

Nokia 6275i User Guide Update

The following is additional information on hearing aid compatibility for your device.

For more information and product support, please visit the Nokia Website <http://www.nokiausa.com/phones/6275i>.

■ Hearing aid compatibility (HAC)

For hearing aid compatibility, you must turn off the Bluetooth connectivity.

Your mobile device model complies with FCC rules governing hearing aid compatibility. These rules require an M3 microphone or higher value. The M-value, shown on the device box, refers to lower radio frequency (RF) emissions. A higher M-value generally indicates that a device model has a lower RF emissions level, which may improve the likelihood that the device will operate with certain hearing aids. Some hearing aids are more immune than others are to interference. Please consult your hearing health professional to determine the M-rating of your hearing aid and whether your hearing aid will work with this device. More information on accessibility can be found at www.nokiaaccessibility.com.

We apologize for any inconvenience this may have caused.
