

INFORMATION FOR MOTOROLA **XOOM™** LTE

The 4G Module

Your mobile device now contains an LTE module that will provide you with 4G capabilities. It was professionally installed and is not intended to be accessible or serviceable by the end user. The module's FCC ID is IHDP56LU2. It is intended for use solely in this mobile device and cannot be removed and installed into another device.

Accessing FCC Information about This Module

The FCC identifier and other information pertaining to this module can be obtained via the user menu on the host device. From the home screen, press **Menu > Settings > About this device**. More information about this module is available on the FCC's website (<http://www.fcc.gov/oet/ea>).

Specific Absorption Rate (IEEE)

YOUR MOBILE DEVICE MEETS FCC LIMITS FOR EXPOSURE TO RADIO WAVES. Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) adopted by the Federal Communications Commission (FCC). These limits include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The radio wave exposure guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile devices is 1.6W/kg. Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The highest SAR values under the FCC guidelines for your device model are listed below.

Body-Worn SAR	CDMA 800/1900	1.05 W/kg
	Wi-Fi 2.4G	1.34 W/kg
	Wi-Fi 5G	0.53 W/kg
	CDMA 800/1900, Wi-Fi, Bluetooth	1.32 W/kg
	LTE 700	1.30 W/kg
	LTE 700, Wi-Fi, Bluetooth	1.51 W/kg

During use, the actual SAR values for your device are usually well below the values stated. This is because, for purposes of system efficiency and to minimize interference on the network, the operating power of your mobile device is automatically decreased when full power is not needed for the wireless connection. The lower the power output of the device, the lower its SAR value. The World Health Organization has stated that present scientific information does not indicate the need for any special precautions for the use of mobile devices. They recommend that if you are interested in further reducing your exposure then you can easily do so by limiting your usage. Additional information can be found at www.who.int/emf (World Health Organization) or www.motorola.com/rfhealth (Motorola Mobility, Inc.).
