

USER'S MANUAL

- A preliminary draft copy of the User's Manual follows this cover page.
- **The text on the following three pages will be added for FCC requirements.**

FCC Notice To Users

Motorola has not approved any changes or modifications to this device by the user. Any changes or modifications could void the user's authority to operate the equipment. See 47 CFR Sec. 15.21.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. See 47 CFR Sec. 15.19(3).

If your mobile device or accessory has a USB connector, or is otherwise considered a computer peripheral device whereby it can be connected to a computer for purposes of transferring data, then it is considered a Class B device and the following statement applies:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is

encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Specific Absorption Rate Data

This model wireless phone meets the government's requirements for exposure to radio waves.

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission (FCC) of the U.S. Government and by the Canadian regulatory authorities. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age or health.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC and by the Canadian regulatory authorities is 1.6 W/kg.¹ Tests for SAR are conducted using standard operating positions accepted by the FCC and by Industry Canada with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR

level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station, the lower the power output.

Before a phone model is available for sale to the public in the U.S. and Canada, it must be tested and certified to the FCC and Industry Canada that it does not exceed the limit established by each government for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) reported to the FCC and available for review by Industry Canada. The highest SAR value for this model phone when tested for use at the ear is 1.52 W/kg, and when worn on the body, as described in this user guide, is 1.25 W/kg.

(Body-worn measurements differ among phone models, depending upon available accessories and regulatory requirements).²

While there may be differences between the SAR levels of various phones and at various positions, they all meet the governmental requirements for safe exposure. Please note that improvements to this product model could cause differences in the SAR value for later products; in all cases, products are designed to be within the guidelines.

SAR Data

Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications & Internet Association (CTIA) Web site:

<http://www.phonefacts.net>

or the Canadian Wireless Telecommunications Association (CWTA) Web site:

<http://www.cwta.ca>

1. In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.
2. The SAR information includes the Motorola testing protocol, assessment procedure, and measurement uncertainty range for this product.

Welcome!

Welcome to the world of Motorola digital wireless communication!
We are pleased that you have chosen the Motorola V3a wireless phone.

Safety and General Information

IMPORTANT INFORMATION ON SAFE AND EFFICIENT OPERATION. READ THIS INFORMATION BEFORE USING YOUR PHONE.

The information provided in this document supersedes the general safety information in user guides published prior to December 1, 2002.

Exposure To Radio Frequency(RF) Energy

Your phone contains a transmitter and a receiver. When it is ON, it receives and transmits RF energy. When you communicate with your phone, the system handling your call controls the power level at which your phone transmits.

Your Motorola phone is designed to comply with local regulatory requirements in your country concerning exposure of human beings to RF energy.

Federal Communications Commission laws : the 2nd parts of J paragraph at 47 CFR

ANSI / IEEE C 95.1-1992

IEEE C 95.1-1999

NCRP Report 86, 1986

ICNIRP 1998

Canada, Department of Health & Human Services, safety regulation, 6th articles-
Frequency 3KHz ~ 300GHz, Electromagnetic power radiation emission regulation 1999

Australia communication Associates, "Wireless communication(Electromagnetic radiation emission)
Standards 1999

Operational Precautions

To assure optimal phone performance and make sure human exposure to RF energy is within the guidelines set forth in the relevant standards, always adhere to the following procedures.

External Antenna Care

Use only the supplied or Motorola-approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone.

Do NOT hold the external antenna when the phone is IN USE. Holding the external antenna affects call quality and may cause the phone to operate at a higher power level than needed. In addition, use of unauthorized antennas may result in non-compliance with the local regulatory requirements in your country.

Phone Operation

When placing or receiving a phone call, hold your phone as you would a wireline telephone.

Body-Worn Operation

To maintain compliance with RF energy exposure guidelines, if you wear a phone on your body when transmitting, always place the phone in a Motorola-supplied or approved clip, holder, holster, case, or body harness for this phone, where available. Use of accessories not approved by Motorola may exceed RF energy exposure guidelines. If you do not use one of the body-worn accessories approved or supplied by Motorola, and are not using the phone held in the normal use position, ensure the phone and its antenna are at least 1inch(2.5centimeters) from your body when transmitting.

Responsible driving best practices may be found in the "Wireless Phone Safety Tips" at the end of this manual and at the Motorola website : www.Motorola.com/callsmart.

Operational Warnings

For Vehicles With an Air Bag

Do not place a phone in the area over an air bag or in the air bag deployment area. Air bags inflate with great force. If a phone is placed in the air bag deployment area and the air bag inflates, the phone may be propelled with great force and cause serious injury to occupants of the vehicle.

Potentially Explosive Atmospheres

Turn off your phone prior to entering any area with a potentially explosive atmosphere, unless it is a phone type especially qualified for use in such areas and certified as "Intrinsically Safe." Do not remove, install, or charge batteries in such areas. Sparks in a potentially explosive atmosphere can cause an explosion or fire resulting in bodily injury or even death.

Note : The areas with potentially explosive atmospheres referred to above include fueling areas such as below decks on boats, fuel or chemical transfer or storage facilities, areas where the air contains chemicals or particles, such as grain, dust, or metal powders. Areas with potentially explosive atmospheres are often but not always posted.

Blasting Caps and Areas

To avoid possible interference with blasting operations, turn OFF your phone when you are near electrical blasting caps, in a blasting area, or in areas posted "Turn off electronic devices." Obey all signs and instructions.

Medical Devices

Pacemakers

Pacemaker manufacturers recommend that a minimum separation of 6 inches(15centimeters) be maintained between a handheld wireless phone and pacemaker.

Persons with pacemakers should :

ALWAYS keep the phone more than 6inches(15centimeters) from your pacemaker when the phone is turned ON.

NOT carry the phone in the breast pocket.

Use the ear opposite the pacemaker to minimize the potential for interference.

Turn OFF the phone immediately if you have any reason to suspect that interference is taking place.

Hearing Aids

Some digital wireless phones may interfere with some hearing aids. In the event of such interference, you may want to consult your hearing aid manufacturer to discuss alternatives.

Other Medical Devices

If you use any other personal medical device, consult the manufacturer of your device to determine if it is adequately shielded from RF energy. Your physician may be able to assist you in obtaining this information.

Use While Driving

Check the laws and regulations on the use of phones in the area where you drive. Always obey them.

When using your phone while driving, please :

Give full attention to driving and to the road.

Use hands-free operation, if available.

Pull off the road and park before making or answering a call if driving conditions so require.

Operational Warnings

For Vehicles With an Air Bag

Do not place a portable phone in the area over an air bag or in the air bag deployment area.

Air bags inflate with great force. If a portable phone is placed in the air bag deployment area and the air bag inflates, the phone may be propelled with great force and cause serious injury to occupants of the vehicle.

Potentially Explosive Atmospheres

Turn off your phone prior to entering any area with a potentially explosive atmosphere, unless the phone is a model specifically identified as being "Intrinsically Safe." Do not remove, install, or charge batteries in such areas. Sparks in a potentially explosive atmosphere can cause an explosion or fire resulting in bodily injury or even death.

Note : The areas with potentially explosive atmospheres referred to above include fueling areas such as below decks on boats, fuel or chemical transfer or storage facilities, areas where the air contains chemicals or particles, such as grain, dust, or metal powders, and any other area where you would normally be advised to turn off your vehicle engine. Areas with potentially explosive atmospheres are often but not always posted.

Batteries

Batteries can cause property damage and/or bodily injury such as burns if a conductive material such as jewelry, keys, or beaded chains touch exposed terminals. The conductive material may complete an electrical circuit(short circuit) and become quite hot. Exercise care in handling any charged battery, particularly when placing it inside a pocket, purse, or other container with metal objects. Use only Motorola original batteries and chargers.

Your battery or phone may contain symbols, defined as follows :

Symbol	Definition
	Important safety information will follow.
	Your battery or phone should not be disposed of in a fire
	Your battery or phone may require recycling in accordance with local laws. Contact your local regulatory authorities for more information.
	Your battery or phone should not be thrown in the trash.
	Your phone contains an internal lithium ion battery.

7. How to Use Battery

Cell Phone and Battery

I. Assembling

Pull battery cover in the front direction while pressing the removal button
 Insert battery and fit the battery cover correctly into the groove provided on the bottom-hand side of the handset
 Slide it all the way in the arrow direction until a 'click' is heard.

II. Removal

Pull in the front direction while pressing the removal button.
 Open the battery cover and push the both part in the arrow direction and the removal the battery from the handset.

Before removal the battery, be sure to turn off the power of the phone. Forcible removal of the battery may cause malfunction. Cell phone and battery cover shall be always combined.

The Battery and UIM Card

I. Installing UIM Card on the Phone

Disconnect the battery pack from the phone and side UIM Card into the rail on the back of the phone.

NOTE!!

UIM Card ?

UIM Card contains your Phone Number, service details, and phonebook/message memory,
 Caution : Do not bend or scratch your UIM Card. Avoid exposing your UIM Card to static electricity, water, or dirt.

Charging Battery Pack

The battery is not fully charged when it is supplied. Be sure to charge the battery fully before you use the phone.

Connect the power plug of the charger to the outlet.

Connect the jack of the charger to the port on the side of the phone.

When you use USB Hub device to use charging battery, data service or mPT, it must be restricted as following,

1. USB hub must match USB Power Distribution Specification.
2. Use USB hub with self-power as possible.
3. When you want to charge your phone with USB, it is recommended to use PC host root hub.
4. When you want to charge with hub that is not match spec., only one port must be used.

Battery Pack Charging Time

Description	700mAh (V3a)
Required Time	Under 3 hours

Recharging time varies by the battery pack and charger status.

If AC power voltage applied to the power supply adapter is low, the charging time may become longer.

If ambient temperature is too high or low, charging may not be done sufficiently. Always charge the battery in room temperature.

Battery Pack Operating Time

Time	700mAh (V3a)		
	Slot Mode 0	Slot Mode 1	Slot Mode 2
Standard Standby Time	About 70 hours	About 115 hours	About 170 hours
Standard Talk time	About 170 Min		

The slot mode varies according to service areas.

Electric currents are consumed more during a call or when using UNI or Game than in standby state, so the longer call time is, the shorter the standby time becomes.

Receiving a call requires the same amount of electric currents as when placing a call.

Standby time in 'NO SERVICE' area becomes shorter.

The operating time varies according to charging state, temperature(low/high), radio wave condition in the area of use, backlight status.

Low Voltage Alert

When the battery pack is almost used up, the phone sounds 'beep' and '  ' flashes.

If you continue to use your phone in this state, the power of the phone is turned off. Immediately charge your phone.

If '  ' flashes, although you press the button, backlight for display screen and buttons may not be On and the cell phone features are not supported properly. Immediately charge your phone before using again.

Battery Pack Care Information

Always use the authorized, dedicated charger and battery pack. If an unauthorized battery pack is installed, a 'Warning! Unauthorized Battery' message is displayed on the Wait display screen.

Using an unauthorized charger could cause damage to the battery pack or explosion may result. Never use such a product. Never short-circuit the contact terminals of the battery pack. Explosion may result. Always store the battery pack in the battery case.

Always charge or store the battery pack in room temperature. Charging would not be done sufficiently and the indicator lamp changes into orange if you charge the battery pack in a too hot place (in a car in summer or near open flames) or a too cold place. If it is stored over an extended period of time, its capacity level becomes lower, shortening its operating time.

Never disassemble the battery pack or place it near open flames.

Store the charger and battery pack in the area out of children's reach.

Never give a strong impact to your phone or let it drop. Malfunctions or short life may result.

Any foreign matters in contact with the metallic part of contact terminals on the charger and battery pack may interfere with charging process. Always keep them clean.

The chargeable battery pack is a consumable item. Repeated switching between charging and discharging reduces its service life slowly. If the battery operating time is reduced to a half level compared to that when purchased, replace it with a new one.

7. Precautions When Using

If the lamp flickers while you are charging your phone and battery, charging operation fails. If you leave it in such a state, the charger may malfunction.

Always use authorized, dedicated battery pack and charger. Using an unauthorized battery pack or charger rejects the services offered by Motorola.

Do not use the charger to charge phones and batteries of different models. Problems may result.

Never use them in a humid, hot atmosphere. If your phone becomes damp, malfunction may result. If submerged, it may be beyond repair. Never turn the power ON with your phone wet. Instead, remove the battery pack and contact the nearest service center for repair.

Never disassemble or alter your phone. Unauthorized disassembly may reject free service offered by Motorola.

If you sit down with your phone stored in a hip pocket, use care not to give a strong impact to it. It may be broken.

Avoid cleaning your phone with chemical solutions such as solvent or thinner.

Use care not to give an impact or vibration to your phone. When not in use, it should be stored in a safe place.

Use the authorized handsfree kit. Otherwise, malfunction may result. Especially, products having strong magnetism may be a direct cause for malfunction of cell phone, which will reject the free service offered by Motorola.

In order to prevent any harm to human body, do not hold the battery in the mouth and do not use the damaged battery.

Keep the handset away from any magnetic product such as credit card, phone card that may be damaged by the electro magnetic field of the handset.

Keep the handset away from any heating facility such as stove, microwave or oven.

Do not apply excessive force to the handset to protect appearance and internal parts of the handset.

Do not hold the strap and turn the handset round not to hurt anyone.

Be sure that the handset is not held between the automatic doors of a bus or subway train.

Appendix

1. Troubleshooting	152
2. Specific Absorption Rate data	153
3. Specification and Characteristics	155

1. Troubleshooting

Nothing displayed on the display screen

- Check the battery pack state.

No antenna graphic displayed on the display screen

- Move to other place and attempt a call again.

Alarms ' Toot-toot heard when a call is placed

- There is no communication channel available or difficulty in communication with the base station. If you press  to end the connection and then press again  the phone will redial up.

Charging lamp on the charger flashes in red

- Check the location of the battery pack or clean the charging terminals and then attempt a call again, If the lamp keeps flashing in spite of several attempts, contact the nearest Motorola service center.

Battery pack operating time is different from the explanation in the User's Manual

- If you charge and discharge the battery pack continuously, its operating time becomes shorter gradually. If the charged battery pack is exposed to low or high temperature, its operating time may vary.

Malfunctions detected during using the phone or no power ON

- Remove the battery pack and reinstall it, and then turn the power ON.

2. Specific Absorption Rate data

The model phone meets the government's requirements for exposure to radio waves.

Your mobile phone is a radio transmitter and receiver. It is designed and manufactured not to exceed limits for exposure to radio frequency(RF) energy. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The guidelines include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The exposure standard for mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. Under the guidelines for your phone model, the SAR limit is 1.6W/kg. Tests for SAR are conducted using standard operating positions with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to base station, the lower the power output of the phone.

Before a phone model is available for sale to the public, it is tested to confirm compliance with the guidelines. The tests are performed in positions that conform to a uniform testing methodology determined by an expert standards body. The highest SAR value for this model phone when tested for use at the ear is 0.606 W/kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the governmental requirements for safe exposure. Please note that improvements to this product model could cause differences in the SAR value for later products; in all cases, products are designed to be within the guidelines.

According to the SAR guideline of ICNIRP, SAR limitation of mobile phone is under 0.75 W/kg per 10g of human body. The above figure for SAR limitation secures definitely the safety zone for end user and also measuring tolerance also considered on it.

CENELEC is one of European associations

All the reference for this mobile phone does not define the range of Motorola's test procedure and measuring method and evaluation.

3. Charging Note

A USB-cable connection to a personal computer will not charge your phone's battery when the phone is turned off. Turn on the phone to charge the phone's battery through the USB connection.

When your phone's battery is dead or has a very low charge, you must use the phone's travel charger to recharge the battery. You cannot use a USB-cable connection to a personal computer to charge a weak or dead phone battery.

You cannot use MPX-200 phone chargers to charge a weak or dead phone battery. Instead, use the travel charger included with your phone.

3. Specification and Characteristics

Service Frequency Range	Transmit(TX) : 824MHz ~ 849MHz Receive(RX) : 869MHz ~ 894MHz
Frequency Stability	±300 Hz
Exterior(mm)	Mounted with battery : 53 X 98 X 14.5
Weight(g)	Mounted with battery : 98g
Transmission Output	250mW
Operating Temperature	-20 ~ +50
Relative Humidity	95%
