

When attached to your phone properly, the antenna adapter/ portable auxiliary antenna system complies with the standards and recommendations for the protection of public exposure to RF electromagnetic energy outlined in the phone's user manual. Compliance with these standards is contingent on the following:

- To assure that radio frequency (RF) energy exposure to bystanders is lower than that recommended by the adopted standard, operate the phone with an attached auxiliary antenna only when the antenna is positioned at least 20 cm (8 inches) away from the user or bystanders.
- DO NOT operate the telephone unless all RF connectors are secure and open connectors are properly terminated.
- DO NOT operate the phone near electrical blasting caps, or in an explosive atmosphere.
