Charging Dock Operation

The charging dock is designed for tabletop use. To be compliant with RF exposure guidelines and to avoid interference with implanted medical devices, maintain a distance of at least 20 centimeters (approximately eight inches) from the charging dock.

Specific Absorption Rate (FCC & IC)

YOUR MOBILE DEVICE MEETS FCC AND IC LIMITS FOR EXPOSURE TO RADIO WAVES.

Your mobile device is a radio transmitter and receiver intended to be worn on your wrist. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) adopted by the Federal Communications Commission (FCC) and Industry Canada (IC). These limits include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The radio wave exposure guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for a wrist-worn mobile device is 4.0 W/kg. Testing is conducted with the device transmitting at its highest certified power level. The highest SAR tested value for your device model is: 0.44 W/kg.
