Introduction

This users' manual describes the operation of the ULTRA R4000 PC/TV Universal Remote Control Unit with Air Mouse and Music Display (RCU). The RCU contains an embedded micro gyro for motion sensing and in-air control of a floating cursor. This RCU features IR code database and IR learning capabilities to universally control standard home theater devices such as TVs, VCRs, Digital Video Recorders (DVR), DVD players, CD players, cable/SAT boxes, etc. This RCU links directly to your Windows Media Player Audio library. Using the Music Display on the RCU you can browse through your audio files and listen to your music on the PC without going to your computer.

The RCU is also equipped with a 2.4 GHz RF transceiver to send cursor movement information and other commands to the PC via a USB transceiver. The radio frequency (RF) transceiver delivers a range of up to 100 feet with no line-of-sight requirement. The 800 possible channels of the RF transceiver provide high resistance to interference from other radio devices.

Battery Installation and Information

The ULTRA R4000 Motion-Sensing RCU requires four AAA Alkaline batteries. To install the batteries:

1. Remove the battery compartment cover.
2. Insert the batteries, matching the batteries to the (+) and (-) marks inside the battery compartment.
3. Replace the battery compartment cover and snap it into place.

Note: Reprogramming may be required after batteries are replaced.

Battery Saver

The RCU saves battery power by automatically going into a low-power state if no button is pressed after a few seconds. See the Gyro section for gyro battery saver mode.

Product Registration Information

Keep your sales receipt to obtain warranty parts and service and for proof of purchase. Attach it here and record the serial number in case you need it. The serial number is located on the product.

Model Number _____

Serial Number _____ Purchase Date _____

Dealer/Address/Phone _____

Gyro Operation

The RCU provides in-air control of the PC's cursor via patented gyroscopic motion sensing technology. This means mouse-like cursor control, from anywhere in the room, without the need of a flat surface. There is no line-of-sight requirement so you don't have to point the RCU at the PC you are controlling. Remember the following things when using the in-air cursor control feature of the RCU:

- Use your thumb to press the gyro and mouse buttons.
- Click the center button to activate the gyro motion-sensing control. Single click and hold to move the cursor and release it to "park" the cursor where you want it. Double click the center button and release it for continuous cursor movement similar to a standard mouse.
- The right and left buttons function like standard mouse right-click and left-click buttons.
- Move the cursor by flexing your wrist, not your arm or body, much as you would with a flashlight; side to side and up and down. Placing your arm on an armrest or on your lap will make this motion more comfortable.
- The RF Transmit LED indicates when gyro motion or other information is being sent. The LED does not illuminate when transmitting IR information.

Product Diagram

Button Cluster Locations	Button Cluster	Function
A	Power (standby), Music Display Button, Display Backlighting	Power/Standyby: Places the PC into Standby (or power off dependant on the PC configuration) "Music Display Button" Start Music display interaction with PC Backlight: Turns on and off the backlight RF Status LED is located at top left corner (next to Gyration company name)
B	RCU mode selection and power	Selects RCU mode TV: IR legacy control PC: RF communication to PC Cable/Satellite: IR legacy control Auxiliary: IR legacy control
C	Transport control	Standard AV control for selected transport or Windows Media Player, Windows Media Center, DVR, etc. (Play, pause, stop, etc) Includes IR control of legacy devices if supported in IR database

Product Diagram (continued)

Button Cluster Locations	Button Cluster	Function
	D	Menu navigation Standard menu navigation: up, down, left, right, OK. Includes MS required buttons: BACK: RF=Back, IR=Last MORE: RF= More Info, IR=None Includes other buttons: INPUT: RF=none, IR=TV Input selection MENU: RF=DVD Menu, IR=Menu
	E	Gyro button cluster Center button activates gyro for in-air cursor control. Outer buttons function like standard left and right mouse buttons.
	F	Volume and Channel control, eHome (Vista MCE Green Button), Mute Standard volume up/down, channel up/down, Vista Media Center eHome, and volume mute.
	G	Media Center shortcuts Shortcuts buttons to easily navigate within the Media Center environment. Recorded-TV, Live TV, My Pictures, Guide

Product Diagram (continued)

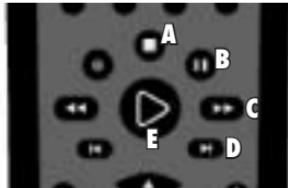

Button Cluster Locations	Button Cluster	Function
	H	Alpha-numeric keypad Standard 0-9 keys with alpha characters, plus *, space, #, CLEAR, and ENTER
	I	US: Hotkeys (For US/North American Remotes only) My Videos, Mail, Web, My Radio, Favorites

RCU Mode Selection

A	Puts RCU into <i>TV control mode</i> for communicating with TV via IR protocol.
B	Puts RCU into <i>PC control mode</i> for communicating with Media Center PC via RF protocol.
C	Puts RCU into <i>Cable / Satellite control mode</i> for communicating with Cable or Satellite box via IR protocol.
D	Puts RCU into <i>Aux mode</i> for communicating with an auxiliary device via IR protocol.
E	Music Display Button - Turns on Display and puts RCU into <i>Music control mode</i> for playing music stored on your PC.
F	PC, TV, CAB/SAT, AUX mode: Powers on/off the selected device. PC Mode: Issues a standby command. If the system is active, the first button pressed puts it into standby mode. If the system is already in standby mode, a button press will awaken.
G	Transmit LED indicator for RF transmission only
H	Backlight – Toggles the backlight for the button keys. If the Display is active, the Display backlight will turn on or off.

Transport Control

	TV, CAB/SAT, AUX Mode or Music Mode:	PC Mode
A	Puts selected device into <i>Stop mode</i> , if supported	Stops media playback and positions pointer to start of media
B	Puts selected device into <i>Pause mode</i> , if supported	First button press will pause the media at present position. Subsequent button presses toggles between pause and playback at present position pointer.
C	Puts selected device into <i>Fast Forward mode</i> , if supported	First press speeds up the time base of the media stream to the first FF value (3X). If media is a slide show, skips to next picture. Subsequent button presses cycle through the FF speed values looping through 0 (normal speed) 3X, 20X, 60X. If slide show, skips to next picture.
D	Skip command, if supported by selected device	Skips ahead an increment: CD and Playlists skip to next song. DVD skips to next chapter. Slide show skips to next picture. DVR skips 29 seconds.
E	Puts selected device into <i>Play mode</i> , if supported	Start (if paused, continue) playback of media at present position pointer. Used by Media Center for Media Center media, DVR, CD/DVD, playlists and slide shows.

Transport Control

	TV, CAB/SAT, AUX Mode or Music Mode:	PC Mode
F	Replay command, if supported by selected device	Move the position pointer back an increment: CD and Playlist: skips back to previous song. DVD: skips back to previous chapter. Slide show: skips back to previous picture. DVR skips back 7 seconds
G	Puts selected device into <i>Reverse</i> mode, if supported	First press speeds up the time base and reverses direction of the media stream to the first rewind value (3X). Second press cycles through the reverse speed values looping through 0 (normal speed) 3X, 20X, 60X. If media is a slide show, skips to previous picture
H	Puts selected device into <i>Record</i> mode, if supported	Records the TV show to disk. Starts recording at the beginning of the show as defined by on-screen TV program guide (if the pause buffer enables it)

Menu Navigation

	TV, CAB/SAT, AUX Mode or Music Mode:	PC Mode
A	BACK - IR: Goes back one location (if supported)*	Goes back one location of the user interface back stack
B	MORE - IR: Provides more information (if supported)	Provide information if available for the focus point
C	Menu Navigation Up*	Moves the focus point up one location, if at top of the screen takes no action
D	Menu Navigation Right*	Moves focus point right one position, if at rightmost position takes no action
E	Menu Navigation Down*	Moves the focus point down one location, if at bottom of the screen takes no action

* See Music Display Navigation Section for information on using the Music Display

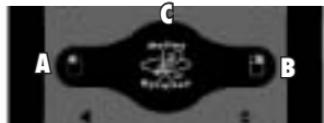

Menu Navigation

	TV, CAB/SAT, AUX Mode or Music mode:	PC Mode
F	Menu Navigation Left*	Moves focus point left one position, if at leftmost position goes back 1 page in the user interface stack
G	Menu OK Performs action indicated by focus point*	Performs action indicated by focus point
H	Menu IR: Setup menu	Media Center "DVD Menu"
I	TV Input IR: (TV Mode) Cycles through the TV inputs. No action in other modes	No action

* See Music Display Navigation Section for information on using the Music Display

Gyro Activation>Select

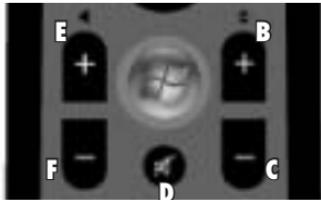

A	Simulates a left-mouse button-click
B	Simulates a right-mouse button-click
C	Activates gyroscope for motion-sensing cursor control, motion-sensing menu navigation, or other motion-sensing features

Channel/Volume Control & Media Center Green Button

	PC, TV, AUX or CAB/SAT Mode	PC Mode
A	Goes to Windows Vista Media Center Home page, launches Media Center if not running already.	Goes to Windows Vista Media Center Home page, launches Media Center if not running already.

Channel/Volume Control & Media Center Green Button

	PC, TV, AUX or CAB/SAT Mode	PC Mode
B	Increment the current channel by 1	Increment the current channel by 1. If in a list view, move up a page in the list.
C	Decrement the current channel by 1	Decrement the current channel by 1. If in a list view, move back a page in the list.
D	Mute selected device, if applicable	Mute the entire PC volume, toggle mute state
E	Decrement the current volume by 1 unit	Decrement the current volume by 1 unit. If muted, un-mute the volume first.
F	Increment the current volume by 1 unit	Increment the current PC volume by 1 unit. If muted, un-mute the volume first.

MCE Shortcut Buttons

	PC, TV, AUX or CAB/SAT Mode	PC Mode
A - Recorded-TV	No action	Shortcut to the Windows Media Center "Recorded TV" page
B - Live TV	No action	Brings Media Center Live TV to the front
C - My Pictures	No action	Shortcut to the Windows Media Center "My Pictures" page
D - Guide	Shows the EPG (electronic program guide) for the particular device selected	Invokes the on-screen Media Center TV programming guide

Numeric Keypad

	PC, TV, AUX or CAB/SAT mode	PC Mode
A	Standard 1-9, alphanumeric	Standard 1-9, alphanumeric
B	Inserts a * symbol, if supported by the selected device	*
C	Inserts a # symbol, if supported by the selected device	#
D	Clear, if supported by the selected device	Clear
E	Enter, if supported by the selected device	Enter

Shortcut Buttons

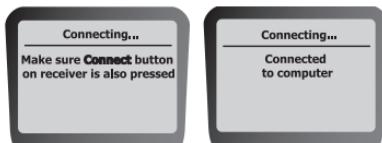

A	My Videos: Microsoft defined button - Shortcut to the Windows Media Center "My Videos" page
B	Mail: Launches default email program on the PC
C	Web: Launches default web browser on the PC
D	My Radio: Microsoft defined button - Shortcut to the Windows Media Center "My Radio"
E	Favorites: Displays the Web Browser "favorites" (favorite URL addresses). Only active when the Web browser is the focus.

Connect

A

Connect: Located on the back side of the RCU. Connects (Binds) the RCU to the Gyration USB RF Receiver
(requires a pen-tip to activate the button since it is below the surface)

Music Display While Connecting

Music Display Upon Successful Connection

Music Display Upon Unsuccessful Connection, See Troubleshooting Section For More Information

Backlighting

The RCU Mode Selection buttons (**TV, PC, CAB/SAT, and AUX**) are lit when pressed; these buttons light up whenever they are pressed (for 2-3 seconds) to indicate which Control Mode the remote is in.

There is no automatic backlighting on any of the RCU buttons. The "Backlight" button controls the backlight of the RCU buttons and the Display. Upon pressing the "Backlight" button, the main RCU keys will be backlit. If the Display is active (by pressing the Display button), the Display will also become backlit.

The backlight acts as a toggle and can also be used to turn off all backlighting. Additionally, the backlighting will timeout after a short amount of time (timeout occurs after last button pressed and the backlight turns off if no other button is pressed within 10 seconds).

If the backlighting seems dim, the batteries may need to be replaced.

Power / Standby Toggle Button

This button turns the selected device on or off or toggles its power state from standby to active. The device is selected with the RCU Mode Switches; **PC, TV, CAB/SAT, and AUX**.

In **PC** mode, this button issues a standard Windows **STANDBY** command. Various options for this command can be set up in Windows. Go to Start/Control Panel/Power Options/ Advanced and then set a function for the **STANDBY** command. In the default configuration, if the PC is already on, the first button press puts the PC into standby mode. If the PC is in standby mode, another press of this button will wake up the PC.

RF Receiver & Synchronization

Communication between the RCU and the PC is done via an RF transceiver which is plugged into a standard USB port in the PC. In order for this to work, you need to synchronize, or "bind" your remote and PC. See below for the binding procedure.

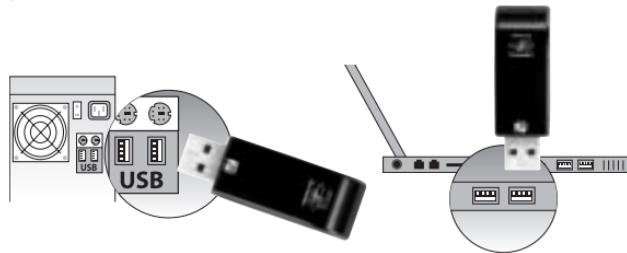

Setting Up & Synchronizing The Remote & The PC

After inserting the batteries in the remote control unit,

1. Hold the remote in close proximity to the PC.
2. Press the **CONNECT** button on the RF Dongle transceiver which is plugged into the PC USB port.
3. Press the **CONNECT** button on the underside of the RCU.
4. The Display screen on the RCU will indicate a successful connection.
5. If a successful connection is not made, repeat steps 1 - 3

Receiver Installation

The RCU requires a USB RF transceiver be plugged into a USB port in the PC in order to access RF and gyro functions. The USB extension cable can be used to maximize the range of the RCU by placing the USB RF transceiver away from other electrical components. A USB RF transceiver does not need to be plugged in to use the IR remote functions. See the diagram below.

USB Features

- Connects to PC via standard USB 2.0 connection
- PC operating systems supported: Windows Vista, Windows XP MCE, and Windows XP
- LED to indicate bind sequence and radio activity
- Connect button, pen-push type

USB Compatibility

The transceiver uses a standard USB Type A connector for connection to any standard USB port of a computer. The transceiver is a certified USB compatible 2.0 device, running at low speed. It is certified to run on Windows Vista, Windows XP MCE, and Windows XP.

Transceiver Compatibility Matrix with Gyration Products

This transceiver is compatible with the following Gyration products:

Ultra R4000 (The Music Service and Music Display functions of this remote require use of the included Ultra 4000 RF Receiver to fully function)

Gyration Go Mouse

Gyration Go Mobile keyboard

Gyration Go Full size keyboard

Gyration Media Center Universal Remote Control

Gyration GyroTransport

Programming the Remote

The RCU can be programmed to operate many brands of IR controllable devices via the IR functions of the RCU. Devices include TVs, DVD Players, Cable/Satellite Boxes, etc. Please see the Remote Code List for all devices supported.

Find Out If You Need to Program the Remote

To determine whether the remote needs to be programmed to operate your device, do the following (using the TV as an example)

1. Turn on the TV.
2. Point the remote at the TV.
3. Press the TV button.
4. Press the ON/OFF button to see if the TV responds. If the TV doesn't respond, you must program the remote to operate it.

Programming Methods

There are two ways to program the remote control to operate other components: Automatic Code Search and Direct Entry.

Using Automatic Code Search

The following instructions can be used to program the RCU to operate each of your components. If you want to stop the automatic code search without programming any of your components, press and hold **CLEAR (*)** until the indicator on the RCU turns off.

1. Turn on the device you want to operate (TV, DVD player, etc.)
2. Press and hold the device button you want to program (**TV**, **AUX**, etc.). While holding the device button, press and hold ON/OFF button until the device button on the RCU turns on, then release both buttons.
3. Point the remote at the device.
4. Press and release **PLAY**, then wait 5 seconds or until the device button stops flashing.

At this point the RCU is searching for the correct code to program. If, after 5 seconds, the device you want to operate does not turn off, press **PLAY** again to tell the RCU to search the next set of codes. Continue pressing and releasing **PLAY** until the device turns off or you have searched through all of the codes. The device buttons flash when all codes have been searched, the device button turns off, and the RCU exits the *Automatic Code Search mode*.

Programming Methods (continued)

If the component you want to control *does* turn off:

1. Press and release REVERSE, then wait 2 seconds. Repeat this step until the component turns back on.
2. To finish, press and hold STOP until the component button on the RCU turns off. The RCU will automatically exit the *Automatic Code Search mode*.

Using Direct Entry

1. Turn on the device you want to operate (TV, DVD player, etc.)
2. Look up the brand and code number(s) for the device in the Remote Code List at the end of this booklet.
3. Press and hold the device button you want to program ((**TV**, **AUX**, etc.) on the RCU).
4. Enter the 4-digit code from the Remote Code List. If all the mode buttons flash, you have either entered an invalid code or the button isn't programmable.
5. Release the device button, point the RCU at the device, and then press the ON/OFF button to see if the device responds to the command. If it doesn't, try pressing the device button and then ON/OFF again.

- If you get no response, repeat these steps using the next code listed for your brand, until the device responds to the remote commands.
- If you try all the codes for your device brand and none work, try the automatic code search method. If automatic code search doesn't find the code, the remote is not compatible with your component.

Because the RCU controls more than one device, you must first "tell" it which device you wish to operate. For example, if you wish to operate the TV, you must first press the **TV** mode button on the RCU to put it in the TV mode.

The RCU stays in the chosen mode until you change it. If the RCU is in the TV mode, you must change the mode in order to operate other components. For example, if you are in the TV mode and you wish to turn off the Cable Box, you must first press the **CAB/SAT** button then the On/Off button. Return to the TV mode by pressing the TV mode button.

Programming Methods (continued)

Volume Punch Through

The Volume Punch Through feature allows you to control the volume without exiting the current mode. When Punch Through is enabled, the **VOL+**, **VOL-**, and **MUTE** keys will always control the Punch Through device. By default the TV is the Volume Punch Through device. To disable Volume Punch Through, see the "Disabling Volume Punch Through" Section below.

Note: Volume Punch Through only applies to the three IR Mode Device Buttons (**TV**, **CAB/SAT**, and **AUX**).

Note: The remote must be programmed via Automatic Code Search or Direct Entry before enabling Volume Punch Through.

To change the Volume Punch Through device or enable Volume Punch Through:

1. Press and hold the device button of the device you want to Punch Through (**TV**, **AUX**, etc.) on the RCU.
2. Press and hold the **VOL-** button until the device button on the RCU turns on, then release both buttons.

Volume Punch Through is now enabled for the selected device.

Disabling Volume Punch Through

To disable Volume Punch Through:

1. Press and hold the **VOL-** button (the device button of the Volume Punch Through lights).
2. While holding the **VOL-** button, enter the code, **0000**, using the number buttons. All device buttons turn on for 2 seconds and then turn off.

Note: If an invalid button is pressed, all device buttons blink 4 times and turn off. At this point, you must start over.

Once Volume Punch Through is disabled, the **VOL+**, **VOL-**, and **MUTE** keys will control the device currently selected by the Device button (**PC**, **TV**, **CAB/SAT**, or **AUX**). To enable Volume Punch Through, see the "Volume Punch Through" Section above.

Learning

The RCU has the ability to *learn* the commands of other remote control units, such as TV remotes or VCR remotes. This allows the most-used commands on those remotes to be combined on the RCU. These original remote control units are also known as source remotes. Learning is not active in the PC mode.

Learning Tips

1. All learned functions for a mode can be erased if you program a different device to that mode.
2. Perform the learning process in low-light areas because too much ambient light might cause interference with the infrared (IR) signals of the remotes.
3. Use fresh batteries in both the Media Center and PC RCU and the original remote.

Code Learning

Codes from the Remote Code List include basic functionality for each component they control. Once you have programmed in the code for your specific component (using either the Automatic Code Search or Direct Entry method), you can customize the RCU to perform certain functions from your original remote(s) that were not embedded in the preset code. The RCU has the ability to learn and store commands from your original remote(s) under the mode(s) of your choice.

Learning Commands

For the following section, the TV remote control unit will be used as an example. Learning from other types of remotes will be done in a similar way.

- 1) First press and hold the mode button on the RCU for the component remote you are learning from (the TV button on the RCU, for example) then press and hold the **RECORD** button on the RCU.
- 2) Keep pressing both buttons until the device mode button light turns off, flashes, and turns off. Release both buttons.

Learning (continued)

3) On the RCU, press and release the button where you want to store the new function (the component button turns off and then back on; a short flash).

Note: If you press an invalid button on the remote, the device mode button flashes 4 times to alert you. You'll have to repeat step 3.

4) Position the source remote facing the bottom of the RCU no more than 2 inches apart.

Press and hold the button of the source remote that has the functionality you are recording. Keep pressing the button until the RCU device mode button light turns off and back on (the source function has been saved to the TV mode on the RCU).

Note: If all device mode buttons flash 4 times, the function wasn't learned. Try again starting with Step 3.

5) The RCU remains in the "learning mode" so you can continue adding functions to different buttons by repeating steps 3 and 4.

6) Press **CLEAR** to exit the learning mode.

Clearing an Individual Learned Function

To delete a learned button function, use the procedure below.

1. Press and hold the component mode button (the component button lights). Then press and hold the **CLEAR** button for 3 seconds. Hold both buttons depressed until the component mode button flashes.

2. Release both buttons. The component mode button turns on indicating that the RCU is now in the Clear Learned Function mode for that component.

3. Press and release the button where learning is to be cleared. The component mode button blinks off then back on indicating that the function was cleared successfully.

4. Repeat Steps 1 through 3 until all the buttons' learned functions have been cleared.

Note: If an invalid button is pressed, the component mode button flashes 4 times, the selected component button stays on, and the RCU remains in Clear Learned Function mode. Repeat Step 3 to continue the clearing process.

5. Press the **CLEAR** button to return the RCU to normal operation.

Deleting All Learned Functions

To delete all learned functions at one time, use the procedure below.

1. Press and hold the **CLEAR** button (the current component button lights). Then press and hold the **ON/OFF** button (component button light turns off for 3 seconds, flashes, turns on and off) while continuing to hold the **CLEAR** button.

2. Release both buttons (current component button turns on).

3. Press any component button to delete all learned functions in all modes. The RCU automatically exits this clearing mode.

Note: Pressing the **CLEAR** button while in this mode will not delete the learning functions, but it will exit this delete mode.

Music Mode

Music mode is a revolutionary new way for you to search through and play your favorite songs that you have already setup on your Windows PC. It links directly to your Windows Media Player Audio library so that you can browse through your audio files and listen to your music without going to your computer.

Note: This mode of the RCU is intended for use on the Windows operating system using the Windows Media Player application (version 10 or higher). Operation on other operating systems has not been verified.

Ultra R4000 Service Application

The RCU comes with a software application that runs in the background (as a "service") on the computer (PC) and interfaces to the Windows Media Player music database. The application communicates the music database information to the RF transceiver attached to the computer. The information is then transmitted via RF to the RCU and displayed on the display. The Ultra R4000 Software Service Application or "Music Software service" is required for operation of the Music display. This Software service is provided via an installation CD.

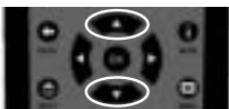

This application can be enabled/disabled manually by the user. The application is set to "enabled" by default (upon system boot). Disabling the service has no effect on normal RCU operation (TV, PC, CAB/SAT, and AUX modes), but will make the display inoperable.

Music Display Navigation

When you press the Music Display button ( button) the Display powers up and displays the top level menu structure. (If service application is running and within range, see the Troubleshooting section for more details).

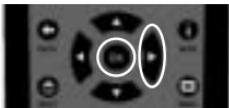

To move up and down the screen, use the **UP** and **DOWN** arrow keys.

To enter a menu level, use either the right (or OK) button. To back out of a level, use the left (or Back) button. You can play the whole album by pressing the Play button at this level, or enter the album and select a specific song.

Note: As you navigate through the menu the heading changes on the top line.

While a song is playing, the MP3 Tag information (called Metadata) will be shown on the display along with a progress bar, the current running time and the time left for that song.

Troubleshooting

Adjusting the Contrast on the Display

To adjust the contrast on the Display, perform the following steps:

1. With the Display screen active, press and hold the  button located beneath the Display screen.
2. Continue to hold the  button after the Display screen turns off for 5 more seconds.
3. The Display Contrast adjustment screen will appear.
4. Use the menu navigation up and down arrows to adjust to the desired appearance.
5. Press any button to exit.
6. If no button is pressed, the display will time out in about 5 seconds.

Note: The contrast settings range from 0 (lightest) to 21 (darkest).

Note: The contrast value is stored, even when removing the batteries.

Reinstalling the Ultra R4000 Installation Software

To reinstall the Ultra R4000 Installation Software service application, perform the following steps:

1. With Windows® running on your computer, insert the CD into your CD/DVD-ROM drive.
2. If the CD window does not open automatically, double-click the My Computer icon on your desktop, and then double-click the CD/DVD-ROM drive containing the CD.
3. Locate the install package provided on the CD for your Ultra R4000 Motion-Sensing Remote Control.
4. Follow the instructions provided by the CD to extract and install the application.

Troubleshooting

Common Problems and Solutions

Cursor Control Issues

Problem	Cause	Solution
The Display screen does not match or show the updates to the Windows Media Player audio library.	The Display Software Service Application did not update correctly.	Restart the Display Software Service Application, by clicking the Ultra R4000 Motion-Sensing Remote Control (green) icon on the Windows Taskbar, and clicking "Restart."
	The Display screens needs to be manually refreshed.	Press the  button to return to the Main Menu.
	The Display screens needs to be manually refreshed.	Use the menu navigation buttons to move up or down from the current level in the Display screen.
The Menu Navigation buttons are non-responsive while the Display screen is active.	The Display Software Service Application has lost contact with the remote control.	Refresh the Display screen by pressing the  button for three seconds to shut off the Display screen, then pressing the  button again to turn the Display screen back on.
	The remote control is out of range with the computer.	Place the remote control closer to the computer.
The cursor does not move when the "Motion by Gyration" button is pressed.	The remote control and computer are not connected.	Connect the Ultra R4000 Motion-Sensing Remote Control with your computer.
	The batteries are low.	Replace the batteries.

Troubleshooting

Common Problems and Solutions

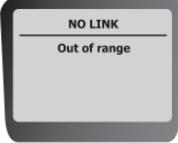

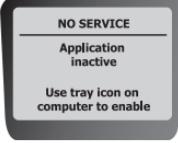

Cursor Control Issues

Problem	Cause	Solution
The cursor movement is choppy or erratic.	There may be radio interference near the computer.	Move any electronic devices away from PC (i.e., speakers, radio, etc.).
The cursor moves too fast or too slow.	The speed or acceleration is not set properly.	Change the cursor tracking speed under the Mouse settings in the Control Panel.
The cursor drifts on the screen.	The remote control sensor may require self-recalibration.	Place the remote control on a flat surface for 5 or more seconds. The gyroscope will perform a self-steady routine to identify and eliminate drift.
The Power/Standy button does not wake the computer out of Standby mode.	If the BIOS setting for Wake from USB is disabled, the system will not turn back on via the remote control.	Enable the wake from USB option in the system BIOS. For information on accessing the system BIOS, see your Owner's Manual.
	If the computer is placed into Hibernation or Shutdown mode, and then the AC power is removed, the internal receiver loses its power and cannot wake the system (even if AC power is reapplied).	Turn on the computer manually using the system Power button.
If the BIOS setting for Wake from USB is disabled, the system will not turn back on via the remote control.		
		Enable the wake from USB option in the system BIOS. For information on accessing the system BIOS, see your Owner's Manual.

Troubleshooting

Common Problems and Solutions

Cursor Control Issues

Problem	Cause	Solution
The text "NO LINK" is displayed on the Display screen.	The remote control and computer are not connected.	Connect the Ultra R4000 Remote with your computer.
		
The text "NO SERVICE" is displayed on the Display screen.	<p>There may be radio interference near the computer.</p> <p>The remote control is out of range with the computer.</p>	<p>Move any electronic devices away from PC (i.e., speakers, radio, etc.).</p> <p>Place the remote control closer to the computer.</p>
		
The text on the Display Screen is in English (if applicable).	All text in the remote control Display screens will be in English until a successful connection to the computer has been made.	Connect the Ultra R4000 Motion-Sensing Remote with your computer.

Remote Code List

TV Brand	Code
Digital TV	
Zenith	1261
