

# **SECTION 4**

## **USER'S MANUAL**

The following statement will be placed in the front of the users manual:

***Notice to users/installers using the 24 dBi parabolic dish antenna in conjunction with the WIT2410 module.*** FCC rules limit the use of this antenna, when connected to the WIT2410 module, to point-to-point applications only. It is the responsibility of the installer to ensure that the system is prohibited from being used in point-to-multipoint applications, omnidirectional applications, and applications where there are multiple co-located intentional radiators transmitting the same information. Any other mode of operation using this antenna is forbidden.

In order to meet FCC's MPE requirements, Cirronet Corporation will add the following statements to the users manual

***Information to user/installer regarding FCC's Maximum Permissible Exposure (MPE) limits.*** The field strength radiated by any approved antennas, when connected to a transmitting WIT2410 module, may exceed FCC mandated RF exposure limits. FCC rules require professional installation of these antennas in such a way that the general public will not be closer than 26 cm from the radiating aperture of any of these antennas. End users of these systems must also be informed that RF exposure limits may be exceeded if personnel come closer than 26 cm to the apertures of any of these antennas.
