Layout guide of RF trace for the u.FL antenna connector

- Must copy the RF traces of the DXF file on the board completely. Allowance to inaccuracy of trace width is Typ. +/-0.025mm (1mil). Typical width should be read from the DXF file.
- Stack height between the standard GND layer and the RF trace layer must be 235um (Typ.) Allowance to inaccuracy of stack height is +/-0.025mm (1mil).
- Passive components must be placed on the same location as the DXF file shows and also same values must be used as the left figure.
- Keep out more than 400um under the U.FL/MHF connectors. Ask to connector vendor in detail.
