INTRODUCTION

Thank you for choosing the NVIDIA® SHIELD™ Tablet.

Your NVIDIA device is powered by the NVIDIA Tegra K1 mobile processor and the Google Android operating system. The included apps take full advantage of the NVIDIA Tegra K1's Kepler graphics core.

Your device also comes with several additional apps so you can get started right away -- surf the web, check your e-mail, take pictures, play games, and more.

NVIDIA Apps

DirectStylus Launcher

The DirectStylus Launcher provides quick access to apps that work well with a stylus. For more information, see [How to Use the Stylus](#).

NVIDIA Dabblers

NVIDIA® Dabblers™ is a drawing and painting app that provides watercolor, oil painting, and sketching capabilities. For more information, see [How to Use NVIDIA Dabblers](#).

NVIDIA Lasso Capture

NVIDIA® Lasso Capture provides a quick and easy way to take screenshots of all or part of your screen. You can also annotate and share the captures.

For more information, see [How to Use NVIDIA Lasso Capture](#).

NVIDIA TegraZone

NVIDIA® TegraZone™ is the place to find Android and PC games that are optimized for Tegra-powered devices, providing a console-quality gaming experience wherever you are. Read professional game reviews and view high-resolution screenshots, HD

videos, and behind-the-scenes footage. For more information, see [How to Find Games and Gaming News](#).

Additional Apps

Adobe Reader by Adobe

Adobe Reader allows you to view and annotate PDF files on your device. To learn more, visit [Adobe Reader](#) in the Google Play store.

Camera Awesome by SmugMug

Camera Awesome provides slow-motion video, enhanced HDR, and integrated stylus support in addition to a number of shooting and editing features. To learn more, visit [Camera Awesome](#) in the Google Play store.

ES File Explorer by ES APP Group

ES File Explorer is a file and application manager. Kill tasks, manage downloads, and store files in the cloud. ES File Explorer also allows you to access your media on other Android devices and computers. To learn more, visit [es File Explorer](#) in the Google Play store.

Evernote by Evernote Corporation

Evernote helps you remember things across all of your devices. Your notes, images, voice reminders, and lists are all searchable wherever you are, from any device. To learn more, visit [Evernote](#) in the Google Play store.

JusWrite by Plackal Tech

JusWrite is a handwriting-friendly organizational app. Use your stylus to write lists by hand. You can categorize and prioritize your lists, mark list items complete, and more. To learn more, visit [JusWrite](#) in the Google Play store.

Write by Stylus Labs

Write is a word processor for handwriting. Use your stylus to write, edit, sketch, organize, and bookmark handwritten documents on your tablet. To learn more, visit [Write](#) in the Google Play store.

This guide includes instructions and information about the NVIDIA features and apps that come with your NVIDIA device. In cases where there are multiple ways to accomplish a task, this document describes the most common procedure.

For help with the Android OS, please visit Google's support website at <http://support.google.com/android/>.

Google provides help for Android OS features and for Google apps such as Gmail, Google Keyboard, Google Plus, Google Play, Chrome, and YouTube.

For help with pre-installed and third-party apps, please visit the app's support website. Most apps include a Help button or an About button that provides a link to the app's support website.

The box includes one SHIELD tablet with DirectStylus™, one USB charging cable, and one Safety Guide.

Your device should arrive with at least a 50 percent charge in the battery. However, if the battery levels are low or empty, we recommend that you charge your device for 2 hours before you begin the setup process.

How to Charge Your SHIELD Device

1. Plug the micro-USB end of the USB cable into the micro-USB slot of the device.
2. Plug the standard USB end of the USB cable into a USB power source, such as an AC adapter or a computer.

NOTE You may use the device while the device is plugged into your computer or a power outlet. However, when the device is in use, the charging time is extended.

[Back to Top](#)

How to Turn On Your Tablet

Press and hold the **Power** button until the screen turns on, and then release the button. It may take three or four seconds for the screen to turn on.

[Back to Top](#)

How to Use the Touchscreen

Use your fingertip or the stylus to perform these touchscreen gestures.

Tap	Tap an icon to perform an action. For example, tap the Maps icon to open Google Maps.
Double-tap	Tap twice quickly. Use double-tap to zoom a photo, webpage, map, or other content. Double-tap again to return to the original size. Not all apps support double-tap.
Tap and hold	Touch an icon and hold until the action occurs. For example, on the Home screen, touch an app icon until all of the icons begin to wiggle.
Drag	Touch and hold, and then move your finger to drag. For example, on the Home screen, touch an app icon until all of the icons begin to wiggle. Drag your finger to move the app icon to another area of the screen. When you lift your finger off the screen, the icon stays in its new position.
Swipe	Swipe your finger up, down, or across to move through lists, screens, photos, and other content. Do not pause while swiping. A pause may change the action from a swipe to a drag.
Pinch	Place two fingers on the screen, a few inches apart. Move the fingers together to zoom out. Not all apps support pinch.
Spread	Place two fingers on the screen, close together. Move the fingers apart to zoom in. Not all apps support spread.

How to Complete NVIDIA Setup

Turn on your device. Follow the prompts to select a language and to accept the NVIDIA Software License Agreement, Privacy Policy, and Tegra Experience Terms

of Service. For more information about these agreements and policies, see [SHIELD Legal](#).

[Back to Top](#)

How to Complete Android Setup

After you complete the NVIDIA setup process, the Android setup process begins automatically. Android prompts you to connect to Wi-Fi, enter your Google account, and set your initial preferences for location services and other features. You may change these preferences later in **Settings**. You must accept the Google terms of service.

NOTE If you do not already have a Google account, you can create one during the set up process. If you have multiple Google accounts, you can add other accounts later in **Settings**.

You may use your NVIDIA device without signing in to a Google account. However, you must have a Google account to use Google mobile services.

Your Google account is the e-mail address and password that you use to log into Gmail, YouTube, Google Drive, and other Google services.

Your Google account enables the following features:

- Synchronize and back up your e-mail, calendar events, contacts, messages, and other data across devices.
- Use Google Play to purchase and access movies, TV shows, books, music, magazines, and apps.
- Connect to Google Wallet.
- Secure your personal data.

How to Turn Off Your Tablet

1. Press and hold the **Power** button for three seconds. The device control panel opens.
2. Tap the **Power Off** icon.

NOTE You can also hold the power button for 4 seconds to turn off the device.

[Back to Top](#)

How to Restart Your Tablet

1. Press and hold the **Power** button for three seconds. The device control panel opens.
2. Tap the **Restart** icon.

3. At the prompt, tap **Restart**.

NOTE You can also hold the power button for 12 seconds to restart the device.

MANAGE YOUR TABLET

Your NVIDIA device supports standard Android navigation, such as the Notification shade and the Favorites bar.

This guide includes instructions for the most common navigation elements. Most of the elements are standard with the Android operating system.

For help with the Android OS, please visit Google's support website at <http://support.google.com/android/>.

Navigation Overview

1	Notification bar. Notification icons show that you have new e-mail, calendar events, alarms, and other notifications. Swipe down to view details in the Notification shade.
2	System bar. System icons show the battery level, Wi-Fi signal strength, battery level, Bluetooth connectivity, and other statuses. For more information, see How to View Device Status . Swipe down from the System bar to view the Quick Settings shade. For more information, see How to Use Quick Settings .

3	Favorites. The Favorites tray provides quick access to up to six apps. The Favorites tray is visible on all Home pages. For more information, see <u>Organizing Your Apps</u> .
4	<p>Navigation bar. These icons provide common navigation functions, such as return to the previous screen, open the main Home screen, and view recently opened apps.</p> <p> Back. Tap to return to the previous screen.</p> <p> Home. Tap to return to the main Home screen.</p> <p> Recents. Tap to view apps that are currently open, in order of recent use.</p>

NOTE If the Navigation bar is hidden, swipe up from the bottom of the screen to open it. Some apps hide the Navigation bar to provide you with a full-screen experience. The Navigation bar also hides after a period of disuse.

Your device scans automatically for available Wi-Fi networks and connects to known networks when you are within range.

The Android operating system provides several options for connecting to Wi-Fi. This section describes the most common options.

For help with the Android OS, please visit Google's support website at <http://support.google.com/android/>.

How to Connect to Wi-Fi

1. Go to **Settings > Wireless & Networks > Wi-Fi**. Wi-Fi settings are also available on the Quick Settings shade. For more information, see How to Use Quick Settings.

2. If Wi-Fi is set to **OFF**, tap the **ON/OFF**  switch to turn it on.

When Wi-Fi is on, the **ON/OFF** switch shows **ON** .

3. Tap **Wi-Fi**. The Wi-Fi control panel shows the wireless networks that are in range and indicates their signal strength. The control panel also shows any wireless networks that your device has connected to in the past. If you are already connected to Wi-Fi, the name and signal strength of the current Wi-Fi network are shown.
4. In the Wi-Fi control panel, select the network that you want to connect to.
5. If prompted, enter the password and tap **Connect**.

[Back to Top](#)

How to Connect Through Wi-Fi Protected Setup

1. Go to **Settings > Wireless & Networks > Wi-Fi**.
2. If Wi-Fi is set to **OFF**, tap the **ON/OFF**  switch to turn it on.
When Wi-Fi is on, the **ON/OFF** switch shows **ON** .
3. Tap **Wi-Fi**.
4. Tap the **Wi-Fi Protected Setup** icon .
5. When prompted, press the **Wi-Fi Protected Setup** button on your router.

[Back to Top](#)

How to Scan for Available Wi-Fi Networks

1. Go to **Settings > Wireless & Networks > Wi-Fi**.
2. If Wi-Fi is set to **OFF**, tap the **ON/OFF**  switch to turn it on.
When Wi-Fi is on, the **ON/OFF** switch shows **ON** .
3. Tap **Wi-Fi**.
4. In the Wi-Fi control panel, tap the menu  icon. The menu opens.
5. Tap **Scan**. A list of available networks appears.

[Back to Top](#)

How to Remove a Wi-Fi Network Connection

When you remove a Wi-Fi network connection, the network may still appear in the list if you are within signal range. To connect to the network again, tap the network.

1. Go to **Settings > Wireless & Networks > Wi-Fi**.
2. If Wi-Fi is set to **OFF**, tap the **ON/OFF**  switch to turn it on.
When Wi-Fi is on, the **ON/OFF** switch shows **ON** .
3. Tap **Wi-Fi**.
4. In the Wi-Fi control panel, tap the network that you want to remove. The network window opens.
5. Tap **Forget**.

[Back to Top](#)

Your tablet includes the NVIDIA DirectStylus™. This stylus enables precise control of handwriting, drawing, and touchscreen games that require pinpoint accuracy.

The stylus has a chisel tip, similar to the tip of a highlighter pen. For fine lines, touch with the pointed tip. For thick lines, touch with the full width of the chisel.

NOTE Some apps do not support variable line thickness. In those apps, the stylus produces the same line thickness, regardless of which part of the tip you use.

When the tablet is in stylus-only mode, the touchscreen only responds to input from the stylus. Touches from your finger or palm are ignored.

[Back to Top](#)

Stylus Behavior

How to Enable Access to Stylus-Only Mode

Before you can use stylus-only mode, you must enable access in the settings.

1. Go to **Settings > DirectStylus**.
2. Under Stylus-Only Mode and Lasso Capture, select the **Quick access via navigation bar** check box.

[Back to Top](#)

How to Use Stylus-Only Mode

Before you can use stylus-only mode, you must enable access in the settings. For more information, see [How to Enable Access to Stylus-Only Mode](#).

1. Remove the stylus from its holder.

2. In the Navigation bar, tap the **Stylus-Only Mode** icon.
3. To return to Touch Mode, tap the **Stylus-Only Mode** icon again.

NOTE Your NVIDIA device automatically disables stylus-only mode when you return the stylus to its holder. The device also disables stylus-only mode when you press the power button quickly to put the device to sleep. This allows you to continue using the touchscreen even if you left the device in stylus mode but do not have the stylus with you.

[Back to Top](#)

How to Optimize Palm Rejection for Your Writing Style

Your tablet includes good palm rejection technology. With palm rejection, the touch screen responds only to the stylus while you are writing, even if you rest your hand on the screen while you write. When the stylus is not touching the screen, the touchscreen responds normally to your finger.

If your palm is sometimes misidentified when you reposition your hand on the screen, then you can change the DirectStylus pen-to-touch delay to optimize palm rejection for your writing style. Pen-to-touch delay temporarily suppresses non-stylus touches during and after stylus input. The default delay of 0.5 seconds works well for most users.

If you do a lot of stylus interactions with your palm on the screen, select a longer delay. If you do not put your palm on the screen and you switch quickly between stylus and finger inputs, select a shorter delay.

1. Go to **Settings > DirectStylus**.
2. Tap **Set timer to activate finger touch after pen use**.
 - To remove any delay, tap **Disable touch only during pen use**.
 - To add a delay, tap one of the delay options.

[Back to Top](#)

How to Adjust the Stylus for Left-Handed Use

Left-handed users tend to place their palm on the left side of the screen. In left-handed mode, the palm rejection algorithm rejects stray touch inputs from the left side of the screen.

1. Go to **Settings > DirectStylus**.
2. Under **Handedness**, tap **Left-handed** to select the check box. To return to right-handed mode, tap again to clear the check box.

[Back to Top](#)

How to Show or Hide the Draw Cursor

The draw cursor shows when the stylus touches the screen and provides precision visual feedback.

1. Go to **Settings > DirectStylus**.
2. Under **Cursor**, tap **Show draw cursor** to select the check box. To hide the draw cursor, tap again to clear the check box.

[Back to Top](#)

Stylus Apps

How to Use DirectStylus Launcher for Quick Access to Apps

The DirectStylus Launcher provides quick access to a subset of your apps. When DirectStylus Launcher opens, tap any app icon to open the app.

You may add or remove apps from the DirectStylus launcher at any time.

1. Open **DirectStylus Launcher**.

2. Tap the **App Selection** icon . The selection window opens.
3. Tap the app icons to select or clear the check boxes.
4. Tap **OK** to add selected apps and remove cleared apps.

[Back to Top](#)

How to Open DirectStylus Launcher Automatically When the Stylus Is Removed

1. Go to **Settings > DirectStylus**.
2. Tap **Default action when DirectStylus removed**.
3. Tap **Open DirectStylus Launcher**.
4. Tap **OK**.

[Back to Top](#)

How to Open an App Automatically When the Stylus Is Removed

You can select a single app to open automatically when the stylus is removed.

1. Go to **Settings > DirectStylus**.
2. Tap **Default action when DirectStylus removed**.
3. Tap **Launch App**.
4. Tap the app.
5. Tap **OK**.

[Back to Top](#)

How to Prevent Apps from Opening Automatically When the Stylus Is Removed

Follow these steps to prevent any app from opening when the stylus is removed.

1. Go to **Settings > DirectStylus**.
2. Tap **Default action when DirectStylus removed**.
3. Tap **None**.

[Back to Top](#)

You can customize what you see, what you hear, and how you interact with your device. Set your personal preferences for notification sounds, screen brightness, wallpaper images, font size, power saving mode, and other settings. Settings can be changed at any time.

The Android operating system provides several options for customizing your device. This section describes the most common options.

For help with the Android OS, please visit Google's support website at <http://support.google.com/android/>.

NOTE After you view or change any settings, tap **Back**  to return to the previous screen or tap **Home**  to return to the Home screen.

[Back to Top](#)

How to Open Settings

1. Tap **All Apps** .

2. Tap **Settings** .

You can also use the Quick Settings. Swipe down from the System bar and then tap **Settings**. For more information, see [Use Quick Settings](#).

[Back to Top](#)

Sounds

How to Turn Touch Sounds On and Off

Touch sounds provide audio feedback when you use the touchscreen.

1. Go to **Settings > Device > Sound**.
2. Select the **Touch Sounds** check box to turn touch sounds on, or clear the check box to turn touch sounds off.

[Back to Top](#)

Display

How to Adjust Display Brightness

1. Go to **Settings > Device > Display**.
2. Tap **Brightness**. The Brightness control panel opens.
3. Swipe the slider to dim or brighten the display.

NOTE To adjust brightness automatically, tap **Auto**. Your device senses the amount of light in the immediate environment and adjusts the display brightness in response.

[Back to Top](#)

How to Change the Wallpaper

The wallpaper is an image or pattern that shows in the background of the Home screen pages.

1. Go to **Settings > Device > Display**.
2. Tap **Wallpaper**. The Wallpaper control panel opens.
3. Select the type of wallpaper that you want.
 - **Gallery**. Select from drawings, photos, or other images in the Gallery.
 - **Live Wallpapers**. Select from animated images.
 - **Photos**. Select from your photos.
 - **Wallpapers**. Select from still images.
4. Tap the image you want.
5. Tap **Set Wallpaper**.

[Back to Top](#)

How to Change the System Font Size

The font-size setting changes your device's system font size. However, apps may define their own font sizes. Fonts displayed in apps may not conform to the font-size setting.

1. Go to **Settings > Device > Display**.
2. Tap **Font Size**. The Font Size control panel opens.
3. Tap a font size. The control panel closes and the device applies the new font size immediately.

[Back to Top](#)

How to Change the Color Correction Preset

Your NVIDIA device supports sRGB and Native color presets. sRGB provides a more accurate color representation for photographs. Native provides brighter colors and a greater range of color.

1. Go to **Settings > Device > Display**.
2. Tap **Color Correction Preset**. The Color Correction Preset control panel opens.
3. Tap a color correction preset. The Color Correction Preset control panel closes and the device applies the preset immediately.

[Back to Top](#)

Power Saving

How to Change the Sleep-Mode Interval

Sleep mode conserves power by turning off the display after a period of inactivity. Sleep mode also activates the screen lock security, if any. For more information, see [Secure Your Device](#).

1. Go to **Settings > Device > Display**.
2. Tap **Sleep**. The Sleep control panel opens.
3. Tap the interval of time that you want the display to remain on when there is no activity. At the end of this interval, your device automatically enters sleep mode.

[Back to Top](#)

How to Manage Processor Performance

1. Go to **Settings > Power Saving**.
2. Tap **Processor**. The Processor status screen opens. This screen shows the selected power saving mode, the cores allowed by the mode, and whether a frequency limit is enabled.
3. Tap **Processor**. The Processor control panel opens.
4. Tap a power saving mode.
 - **Maximize Performance**. This mode increases processor performance. This option drains the battery faster than the other options.
 - **Optimized**. This mode provides a balance between performance and saving power.
 - **Save Battery**. This mode conserves power by limiting the number of processor cores and setting a frequency limit.

[Back to Top](#)

How to Reduce Background App Power Usage

Some apps use power even when your device is not in use. For example, a weather app might download information every 30 minutes even when the app is closed. You can conserve battery power by reducing app activity for apps you do not use often.

1. Go to **Settings > Power Saving**.
2. Tap **nSaver**.
3. In the list of apps, tap the **ON/OFF** switch to enable or disable nSaver for that app.
 - To turn nSaver on or off for all apps, tap .
 - To sort the app list, tap  and select a sort preference.

[Back to Top](#)

The Android operating system provides several options for organizing your apps and widgets. This section describes the most common options.

For help with the Android OS, please visit Google's support website at <http://support.google.com/android/>.

Home Screen

The Home screen is a place to organize apps and to display widgets. To return to the main Home screen at any time, tap the **Home** icon  in the Navigation bar.

NOTE If the Navigation Menu is not visible, swipe up from the bottom of the screen to open it.

Your NVIDIA device supports multiple Home screen pages. When you add more apps and widgets than can fit on the default Home screen page, additional pages are created automatically.

Console Mode transforms your SHIELD tablet into a full gaming and entertainment experience on your HDTV. In Console Mode, you can do everything that you would normally do on your device. Your TV provides the display, and you navigate with a keyboard and mouse or with a game controller. Play Android games, browse the web, check your e-mail, and watch your favorite movies.

NOTE When in Console Mode, the apps, menu, browser, and optimized Android games play back at native 1080p at up to 60 frames per second (fps). However, some Android games are not optimized for 1080p at 60fps playback.

Console Mode requires the following hardware:

- **Cable.** A Mini-HDMI to HDMI cable.
- **HDTV.** An HDTV with HDMI support.
- **Controller.** A Bluetooth wireless controller or keyboard and mouse. NVIDIA recommends the NVIDIA SHIELD Wireless Controller or the Nyko PlayPad Pro.

Bluetooth Accessories

How to Pair a Bluetooth Accessory with Your Device

The first time you use a Bluetooth accessory, you must pair the accessory and the device. You can also follow these steps to pair your NVIDIA device with another Bluetooth device such as a smart phone.

NOTE The Google Keyboard on the touchscreen is not active when a Bluetooth keyboard is paired with your device.

1. Follow the instructions from your accessory's manufacturer to put the accessory into Pair mode.
2. On your NVIDIA device, go to **Settings > Wireless & Networks**.
3. Tap **Bluetooth**. The Bluetooth control panel opens.
4. If Bluetooth is off, tap the **ON/OFF** switch to turn on Bluetooth.
5. If your NVIDIA device is visible only to paired devices, tap the device name to enable visibility. Your device searches for nearby Bluetooth accessories.
6. When the Bluetooth accessory appears in the list of **Available Devices**, tap the accessory's name to pair it. If the pairing is successful, the accessory now appears on the list of **Paired Devices**.

NOTE Some devices require a passkey before pairing. In these cases, your SHIELD device prompts you to verify that the passkey is appearing on your other device. Respond to any security prompt on that device. Then on your SHIELD device, tap **Pair** to complete the pairing or **Cancel** to cancel the pairing.

[Back to Top](#)

How to Disconnect a Bluetooth Accessory from Your Device

Disconnecting the Bluetooth accessory does not permanently cancel the pairing. The accessory remains on the list of Available Devices with a status of Disconnected.
