

Dap2 Installation Guide

(Front)

One time easy connection for headsets, mic, speakers, and now **USB** applications

(Back)

DAP II

One time easy connection for headsets, Speakers, Mic, and **USB** applications

What is DAP II?

DAP II is an external device that expands on the previous DAP allowing for the convenient installation of a headset, speakers, microphone and now **USB** applications including digital cameras, external hard drives, scanners, etc. Created for PC users, DAP eliminates the continuous need to manually hook up or disconnect the aforementioned devices.

Features

Four inputs: (1) Headset (2) Microphone (3) Speakers (4) **USB**
Two central buttons left center and right center
Left center switches between Headset and Speakers:
Click once; switch from headset to speakers
Click twice; switch back to headset
Right center activates **SRS chip**, which provides for sound enhancement via headset.

Note: Center buttons have no effect on the microphone nor the **USB** port. DAP II's design allows for uninterrupted use of the microphone as well as any **USB** applications

Installation

DAP II can be installed in a matter of moments. From the rear of the PC, DAP is connected via the sound card port one time and one time only.

FCC

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution : Any changes or modifications in construction of this device which are not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment

Note : This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
