HotWire 5030 POTS Splitter Customer Premises
Installation Instructions

Document Number 5030-A2-GN10-10

October 1997

Before You Begin

Verify that:

❏ The local loop POTS service is connected to the POTS/DSL network at the punchdown block or network interface device (NID).

❏ New or existing unshielded twisted-pair wiring (CAT3 or better) is used with this product. The CAT3 wiring must meet EIA/TIA-568 specifications with 24 AWG (.5 mm) or 26 AWG (.4 mm).

For RADSL (Rate Adaptive Digital Subscriber Line) RTU installation information, refer to the appropriate RTU document:

Document Number	Document Title
5216-A2-GN10	*HotWire 5216 Remote Termination Unit (RTU) Customer Premises Installation Instructions*
5246-A2-GN10	*HotWire 5246 Remote Termination Unit (RTU) Customer Premises Installation Instructions*
5446-A2-GN10	*HotWire 5446 Remote Termination Unit (RTU) Customer Premises Installation Instructions*

Package Checklist

Verify that your package contains the following:

❏ POTS splitter and housing with closure screw

❏ Small plastic bag with two 8–15 x 1″ Type A combination Phillips/slotted-head screws and two 1″ plastic anchors

❏ Warranty card

Tools Required

❏ Flat-blade screwdriver to tighten terminal screws

❏ 3/8″ nut driver to close housing securely

❏ Phillips-head or combination Phillips/slotted-head screwdriver to mount the housing

❏ Drill and 3/16″ drill bit to mount the housing in cement or cinder block

What Does the POTS Splitter Do?

The POTS splitter and HotWire Remote Termination Unit (RTU) are components in the RADSL Access System. This system provides high-speed Internet or corporate LAN access over traditional twisted-pair copper telephone wiring.

The POTS splitter filters out the DSL signal and allows the POTS frequencies to pass through. The RADSL RTU and telephone can function simultaneously over the same pair of copper wires at the customer premises when a POTS splitter is used at both ends of the local loop.

Copper pairs run from the central office to the customer premises to create the local loop. The local loop terminates on the customer premises at the demarcation point in a punchdown block or NID.

Wiring is connected from the demarcation point to the POTS splitter and to the DSL jack. Wiring also connects the demarcation point to an RJ11 wall jack for DSL access by the RTU.

Mounting the POTS Splitter Housing

The POTS splitter can be placed:

- On the outside of the structure near the NID or punchdown block, or

- Inside the building.

When mounted outside, the POTS splitter must be installed at or above the height of the NID, and should be a minimum of three feet above ground.

At the front of the housing, align the housing to open from the right with the rubber grommet for cable access facing downward. Place the housing upright as shown. Use a Phillips-head or combination Phillips/slotted-head screwdriver and the screws included in the package.

If mounting to:

POTS Splitter Housing

- Cement or cinder block: use a drill and and 3/16″ masonry drill bit to install the two plastic anchors first. Then, install the two 8–15 x 1″ Type A screws.

- Wood: install only the two 8–15 x 1″ Type A screws and discard the plastic anchors.

97-15247
Preparing the POTS Splitter

▶ Procedure

1. Unscrew the closure screw and open the housing by pressing on the lever on the right above the closure screw.

2. Remove the rubber grommet at the base of the POTS splitter.

3. Make a small diagonal cut in the rubber grommet to feed the wiring through.

4. Replace the rubber grommet at the base of the POTS splitter.

Installing the POTS Splitter Wiring

The local loop ends at the punchdown block or NID. Wiring must be connected from the customer premises (CP) side of the punchdown block or NID to the DSL jack. Typically, the punchdown block is installed in commercial locations and the NID is installed in residential locations.

The following is an example of a punchdown block.

Punchdown Block

97-15349
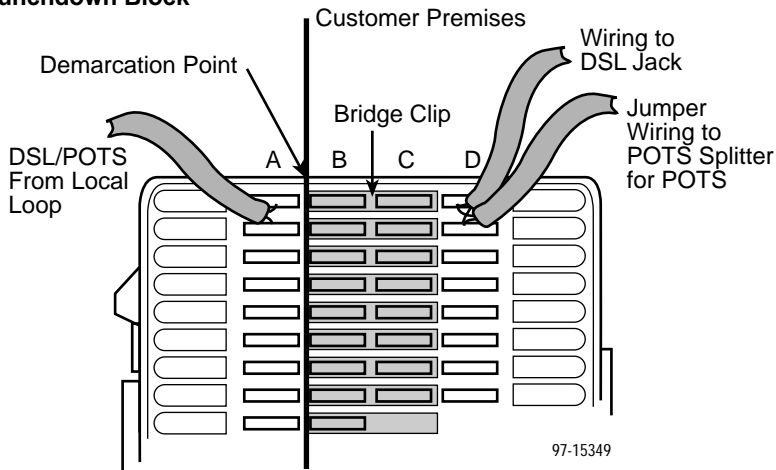

▶ Procedure

1. Access the punchdown block or NID.

2. Disconnect the POTS access wiring from the local loop.

> ⚠️ **WARNING:**
>
> **Do not continue unless the DSL access line from the local loop has been disconnected at the NID or punchdown block. Refer to _Important Safety Instructions_, page 10.**

Green (T1) and Red (R1) are the standard pair wiring colors used in the next two NID illustrations for Tip (T1) and Ring (R1). Your wiring may differ.

Telephone Network Interface Device (NID)
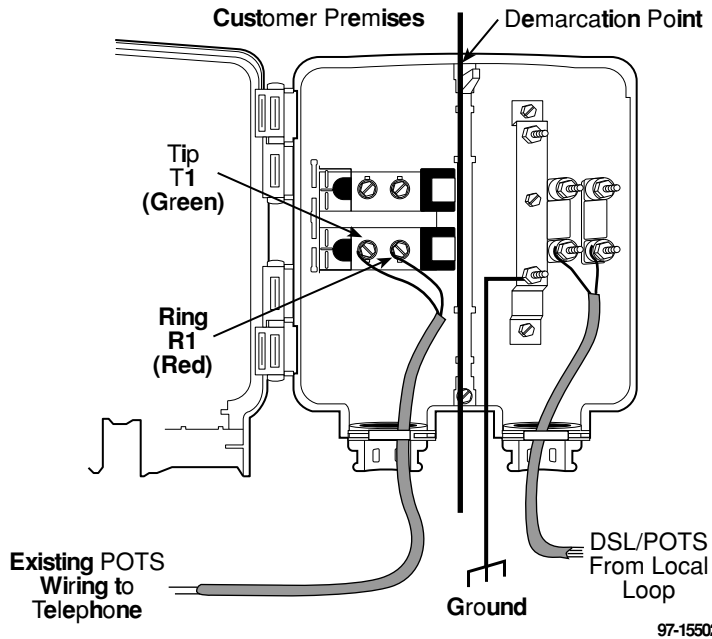

3. Disconnect the POTS wiring to the telephone from the T1/R1 connectors on the customer premises side.

4. Feed the disconnected POTS wiring through the POTS splitter rubber grommet access opening created at the base of the POTS splitter. Connect the wiring to the right side labeled PHONE. Attach green to P3 and red to P4. Tighten both terminal screws with a flat-blade screwdriver.
POTS Splitter

Reconnecting to the Local Loop

▶ **Procedure**

1. Feed new jumper wiring through the POTS splitter rubber grommet. Remove the insulation at the end of the wiring.

2. On the left side labeled LINE, attach red to terminal screw P1 and green to terminal screw P2. Tighten both terminal screws with a flat-blade screwdriver.

3. Locate the T1/R1 connectors on the customer premises side of the punchdown block or NID where the existing POTS wiring was removed in Step 3 on page 6. Attach the jumper pair from P1/P2 labeled LINE in the POTS splitter to the T1/R1 connectors.

DSL Access Wiring

▶ Procedure

1. Attach new wiring to the T1/R1 connectors that will go to the DSL jack from the punchdown block or NID.

2. Tighten the T1/R1 terminal screws with a flat-blade screwdriver.

97-15485
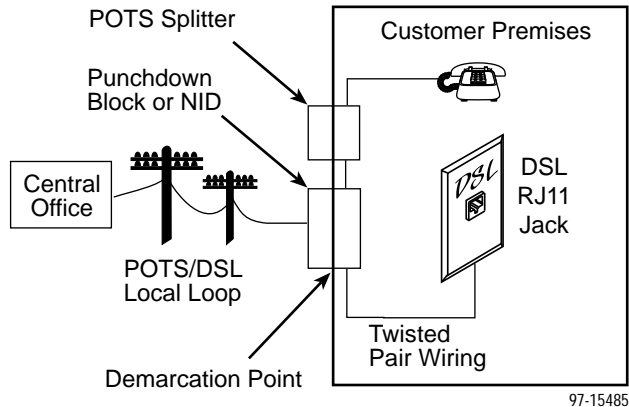

You are now ready to run the specified wiring to the RTU location and install a DSL wall jack. To install an RTU, refer to the *HotWire 5446 Remote Termination Unit (RTU) Customer Premises Installation Instructions.*

If the RTU is not being installed at this time, reconnect the local loop wiring at the demarcation point.

5030 POTS Splitter Technical Specifications

Item	Specification*
Height x Width x Depth	6.65″ x 5.44″ x 2.25″ (16.89 cm x 13.82 cm x 5.72 cm)
Weight	10.2 ounces (289.2 grams)
Approvals FCC Part 68 Safety Certifications	 Refer to the equipment's label for Registration Number. Refer to the equipment's label for approvals on product.
Physical Environment Operating temperature Storage temperature Relative humidity Shock and vibration	 $-40°$ F to $140°$ F ($-40°$ C to $60°$ C) $-40°$ F to $158°$ F ($-40°$ C to $70°$ C) 5% to 95% (noncondensing) Withstands normal shipping and handling
Interface Connectors	Four terminal screws
* Technical Specifications subject to change without notification.	

Important Safety Instructions

1. Read and follow all warning notices and instructions marked on the product or included in the manual.

2. This product is intended to be connected to Listed/Certified telephone wiring with a minimum of 24 AWG (.5 mm) behind a Listed/Certified primary protector.

3. Do not attempt to install or service this product yourself, as opening or removing covers may expose you to dangerous high-voltage points or other risks. Refer all installation and servicing to qualified service personnel.

4. When installed in the final configuration, the product must comply with the applicable Safety Standards and regulatory requirements of the country in which it is installed. If necessary, consult with the appropriate regulatory agencies and inspection authorities to ensure compliance.

5. In addition, since the equipment is to be used with telecommunications circuits, take the following precautions:

   — Never install telephone wiring during a lightning storm.

   — Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.

   — Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.

   — Use caution when installing or modifying telephone lines.

   — Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.

   — Do not use the telephone to report a gas leak in the vicinity of the leak.

Notice to Users of the Telephone Network

This equipment complies with Part 68 of the FCC rules. On the inside of the equipment's enclosure is a label that contains, among other information, the FCC registration number and ringer equivalence number (REN) for this equipment. If requested, this information must be provided to the telephone company.

This equipment is intended to be hard wired to the telephone line's primary protector and to the inside building wiring. If the primary protector utilizes an RJ11C jack for the inside building wiring connection, connection to the protector must be made using a Part 68-compliant telephone line cord, spade terminal to RJ11C plug.

The REN is used to determine the quantity of devices which may be connected to the telephone line. Excessive RENs on the telephone line may result in the devices not ringing in response to an incoming call. In most, but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company.

If the Model 5030 Telephone Line Filter causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice is not practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens, the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

If trouble is experienced with the Telephone Line Filter, for repair or warranty information, please refer to *Warranty, Sales, and Service Information*.

No repairs may be performed by the end user.

The equipment can not be used on public coin phone service provided by the telephone company. Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

Warranty, Sales, and Service Information

Contact your sales or service representative directly for any help needed. For additional information concerning warranty, sales, service, repair, installation, documentation, or training, use one of the following methods:
