Before You Start

We've designed the Oster® Deluxe Bread and DoughMaker to be easy to use. But, like any kitchen appliance, it requires proper use and handling.

Using Your Bread Maker Safely

Before Use

1. Read and keep all instructions.
2. Make sure to remove all foreign matter from the baking pan.
3. Plug the Bread Maker into a properly wired outlet.

Where to Use

1. Use only on a stable, heat-resistant surface.
2. Do not use the Bread Maker where it will be exposed to direct sunlight or other heat sources, such as a stove or oven.
3. Place the unit at least two inches away from walls. If you do not, walls may become discolored.

While in Use

Keep the Bread Maker out of the reach of children -- it's hot!

1. The temperature is very hot during operation. Be careful to keep your hands and face away from the unit.
2. Do not open the lid or remove the bread pan during operation.
3. Do not place anything on the Bread Maker lid. Do not cover vents.
4. If any buttons are accidentally touched during operation, baking may stop.

After Use

1. Use oven mitts or a pot holder when taking out the bread pan after baking.
2. Make sure to disconnect the power by unplugging the unit. Allow the Bread Maker to cool down before storing.
3. Read instructions before cleaning. Do not immerse the unit in water. This will cause electric shock and/or damage to the unit.

Important Safeguards

Read and Save These Instructions

When using electrical appliances, basic safety precautions should always be followed including the following:

1. Read all instructions, product labels, and warnings before using the Bread Maker.
2. Do not touch hot surfaces. Always use oven mitts when handling hot materials, and allow metal parts to cool before cleaning. Allow the Bread Maker to cool thoroughly before putting in or taking off parts.
3. When unit is not in use and before cleaning, unplug the Bread Maker from wall outlet.
4. To protect against risk of electrical shock, do not immerse the appliance or plugs in water or other liquids.
5. Close supervision is always necessary when this or any appliance is used by or near children, or incapacitated persons.
6. Do not allow anything to rest on the power cord. Do not plug in cord where people may walk or trip on it.
7. Do not operate this or any appliance with a frayed or damaged cord or plug or after the appliance malfunctions or is dropped or has been damaged in any manner. Return appliance to the nearest authorized service facility for examination, repair or electrical or mechanical adjustment.
8. Do not let the cord dangle over the edge of a table or counter or touch hot surfaces. Do not place on an unsteady or cloth-covered surface.
9. Avoid contact with moving parts.
10. Do not use attachments not recommended by the manufacturer; they may cause fire, electric shock or injury.
11. Do not use outdoors or for commercial purposes.
12. Do not place the appliance near a hot gas or electric burner, or in a heated oven.
13. To unplug, press and hold the "STOP" button, grip plug and pull from wall outlet. Never pull on the cord.
14. Use of extension cords: A short power supply cord has been provided to reduce the risk of injury resulting from becoming entangled in or tripping over a longer cord. Extension cords are available from hardware stores and may be used with care. The cord should be arranged so that it will not drape over the counter or table top where it can be pulled by children or tripped over accidentally.
15. Electrical power: If electric circuit is overloaded with other appliances, your Bread Maker may not operate properly. The Bread Maker should be operated on a separate electrical circuit from other operating appliances.
16. Polarized plug: To reduce the risk of electrical shock, this appliance has a polarized plug (one blade is wider than the other). This plug fits a polarized outlet only one way; if the plug does not fit fully into the outlet, reverse the plug. If it still does not fit, contact a qualified electrician. Do not attempt to defeat this safety feature.

This unit is intended for household use only.

A Symphony of Ingredients

Like the instruments in an orchestra, the ingredients in basic bread are very simple: flour, sugar, salt, a liquid (such as water or milk), possibly a fat (such as butter or oil), and yeast. And, like each musical instrument, each ingredient performs a specific job, and each lends a special flavor to the final masterpiece.

That's why it's important to use the right ingredients in exactly the right proportions to ensure you get the most delicious results!

Basic Ingredients

Yeast

Yeast is actually a microscopic plant. Simply stated, without yeast, your bread will not rise. When moistened by a liquid, fed by sugar, and carefully warmed, yeast produces gases which power the dough to rise. If the temperature is too cold, the yeast will not be activated; if it's too warm, it will die. The Oster® Deluxe Bread and Dough Maker takes care of this worry for you by maintaining just the right temperature in the baking chamber at all times. You can use either "active dry yeast", "quick acting", "rapid rise yeast" or one of the new "Bread machine yeasts" in your Oster® Deluxe Bread and Dough Maker. Important: The amount of yeast for Extra Large Loaf recipes may be the same or even less than what is called for in Large recipes. For best results, use yeast amounts as indicated in each recipe.

Sugars

Sugars sweeten the bread, brown the crust, and lend tenderness to the texture. These jobs can be performed by white or brown sugar, molasses, maple or corn syrups, honey, fruits or other sweeteners.

Flour

In order for the bread to rise, the flour has to have a high protein content. You should always use a "bread flour" (for white bread recipes) in your bread maker to get the best results. Do not use all-purpose, cake flour or self-rising flour.

Unlike white bread flour, whole wheat flour contains bran and wheat germ which inhibit rising. Wheat breads therefore tend to be heavier in texture and smaller in size. A lighter larger loaf can be achieved by combining whole wheat flour with white bread flour for wheat bread recipes.

Liquids

When liquids are mixed with the proteins in flour, gluten is formed. Gluten is necessary for rising. Many recipes use dry milk, but other liquids, such as fruit juice, beer, and water work too. It's a delicate balance: A recipe with too much liquid may cause the bread to fall during baking while a recipe with too little liquid will not rise.

Salt

Salt inhibits rising, so be very careful measuring. Ordinary table salt will do.

Fats

Many breads use fats to enhance the flavor and retain moisture. Typically, we use margarine in these recipes, but butter may also be used.

Important Measuring Tips

Because each ingredient plays such a specific role, it is especially important to measure the ingredients exactly to get the best results.

For **dry ingredients**, use a standard measuring spoon or measuring cup -- not a tableware spoon or coffee cup -- and level off. For flour, simply spoon the flour into a measuring cup and level off with a flat kitchen utensil.

For **liquids**, fill a standard measuring spoon or measuring cup to the level indicated. Check your cup measurement by placing the measuring cup on a flat surface.

For **solid fats**, fill a standard measuring spoon or measuring cup to the level indicated and level off with a kitchen utensil.

Last Things Last!

You'll see this tip in several places in this book, but it bears repeating: **Always put the liquids in first, the dry ingredients in next, and the yeast last.** Before adding the yeast, dig a shallow hole in the dry ingredients and place the yeast in the hole so that there's absolutely no contact between the liquids and the yeast. You don't want the yeast to be activated too soon in the process. This is especially important when you're using the Delay Bake option.

The Process Simplified

Mixing, Kneading, Rising,
Baking ...here's a glimpse of
how the Oster® Deluxe Bread
and Dough Maker automatically
does all the steps for you.

Mixing and Kneading

In standard bread baking, the baker mixes the ingredients first by stirring, then by kneading the dough by hand. The Oster® Deluxe Bread and Dough Maker mixes and kneads the dough automatically for you.

Rising

When making bread by hand, the dough is placed in a warm place to rise after mixing so that the yeast can ferment and produce gas. After mixing the dough, the Oster® Deluxe Bread and Dough Maker maintains the optimum temperature for rising during this part of the process.

If you are using the Dough Only cycle, the Oster® Deluxe Bread and Dough Maker will stop at the end of the first rising. You will hear a series of 3 beeps to let you know it's done. The dough can now be removed and shaped - for bagels, pizza or other creations - and placed in your own oven for baking.

Punch Down

Once the dough has risen, the baker will typically "punch down" the dough. This process helps to break apart large, unwanted pockets of air and gas that have developed through rising, giving the bread a more even and appetizing texture. This Oster® Deluxe Bread and Dough Maker handles this process automatically for you by turning on the kneading blade for just the right amount of time.

Second Rise

After it is punched down, the bread bounces back — it rises a second time. Some breads require shorter or longer rising times. For example, wheat breads require a longer rising time because the flour contains bran and wheat germ which inhibit rising. The Oster® Deluxe Bread and Dough Maker regulates the temperature and timing of this second rise automatically for you based on your selection.

Bake

The Oster® Deluxe Bread and Dough Maker automatically regulates baking time and temperature for perfect results every time!

Cool

In standard baking, the baker removes the bread from the pan immediately to keep the crust from turning soggy. We recommend that you do the same with the Oster® Deluxe Bread and Dough Maker, too.

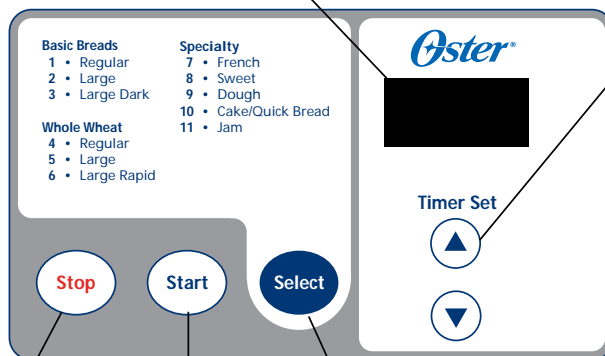

Getting to Know Your Deluxe Bread and Dough Maker

The best way to get there is to use this map. Soon you'll know the electronic bread-baking territory the way you know your own kitchen. In the meantime, here are some easy-to-follow directions to get you started.

The Control Panel

DISPLAY WINDOW -
Indicates the One Digit Number for the selected Bread Setting. Shows the minute-by-minute countdown for the baking cycle.

TIMER SET-
Allows you to set the timer for Delay Bake Function. Has "Up" and "Down" arrows to set time. The arrows move up and down in 10-minute increments.

STOP -
Tells the bread maker to stop everything. Press and hold until you hear the beep to stop operation or cancel incorrect Timer setting.

START-
Tells the bread maker to begin operation.

SELECT -
Press to select desired bread setting and it will automatically set the time needed to complete the baking cycle.

Step-by-Step Directions On How to Use Your Bread Maker

- 1. OPEN THE LID AND REMOVE THE BAKING PAN** by pulling straight up on the handle. It is important to remove the Baking Pan from the unit before putting the ingredients into the pan to avoid accidentally spilling ingredients into the inner case.
- 2. ATTACH THE KNEADING BLADE** onto the shaft inside the Baking Pan by lining up the flat side of the blade with the flat side on the shaft. Make sure the Kneading Blade is placed securely on the shaft.
- 3. MEASURE ALL INGREDIENTS** carefully and accurately. Inaccurate measurement, even if only slightly off, can make a difference in results. Add ingredients into the bread pan in the order they are listed. Yeast is always added last and must not come in contact with any liquid. (Before adding yeast, remember to dig a small hole in the flour so that the yeast doesn't prematurely come into contact with the liquids. This is especially important when you are using the Delay Bake Timer.)
- 4. WIPE WATER AND OTHER SPILLS** from the outside of the pan; then insert the pan firmly into the bottom of the machine, applying pressure to each corner of the pan to make sure it is snapped tightly into the retaining brackets.
- 5. CLOSE THE LID AND PLUG IN THE BREAD MAKER.** You will hear a beep and the LED display window will be blank.
- 6. CHOOSE YOUR BREAD TYPE.** Select the appropriate setting for your recipe (#1 thru 11) by pressing the "SELECT" button on the control panel. Each time "SELECT" is pressed the number in the display window will advance to the next setting.
- 7. PRESS THE "START" BUTTON** once you have selected your bread type. The baking time in hours and minutes will appear in the display. It will count down the remaining bake time in one minute increments until the bread is done. This bread maker has a convenient Viewing Window so that you may watch the progress of the bread as it is mixed, kneaded, and baked. **DO NOT OPEN THE LID DURING THE BAKING CYCLES.**
- 8. WHEN THE BREAD IS DONE.** When the baking time is completed, a signal tone will sound three times and the display window will flash END. Remove the pan using potholders, and take the bread out of the pan by turning the pan upside down and shaking it. If you have difficulty removing the bread from the pan, slide a flat rubber or plastic spatula along the sides of the pan to loosen the loaf. If the kneading paddle remains in the bottom of the loaf, use the end of a plastic utensil to remove it. Once removed from the Bread Pan, it's best to let your bread cool 15 minutes before slicing. Enjoy!
- 9. KEEP WARM CYCLE** automatically begins when the bake time is done. The display will show END for up to 60 minutes after baking is complete and will keep bread warm during that time. At the end of the 60 minutes, the heater will turn off.
Note: You may remove the Baking Pan at any time during the "Keep Warm" cycle. To turn off the "Keep Warm" feature, simply press the "STOP" button and hold it for 3 seconds. "END" will disappear and the display window will be blank. Please Note: Bread is best when removed from bread pan no more than 1 hour after keep warm feature ends. The "Keep Warm" feature is not provided for the dough setting or the Jam/Jelly Setting.
- 10. USING THE TIMER FOR DELAYED COMPLETION** To delay the completion of your bread, use the TIMER. This feature allows you to delay the bake time for up to 12 hours. For example, it lets you set the TIMER at 8 p.m. one evening so that you can wake to fresh bread by 8 a.m. the following morning. **To set the TIMER, follow these instructions:**
NOTE: It is not recommended that you use the "Delayed Completion" function and TIMER with recipes that call for fresh ingredients that might spoil such as eggs, milk, sour cream, or cheese. 1. To set the TIMER, determine when you would like your bread to be finished. For example, if it is 8 p.m. when you place all your ingredients in the Baking Pan and you would like to the aroma of fresh-baked bread at 8 a.m., you will want a total of 12 hours before your bread is complete. Once you have chosen the appropriate setting for your recipe, (for example, if you are doing Sweet Bread, you will push "SELECT" until #8 is showing) you simply set the TIMER to bring it up to your total hours (in this case, 12 hours). 2. Press the "Up" arrow on the control panel and 3:25 (the time setting for #8 setting) will automatically come up in the display window. Continue to press the "Up" arrow until the display reads 12:00. You do not need to mathematically calculate the difference between the setting time (3:25) and the total hours you want (12:00). The machine will automatically adjust to include the setting time. Simply set the TIMER for your total hours. If you pass the 12:00, simply press the "Down" arrow to go back. 3. Once you have selected the time, press START. The colon in the display will flash to indicate the TIMER has been set and the countdown will begin. The TIMER will count down in one-minute increments. When the display reads "END", your bread is complete and the beeper will sound. 4. If you make a mistake while setting the TIMER, press and hold the STOP button for 3 seconds. This will clear the display and you can set the TIMER again.

Tips for the

Gourmet Baker

Last Things Last

You'll see this tip in several places in this book, but it bears repeating: Always put the liquids in first, the dry ingredients in next, and the yeast last (fruits and nuts are added later, after the machine has completed the first knead). Dig a shallow hole in the dry ingredients and place the yeast in the hole so that there's absolutely no contact between the liquids and the yeast. This is especially important when you're using the Delay bake option. You don't want the yeast to be activated too soon in the process!

Placement Counts!

Place dried fruits, vegetables, and dried spices away from the liquid ingredients in the bread pan. If they soak up water, they can undermine the bread's chemistry.

Freshness First

Avoid using perishable ingredients — milk, yogurt, eggs, or cheese — with the Delay Bake function.

Just Wait Fifteen

For best results, wait fifteen minutes before slicing; the bread needs time to cool.

Deep Freeze

To freeze fresh bread, let it cool completely and double-bag in plastic.

Commonly Asked Questions

Why did my bread turn out like lead, resembling a hockey puck?

Perhaps you forgot the yeast (we can all error!) or you used stale yeast, extra salt or sugar or hot liquids that may have killed the yeast and inhibited rising.

Why does my loaf look caved in on top?

Perhaps there was too much liquid or moisture from fruits or vegetables or cheese. It may have risen too fast due to too much yeast. You'll be surprised to find when you cut the top off that you will have a tasty loaf with a coarse texture.

Why does my loaf look lumpy or have an uneven shape on top?

Perhaps there wasn't enough moisture. Sometimes heavier textured breads appear this way.

Why does my loaf have large holes?

There was probably too much yeast or moisture.

Why does my recipe turn out perfect most of the time but does not occasionally?

Perhaps the humidity in the air or the moisture in the flour varied causing the dough to be stickier or drier OR the room temperature was cold or very hot. Remember the machine cannot make judgment calls for those variables.

Why are there deposits of flour on the side of the baked loaf?

Perhaps with a heavier bread all the dry ingredients did not get mixed in the kneading; the next time you could try using a rubber spatula to push down ingredients on the sides of the pan, after the first kneading cycle.

Why do the raisins and dates seem to be clumped together at the bottom or the loaf?

The raisins and dates were too sticky. Try air-drying them overnight on the counter or buying date pieces that have a dextrose coating on the outside.

How To Test Yeast

The following instructions can be used to determine the freshness and quality of your yeast. To test, follow these instructions:

1. Place 1/2 cup of lukewarm water into a small bowl or cup.
2. Stir 1 tsp. of sugar into the water.
3. Sprinkle 2 tsp. of yeast over the surface.
4. Place bowl or cup in a warm area and allow it to sit for 10 minutes undisturbed.
5. The mixture should foam and produce a strong yeast aroma. If this does not occur, the yeast is inactive and stale and new yeast should be purchased.

Care and Cleaning Instructions

Cleaning the Oster® Bread Maker

Before cleaning the Oster® Bread Maker, unplug it and allow it to cool. To clean, wipe manually. Do not immerse in water! And make sure to use only a mild kitchen detergent — benzine, cleaners, scrubbing brushes, and chemical cleaners will damage the unit.

Before re-using the unit, make sure it is completely dry.

Body and Lid

1. Remove all bread crumbs by wiping gently with a slightly damp cloth.
2. As you wipe, take care not to bend the temperature sensor, which is located on the inside wall of the Bread Maker.

Baking Pan and Kneading Blade

1. Wipe clean with a damp cloth and dry thoroughly.
2. Do not wash the pan or removable parts in the dishwasher.

Caring for your Oster® Bread Maker

Non-stick Pan and Blade

1. Keep your Bread Maker clean.
2. Do not use metal utensils. These will damage the non-stick coating on the pan and kneading blade.
3. Don't worry if the non-stick coating changes color over time. The color change is the result of steam and other moisture and in no way affects the performance.
4. If you experience difficulty in removing the kneading blade, place warm water in the bread pan for 10-15 minutes to allow the kneading blade to loosen out.

Storage

1. Make sure that the unit is completely cool and dry before storing.
2. Store the Bread Maker with the lid closed.
3. Do not place heavy objects on the top lid.

Baking at High Altitudes

At High Altitudes above 3,000 feet, dough rises faster. Therefore, when baking in high altitudes some experimentation is required. Follow the suggested guidelines. Use one suggestion at a time and remember to write down which suggestions work best for you.

Guidelines:

1. Reduce the amount of yeast by 25%. This will inhibit the bread from over rising.
2. Increase salt by 25%. The bread will rise slower and have less of a tendency to sink.
3. Watch your dough as it mixes. Flour stored at High Altitudes tends to be drier. You might have to add a few tablespoons of water, until the dough forms a nice ball.
