

Parrot

FC6100 ASPEN

Version 1.1
MARCH 2012

PRELIMINARY

Confidential information

Parrot FC6100 ASPEN

Full connectivity module with Android OS.

Technical Features:

- LCD Management-LCD RGB/LVDS
- Wi-Fi module
- Piconet and scatternet support
- Standard single 3V3 supply
- UARTs, I²C
- 1*USB 2.0 High Speed
- Digital and analog audio in and out
- Analog Video output
- Module dimensions 72 x 44.3 x 4.60mm
- iPod chip management (optional)
- 2nd USB 2.0 connection (optional)

Applications:

- Smartphone Android Apps platform
- Navigation
- Telephony voice recognition
- Multimedia voice recognition
- Terminal mode

The FC6100 ASPEN platform provides a full API, to access Parrot Libraries.

Description:

Parrot FC6100 ASPEN is a solution for Multimedia systems. It integrates a large variety of interfaces for easy integration of most multimedia applications.

1 FC6100 ASPEN Overview

FC6100 ASPEN is an easy to integrate module based on the Texas Instruments OMAP 3630 multimedia processor: Cortex A8 (1600 MIPS), 3D and video hardware accelerator. The FC6100 ASPEN offers the best of both worlds, the automotive-specific precision of Parrot automotive libraries along with the market acceptance of the Android platform running on the ARM Architecture.

- TI OMAP ARM Cortex-A8 (1600 MIPS)
- Display up to 10" (1024x768 pixels)
- Integrated OpenGL 3D Graphics Accelerator
- Up to 4Gbits RAM, 8Gbits FLASH

The ARM architecture includes a family of CPUs with FPU which are sold now in larger volumes than Intel CPUs. They power products with huge market success such as the iPhone and Android phones. The portfolio includes single, dual and quad-core CPUs.

2 Features List

2.1 Connectivity

- **USB**

- Parrot FC6100 ASPEN embeds a USB 2.0 OTG high speed transceiver
- Compliant with USB devices supporting Mass Storage Class
- Supports USB hub

- **Wi-Fi**

- IEEE 802.11b/g/i compliant
- Data rates of 1–54 Mbps for 802.11g
- Security support for WPS, WPA2, WPA
- Ad hoc, station, or Access Point mode
- Up to 8 devices can simultaneously be connected in Access Point mode

PRELIMINARY

3 FC6100 ASPEN technology

➤ FC6100 ASPEN Wi-Fi protocol summary

<u>WLAN</u>	
802.11a - 5GHz WiFi 54Mbps	No
802.11b - 2.4GHz WiFi 11Mbps	Yes
802.11d - "World Mode"	No
802.11g - 2.4GHz WiFi 54Mbps	Yes
802.11h - 5GHz interference avoid	No
802.11i - Security	Yes
802.11j - Japan Standard	No
802.11n - 2.4GHz WiFi 150Mbps	No
802.11y - High Power WiFi	No
Access Point support	on reset -firmware change
Ad-Hoc	Yes
Client	Yes
PAN - like Intel Cliffside multi point access	No
WPA2 / WPA	Yes
<u>Coexistence</u>	
2.4GHz	Supported

PRELIMINARY

5 Wi-Fi Use Cases

5.1 Parrot's FC6100 ASPEN provides the internet connection to Wi-Fi users

The Parrot module can act as a Wi-Fi micro Access Point (AP). As an access point, up to 8 devices can be connected simultaneously. With this use case, the FC6100 ASPEN acts as the gateway, using networking terminology.

The internet connection is provided by a HSDPA module or by a 3G+ USB dongle. The low-level network control is handled by the FC6100 ASPEN.

From the Wi-Fi user perspective, connecting to the in-car network works the same as a standard access point,

A software application running in the FC6100 ASPEN is used to set the Wi-Fi networking service:

- enabling/disabling Wi-Fi
- configuring the security level (WEP, WPA, WPA2), and associated passes
- retrieving network information as needed (example: which users are connected)

7 Hardware Overview

Here is an overview of FC6100 ASPEN Hardware design.

For more details, the FC6100 ASPEN Hardware Integration Guide can be sent upon request.

7.1 Memory

FC6100 ASPEN Memory configuration:

Up to 8Gbits NAND Flash and 4 Gbits mDDR RAM.

7.2 Power domains

FC6100 ASPEN's processor's digital I/O are mainly referenced to a 1.8V voltage.

Historically, Parrot interface uses 3.3V interface.

However, some customers might already use 1.8V signaling on their motherboard and level-shifting would then become redundant.

The decision was then made to move level-shifting function on the motherboard to improve the flexibility of the design and the module size.

Consequently, FC6100 ASPEN digital I/Os belong to 2 different power domains:

- 3.3V signaling
- 1.8V signaling

7.3 Power supplies

- **3V3_MAIN**

To operate, the module requires a unique 3.3V voltage power supply called 3V3_MAIN with a 10% precision and capable to deliver up to 1A.

3V3_MAIN is internally monitored and triggers power on and power down sequence of the module.

- **VDD_PERM**

In cases where RTC option is needed, for time-keeping, the motherboard must also supply the board permanently with another 3.3V voltage called VDD_PERM.

- **1V8_IO**

For customers that do not have any 1.8V voltage level power supply, the module outputs a 1V8_IO power supply that can be used to power level-shifter and 1.8V external devices I/O pads.

7.4 Digital communication links

FC6100 ASPEN module uses several means to interface with the system it is integrated in.

7.4.1 Control signals

Some discrete signals are used by the module to interact with the rest of the system:

- RESET_HOSTn is the module's reset input
- S_RESETOUn & H_RESETOUn inform the motherboard of the reset state of the module
- BOOTS is an input which activates firmware update

- IT_HOSTn is the motherboard's interruption signal to request communication with FC6100 ASPEN when slave.

7.4.2 I2C

- **I2C_0**

I2C_0 is a 1.8V signaling I2C link dedicated to be used on motherboard.

It can operate as a master or as a slave.

Note: On WB_FC6xxx development board, I2C_0 is used for Touch Panel Controller, external audio codec & audio power amplifier interface.

- **I2C_1**

I2C_1 set as a master and is 3.3V signaling at the connector end.

It is also used internally for communication with the Audio Codec.

Its clock frequency is limited to 100 KHz in compliance with I2C default speed specification.

Note: On WB_FC6xxx board, I2C_1 is used for IPOD authentication chip communication.

7.4.3 UART

- **UART_0**

UART_0 is a standard UART interface with flow control signals.

7.4.4 Digital data bus

7.4.4.1 SDIO

- **SDIO_0**

SDIO_0 is a complete SD Card bus, capable of high speed operation (up to 48Mhz).

It is also used as secondary flash update interface.

- **SDIO_1**

SDIO_1 is a complete SD Card bus, capable of full speed operation (up to 48Mhz).

7.4.4.2 USB

- **USB_0**

USB_0 is a host or device USB interface compliant with USB2.0 High Speed Specifications.

It can also be used as OTG USB device.

- **USB_1**

USB_1 is a host or device USB interface compliant with USB2.0 High Speed Specifications.

7.4.4.3 SPI

- **SPI_0**

SPI_0 is a 1.8V SPI Bus operating as a master for up to 2 slaves. Its maximum clock frequency is 48Mhz.

- **SPI_1**

SPI_1 is a 1.8V SPI Bus operating as master or slave.

Its maximum clock frequency is 48MHz when master & 24Mhz when slave

7.4.5 Audio interface

FC6100 ASPEN module provides both digital and analog audio interface.

7.4.5.1 Analog Audio

- **Analog audio inputs**

FC6100 ASPEN provides 3 stereo analog audio inputs:

- 2 stereo Line inputs : LINEIN_1 & LINEIN_2
- 1 stereo Microphone input MIC* composed of 2 single-ended or differential Mic inputs

Those 3 channels are internally multiplexed so only one can be used at the same time.

- **Analog audio output**

FC6100 ASPEN provides one stereo line out: LINEOUT.

7.4.5.2 Digital Audio

FC6100 ASPEN module provides 2 bidirectional 1.8V I2S links.

Providing a complete I2S interface (bit clock, left/right clock & master clock), FC6100 ASPEN operates as master of the bus for an external audio codec on motherboard.

If needed, FC6100 ASPEN I2S interface can be set as slave if your motherboard provides the needed clock signals:

- Bit clock & Left/Right if using digital audio only
- Bit clock, left/right Clock & Master Clock if analog audio is also needed

7.4.6 Video interface

FC6100 ASPEN features input & output video flow management.

7.4.6.1 Display interface

- Digital video interface: LCD_*

FC6100 ASPEN features a 1.8V signaling 24-bit wide parallel video bus targeting LCD Panel use:

- It includes Horizontal & Vertical synchronization signals and can also be used with Data Enable signal only.
- Max clock frequency is 74Mhz.

7.4.6.1.1 **Analog video interface: TV***

The interface is an analog video output capable of:

- S-video
- AC-coupled Composite

7.4.6.1.2 **Record interface: CAM_***

A parallel 1.8V signaling 8-bit wide parallel camera input bus is provided.

7.5 Pin Out Table (140 pins connector)

pin	signal name	pin type	Pwr domain	function
Analog Audio				
2	MIC1_P	I	3V3 Ana	Differential Microphone 1 - Positive Input
4	MIC1_N	I	3V3 Ana	Differential Microphone 1 - Negative Input
8	MIC2_P	I	3V3 Ana	Differential Microphone 2 - Positive Input
6	MIC2_N	I	3V3 Ana	Differential Microphone 2 - Negative Input
1	MIC_BIAS	O	3V3 Ana	Microphone Bias Supply Output
3	LINEIN1_R	I	3V3 Ana	Stereo Line Input 1 - Right Channel
5	LINEIN1_L	I	3V3 Ana	Stereo Line Input 1 - Left Channel
9	LINEIN2_R	I	3V3 Ana	Stereo Line Input 2 - Right Channel
7	LINEIN2_L	I	3V3 Ana	Stereo Line Input 2 - Left Channel
12	LINEOUT1_R	O	3V3 Ana	Stereo Line Output 1 - Right Channel
14	LINEOUT1_L	O	3V3 Ana	Stereo Line Output 1 - Left Channel
Digital Audio				
15	I2S_MCLK	O	1V8	I2S Master Clock
24	I2S_FSYNC	O	1V8	I2S Left/Right Clock
26	I2S_BCLK	O	1V8	I2S Bit Clock

8 Mechanical Dimension (preliminary)

Please find below the main dimensions for FC6100 ASPEN module.

The module's interface is made through a 140-pin board to board connector with a 0.635mm pitch.

- Module connector reference: MOLEX / 55091-1472
- Motherboard connector's reference: MOLEX / 52885-1474

9 Absolute Maximum Ratings

Operating temperature range.....	-40°C to +85°C
Storage temperature range.....	-40°C to +125°C
DC input supply voltage.....	3.2V to 3.6V
Maximum current drawn from 3V3_MAIN.....	1A
ESD sensitivity according to AEC Q100 : +/-2kV HBM +/- 200V MM.....	TBD

10 Electrical Specifications

10.1 Power Consumption (preliminary)

Off mode	TBD μ A
Software Reset mode	5 mA
Hands free mode	TBD mA
Audio streaming mode	TBD mA
Video rendering mode	TBD mA

10.2 Power Supplies

Conditions unless otherwise-noted : over -40°/ +85 °C					
Parameter	Conditions	Min.	Typ.	Max.	Unit
3V3_MAIN	Operating conditions	3.2	3.3	3.4	V
VDD_PERM	Operating conditions	2.5	-	5	V
1V8_OUT	Current drawn on Host Board < 300mA	1.72	1.8	1.92	V

10.3 Hardware Reset Conditions

Conditions unless otherwise-noted : over -40°/ +85 °C					
Parameter	Conditions	Min.	Typ.	Max.	Unit
3V3_MAIN considered as off	-	-	-	0.5	V
3V3_MAIN "off" delay	-	100	-	-	ms

10.4 Software Reset Input

Conditions unless otherwise noted,; over -40°/ +8 5°C					
Parameter	Conditions	Min.	Typ.	Max.	Unit
RESET_HOSTn – Activation delay	-	100	-	-	μ s
RESET_HOSTn – ViL	-	-	-	0.6	V
RESET_HOSTn – ViH	-	1.45	-	-	V

10.5 Digital IO Pins

FC6100 ASPEN I/Os belong to 2 different digital power domains: 1.8V or 3.3V power supplies.

3.3V power domain

Conditions unless otherwise noted : over -40°/ +85 °C					
Parameter	Conditions	Min.	Typ.	Max.	Unit
ViH	-	2.2	-	3.5	V
ViL	-	-0.3	-	0.4	V
VoH	-	3.07	-	3.6	V
VoL	-	-0.1	-	0.4	V

1.8V power domain

Conditions unless otherwise noted : Tamb.=25°C; Vdd =3V3					
Parameter	Conditions	Min.	Typ.	Max.	Unit
ViH	-	1.3	-	1.95	V
ViL	-	-0.3	-	0.55	V
VoH	-	1.15	-	2.1	V
VoL	-	-0.1	-	0.45	V

11 FCC requirements for module application

FCC ID: RKXFC6100ASPEN

In accordance with FCC Part 15, the FC6100 ASPEN is listed as a Modular Transmitter device.

USA – User information

This intends to inform how to specify the FCC ID of our module “FC6100 ASPEN” on the product. Based on the Public Notice from FCC, the host device should have a label which indicates that it contains our module. The label should use wording such as: “Contains FCC ID: RKXFC6100ASPEN”

Any similar wording that expresses the same meaning may be used.

The label of the host device should also include the below FCC Statement. When it is not possible, this information should be included in the User Manual of the host device.

“This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions.

(1) This device may not cause harmful interference

(2) this device must accept any interference received, including interference that may cause undesired operation.

Caution: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

PRELIMINARY
