Carlton® Rigid Nonmetallic Conduit, Fittings & Accessories

Carlton® manufactures the most complete line of nonmetallic conduit fittings in the electrical industry. Carlton Plus 40® and Plus 80® conduits are designed for use aboveground and underground as described in the National Electrical Code. Specify only Carlton conduits and fittings to ensure raceway system integrity.

Features

Ease of Installation Nonmetallic conduits are 1/4 to 1/5 the weight of metallic systems, can be installed in less than half the time, and are easily fabricated on the job.

Safety Nonmetallic conduits are non-conductive, assuring a safe system.

Impact Resistant Carlton Plus 40® and Plus 80® nonmetallic conduits are resistant to sunlight and are UL Listed for exposed or outdoor usage. The use of expansion fittings allows the system to expand and contract with temperature variations.

Corrosion Resistant Carlton conduits and fittings are nonmetallic and will not rust or corrode.

Carlton nonmetallic Plus 40® and Plus 80® conduits and elbows are manufactured to NEMA TC-2, Federal specification WC1094A and UL 651 specifications. Fittings are manufactured to NEMA TC-3, Federal specification WC1094A and UL514B. Both conduit and fittings carry respective UL or ETL Listings and UL or ETL labels.

Support of Carlton Rigid Nonmetallic Conduit in Aboveground Installations

Table 347-8, 99 NEC shows the support requirements for Plus 40® and Plus 80® rigid PVC non-metallic conduit.

Plastic conduit should always be installed away from steam lines, etc. Support straps should allow for lineal movement caused by expansion and contraction.

Maximum ambient temperature is 122°F (50°C).

Rigid nonmetallic conduit is normally supplied in standard 10' lengths, with one belled end per length. For specific requirements, it may be produced in lengths shorter or longer than 10', with or without belled ends.

Use Schedule 40 Fittings with Plus 40® and Plus 80® Conduit.

Notes: 1. Special fittings and conduit sizes will be quoted on request.

2. DON'T FORGET TO ORDER CEMENT.

3. Carlson reserves the right to ship to the nearest unitized quantity.

Schedule 40 Elbows - Standard Radius

Available in plain and integral belled end for use with nonmetallic solvent weld fittings.

Snap Strap® Conduit Support Straps

Carlon's Snap Strap® offers a unique support strap designed especially for the installation of PVC conduit. Also usable for installations of rigid steel. This high strength, nonmetallic clamp allows conduit to expand and contract freely, eliminating the bowing commonly seen from the expansion and contraction of conduit caused by varying temperature changes. Finished installations have a neat, attractive appearance on exposed applications.

Expansion and Contraction

Temperature Considerations for Rigid Nonmetallic Conduit Compensation for Linear Expansion

Like all construction materials, PVC will expand or contract with variations in temperatures. The coefficient of linear expansion in PVC conduit is 3.38×10^{-5} in./in./°F as compared to 1.2×10^{-5} for aluminum and 0.6×10^{-5} for steel. An expansion coupling is needed whenever the change in length due to temperature variation will exceed 1/2 in.

Add 30°F to the estimated temperature range when conduit is installed in direct sunlight to allow for radiant heating.

An expansion coupling consists of two sections of conduit, one telescoping inside another. When installing expansion couplings, alignment of piston and barrel is important. Be sure to mount expansion joint level for best performance.

For a vertical run, the expansion coupling must be installed close to the top of the run with the barrel jointing down, in order that rain water does not run into the opening. The lower end of the conduit run must be secured at the bottom so that any length change due to temperature variation will result in an upward movement.

Determine the Piston Opening

The expansion joint must be installed to allow both expansion and contraction of the conduit run. The correct piston opening for any installation condition should use the following formula:

$$O = \left[\frac{T \text{ max} - T \text{ installed}}{DT} \right] E$$

Where:

- O = Piston opening (in.)
- T max = Maximum anticipated temperature of conduit (°F)
- T inst. = Temperature of conduit at time of installation (°F)
- DT = Total change in temperature of conduit (°F)
- E = Expansion allowance built into each expansion coupling (in.)

Example

380 ft. of conduit is to be installed on the outside of a building exposed to the sun in a single straight run. It is expected that the conduit will vary in temperature from 0°F in the winter to 140°F in the summer (this includes the 30°F for radiant heating from the sun.) The installation is to be made at a conduit temperature of 90°F. From the table, a 140°F temperature change will cause a 5.7 in. length change in 100 ft. of conduit. The total change for this example is $5.7 \times 3.8 = 21.67'$ which should be rounded to 22'. The number of expansion couplings will be $22' \div 6" = 3.67$ which should be rounded to 4. The coupling should be placed at 95 ft. intervals (380 # 4). the proper piston setting at the time of installation is calculated as explained above.

$$O = \left[\frac{140 - 90}{140} \right] 6.0 = 2.1 \text{ in.}$$

Insert the piston into the barrel to the maximum depth. Place a mark on the piston at the end of the barrel. To properly set the piston, pull the piston out of the barrel to correspond to the 2.1 in. calculated above. See drawing at lower left.

Summary

1. Anticipate expansion and contraction of PVC conduit in aboveground, exposed installation.
2. Use an expansion coupling when length change due to temperature variation will exceed 1/4".
3. PVC conduit expands 4.1" for each 100 feet of run and a 100°F temperature change.
4. Align expansion coupling with the conduit run to prevent binding.
5. Follow the instructions to set the piston opening.
6. Rigidly fix the outer barrel of the expansion coupling so it cannot move. Mount the conduit connected to the piston loosely enough to allow the conduit to move as the temperature changes.

Corrosion Resistance of Carlon Plus 40® and Plus 80® Conduit and Fittings

Carlon Plus 40® and Plus 80® are generally acceptable for use in environments containing the chemicals below. These environmental resistance ratings are based upon tests where the specimens were placed in complete submergence in the reagent listed. Plus 40® and Plus 80® can be used in many process areas where chemicals not on this list are

manufactured or used because worker safety requirements dictate that any air presence or splashing be at a very low level.

If there are any questions for specific suitability in a given environment, prototype samples should be tested under actual conditions.

Suggested Format for Specifying Carlon Nonmetallic Conduit, Conduit Fittings and Junction Boxes

- A.** The Carlon rigid nonmetallic conduit system shall be installed as indicated on the drawings and as specified herein.
- B.** All wiring shall be installed in Carlon rigid nonmetallic conduit. All conduit shall be secured by means of proper fittings. All fittings shall be Carlon.
- C.** Carlon outlet boxes, fittings and junction boxes shall be used for all outlets, pull boxes and junction points. (Lighting fixtures shall not be supported or hung from PVC junction boxes but be supported in position by other means.)
- D.** Exposed conduits shall be mounted securely by suitable hangers or straps with the maximum spacing of points of supports not greater than indicated by Article 347-8 Supporting of Conduit NEC.
- E.** Except where embedded in concrete or direct buried, Carlon conduit shall be supported to permit adequate lineal movement to allow for expansion and contraction of conduit due to temperature change.
- F.** For aboveground installations where temperature change in excess of 14°C (25°F) is anticipated, expansion joints shall be installed. See Table 347-9(A) NEC for expansion characteristics.
- G.** Proper care shall be taken when field bending is employed to maintain the internal diameter and wall thickness of the conduit.

- ***PROVIDES CABLE PROTECTION FROM GROUND MOVEMENT.***

Slip Meter Risers

Carlton offers a full line of slip meter risers for use in electrical service entrance applications. The product line provides solutions for applications requiring a non-rigid connection, with incoming service conduit diameters ranging from 2" to 4".

Part #	Description	Length A	Inside Diameter B (Minimum)	Thread Length C	Thread Size	Carton Quantity	Case Weight (Lbs)
E954JXX	2" slip joint	24.00 (609.6)	2.750 (69.85)	0.825 (20.951)	2" NPT	20	43.6
E954LXX	3" slip joint	24.00 (609.6)	4.01 (101.85)	0.797 (20.24)	3" NPT	10	41.9
E954NXX	4" slip joint	24.00 (609.6)	5.06 (128.52)	0.773 (19.63)	4" NPSC	5	31.8

The slip meter risers are fitted with a terminal adapter for easy installation at the service entrance location. This product provides a low-cost method to comply with NEC 300-5 (j), which requires protection for buried cables in areas subject to ground movement due to frost or trench settling.

Today's commercial office/retail environment is placing increasing demands on telephone, data and power requirements. These dynamics demand construction decisions to meet existing needs, yet accommodate future changes. In addition, containing construction costs and providing fit-up flexibility remain important in the building design process.

The design, installation and application of floor boxes in today's office and retail sites no longer need to be limited by past product designs.

Carflex® Liquidtight Whip assemblies save the customer time and hassle of having to hunt for the needed components. Our moisture tight, nonmetallic, flexible conduit system is ideal for installing swimming pool motors, hot tub spas, air conditioners, pumps, outdoor lighting and more.

Unlike plastic coated metal conduit, the Carlon® Carflex System has no metal core to fatigue, rust, or corrode. The Carflex System has no sharp edges or burrs to cut into the wire insulation. Metal conduit is subject to fatigue and penetration of moisture.

The Carflex Liquidtight Whip assembly is complete with Carflex moisture tight conduit, wire, one straight fitting, and one 90° fitting.

All this makes for quick and trouble free installation.

**All fittings and boxes are standard Carlon® Blue. The development of red and yellow tubing was accomplished at the request of engineers desiring color coded conduits to identify fire protective signaling conductors and communication conductors on the job for safety purposes. Blue™ ENT continues to indicate to the trade, as it always has, a conduit for power conductors made solely by Carlon.

ENT may show color deterioration in direct sunlight over an extended period of time. It is suggested that all ENT products not be stored outside. Since this product is not intended for use outdoors, it should not be exposed to extended periods of direct sunlight.

Carlton® Quick Connect

Carlton new quick connect one piece fittings are approved for concrete-tight installations. For sizes larger than 1" the use of standard Carlton® solvent weld fittings with the proper ENT cement is recommended.

1. Cut ENT square end cleanly.
2. Insert end into fitting, making sure two (2) full corrugations are snapped into fitting beyond flexible tabs (2 clicks).
3. ENT should be tied to rebar at 2-3 foot intervals to prevent flotation. Keep ENT straight. Small deflections over a long run may accumulate significant degrees of bend which will affect conductor installation. Suitable materials include wire, tie wraps, and tape.
4. When using UL solvent weld fittings for concrete tight performance:

- A. Do not use chemical primer or cleaner.
- B. Apply a light, uniform coat of cement labeled for use with ENT on the coupling and ENT.
- C. Do not use a dauber.
- D. Brush excess cement out of ENT grooves.
- E. Promptly insert ENT into fitting while cement is wet, until the stop is reached, and give a quarter turn.
- F. Do not disturb until joint is set.

Electrical Nonmetallic Tubing (ENT)

- 1.1 Electrical Nonmetallic Tubing (ENT), is designed to replace EMT, flexible metal conduit or other raceway or cable systems, for installation in accordance with Article 362 of the National Electrical Code, other applicable sections of the Code, and local codes.
- 1.2 Any ENT used shall meet the requirements of UL Standard UL 1653 and shall be listed by Underwriters Laboratories, Inc., as suitable for its intended purpose.
- 1.3 ENT shall be recognized by a The National Evaluation Service, Inc. for use in fire resistive construction.
- 1.4 Penetration of fire rated walls, floors or ceilings shall use classified Through-Penetration Firestop Systems described in the current Underwriters Laboratories Fire Resistance Directory.
- 1.5 Fittings and outlet boxes shall be designed for use with ENT and listed by Underwriters Laboratories. All fittings, boxes and accessories shall be manufactured by CARLON.
- 1.6 Only Carlton ENT Blue cement recommended specifically for use with ENT and PVC Schedule 40 fittings shall be used.
- 1.7 Unless indicated differently on drawings, ENT systems shall be color coded: BLUE, YELLOW, or RED. ENT can be used for identification.

Electrical Nonmetallic Tubing (Continued)

FEATURES:

- UL Listed, Trade Sizes (1/2" to 2")
- UL recognizes the use of PVC Schedule 40 cement type fittings with all sizes of ENT
- ENT ambient temperature range -4°F (installation) to 122°F
- ENT rated for 90°C conductors
- One piece ENT Coupling, Threaded Terminator and Schedule 40 Transition Fitting are rated concrete tight without tape by UL Recognized in current NEC ref. Article 362
- Recognized for use in 2-hour fire resistive nonload bearing and load bearing wall assemblies per NER-290 and ER-5644
- Recognized for use in 1-hour fire resistive nonload bearing wall assemblies per NER-290 and ER-5644
- Recognized for use in a fire resistive ceiling assembly (up to 3 hours) per NER-290 and ER-5644
- Recognized for Through-Penetration Firestop systems as classified by UL to meet BOCA, SBCCI and ICBO codes.
- Nonconductive /noncorrosive pliable raceway system
- Packaged in sticks, coils and reels
- Available in three colors: Blue, Yellow and Red for color coding
- Complete line of fittings & accessories specifically designed for use with ENT
- Hand bendable - does not require special tools*
- Easy to cut length needed for installation - reduces scrap*
- Conductors easily push through the raceway (up to approximately 50 feet)*
- Lightweight makes it easy to handle on the job*

*Speed of installation keeps the job on schedule despite unexpected obstacles. Lower installation costs allow for savings to be reallocated to upgrade other areas, such as; lighting, dimming, etc.

APPROVED USES:

- Concrete slab ref. current NEC Article 362
- Walls - wood stud, masonry and metal stud ref. current NEC Article 362
- Ceilings - permanent or dropped (free air only) ref. current NEC Article 362
- Exposed - buildings not in excess of 3 stories ref. current NEC Article 362
- Public Assembly ref. current NEC Section 518-4, in nonfire rated and certain five rated structures
- Prewired, current NEC Article 362
- Classified by UL 1479 for Through Penetration Firestop Systems in UL Guide Category XHEZ and current UL Fire Resistance Directory
- Three hour rated floor/ceiling assemble

TYPICAL APPLICATIONS:

- Residential: Low or high rise - multi or single family
- Commercial: Low or high rise - office, shopping malls, retail, hotel/motel, restaurant, etc.
- Nursing Homes/Hospitals in nonpatient care areas only
- Schools, classrooms, dormitories, offices
- Fire Alarm Systems
- Recreational vehicles and parks
- Marinas and boatyards
- Information Technology equipment
- Other uses per the current NEC

WIRED PUSH BUTTONS

WIRELESS BATTERY CHIMES

WIRELESS PLUG-IN CHIMES

**WIRELESS SPECIALTY
CHIMES & ACCESSORIES**

FEATURES:

- **EASY INSTALLATION**
- **MODULAR CHIMES FOR EASY EXPANSION CAPABILITIES**

Simple Installation 1-2-3!

Replacing your Chime Systems step by step

Replacing A Push Button

1. Remove the button from its mounting by backing out its screws.
2. Remove the bell wires from the terminals, and touch wires together to make sure problem is not in the actual chime.
3. If there is no sound, the problem is in your chime, and you should replace it.

Replacing A Door Chime

1. Tag the wires marked "front", "back", and "trans", so you won't mix the wires up.
2. Remove the old chime, buzzer or bell. Install the new chime.
3. Connect the tagged wires to the proper terminals

Replacing A Transformer

1. Purchase transformer with same voltage rating as old one. SHUT OFF POWER TO CIRCUIT!
2. Open adjacent junction box, label bell wires and disconnect them. Disconnect transformer leads inside junction box, and disconnect transformer.
3. Thread new transformer leads inside junction box, fasten transformer to the box, and splice the leads to the wires. Connect the bell wires and test.

For any questions or concerns contact a qualified electrician

Wired Door Chimes

Carlton® Wired Chimes are perfect for new installations or for replacing non-functioning wired systems. For new installation, the following is required: 16-volt, 10VA transformer - Carlton® DH905, Bell Wire - Carlton® DH965. Pushbuttons as needed.
