

*Innovative operator interface,  
measurement, monitoring  
and control solutions*

# Red Lion product families

Red Lion's **Data Station Plus** provides a powerful set of data integration tools in a single DIN-rail mounted box. With the ability to perform protocol conversion among any of over 170 protocols, the Data Station Plus supports a minimum of seven protocols running and exchanging data simultaneously, over three serial and four Ethernet™ ports. Additional serial ports or DeviceNet™, ProfibusDP, or CANopen/J1939 communications cards can be added to further enhance protocol conversion capabilities. The Data Station Plus facilitates communication to multiple PLCs, drives, motion controllers, HMIs, motor control products, breakers, SCADA and PCs with a host of on-board drivers. A web-based HMI feature allows you to monitor and control processes remotely via a web browser.

## MODULAR CONTROL & DATA ACQUISITION

Red Lion's **Modular Controller** series offers a cost-effective solution to integrating multi-zone PID control, data acquisition and I/O into your PC, DCS or PLC control system. The Modular Controller product line has all the communication, protocol conversion, data logging and web-based HMI capabilities of the *Data Station Plus*, while adding the ability to manage up to 32 zones of PID control for analog and digital I/O. With capabilities to handle high I/O counts between a minimum of 96 analog to a maximum of 224 digital I/O, the Modular Controller supports up to 16 hot-swappable controller modules with automatic reprogramming, available with configurations ranging from analog input and output, digital I/O, PID control, strain gage and temperature input. Red Lion also offers a range of DIN rail mount **Temperature and PID Loop Controllers** and accessories.

The preferred brand for many years running, Red Lion has more high-quality **Digital and Analog Panel Meter** solutions than any other supplier. Digitally display count, rate, time, voltage, current, process, strain gage and temperature data in the widest range of models, sizes and capabilities—from Red Lion's standard CUB family to the versatile PAX family. Some models facilitate extended capabilities via plug-and-play, field-installable cards, allowing users to easily add or change features including analog outputs, communication, setpoints and more. To provide maximum visibility in plant floor and control room environments, Red Lion offers a number of analog meters, counter, timer and rate panel meters featuring **Large Displays** that provide vastly improved readability from distances, with display sizes from 1.5" to 4" and **LED Graphical Displays** up to 19" high.

Red Lion's innovative **G3 Series Human Machine Interface** panels provide complete HMI functionality for PLCs, motor drives and other communications-capable devices. G3 Series HMIs with integrated Ethernet ability network-enable any serial device connected to the panel. G3 HMIs have the same data management features as Red Lion's *Data Station* series with the addition of an integrated LCD display or touchscreen in display sizes ranging from 3" to 15". For applications that don't require data logging or web-based HMI, Red Lion's **G3 Kadet Series HMIs** offers a similar set of capabilities including multiple serial ports, Ethernet connectivity, visualization, protocol conversion and configuration using Red Lion's free Crimson® software.

## SIGNAL CONDITIONERS

To modify existing signals into the desired format for an application, Red Lion manufactures a wide array of **Signal Conditioning Products** that assure the proper interface and output. Input types range from RTD, thermocouple, process, frequency, volt and current, and can convert to frequency and/or various analog outputs. Communication conversions are also available. Features include 3-way isolation, sensor break detection, programmable inputs, multiple input-to-output conversion combinations and loop power.

## SENSORS & ENCODERS

Red Lion offers a complete line of **Sensors and Encoders** to complement the multiple products that require sensor inputs. Choose from photoelectric, proximity, pressure, thermocouple, RTD, magnetic pickup, shaft encoders, thru-bore encoders, length sensors, temperature, and motor and gear sensors that provide seamless integration with Red Lion products.

# Red Lion insight enabled.

*A global leader in process measurement, controls and automation, **Red Lion Controls** continues to be recognized as industry's preferred brand of panel meters, offering the broadest selection of rate, count and panel indication solutions in the world. The experience gained from over 35 years in the control and automation industry has allowed Red Lion to develop a number of successful related products, including advanced lines of Human Machine Interface (HMI) and protocol conversion technology, as well as PID loop controller and process controller products.*

## **From humble beginnings, a world-class innovator.**

Founded in a garage in 1972, today Red Lion remains committed to domestic manufacturing, designing and producing its products in a state-of-the-art, 100,000 sq. ft. facility in York, Pennsylvania. The proximity and close interaction of our design and manufacturing arms in the United States provide Red Lion unique and unparalleled customer focus and agility. A member of Spectris plc, the productivity-enhancing instrumentation and control company, Red Lion supports a vast network of specialized distributors from its USA., European and Asian offices. Understanding manufacturing problems and providing innovative, common sense solutions has earned Red Lion the loyalty of its global customers, and the recognition of top industry awards year after year.

## **See inside your process.**

Red Lion's core competency lies in providing simple solutions that enable insight into complex, mixed-vendor product processes. Through basic, essential indicators and large I/O count analog and digital process controls that feature advanced communications capabilities, Red Lion has tamed process complexity through the conversion of more than 170 protocols—simultaneously enabling open solutions for data management, visualization and remote access. In short, Red Lion provides solutions that reveal untapped or inaccessible data that can be used to make processes run more efficiently.

## **Crimson®. A powerful universal software platform.**

Central to the success and adoption of Red Lion as an industry-leading technology innovator is Red Lion's Crimson® software, which seamlessly ties together products from multiple vendors, creating insight into a process from a single entry point. Unlike proprietary systems, this software platform is universal across all Red Lion products with programming capabilities, facilitating communication among dissimilar devices and protocols while reconnecting orphaned and legacy technologies.

From this entry point, data from one vendor's product can be sent to another vendor's dissimilar product. Data collection can be centrally stored, emailed and pushed to an FTP site. Alarms can be emailed or sent by text message to a mobile phone. Different vendors' products can be configured using Red Lion's pass-through feature. This can all be achieved remotely via standard network communications. Likewise, operational status can be viewed in real-time, and process data can be visualized with a web browser or uploaded in IT-ready CSV files. Making it simple to monitor, analyze and trend data via common productivity platforms such as Microsoft® Office.

## **OEM solutions. Powered by Red Lion.**

As one of the world's leading innovators in monitoring and control, Red Lion technology plays an instrumental role in many OEM products. Whether integrated or private branded, Red Lion offers advanced technology that adds value to products and greatly expands the capabilities of legacy devices. Many recognizable global brands feature integrated technology "Powered By Red Lion", adding advanced capabilities and value to their product portfolios. Our engineering teams work with OEM customers to provide innovative and tailored solutions, and our responsive service demonstrates a strong commitment to our third party customers. For inquiries on customized products, call our Technical Sales Department at (717) 767-6511.

The growth and success of Red Lion is fueled by an ongoing commitment to delivering the greatest value in its products—not only in terms of affordability and performance, but also in USA-made quality, seamless integration, superior functionality and sophisticated simplicity. With an unparalleled combination of innovation, features and capabilities, Red Lion represents best-in-class solutions for monitoring, control and automation across a broad range of discrete and process manufacturing environments.

# Red Lion *what's new*

*We've compiled a list with just a brief description to let you know about the new and exciting products Red Lion has added to our already extensive list of product offerings. Each of the products shown on this list can be found in the catalog you are holding.*

- ❑ **G3 Series Operator Interface** – World renowned operator interface
- ❑ **G3 Kadet Series Operator Interface** – Functional interface and connectivity features for applications where FTP access, data logging, and web server capabilities are not needed
- ❑ **Data Station** – Protocol converters
- ❑ **Modular Controller** – Multi-zone loop controller
- ❑ **PFM** – The tri-color display's graphical design allows bargraphs, custom symbols and graphics. There are four sizes for a wide range of applications.
- ❑ **Compact Meters** – Expanded the CUB5 line with analog inputs
- ❑ **New Universal Signal Conditioners** – Easily programmable IAMS signal conditioners
- ❑ **New Line Of Large Digital Displays** – Large display timers, counter/rate, serial slave display and DC volt/current/process meters
- ❑ **Encoders** – Rotary pulse generator selection has grown to include many new thru-bore encoders, shaft encoders and accessory items
- ❑ **New PAX Lite Models** – PAXLA accepts DC current, DC voltage, or process input signals; PAXLCR features two independent counters and separate rate display capability; PAXLT accepts thermocouple and RTD inputs
- ❑ **New Current Transducers** – New non-contact, current transducers to convert high level current signals into simple 4 - 20 mA or 0 - 10 VDC process signals
- ❑ **USB Interface** – USB programming cards for the CUB5 and PAX meters
- ❑ **CUB5 Dual Counter/Rate Meter Upgrade** – Expanded the capabilities by adding a second setpoint. Capabilities now include batch counting and control
- ❑ **New Power Supply** – New MLPS2 offers 24 VDC for use with the CUB5 Series.
- ❑ **Communication Gateway** – Serial to Ethernet connectivity
- ❑ **Temperature Sensors** – 50 new Thermocouple and RTD sensors

# Red Lion catalog guide

*This edition of the Red Lion products catalog offers several tools to help you find the exact control solution you need, whether it's instrumentation, indication, panel meters, communications, data acquisition or interface devices.*

*Products are grouped by section. Preceding each section, you'll find a summary of general specifications for the product group. Product listings offer a detailed look at specifications including description, applications and features, along with specific technical data such as voltages, input and output, physical dimensions, wiring diagrams, tutorials and ordering information.*

## **More ways to find the right solutions.**

There are also several alternative methods of determining the best product for your application:

- **Product Selection Guide** (Starting on page 7)  
Helps you determine the appropriate product model based on your application parameters.
- **Quick Spec Comparison Grid** (Beginning of each section)  
Offers a side-by-side comparison of models within a given product group.
- **Product Replacement Guide** (Following "Quick Specs" in each section)  
A cross reference to the current Red Lion models to provide a functional replacement for obsolete products. Always refer to replacement product literature as differences may exist.
- **Product Lookup** (Starting on page 1013)  
An historical reference of current and past Red Lion products.

### **Industry and application experts at your disposal.**

Because Red Lion's selection of control solutions is so vast and growing every day, you might find the best way to get what you need is by asking your local Red Lion distributor. We choose nothing but the best and most experienced industry professionals to represent our products and give them the support and resources to help our customers deploy the best solutions, quickly.

In some cases, you may want more advice. That's where Red Lion's dedicated customer support and technical assistance teams can help. We respect your time by providing real answers from real people. Not automated phone menus and stock answers. Red Lion also has an extensive Virtual Help Desk with Knowledge Base, technical notes, tutorials and FAQs easily accessible 24/7 on our web site, plus convenient email technical assistance. So you have several options to get the answers, and solutions you need:

- Personal service from your **Local Red Lion Distributor**
- **Live customer service, application and technical assistance** at 717-767-6511
- **Online Virtual Help Desk** available 24/7 at [www.redlion.net](http://www.redlion.net)
- **Email tech support** for a prompt, personal response at [techsupport@redlion.net](mailto:techsupport@redlion.net)
- **Tutorials and Training** available pre- and post-sale

## Section G - Large Displays

<b>QUICK SPECS</b>		<b>626</b>
<b>REPLACEMENT GUIDE</b>		<b>627</b>
<b>Model</b>	<b>Title</b>	<b>Page #</b>
LD	4 or 6-Digit Large Displays for Count and Rate	629
LDT	6-Digit Large Displays for Timing	645
LDA	5-Digit Large Displays for DC Current, Voltage and Process Inputs	659
LDSS	6-Digit Large Displays for Slave Display Inputs	674
LPAX5	5-Digit Large PAX Displays For Analog Inputs	682
LPAX6	6-Digit Large PAX Displays For Digital Inputs	686
LPAXDA	5-Digit Large PAX Displays For Dual Analog Inputs	690
EPAX5	5-Digit Extra Large PAX Displays For Analog Inputs	694
EPAX6	6-Digit Extra Large PAX Displays For Digital Inputs	700

## Section H - Signal Conditioners

<b>QUICK SPECS</b>		<b>708</b>
<b>Model</b>	<b>Title</b>	<b>Page #</b>
IFMA	DIN-Rail Frequency to Analog Converter	713
IFMR	DIN-Rail Speed Switch	721
AFCM	Analog to Frequency Converter Module	729
IAMS	Intelligent Universal Signal Conditioner	731
IAMA	Universal Signal Conditioning Module	742
IAMA6	Universal Signal Conditioning Module	750
AAMA	Universal Signal Conditioning Module	753
AIMI	0 (4) - 20 mA Passive Loop Powered Isolator	758
APMR	Three Phase Fault Detection	759

IRMA	Intelligent RTD Module with Analog Output	763
IRMA DC	Intelligent RTD Module with Analog Output	769
ITMA	Intelligent Thermocouple Module with Analog Output	775
ITMA DC	Intelligent Thermocouple Module with Analog Output	782
ICM4	Serial Converter Module	788
ICM5	3-Way Isolated Serial Converter Module	792
ICM8	Serial to Ethernet Converter Module	796
SWITCH08	Eight Port Ethernet Switch	802

## Section I - Sensors

QUICK SPECS		806
Model	Title	Page #
HESS	Hall Effect Speed Sensor	813
PSAH	Hall Effect Speed Sensor	814
PSA	Inductive Proximity Sensors	815
PSAC	Inductive Proximity Sensor with Current Sink Output	818
PSAFP	Flat Pack Proximity Sensors	819
MPS	Magnetic Proximity Switch	822
MP	Magnetic Pickups	823
LMP	Logic Magnetic Pickups	825
ARCJ	NEMA“C” Face-Mounted Motor Adapter Kits	827
ZR Motor	C-Face Encoder w/Line Driver Output	829
GEARS	Machined Steel Sensing Gears	831
ZUJ/ZUL	Large Thru-Bore Rotary Pulse Generator for Motor Feedback	833
ZR	C-Face Encoder w/NPN Open Collector Output	835
ZSD	Standard Servo Mount Rotary Pulse Generator	837
ZOD/ZOH	Thru-Bore Rotary Pulse Generators	838
ZCG/ZFG/ZGG	Single Channel Rotary Pulse Generator and Length Sensor	839
ZCH/ZFH/ZGH	Quadrature Rotary Pulse Generator and Length Sensor	843
ZUK	Large Thru Bore Rotary Pulse Generator	847
ZPJ	Large Thru-Bore Rotary Pulse Generator	849
ZBG/ZBH/ZHG	Industrial and Heavy Duty Rotary Pulse Generator	851
ZDH/ZNH	Flange Mount Rotary Pulse Generator	855
ZMD	Miniature Length Sensor	857
ZLZ	Linear Cable Encoder	859
RR/PRDC	Compact DC Powered Photo Electric Sensors	861
PRM/RRM	Miniature DC Powered Photo Sensors	865
PT	Pressure Transmitter	868
TMP	Temperature Sensor Probes	869
TMPC	High Temperature Thermocouple	871
TMPU	Utility Thermocouples	872
TMPB	Spring Loaded Compression Fitting Thermocouples	872
TMP	Quick Disconnect Temperature Probes and Accessories	873
TMP	Transition Joint Probes and Accessories	876
TMPRT/CN	RTD Sensors and Connectors	878
TMPT/TMPRN	Thermocouple and RTD Connectors with Signal Amplifier	880
CT5	Current Transformer	881
CT4	Current Transformer	882
CTD	DC Current Transducer	883
CTL	Average Responding AC Current Transducer	885
CTR	True RMS AC Current Transducer	887
CTS	AC Current Operated Switch	889

## Section J - PC Board Mount Displays

QUICK SPECS		892
Model	Title	Page #
SCUB1 & 2	6-Digit Component Counter	895
SCUB28A	8-Digit Component Counter	896
SCUBD	Two Mode Component Counter w/ 6-Digit Display	897

SCUBT	5 1/2-Digit Component Timer/Counter	898
MDMU	Component Counter/Timer/Tach	899
MDMV	Component DC Voltmeter	900

## Section K - Accessories

QUICK SPECS		902
Model	Title	Page #
PSDR	Signal Conditioner 1 2, or 4 A Power Supply	907
APS	Octal Plug-In Power Supply	909
APSYS	Octal Plug-In Power Supply with 20 mA Source	911
MLPS	MicroLine Power Supply 12 and 24 VDC	913
PSMA	Power Supply and Interface Module	915
V/T/LCM	Signal Converter Modules	917
RS	DIN Rail Relay System	920
RLY5	Solid State Power Unit	922
RLY6/6A	Single-Phase DIN-Rail Mount Solid State Relay	924
RLY7	Three-Phase DIN-Rail Mount Solid State Relay	926
PAXLBK10	PAX Annunciator Label Kit	928
LX Label	LPAX Annunciator Label	929
CUB5USB	CUB5 Universal Serial Bus Card	930
CUB5COM	CUB5 Serial Communications Card	932
PAXUSB	PAX Universal Serial Bus Card	936
PAXCDC	PAX Serial Communications Card	938
PAXCDC3	PAX DeviceNet Output Card	944
PAXCDC4	PAX ModBus Output Card	948
PAXCDC5	PAX Profibus Communications Card	954
PAXCDS	PAX Setpoint Output Card	958
PAXCDL	PAX Analog Output Card	962
	EMI Installation Notes & Accessories	964
FCOR	Ferrite Suppression Core	965
ILS	Inductive Load Suppressor	966
SNUB	R-C Snubber Noise and Arc Suppressor	967
LFIL	General Purpose Line Filter	968

## Section L - Enclosures & Panels

Model	Title	Page #
ENC4/5/6	NEMA 4 Enclosures for Legend, Libra, and Gemini	971
ENC5A/B/C	NEMA 4 Enclosures for PAX	973
ENC8/A/B	NEMA 4 Enclosures for CUB4, CUB5, and DT8	975
ENC9	LPAX Enclosure/Shroud	979
ENC11	1/16 DIN Enclosure	981
ENC12	EPAX Enclosure/Shroud	983
BMK3/4	Base Mount Kit for Legend, Lynx, Libra, C48, T48, T16 and P16	985
BMK6/7/7A	Base Mount Kit for CUB4, CUB5, and DT8	987
BMK8	Base Mount Kit for CUB7	989
BMK9	DIN Rail PAX Base Mount Kit	990
BMK11	DIN Rail Base Mount Adapter Kit for CUB5 or MLPS	991
PMK5/7/7A	Panel Mount Adapter Kit - 1/4 DIN to 1/8 or 1/16 DIN	993
PMK6	Panel Mount Adapter Kit - 1/8 DIN to 1/16 DIN	996
PMK6A	Panel Mount Adapter Kit - 1/8 DIN to CUB5	997
PMK8	Panel Mount Adapter Kit - Gemini to PAX	998
PMKG1	Panel Adapter Kit for GEM	999
PMKA1	Panel Adapter Kit - 1/8 DIN units into cut-outs for older DT3 and SC units	1000
PMKCC	Panel Mount Adapter Kit for C48 and T48	1001

# SELECTION GUIDE: Signal Conditioning

## DIN RAIL

### PROCESS

**IAMA [pg. 742 ]**

Universal Signal Conditioning module  
Inputs and Outputs are Switch Selectable  
9-32 VDC Powered

**IAMS [pg. 731 ]**

Universal Signal Conditioning Module  
Programmable Inputs and Outputs  
Dual Setpoint Control  
21.6-253 VAC or 19.2-300 VDC Powered  
Removable Programming Module

**IAMA6 [pg. 750 ]**

Universal Signal Conditioning module  
Inputs and Outputs are Switch Selectable  
19.2-32 VDC Powered  
6.2 mm Wide

**AAMA [pg. 753 ]**

Universal Signal Conditioning module  
Inputs and Outputs are Switch Selectable  
18-32 VDC Powered  
Negative Signal Inputs

**AIMI [pg. 758 ]**

Loop Powered  
0-20 or 4-20 mA  
Input/Output Isolation

### TEMPERATURE

**IAMS [pg. 731 ]**

Universal Signal Conditioning Module  
Programmable Inputs and Outputs  
Dual Setpoint Control  
21.6-253 VAC or 19.2-300 VDC Powered  
Removable Programming Module

**ITMA [pg. 775 ]**

Accepts Thermocouple Types J, K, T, & E or Millivolt Input  
12-42 VDC  
Loop Powered  
Adjustable Range Setting

**ITMA DC [pg. 782 ]**

Accepts Thermocouple Types J, K, T, & E or Millivolt Input  
9-32 VDC  
Adjustable Range Setting

**IRMA [pg. 760 ]**

Accepts RTD Inputs  
12-42 VDC  
Loop Powered  
Adjustable Range Setting

**IRMA DC [pg. 769 ]**

Accepts RTD Inputs  
9-32 VDC  
Adjustable Range Setting

### FREQUENCY

**AFCM [pg. 729 ]**

Analog to Frequency Converter  
Universal Input to Output  
3-Way Isolation  
19-30 VDC Powered

**IFMA [pg. 713 ]**

Frequency to Analog Converter  
0-10 V, 4-20 mA Output  
1 to 25 KHz Input  
On-Line Range Setting

**IFMR [pg. 721 ]**

Speed Switch  
Settable Trip Frequency  
Over Speed, Under Speed, and Zero-Speed Detection  
Form C Relay Output

### COMMUNICATIONS

**ICM4 [pg. 788 ]**

RS-232 to RS-485  
RS-232 to RS-422  
4800-19200 Baud  
9-32 VDC Powered

**ICM5 [pg. 792 ]**

RS-232 to RS-485  
RS-232 to RS-422  
4800-19200 Baud  
9-32 VDC Powered  
Three Way Isolation

**ICM8 [pg. 796 ]**

Serial to Ethernet Converter  
RS-232 or RS-485 from Red Lion products only  
24 VDC Powered

**SWITCH08 [pg. 802 ]**

Unmanaged Switch  
Requires No Configuration  
Supports 10/100 MDPS Network  
Half/Full Duplex Negotiation  
Auto-Crossing Detection

### POWER SUPPLIES

**PSDR1 [pg. 907 ]**

24 VDC @ 1 A  
Input 85-264 VAC or 90-350 VDC  
CE Approved  
UL Listed

**PSDR2 [pg. 907 ]**

24 VDC @ 2 A  
Input 85-264 VAC or 90-350 VDC  
CE Approved  
UL Listed

**PSDR4 [pg. 907 ]**

24 VDC @ 4 A  
Input 85-264 VAC or 90-350 VDC  
CE Approved  
UL Listed

### OTHER MODULES

**APMR [pg. 759 ]**

# G3 OPERATOR INTERFACE TERMINALS

## MODEL G303 - 3" DISPLAY

FOR USE IN HAZARDOUS LOCATIONS:  
 Class I, Division 2, Groups A, B, C, and D  
 Class II, Division 2, Groups F and G  
 Class III, Division 2

### GENERAL DESCRIPTION

The G303 Operator Interface Terminal combines unique capabilities normally expected from high-end units with a very affordable price. It is built around a high performance core with integrated functionality. This core allows the G303 to perform many of the normal features of the Paradigm range of Operator Interfaces while improving and adding new features.

The G303 is able to communicate with many different types of hardware using high-speed RS-232/422/485 communications ports and Ethernet 10 Base T/100 Base-TX communications. In addition, the G303 features USB for fast downloads of configuration files and access to trending and data logging. A CompactFlash socket is provided so that Flash cards can be used to collect your trending and data logging information as well as to store larger configuration files.

In addition to accessing and controlling of external resources, the G303 allows a user to easily view and enter information. The unit uses a Liquid Crystal Display (LCD) module, which is easily readable in both indoor and outdoor applications. Users can enter data through the front panel 32-button keypad that has user identifiable keys.

### DIMENSIONS IN INCHES (MM)

- ❑ 3.2-INCH 128X64 PIXEL BACKLIGHT LCD, ABLE TO SUPPORT TEXT AND GRAPHICS
- ❑ CONFIGURED USING CRIMSON® SOFTWARE
- ❑ UP TO 5 RS-232/422/485 COMMUNICATIONS PORTS (3 ON BOARD, 2 ON OPTIONAL COMMUNICATIONS CARD)
- ❑ ETHERNET PORT TO NETWORK UNITS
- ❑ WEB-SERVE DATA & VISUALIZATION
- ❑ PROTOCOL CONVERSION
- ❑ EMAIL, SMS ALARMS/EVENTS
- ❑ USB PORT TO DOWNLOAD THE UNIT'S CONFIGURATION FROM A PC OR FOR DATA TRANSFERS TO A PC
- ❑ COMPACTFLASH® SOCKET TO INCREASE MEMORY CAPACITY
- ❑ OUTDOOR UNIT WITH UV RATED OVERLAY AVAILABLE

### SPECIFICATIONS

1. **POWER REQUIREMENTS:**  
 +24 VDC  $\pm 20\%$  @ 9.5 W maximum.
2. **BATTERY:** Lithium coin cell. Typical lifetime of 10 years.
3. **DISPLAY:** 3.2" 128 x 64 pixel FSTN LCD with yellow LED backlight for text and graphics applications.
4. **32-KEY KEYPAD:** 8 user legendable keys, 5 navigational keys, 10+2 numeric keys, 4 dedicated keys, and 3 soft keys for on-screen menus.
5. **MEMORY:**  
**On Board User Memory:** Non-volatile Flash memory.  
**Memory Card:** CompactFlash Type II slot for Type I and Type II CompactFlash cards.
6. **COMMUNICATIONS:**  
**USB Port:** USB 1.1. Type B connection.  
**Serial Ports:** Three ports total. Two RS-232 and one RS-485/422. Each port is individually software programmable up to 115,200 baud.  
 DH485 TXEN: Transmit enable; open collector,  $V_{OH} = 15$  VDC,  $V_{OL} = 0.5$  V @ 25 mA max.  
**Ethernet Port:** 10 BASE-T / 100 BASE-TX
7. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** 0 to 50°C  
**Storage Temperature Range:** -30 to 70°C  
**Operating and Storage Humidity:** 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
**Vibration according to IEC 68-2-6:** Operational 5 to 8 Hz, 0.8" (p-p), 8 to 500 Hz, in X, Y, Z direction, duration: 1 hour, 3 g.  
**Shock according to IEC 68-2-27:** Operational 40 g, 9 msec in 3 directions.  
**Altitude:** Up to 2000 meters.
8. **CERTIFICATIONS AND COMPLIANCES:**  
 CE, UL Listed for use in Hazardous Locations, Class I, Division 2, Groups A, B, C, and D; Class II, Division 2, Groups F and G; Class III, Division 2.  
 See data sheet on web site for detailed information.
9. **RATINGS:** NEMA 4X/IP66
10. **WEIGHT:** 1.96 lbs (0.89 Kg)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
G303	Operator Interface for indoor applications only, textured finish with embossed keys	G303M000
	Operator Interface for indoor or outdoor applications, glossy finish with UV rated overlay (keys are not embossed)	G303S000

## ACCESSORIES

### OPTIONAL COMMUNICATION CARD

Red Lion offers optional communication cards for fieldbus communications. These communication cards will allow your G303 to communicate with many of the popular fieldbus protocols.

Red Lion is also offering a communications card for additional RS-232 and RS-422/485 communications. See the G3 Accessories section on page 37 for information about these cards.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "G303 Port Pin Outs" for wiring information.

- ❑ UP TO 5 RS-232/422/485 COMMUNICATIONS PORTS (3 ON BOARD, 2 ON OPTIONAL COMMUNICATIONS CARD)
- ❑ ETHERNET PORT TO NETWORK UNITS
- ❑ WEB-SERVE DATA & VISUALIZATION
- ❑ PROTOCOL CONVERSION
- ❑ EMAIL, SMS ALARMS/EVENTS
- ❑ USB PORT TO DOWNLOAD THE UNIT'S CONFIGURATION FROM A PC OR FOR DATA TRANSFERS TO A PC
- ❑ COMPACTFLASH® SOCKET TO INCREASE MEMORY CAPACITY
- ❑ OUTDOOR UNIT WITH UV RATED OVERLAY AVAILABLE
- ❑ 5 BUTTON KEYPAD FOR ON-SCREEN MENUS
- ❑ RESISTIVE ANALOG TOUCHSCREEN

## GENERAL DESCRIPTION

The G306M Operator Interface Terminal combines unique capabilities normally expected from high-end units with a very affordable price. It is built around a high performance core with integrated functionality.

The G306 is able to communicate with many different types of hardware using high-speed RS-232/422/485 communications ports and Ethernet 10 Base T/100 Base-TX communications. In addition, the G306 features USB for fast downloads of configuration files and access to trending and data logging. A CompactFlash socket is provided so that Flash cards can be used to collect your trending and data logging information as well as to store larger configuration files.

In addition to accessing and controlling of external resources, the G306 allows a user to easily view and enter information. The unit uses a Liquid Crystal Display (LCD) module, which is easily readable in both indoor and outdoor applications. Users can enter data through the touchscreen and/or front panel 5-button keypad.

The G308 Operator Interface Terminal combines unique capabilities normally expected from high-end units with a very affordable price. It is built around a high performance core with integrated functionality. This core allows the G308 to perform many of the normal features of the Paradigm range of Operator Interfaces while improving and adding new features.

The G308 is able to communicate with many different types of hardware using high-speed RS-232/422/485 communications ports and Ethernet 10 Base T/100 Base-TX communications. In addition, the G308 features USB for fast downloads of configuration files and access to trending and data logging. A CompactFlash socket is provided so that Flash cards can be used to collect your trending and data logging information as well as to store larger configuration files.

In addition to accessing and controlling of external resources, the G308 allows a user to easily view and enter information. Users can enter data through the touchscreen or front panel 7-button keypad.

## DIMENSIONS IN INCHES (MM)

- 7.7-INCH DSTN PASSIVE MATRIX 256 COLOR VGA 640X480 PIXEL LCD MODULE
- CONFIGURED USING CRIMSON® SOFTWARE
- UP TO 5 RS-232/422/485 COMMUNICATIONS PORTS (3 ON BOARD, 2 ON OPTIONAL COMMUNICATIONS CARD)
- ETHERNET PORT TO NETWORK UNITS
- WEB-SERVE DATA & VISUALIZATION
- PROTOCOL CONVERSION
- EMAIL, SMS ALARMS/EVENTS
- USB PORT TO DOWNLOAD THE UNIT'S CONFIGURATION FROM A PC OR FOR DATA TRANSFERS TO A PC
- COMPACTFLASH® SOCKET TO INCREASE MEMORY CAPACITY
- 7 BUTTON KEYPAD FOR ON-SCREEN MENUS
- RESISTIVE ANALOG TOUCHSCREEN

## SPECIFICATIONS

1. **POWER REQUIREMENTS:**  
 +24 VDC ±20% @ 24 W maximum.
2. **BATTERY:** Lithium coin cell. Typical lifetime of 10 years.
3. **DISPLAY:** 7.7" 640 x 480 pixel DSTN passive matrix.
4. **7-KEY KEYPAD:** for on-screen menus.
5. **MEMORY:**  
 On Board User Memory: Non-volatile Flash memory.  
 Memory Card: CompactFlash Type II slot for Type I and Type II CompactFlash cards.
6. **COMMUNICATIONS:**  
 USB Port: USB 1.1. Type B connection.  
 Serial Ports: Three ports total. Two RS-232 and one RS-485/422. Each port is individually software programmable up to 115,200 baud.  
 DH485 TXEN: Transmit enable; open collector,  $V_{OH} = 15$  VDC,  $V_{OL} = 0.5$  V @ 25 mA max.  
 Ethernet Port: 10 BASE-T / 100 BASE-TX
7. **ENVIRONMENTAL CONDITIONS:**  
 Operating Temperature Range: 0 to 50°C  
 Storage Temperature Range: -20 to 60°C  
 Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
 Vibration according to IEC 68-2-6: Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's..  
 Shock according to IEC 68-2-27: Operational 40 g, 9 msec in 3 directions.  
 Altitude: Up to 2000 meters.
8. **CERTIFICATIONS AND COMPLIANCES:**  
 CE, UL Listed for use in hazardous locations, Class I, Division 2, Groups A, B, C, and D; Class II, Division 2, Groups F and G; Class III, Division 2. See data sheet on web site for detailed information.
9. **RATINGS:** NEMA 4X/IP66
10. **WEIGHT:** 3.84 lbs (1.74 Kg)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER

## ACCESSORIES

### OPTIONAL COMMUNICATION CARD

Red Lion offers optional communication cards for fieldbus communications. These communication cards will allow your G308 to communicate with many of the popular fieldbus protocols.

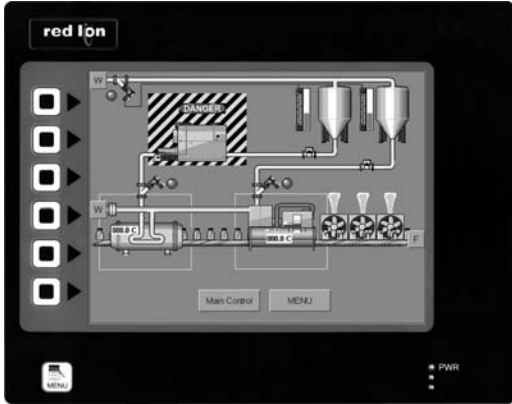

Red Lion is also offering a communications card for additional RS-232 and RS-422/485 communications. See the G3 Accessories section on page 37 for information about these cards.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "G308 Port Pin Outs" for wiring information.

# MODEL G308A - 8.4" DISPLAY

- 8.4-INCH TFT ACTIVE MATRIX DISPLAY, 256 COLOR VGA 640X480 PIXELS
- CONFIGURED USING CRIMSON® SOFTWARE
- UP TO 5 RS-232/422/485 COMMUNICATIONS PORTS (3 ON BOARD, 2 ON OPTIONAL COMMUNICATIONS CARD)
- ETHERNET PORT TO NETWORK UNITS
- WEB-SERVE DATA & VISUALIZATION
- PROTOCOL CONVERSION
- EMAIL, SMS ALARMS/EVENTS
- USB PORT TO DOWNLOAD THE UNIT'S CONFIGURATION FROM A PC OR FOR DATA TRANSFERS TO A PC
- COMPACTFLASH® SOCKET TO INCREASE MEMORY CAPACITY
- 7 BUTTON KEYPAD FOR ON-SCREEN MENUS
- RESISTIVE ANALOG TOUCHSCREEN

FOR USE IN HAZARDOUS LOCATIONS:  
 Class I, Division 2, Groups A, B, C, and D  
 Class II, Division 2, Groups F and G  
 Class III, Division 2

### OPTIONAL COMMUNICATION CARD

Red Lion offers optional communication cards for fieldbus communications. These communication cards will allow your G310 to communicate with many of the popular fieldbus protocols.

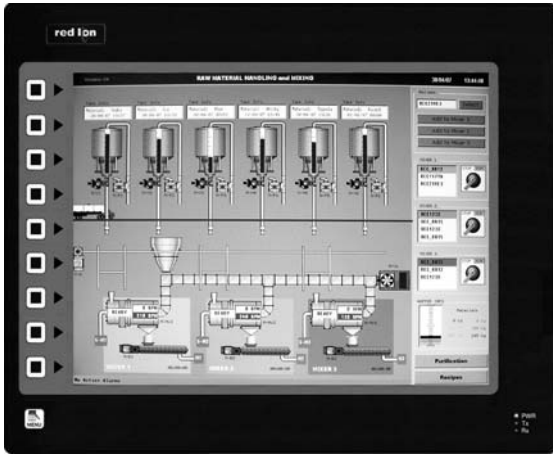

Red Lion is also offering a communications card for additional RS-232 and RS-422/485 communications. See the G3 Accessories section on page 37 for information about these cards.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "G310C/S Port Pin Outs" for wiring information.

# MODEL G315 - 15" DISPLAY

## GENERAL DESCRIPTION

The G315C Operator Interface combines powerful features normally found only in PC-based HMIs, with the reliability of a dedicated operating system. It is built around a high performance core with integrated features, allowing it to provide SCADA-like functionality at a fraction of the cost.

The G315C is able to act as a multiple protocol converter using four high-speed RS-232/422/485 communications ports and an Ethernet 10/100 Base-TX port. The Ethernet port supports up to four protocols simultaneously, allowing dissimilar Ethernet based products to communicate with one another.

The G315C's USB port allows fast downloads of configuration files and access to trending and data logging. A CompactFlash socket is provided so that standard CompactFlash cards can be used to collect your trending and data logging information as well as to store configuration files. The built-in web server allows processes to be controlled remotely.

The G315C's large, high-resolution display allows users to easily view and enter information. Data can be manipulated through the touchscreen and/or the 10-button keypad.

## DIMENSIONS IN INCHES (MM)

- 15-INCH TFT ACTIVE MATRIX DISPLAY, 32K COLOR VGA 1024X768 PIXELS
- CONFIGURED USING CRIMSON® SOFTWARE
- UP TO 6 RS-232/422/485 COMMUNICATIONS PORTS (4 ON BOARD, 2 ON OPTIONAL COMMUNICATIONS CARD)
- ETHERNET PORT SUPPORTS MULTIPLE PROTOCOLS SIMULTANEOUSLY
- PROTOCOL CONVERSION
- EMAIL, SMS ALARMS/EVENTS
- BUILT-IN WEB SERVER AND FTP SERVER/CLIENT
- USB PORT TO DOWNLOAD THE UNIT'S CONFIGURATION FROM A PC OR FOR DATA TRANSFERS TO A PC
- COMPACTFLASH® SOCKET TO INCREASE MEMORY CAPACITY
- 10 BUTTON KEYPAD FOR ON-SCREEN MENUS
- RESISTIVE ANALOG TOUCHSCREEN

## SPECIFICATIONS

# G3 KADET O/ TERMINALS

## MODEL G304K - 4.3" DISPLAY

- ❑ BRIGHT 4.3-INCH TFT ACTIVE MATRIX 256 COLOR 480 x 272 PIXEL DISPLAY
- ❑ CONFIGURED USING CRIMSON® SOFTWARE
- ❑ TWO SERIAL COMMUNICATIONS PORTS (1 RS-232 AND 1 RS-232/422/485)
- ❑ RESISTIVE ANALOG TOUCHSCREEN
- ❑ PROTOCOL CONVERSION

### GENERAL DESCRIPTION

The 4.3-inch G3 Kadet was designed for applications in which available mounting space is at a premium. Though diminutive in size, the Kadet boasts a bright TFT display with full 256-color support. With a resolution of 480 x 272, the Kadet's 4.3-inch display has a higher resolution and better image clarity than most 6-inch HMIs.

The G3 Kadet offers two high-speed serial ports in the form of one RS-232 and one RS-232/422/485 ports. This allows the Kadet to simultaneously communicate with devices from different manufacturers, as well as to perform protocol conversion.

The G3 Kadet range of HMIs is programmed with Red Lion's free Crimson 2.0 software. Crimson 2.0 offers easy to use drag and drop communications configuration, while the embedded image library allows the programmer to create intuitive screens and prompts for the operator.

### SPECIFICATIONS

#### 1. POWER REQUIREMENTS:

Supply Voltage: 12-28 VDC, Class 2  
Maximum Power: 3.6 W; Start up current may be as high as 700 mA  
Fused: Fast-blow 800mA, 5x20mm

#### 2. DISPLAY: 4.3" 480 x 272 pixel TFT active matrix.

#### 3. MEMORY: 2MB of non-volatile flash memory.

#### 4. COMMUNICATIONS:

**Serial Ports:** Two Serial Ports total. One RS-232 port, one RS-232/422/485  
Each port is individually software programmable up to 115,200 baud.

#### 5. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 45°C

**Operating and Storage Humidity:** 10-90% relative humidity (non-condensing) from 0 to 45°C.

**Vibration:** Operational 10 to 25 Hz in X, Y, Z direction for 30 minutes, 2 g's.

#### 6. CERTIFICATIONS AND COMPLIANCES:

CE, UL Listed

See data sheet on web site for detailed information.

#### 7. RATINGS: NEMA 4/IP65

#### 8. WEIGHT: 9.4 oz (270 g)

### DIMENSIONS IN INCHES (MM)

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "Device Communications" for wiring information.

# MODEL G306K - 5.6" DISPLAY

- 5.6-INCH TFT ACTIVE MATRIX 256 COLOR QVGA 320 X 234 PIXEL DISPLAY
- CONFIGURED USING CRIMSON® SOFTWARE
- THREE SERIAL COMMUNICATIONS PORTS (1 RS-232 AND 2 RS-232/422/485 PORTS)
- ETHERNET PORT SUPPORTS MULTIPLE PROTOCOLS SIMULTANEOUSLY
- COMPACTFLASH® SOCKET FOR LOADING DATABASE IN FIELD
- RESISTIVE ANALOG TOUCHSCREEN
- PROTOCOL CONVERSION

## GENERAL DESCRIPTION

The G306K is the perfect solution for applications that require the operator to monitor and control more than just a single device. With three serial ports and an Ethernet port, the 5.6" Kadet can connect to multiple serial and Ethernet devices simultaneously, including PLCs, motor drives, bar code scanners, etc.

The G306K performs the functions of a multiple protocol converter, using three high-speed RS-232/422/485 communications ports and a 10 Base-T Ethernet port. The Ethernet port supports up to four protocols simultaneously, allowing dissimilar Ethernet based products to communicate with one another.

The CompactFlash slot can be used to load the unit's configuration file, allowing configuration changes to be made and saved to the card for later transfer.

The G3 Kadet range of HMIs is programmed with Red Lion's free Crimson 2.0 software. Crimson 2.0 offers easy to use drag and drop communications configuration, while the embedded image library allows the programmer to create intuitive screens and prompts for the operator.

# G3 ACCESSORIES

## MODEL G3RS - ISOLATED SERIAL EXPANSION CARD

- CONFIGURED USING CRIMSON® SOFTWARE
- ISOLATED RS-232 AND RS-485 MULTIPLEXED PORTS CAPABLE OF COMMUNICATING WITH RS-232, RS-422, RS-485 AND DH485 DEVICES AT UP TO 115,200 BAUD
- EASY INSTALLATION

### GENERAL DESCRIPTION

The G3 proprietary expansion slot provides a high speed, parallel architecture that extends the functionality and flexibility of the G3 series HMI. This approach allows the G3 series to evolve concurrently with the latest advances in communications and standards, without sacrificing performance. This high bandwidth channel has significantly greater throughput when compared to the traditional (external) serial gateway approach.

The G3RS option card is easily installed by removing the rear cover of your G3 operator interface, attaching the card using three screws and connecting a single cable. Adding this card gives the operator interface another RS-232 port and RS-422/485 port. It is built with isolation to protect equipment from potentially harmful ground loops, and provides high speed RS-232, RS-422, RS-485, and DH485 communications for many different types of hardware.

### SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of your G3 operator interface.
2. **COMMUNICATIONS:**
  - Serial Ports:** Format and Baud Rates for each port are individually software programmable up to 115,200 baud and are isolated to help prevent ground loops. The RS-422/485 and DH485 port via RJ45 and the RS-232 port via RJ12 share the same hardware.
  - DH485 TXEN:** Transmit enable; open collector,  $V_{OH} = 15$  VDC,  $V_{OL} = 0.5$  VDC
  - Isolation from G3RS Communication ports to G3 operator interface:** 1000 VDC for 1 minute.
3. **CERTIFICATIONS AND COMPLIANCES:** Refer to “Agency Approvals” section of Red Lion’s website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range: 0 to 50°C
  - Storage Temperature Range: -20 to 80°C
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.
  - Altitude: Up to 2000 meters.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
G3RS	RS-232/485 option card for G3 operator interfaces with isolated high speed communications ports	G3RS0000

## MODEL G3CN - CANopen/J1939 EXPANSION CARD

**CANopen**

- CONFIGURED USING CRIMSON® SOFTWARE
- DIGITALLY ISOLATED CANopen PORT CAPABLE OF COMMUNICATING WITH ANY CANopen DEVICE
- EASY INSTALLATION

### GENERAL DESCRIPTION

The G3 proprietary expansion slot provides a high speed, parallel architecture that extends the functionality and flexibility of the G3 series HMI. This approach allows the G3 series to evolve concurrently with the latest advances in communications and standards, without sacrificing performance. This high bandwidth channel has significantly greater throughput when compared to the traditional (external) serial gateway approach.

The G3CN option card is easily installed by removing the rear cover of your G3 operator interface, attaching the card using three screws and connecting a single cable. Adding this card gives the operator interface a CANopen communications port. It is built with digital isolation to protect the operator interface from the CANopen/J1939 bus and vice versa. It provides the ability to communicate to any high speed CANopen device. The G3CN option board has a termination resistor built-in, and is selectable through a jumper setting. A connector housing is provided to function as a strain relief for the wires that terminate into the five position connector. The connector is pluggable for easy removal of the G3 operator interface from the CANopen bus, without disturbing communications with other devices on the bus.

### SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of your G3 operator interface.
2. **COMMUNICATIONS:**
  - CANopen Port:** The CANopen port has format and baud rates that are software programmable up to 1M baud and are digitally isolated. This port may be configured for various CANopen protocols.
  - Isolation from G3CN Communication ports to G3 operator interface:** 1000 VDC for 1 minute.
3. **CERTIFICATIONS AND COMPLIANCES:** Refer to “Agency Approvals” section of Red Lion’s website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range: 0 to 50°C
  - Storage Temperature Range: -20 to 80°C
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.
  - Altitude: Up to 2000 meters.

G3CN	CANopen option card for G3 operator interfaces with isolated high speed communications ports	G3CN0000

# MODEL G3DN - DEVICENET EXPANSION CARD

- CONFIGURED USING CRIMSON® SOFTWARE
- DIGITALLY ISOLATED DeviceNet PORT CAPABLE OF COMMUNICATING WITH ANY DeviceNet MASTER
- EASY INSTALLATION

## SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of your G3 operator interface.
2. **COMMUNICATIONS:**  
**DeviceNet Port:** The DeviceNet port has format and baud rates that are software programmable up to 500K baud and are digitally isolated. This port may be configured for various DeviceNet protocols. Check [www.redlion.net/g3](http://www.redlion.net/g3) for currently supported protocols.  
**Isolation from G3DN Communication ports to G3 operator interface:** 1000 VDC for 1 minute.
3. **CERTIFICATIONS AND COMPLIANCES:**  
Refer to “Agency Approvals” section of Red Lion’s website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**  
 Operating Temperature Range: 0 to 50°C  
 Storage Temperature Range: -20 to 80°C  
 Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
 Altitude: Up to 2000 meters.

## GENERAL DESCRIPTION

The G3 proprietary expansion slot provides a high speed, parallel architecture that extends the functionality and flexibility of the G3 series HMI. This approach allows the G3 series to evolve concurrently with the latest advances in communications and standards, without sacrificing performance. This high bandwidth channel has significantly greater throughput when compared to the traditional (external) serial gateway approach.

The G3DN option card is easily installed by removing the rear cover of your G3 operator interface, attaching the card using three screws and connecting a single cable. Adding this card gives the operator interface a DeviceNet slave communications port. It is built with digital isolation to protect the operator interface from the DeviceNet bus and vice versa. It provides the ability to communicate to any DeviceNet master. A connector housing is provided to function as a strain relief for the wires that terminate into the five position connector. The connector is pluggable for easy removal of the G3 operator interface from the DeviceNet bus, without disturbing communications with other devices on the bus.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
G3DN	DeviceNet option card for G3 operator interfaces with isolated high speed communications ports	G3DN0000

# MODEL G3PB - PROFIBUS EXPANSION CARD

- ADDS PROFIBUS DP CONNECTIVITY TO ANY G3 OPERATOR INTERFACE
- EASY INSTALLATION

## SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of your G3 operator interface.
2. **COMMUNICATIONS:**  
**PROFIBUS Port:** FIELDBUS TYPE : PROFIBUS-DP EN 50 170, I. The PROFIBUS port has a format and baud rates that are software programmable up to 12M baud and are digitally isolated.
3. **CERTIFICATIONS AND COMPLIANCES:**  
Refer to “Agency Approvals” section of Red Lion’s website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**  
 Operating Temperature Range: 0 to 50°C  
 Storage Temperature Range: -20 to 80°C  
 Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
 Altitude: Up to 2000 meters.

## GENERAL DESCRIPTION

The G3 proprietary expansion slot provides a high speed, parallel architecture that extends the functionality and flexibility of the G3 series HMI. This approach allows the G3 series to evolve concurrently with the latest advances in communications and standards, without sacrificing performance. This high bandwidth channel has significantly greater throughput when compared to the traditional (external) serial gateway approach.

The G3PB option card adds PROFIBUS DP connectivity to any G3 series HMI. This allows a high speed exchange of blocks of data, at data rates up to 12 MBaud, between the hosting G3 and a Master PLC on a PROFIBUS network. The DP suffix refers to “Decentralized Periphery”, which is used to describe distributed I/O devices connected via a fast serial data link with a central controller.

The card is easily installed by removing the rear cover of your G3 operator interface, attaching the card using three screws and connecting a single cable.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
G3PB	PROFIBUS option card for G3 operator interfaces	G3PBDP00

# MODEL G3GSM - CELLULAR MODEM EXPANSION CARD

- GSM/GPRS CAPABILITY
- SMS TEXT MESSAGING
- E-MAIL AND FTP
- GLOBAL OPERATION
- CONFIGURED USING CRIMSON® SOFTWARE
- EASY INSTALLATION

## GENERAL DESCRIPTION

The G3GSM option card allows the user to add GSM/GPRS cellular modem capability to their G3 operator interface terminal. GSM/GPRS is the most prevalent cellular technology in today's markets. GPRS can be used for services such as Wireless Application Protocol (WAP) access, Short Message Service (SMS), and for Internet communication services such as email and World Wide Web access. The G3GSM modem option card is quad-band, allowing it to work in frequencies across Americas, Europe and Asia. US and Canada work in the 850/1900 MHz bands, while Europe, Middle East, Africa and most of Asia work in the 900/1800 MHz GSM/GPRS frequencies.

The G3GSM requires the addition of a SIM (Subscriber Identity Module) card, which is inserted into the holder prior to installation of the G3GSM card. The SIM card securely stores the service-subscriber key (IMSI) used to identify a subscriber, and is used to connect to the network to obtain an IP address from the provider.

## SPECIFICATIONS

1. **POWER REQUIREMENTS:** 24 VDC  $\pm$  20%; 0.25A max; 0.25A typical (independent from the host G3 power connection). Must use Class 2 or SELV rated power supply.
2. **ANTENNA CONNECTOR:**  
**SMA Female connector requires:**  
 50 Ohm antenna with SMA male connector  
 Quad-band antenna (850/900/1800/1900 MHz) for global support.  
 Dual-band (850/1900 MHz) antenna for US and Canada only  
 Dual band (900/1800 MHz) for Europe only  
 The antenna cable should be 50 $\Omega$  impedance, RG178/U or RG174/U type and be able to connect to the RSMA (Male) jack bulkhead. The antenna could be horizontal, vertical or right angled. Longer antenna cable would equate to signal loss.
3. **CERTIFICATIONS AND COMPLIANCES:**  
 Refer to "Agency Approvals" section of Red Lion's website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**  
 Operating Temperature Range: 0 to 50°C  
 Storage Temperature Range: -20 to 80°C  
 Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
 Altitude: Up to 2000 meters.

# DATA STATION PLUS SERIES

## MODEL DSP

FOR USE IN HAZARDOUS LOCATIONS:  
Class I, Division 2, Groups A, B, C, and D

### GENERAL DESCRIPTION

The Data Station Plus was designed to act as a nexus for industrial data collection and management. The unit offers multiple protocol conversion, data logging and remote machine access. With three built in serial ports and a 10 Base-T/100 Base-TX Ethernet port, the unit performs protocol conversion, allowing disparate devices to communicate seamlessly with one another. The Ethernet port supports up to four protocols simultaneously so even Ethernet to Ethernet protocols can be converted.

The CompactFlash card allows data to be collected and stored for later review. The files are stored in simple CSV file format allowing common applications, such as Microsoft Excel and Access, to view and manage the data. The free Websync utility provides a means to synchronize the files with a PC's hard drive for permanent storage. The CompactFlash card may also be used to load new configuration files into the Data Station.

The built-in web server allows log files to be retrieved manually, and also provides access to the unique web-based HMI. The web-based HMI is programmed just like Red Lion's G3 series of HMI. Any standard web browser such as Internet Explorer or Netscape may be used to monitor or control the HMI from a PC anywhere in the world.

The USB port may be used for blazing fast file downloads, or to mount the Data Station's CompactFlash card as an external drive to your PC. The Data Station's DIN rail mounting saves time and panel space and snaps easily onto standard top hat (T) profile DIN rail.

### DIMENSIONS IN INCHES (MM)

- ❑ CONVERTS NUMEROUS PROTOCOLS SIMULTANEOUSLY
- ❑ COMPACTFLASH® SLOT ALLOWS PROCESS DATA TO BE LOGGED DIRECTLY TO CSV FILES
- ❑ WEB-BASED HMI OFFERS BUILT-IN PC-BASED SCADA FUNCTIONALITY
- ❑ WEBSERVER PROVIDES WORLDWIDE ACCESS TO DATA LOGS AND WEB-BASED HMI
- ❑ EXTENSIVE BUILT-IN DRIVER LIST ALLOWS EASY DATA MAPPING TO PLCs, PCs, AND SCADA SYSTEMS
- ❑ 10 BASE-T/100BASE-TX ETHERNET PORT SUPPORTS FOUR SIMULTANEOUS PROTOCOLS
- ❑ INDEPENDENT SERIAL PORTS PROVIDE VIRTUALLY UNLIMITED INTEGRATION METHODS
- ❑ ALARM NOTIFICATIONS CAN BE SENT VIA EMAIL OR TEXT MESSAGES
- ❑ SUPPORTS UP TO NINE PROTOCOLS SIMULTANEOUSLY

### SPECIFICATIONS

1. **POWER:** 24 VDC  $\pm$  10%  
200 mA min., without expansion card  
1 Amp maximum with expansion card fitted
2. **COMMUNICATIONS:**
  - USB/PG Port:** USB 1.1. Device only using Type B connection.
  - Serial Ports:** Format and Baud Rates for each port are individually software programmable up to 115,200 baud.
  - RS-232/PG Port:** RS-232 port via RJ12
  - COMMS Ports:** RS-422/485 port via RJ45, and RS-232 port via RJ12
  - DH485 TXEN:** Transmit enable; open collector,  $V_{OH} = 15$  VDC,  $V_{OL} = 0.5$  V @ 25 mA max.
  - Ethernet Port:** 10 BASE-T / 100 BASE-TX  
RJ45 jack is wired as a NIC (Network Interface Card).
3. **LEDs:**
  - STS – Status LED indicates condition of Data Station.
  - TX/RX – Transmit/Receive LEDs show serial activity.
  - Ethernet – Link and activity LEDs.
  - CF – CompactFlash LED indicates card status and read/write activity
4. **MEMORY:**
  - On-board User Memory: 4 Mbytes of non-volatile Flash memory.
  - On-board SDRAM:
    - DSPLE and DSPSX: 2 Mbytes
    - DSPGT: 8 Mbytes
  - Memory Card: CompactFlash Type II slot for Type I and Type II cards.  
Used for optional database storage only
5. **REAL-TIME CLOCK:** Typical accuracy is less than one min./month drift.  
Battery: Lithium Coin Cell. Typical lifetime of 10 years at 25 °C.
6. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range: 0 to 50°C
  - Storage Temperature Range: -30 to +70°C
  - Operating and Storage Humidity: 80% max relative humidity, non-condensing, from 0 to 50°C
  - Vibration According to IEC 68-2-6: Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's.
  - Shock According to IEC 68-2-27: Operational 30 g, 11 msec in 3 directions.
  - Altitude: Up to 2000 meters
7. **CERTIFICATIONS AND COMPLIANCES:**
  - CE, UL Listed For use in Hazardous Locations: Class I, Division 2, Groups A, B, C, and D
8. **WEIGHT:** 15.1 oz (456.4 g)

		Data Station with multiple protocol converter, data logger, web server with web-based HMI up to VGA (640 x 480) size and expansion slot with increased SDRAM.	DSPGT000

## ACCESSORIES

### OPTIONAL COMMUNICATION CARD

Red Lion offers optional communication cards for fieldbus communications. These communication cards will allow your DSP to communicate with many of the popular fieldbus protocols.

Red Lion is also offering a communications card for additional RS-232 and RS-422/485 communications. See the DSP Accessories section on page 59 for information about these cards.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "Data Station Port Pin Outs" for wiring information.

# MODULAR CONTROLLER SERIES

## MODEL CSMSTRV2

- CONTROL AND MONITOR UP TO 256 I/O POINTS ANALOG OR DIGITAL
- CONTROL OF OTHER MODULES IN THE MODULAR CONTROLLER SERIES
- STORES MODULE CONFIGURATION INFORMATION, AND AUTOMATICALLY REPROGRAMS REPLACED MODULES
- EXTENSIVE BUILT-IN DRIVER LIST ALLOWS EASY DATA MAPPING TO PLCs, PCs, AND SCADA SYSTEMS
- INDEPENDENT SERIAL PORTS PROVIDE VIRTUALLY UNLIMITED INTEGRATION METHODS
- 10 BASE-T/100 BASE-TX ETHERNET CONNECTION PROVIDES NETWORKING CAPABILITY
- SUPPORTS UP TO 16 MODULAR CONTROLLER SERIES MODULES
- SUPPORTED BY CRIMSON SOFTWARE
- HOT SWAPPABLE MODULES
- MULTI-ZONE PID CONTROL
- DATA ACQUISITION FOR PC, PLC OR SCADA SYSTEMS

### GENERAL DESCRIPTION

Red Lion's Modular Controller series offers a cost-effective solution to integrating multi-zone PID control, data acquisition and I/O into your PC, DCS or PLC control system. The Modular Controller product line has all the features of the Data Station Plus, while adding the ability to manage up to 32 zones of PID control for analog and digital I/O. With capabilities to handle high I/O counts between a minimum of 96 analog to a maximum of 224 digital I/O, the Modular Controller series is ideal for complex multi-zone applications, such as cold storage warehouses or other areas where large amounts of analog and digital I/O are needed. The Modular Controller supports up to 16 hot-swappable controller modules with automatic reprogramming, available with configurations ranging from analog input and output, digital I/O, PID control, strain gage and temperature input. Combined with enhanced communication, protocol conversion, and data logging capabilities with web-based HMI and remote alarm/text, Red Lion's Modular Controller offers 24/7 monitoring capabilities for process peace-of-mind.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "Master Port Pin Outs" for wiring information.

# MODEL CSMSTRLE

## GENERAL DESCRIPTION

The Model CSMSTRLE is a communications and control platform designed for use with Modular Controller Series slave modules. The CSMSTR uses a proprietary high speed serial protocol to communicate, via backplane connection, with up to 16 slave modules. Through the same connection, the Master also provides power to the modules.

When powered up, the CSMSTR automatically identifies and addresses connected slave modules. By storing the configuration information of all of the modules, the CSMSTR is able to automatically configure modules if they are replaced.

The Master provides high-speed RS-232/422/485 communication ports and an Ethernet port for connection to PCs, PLCs, and SCADA systems. An extensive list of master and slave protocol drivers are available to allow the CSMSTR to share and exchange variable data with external devices. The 10 Base-T/100 Base-TX Ethernet port can also be used to connect and share data with other devices at high speeds.

## DIMENSIONS IN INCHES (MM)

- ❑ ADDS MULTIPLE PROTOCOL CONVERSION FUNCTIONALITY TO DATA ACQUISITION AND MULTI-ZONE PID CONTROL APPLICATIONS
- ❑ PERFORMS HIERARCHICAL CONTROL OF OTHER MODULES IN THE MODULAR CONTROLLER SERIES
- ❑ STORES MODULE CONFIGURATION INFORMATION, AND AUTOMATICALLY REPROGRAMS REPLACED MODULES
- ❑ EXTENSIVE BUILT-IN DRIVER LIST ALLOWS EASY DATA MAPPING TO PLCs, PCs, AND SCADA SYSTEMS
- ❑ INDEPENDENT SERIAL PORTS PROVIDE VIRTUALLY UNLIMITED INTEGRATION METHODS
- ❑ 10 BASE-T/100 BASE-TX ETHERNET CONNECTION PROVIDES NETWORKING CAPABILITY
- ❑ SUPPORTS UP TO 16 MODULAR CONTROLLER SERIES MODULES
- ❑ SUPPORTS UP TO NINE PROTOCOLS SIMULTANEOUSLY (with expansion card)

# MODEL CSMSTRSX & CSMSTRGT

## GENERAL DESCRIPTION

The Model CSMSTR is a communications and control platform designed for use with Modular Controller Series slave modules. The CSMSTR uses a proprietary high speed serial protocol to communicate, via backplane connection, with up to 16 slave modules. Through the same connection, the Master also provides power to the modules.

When powered up, the CSMSTR automatically identifies and addresses connected slave modules. By storing the configuration information of all of the modules, the CSMSTR is able to automatically configure modules if they are replaced.

The Master provides high-speed RS-232/422/485 communication ports and an Ethernet port for connection to PCs, PLCs, and SCADA systems. An extensive list of master and slave protocol drivers are available to allow the CSMSTR to share and exchange variable data with external devices. The 10 Base-T/100 Base-TX Ethernet port can also be used to connect and share data with other devices at high speeds. The web-based HMI feature allows you to create and control an HMI from any networked PC. An onboard CompactFlash slot provides storage for the Master's built-in data logger.

The design of the Modular Controller Series high density packaging and DIN rail mounting saves time and panel space. The controller snaps easily onto standard top hat (T) profile DIN rail.

## DIMENSIONS IN INCHES (MM)

- ❑ PROVIDES ENHANCED FEATURES FOR DATA ACQUISITION OR MULTI-ZONE PID CONTROL APPLICATIONS

## ACCESSORIES

### OPTIONAL COMMUNICATION CARD

Red Lion offers optional communication cards for fieldbus communications. These communication cards will allow your CSMSTR to communicate with many of the popular fieldbus protocols.

Red Lion is also offering a communications card for additional RS-232 and RS-422/485 communications. See the CSMSTR Accessories section on page 59 for information about these cards.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "Master Port Pin Outs" for wiring information.

# MODEL CSPID - SINGLE AND DUAL LOOP PID MODULES

## GENERAL DESCRIPTION

The Model CSPID series modules are full featured PID controllers designed for use with the Modular Controller Series. The CSPID1 is a single loop controller, while the CSPID2 is a dual loop controller. The design of the system provides a true modular PID control platform for multi-zone control applications. The modules can accept a wide range of thermocouple, RTD, 0-10 V, 0/4-20 mA signals. With multiple discrete outputs, plus an optional analog output (CSPID1 only), the CSPID modules can perform virtually any combination of time-proportioning or linear control for heat, cool, or heat/cool applications. The discrete outputs may also be assigned to one of seven internal soft alarms. The CSPID1's optional linear output can be assigned to transmit virtually any internal variable.

The CSPID modules connect and communicate via a backplane connection to the CSMSTR Modular Controller Series Master. The CSMSTR, equipped with serial ports as well as an Ethernet port, allows the system to share data with PCs, PLCs, and SCADA systems. The Master supports any combination of up to 16 CS Series modules.

The modules can operate in On/Off, P, PI, or PID control mode, and use an on-demand Auto-Tune that establishes the tuning constants. The PID constants may be fine-tuned through the serial or Ethernet interface. The modules employ a unique overshoot suppression feature, which allows the quickest response without excessive overshoot. The modules can also be operated in manual mode, providing the operator with direct control of the output.

## DIMENSIONS IN INCHES (MM)

- ❑ DEDICATED SINGLE AND DUAL PID MODULES FOR THE MODULAR CONTROLLER SERIES
- ❑ HOT-SWAPPABLE REPLACEMENT REDUCES DOWNTIME
- ❑ AUTO ADDRESSING MINIMIZES CONFIGURATION TIME
- ❑ FULLY ISOLATED DESIGN PROVIDES RELIABLE OPERATION
- ❑ PID CONTROL WITH REDUCED OVERSHOOT
- ❑ UNIVERSAL INPUTS ACCEPT TC, RTD, 0-10 V and 0/4-20 mA SIGNALS
- ❑ ON DEMAND AUTO-TUNING OF PID SETTINGS
- ❑ DC ANALOG OUTPUT (OPTIONAL, CSPID1 ONLY)
- ❑ HEATER CURRENT INPUT (OPTIONAL) ENSURES DETECTION OF HEATER CIRCUIT FAILURE

## SPECIFICATIONS

1. **POWER:** Derived from system backplane. (CSPID1 draws 150 mA max. load on power input of MASTER, CSPID2 draws 125 mA max). Modules may be hot-swapped (Replaced while powered up).
2. **LEDs\*:**
  - STS** - Status LED shows module condition
  - OP1, OP2, OP3, OP4** - Indicate status of outputs 1, 2, 3, and 4
  - ALM, or AL1 and AL2** - Alarm LEDs are lit during any internal alarm condition
3. **MEMORY:** Non-volatile memory retains all programmable parameters.
4. **INPUT:**
  - GENERAL:**
    - Sample Time: 67 msec (15 Hz)
    - Common Mode Rejection: >110 dB, 50/60 Hz
    - Normal Mode Rejection: >40 dB, 50/60 Hz
    - Temperature Coefficient: 0.01%/°C
    - Step Response Time: 200 msec typ., 250 msec max
  - THERMOCOUPLE INPUTS:**
    - Types: T, E, J, K, R, S, B, N, C
    - Input Impedance: 20 M Ω
    - Lead Resistance Effect: 0.25 μV/Ω
    - Cold Junction Compensation: Less than ±1°C typical (±1.5°C max) over 0 to 50 °C ambient temperature
    - Resolution: 0.1°
  - RTD INPUTS:**
    - Type: 2 or 3 wire
    - Excitation: 150 μA
    - Lead Resistance: 15 Ω Max
    - Resolution: 1 or 0.1°

### PROCESS INPUT:

INPUT RANGE	ACCURACY (18 TO 28 °C)	IMPEDANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
10 V	0.1% span	1 M Ohm	50 V	16 bit
20 mA	0.1% span	10 Ohm	100 mA	16 bit

5. **COMMUNICATIONS:** Provided by the CS Master
  6. **A/D CONVERTER:** 16 bit resolution
  7. **DISCRETE OUTPUTS:**
    - CSPID1:** Outputs 1 and 2 available as Solid State NFET, Form A relay or Triac. Output 3 is a Form C relay.
    - CSPID2:** Outputs 1 through 4 available as Form A relay, Solid State NFET, or Triac.
- Solid State Output:**
- Type: Switched DC, N Channel open drain MOSFET
  - Current Rating: 1 A max
  - VDS ON: 0.3 V @ 1 A
  - VDS MAX: 30 VDC
  - Offstate Leakage Current: 0.5 mA max

**Form A Relay Output:**

Type: N.O.  
 Current Rating: 3 Amps @ 125 VAC  
 1/10 HP @ 125 VAC

Life Expectancy: 200,000 cycles at maximum load rating.

**Form C Relay Output:**

Type: SPDT  
 Current Rating: 5 Amps @ 125 VAC or 28 VDC (resistive load)  
 1/8 HP @ 125 VAC

Life Expectancy: 100,000 cycles at maximum load rating.

**Triac: (CSPID1TA only)**

Type: Optically isolated, zero-crossing detection  
 Rating: 120 VAC, Min: 20 VAC  
 Max Load Current: 1.0 A across Operating Temperature Range  
 Min Load Current: 5 mA  
 Offstate Leakage Current: 1 mA Max  
 Operating Frequency: 20 to 400 Hz  
 Protection: Internal Transient Suppression, Fused

**Triac: (CSPID2T0 and CSPID2TM only)**

Type: Optically isolated, zero-crossing detection  
 Rating: 120 VAC, Min: 20 VAC  
 Max Load Current: 0.5A @ 25°C, 0.4A @ 50°C  
 Min Load Current: 5 mA  
 Offstate Leakage Current: 1 mA Max  
 Operating Frequency: 20 to 500 Hz  
 Protection: Internal Transient Suppression, Fused

Cycle Time: Programmable from 0.0 to 60.0 sec  
 Auto-Tune: When selected, sets proportional band, integral time, derivative time values, and output dampening time  
 Probe Break Action: Programmable response  
 Sensor Fail Response: Upscale

**9. ALARMS:**

Modes:  
 Manual  
 Absolute High Acting                      Absolute Low Acting  
 Deviation High Acting                      Deviation Low Acting  
 Inside Band Acting                          Outside Band Acting

Reset Action: Programmable; automatic or latched  
 Standby Mode: Programmable; enable or disable  
 Hysteresis: Programmable  
 Sensor Fail Response: Upscale

**10. ENVIRONMENTAL CONDITIONS:**

Operating Temperature Range: 0 to +50°C  
 Storage Temperature Range: -40 to +85°C  
 Operating and Storage Humidity: 85% max relative humidity, non-condensing, from 0 to +50°C  
 Vibration According to IEC 68-2-6: 10 to 150 Hz, 0.075 mm amplitude in X, Y, Z direction 1 g.  
 Shock According to IEC 68-2-27: Operational 25 g (10g relay), 11 msec in 3 directions.

**11. CERTIFICATIONS AND COMPLIANCES:**

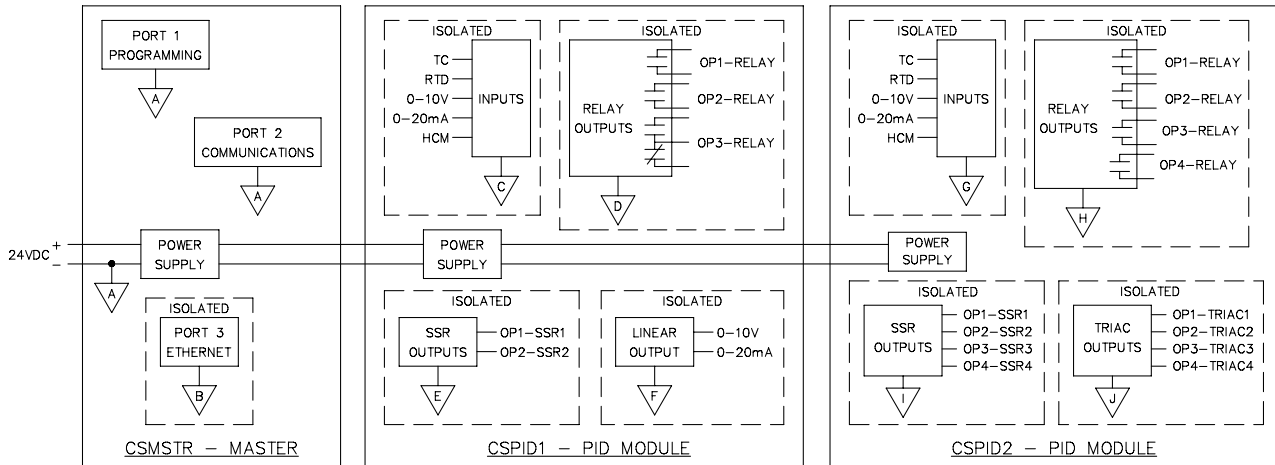

CE, UL Listed

**12. WEIGHT: 7 oz (198.4 g)**

**8. CONTROL MODES:**

Control: On/Off, P, PI, or PID  
 Output: Time proportioning or linear (CSPID1 only)

# MODEL CSSG - STRAIN GAGE MODULE

- HOT-SWAPPABLE REPLACEMENT REDUCES DOWNTIME
- AUTO ADDRESSING MINIMIZES CONFIGURATION TIME
- PID CONTROL WITH REDUCED OVERSHOOT
- LOAD CELL, PRESSURE AND TORQUE BRIDGE INPUTS
- SOFTWARE SELECTABLE LOW LEVEL INPUTS
- SOFTWARE SELECTABLE 5 VDC or 10 VDC BRIDGE EXCITATION
- DIGITAL TARE (re-zero), BATCH TOTALIZER, AND PEAK/VALLEY (max/min) RECORDING
- ON DEMAND AUTO-TUNING OF PID SETTINGS
- DC ANALOG OUTPUT

## GENERAL DESCRIPTION

The Model CSSG is a full featured single loop PID controller designed for use with the Modular Controller Series. The module accepts low level signals from a variety of bridge-type transducers, such as load cells, pressure transducers, torque transducers, etc. An optional second signal input is available, providing math capabilities between the two input channels (average, differential, etc.). Each input channel provides a software selectable 5 V or 10 V stable bridge excitation voltage, capable of driving up to four 350 Ω bridges (combined total per module). The inputs are software selectable for ±20 mV, ±33 mV, or ±200 mV full scale. With solid state or relay outputs, plus an analog output, the CSSG module can perform virtually any combination of time-proportioning or linear control. The discrete outputs may also be assigned to one of seven internal soft alarms; and the linear output can be assigned to transmit virtually any internal variable. In addition, digital tare (re-zero), batch totalizer, and peak/valley (max/min) are provided.

The CSSG modules are available with relays, or open drain MOSFET outputs. For applications requiring large loads to be controlled, several DIN rail mount relays are available.

Internal power management circuits allow the modules to be replaced while power is applied, which reduces downtime in the event of a relay failure. All configuration information is stored locally within each module, as well as in the Master, so replacement modules do not need to be configured.

The Modular Controller Series' high density packaging and DIN rail mounting saves time and panel space. The backplane connection provides power and communication to the module and snaps easily onto standard top hat (T) profile DIN rail.

## DIMENSIONS IN INCHES (MM)

## SPECIFICATIONS

1. **POWER:** Derived from system backplane. 250 mA max. load on power input of MASTER. Module may be hot-swapped (replaced while powered up).  
Modules per Master: A single Master can support up to 11 CSSG1 modules combined with any 5 other module types. For applications that require more than 11 CSSG1 modules, please contact technical support.
2. **LEDs\*:**  
STS - Status LED shows module condition.  
OP1, OP2, OP3 - Indicate status of outputs 1, 2, and 3  
ALM - Alarm LED is lit during an internal alarm condition.  
\* Default configuration.
3. **MEMORY:** Non-volatile memory retains all programmable parameters. The MASTER also stores the parameters in order to reprogram any modules that are replaced.
4. **INPUTS:**

SOFTWARE SELECTABLE INPUT RANGE	ACCURACY * 18 TO 28°C 10 TO 75% RH	ACCURACY * 0 TO 50°C 0 TO 85% RH
±20.000 mVDC	0.02% of reading +3 µV	0.07% of reading +4 µV
±33.000 mVDC	0.02% of reading +5 µV	0.07% of reading +7 µV
±200.00 mVDC	0.02% of reading +30 µV	0.07% of reading +40 µV

\* After 20 minute warm-up. Accuracy over the 0 to 50°C range includes the temperature coefficient.

Connection Type:

- 4-wire bridge (differential)
- 2-wire (single-ended)

Sample Time: 67 msec (15 readings per second)

Common Mode Range (with respect to input common): 0 to +5 VDC

Common Mode Rejection: > 100 dB, DC to 120 Hz

Temperature Coefficient (ratio metric): 20 ppm/°C max.

Step Response Time: 200 msec max. to within 99% of final process value

Input Impedance: 100 MΩ

Max Continuous Overload: 30 V

PV Range: -30,000 to 30,000

Effective Resolution: 16-bit

5. **BRIDGE EXCITATIONS:**

Software selectable:

5 VDC, ±2%, 65 mA max.

10 VDC, ±2%, 125 mA max. combined (excitation 1 plus excitation 2).

Temperature coefficient (ratio metric): 20 ppm/°C max.

Max. four 350Ω bridges per module.

6. **COMMUNICATIONS:** Provided by the CS Master.

7. **DISCRETE OUTPUTS:**

Outputs 1 and 2 are available as Solid State NFET, or Form A relay. Output 3 is a Form C relay.

Solid State Output:

Type: Switched DC, N Channel open drain MOSFET

Current Rating: 1 A max  
 VDS ON: 0.3 V @ 1 A  
 VDS MAX: 30 VDC  
 Offstate Leakage Current: 0.5 mA max

Form A Relay Output:

Type: N.O.  
 Current Rating: 3 Amps @ 125 VAC  
 1/10 HP @ 125 VAC

Life Expectancy: 200,000 cycles at maximum load rating. (Decreasing load, increasing cycle time, and use of surge suppression such as RC snubbers increases life expectancy.)

Form C Relay Output:

Type: SPDT  
 Current Rating: 5 Amps @ 125 VAC or 28 VDC (resistive load)  
 1/8 HP @ 125 VAC

Life Expectancy: 100,000 cycles at maximum load rating. (Decreasing load, increasing cycle time, and use of surge suppression such as RC snubbers increases life expectancy.)

**8. CONTROL MODES:**

Control: On/Off, P, PI, or PID

Output: Time proportioning or linear

Cycle Time: Programmable from 0.0 to 60.0 sec

Auto-Tune: When selected, sets proportional band, integral time, derivative time values, and output dampening time

Input Fault Response: Upscale

**9. ALARMS:**

Modes:

Manual	Absolute High Acting	Absolute Low Acting
	Deviation High Acting	Deviation Low Acting
	Inside Band Acting	Outside Band Acting

Reset Action: Programmable; automatic or latched

Standby Mode: Programmable; enable or disable

Hysteresis: Programmable

Input Fault Response: Upscale

**10. ANALOG DC OUTPUT:**

Jumper Selectable/programmable for 0-10 VDC, 0-20 mA, or 4-20 mA

Resolution:

Voltage: 500  $\mu$ V

Current: 1  $\mu$ A

Accuracy:

0.1% of full scale (18 to 28°C)

0.2% of full scale (0 to 50°C)

Update Time: 0.0 to 60.0 sec

Compliance (for current output only): 500  $\Omega$  max.

Minimum load (voltage output only): 10 K $\Omega$  min.

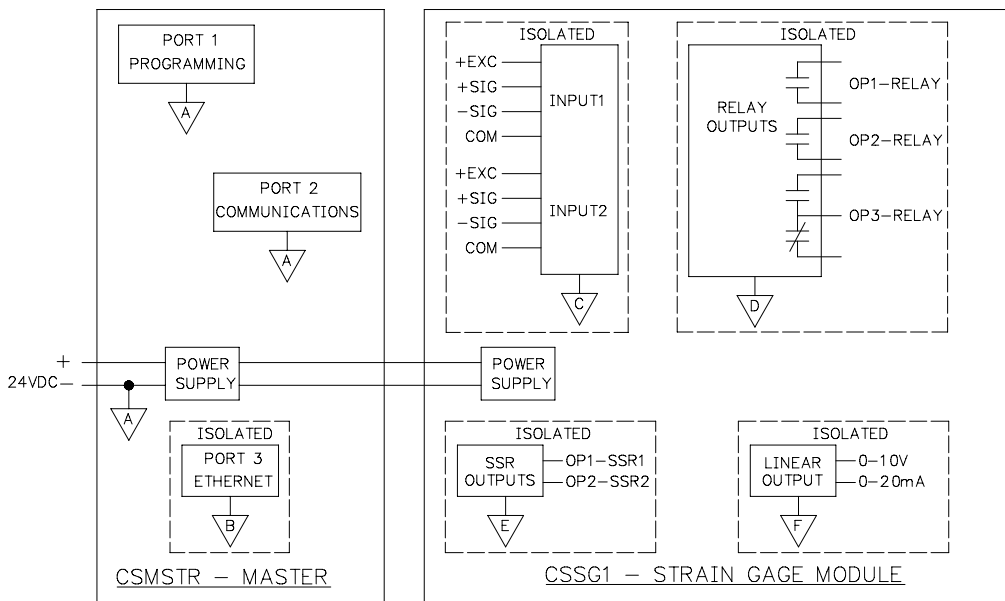

Output is independently jumper selectable for either 10 V or 20 mA. The output range may be field calibrated to yield approximate 10% overrange and a small underrange (negative) signal.

**11. CERTIFICATIONS AND COMPLIANCES:**

# MODELS CSTC, CSRTD, CSINI AND CSINV - HIGH DENSITY TEMP AND ANALOG INPUT MODULES

## GENERAL DESCRIPTION

The Model CSTC, CSRTD, CSINI, and CSINV are 16-bit analog input modules designed for use with the Modular Controller Series. These modules provide a means of high-density signal measurement for data-acquisition applications. The CSTC module accepts a wide range of thermocouple types, while the CSRTD accepts various RTD inputs. The CSINI and CSINV accept 0/4-20 mA and  $\pm 10$  V process signals, respectively.

The modules connect and communicate via a backplane connection to the CSMSTR Modular Controller Series Master. The CSMSTR, equipped with serial ports as well as an Ethernet port, allows the system to share data with PCs, PLCs, and SCADA systems. The Master supports any combination of up to 16 CS series modules, allowing a total of 128 signals to be monitored via a single Master.

Internal power management circuits allow the modules to be replaced while power is applied, which reduces downtime. All configuration information is stored locally within the module, as well as in the Master, so replacement modules do not need to be configured.

The Modular Controller Series' high density packaging and DIN rail mounting saves time and panel space. The backplane connection provides power and communication to the module and snaps easily onto standard top hat (T) profile DIN rail.

## DIMENSIONS IN INCHES (MM)

- MODELS AVAILABLE TO ACCEPT  $\pm 10$  V, 0/4-20 mA, THERMOCOUPLE AND RTD INPUTS
- $\pm 10$  V AND 0/4-20 mA INPUT VERSIONS FULLY SCALABLE
- $\pm 10$  V AND 0/4-20 mA INPUT VERSIONS AVAILABLE WITH 100 POINT LINEARIZATION
- UNUSED INPUTS CAN BE DISABLED TO INCREASE OVERALL READING RATE
- IDEAL FOR DATA-ACQUISITION APPLICATIONS
- AUTO ADDRESSING MINIMIZES CONFIGURATION TIME
- CAN BE USED IN CONJUNCTION WITH ANY CS SERIES MODULES

## SPECIFICATIONS

### GENERAL

1. **POWER:** Derived from system backplane. (75 mA load on power input of MASTER). Module may be hot-swapped (replaced while powered up).
2. **LEDs:**
  - STS** - Status LED shows module condition.
  - ALM** - Alarm LED is lit during any internal alarm condition.
3. **MEMORY:** Non-volatile memory retains all programmable parameters. MASTER also stores the parameters in order to reprogram modules that are replaced.
4. **ISOLATION LEVEL:** 500 Vrms @ 50/60 Hz for 1 minute between the Signal Inputs and the CS Master Power Supply Input.
5. **COMMUNICATIONS:** Provided by the CS Master
6. **CERTIFICATIONS AND COMPLIANCES:** CE, UL Listed
7. **WEIGHT:** 6 oz (170.1 g)

### CSTC8 SPECIFICATIONS

1. **INPUTS:**
  - Channels: 8 single-ended
  - Effective Resolution: Full 16-bit
  - Sample Time: 50 msec - 400 msec, depending on number of enabled inputs.
  - Common Mode Rejection: >110 dB, 50/60 Hz
  - Normal Mode Rejection: >90 dB, 50/60 Hz
  - Temperature Coefficient: 0.01%/°C
  - Step Response Time: One scan time (to within 99% of final value)
  - Types: T, E, J, K, R, S, B, N, C
  - Slope & Offset: Provides sensor error correction
  - Input Impedance: 20 M  $\Omega$
  - Lead Resistance Effect: 0.25  $\mu$ V/ $\Omega$
  - Cold Junction Compensation: Less than  $\pm 1^\circ$ C typical ( $\pm 1.5^\circ$ C max) over 0 to 50 °C ambient temperature
  - Resolution: 0.1°
2. **TEMPERATURE INDICATION ACCURACY:**  $\pm$  (0.3% of span, +1°C).
3. **PROBE BREAK RESPONSE:** Upscale drive, Input Fault Alarm bit set high, ALM LED illuminates.

### CSRTD6 SPECIFICATIONS

1. **RTD INPUTS:**
  - Channels: 6 single-ended
  - Effective Resolution: Full 16-bit
  - Sample Time: 67 msec - 400 msec, depending on enabled inputs.
  - Common Mode Rejection: >110 dB, 50/60 Hz
  - Normal Mode Rejection: >90 dB, 50/60 Hz
  - Temperature Coefficient: 0.01%/°C

Step Response Time: One scan time (to within 99% of final value)  
 Type: 2 or 3 wire; 100 Ω platinum, Alpha = .00385 and .003919, and 120 Ω nickel, Alpha = .00672  
 Excitation: 150μA  
 Lead Resistance: 15 Ω Max  
 Resolution: 0.1°  
 Slope & Offset: Provides sensor error correction

- TEMPERATURE INDICATION ACCURACY:** ± (0.1% of span) over 18 to 28°C environment, ± (0.2% of span) over 0 to 50°C environment.
- PROBE BREAK RESPONSE:** If channel is enabled: upscale drive, Input Fault Alarm bit set high, ALM LED illuminates.

### CSINI8 SPECIFICATIONS

1. **INPUTS:**  
 Channels: 8 single-ended  
 Ranges: 0-20 mA or 4-20 mA  
 Effective Resolution: Full 16-bit  
 Programmable Scaling: ±30,000  
 Linearizer: 100 Points (CSINI8L0 only)  
 Sample Time: 50 msec - 400 msec, depending on number of enabled inputs.  
 Common Mode Rejection: >110 dB, 50/60 Hz  
 Normal Mode Rejection: >90 dB, 50/60 Hz  
 Step Response Time: One scan time (to within 99% of final value)

Input Impedance: 10 Ω  
 Max. Continuous Overload: 100 mA

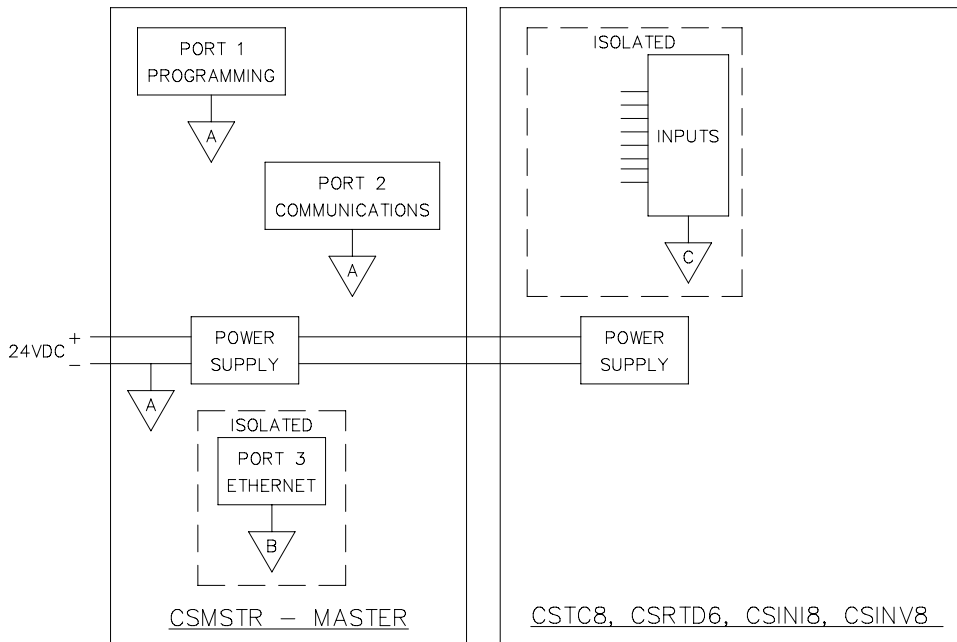

- ACCURACY:** ±0.1% of span
- INPUT FAULT RESPONSE:** Upscale Drive, Input Fault Alarm bit set high, ALM LED illuminates below -3 mA, and above 23 mA for 0-20 mA range; below +3 mA and above 23 mA for 4-20 mA signals.

### CSINV8 SPECIFICATIONS

1. **INPUTS:**  
 Channels: 8 single-ended  
 Ranges: 0-10 VDC or ±10 VDC  
 Effective Resolution: Full 16-bit  
 Programmable Scaling: ±30,000  
 Linearizer: 100 Points (CSINV8L0 only)  
 Sample Time: 50 msec - 400 msec, depending on number of enabled inputs.  
 Common Mode Rejection: >110 dB, 50/60 Hz  
 Normal Mode Rejection: >90 dB, 50/60 Hz  
 Step Response Time: One scan time (to within 99% of final value)  
 Input Impedance: 10 M Ω  
 Max. Continuous Overload: 50 V

- ACCURACY:** ±0.1% of span
- INPUT FAULT RESPONSE:** Upscale Drive, Input Fault Alarm bit set high, ALM LED illuminates below -10.4 VDC and above +10.4 VDC.

# MODEL CSDIO - DIGITAL INPUT/OUTPUT MODULES

## GENERAL DESCRIPTION

The Model CSDIO series modules are digital I/O modules designed for use with the Modular Controller Series. The CSDIO14 offers eight inputs and six outputs that can be used to monitor contact or sensor inputs and actuate relays, solenoids, PLC inputs, etc.

The inputs accept standard DC inputs or contact closures, and are configured for Sink/Source signals via external switches. Additionally, each input has a switch selectable input filter that can be used to prevent contact bounce. Each input may also be software configured as a high-active or low-active input.

The modules are available with relay or NFET outputs that are capable of switching up to one amp each (NFET DC only). For applications requiring large loads to be controlled, several DIN rail mount relays are available.

The CSDIO modules connect and communicate via a backplane connection to the CSMSTR Modular Controller Series Master. The CSMSTR, equipped with serial ports as well as an Ethernet port, allows the system to share data with PCs, PLCs, and SCADA systems. The Master supports any combination of up to 16 CS Series modules.

Internal power management circuits allow the modules to be replaced while power is applied, which reduces downtime in the event of a relay failure. All configuration information is stored locally within each module, as well as in the Master, so replacement modules do not need to be configured. The Modular Controller Series' high density packaging and DIN rail mounting saves time and panel space. The backplane connection provides power and communication to the module and snaps easily onto standard top hat (T) profile DIN rail.

## DIMENSIONS IN INCHES (MM)

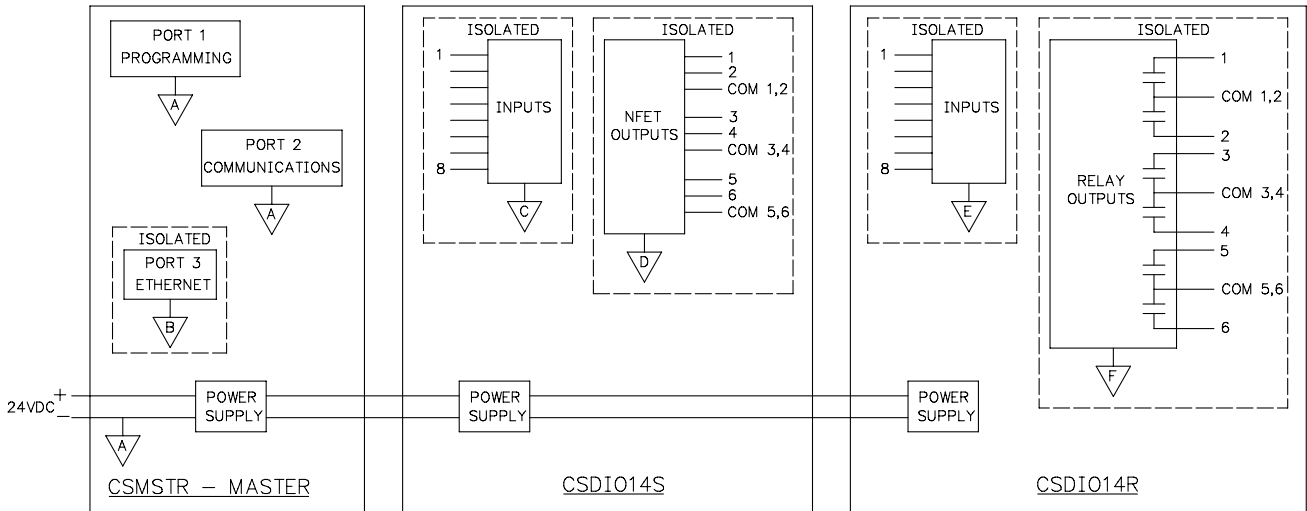

- ❑ ADDS REMOTE I/O CAPABILITY TO THE MODULAR CONTROLLER SERIES
- ❑ EIGHT INPUT, SIX OUTPUT DIGITAL MODULE
- ❑ INPUTS ISOLATED FROM OUTPUTS
- ❑ INPUTS INDEPENDENTLY SWITCH SELECTABLE FOR SINK OR SOURCE SIGNALS
- ❑ INPUTS INDEPENDENTLY CONFIGURABLE FOR HIGH OR LOW ACTIVE STATE
- ❑ INPUTS INDEPENDENTLY SWITCH SELECTABLE FOR HIGH OR LOW FREQUENCY SIGNALS
- ❑ RELAY OR NFET OUTPUT MODELS AVAILABLE

## SPECIFICATIONS

1. **POWER:** Derived from system backplane. (CSDIO draws 170 mA max. load on power input of MASTER). Modules may be hot-swapped (replaced while powered up).
2. **LEDs:**
  - STS - Status LED shows module condition.
  - IN1-IN8 - LEDs are lit when associated input is active.
  - OP1-OP6 - LEDs are lit when associated output is active.
  - ALM - Alarm LED is lit when an internal alarm condition exists.
3. **MEMORY:** Non-volatile memory retains all programmable parameters. MASTER also stores the parameters in order to reprogram modules that are replaced.
4. **INPUTS:** DIP switch selectable for sink or source
  - Maximum voltage: +30 VDC, reverse polarity protected
  - Off Voltage: < 1.2 Volts
  - On Voltage: > 3.8 Volts
  - Input Impedance: Source Mode 10K ohms; Sink Mode 20K ohms
  - Input Frequency\*:
    - Filter switch on: 50 Hz
    - Filter switch off: 300 Hz
    - \* Actual useable frequency limited by communication to external device.
5. **OUTPUTS:** Outputs available as FORM-A relay or Solid State NFET.
  - Form A Relay Output:**
    - Type: N.O.
    - The following pairs of relays share the common terminal: 1&2, 3&4, 5&6
    - Current Rating by pair: 3 Amps @ 30 VDC / 125 VAC resistive
    - 1/10 HP @ 125 VAC
    - Life Expectancy: 200,000 cycles at maximum load rating. (Decreasing load, increasing cycle time, and use of surge suppression such as RC snubbers increases life expectancy.)
  - Solid State Output:**
    - Type: Switched DC, N Channel open drain MOSFET
    - Contact Rating: 1 ADC max
    - VDS ON: < 0.2 V @ 1 A
    - VDS MAX: 30 VDC
    - Offstate Leakage Current: 0.5 µA max
6. **LOGIC (BOOLEAN) MODE:**
  - Count Frequency: 200 Hz/input when input is directly connected (soft-wired) to the counter.
  - Logic Propagation Delay: 400 msecs. max.
  - Timer Accuracy: 0.2%
7. **ISOLATION LEVEL:** 500 Vrms @ 50/60 Hz for 1 minute between the following:
  - Inputs
  - Outputs
  - CS Master Power Supply Input
8. **COMMUNICATIONS:** Provided by the CS Master
9. **CERTIFICATIONS AND COMPLIANCES:**
  - CE, UL Listed
10. **WEIGHT:** 6.6 oz (187.1 g)

# MODEL CSOUT - 4-CHANNEL ANALOG OUTPUT MODULE

## GENERAL DESCRIPTION

The model CSOUT is an analog output module designed for use with the Modular Controller Series. The module provides four isolated outputs that are independently programmable for output ranges of 0-5V, 0-10V, +/-10V, 0-20mA, or 4-20mA. Internal scaling is provided to accommodate virtually any application.

The modules connect and communicate via a backplane connection to the CSMSTR Modular Controller Series Master. The CSMSTR, equipped with serial ports as well as an Ethernet port, allows the system to share data with PCs, PLCs, and SCADA systems. The Master supports up to 16 CS Series modules (refer to the "Power" specifications).

Internal power management circuits allow the modules to be replaced while power is applied, which reduces downtime. All configuration information is stored locally within each module, as well as in the Master, so replacement modules do not need to be configured.

The Modular Controller Series' high density packaging and DIN rail mounting saves time and panel space. The backplane connection provides power and communication to the module and snaps easily onto standard top hat (T) profile DIN rail.

- HIGH DENSITY ANALOG OUTPUT MODULE FOR THE MODULAR CONTROLLER SERIES
- AVAILABLE OUTPUTS INCLUDE 0 to 5 VDC, 0 to 10 VDC, ±10 VDC, AND 0/4-20 mA DC
- OUTPUTS ARE ISOLATED FROM EACH OTHER AND FROM THE BACKPLANE
- OUTPUTS ARE SOFTWARE CONFIGURED AND FULLY SCALABLE
- AUTO ADDRESSING MINIMIZES CONFIGURATION TIME
- CAN BE USED IN CONJUNCTION WITH ANY CS SERIES MODULES

## SPECIFICATIONS

1. **POWER:** Derived from system backplane. (CSOUT draws 180 mA max. load on power input of MASTER). Modules may be hot-swapped (replaced while powered up).
2. **LEDs:**
  - STS - Status LED shows module condition.
  - ALM - Alarm LED is lit when an internal alarm condition exists.
3. **MEMORY:** Non-volatile memory retains all programmable parameters. MASTER also stores the parameters in order to reprogram modules that are replaced.
4. **COMMUNICATIONS:** Provided by the CS Master
5. **OUTPUTS:**
  - Channels:** 4 independent outputs
  - Response Time:** 25 msec max. to within 99% of final value
  - Output Range:** software selectable

OUTPUT RANGE	ACCURACY * 18 to 28 °C 10 to 75% RH	ACCURACY * 0 to 50 °C 0 to 85% RH	COMPLIANCE	RESOLUTION
0 to 5 VDC	0.2% of span	0.4% of span	10K Ω min.	1/30,000
0 to 10 VDC	0.1% of span	0.2% of span	10K Ω min.	1/60,000
-10 to +10 VDC	0.1% of span	0.2% of span	10K Ω min.	1/60,000
0 to 20 mA	0.1% of span	0.2% of span	500 Ω max.	1/60,000
4 to 20 mA	0.1% of span	0.2% of span	500 Ω max.	1/48,000

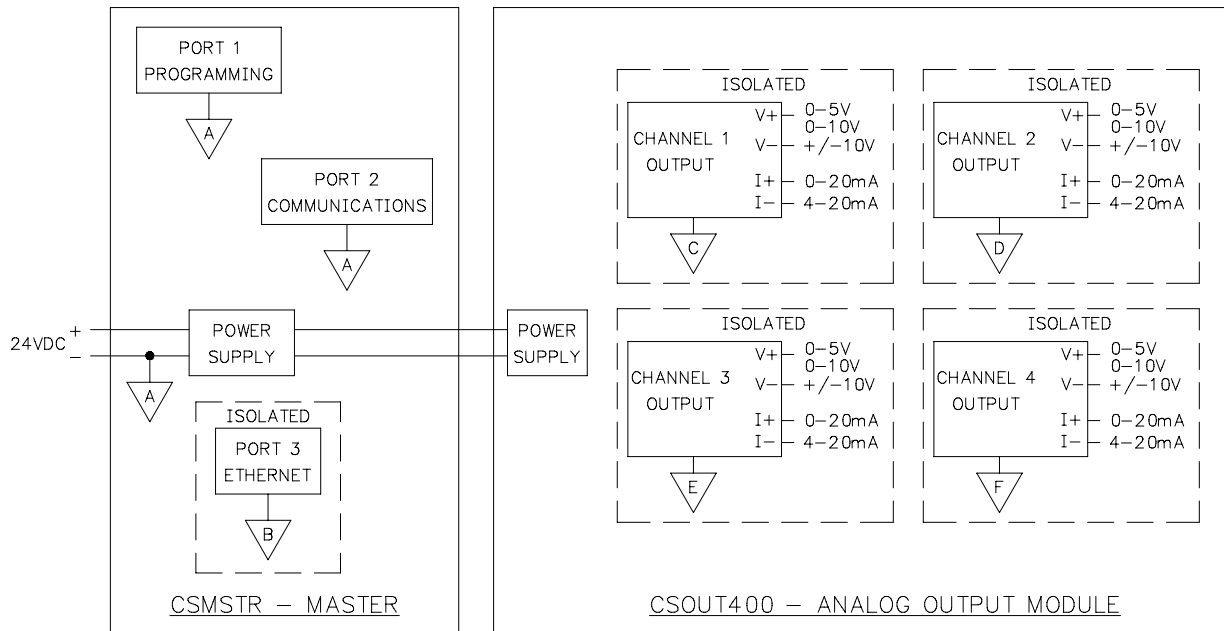

\* The accuracy is specified after 20 minutes warmup; in a non-condensing environment; and includes linearity errors.

6. **ISOLATION LEVEL:** The outputs are isolated from each other, and are isolated from the power supply. 500 V @ 50/60 Hz for 1 minute between any of the outputs and the CS Master power supply input.
7. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range:** 0 to +50°C
  - Storage Temperature Range:** -40 to +85°C
  - Operating and Storage Humidity:** 85% max relative humidity, non-condensing, from 0 to +50°C
  - Vibration According to IEC 68-2-6:** 10 to 150 Hz, 0.075 mm amplitude in X, Y, Z direction 1 g.
  - Shock According to IEC 68-2-27:** Operational 25 g, 11 msec in 3 directions.
  - Altitude:** Up to 2000 meters
8. **CERTIFICATIONS AND COMPLIANCES:** CE, UL Listed
9. **CONSTRUCTION:** Case body is burgundy high impact plastic. Installation Category I, Pollution Degree 2.
10. **CONNECTIONS:** Removable wire clamp screw terminal blocks. Wire Gage: 28-16 AWG terminal gage wire. Torque: 1.96-2.23 inch/lbs (0.22-0.25 N-m)
11. **MOUNTING:** Snaps on to standard DIN style top hat (T) profile mounting rails according to EN50022 -35 x 7.5 and -35 x 15.
12. **WEIGHT:** 7 oz (198.4 g)

# DSP & MODULAR CONTROLLER ACCESSORIES

## MODEL XCRS - ISOLATED SERIAL OPTION CARD

- CONFIGURED USING CRIMSON SOFTWARE
- ISOLATED RS-232 AND RS-485 MULTIPLEXED PORTS CAPABLE OF COMMUNICATING WITH RS-232, RS-422, RS-485 AND DH485 DEVICES AT UP TO 115,200 BAUD
- EASY INSTALLATION

### GENERAL DESCRIPTION

The XCRS option card adds an additional RS-232 and RS-422/485 port to the series. This isolated card protects user equipment from potentially harmful ground loops while providing high-speed RS-232, RS-422, RS-485, and DH485 communication options to the end user.

The XCRS communication card is easily installed by removing the blank expansion port cover of your Modular Controller or Data Station Plus, and plugging the XCRS card into the expansion port. Configuration is simple using Red Lion's free Crimson 2.0 software.

### SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of the Modular Controller Master or Data Station Plus.
2. **COMMUNICATIONS:**
  - Serial Ports:** Format and Baud Rates for each port are individually software programmable up to 115,200 baud and are isolated to help prevent ground loops. The RS-422/485 and DH485 port via RJ45 and the RS-232 port via RJ12 share the same hardware.
  - DH485 TXEN:** Transmit enable; open collector,  $V_{OH} = 15 \text{ VDC}$ ,  $V_{OL} = 0.5 \text{ VDC}$
  - Isolation from XCRS Communication ports to the Modular Controller Master or Data Station Plus:** 1000 VDC for 1 minute.
3. **CERTIFICATIONS AND COMPLIANCES:** Refer to "Agency Approvals" section of Red Lion's website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range: 0 to 50°C
  - Storage Temperature Range: -20 to 80°C
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.
  - Altitude: Up to 2000 meters.

## MODEL XCCN - CANopen/J1939 OPTION CARD

CANopen

- CONFIGURED USING CRIMSON SOFTWARE
- DIGITALLY ISOLATED CANopen PORT CAPABLE OF COMMUNICATING WITH ANY CANopen DEVICE
- EASY INSTALLATION

### GENERAL DESCRIPTION

The XCCN option card adds a CANopen communication port to the series. This isolated card protects user equipment from potentially harmful ground loops while providing the ability to communicate to any high speed CANopen device. The XCCN option card has a termination resistor built-in, which is selectable via a jumper setting. Additionally, the XCCN connector is pluggable for easy removal of the Modular Controller Master or Data Station Plus from the CANopen bus without disturbing communications with other devices on the bus.

The XCCN communication card is easily installed by removing the blank expansion port cover of your Modular Controller or Data Station Plus, and plugging the XCCN card into the expansion port. Configuration is simple using Red Lion's free Crimson 2.0 software.

### SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of the Modular Controller Master or Data Station Plus.
2. **COMMUNICATIONS:**
  - CANopen Port:** The CANopen port has format and baud rates that are software programmable up to 1M baud and are digitally isolated. This port may be configured for various CANopen protocols. Check [www.redlion.net](http://www.redlion.net) for currently supported protocols.
  - Isolation from XCCN Communication ports to the Modular Controller Master or Data Station Plus:** 1000 VDC for 1 minute.
3. **CERTIFICATIONS AND COMPLIANCES:** Refer to "Agency Approvals" section of Red Lion's website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range: 0 to 50°C
  - Storage Temperature Range: -20 to 80°C
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.
  - Altitude: Up to 2000 meters.

# MODEL XCDN - DEVICENET OPTION CARD

- CONFIGURED USING CRIMSON SOFTWARE
- DIGITALLY ISOLATED DeviceNet PORT CAPABLE OF COMMUNICATING WITH ANY DeviceNet MASTER
- EASY INSTALLATION

## SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of the Modular Controller Master or Data Station Plus.
2. **COMMUNICATIONS:**  
**DeviceNet Port:** The DeviceNet port has format and baud rates that are software programmable up to 500K baud and are digitally isolated. This port may be configured for various DeviceNet protocols. Check [www.redlion.net](http://www.redlion.net) for currently supported protocols.  
**Isolation from XCDN Communication ports Modular Controller Master or Data Station Plus:** 1000 VDC for 1 minute.
3. **CERTIFICATIONS AND COMPLIANCES:**  
Refer to "Agency Approvals" section of Red Lion's website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**  
Operating Temperature Range: 0 to 50°C  
Storage Temperature Range: -20 to 80°C  
Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
Altitude: Up to 2000 meters.

## GENERAL DESCRIPTION

The XCDN option card adds a DeviceNet slave communication port to the series. This isolated card protects user equipment from potentially harmful ground loops while providing the ability to communicate to any high speed DeviceNet master. Additionally, the XCDN connector is pluggable for easy removal of the Modular Controller Master or Data Station Plus from the DeviceNet bus without disturbing communications with other devices on the bus.

The XCDN communication card is easily installed by removing the blank expansion port cover of your Modular Controller or Data Station Plus, and plugging the XCDN card into the expansion port. Configuration is simple using Red Lion's free Crimson 2.0 software.

# MODEL XCPB - PROFIBUS OPTION CARD

- CONFIGURED USING CRIMSON SOFTWARE
- ADDS PROFIBUS DP CONNECTIVITY TO THE DATA STATION PLUS AND MODULAR CONTROLLER SERIES
- PROFIBUS DP SLAVE PROTOCOL
- EASY INSTALLATION

## SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of the Modular Controller Master or Data Station Plus.
2. **COMMUNICATIONS:**  
**PROFIBUS Port:** FIELDBUS Type : PROFIBUS-DP EN 50 170, I. The PROFIBUS port has autobaud detect up to 12M baud and is digitally isolated.
3. **CERTIFICATIONS AND COMPLIANCES:**  
Refer to "Agency Approvals" section of Red Lion's website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**  
Operating Temperature Range: 0 to 50°C  
Storage Temperature Range: -20 to 80°C  
Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.  
Altitude: Up to 2000 meters.

## GENERAL DESCRIPTION

The XCPB option card adds PROFIBUS DP connectivity to the series. This allows a high-speed exchange of blocks of data, at data rates up to 12MBaud, between the hosting Modular Controller or Data Station and a Master PLC or PC on a PROFIBUS network. The DP suffix refers to "Decentralized Periphery", which is used to describe distributed I/O devices connected via a fast serial data link with a central controller.

The XCPB communication card is easily installed by removing the blank expansion port cover of your Modular Controller or Data Station Plus, and plugging the XCPB card into the expansion port. Configuration is simple using Red Lion's free Crimson 2.0 software.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
XCCN	CANopen option card for Modular Controller or Data Station Plus	XCCN0000

# MODEL XCGSM - CELLULAR MODEM OPTION CARD

- CONFIGURED USING CRIMSON SOFTWARE
- INSTALLS INSIDE A DATA STATION PLUS OR MODULAR CONTROLLER
- INSTALLATION AND CONNECTION HARDWARE ARE INCLUDED WITH CARD

## GENERAL DESCRIPTION

The XCGSM option card allows the user to add GSM/GPRS cellular modem capability to their Data Station Plus or Modular Controller. GSM/GPRS is the most prevalent cellular technology in today's markets. GPRS can be used for services such as Wireless Application Protocol (WAP) access, Short Message Service (SMS), and for Internet communication services such as email and World Wide Web access. The XCGSM modem option card is quad-band, allowing to work in frequencies across Americas, Europe and Asia. US and Canada work in the 850/1900 MHz bands, while Europe, Middle East, Africa and most of Asia work in the 900/1800 MHz GSM/GPRS frequencies.

The XCGSM requires the addition of a SIM (Subscriber Identity Module) card, which is inserted into the holder prior to installation of the XCGSM card. The SIM card securely stores the service-subscriber key (IMSI) used to identify a subscriber, and is used to connect to the network to obtain an IP address from the provider.

The XCGSM communication card is easily installed by removing the blank expansion port cover of your Modular Controller or Data Station Plus, and plugging the XCGSM card into the expansion port. Configuration is simple using Red Lion's free Crimson 2.0 software.

## SPECIFICATIONS

1. **POWER REQUIREMENTS:** Power is supplied to the option card from the main board of the Modular Controller Master or Data Station Plus.
2. **ANTENNA CONNECTOR:**
  - SMA Female connector requires:**
    - 50 Ohm antenna with SMA male connector
    - Quad-band antenna (850/900/1800/1900 MHz) for global support.
    - Dual-band (850/1900 MHz) antenna for US and Canada only
    - Dual band (900/1800 MHz) for Europe only
  - The antenna cable should be 50Ω impedance, RG178/U or RG174/U type and be able to connect to the RSMA (Male) jack bulkhead. The antenna could be horizontal, vertical or right angled. Longer antenna cable would equate to signal loss.
3. **CERTIFICATIONS AND COMPLIANCES:** Refer to "Agency Approvals" section of Red Lion's website for agency certifications.
4. **ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range: 0 to 50°C
  - Storage Temperature Range: -20 to 80°C
  - Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C.
  - Altitude: Up to 2000 meters.

MODEL NO.	DESCRIPTION	PART NUMBER
XCGSM	GSM/GPRS Modem Option Card for Modular Controller or Data Station Plus	XCGSM000

# MESSAGE DISPLAYS

## MODEL PFM - PLANT FLOOR MARQUEE

- TRI-COLOR DISPLAY PROVIDES INSTANT NOTICE OF IMPORTANT INFORMATION
- DISPLAYS INFORMATION FROM ANY G3 HMI, AND SX/GT MODELS OF THE DATA STATION AND MODULAR CONTROLLER
- GRAPHICAL DESIGN ALLOWS BARGRAPHS, CUSTOM SYMBOLS AND GRAPHICS
- FOUR SIZES FOR A WIDE RANGE OF APPLICATIONS
- RS-485 PORT SUPPORTS MULTIDROP
- AC POWERED (110 or 220 VAC, 50 / 60 HZ)

### GENERAL DESCRIPTION

The PFM - Plant Floor Marquee series are multi-color LED displays designed to provide vital process and production information to personnel at a glance. The PFM must be used in tandem with Red Lion's G3 series of HMIs, Data Station Plus or Modular Controller series. This affords the PFM the unique ability to display information gathered by its host. The host devices can collect information from virtually any device equipped with a serial or Ethernet port.

Four different sizes are available - The smallest is suitable to provide data at the machine level, while the largest can be used to communicate information across an entire factory floor at distances up to 600 feet (182 meters) away.

The PFM displays are controlled via the RS-485 port of a G3 HMI, or Data Station Plus SX/GT models or Modular Controller Master modules. Acting as a slave to these products allows the PFM to display data from multiple industrial devices including PLCs, motor drives, barcode scanners, etc. The RS-485 connection allows the displays to be multi-dropped for applications requiring more than one display.

The PFMs are graphic-based (versus text-based), which allows the series to display items such as bargraphs and custom symbols and graphics. The 7.62 mm (0.3 inch) pitch LED design allows the use of a wide range of font styles and sizes to suit any application. The display is housed in an extruded aluminum and plastic housing designed for indoor use. Brackets are provided to allow the PFM to be mounted from an overhead support.

### SPECIFICATIONS

1. **POWER:**  
 PFM1608A: 105-115 VAC, 50/60 Hz @ 75 W max.  
 PFM2412A: 105-115 VAC, 50/60 Hz @ 155 W max.  
 PFM3212A: 105-115 VAC, 50/60 Hz @ 185 W max.  
 PFM6412A: 105-115 VAC, 50/60 Hz @ 267 W max.  
 PFM1608B: 210-230 VAC, 50/60 Hz @ 75 W max.  
 PFM2412B: 210-230 VAC, 50/60 Hz @ 155 W max.  
 PFM3212B: 210-230 VAC, 50/60 Hz @ 185 W max.  
 PFM6412B: 210-230 VAC, 50/60 Hz @ 267 W max.
2. **DISPLAY:** 7.62 mm (0.3 inch) pitch LED (red/amber/green)  
 Resolutions:  
 PFM1608x: 16H x 80W  
 PFM2412x: 24H x 120W  
 PFM3212x: 32H x 120W  
 PFM6412x: 64H x 120W  
 Maximum Viewing Distance:  
 PFM1608x: 150 ft (45.72 m)  
 PFM2412x: 200 ft (60.96 m)  
 PFM3212x: 450 ft (137.16 m)  
 PFM6412x: 600 ft (182.88 m)
3. **COMMUNICATIONS:** Connects to the host G3, Data Station or Modular Controller (SX or GT models only) via RS-485.
4. **ENVIRONMENTAL CONDITIONS:**  
 Operating Temperature: 0 to 50°C.  
 Storage Temperature: -10 to 60°C.  
 Operating and Storage Humidity: 80% maximum relative humidity (non condensing from 0 to 50°C).
5. **CERTIFICATIONS AND COMPLIANCES:**  
 Contact your Red Lion Controls distributor for more information.
6. **CONNECTOR:** IEC 320 C22 style; 5 ft. power cord included (US connector)
7. **CONSTRUCTION:** Extruded aluminum enclosure with ABS endcaps.
8. **MOUNTING REQUIREMENTS:** Suspend from overhead truss or other suitable structure. See "Mounting Instructions" for more info. Refer to local safety codes for additional requirements.
9. **DIMENSIONS:**  
 PFM1608x: 26" x 6.6" x 2.4" (660 x 168 x 61 mm)  
 PFM2412x: 38.5" x 8.8" x 3.4" (978 x 224 x 86 mm)  
 PFM3212x: 38.8" x 10.9" x 3.4" (986 x 277 x 86 mm)  
 PFM6412x: 39.3" x 22.6" x 3.4" (998 x 572 x 86 mm)
10. **WEIGHT:**  
 PFM1608x: 6.8 lbs. (3.1 Kg)  
 PFM2412x: 14.1 lbs. (6.4 Kg)  
 PFM3212x: 17.0 lbs. (7.7 Kg)  
 PFM6412x: 28.7 lbs. (13.0 Kg)

# MODEL BFD - BIG FLEXIBLE DISPLAY

## GENERAL DESCRIPTION

The BFD is a large (38.5" x 19") LED display (128 x 64 pixel resolution) which is driven from the RS-485 port of a G3. The BFD is built using 32 display boards in an 8 column by 4 row configuration. When used with a G303, the BFD will display the contents of the current G3 page. When used with larger G3s, the desired information is selected by using a "display primitive" on the current G3 page. Multiple BFDs can be driven from a single G3. The exact number is dependent upon the lengths of the individual wiring runs. Contact Red Lion Tech Support for more information.

The display is housed in a welded steel enclosure and the display window (0.118" thick red acrylic) is sealed to the enclosure using a gasket and bezel strips. The gasketed rear panel is bolted to the enclosure. The ventilation slots and internal fan are designed to provide adequate cooling in a normal industrial environment. The enclosure is designed to hang from an overhead support.

The BFD enclosure can be easily converted for indoor NEMA 4 operation using the optional BFD NEMA 4 conversion kit. The kit includes a sealed cover plate (to plug the vent hole), an external "cabinet cooler" (to replace the internal fan) and a DIN-rail mounted power supply to operate the "cabinet cooler".

Power to the BFD is provided by a universal AC input power supply. The AC power and the G3 RS-485 cable enter the enclosure thru separate conduit fittings. AC power connects to the power supply via a removable 3 position terminal block. The RS-485 signal connects to the communication board via either an RJ45 modular plug or a removable 2 position terminal block.

- NEMA 4 SEALED
- LARGE 38.5" (977.9 mm) X 19" (482.6 mm) RED LED DISPLAY WITH 0.2" DIAMETER PIXELS; 128 X 64 DOT RESOLUTION
- DISPLAYS THE INFORMATION FROM ANY G3, DSP or MODULAR CONTROLLER TO THE PLANT FLOOR
- CONNECTS DIRECTLY TO THE RS-485 PORT OF A G3, DSP or MODULAR CONTROLLERFS
- FIELD REPLACEABLE DISPLAY BOARDS
- REPLACEABLE FAN FILTER
- FLEXIBLE 4 EYEBOLT MOUNTING
- UNIVERSAL AC POWER (100 - 240 VAC, 50 / 60 HZ)
- OPTIONAL NEMA 4 COOLING KIT AVAILABLE

## SPECIFICATIONS

1. **POWER:** Universal AC input (100 - 240 VAC 50/60 Hz); 2.0 A @ 120 VAC; 1.0 A @ 240 VAC.
2. **DISPLAY:** 128 x 64 resolution using 0.2" (5.08 mm) diameter red LED pixels. Overall display measures 38.5" (977.9 mm) x 19" (482.6 mm).
3. **COMMUNICATIONS:** Connects to the host G3 thru RS485 port via either RJ45 or a removable 2 position terminal block; 115,200 baud, 8 bit, 1 stop bit, no parity. The RS-232 ports (either the COMMs or PGM ports) may also be used with the appropriate RS-232 to RS-485 converter. Note that the RS-232 and RS-485 ports provided by the Expansion card are not currently supported.  
**Isolation for communications:** 2500 Vrms  
**Isolation for common:** 1000 VDC for 60 seconds.
4. **ENVIRONMENTAL CONDITIONS:**  
 Operating Temperature : 0 - 50°C  
 Storage Temperature : -10 - 60°C  
 Operating and Storage Humidity: 80% maximum relative humidity (non-condensing) from 0 to 50°C  
 Altitude: Up to 2000 meters
5. **CERTIFICATIONS AND COMPLIANCES:** See data sheet on web site for detailed information.
6. **WEIGHT:** 117 lbs. (53.07 Kg)

# PROCESS CONTROLLERS

## MODEL DLC - DUAL LOOP CONTROLLERS

UL Recognized Component,  
File #E156876

- MODULAR BUILDING BLOCK FOR MULTI-ZONE PROCESS CONTROL
- TWO INDEPENDENT PID CONTROL LOOPS
- PID CONTROL WITH REDUCED OVERSHOOT
- UNIVERSAL INPUTS ACCEPT TC, RTD, 0-10 V and 0/4-20 mA SIGNALS
- TWO DC ANALOG OUTPUTS (OPTIONAL)
- WINDOWS® CONFIGURATION SOFTWARE
- RS485 MODBUS™ PROTOCOL
- CHANNEL B CAN BE ASSIGNED AS A SECOND ANALOG INPUT TO CHANNEL A FOR REMOTE SETPOINT OPERATION
- SETPOINT CONTROLLER OPTION FOR TIME VS. TEMP./PROCESS (RAMP/SOAK) AND SPECIAL BATCH/RECIPE APPLICATIONS
- SQUARE ROOT EXTRACTION FOR FLOW SENSOR APPLICATIONS

### GENERAL DESCRIPTION

The Model DLC, Dual Loop Controller, is a full featured, DIN rail mounted, dual input PID controller. The DLC is designed as a modular building block for multi-zone process control applications. The controller has two independent “A” & “B” input channels. Each channel’s input can be configured to accept a wide range of thermocouple, RTD, 0-10 V, 0/4-20 mA, or resistive signals. Each channel can also be configured to extract the square root of the input in both process voltage or process current modes for applications such as flow measurement using a differential flow sensor.

Channel B can be assigned as a Remote Setpoint for Channel A. The two time-proportioning or DC Analog outputs can be programmed to control two independent processes. The two alarms per channel can be configured for various alarm modes, or provide a secondary control output for heat/cool applications.

The control and alarm outputs are N channel open drain MOSFETs capable of switching up to 1 Amp DC. For applications requiring larger loads or A/C loads, several DIN rail mount relays are available.

The controller operates in the PID Control Mode for both heating and cooling, with on-demand auto-tune, that establishes the tuning constants. The PID tuning constants may be fine-tuned through the serial interface. The controller employs a unique overshoot suppression feature, which allows the quickest response without excessive overshoot. The controller can be transferred to operate in the Manual Mode, providing the operator with direct control of the output, or the On/Off Control Mode with adjustable hysteresis.

The controller’s high density packaging and DIN rail mounting saves time and panel space. The controller snaps easily onto standard top hat (T) profile DIN rails.

### ALARMS

The DLC’s two solid-state alarms can be configured independently for absolute high or low acting with balanced or unbalanced hysteresis. They can also be configured for deviation and band alarm. In these modes, the alarm trigger values track the setpoint value. Adjustable alarm trip delays can be used for delaying output response. The alarms can be programmed for Automatic or Latching operation. Latched alarms must be reset with a serial command. A standby feature suppresses the alarm during power-up until the temperature stabilizes outside the alarm region. The outputs can also be manually controlled with Modbus register or coil commands.

### SETPOINT CONTROLLER OPTION

The Setpoint Controller option is suitable for time vs. temperature/process control applications. The controller allows a profile of up to 20 ramp/soak segments. Profile conformity is assured by using the Error Band Mode and Error Band parameter. The Profile Cycle Count allows the profile to run continuously or a fixed number of cycles. Power-on options automatically stop, abort, start, resume, or pause a running profile.

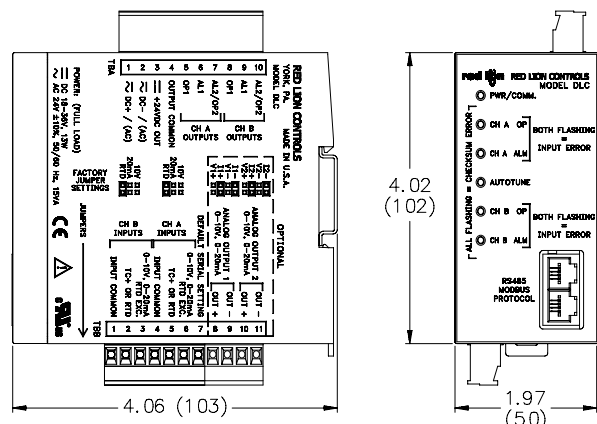

### COMMUNICATIONS

The RS-485 serial communications allows the DLC to be multi-dropped, with Baud rates up to 38400. The CBPRO007 programming cable converts the RS-232 port of a PC to RS-485 and is terminated with an RJ11 connector. The bi-directional capability of the CBPRO007 allows it to be used as a permanent interface cable as well as a programming cable.

### ANALOG OUTPUT OPTION

The optional dual DC Analog Output (10 V or 20 mA) can be independently configured and scaled for control or re-transmission purposes. These outputs can be assigned to separate channels, or both outputs can be assigned to the same channel. Programmable output update time reduces valve or actuator activity.

### DIMENSIONS IN INCHES (MM)

# ETHERNET SWITCH

## MODEL SWITCH08 - 8 PORT

- UNMANAGED SWITCH REQUIRES NO CONFIGURATION
- SUPPORTS 10/100 MDPS NETWORK
- AUTO HALF/FULL DUPLEX NEGOTIATION
- AUTO-CROSSING DETECTION SUPPORTS STANDARD AND CROSSOVER ETHERNET CABLES

UL Recognized Component,  
File # E244362

### GENERAL DESCRIPTION

The SWITCH08 is an eight-port Ethernet switch designed to simplify network expansion, while improving the network's efficiency. Eight 10/100 Base-T ports, with auto negotiation of half or full duplex connections requires no setup, reducing installation time. The SWITCH08 also offers an auto-crossing feature, which allows connections to be made with any combination of standard or crossover Ethernet cables.

The SWITCH08 may be powered with two DC sources, allowing for redundancy in critical applications. A relay output provides a warning signal if the backup supply fails, ensuring continued operation when needed.

### SPECIFICATIONS

- POWER:** 24 VDC  $\pm 20\%$ , 4.8 W
- RELAY OUTPUT:** Single N.C. 24 VDC @ 100 mA max.
- LEDs:**
  - V1+ and V2+ - On when proper voltage is present at respective terminal
  - Link/Act - On indicates link established; blinking indicates network activity on the port.
  - 100 - On indicates 100 Mbps connection established; off indicates 10 Mbps connection.
- ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range:** 0 to +55°C
  - Storage Temperature Range:** -20 to +70°C
  - Operating and Storage Humidity:** 30-95%, non-condensing
  - Altitude:** Up to 1500 meters
- CERTIFICATIONS AND COMPLIANCES:**
- WEIGHT:** 0.61 lbs. (0.27 Kg)

## MODEL CUB7 - MINIATURE ELECTRONIC 8 DIGIT COUNTER

- LCD, REFLECTIVE OR TRANSMISSIVE WITH YELLOW/GREEN OR RED LED BACKLIGHTING (9-28 VDC power supply required for versions with LED backlighting)
- 0.35" (8.90 mm) HIGH DIGITS
- REPLACEABLE INTERNAL LITHIUM BATTERY PROVIDES UP TO 7 YEARS OF UNINTERRUPTED OPERATION (Battery included)
- NEMA 4X/IP65 SEALED FRONT BEZEL
- COUNT SPEEDS UP TO 10 KHz (CUB7)
- WIRE CONNECTION MADE VIA SCREW CLAMP TYPE TERMINALS
- FITS DIN STANDARD CUT-OUT 1.77" (45 mm) x 0.874" (22.2 mm)

### DESCRIPTION

The CUB7 series is an 8-digit miniature counter with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective, Negative Image Transmissive with yellow/green backlighting or red backlighting. The backlight versions require an external 9 to 28 VDC power supply.

The CUB7 series use a CMOS LSI counter circuit chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7 series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber reset button meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS
CUB7 *	Counter Positive Image Reflective	CUB70000
	Counter W/Yel-Grn Backlighting	CUB70010
	Counter W/Red Backlighting	CUB70020

For more information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC distributor.

\*Battery is included with unit.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

### SPECIFICATIONS

- DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
- POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 7 years of continuous operation. (Battery life is dependent upon usage. Count and reset contacts that remain closed for long periods of time reduce battery life.)
- BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C. Must use a Class 2 or SELV rated power supply.
- INPUTS:**  $V_{IL}$  (low) = 0.5 V max  
 Low speed input: 30 Hz from switch contact or open collector transistor with 50% duty cycle  
 High speed input:  $V_{IH}$  (high) = 2.0 V min. (3 V max). 10KHz max from 3.0 V bipolar output with a 50% duty cycle
- REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.

### DIMENSIONS In inches (mm)

6. CERTIFICATIONS AND COMPLIANCES:

Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

**Emissions to EN 50081-1**

RF interference	EN 55022	Enclosure class B Power mains class B
-----------------	----------	--

**Notes:**

1. Burst to DC backlight power had a power line filter installed RLC #LFIL0000 or equivalent at the unit.

2. Self-recoverable loss of performance during EMI disturbance at 10 V/rms to backlight power lines.  
 LCD segments may flicker during EMI disturbance.

For operation without loss of performance:

Install power line filter RLC #LFIL0000 or equivalent at the unit.

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

**7. ENVIRONMENTAL CONDITIONS:**

**Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC. (Backlight versions)

**Storage Temperature Range:** -30 to 80°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

**8. CONNECTIONS:** Wire clamping screw terminals

Wire Strip Length: 0.3" (7.5 mm)

Wire Gauge: 30-14 AWG copper wire

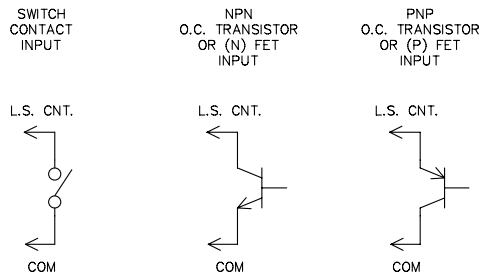

Torque: 5 inch-lbs (0.565 N-m) max

**9. CONSTRUCTION:** High impact plastic case with clear viewing window.

The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.

**10. WEIGHT:** 2 oz. (57 grams) [with battery]

**CUB7 LOW SPEED COUNT INPUT, 30 Hz MAX.**

Pulling the "L.S. CNT." Input to Common with a mechanical or solid-state switch increments the counter. The low pass filter (2.2 MΩ resistor and 0.0068 µf capacitor) used with a Schmidt trigger circuit debounces mechanical switch signals. The switch load is 6 µA (max. voltage drop 0.5 V) when ON. The

OFF-state leakage current must be less than 2 µA.

Motor starter contacts, tungsten contacts, and brush-type contacts should not be used.

**CUB7 HIGH SPEED COUNT INPUT, 10 KHz MAX.**

The "H.S. CNT." Input allows the CUB7 to operate at speeds up to 10 KHz when driven by bi-polar outputs or external circuits having an output impedance of 3.3 KΩ or less. Input drive voltage must be limited to 3 V maximum to avoid damage to the counter. CMOS and TTL Logic outputs can be loaded with a resistor (R<sub>L</sub>) to limit drive voltage, or a voltage divider can be used as shown for the PNP O.C. Transistor output.

R values for Fig 2 & 3	
+V	R
+5 V	2.2 K
+12 V	10 K
+18 V	16 K
+24 V	24 K

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful installation or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long

and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:  
 Ferrite Suppression Cores for signal and control cables:  
 Fair-Rite # 0443167251 (RLC #FCOR0000)  
 TDK # ZCAT3035-1330A  
 Steward #28B2029-0A0  
 Line Filters for input power cables:  
 Schaffner # FN610-1/07 (RLC #LFIL0000)  
 Schaffner # FN670-1.8/07  
 Corcom #1VR3  
*Note: Reference manufacturer's instructions when installing a line filter.*
- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated. All leads will be at the same line potential as the input leads.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

### Installation

The CUB7 series of products meets NEMA 4X/IP65 requirements for indoor use, when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

The following procedure assures proper installation:

- Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
- Carefully remove and discard the center section of the gasket. Slide the panel gasket over the rear of the unit to the back of the bezel. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
- Install CUB7 unit through the panel cut-out until front bezel flange contacts the panel.
- Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7 housing.

*Note: It is necessary to hold the unit in place when sliding mounting clip into position.*

- Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
- If gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that mounting clip is latched as close as possible to the panel.
- Repeat from step #5 for tightening mounting screws.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove battery cover, push upward in the direction of the arrow on rear cover (See drawing at right), until the cover unlatches. Pull cover straight out from unit to fully remove.
3. Remove old battery\* and replace with an RLC battery (BNL10000). Observe proper polarity when replacing battery as shown in drawing.
4. Replace cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7 series when properly installed

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## RESET OPTIONS (CUB7 SERIES)

Connecting a wire from the RST. EN. (Reset Enable) Input terminal to Common will enable the front panel Reset button.

Pulling the "RST." input low causes the counter to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when on. The off-state leakage current must be less than 2  $\mu$ A

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

## BACKLIGHT OPTION (CUB7 SERIES)

Optional backlight versions of the CUB7 series require an external 9-28 VDC power supply. The external supply is connected between V+ and Common terminals as shown by the solid line in the drawing.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## MODEL CUB7W - MINIATURE ELECTRONIC 8 DIGIT COUNTER

- LCD, REFLECTIVE OR TRANSMISSIVE WITH YELLOW/GREEN OR RED LED BACKLIGHTING (9-28 VDC power supply required for versions with LED backlighting)
- 0.35" (8.90 mm) HIGH DIGITS
- REPLACEABLE INTERNAL LITHIUM BATTERY PROVIDES UP TO 7 YEARS OF UNINTERRUPTED OPERATION
- NEMA 4X/IP65 SEALED FRONT BEZEL
- COUNT INPUT FROM 10 to 300 VAC/DC (CUB7W)
- WIRE CONNECTION MADE VIA SCREW CLAMP TYPE TERMINALS
- FITS DIN STANDARD CUT-OUT 1.77" (45 mm) x 0.874" (22.2 mm)

### DESCRIPTION

The CUB7 series is an 8-digit miniature counter with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective, Negative Image Transmissive with yellow/green backlighting or red backlighting. The backlight versions require an external 9 to 28 VDC power supply.

The CUB7 series use a CMOS LSI counter circuit chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7 series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber reset button meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

8. **CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category 1, Pollution Degree 2. Panel gasket and mounting clip included.

9. **WEIGHT:** 2 oz. (57 grams) [with battery]

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful installation or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated. All leads will be at the same line potential as the input leads.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

### L. S. INPUT, 30 CPS MAX.

The CUB7W accepts most machine control voltage signals. The input accepts AC (50/60 Hz) or DC control voltages from 10 to 300 V at count speeds up to 30 cps. The unit counts on the positive going edge of the input signal.

**WARNING:** Any lead may be at hazardous live input potential. External wiring and devices connected to the unit must be rated the same as applied signal input voltage and be properly isolated from Class 2 or SELV circuitry.

### INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

### Installation

The CUB7 series of products meets NEMA 4X/IP65 requirements for indoor use, when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket. Slide the panel gasket over the rear of the unit to the back of the bezel. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
3. Install CUB7 unit through the panel cut-out until front bezel flange contacts the panel.
4. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7 housing.

*Note: It is necessary to hold the unit in place when sliding mounting clip into position.*

5. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
6. If gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that mounting clip is latched as close as possible to the panel.
7. Repeat from step #5 for tightening mounting screws.

### BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove battery cover, push upward in the direction of the arrow on rear cover (See drawing at right), until the cover unlatches. Pull cover straight out from unit to fully remove.
3. Remove old battery\* and replace with an RLC battery (BNL10000). Observe proper polarity when replacing battery as shown in drawing.
4. Replace cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7 series when properly installed

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## RESET OPTIONS (CUB7 SERIES)

Connecting a wire from the RST. EN. (Reset Enable) Input terminal to Common will enable the front panel Reset button.

Pulling the "RST." input low causes the counter to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when on. The off-state leakage current must be less than 2  $\mu$ A

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

## BACKLIGHT OPTION (CUB7 SERIES)

Optional backlight versions of the CUB7 series require an external 9-28 VDC power supply. The external supply is connected between V+ and Common terminals as shown by the solid line in the drawing.

**WARNING:** When connecting the signal wiring for a backlit CUB7W measuring an AC input voltage, the neutral of the single phase AC signal is connected to Terminal 1 (COM), and line (hot) is connected to Terminal 4 (LS) as shown by the dashed line in the drawing. The DC supply for the backlighting is connected between V+ and Common as shown by the solid line in the drawing. Three phase AC applications require an isolation transformer.

## MODEL CUB7W3 - MINIATURE ELECTRONIC 8 DIGIT COUNTER

- LCD, REFLECTIVE OR TRANSMISSIVE WITH YELLOW/GREEN OR RED LED BACKLIGHTING (9-28 VDC power supply required for versions with LED backlighting)
- 0.35" (8.90 mm) HIGH DIGITS
- REPLACEABLE INTERNAL LITHIUM BATTERY PROVIDES UP TO 7 YEARS OF UNINTERRUPTED OPERATION
- NEMA 4X/IP65 SEALED FRONT BEZEL
- COUNT INPUT FROM 10 to 30 VAC/DC
- WIRE CONNECTION MADE VIA SCREW CLAMP TYPE TERMINALS
- FITS DIN STANDARD CUT-OUT 1.77" (45 mm) x 0.874" (22.2 mm)

### DESCRIPTION

The CUB7 series is an 8-digit miniature counter with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective, Negative Image Transmissive with yellow/green backlighting or red backlighting. The backlight versions require an external 9 to 28 VDC power supply.

The CUB7 series use a CMOS LSI counter circuit chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7 series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber reset button meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS
CUB7W3 *	Counter Positive Image Reflective	CUB7W300
	Counter w/Yel-Grn Backlighting	CUB7W310
	Counter w/Red Backlighting	CUB7W320
BNL	3 V Lithium Battery	BNL10000

For more information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC distributor.

\*Battery is included with unit.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

### SPECIFICATIONS

- DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
- POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 7 years of continuous operation. (Battery life is dependent upon usage. Count and reset contacts that remain closed for long periods of time reduce battery life.)
- BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C. Must use a NEC Class 2 or SELV rated power supply.
- INPUTS:**  $V_{IL}$  (low) = 0.5 V max  
Low speed input: 10 to 30 VAC/DC, 50/60 Hz, 30 cps max. Unit counts on positive going edge.
- REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.

## 6. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O <sup>1</sup> Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms <sup>2</sup> 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

#### Emissions to EN 50081-1

RF interference	EN 55022	Enclosure class B Power mains class B
-----------------	----------	--

#### Notes:

1. Burst to DC backlight power had a power line filter installed RLC #LFIL0000 or equivalent at the unit.

2. Self-recoverable loss of performance during EMI disturbance at 10 V/rms to backlight power lines.

LCD segments may flicker during EMI disturbance.

For operation without loss of performance:

Install power line filter RLC #LFIL0000 or equivalent at the unit.

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

## 7. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC. (Backlight versions)

**Storage Temperature Range:** -30 to 80°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

8. **CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.
9. **CONNECTIONS:** Wire clamping screw terminals  
Wire Strip Length: 0.3" (7.5 mm).  
Wire Gauge: 30-14 AWG copper wire  
Torque: 5 inch-pounds (0.565 N-m) max.
10. **WEIGHT:** 2 oz. (57 grams) [with battery]

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful installation or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly

grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC #FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward #28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC #LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated. All leads will be at the same line potential as the input leads.

### L. S. INPUT, 30 CPS MAX.

The CUB7W3 accepts most machine control voltage signals. The input accepts AC (50/60 Hz) or DC control voltages from 10 to 30 V at count speeds up to 30 cps. The unit counts on the positive going edge of the input signal.

### INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

### Installation

The CUB7 series of products meets NEMA 4X/IP65 requirements for indoor use, when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket. Slide the panel gasket over the rear of the unit to the back of the bezel. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
3. Install CUB7 unit through the panel cut-out until front bezel flange contacts the panel.
4. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7 housing.

Note: It is necessary to hold the unit in place when sliding mounting clip into position.

5. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
6. If gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that mounting clip is latched as close as possible to the panel.
7. Repeat from step #5 for tightening mounting screws.

### BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove battery cover, push upward in the direction of the arrow on rear cover (See drawing at right), until the cover unlatches. Pull cover straight out from unit to fully remove.
3. Remove old battery\* and replace with an RLC battery (BNL10000). Observe proper polarity when replacing battery as shown in drawing.
4. Replace cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7 series when properly installed

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## RESET OPTIONS (CUB7 SERIES)

Connecting a wire from the RST. EN. (Reset Enable) Input terminal to Common will enable the front panel Reset button.

Pulling the "RST." input low causes the counter to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when on. The off-state leakage current must be less than 2  $\mu$ A

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

## BACKLIGHT OPTION (CUB7 SERIES)

Optional backlight versions of the CUB7 series require an external 9-28 VDC power supply. The external supply is connected between V+ and Common terminals as shown by the solid line in the drawing.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

# MODEL CUB7P PROGRAMMABLE ELECTRONIC 8-DIGIT COUNTER

- LCD, POSITIVE IMAGE REFLECTIVE OR NEGATIVE IMAGE TRANSMISSIVE WITH YELLOW/GREEN OR RED LED BACKLIGHTING (9-28 VDC power supply required for versions with LED backlighting)
- AVAILABLE WITH LOW SPEED CONTACT (30 Hz MAX.), HIGH SPEED LOGIC (10 KHz MAX.)
- PRESCALER FROM 0.0001 TO 1.9999
- SELECTABLE DECIMAL POINTS
- REPLACEABLE INTERNAL LITHIUM BATTERY PROVIDES UP TO 6 YEARS OF UNINTERRUPTED OPERATION (Battery Included)
- WIRE CONNECTIONS VIA SCREW CLAMP TYPE TERMINALS
- FRONT PANEL AND REMOTE RESET INPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL
- BOTH FRONT PANEL PROGRAM AND RESET BUTTONS ARE INDIVIDUALLY ENABLED

## DESCRIPTION

The CUB7P is an 8-digit miniature programmable counter with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective, Negative Image Transmissive with yellow/green backlighting, or red backlighting. Backlight units require an external 9 to 28 VDC power supply.

The CUB7P is available in either Low Speed Contact or High Speed Logic. The Contact versions (CUB7P0xxx) operate from a switch contact or an NPN open collector transistor. The Logic versions (CUB7P2xx) operate from 3 VDC logic output or from an NPN open collector transistor.

The CUB7P has a programmable prescaler that can be set for any value between 0.0001 and 1.9999. The decimal point position can be set anywhere from 0 (no D.P.) to 0.000000 or no Leading Zero Blanking. Both the prescaler and DP selection are accessed using the front panel PGM and RESET push buttons. See Programming for details. Note that the count, prescaler and DP values will be lost if the battery is removed. See BATTERY INSTALLATION for additional information.

The CUB7P counters use a CMOS LSI chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7P series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber buttons meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

-----------------	----------	-------------------

#### Notes

1. Backlit powered units require a power line filter to be installed, RLC LFI0000 or equivalent, so as not to impair the function of the backlighting.

Refer to EMC Installation Guidelines for additional information.

- CONNECTIONS:** Wire clamping screw terminals
  - Wire Strip Length:** 0.3" (7.5 mm)
  - Wire Gauge:** 30-14 AWG copper wire
  - Torque:** 5 inch-lbs (0.565 N-m) max.
- CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.
- WEIGHT:** 2 oz. (57 grams) [with battery]

## PROGRAMMING

The CUB7P has programmable prescale values and decimal point positions. These values are changed using the front panel push buttons. Connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable front panel push buttons.

*Note: Upon entering the PGM mode for the first time, the Prescaler value is set to 0.0000. Some value between 0.0001 and 1.9999 must be entered in order for the CUB7P to operate properly. Previously stored values are retained until changed by the user.*

With the front panel push buttons enabled, press the PGM button to enter the program mode. The CUB7P display will change to the current prescale value, with the least significant digit flashing at a 2 Hz rate. The prescale value can be set to any value between 0.0001 and 1.9999. Press the RST button to increment the flashing digit to the desired value. Pressing the PGM button will lock in the value of the flashing digit and advance to the next significant digit. The most significant digit can only be set to 0 or 1. When the entire prescale value has been programmed, press the PGM button once to enable decimal point selection. Any new count pulses will be accumulated using the new prescale value.

After performing the prescale selection, the display will show 0.0000. Decimal point positions can be set for:

0  
0.0  
0.00  
0.000  
0.0000 (Default)  
0.00000  
0.000000  
00000000

Press the RST button until the desired decimal point position is displayed. Press the PGM button to select that position and return to the counter mode. Remove the wire from the HS (Program Enable) terminal to prevent accidental changes to the programmed values.

*Note: The incrementing edge of the count signal will change when the PGM button is pressed for the first time. To avoid incorrect display information, it is recommended that the CUB7P be reset after making programming changes.*

## COUNT EDGE

Accessing program mode for the first time will complement the incrementing edge of the count signal. The table below shows the incrementing edge of the count signal for the different versions of the CUB7P.

VERSION	AFTER INSTALLING OR REPLACING BATTERY	AFTER ENTERING PROGRAM MODE
CUB7P0 (Contact)	Rising Edge	Falling Edge
CUB7P2 (Logic)	Rising Edge	Falling Edge

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove the battery cover, push upward in the direction of the arrow on the rear cover (See drawing below), until the cover unlatches. Pull the cover straight out from unit to fully remove.
3. Remove old battery\* and replace it with an RLC battery (BNL10000). Observe proper polarity when replacing the battery as shown in the drawing.
4. Replace the cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7P when properly installed.

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the push buttons of the unit.

## INSTALLATION

The CUB7P meets NEMA 4X/IP65 requirements for indoor use when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

The following procedure assures proper installation:

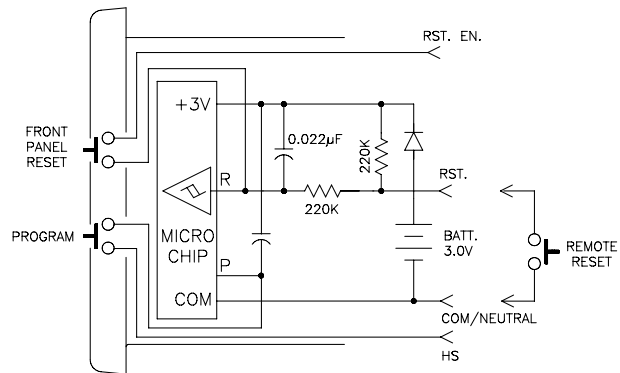

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket.
3. Slide the panel gasket over the rear of the counter body to the back of the bezel. Install CUB7P unit through the panel cut-out.
4. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
5. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7P housing.
6. Note: It is necessary to hold the unit in place when sliding mounting clip into position.
7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
8. If the gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that the mounting clip is latched as close as possible to the panel.
9. Repeat from step #5 for tightening mounting screws.

## RESET AND PROGRAM OPTIONS

Connecting a wire from the RST EN (Reset Enable) or the HS (Program Enable) Input terminals to Common will enable the front panel Reset or Program buttons respectively.

Pulling the "RST." input low causes the counter to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. The Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2  $\mu$ A.

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

## L.S. INPUT; LOGIC VERSIONS (10 KHz MAX.)

TTL OR CMOS OUTPUT

FIG 1

PNP O.C. TRANSISTOR OR BI-POLAR OUTPUT

FIG 2

NPN O.C. TRANSISTOR

FIG 3

The "LS." Input allows the CUB7P to operate at speeds up to 10 KHz when driven by bi-polar outputs or external circuits having an output impedance of 3.3 K $\Omega$  or less. Input drive voltage must be limited to 3 V maximum to avoid damage to the counter. CMOS and TTL Logic outputs can be loaded with a resistor ( $R_L$ ) to limit drive voltage, or a voltage divider can be used as shown for the PNP O.C. Transistor output.

R values for Fig 2 & 3	
+V	R
+5 V	2.2 K
+12 V	10 K
+18 V	16 K
+24 V	24 K

### L.S. INPUT; CONTACT VERSIONS (30 Hz MAX.)

Connecting the "L.S." Input to Common with a mechanical or solid-state switch increments the counter. The switch load is 7 µA (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2 µA.

SWITCH CONTACT INPUT

NPN O.C. TRANSISTOR OR (N) FET INPUT

PNP O.C. TRANSISTOR OR (P) FET INPUT

Reed switches, mercury wetted contacts, snap action limit switches, and silver alloy relay contacts with wiping action are usually satisfactory for input activation. Motor starter contacts, tungsten contacts, and brush-type contacts should not be used.

### BACKLIGHT OPTION

Optional backlight versions of the CUB7P require an external 9 to 26 VDC power supply. The external supply is connected between the V+ and common terminals as shown in the drawing.

### PROGRAMMING EXAMPLES

#### SCALING A COUNTER

**Example:** An encoder generates 600 pulses per foot. The Desired Display is tenths of inches. The Prescaler is determined using the formula below.

$$\text{Prescaler} = \frac{\text{Desired Display Units} \times \text{Decimal Point Value}}{\text{Number of Pulses}}$$

**Where:**

**Desired Display** = The number of Desired Display units (revolutions, feet, 10ths of feet, meters, etc.).

**Number of Pulses** = The number of pulses required to achieve the Desired Display

**Decimal Point Value** = The desired decimal point placement on the display.

Decimal Point Value	Multiply By
0	1
0.0	10
0.00	100
0.000	1000
0.0000	10000
0.00000	100000

**Example:** Display tenths of inches when using

$$\text{Prescaler} = \frac{1 \text{ (inch)} \times 10 \text{ (Decimal Point Value)}}{600 \text{ pulses/foot} \times 1 \text{ foot/ 12 inches}}$$

$$= 10/50 = 0.2$$

### APPLICATION - TOTAL YARDS OF MATERIAL

A fabric manufacturer wants to know, as economically as possible, how many whole yards of material his lines are running. The CUB7P000 will meet his process requirements. The encoder measuring the material, generates a one pulse per foot output signal. To obtain the desired display of yards measured, a prescale value of 0.3333 is programmed. To program the prescale value, connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable the front panel push buttons (See PROGRAMMING for more details.). Remove these wires after programming to prevent accidental changes to the prescale value. At the end of each shift, the machine operator records the total shown on the display and resets the counter to zero via key switch.

### TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## MODEL CUB7P - PROGRAMMABLE ELECTRONIC 8-DIGIT COUNTER

- 3 (8 Digit 0.35") LCD DISPLAY OPTIONS (Reflective, Red Transmissive, Yellow/Green Transmissive. 9 to 28 VDC power supply required for versions w/ LED backlighting)
- AVAILABLE VOLTAGE INPUTS (10 TO 300 VAC/DC)
- PRESCALER FROM 0.0001 TO 1.9999
- SELECTABLE DECIMAL POINTS
- REPLACEABLE INTERNAL LITHIUM BATTERY PROVIDES UP TO 6 YEARS OF UNINTERRUPTED OPERATION (Battery Included)
- WIRE CONNECTIONS VIA SCREW CLAMP TYPE TERMINALS
- FRONT PANEL AND REMOTE RESET INPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL
- BOTH FRONT PANEL PROGRAM AND RESET BUTTONS ARE INDIVIDUALLY ENABLED

### DESCRIPTION

The CUB7P is an 8-digit miniature programmable counter with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective, Negative Image Transmissive with yellow/green backlighting, or red backlighting. Backlight units require an external 9 to 28 VDC power supply. The CUB7P versions operate from a signal voltage of 10 to 300 V (AC 50/60 Hz or DC).

The CUB7P1 has a programmable prescaler that can be set for any value between 0.0001 and 1.9999. The decimal point position can be set anywhere from 0 (no D.P.) to 0.000000 or no Leading Zero Blanking. Both the prescaler and DP selection are accessed using the front panel PGM and RESET push buttons. See Programming for details. Note that the count, prescaler and DP values will be lost if the battery is removed. See BATTERY INSTALLATION for additional information.

The CUB7P counters use a CMOS LSI chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7P series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber buttons meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

### SAFETY SUMMARY

All instructions that appear in the bulletin or on equipment, all safety related regulations, and all local codes must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Read complete instructions prior to installation and operation of the unit.**

**CAUTION: Risk of electric shock.**

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
*CUB7P	Counter; Positive Image Reflective	CUB7P100
	Counter, w/Yel-Grn Backlighting	CUB7P110
	Counter; w/Red Backlighting	CUB7P120
BNL	Replacement 3 V Lithium Battery	BNL10000

\* Battery is included with unit.

### DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.5" (140) W.

## SPECIFICATIONS

- DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
- POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 6 years of continuous operation. (Battery life is dependent upon usage. Contacts that remain closed for long periods of time reduce battery life.)
- BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C.
- SIGNAL INPUT:** (LS terminal #4) See *Count Edge* under Programming for incrementing edge of input signal.
  - Voltage Input** (CUB7P1xx): 10 V min. to 300 V max. (AC 50/60 Hz. or DC) to Common, 150 V max. for backlight versions. 30 cps max. Input current 0.5 mA max. ANY off-state leakage current may prevent counter from activating.
- REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.
- ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC (Backlight versions).
  - Storage Temperature:** -30 to 80°C
  - Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.
  - Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.
  - Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.
  - Altitude:** Up to 2000 meters
- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

IEC-1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

Type 4X Enclosure rating (Face only), UL50

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power <sup>1</sup>
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

#### Emissions to EN 50081-1

RF interference	EN 55022	Enclosure class B
-----------------	----------	-------------------

### Notes

1. Backlit powered units require a power line filter to be installed, RLC LFIL0000 or equivalent, so as not to impair the function of the backlighting.

Refer to EMC Installation Guidelines for additional information.

- CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.
- WEIGHT:** 2 oz. (57 grams) [with battery]

## PROGRAMMING

The CUB7P has programmable prescale values and decimal point positions. These values are changed using the front panel push buttons. Connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable front panel push buttons.

*Note: Upon entering the PGM mode for the first time, the Prescaler value is set to 0.0000. Some value between 0.0001 and 1.9999 must be entered in order for the CUB7P to operate properly. Previously stored values are retained until changed by the user.*

With the front panel push buttons enabled, press the PGM button to enter the program mode. The CUB7P display will change to the current prescale value, with the least significant digit flashing at a 2 Hz rate. The prescale value can be set to any value between 0.0001 and 1.9999. Press the RST button to increment the flashing digit to the desired value. Pressing the PGM button will lock in the value of the flashing digit and advance to the next significant digit. The most significant digit can only be set to 0 or 1. When the entire prescale value has been programmed, press the PGM button once to enable decimal point selection. Any new count pulses will be accumulated using the new prescale value.

After performing the prescale selection, the display will show 0.0000. Decimal point positions can be set for:

```

0
0.0
0.00
0.000
0.0000 (Default)
0.00000
0.000000
00000000
  
```

Press the RST button until the desired decimal point position is displayed. Press the PGM button to select that position and return to the counter mode. Remove the wire from the HS (Program Enable) terminal to prevent accidental changes to the programmed values.

*Note: The incrementing edge of the count signal will change when the PGM button is pressed for the first time. To avoid incorrect display information, it is recommended that the CUB7P be reset after making programming changes.*

## COUNT EDGE

Accessing program mode for the first time will complement the incrementing edge of the count signal. See below for the incrementing edge of the count signal for the CUB7P1:

After installing or replacing battery: Falling Edge

After entering program mode: Rising Edge

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

**WARNING:** Lithium battery may explode if incinerated. To prevent damage to the unit, the voltage on all inputs must not exceed 3.0 VDC with the following exceptions: V+ (all models - 28 VDC max.) and LS (voltage versions - 300 V max.).

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated.

**CAUTION:** All leads will be at the same line potential as the input leads.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove the battery cover, push upward in the direction of the arrow on the rear cover (See drawing below), until the cover unlatches. Pull the cover straight out from unit to fully remove.
3. Remove old battery\* and replace it with an RLC battery (BNL10000). Observe proper polarity when replacing the battery as shown in the drawing.
4. Replace the cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7P when properly installed.

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the push buttons of the unit.

## INSTALLATION

The CUB7P meets NEMA 4X/IP65 requirements for indoor use when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket.
3. Slide the panel gasket over the rear of the counter body to the back of the bezel. Install CUB7P unit through the panel cut-out.
4. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
5. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7P housing.
6. Note: It is necessary to hold the unit in place when sliding mounting clip into position.
7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
8. If the gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that the mounting clip is latched as close as possible to the panel.
9. Repeat from step #5 for tightening mounting screws.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

### L.S. INPUT; VOLTAGE VERSIONS (30 Hz MAX.)

The CUB7P accepts most machine control voltage signals. The input accepts single phase AC (50/60 Hz) or DC control voltages from 10 to 300 V at count speeds up to 30 Hz. The counter increments when voltage is applied between the LS input and Common. Any off-state leakage current may prevent the counter from operating properly.

**WARNING:** If voltage input is connected to circuits above 30 Vrms, any lead may be at hazardous live input potential. External wiring and devices connected to the unit must be rated the same as applied signal input voltage and be properly isolated from Class 2 or SELV circuitry.

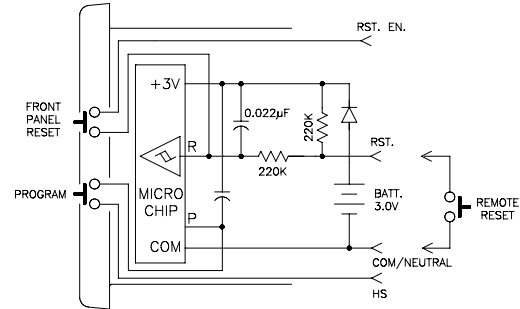

### RESET AND PROGRAM OPTIONS

Connecting a wire from the RST EN (Reset Enable) or the HS (Program Enable) Input terminals to Common will enable the front panel Reset or Program buttons respectively.

Pulling the "RST." input low causes the counter to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. The Switch load is 15 μA (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2 μA.

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

### BACKLIGHT OPTION

Optional backlight versions of the CUB7P require an external 9 to 26 VDC power supply. The external supply is connected between the V+ and common terminals as shown in the drawing.

**WARNING:** When connecting the wiring for a backlit CUB7P measuring an AC input voltage, the neutral of the single phase AC signal is connected to Terminal 1 (COM), and line (hot) is connected to Terminal 4 (LS). The DC supply for the backlighting is connected as shown in the drawing. Three phase AC applications require an isolation transformer.

### PROGRAMMING EXAMPLES

#### SCALING A COUNTER

**Example:** An encoder generates 600 pulses per foot. The Desired Display is tenths of inches. The Prescaler is determined using the formula below.

$$\text{Prescaler} = \frac{\text{Desired Display Units} \times \text{Decimal Point Value}}{\text{Number of Pulses}}$$

**Where:**

**Desired Display** = The number of Desired Display units (revolutions, feet, 10ths of feet, meters, etc.).

**Number of Pulses** = The number of pulses required to achieve the Desired Display

**Decimal Point Value** = The desired decimal point placement on the display.

Decimal Point Value	Multiply By
0	1
0.0	10
0.00	100
0.000	1000
0.0000	10000
0.00000	100000

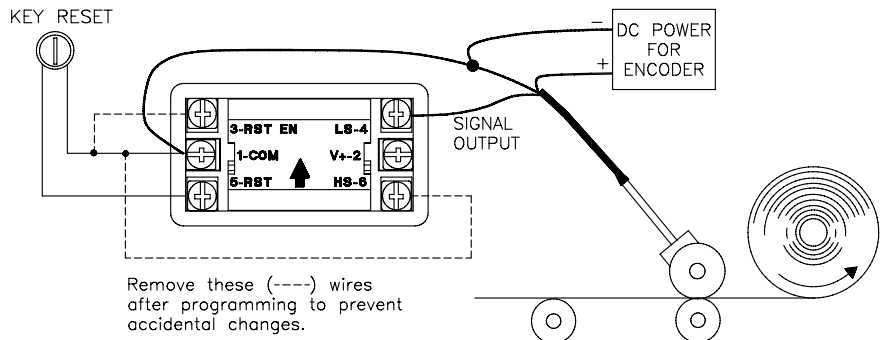

**Example:** Display tenths of inches when using

$$\text{Prescaler} = \frac{1 \text{ (inch)} \times 10 \text{ (Decimal Point Value)}}{600 \text{ pulses/foot} \times 1 \text{ foot/ 12 inches}}$$

$$= 10/50 = 0.2$$

### APPLICATION - TOTAL YARDS OF MATERIAL

The management at an amusement park wants to know how many miles (in tenths) each of their parking lot trams travel. They know that a 24 VDC input pulse is given for each revolution of the 6 foot in circumference wheel. The small CUB7P100 can meet this need. There are 5280 feet in one mile and with 6 feet per revolution; there would be 880 revolutions or pulses in a mile. To obtain the desired display of miles in tenths, the CUB7P100 decimal point would be programmed for 0.0 with the prescale value of 0.0114 (1 x 10 decimal point value / 880 pulses per mile). TO program these values, connect wires between RST EN (Reset Enable) and COM (Common); and between HS (Program Enable) and COM (Common) to enable the front panel push buttons. (See PROGRAMMING for more details) Remove these (---) wires after programming to prevent the mileage from being reset.

## MODEL CUB7P3 - PROGRAMMABLE ELECTRONIC 8-DIGIT COUNTER

- 3 (8 Digit 0.35") LCD DISPLAY OPTIONS (Reflective, Red Transmissive, Yellow/Green Transmissive. 9 to 28 VDC power supply required for versions w/ LED backlighting)
- AVAILABLE VOLTAGE INPUTS (10 TO 30 VAC/DC)
- PRESCALER FROM 0.0001 TO 1.9999
- SELECTABLE DECIMAL POINTS
- REPLACEABLE INTERNAL LITHIUM BATTERY PROVIDES UP TO 6 YEARS OF UNINTERRUPTED OPERATION (Battery Included)
- WIRE CONNECTIONS VIA SCREW CLAMP TYPE TERMINALS
- FRONT PANEL AND REMOTE RESET INPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL
- BOTH FRONT PANEL PROGRAM AND RESET BUTTONS ARE INDIVIDUALLY ENABLED

### DESCRIPTION

The CUB7P3 is an 8-digit miniature programmable counter with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective, Negative Image Transmissive with yellow/green backlighting, or red backlighting. Backlight units require an external 9 to 28 VDC power supply. The CUB7P3 versions operate from a signal voltage of 10 to 30 V (AC 50/60 Hz or DC).

The CUB7P3 has a programmable prescaler that can be set for any value between 0.0001 and 1.9999. The decimal point position can be set anywhere from 0 (no D.P.) to 0.000000 or no Leading Zero Blanking. Both the prescaler and DP selection are accessed using the front panel PGM and RESET push buttons. See Programming for details. Note that the count, prescaler and DP values will be lost if the battery is removed. See BATTERY INSTALLATION for additional information.

The CUB7P counters use a CMOS LSI chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7P series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber buttons meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

### SAFETY SUMMARY

All instructions that appear in the bulletin or on equipment, all safety related regulations, and all local codes must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
*CUB7P3	Counter; Positive Image Reflective	CUB7P300
	Counter, w/Yel-Grn Backlighting	CUB7P310
	Counter; w/Red Backlighting	CUB7P320
BNL	Replacement 3 V Lithium Battery	BNL10000

\* Battery is included with unit.

### DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.5" (140) W.

## SPECIFICATIONS

- DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
- POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 6 years of continuous operation. (Battery life is dependent upon usage. Contacts that remain closed for long periods of time reduce battery life.)
- BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C. Must use a NEC Class 2 or SELV rated power supply.
- SIGNAL INPUT:** (LS terminal #4) See *Count Edge* under Programming for incrementing edge of input signal.

**Voltage Input** (CUB7P3xx): 10 V min. to 30 V max. (AC 50/60 Hz. or DC) to Common. 30 cps max. ANY off-state leakage current may prevent counter from activating.

- REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.

### 6. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC (Backlight versions).

**Storage Temperature:** -30 to 80°C

**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

### 7. CERTIFICATIONS AND COMPLIANCES:

#### SAFETY

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IEC-61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

#### ELECTROMAGNETIC COMPATIBILITY

##### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power <sup>1</sup>
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

##### Emissions to EN 50081-1

RF interference	EN 55022	Enclosure class B
-----------------	----------	-------------------

#### Notes

1. Backlit powered units require a power line filter to be installed, RLC LFIL0000 or equivalent, so as not to impair the function of the backlighting.

Refer to EMC Installation Guidelines for additional information.

- CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.
- CONNECTIONS:** Wire clamping screw terminals  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gauge: 30-14 AWG copper wire  
Torque: 5 inch-pounds (0.565 N-m) max.
- WEIGHT:** 2 oz. (57 grams) [with battery]

## PROGRAMMING

The CUB7P has programmable prescale values and decimal point positions. These values are changed using the front panel push buttons. Connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable front panel push buttons.

*Note: Upon entering the PGM mode for the first time, the Prescaler value is set to 0.0000. Some value between 0.0001 and 1.9999 must be entered in order for the CUB7P to operate properly. Previously stored values are retained until changed by the user.*

With the front panel push buttons enabled, press the PGM button to enter the program mode. The CUB7P display will change to the current prescale value, with the least significant digit flashing at a 2 Hz rate. The prescale value can be set to any value between 0.0001 and 1.9999. Press the RST button to increment the flashing digit to the desired value. Pressing the PGM button will lock in the value of the flashing digit and advance to the next significant digit. The most significant digit can only be set to 0 or 1. When the entire prescale value has been programmed, press the PGM button once to enable decimal point selection. Any new count pulses will be accumulated using the new prescale value.

After performing the prescale selection, the display will show 0.0000. Decimal point positions can be set for:

0  
0.0  
0.00  
0.000  
0.0000 (Default)  
0.00000  
0.000000  
00000000

Press the RST button until the desired decimal point position is displayed. Press the PGM button to select that position and return to the counter mode. Remove the wire from the HS (Program Enable) terminal to prevent accidental changes to the programmed values.

*Note: The incrementing edge of the count signal will change when the PGM button is pressed for the first time. To avoid incorrect display information, it is recommended that the CUB7P be reset after making programming changes.*

## COUNT EDGE

Accessing program mode for the first time will complement the incrementing edge of the count signal. See below for the incrementing edge of the count signal for the CUB7P3:

After installing or replacing battery: Falling Edge

After entering program mode: Rising Edge

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

**WARNING:** Lithium battery may explode if incinerated. To prevent damage to the unit, the voltage on all inputs must not exceed 3.0 VDC with the following exceptions: V+ (all models: 28 VDC max.) and LS (voltage versions: 30 V max.).

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove the battery cover, push upward in the direction of the arrow on the rear cover (See drawing below), until the cover unlatches. Pull the cover straight out from unit to fully remove.
3. Remove old battery\* and replace it with an RLC battery (BNL10000). Observe proper polarity when replacing the battery as shown in the drawing.
4. Replace the cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7P when properly installed.

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the push buttons of the unit.

## INSTALLATION

The CUB7P meets NEMA 4X/IP65 requirements for indoor use when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket.
3. Slide the panel gasket over the rear of the counter body to the back of the bezel. Install CUB7P unit through the panel cut-out.
4. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
5. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7P housing.
6. Note: It is necessary to hold the unit in place when sliding mounting clip into position.
7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
8. If the gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that the mounting clip is latched as close as possible to the panel.
9. Repeat from step #5 for tightening mounting screws.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

**L.S. INPUT; VOLTAGE VERSIONS (30 Hz MAX.)**

The CUB7P3 accepts most machine control voltage signals. The input accepts single phase AC (50/60 Hz) or DC control voltages from 10 to 30 V at count speeds up to 30 Hz. The counter increments when voltage is applied between the LS input and Common. Any off-state leakage current may prevent the counter from operating properly.

**RESET AND PROGRAM OPTIONS**

Connecting a wire from the RST EN (Reset Enable) or the HS (Program Enable) Input terminals to Common will enable the front panel Reset or Program buttons respectively.

Pulling the "RST." input low causes the counter to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. The Switch load is 15 μA (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2 μA.

Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.

**BACKLIGHT OPTION**

Optional backlight versions of the CUB7P require an external 9 to 26 VDC power supply. The external supply is connected between the V+ and common terminals as shown in the drawing.

**PROGRAMMING EXAMPLES**

**SCALING A COUNTER**

Example: An encoder generates 600 pulses per foot. The Desired Display is tenths of inches. The Prescaler is determined using the formula below.

$$\text{Prescaler} = \frac{\text{Desired Display Units} \times \text{Decimal Point Value}}{\text{Number of Pulses}}$$

Where:

**Desired Display** = The number of Desired Display units (revolutions, feet, 10ths of feet, meters, etc.).

**Number of Pulses** = The number of pulses required to achieve the Desired Display

**Decimal Point Value** = The desired decimal point placement on the display.

Decimal Point Value	Multiply By
0	1
0.0	10
0.00	100
0.000	1000
0.0000	10000
0.00000	100000

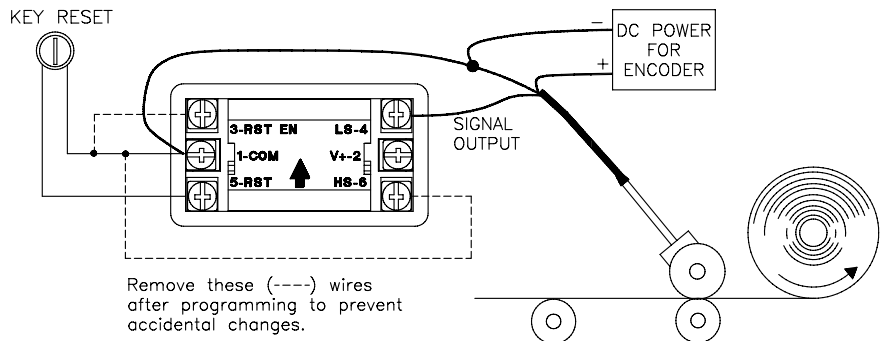

Example: Display tenths of inches when using

$$\text{Prescaler} = \frac{1 \text{ (inch)} \times 10 \text{ (Decimal Point Value)}}{600 \text{ pulses/foot} \times 1 \text{ foot} / 12 \text{ inches}}$$

$$= 10/50 = 0.2$$

**APPLICATION - TOTAL YARDS OF MATERIAL**

The management at an amusement park wants to know how many miles (in tenths) each of their parking lot trams travel. They know that a 24 VDC input pulse is given for each revolution of the 6 foot in circumference wheel. The small CUB7P300 can meet this need. There are 5280 feet in one mile and with 6 feet per revolution; there would be 880 revolutions or pulses in a mile. To obtain the desired display of miles in tenths, the CUB7P300 decimal point would be programmed for 0.0 with the prescale value of 0.0114 (1 x 10 decimal point value /880 pulses per mile). TO program these values, connect wires between RST EN (Reset Enable) and COM (Common); and between HS (Program Enable) and COM (Common) to enable the front panel push buttons. (See PROGRAMMING for more details) Remove these wires after programming to prevent the mileage from being reset.

## MODEL CUB4L, CUB4L8 & CUB4L8W - MINIATURE ELECTRONIC COUNTERS

UL Recognized Component,  
File # E179259

- LCD, POSITIVE REFLECTIVE OR NEGATIVE TRANSMISSIVE WITH YELLOW/GREEN OR RED LED BACKLIGHTING
- INTERNAL LITHIUM BATTERY PROVIDES UP TO 6 YEARS OF UNINTERRUPTED OPERATION
- NEMA 4X/IP65 SEALED FRONT BEZEL
- FRONT PANEL RESET, REMOTE RESET, OR BOTH
- COUNT SPEEDS UP TO 5 KHz (Model Dependent)
- COUNT INPUT FROM 10 to 300 VAC/DC (CUB4L8W)
- WIRE CONNECTION MADE VIA SCREW CLAMP TYPE TERMINALS

### DESCRIPTION

The CUB4 offers a large display in a miniature package. There are three CUB4 counters to choose from; the CUB4L (6-digit counter), CUB4L8 (8-digit counter), and the CUB4L8W (8-digit counter with voltage input). You also have a choice of three displays; reflective, red backlight or green backlight.

The backlight versions require power from an external 9–28 VDC supply. The optional power supply (MLPS1000) is designed to be attached directly to the rear of the CUB4 and is powered from an 85–250 VAC source. The power supply provides 12 VDC @ 400 mA to power the backlight and sensor, if required.

The CUB4 series has a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber reset button meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS
CUB4L (6-digit)	Counter Positive Image Reflective	CUB4L000
	Counter w/Yel-Grn Backlighting	CUB4L010
	Counter w/Red Backlighting	CUB4L020
CUB4L8 (8-digit)	Counter Positive Image Reflective w/V+ Terminal	CUB4LM00
	Counter Positive Image Reflective	CUB4L800
	Counter w/Yel-Grn Backlighting	CUB4L810
CUB4L8W (8-digit w/VCM)	Counter w/Red Backlighting	CUB4L820
	Counter Positive Image Reflective w/V+ Terminal	CUB4L80M
	Counter Positive Image Reflective	CUB4L8W0
	Counter w/Yel-Grn Backlighting	CUB4L8W1
	Counter w/Red Backlighting	CUB4L8W2
	Counter Positive Image Reflective w/V+ Terminal	CUB4L8WM
MLPS	Micro Line/Sensor Power Supply	MLPS1000

For more information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC distributor.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

### SPECIFICATIONS

- DISPLAY:**  
CUB4L: 6-Digit, LCD, 0.48" (12.2 mm) high digits.  
CUB4L8 & CUB4L8W: 8-Digit, LCD, 0.46" (11.7 mm) high digits.
- POWER SOURCE:** Internal 3.0 V lithium battery to provide up to 6 years of continuous operation. Battery life is dependent upon usage. Count and reset contacts that remain closed for long periods of time will reduce battery life.
- BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC, 35 mA typical, 50 mA max. Above 26 VDC, derate operating temperature to 50°C. Must use the MLPS or a Class 2 or SELV rated power supply.
- INPUTS:**  
**All Inputs:**  $V_{IL} (low) = 0.5 V$  max.  
**Low Speed Input (CUB4L & CUB4L8):** 30 Hz from switch contact or open collector transistor with a 50% duty cycle.  
**Low Speed Input (CUB4L8W):** 10 to 300 VAC/DC, 50/60 Hz, 30 cps max.  $V_{IL} = 0.5 VDC$  max. Unit counts on positive going edge. Will not operate with Triac outputs.  
**High Speed Input (CUB4L):** 5 KHz from 4.0 V to 28.0 V bipolar output with a 50% duty cycle.  
**High Speed Input (CUB4L8):** 5 KHz at 2.0 V (3 V max) bipolar output with a 50% duty cycle.  
**Remote Reset:**  
CUB4L: 15 msec min. pulse width (active low) from 4.0 V to 28.0 V bipolar output or an open collector transistor or a switch contact to common.

### DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

CUB4L8 & CUB4L8W: 15 msec min. pulse width (*active low*) from 3.0 V bipolar output or open collector transistor or a switch contact to common.

5. ENVIRONMENTAL CONDITIONS:

**Operating Temperature:** 0 to 60°C (above 50°C, derate backlight operating voltage to 26 VDC max.).

**Storage Temperature:** -30 to 85°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

6. CERTIFICATIONS AND COMPLIANCES:

7. CONSTRUCTION:

This unit is rated for NEMA 4X/IP65 indoor use. Installation Category I, Pollution Degree 2

8. WEIGHT: 3 oz. (85 grams)

**EMC INSTALLATION GUIDELINES**

Although Red Lion Controls Products are designed with a high degree of immunity to Electromagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into a unit may be different for various installations. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed are some EMI guidelines for a successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

**Ferrite Suppression Cores for signal and control cables:**

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

**Line Filters for input power cables:**

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

**INSTALLATION ENVIRONMENT**

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

**Installation**

The CUB4 series of products meet NEMA 4X/IP65 requirements for indoor use, when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for sealing the unit in the panel cut-out.

The following procedure assures proper installation:

- Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
- Carefully remove the center section of the panel gasket and discard. Slide gasket over rear of the unit to the back of the bezel.
- Assemble nut fastener first and then mounting screw onto both sides of mounting clip. Tip of screw should not project from hole in mounting clip.
- Install CUB4 unit through the panel cut-out until front bezel flange contacts the panel-mounted gasket.
- Slide the mounting clip over the rear of the unit until the mounting clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB4 housing.

*Note: It is necessary to hold the unit in place when sliding mounting clip into position.*

- Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed about 75 to 80% of its original thickness. (Recommended torque is 28 to 36 in-oz.) If not, gradually turn mounting screws to further compress gasket.
- If gasket is not adequately compressed, and mounting screws can no longer be turned, loosen mounting screws and check that mounting clip is latched as close as possible to panel. Repeat procedure for tightening mounting screws.

## WIRING CONNECTIONS

The electrical connections are made via rear screw-clamp terminals located on the back of the unit. When wiring the unit, use the label to identify the wire position with the proper function. All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker. Strip the wire, leaving approximately 1/4" bare wire exposed (*stranded wires should be tinned with solder*). Insert the wire into the screw-clamp terminal and tighten down the screw until the wire is clamped tightly. Each terminal can accept up to two #14 AWG wires.

*Note: The Reflective CUB4 will NOT have a screw terminal installed at the V+ terminal, since it is NOT required for operation and is not internally connected. Refer to the Ordering Information for the part number of a reflective model that will accommodate the MLPS.*

### Backlight Wiring

Optional backlight versions of the CUB4 require an external 9-28 VDC power supply. The external supply is connected between the V+ and Common terminals.

*Note: This drawing is for CUB4L and CUB4L8 reference only. For reference of CUB4L8W, refer to Backlight Option on page 4.*

**Warning:** Lithium battery may explode if incinerated.

**Caution:** All leads will be at the same line potential as the input leads.

### CUB4L AND CUB4L8 LOW SPEED COUNT INPUT, 30 Hz MAX.

Pulling the "L.S. CNT." Input to Common with a mechanical or solid-state switch increments the counter. The low pass filter used with a Schmidt trigger circuit debounces mechanical switch signals. The switch load is 14  $\mu$ A (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2  $\mu$ A. Motor starter contacts, tungsten contacts, and brush-type contacts should NOT be used.

### CUB4L8W L.S. INPUT, 30 CPS MAX.

The CUB4L8W accepts most machine control voltage signals. The input accepts AC (50/60 Hz) or DC control voltages from 10 to 300 V at count speeds up to 30 cps. The unit counts on the positive going edge of the input signal.

**WARNING:** Any lead may be at hazardous live input potential. External wiring and devices connected to the unit must be rated the same as applied signal input voltage and be properly isolated from Class 2 or SELV circuitry.

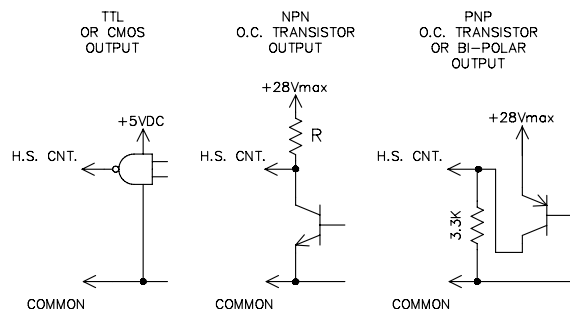

### CUB4L HIGH SPEED COUNT INPUT, 5 KHz MAX.

The "H.S. CNT." Input allows the CUB Counter to operate at speeds up to 5 KHz when driven by bi-polar outputs. Input drive voltage must be limited to 28.0 V maximum to avoid damage to the counter.

**INPUT PULSE EXCURSION LIMITS**  
 $V_{IH}$  (High) = +4.0 V min., +28.0 V max.  
 $V_{IL}$  (Low) = +0.5 V max.

## CUB4L8 HIGH SPEED COUNT INPUT, 5 Hz MAX.

The "H.S. CNT." Input allows the CUB Counter to operate at speeds up to 5 KHz when driven by bi-polar outputs or external circuits having an output impedance of 3.3 K $\Omega$  or less. Input drive voltage must be limited to 3 V maximum to avoid damage to the counter. CMOS and TTL logic outputs can be loaded with a resistor (R<sub>1</sub>) to limit drive voltage, or a voltage divider can be used as shown for the PNP O.C. transistor output.

TTL OR CMOS OUTPUT

FIG 1

PNP O.C. TRANSISTOR OR BI-POLAR OUTPUT

FIG 2

NPN O.C. TRANSISTOR

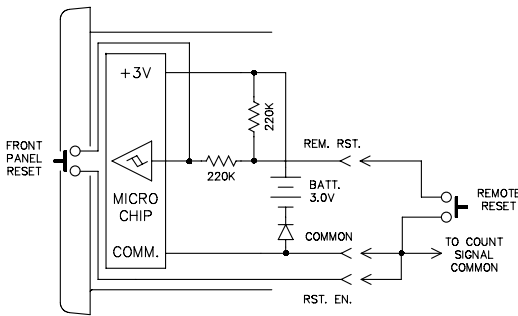

FIG 3

### INPUT PULSE EXCURSION LIMITS

$V_{IN}$  (High) = 2.0 V min., 3.0 V max.  
 $V_{IL}$  (Low) =  $\pm 0.5$  V max.

R values for Fig 2 & 3	
+V	R
+5 V	2.2 K
+12 V	10 K
+18 V	16 K
+24 V	24 K

## RESET OPTIONS

Connecting a wire from the "RST. EN." (Reset Enable) Input terminal to Common will enable the front panel Reset button. When Remote Reset is required, a wire is connected from the "REM. RST." input terminal to Common. Pulling this input low causes the counter to reset. The "REM. RST." can be pulled low by either a mechanical switch or solid-state transistor switch. Switch load and leakage are the same as for "L.S. CNT." Input above.

*Note: The RC protection circuit on the "REM. RST." Input causes a delay of approximately 15 msec in Reset response.*

## BACKLIGHT OPTION

Optional backlight versions of the CUB4 require an external 9-28 VDC power supply. The external supply is connected between the +V and Common terminals as shown in the drawing.

Red Lion Controls optional power supply (MLPS1000) is designed to be attached directly to the rear of a CUB4 and is powered from a 85 to 250 VAC source. The MLPS provides power for unit backlighting and a sensor.

**WARNING:** When connecting the wiring for a backlit CUB4L8W measuring an AC input voltage, the neutral of the single phase AC signal is connected to Terminal 1 (COM), and line (hot) is connected to Terminal 5 (LS). The DC supply for the backlighting is connected as shown in the drawing. Three phase AC applications require an isolation transformer.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

# MODEL CUB5 - MINIATURE ELECTRONIC 8-DIGIT DUAL COUNTER AND RATE INDICATOR

- LCD, REFLECTIVE OR GREEN/RED LED BACKLIGHTING
- 0.46" (11.7 mm) HIGH DIGITS
- OPTIONAL SETPOINT OUTPUT MODULES
- OPTIONAL SERIAL COMMUNICATIONS MODULE (RS232 or RS485)
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- PROGRAMMABLE SCALING FOR COUNT AND RATE
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (UP TO 4 TIMES RESOLUTION)
- BUILT-IN BATCH COUNTING CAPABILITY
- DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The CUB5 provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The meter can be programmed as a single or dual counter with rate indication capability. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.46" (11.7 mm) high digits. The LCD is available in two versions, reflective (CUB5R000) and backlight (CUB5B000). The backlight version is user selectable for green or red backlighting with variable display intensity.

The counter is programmable for one of eight different count modes, including bi-directional and quadrature. When programmed as a dual counter, each counter has a separate scale factor and decimal points. In the counter/rate indicator mode, each have their own scaling and decimal point read-outs in different engineering units. The internal batch counter can be used to count setpoint output activations.

The meter has two separate inputs which provide different functions depending on which operating mode is selected. Input A accepts the signal for the Count and/or Rate displays, while Input B accepts the signal for the Count display or direction control. In the anti-coincidence mode, both inputs are monitored simultaneously so that no counts are lost. The resulting display can be chosen as the sum or difference of the two inputs. The Rate Indicator has programmable low (minimum) and high (maximum) update times to provide optimal display response at any input frequency. There is a programmable user input that can be programmed to perform a variety of functions.

The capability of the CUB5 can be easily expanded with the addition of option modules. Setpoint capability is field installable with the addition of the single setpoint relay output module or the dual setpoint solid state output module. Serial communications capability for RS232 or RS485 is added with a serial option module.

The CUB5 can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5. The MLPS1 is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

## COUNTER

The CUB5 receives incoming pulses and multiplies them by the Count Scale Factor to obtain the desired reading for the count display. Input A accepts the signal for the count and Input B is used for quadrature, dual counter, anti-coincidence counting, or up/down control counting.

## RATE

The rate indicator utilizes the signal at Input A to calculate the rate value using a time interval method (1/tau). The unit counts on the negative edge of the input pulses. After the programmed minimum update time elapses and the next negative edge occurs, the unit calculates the input rate based on the number of edges that occurred during the elapsed time. The input rate is then multiplied by the rate scaling value to calculate the rate display.

At slower rates, averaging can be accomplished by programming the rate minimum update time for the desired response. Extensive scaling capabilities allow practically any desired reading at very slow count rates.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

# ORDERING INFORMATION

TYPE	MODEL NO.	DESCRIPTION	PART NUMBER
CUB5	CUB5R	Dual Counter & Rate Indicator with Reflective Display	CUB5R000
	CUB5B	Dual Counter & Rate Indicator with Backlight Display	CUB5B000
Optional Plug-in Cards	CUB5RLY	Single Relay Option Card	CUB5RLY0
	CUB5SNK	Dual Sinking Open Collector Output card	CUB5SNK0
	CUB5COM	RS485 Serial Communications Card	CUB5COM1

## GENERAL METER SPECIFICATIONS

- DISPLAY:** 8 digit LCD 0.46" (11.7 mm) high digits  
**CUB5R000:** Reflective LCD with full viewing angle  
**CUB5B000:** Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS1 or a Class 2 or SELV rated power supply.

MODEL NO.	DISPLAY COLOR	INPUT CURRENT @ 9 VDC WITHOUT CUB5RLY0	INPUT CURRENT @ 9 VDC WITH CUB5RLY0
CUB5R000	---	10 mA	30 mA
CUB5B000	Red (max intensity)	85 mA	115 mA
CUB5B000	Green (max intensity)	95 mA	125 mA

### 3. COUNTER DISPLAYS:

**Counter A:** 8-digits, enabled in all count modes

Display Range: -9999999 to 9999999

Overflow Indication: Display flashes "Err"

**Counter B:** 7-digits, enabled in Dual Counter Mode or batch counting

Display Designator: "b" to the left side of the display

Display Range: 0 to 9999999 (positive count only)

Overflow Indication: Display flashes "bErr"

**Maximum Count Rates:** 50% duty cycle

Without setpoint option card: 20 KHz (all count modes)

With setpoint option card: 20 KHz for any count mode except Dual Counter (16 KHz), Quadrature x2 (14 KHz) and Quadrature x4 (13 KHz).

### 4. RATE DISPLAY: 6-digits, may be enabled or disabled in any count mode

**Display Designator:** "R" to the left side of the display

**Display Range:** 0 to 999999

**Over Range Display:** "R OL OL"

**Maximum Frequency:** 20 KHz

**Minimum Frequency:** 0.01 Hz

**Accuracy:** ±0.01%

### 5. COUNT/RATE SIGNAL INPUTS (INP A and INP B):

**Input A:** DIP switch selectable to accept pulses from a variety of sources.

See Section 2.0 Setting the DIP Switches for Input A specifications.

**Input B:** Logic signals only

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

Current sinking: Internal 10KΩ pull-up resistor to +9 to 28 VDC

Filter (LO Freq.): Damping capacitor provided for switch contact bounce.

Limits input frequency to 50 Hz and input pulse widths to 10 msec min.

### 6. USER INPUT (USR): Programmable input. Connect to input common (INP COMM) to activate function. Internal 10KΩ pull-up resistor to +9 to 28 VDC.

**Threshold Levels:**  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)

### 7. MEMORY: Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and count values when power is removed.

### 8. CONNECTIONS: Wire clamping screw terminals

**Wire Strip Length:** 0.3" (7.5 mm)

**Wire Gauge:** 30-14 AWG copper wire

**Torque:** 5 inch-lbs (0.565 N-m) max.

### 9. CONSTRUCTION: This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category I, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.

### 10. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range for CUB5R000:** -35 to 75°C

**Operating Temperature Range for CUB5B000 depends on display color and intensity level as per below:**

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
	Green Display	1 & 2
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C

**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 40 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

### 11. CERTIFICATIONS AND COMPLIANCES:

#### SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 61010-1 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #US/9257C/UL

CB Scheme Test Report #E179259-V01-S02

Issued by Underwriters Laboratories, Inc.

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

#### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

#### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m

#### Emissions:

Emissions EN 55011 Class A

Notes:

1. Criterion A: Normal operation within specified limits.

Refer to EMC Installation Guidelines for additional information.

12. WEIGHT: 3.2 oz (100 g)

# OPTIONAL PLUG-IN CARDS

## A ADDING OPTION CARDS

The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

**WARNING:** Disconnect all power to the unit before installing Plug-in card.

### SINGLE RELAY OUTPUT CARD (One setpoint only)

**Type:** Single FORM-C relay

**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.

**Working Voltage:** 150 Vrms

**Contact Rating:** 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive

**Life Expectancy:** 100,000 minimum operations

**Response Time:**

Turn On Time: 4 msec max.

Turn Off Time: 4 msec max.

### DUAL SINKING OUTPUT CARD (One or two setpoints)

**Type:** Non-isolated switched DC, N Channel open drain MOSFET

**Current Rating:** 100 mA max.

$V_{DS\ ON}$ : 0.7 V @ 100 mA

$V_{DS\ MAX}$ : 30 VDC

**Offstate Leakage Current:** 0.5 mA max.

### RS485 SERIAL COMMUNICATIONS CARD

**Type:** RS485 multi-point balanced interface (non-isolated)

**Baud Rate:** 300 to 38.4k

**Data Format:** 7/8 bits; odd, even, or no parity

**Bus Address:** 0 to 99; max 32 meters per line

**Transmit Delay:** Selectable, 2 msec min. or 50 msec min.

### RS232 SERIAL COMMUNICATIONS CARD

**Type:** RS232 half duplex (non-isolated)

**Baud Rate:** 300 to 38.4k

**Data Format:** 7/8 bits; odd, even, or no parity

## 1.0 INSTALLING THE METER

### INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

### INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## 2.0 SETTING THE DIP SWITCHES

To access the switches, remove the rear cover of the meter as described below. A bank of 4 switches is located in the upper right hand corner. After setting the switches, install any optional plug-in cards before replacing the rear cover (see next section).

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

### REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

### SETTING THE INPUT DIP SWITCHES

The meter has four DIP switches for Input A and Input B that must be set before applying power.

#### SWITCH 1

**LOGIC:** Input A trigger levels  $V_{IL} = 1.25\text{ V max.}$ ;

$V_{IH} = 2.75\text{ V min.}$ ;  $V_{MAX} = 28\text{ VDC}$

**MAG:** 200 mV peak input sensitivity; 100 mV hysteresis; maximum input voltage:  $\pm 40\text{ V peak}$  (28 Vrms); Must also have SRC switch ON. (Not recommended with counting applications.)

#### SWITCH 2

**SNK:** Adds internal 7.8 K $\Omega$  pull-up resistor to +9 to 28 VDC,  $I_{MAX} = 3.8\text{ mA}$ .

**SRC:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

Legend:  
 ON: [ ]  
 OFF: [■]  
 1: Logic  
 2: SNK  
 3: HI Freq.  
 4: HI Freq.

■ Factory Setting

#### SWITCHES 3 and 4

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Adds a damping capacitor for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec.

# 3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter. After installing the cards, replace the rear cover before wiring the meter.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## REPLACING THE REAR COVER

To replace the rear cover, align the cover with the input terminals and press down until the cover snaps into place.

# 4.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when

- the noise source frequency is above 1 MHz.
- Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

- Fair-Rite # 0443167251 (RLC# FCOR0000)
- TDK # ZCAT3035-1330A
- Steward # 28B2029-0A0

Line Filters for input power cables:

- Schaffner # FN610-1/07 (RLC# LFIL0000)
- Schaffner # FN670-1.8/07
- Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
- Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### DC Power

+9 to +28 VDC: +VDC  
Power Common: -VDC

## 4.2 USER INPUT WIRING

### Sinking Logic

INP COMM } Connect external switching device between the  
USR } User Input terminal and Input Common.

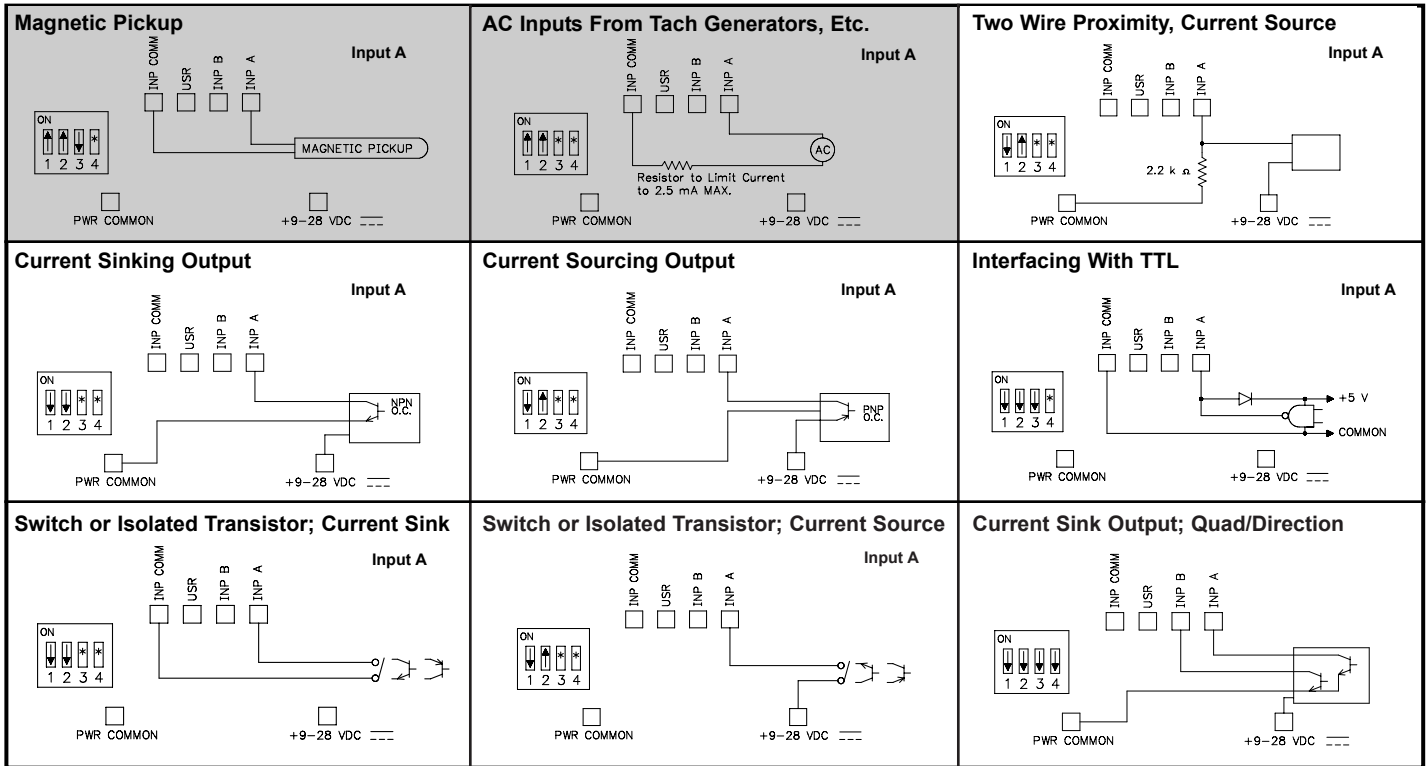

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<1 .0 V).

# 4.3 INPUT WIRING

**CAUTION:** Power common (PWR COMMON) is NOT isolated from input common (INP COMM). In order to preserve the safety of the meter application, the power common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the Signal or User Inputs and input common terminals. Appropriate considerations must then be given to the potential of the input common with respect to earth ground; and the common of the plug-in cards with respect to input common.

\* Switch position is application dependent.

Shaded areas not recommended for counting applications.

# 4.4 SETPOINT (OUTPUT) WIRING

## SINGLE SETPOINT RELAY PLUG-IN CARD

## ELECTRICAL CONNECTIONS

## DUAL SETPOINT N-FET OPEN DRAIN PLUG-IN CARD

## ELECTRICAL CONNECTIONS

Note: Output Common is not isolated from DC Power Common. Load must be wired between OSNK terminal and V+ of the load supply.

# 4.5 SERIAL COMMUNICATION WIRING

## SERIAL COMMUNICATIONS PLUG-IN CARD

## RJ11 CONNECTOR PIN OUTS

# 5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

A

KEY	DISPLAY MODE OPERATION	ENTERING PROGRAM MODE	PROGRAMMING MODE OPERATION
SEL	Index display through enabled values	Press and hold for 2 seconds to activate	Store selected parameter and index to next parameter
RST	Resets count display(s) and/or outputs		Advances through the program menu/ Increments selected parameter value or selection

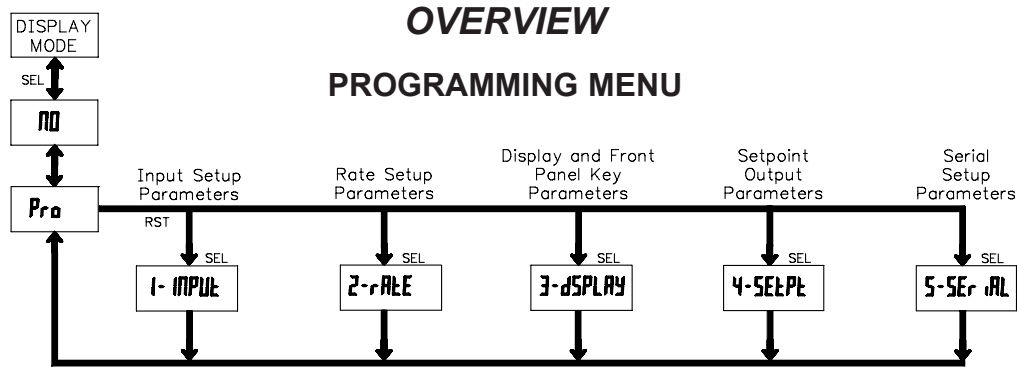

## OPERATING MODE DISPLAY DESIGNATORS

“R” - To the left of the display is the rate value.  
- Counter A has no designator.

“b” - To the left of the display is the Counter B value (dual count or batch).  
“1” and “2” - Indicates setpoint 1 and 2 output status.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the rate and count values.

# 6.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL KEY)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** key. If it is not accessible then it is locked by either a security code, or a hardware lock.

## MODULE ENTRY (SEL & RST KEYS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between *PrO* and the present module. The **RST** key is used to select the desired module. The displayed module is entered by pressing the **SEL** key.

## MODULE MENU (SEL KEY)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to *PrO*. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** key is used to move through the selections/values for that parameter. Pressing the **SEL** key, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** key to access the value. The right hand most digit will begin to flash. Pressing the **RST** key again increments the digit by one or the user can hold the **RST** key and the digit will automatically scroll. The **SEL** key will advance to the next digit. Pressing and holding the **SEL** key will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL KEY)

The Programming Mode is exited by pressing the **SEL** key with *PrO NO* displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 for counting or Module 2 for rate. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory settings may be completely restored in Module 3. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's factory setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 6.1 MODULE 1 - INPUT SETUP PARAMETERS (1- INPUT)

A

## PARAMETER MENU

Shaded area selections only apply when Counter B is enabled (Dual Counter mode or batch counter).

### COUNT MODE

INP A-b  
 Cnt ud

QUAD 4	Quadrature x4	Count A	Quad A
Add Add	2 Input Add/Add	Counter A Add	Counter A Add
Add Sub	2 Input Add/Subtract	Counter A Add	Counter A Subtract

Note: The Rate indicator signal is derived from Input A in all count modes.

### COUNTER A DECIMAL POSITION

CntA dP  
 0 000 00000  
 00 0000 000000

This selects the decimal point position for Counter A. The selection will also affect Counter A scale factor calculations.

### COUNTER A SCALE FACTOR

CntA ScF  
 0.0000  
 00000 I to 999999

The number of input counts is multiplied by the scale factor to obtain the desired process value. A scale factor of 1.0000 will result in the display of the actual number of input counts. (Details on scaling calculations are explained at the end of this section.)\*

### COUNTER A RESET ACTION

CntA rSt  
 to 2Er0  
 to Cld

When Counter A is reset, it returns to Zero or Counter A Count Load value. This reset action applies to all Counter A resets, except a setpoint generated Counter Auto Reset programmed in Module 4.

### COUNTER A COUNT DIRECTION

CntA dir  
 NO  
 rEU

Reverse (rEU) switches the normal Counter A count direction shown in the Count Mode parameter chart.

### COUNTER A COUNT LOAD VALUE

CntA Ld  
 00000500  
 -9999999 to 99999999

Counter A resets to this value if Reset to Count Load action is selected.

### COUNTER B BATCH COUNT ENABLE

Cntb bRE  
 NO  
 SP1 SP2  
 SP1 SP1-2

The Counter B batch count function internally counts the number of output activations of the selected setpoint(s). The count source for the batch counter can be SP1, SP2 or both. Batch counting is available in all count modes except Dual Counter, which uses an external input signal for Counter B. This parameter only appears if a Setpoint Output option card is installed.

### COUNTER B DECIMAL POSITION

Cntb dP  
 0 000 00000  
 00 0000 000000

This selects the decimal point position for Counter B. The selection will also affect Counter B scale factor calculations.

### COUNTER B SCALE FACTOR

Cntb ScF  
 0.0000  
 00000 I to 999999

The number of input or batch counts is multiplied by the scale factor to obtain the desired process value. A scale factor of 1.0000 will result in the display of the actual number of input or batch counts. (Details on scaling calculations are explained at the end of this section.)\*

### COUNTER RESET AT POWER-UP

RSt P-UP  
 NO  
 YES  
 NO Count b  
 Count A both A-b

The selected counter(s) will reset at each meter power-up.

\* For value entry instructions, refer to selection/value entry in the Programming The Meter section.

## SCALING FOR COUNT INDICATION

The CUB5's scale factor is factory set to 1, to provide one count on the display for each pulse that is input to the unit. In many applications, there will not be a one-to-one correspondence between input pulses and display units. Therefore, it is necessary for the CUB5 to scale or multiply the input pulses by a scale factor to achieve the desired display units (feet, meters, gallons, etc.)

The Count Scale Factor Value can range from 00.0001 to 99.9999. It is important to note that the precision of a counter application cannot be improved by using a scale factor greater than one. To accomplish greater precision, more pulse information must be generated per measuring unit. The following formula is used to calculate the scale factor.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

### WHERE:

**Desired Display Units:** Count display units acquired after pulses that occurred.

**Number of Pulses:** Number of pulses required to achieve the desired display units.

### Decimal Point Position:

0	=	1
0.0	=	10
0.00	=	100
0.000	=	1000
0.0000	=	10000
0.00000	=	100000

**EXAMPLE:** The counter display is used to indicate the total number of feet used in a process. It is necessary to know the number of pulses for the desired units to be displayed. The decimal point is selected to show the resolution in hundredths.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

Given that 128 pulses are equal to 1 foot, display total feet with a one-hundredth resolution.

$$\text{Scale Factor} = \frac{1.00}{128} \times 100$$

$$\text{Scale Factor} = 0.007812 \times 100$$

$$\text{Scale Factor} = 0.7812$$

## USER INPUT FUNCTION

DISPLAY	MODE	DESCRIPTION
no	No Function	User Input disabled.
Pro Loc	Program Mode Lock-out	See Programming Mode Access chart. (Module 3)
Inhibit	Inhibit	Inhibit counting for the selected counter(s).
RESET	Maintained Reset	Level active reset of the selected counter(s).
Store	Store	Freeze display of selected counter(s) while allowing counts to accumulate internally.
Store-Reset	Store and Reset	Edge triggered reset of the selected counter(s) after storing the count.
SELECT	Display Select *	Advance once for each activation
LEVEL	Display Intensity Level *	Increase intensity one level for each activation. (backlight version only)
COLOR	Backlight Color *	Change backlight color with each activation (backlight version only)
Print	Print Request	Serial transmit of the active parameters selected in the Print Options (Module 5)
Print-Reset	Print and Reset *	Same as Print Request followed by a momentary reset of the selected counter(s).
RESET-1	Setpoint 1 Reset *	Reset Setpoint 1 output
RESET-2	Setpoint 2 Reset *	Reset Setpoint 2 output
RESET-12	Setpoint 1 and 2 Reset *	Reset Setpoint 1 and 2 outputs

Note: \* indicates Edge Triggered function. Other functions are Level Active (maintained)

## USER INPUT ASSIGNMENT

Count A    Count B    both A-B

The User Input Assignment is only active when Counter B is enabled and the User Input performs a Reset, Inhibit or Store function on one or both counters.

## 6.2 MODULE 2 - RATE SETUP PARAMETERS (2-RATE)

Module 2 is the programming for the rate parameters. For maximum input frequency, Rate Enable should be set to no when not in use. When set to no, the remaining rate parameters are not accessible. The rate value is shown with an annunciator of "P" in the Display Mode.

### RATE ENABLE

no    YES

### RATE DECIMAL POINT

0    000    00000  
00    0000    000000

This selects the decimal point position for the rate display and any setpoint value assigned to rate. This parameter does not affect rate scaling calculations.

### RATE SCALING DISPLAY VALUE

0 to 999999

Enter the desired Rate Display Value for the Scaling Point.\*

### RATE SCALING INPUT VALUE

0.1 to 999999

Enter the corresponding Rate Input Value for the Scaling Point.\*

\*For value entry instructions, refer to selection/value entry in the Programming The Meter section.

## SCALING FOR RATE INDICATION

To scale the rate, enter a Scaling Display value with a corresponding Scaling Input value. These values are internally plotted to a display value of 0 and input value of 0.0 Hz. A linear relationship is formed between these points to yield a rate display value that corresponds to the incoming input signal rate. The meter is capable of showing a rate display value for any linear process.

## SCALING CALCULATION

If a display value versus input signal (in pulses per second) is known, then those values can be entered into Scaling Display (RATE dSP) and Scaling Input (RATE INP). No further calculations are needed.

If only the number of pulses per 'single' unit (i.e. # of pulses per foot) is known, then it can be entered as the Scaling Input value and the Scaling Display value will be entered as the following:

RATE PER	DISPLAY (RATE dSP)	INPUT (RATE INP)
Second	1	# of pulses per unit
Minute	60	# of pulses per unit
Hour	3600	# of pulses per unit

### NOTES:

- If # of pulse per unit is less than 10, then multiply both Input and Display values by 10.
- If # of pulse per unit is less than 1, then multiply both Input and Display values by 100.
- If the Display value is raised or lowered, then Input value must be raised or lowered by the same proportion (i.e. Display value for per hour is entered by a third less (1200) then Input value is a third less of # of pulses per unit). The same is true if the Input value is raised or lowered, then Display value must be raised or lowered by the same proportion.
- Both values must be greater than 0.0.

### EXAMPLE:

- With 15.1 pulses per foot, show feet per minute in tenths. Scaling Display = 60.0 Scaling Input = 15.1.
- With 0.25 pulses per gallon, show whole gallons per hour. (To have greater accuracy, multiply both Input and Display values by 10.) Scaling Display = 36000 Scaling Input = 2.5.

## RATE LOW UPDATE TIME

LO-Udt 0.1 to 999 seconds

0.10

The Low Update Time is the minimum amount of time between display updates for the rate display. Values of 0.1 and 0.2 seconds will update the display correctly but may cause the display to appear unsteady.

## RATE HIGH UPDATE TIME

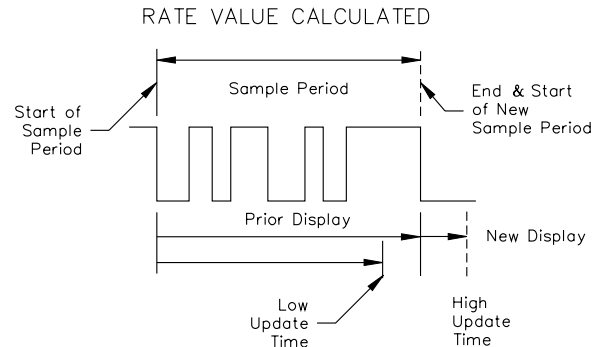

HI-Udt 0.2 to 999 seconds

02.0

The High Update Time is the maximum amount of time before the rate display is forced to zero. (For more explanation, refer to Rate Value Calculation.) The High Update Time **must** be higher than the Low Update Time and higher than the desired slowest readable speed (one divided by pulses per second). The factory setting of 2.0, will force the display to zero for speeds below 0.5 Hz or a pulse every 2 seconds.

## INPUT FREQUENCY CALCULATION

The meter determines the input frequency by summing the number of falling edges received during a sample period of time. The sample period begins on the first falling edge. At this falling edge, the meter starts accumulating time towards Low Update and High Update values. Also, the meter starts accumulating the number of falling edges. When the time reaches the Low Update Time value, the meter looks for one more falling edge to end the sample period. If a falling edge occurs (before the High Update Time value is reached), the Rate display will update to the new value and the next sample period will start on the same edge. If the High Update Time value is reached (without receiving a falling edge after reaching Low Update Time), then the sample period will end but the Rate display will be forced to zero. The High Update Time value must be greater than the Low Update Time value. Both values must be greater than 0.0. The input frequency calculated during the sample period, is then shown as a Rate value determined by the scaling calculation.

# 6.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY PARAMETERS (3-DISPLAY)

A

## FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The **YES** selection allows the **SEL** button to toggle through the enabled displays.

## FRONT PANEL COUNTER RESET ENABLE (RST)

The **YES** selection allows the **RST** button to reset the selected counter(s). The shaded selections are only active when Counter B is enabled (Dual Count mode or batch counter).

## DISPLAY SCROLL ENABLE

The **YES** selection allows the display to automatically scroll through the enabled displays. Each display is shown for 4 seconds.

## DISPLAY COLOR (BACKLIGHT UNIT ONLY)

Enter the desired display color, red or green. This parameter is active for backlight units only.

## DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

## PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (*Pro Loc*) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the setpoint output time-out and counter load values (when applicable) to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the *Pro CodE* prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the *Pro CodE* prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" KEY IS PRESSED	FULL PROGRAMMING MODE ACCESS
not <i>Pro Loc</i>	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at <i>Pro CodE</i> prompt *
		100-999	<i>Pro CodE</i> prompt	With correct code entry at <i>Pro CodE</i> prompt *
<i>Pro Loc</i>	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	<i>Pro CodE</i> prompt	With correct code entry at <i>Pro CodE</i> prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

## SOFTWARE VERSION DISPLAY

Select **YES** to momentarily display the meter software version before advancing to the next parameter. The software version is also displayed at power-up.

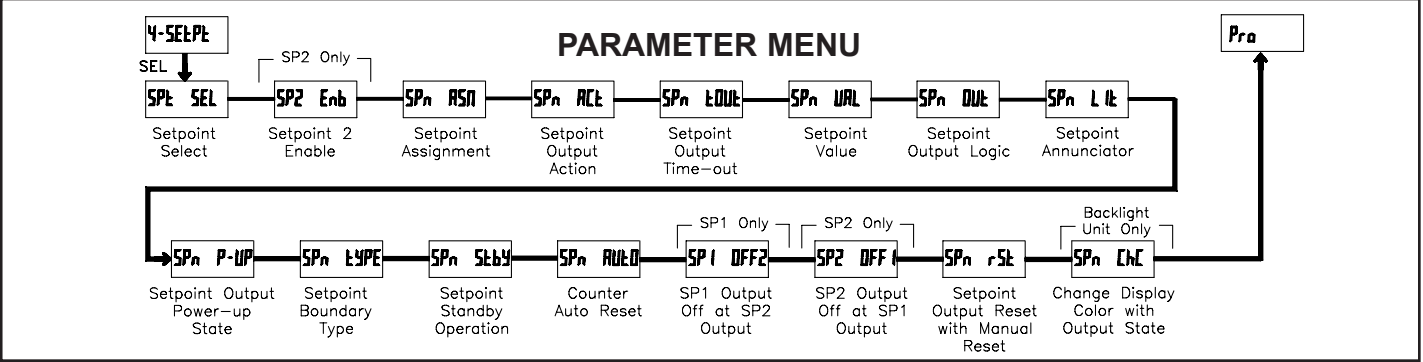

## LOAD FACTORY DEFAULT SETTINGS

The **YES** selection will return the meter to the factory default settings. The meter will display *rESEt* and then return to *Pro*, at which time all settings have been changed.

# 6.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SETPt)

A

The Setpoint Output Parameters are only active when an optional Setpoint Output Module is installed in the meter. Some parameters in the menu will not appear depending on the Setpoint Assignment and Setpoint Output Action. The Setpoint Parameter Availability chart below illustrates this.

## SETPOINT SELECT

Select the Setpoint Output to be programmed, starting with Setpoint 1. The "n" in the following parameters reflects the chosen Setpoint number. After Setpoint 1 is completely programmed, the display returns to SPt SEL. Repeat steps for Setpoint 2 if both Setpoints are used in the application.

Select n0 to exit the Setpoint programming module. The number of Setpoints available is dependent on the Setpoint option module installed.

## SETPOINT OUTPUT ACTION

The parameter selects the action of the Setpoint Output as described in the chart. Boundary output action is not applicable for Counter B assignment.

SPT ACTION	DESCRIPTION	OUTPUT ACTIVATES	OUTPUT DEACTIVATES
LATCH	Latched Output Mode	When Count = Setpoint	At Manual Reset (if SPn rSt=YES)
T-OUT	Timed Output Mode	When Count = Setpoint	After Setpoint Output Time-Out
bOUND	Boundary Mode (High Acting Type)	When Count ≥ Setpoint	When Count < Setpoint
	Boundary Mode (Low Acting Type)	When Count ≤ Setpoint	When Count > Setpoint

## SETPOINT 2 ENABLE (SP2 Only)

Select YES to enable Setpoint 2 and access the setup parameters. If n0 is selected, the unit returns to SPt SEL and Setpoint 2 is disabled.

## SETPOINT ASSIGNMENT

Select the display to which the Setpoint is assigned.

## SETPOINT PARAMETER AVAILABILITY

PARAMETER	DESCRIPTION	COUNTER ASSIGNMENT (A or B) *			RATE ASSIGNMENT		
		TIMED OUT T-OUT	BOUNDARY bOUND	LATCH LATCH	TIMED OUT T-OUT	BOUNDARY bOUND	LATCH LATCH
SPn TOUT	Setpoint Output Time-out Value	Yes	No	No	Yes	No	No
SPn VAL	Setpoint Value	Yes	Yes	Yes	Yes	Yes	Yes
SPn OUT	Setpoint Output Logic	Yes	Yes	Yes	Yes	Yes	Yes
SPn Lk	Setpoint Annunciator	Yes	Yes	Yes	Yes	Yes	Yes
SPn P-UP	Setpoint Output Power-up State	No	No	Yes	No	No	Yes
SPn TYPE	Setpoint Boundary Type	No	Yes	No	Yes	Yes	Yes
SPn Stby	Standby Operation (Low acting only)	No	Yes	No	Yes	Yes	Yes
SPn AUTO	Counter Auto Reset	Yes	No	Yes	No	No	No
SP1 OFF	SP1 Output Off at SP2 (SP1 only)	Yes	No	Yes	No	No	No
SP2 OFF	SP2 Output Off at SP1 (SP2 only)	Yes	No	Yes	No	No	No
SPn rSt	Output Reset with Manual Reset	Yes	No	Yes	Yes	No	Yes
SPn Chg	Change Display Color w/ Output State	Yes	Yes	Yes	Yes	Yes	Yes

\* BOUNDARY Setpoint Action not applicable for Counter B Assignment

## SETPOINT OUTPUT TIME-OUT

SPn **TIME** ↵  
 ↶ 001 to 59999 seconds  
 ↷ 00100

This parameter is only active if the Setpoint Action is set to time out (t-Out). Enter the value in seconds that the Setpoint output will be active, once the Setpoint Value is reached.

## SETPOINT VALUE

SPn **VAL** ↵  
 ↶ Count A: -9999999 to 99999999  
 ↷ 00000100  
 Count B: 0 to 9999999  
 Rate: 0 to 999999

Enter the desired Setpoint value. To enter a negative setpoint value, increment digit 8 to display a “-” sign (Counter A only).

## SETPOINT OUTPUT LOGIC

SPn **OUT** ↵  
 ↶ NOR rEU  
 ↷ NOR

Normal (NOR) turns the output “on” when activated and “off” when deactivated. Reverse (rEU) turns the output “off” when activated and “on” when deactivated.

## SETPOINT ANNUNCIATOR

SPn **Lit** ↵  
 ↶ NOR rEU  
 ↷ NOR

Normal (NOR) displays the setpoint annunciator when the corresponding output is “on”. Reverse (rEU) displays the setpoint annunciator when the output is “off”.

## SETPOINT OUTPUT POWER-UP STATE

SPn **P-UP** ↵  
 ↶ OFF ON SAVE  
 ↷ OFF

SAVE will restore the output to the same state it was at before the meter was powered down. ON will activate the output at power up. OFF will deactivate the output at power up.

## SETPOINT BOUNDARY TYPE

SPn **TYPE** ↵  
 ↶ HI-Act LO-Act  
 ↷ HI-Act

High Acting Boundary Type activates the output when the assigned display value (SPn RSN) equals or exceeds the Setpoint value. Low Acting activates the output when the assigned display value is less than or equal to the Setpoint.

## SETPOINT STANDBY OPERATION

SPn **Stby** ↵  
 ↶ NO YES  
 ↷ NO

This parameter only applies to Low Acting Boundary Type setpoints. Select YES to disable a Low Acting Setpoint at power-up, until the assigned display value crosses into the output “off” area. Once in the output “off” area, the Setpoint will then function per the description for Low Acting Boundary Type.

## COUNTER AUTO RESET

SPn **AUTO** ↵  
 ↶ NO ZErO-StR CtlLd-StR  
 ↷ NO ZErO-End CtlLd-End

This parameter automatically resets the counter to which the setpoint is assigned (SPn RSN) each time the setpoint value is reached. The automatic reset can occur at output start, or at output end if the Setpoint Output Action is programmed for timed output mode. The Reset-to-Count Load selections (“CtlLd-”) only apply to Counter A assignment. This reset may be different from the Counter A Reset Action selected in Module 1.

SELECTION	ACTION
NO	No Auto Reset.
ZErO-StR	Reset to Zero at the start of output activation.
CtlLd-StR	Reset to Count Load value at the start of output activation.
ZErO-End	Reset to Zero at the end of output activation (timed out only).
CtlLd-End	Reset to Count Load value at the end of output activation (timed out only).

## SETPOINT 1 OUTPUT OFF AT SETPOINT 2 (SP1 Only)

SP1 **OFF2** ↵  
 ↶ NO Out2-StR Out2-End  
 ↷ NO

This parameter will deactivate Setpoint 1 output at the Start or End of Setpoint 2 output (O1 off at O2). The “-End” setting only applies if Setpoint 2 Output Action is programmed for timed output.

## SETPOINT 2 OUTPUT OFF AT SETPOINT 1 (SP2 Only)

SP2 **OFF1** ↵  
 ↶ NO Out1-StR Out1-End  
 ↷ NO

This parameter will deactivate Setpoint 2 output at the Start or End of Setpoint 1 output (O2 off at O1). The “-End” setting only applies if Setpoint 1 Output Action is programmed for timed output.

## SETPOINT OUTPUT RESET WITH MANUAL RESET

SPn **rSt** ↵  
 ↶ YES NO  
 ↷ YES

Selecting YES causes the Setpoint output to deactivate (reset) when the Setpoint Assigned Counter is reset. The counter reset can occur by the RST button, User Input, Counter Reset at Power-up or a serial Reset Counter command.

This output reset will not occur when the Assigned Counter is reset by a Setpoint generated Counter Auto Reset.

## CHANGE DISPLAY COLOR WITH OUTPUT STATE

SPn **ChC** ↵  
 ↶ NO YES  
 ↷ NO

This parameter enables the backlight CUB5 to switch the backlight color when the output state changes. This parameter is only active for the backlight version.

# 6.5 MODULE 5 - SERIAL COMMUNICATIONS PARAMETERS (5-SERIAL)

A

The Serial Communications Parameters are only accessible when an optional RS232 or RS485 serial communications module is installed in the meter.

This section replaces the bulletin shipped with the RS232 and RS485 serial communications plug-in cards. Discard the separate bulletin when using those serial plug-in cards with the CUB5B and CUB5R.

## BAUD RATE

bAUD 300 1200 4800 19200  
 600 2400 9600 38400  
 9600

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

## DATA BIT

dAtA 7-bit 8-bit  
 7-bit

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

## PARITY BIT

PARity NO Odd EVEN  
 Odd

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to NO, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

Addr 0 to 99  
 00

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING

Abbr NO YES  
 NO

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select NO for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select YES for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS

Prnt OPT NO YES  
 NO

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting YES displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as YES in the sublist will be transmitted during a block print. Parameters entered as NO will not be sent.

The "Print All" (Prnt ALL) option selects all meter values for transmitting (YES), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. For example, Counter B or Scale Factor B will only be sent if Counter B is enabled (Dual Counter mode or batch count). Likewise, the Setpoint value(s) will not be sent unless an optional setpoint card is installed in the meter.

DISPLAY	DESCRIPTION	FACTORY SETTING	MNEMONIC
Count A	Counter A	YES	CTA
Count B	Counter B	NO	CTB
Rate	Rate Value	NO	RTE
Count SFA	Scale Factor A	NO	SFA
Count SFB	Scale Factor B	NO	SFB
SP1	Setpoint 1	NO	SP1
SP2	Setpoint 2	NO	SP2
Count CLD	Counter A Count Load	NO	CLD

## Sending Serial Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character, \* or \$.

### Command Chart

Command	Description	Notes
N	Node (meter) Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by a register ID character.
V	Value Change (write)	Write to register of the meter. Must be followed by a register ID character and numeric data.
R	Reset	Reset a count value or setpoint output. Must be followed by a register ID character
P	Block Print Request (read)	Initiates a block print output. Registers in the print block are selected in Print Options.

### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

- The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
- After the optional address specifier, the next character is the command character.
- The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints all the active selections chosen in the Print Options menu parameter.
- If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See Command Response Time section for differences in meter response time when using the \* and \$ terminating characters.

## Receiving Data From The Meter

Data is transmitted from the meter in response to either a transmit command (T), a block print request command (P) or a User Input print request. The response from the meter is either a full field transmission or an abbreviated transmission, depending on the selection chosen in Module 5.

### Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte data field; 10 bytes for number, one byte for sign, one byte for decimal point
19	<CR> (carriage return)
20	<LF> (line feed)
21	<SP>* (Space)
22	<CR>* (carriage return)
23	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The first two characters transmitted are the meter address. If the address assigned is 0, two spaces are substituted. A space follows the meter address field. The next three characters are the register mnemonic, as shown in the Register Identification Chart.

The numeric data is transmitted next. The numeric field (bytes 7 to 18) is 12 characters long. When a requested counter or rate value exceeds the meter's display limits, an \* (used as an overflow character) replaces a space in byte 7. Byte 8 is always a space.

The remaining ten positions of this field consist of a minus sign (for negative values), a floating decimal point (if applicable), and eight positions for the

### Register Identification Chart

ID	Value Description	MNEMONIC	Applicable Commands	Transmit Details (T and V)
A	Counter A	CTA	T, V, R	8 digit positive/7 digit negative (with minus sign)
B	Counter B	CTB	T, V, R	7 digit, positive only
C	Rate	RTE	T	6 digit, positive only
D	Scale Factor A	SFA	T, V	6 digit, positive only
E	Scale Factor B	SFB	T, V	6 digit, positive only
F	Setpoint 1 (Reset Output 1)	SP1	T, V, R	per setpoint Assignment, same as Counter or Rate
G	Setpoint 2 (Reset Output 2)	SP2	T, V, R	per setpoint Assignment, same as Counter or Rate
H	Counter A Count Load Value	CLD	T, V	8 digit positive/7 digit negative (with minus sign)

### Command String Examples:

- Node address = 17, Write 350 to the Setpoint 1 value  
String: N17VF350\*
- Node address = 5, Read Counter A, response time of 50 msec min  
String: N5TA\*
- Node address = 0, Reset Setpoint 1 output  
String: RF\*
- Node address = 31, Request a Block Print Output, response time of 2 msec min  
String: N31PS

### Transmitting Data to the Meter

Numeric data sent to the meter must be limited to transmit details listed in the Register Identification Chart. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (For example: The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.

requested value. The data within bytes 9 to 18 is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with a <CR> and <LF>. After the last line of a block print, an extra <SP>, <CR> and <LF> are added to provide separation between the print blocks.

### Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 10 bytes for number, one byte for sign, one byte for decimal point
13	<CR> (carriage return)
14	<LF> (line feed)
15	<SP>* (Space)
16	<CR>* (carriage return)
17	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and register ID, leaving only the numeric part of the response.

### Meter Response Examples:

- Node address = 17, full field response, Counter A = 875  
17 CTA 875 <CR><LF>
- Node address = 0, full field response, Setpoint 1 = -250.5  
SP1 -250.5<CR><LF>
- Node address = 0, abbreviated response, Setpoint 1 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Command Response Time

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\* or \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

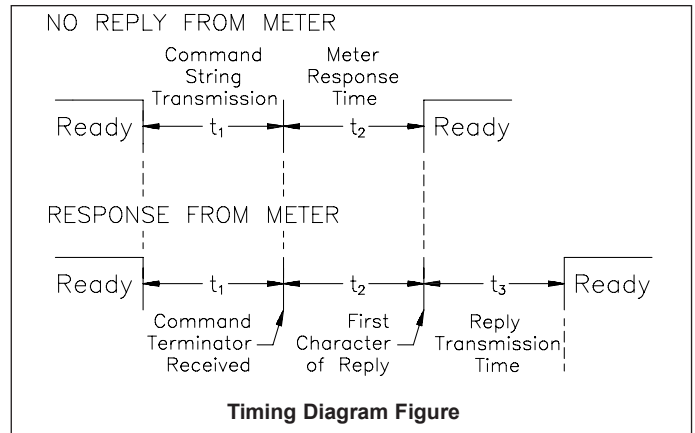

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time of 50 msec. minimum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time ( $t_2$ ) of 2 msec. minimum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

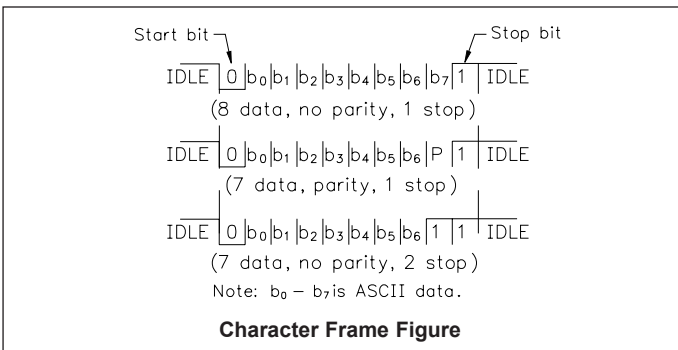

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character. The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start Bit and Data Bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

### Parity Bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The CUB5 meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop Bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the meter.

## MODEL PAXLC - PAX<sup>®</sup> LITE COUNTER

- AVAILABLE IN 6 OR 8-DIGIT VERSIONS
- 6-DIGIT, 0.56" (14.2 mm) / 8-DIGIT, 0.4" (10.1 mm) HIGH LED DISPLAYS
- ACCEPTS INPUT COUNT RATES UP TO 25 KHZ
- BI-DIRECTIONAL COUNTING
- REMOTE RESET CAPABILITY
- DISPLAY STORE
- COUNT INHIBIT
- PROGRAMMABLE SCALE FACTOR
- NEMA 4X/IP65 SEALED FRONT BEZEL

### GENERAL DESCRIPTION

The PAX<sup>®</sup> Lite Counter, Model PAXLC, is a versatile totalizing counter that can be adapted to a wide variety of counting, measuring, and positioning readout applications.

The unit features a programmable scale factor, front panel and remote reset, store, inhibit, and a count rate of 25 KHz, while offering an economical solution to any totalizing need.

The PAXLC accepts digital inputs from a variety of sources including switch contacts, NPN-OC and TTL outputs, as well as most standard Red Lion sensors. The input can be scaled to display any desired unit of measure by simply using the programmable scale factor. The meter can accept bi-directional and unidirectional signals.

The meter is programmed through the front panel buttons and the use of DIP switches. The Down Arrow Key will also function as a front panel display reset. Once the front panel programming is complete, the buttons can be disabled by a DIP switch setting.

The meter has been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

### DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

# ORDERING INFORMATION

## Meter Part Numbers

# GENERAL METER SPECIFICATIONS

A

- DISPLAY:** 6-digit, 0.56" (14.2 mm) or 8-digit, 0.4" (10.1 mm)  
7-segment LED  
**Display Range:** 6-digit, -99999 to 999999 or 8-digit, -9999999 to 99999999  
Display Overflow indicated by flashing dot to the right of digit 1  
Decimal points are programmed by front panel keys
- POWER:**  
**AC Power:** 115/230 VAC, switch selectable. Allowable power line variation  $\pm 10\%$ , 50/60 Hz, 6 VA.  
**Isolation:** 2300 Vrms for 1 min. to input and DC Out/In.  
**DC Power:** 10 to 16 VDC @ 0.1 A max.
- SENSOR POWER:** 9 to 17.5 VDC @ 100 mA max.
- KEYPAD:** 3 programming keys, the ▼ (Down Arrow) key can also function as the front panel reset button
- COUNT INPUT:** (DIP switch selectable)  
Accepts pulses from a variety of sources including switch contacts, NPN-OC and TTL Outputs, as well as most standard Red Lion® sensors  
**Logic State:** Active Low  
Input trigger levels  $V_{IL} = 1.5$  V max.;  $V_{IH} = 3.75$  V min.  
**Current Sinking:** Internal 7.8 K $\Omega$  pull-up to +12 VDC, I max = 1.9 mA  
**Current Sourcing:** Internal 3.9 K $\Omega$  pull-down, 8 mA max. @ 30 VDC max.  
**Filter:** Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.
- MAXIMUM COUNT RATE:** 25 KHz max.
- CONTROL INPUTS:**  
Count Up/Down Control, Remote Reset, Inhibit, and Store  
**Max. Continuous Input:** 30 VDC  
**Isolation To Sensor Input Commons:** Not isolated  
**Logic State:** Active Low, 22 K $\Omega$  pull-up to +12 V  
Active:  $V_{IN} < 0.9$  VDC  
Inactive:  $V_{IN} > 3.6$  VDC  
**Response Time:**  
Up/Down and Inhibit: 25  $\mu$ sec max.  
Reset and Store: 10 msec. max.
- MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and count values.
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** 0 to 60°C  
**Storage Temperature Range:** -40 to 60°C  
**Operating and Storage Humidity:** 0 to 85% max. relative humidity non-condensing  
**Altitude:** Up to 2000 meters
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
UL Recognized Component, File # E179259, UL61010A-1, CSA C22.2 No. 61010-1  
Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards Type 4X Enclosure rating (Face only), UL50  
IECEE CB Scheme Test Certificate # US/8843A/UL  
CB Scheme Test Report # 04ME11209-20041018  
Issued by Underwriters Laboratories, Inc.  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529  
IP20 Enclosure rating (Rear of unit), IEC 529

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A <sup>2</sup> 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A <sup>2</sup> 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle
<b>Emissions:</b>		
Emissions	EN 55011	Class B

### Notes:

1. Criterion A: Normal operation within specified limits.
2. EMI filter placed on the DC power supply, when DC powered: Corcom #IVB3 or Schaffner #FN610-1/07 (RLC #LFIL0000).

11. **CONNECTIONS:** High compression cage-clamp terminal block

**Wire Strip Length:** 0.3" (7.5 mm)

**Wire Gauge:** 30-14 AWG copper wire

**Torque:** 4.5 inch-lbs (0.51 N-m) max.

12. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

13. **WEIGHT:** 12 oz. (340 g)

## 1.0 INSTALLING THE METER

### Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

### Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE SWITCHES

A

The meter has switches that must be checked and/or changed prior to applying power. To access the power switch, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Power Selection Switch

Caution: Insure the AC power selection switch is set for the proper voltage before powering-up the meter. The meter is shipped from the factory in the 230 VAC position.

## Setup DIP Switches

A DIP switch is at the rear of the meter. It is used to set up the input, enable/disable programming and front panel reset functions. For the correct input setup, refer to 3.3 Wiring the Meter.

### Switch 1

**SNK.:** Adds internal 7.8 KΩ pull-up resistor to +12 VDC, I<sub>MAX</sub> = 1.9 mA

### Switch 2

**SRC:** Adds internal 3.9 KΩ pull-down resistor, 8 mA max. @ 30 VDC max.

### Switch 3

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Limits input frequency to 50 Hz and input pulse widths to 10 msec.

### Switch 4

**LOGIC:** Input trigger levels V<sub>IL</sub> = 1.5 V max; V<sub>IH</sub> = 3.75 V max.

**MAG:** Not used for count applications.

### Switch 5

**Enable Programming:** Enables programming through the front panel buttons.

**Disables Programming:** Disables the front panel buttons from any programming changes.

### Switch 6

**Enable Reset:** Enables the front panel reset (down arrow key).

**Disable Reset:** Disables the front panel reset key. *Note: The remote reset terminal is not disabled by this switch.*

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

- Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  - Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  - In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
    - Ferrite Suppression Cores for signal and control cables:
      - Fair-Rite # 0443167251 (RLC# FCOR0000)
      - TDK # ZCAT3035-1330A
      - Steward # 28B2029-0A0
    - Line Filters for input power cables:
      - Schaffner # FN610-1/07 (RLC# LFIL0000)
      - Schaffner # FN670-1.8/07
      - Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
  - Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
  - Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
    - Snubber: RLC# SNUB0000.

### 3.1 POWER WIRING

**AC Power**

Terminal 1: VAC  
Terminal 2: VAC

**DC Power**

Terminal 3: +VDC  
Terminal 4: COMM

### 3.2 CONTROL INPUT WIRING

The PAXLC provides a number of control inputs, including Store, Reset, Inhibit and Up/Down control. These inputs are active low (connected to common), so the external switching device should be connected between the control input and common terminals.

**Up/Down** - This input determines the direction of the count. Unconnected, the meter will count up. When input is pulled low, the meter will count down.

**Reset** - When this input is pulled low, the meter will reset to zero. If the input remains low or connected to common, the meter will be held in the reset mode, and not able to count.

**Inhibit** - When low, this input will prevent the meter from counting. If the input remains low or connected to the common, the meter will not be able to count.

**Store** - A low will stop the display from updating. It will freeze the display as long as the input is held low. Once released the display will update to the current count display.

### 3.3 INPUT WIRING

<p><b>Two Wire Proximity, Current Source</b></p>	<p><b>Current Sinking Output</b></p>	<p><b>Current Sourcing Output</b></p>
<p><b>Interfacing With TTL</b></p>	<p><b>Switch or Isolated Transistor; Current Sink</b></p>	<p><b>Switch or Isolated Transistor; Current Source</b></p>
<p><b>Emitter Follower; Current Source</b></p>		

\*Switch position is application dependent.

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

A

KEY	DISPLAY MODE OPERATION	PROGRAMMING MODE OPERATION
PAR	Access Programming Mode	Store selected parameter and index to next parameter
▲	No Function	Increment selected digit of parameter value
▼	Front Panel Reset	Select digit position in parameter value

# 5.0 SCALING THE METER

In many industrial applications, a meter is required to totalize the output of an operation or event. The pulses from a sensor are received by the PAXLC, and then totalized on the display. In many cases the incoming pulses do not represent the desired display readout. For those applications, a scale factor can be entered into the meter, scaling the pulses to obtain the desired readout. The following formula will help provide the scaling values to achieve the desired readout.

$$SF = \frac{DR}{EPU}$$

### WHERE:

- SF = Scale Factor
- DR = Desired Readout\* (Single unit of measure, i.e. foot, gallon, etc.)
- EPU = Existing Pulses per Unit (Number of pulses per single unit of measure, i.e. foot, gallons, etc.)

*\*For applications requiring a decimal point, select and program the appropriate decimal point. When calculating the Scale Factor, use the whole value of the number to be displayed, for example, 1.0 feet, the Desired Readout in this case is 10. Do not use decimal points in the Scaling Formula.*

### For calculated SF values less than 9.99999

If the Scale Factor is a value less than 9.99999, it can be entered directly into the meter as the Scale Factor and the Scale Multiplier can be left at 1.

### For calculated SF values greater than 9.99999

If the Scale Factor is a value over 9.99999 (maximum value), the Scale Multiplier must be used to reduce the calculated SF value until it is less than 9.99999. The Scale Multiplier multiplies the calculated Scale Factor value by 1, 0.1, and 0.01, thus reducing the calculated value accordingly. Select the appropriate Scale Multiplier value that allows the Scale Factor to be a value under 9.99999. Both the Scale Factor and Scale Multiplier can then be entered into the meter.

### Example 1:

This application involves counting cases from a production line. The sensor provides a pulse for every can produced. The desired readout is in cases, therefore the incoming pulses need to be converted to obtain the proper readout. The following is used to calculate scale factor.

$$SF = \frac{DR}{EPU}$$

- DR = 1 case
- EPU = 12 cans/case

$$SF = \frac{1}{12}$$

$$SF = 0.83333$$

Since the Calculated Scale Factor Value is less than 9.99999, it can be entered directly into the meter. The Scale Multiplier can be left at 1.

# 6.0 PROGRAMMING THE METER

A

The Totalizer has four programmable parameters which are entered in the sequence shown above, using the front panel push buttons.

Before programming, refer to the section on Scaling the Meter to determine the Decimal Position, Scale Factor and Scale Multiplier to use for the specific application.

*Note: Programming mode can be locked out with the Program Disable DIP switch. With the switch in the Disabled (up) position the meter will not enter programming mode. Refer to the section on DIP switch setup.*

## PROGRAMMING MODE ENTRY

Press the **PAR** key to enter Programming Mode. The meter briefly displays **Pro** followed by the first programming parameter described below.

## PROGRAMMING PARAMETERS

In programming mode, the display alternates between the parameter and the current selection or value for that parameter. The dual display with arrows is used below to illustrate the alternating display. The selection choices or value range for each parameter is shown to the right of the alternating display.

### DECIMAL POSITION

This parameter selects the decimal point position on the display.

Press the arrow keys ( $\blacktriangle$  or  $\blacktriangledown$ ) to sequence through the selection list until the desired selection is shown. Press the **PAR** key to save the displayed selection and advance to the next parameter.

### SCALE FACTOR

The number of input counts is multiplied by the Scale Factor and the Scale Multiplier to obtain the desired process value. A Scale Factor of 1.00000 and a Scale Multiplier of 1 will result in the display of the actual number of input counts. (See details on scaling calculations.)

The Scale Factor is displayed as a six-digit value with one selected digit flashing (initially digit 6). Press the  $\blacktriangle$  (up arrow) key to increment the value of the selected (flashing) digit. Holding the  $\blacktriangle$  key automatically scrolls the value of the selected digit.

Press the  $\blacktriangledown$  (down arrow) key to select the next digit position to the right. Use the  $\blacktriangle$  key to increment the value of this digit to the desired number. Press the  $\blacktriangledown$  key again to select the next digit to be changed. Holding the  $\blacktriangledown$  key automatically scrolls through each digit position. Repeat the "select and set" sequence until all digits are displaying the desired Scale Factor value. Press the **PAR** key to save the displayed value and advance to the next parameter.

## SCALE MULTIPLIER

The number of input counts is multiplied by the Scale Multiplier and the Scale Factor to obtain the desired process value. A Scale Multiplier of 1 will result in only the Scale Factor affecting the display. (See details on scaling calculations.)

Press the arrow keys ( $\blacktriangle$  or  $\blacktriangledown$ ) to sequence through the selection list until the desired selection is displayed. Press the **PAR** key to save the selection and exit programming mode.

## COUNTER RESET AT POWER-UP

The totalizer may be programmed to reset at each meter power-up.

## PROGRAMMING MODE EXIT

The meter exits Programming Mode when the **PAR** key is pressed to save the Scale Multiplier selection. The meter briefly displays **End** upon exiting Programming Mode. All programmed selections are now transferred to the non-volatile memory and the meter returns to the Counter display.

(If power loss occurs during programming mode, verify parameter changes and reprogram, if necessary, when power is restored.)

## PROGRAMMING MODE TIME OUT

The Programming Mode has an automatic time out feature. If no keypad activity is detected for approximately 60 seconds, the meter automatically exits Programming Mode. The meter briefly displays **End** and returns to the Counter display. When automatic timeout occurs, any changes that were made to the parameter currently being programmed, will not be saved.

## FACTORY SETTINGS

The factory settings for the programming parameters are shown above in the alternating display illustrations. The factory settings can be easily restored by removing power from the meter, and then pressing and holding the **PAR** key while power is reapplied. The meter displays **rESEt** until the **PAR** key is released. The normal power-up sequence then resumes, with the factory settings loaded and saved in non-volatile memory. The Count is reset to 0.

*Note: The Program Disable DIP switch must be in the Enabled (down) position to allow loading factory settings. See section on DIP switch setup.*

# MODEL PAXLCR - PAX LITE DUAL COUNTER AND RATE METER

- 6 DIGIT, 0.56" HIGH RED LED DISPLAY
- PROGRAMMABLE SCALING FOR COUNT AND RATE
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (UP TO 4 TIMES RESOLUTION)
- BUILT-IN BATCH COUNTING CAPABILITY
- PROGRAMMABLE USER INPUT
- DUAL 5 AMP FORM C RELAYS
- UNIVERSALLY POWERED
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAXLCR is a versatile meter that provides a single or dual counter with rate indication, scaling and dual relay outputs. The 6-digit display has 0.56" high digits with adjustable display intensity. The display can be toggled manually or automatically between the selected counter and rate values.

The meter has two signal inputs and a choice of eight different count modes. These include bi-directional, quadrature and anti-coincidence counting, as well as a dual counter mode. When programmed as a Dual Counter, each counter has separate scaling and decimal point selection.

Rate indication is available in all count modes. The Rate Indicator has separate scaling and decimal point selection, along with programmable display update times. In addition to the signal inputs, the User Input can be programmed to perform a variety of meter control functions.

Two setpoint outputs are provided, each with a Form C relay. The outputs can activate based on either counter or rate setpoint values. An internal batch counter can be used to count setpoint output activations.

The PAXLCR can be powered from a wide range of AC or DC voltages. The meter has been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired. Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS

- DISPLAY:** 6 digit, 0.56" (14.2 mm) intensity adjustable Red LED
  - POWER REQUIREMENTS:**
    - AC POWER:** 50 to 250 VAC 50/60 Hz, 12 VA
    - Isolation:** 2300 Vrms for 1 min. to all inputs and outputs
    - DC POWER:** 21.6 to 250 VDC, 6 W
    - DC Out:** +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC  
+24 VDC @ 50 mA if input voltage is less than 50 VDC
  - COUNTER DISPLAYS:**
    - Counter A:** 6-digits, enabled in all count modes  
Display Designator: "A" to the left side of the display  
Display Range: -99999 to 999999
    - Counter B:** 6-digits, enabled in Dual Count mode or Batch Counter  
Display Designator: "B" to the left side of the display  
Display Range: 0 to 999999 (positive count only)
- Overflow Indication:** Display "BLBL" alternates with overflowed count value  
**Maximum Count Rates:** 50% duty cycle, count mode dependent.  
 With setpoints disabled: 25 KHz, all modes except Quadrature x4 (23 KHz).  
 With setpoint(s) enabled: 20 KHz, all modes except Dual Counter (14 KHz),  
 Quadrature x2 (13 KHz) and Quadrature x4 (12 KHz).

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXLCR	Dual Counter & Rate Meter with dual Relay Output	PAXLCR00

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

4. **RATE DISPLAY:** 6-digits, may be enabled or disabled in any count mode  
**Display Range:** 0 to 999999  
**Over Range Display:** "BLBL"  
**Maximum Frequency:** 25 KHz  
**Minimum Frequency:** 0.01 Hz  
**Accuracy:**  $\pm 0.01\%$
5. **COUNT/RATE SIGNAL INPUTS (INPUT A and INPUT B):**  
 See Section 2.0 Setting the DIP Switches for complete Input specifications. DIP switch selectable inputs accept pulses from a variety of sources. Both inputs allow selectable active low or active high logic, and selectable input filtering for low frequency signals or switch contact debounce.  
**Input A:** Logic level or magnetic pickup signals.  
 Trigger levels:  $V_{IL} = 1.25$  V max;  $V_{IH} = 2.75$  V min;  $V_{MAX} = 28$  VDC  
 Mag. pickup sensitivity: 200 mV peak, 100 mV hysteresis, 40 V peak max.  
**Input B:** Logic level signals only  
 Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC
6. **USER INPUT:** Programmable  
 Software selectable for active logic state: active low, pull-up (24.7 K $\Omega$  to +5 VDC) or active high, pull-down resistor (20 K $\Omega$ ).  
 Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
 Response Time: 10 msec typ.; 50 msec debounce (activation and release)
7. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programming parameters and count values when power is removed.
8. **OUTPUTS:**  
**Type:** Dual Form C contacts  
**Isolation to Input & User/Exc Commons:** 1400 Vrms for 1 min.  
 Working Voltage: 150 Vrms  
**Contact Rating:** 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)  
**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads.  
**Response Time:** Turn On or Off: 4 msec max.
9. **ENVIRONMENTAL CONDITIONS:**  
**Operating temperature:** 0 to 50 °C  
**Storage temperature:** -40 to 70 °C  
**Operating and storage humidity:** 0 to 85% max. RH (non-condensing)  
**Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2g's.  
**Shock According to IEC 68-2-27:** Operational 30 g (10g relay), 11 msec in 3 directions.  
**Altitude:** Up to 2,000 meters

10. **CONNECTIONS:** High compression cage-clamp terminal block  
**Wire Strip Length:** 0.3" (7.5 mm)  
**Wire Gauge:** 30-14 AWG copper wire  
**Torque:** 4.5 inch-lbs (0.51 N-m) max.
11. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.
12. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
 IP65 Enclosure rating (Face only), IEC 529  
 Type 4X Enclosure rating (Face only), UL50  
**ELECTROMAGNETIC COMPATIBILITY**  
 Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.
- Immunity to Industrial Locations:**

 2. *Criterion C: Temporary loss of function which requires operator intervention.*
13. **WEIGHT:** 10.4 oz. (295 g)

## 1.0 INSTALLING THE METER

### Installation

The PAX Lite meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]).  
 Do not over-tighten the screws.

### Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE DIP SWITCHES

To access the switches, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start on the other side latch.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## SWITCH 1 (Input A)

**LOGIC:** Input A trigger levels  $V_{IL} = 1.25 \text{ V max.}$ ;  $V_{IH} = 2.75 \text{ V min.}$ ;  $V_{MAX} = 28 \text{ VDC}$

**MAG:** 200 mV peak input sensitivity; 100 mV hysteresis; maximum voltage: 40 V peak (28 Vrms); Must also have Input A SRC switch ON. (Not recommended with counting applications.)

## SWITCH 2 (Input A) {See Note 1}

**SNK.:** Adds internal 7.8 K $\Omega$  pull-up resistor to +5 VDC,  $I_{MAX} = 0.7 \text{ mA}$ .

**SRC.:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

## SWITCH 3 (Input A)

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Adds a damping capacitor for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec.

## SWITCH 4 (Input B) {See Note 1}

**SNK.:** Adds internal 7.8 K $\Omega$  pull-up resistor to +5 VDC,  $I_{MAX} = 0.7 \text{ mA}$ .

**SRC.:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

## SWITCH 5 (Input B)

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Adds a damping capacitor for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec.

*Note 1: When the DIP switch is in the SNK position (OFF), the signal input is configured as active low. When the switch is in the SRC position (ON), the signal input is configured as active high.*

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

- Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  - Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  - In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
    - Ferrite Suppression Cores for signal and control cables:
      - Fair-Rite # 0443167251 (RLC# FCOR0000)
      - TDK # ZCAT3035-1330A
      - Steward # 28B2029-0A0
    - Line Filters for input power cables:
      - Schaffner # FN610-1/07 (RLC# LFIL0000)
      - Schaffner # FN670-1.8/07
      - Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.
  - Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
  - Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
    - Snubber: RLC# SNUB0000.

## 3.1 POWER WIRING

### Power

Terminal 1: VAC/DC +  
Terminal 2: VAC/DC -

### DC Out Power

Terminal 3: + 24 VDC OUT [3] + 24V EXC  
Terminal 4: Common [4] COMMON

## 3.2 INPUT SIGNAL WIRING

The meter provides a choice of eight different count modes using two signal inputs, A and B. The Count Mode selected determines the action of Inputs A and B. Section 5.1, Input Setup Parameters, provides details on count mode selection and input action.

**CAUTION:** DC common (Terminal 4) is NOT isolated from Input common (Terminal 7) or User common (Terminal 9). In order to preserve the safety of the meter application, DC common must be suitably isolated from hazardous live earth referenced voltage; or Input common and User common must be at protective earth ground potential. If not, hazardous voltage may be present at the Signal or User Inputs, and Input or User common terminals. Appropriate considerations must then be given to the potential of the Input or User common with respect to earth ground.

<p><b>Magnetic Pickup</b></p>	<p><b>AC Inputs From Tach Generators, Etc.</b></p>	<p><b>Two Wire Proximity, Current Source</b></p>

<p><b>Switch or Isolated Transistor; Current Sink</b></p>	<p><b>Switch or Isolated Transistor; Current Source</b></p>	<p><b>Current Sink Output; Quad/Direction</b></p>

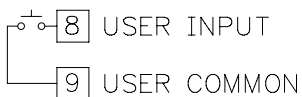

\* Switch position is application dependent.

Shaded areas not recommended for counting applications.

## 3.3 USER INPUT WIRING

Terminal 8: User Input  
Terminal 9: User Common

### Current Sinking (Active Low Logic)

### Current Sourcing (Active High Logic)

## 3.4 SETPOINT (OUTPUT) WIRING

Terminal 10: NC 1  
Terminal 11: NO 1  
Terminal 12: Relay 1 Common  
Terminal 13: NC 2  
Terminal 14: NO 2  
Terminal 15: Relay 2 Common

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

A

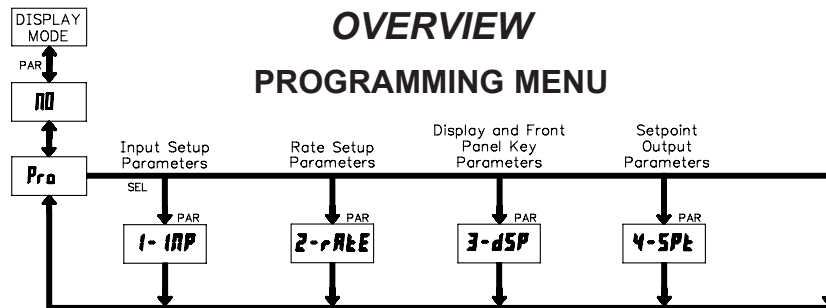

BUTTON	DISPLAY MODE OPERATION	PROGRAMMING MODE OPERATION
PAR	Access Programming Mode	Store selected parameter and index to next parameter
SEL	Index display through enabled values	Advance through selection list/select digit position in parameter value
RST	Resets count display(s) and/or outputs	Increment selected digit of parameter value

## OPERATING MODE DISPLAY DESIGNATORS

- "A" - Counter A value
- "B" - Counter B value (dual count or batch)
  - Rate value is displayed with no designator
- "SP1" - Indicates setpoint 1 output status.
- "SP2" - Indicates setpoint 2 output status.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (PAR BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** button. If it is not accessible, then it is locked by either a security code or a hardware lock.

## MODULE ENTRY (SEL & PAR BUTTONS)

The Programming Menu is organized into four modules. These modules group together parameters that are related in function. The display will alternate between **Pr a** and the present module. The **SEL** button is used to select the desired module. The displayed module is entered by pressing the **PAR** button.

## MODULE MENU (PAR BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr a**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL** and **RST** buttons are used to move through the selections/values for that parameter. Pressing the **PAR** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST** button increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will select the next digit to the left. Pressing the **PAR** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (PAR BUTTON)

The Programming Mode is exited by pressing the **PAR** button with **Pr a** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 3. This is useful when encountering programming problems.

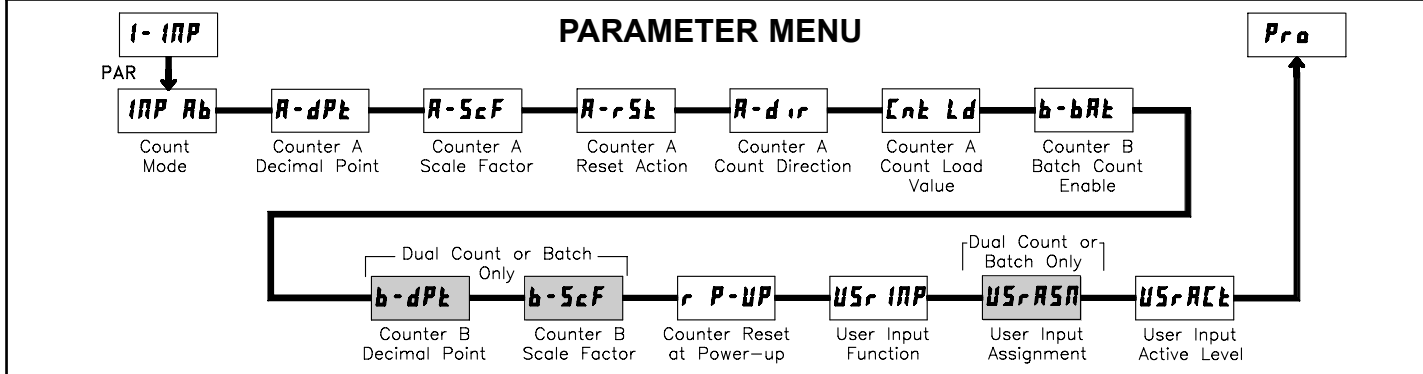

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 5.1 MODULE 1 - INPUT SETUP PARAMETERS (1- INP)

A

Shaded area selections only apply when Counter B is enabled (Dual Count mode or batch counter).

## COUNT MODE

**Cnt ud**    QUAD 1    AddAdd  
**rt-Cnt**    QUAD 2    AddSub  
**dUAL**        QUAD 4

Select the count mode that corresponds with your application. The input actions are shown in the boxes below. For simple counting applications, it is recommended to use Count with Direction for the count mode. Simply leave the direction input unconnected.

DISPLAY	MODE	INPUT A ACTION	INPUT B ACTION
<b>Cnt ud</b>	Count with Direction	Counter A	Counter A Direction
<b>rt-Cnt</b>	Rate/Counter	Rate only	Counter A Add
<b>dUAL</b>	Dual Counter	Counter A Add	Counter B Add
<b>QUAD 1</b>	Quadrature x1	Count A	Quad A
<b>QUAD 2</b>	Quadrature x2	Count A	Quad A
<b>QUAD 4</b>	Quadrature x4	Count A	Quad A
<b>AddAdd</b>	2 Input Add/Add	Counter A Add	Counter A Add
<b>AddSub</b>	2 Input Add/Subtract	Counter A Add	Counter A Subtract

Note: The Rate indicator signal is derived from Input A in all count modes.

## COUNTER A DECIMAL POSITION

This selects the decimal point position for Counter A. The selection will also affect Counter A scale factor calculations.

## COUNTER A SCALE FACTOR

The number of input counts is multiplied by the scale factor to obtain the desired process value. A scale factor of 1.0000 will result in the display of the actual number of input counts. (Details on scaling calculations are explained at the end of this section.)\*

## COUNTER A RESET ACTION

When Counter A is reset, it returns to Zero or Counter A Count Load value. This reset action applies to all Counter A resets, except a Setpoint generated Counter Auto Reset programmed in Module 4.

## COUNTER A COUNT DIRECTION

Reverse (rEU) switches the normal Counter A count direction shown in the Count Mode parameter chart.

## COUNTER A COUNT LOAD VALUE

Counter A resets to this value if Reset to Count Load action is selected. To enter a negative Count Load value, increment digit 6 to display a "-" sign.\*

## COUNTER B BATCH COUNT ENABLE

The Counter B Batch Count function internally counts the number of output activations of the selected setpoint(s). The count source for the batch counter can be SP1, SP2 or both. Batch counting is available in all count modes except Dual Counter, which uses an external input signal for Counter B.

## COUNTER B DECIMAL POSITION

This selects the decimal point position for Counter B. The selection will also affect Counter B scale factor calculations.

\*For value entry instructions, refer to selection/value entry in the Programming The Meter section.

## COUNTER B SCALE FACTOR

00.0001 to 99.9999

The number of input or batch counts is multiplied by the scale factor to obtain the desired process value. A scale factor of 1.0000 will result in the display of the actual number of input or batch counts. (Details on scaling calculations are explained at the end of this section.)\*

## COUNTER RESET AT POWER-UP

NO YES Cnt B Cnt A both

The selected counter(s) will reset at each meter power-up.

## SCALING FOR COUNT INDICATION

The counter's scale factor is factory set to 1, to provide one count on the display for each pulse that is input to the unit. In many applications, there will not be a one-to-one correspondence between input pulses and display units. Therefore, it is necessary for the meter to scale or multiply the input pulses by a scale factor to achieve the desired display units (feet, meters, gallons, etc.)

The Count Scale Factor Value can range from 00.0001 to 99.9999. It is important to note that the precision of a counter application cannot be improved by using a scale factor greater than one. To accomplish greater precision, more pulse information must be generated per measuring unit. The following formula is used to calculate the scale factor.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

### WHERE:

**Desired Display Units:** Count display units acquired after pulses that occurred.

**Number of Pulses:** Number of pulses required to achieve the desired display units.

### Decimal Point Position:

0	=	1
0.0	=	10
0.00	=	100
0.000	=	1000
0.0000	=	10000
0.00000	=	100000

**EXAMPLE 1:** The counter display is used to indicate the total number of feet used in a process. It is necessary to know the number of pulses for the desired units to be displayed. The decimal point is selected to show the resolution in hundredths.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

Given that 128 pulses are equal to 1 foot, display total feet with a one-hundredth resolution.

$$\text{Scale Factor} = \frac{1.00}{128} \times 100$$

$$\text{Scale Factor} = 0.007812 \times 100$$

$$\text{Scale Factor} = 0.7812$$

**EXAMPLE 2:** A manufacturer wants to count the total number of bricks molded in a process yielding 12 bricks per mold. The counter receives 1 pulse per mold and should increase by 12 for each pulse received. Since single brick accuracy is not required, a Scale Factor greater than 1 can be used in this case.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

$$\text{Scale Factor} = \frac{12}{1} \times 1$$

$$\text{Scale Factor} = 12.0000$$

## USER INPUT FUNCTION

DISPLAY	MODE	DESCRIPTION
NO	No Function	User Input disabled.
ProLac	Program Mode Lock-out	See Programming Mode Access chart (Module 3).
INH IBT	Inhibit	Inhibit counting for the selected counter(s).
rESEt	Maintained Reset	Level active reset of the selected counter(s).
StorE	Store	Freeze display for the selected counter(s) while allowing counts to accumulate internally.
St-rSt	Store and Reset	Edge triggered reset of the selected counter(s) after storing the count.
d-SEL	Display Select *	Advance once for each activation.
d-LEU	Display Intensity Level *	Increase intensity one level for each activation.
rSt-1	Setpoint 1 Reset *	Reset setpoint 1 output.
rSt-2	Setpoint 2 Reset *	Reset setpoint 2 output.
rSt-12	Setpoint 1 and 2 Reset *	Reset both setpoint 1 and 2 outputs.

\* Indicates Edge Triggered function. All others are Level Active functions.

## USER INPUT ASSIGNMENT

Cnt A Cnt B both

The User Input Assignment is only active when Counter B is enabled and the user input selection performs a Reset, Inhibit or Store function on one or both of the counters.

## USER INPUT ACTIVE LEVEL

LO HI

Select whether the user input is configured as active low or active high.

\*For value entry instructions, refer to selection/value entry in the Programming The Meter section.

# 5.2 MODULE 2 - RATE SETUP PARAMETERS (2-RALE)

A

## RATE ENABLE

NO YES

This parameter enables the Rate display. For maximum input frequency, Rate Enable should be set to **NO** when not in use. When set to **YES**, the remaining rate parameters are not accessible.

## RATE LOW UPDATE TIME (DISPLAY UPDATE)

0.1 to 999 seconds

The Low Update Time is the minimum amount of time between display updates for the Rate display. Values of 0.1 and 0.2 seconds will update the display correctly but may cause the display to appear unsteady.

## RATE DECIMAL POINT

0 0.00 0.0000  
00 0.000 0.00000

This selects the decimal point position for the rate display. This parameter does not affect rate scaling calculations.

## RATE HIGH UPDATE TIME (DISPLAY ZERO)

02 to 999 seconds

The High Update Time is the maximum amount of time before the Rate display is forced to zero. (For more explanation, refer to Input Frequency Calculation.) The High Update Time **must** be higher than the Low Update Time and higher than the desired slowest readable speed (one divided by pulses per second). The factory setting of 2.0, will force the display to zero for speeds below 0.5 Hz or a pulse every 2 seconds.

## RATE INPUT SCALING STYLE

KEY APPLY

If a Rate Input value (in Hz) and the corresponding Rate Display value are known, the Key-in (**KEY**) Scaling Style can be used. This allows rate scaling without the presence of a rate input signal.

If the Rate Input value has to be derived from the actual rate input signal, the Apply (**APPLY**) Scaling Style should be used.

## SCALING FOR RATE INDICATION

To scale the Rate, enter a Scaling Display value with a corresponding Scaling Input value. These values are internally plotted to a Display value of 0 and Input value of 0.0 Hz. A linear relationship is formed between these points to yield a rate display value that corresponds to the incoming input signal rate. The meter is capable of showing a rate display value for any positive slope linear process.

## RATE SCALING DISPLAY VALUE

0 to 999999

Enter the desired Rate Display value. This value is entered using the front panel buttons for either Scaling Style.\*

## SCALING CALCULATION FOR KEY-IN STYLE

If a display value versus input signal (in pulses per second) is known, then those values can be entered into Scaling Display (**rt-dSP**) and Scaling Input (**rt-INP**). No further calculations are needed.

If only the number of pulses per 'single' unit (i.e. # of pulses per foot) is known, then it can be entered as the Scaling Input value and the Scaling Display value will be entered as the following:

RATE PER	DISPLAY (rt-dSP)	INPUT (rt-INP)
Second	1	# of pulses per unit
Minute	60	# of pulses per unit
Hour	3600	# of pulses per unit

## NOTES:

- If # of pulses per unit is less than 1, multiply both Input and Display values by 10 or 100 as needed to obtain greater accuracy.
- If the Display value is raised or lowered, then Input value must be raised or lowered by the same proportion (i.e. Display value for per hour is entered by a third less (1200) then Input value is a third less of # of pulses per unit). The same is true if the Input value is raised or lowered, then Display value must be raised or lowered by the same proportion.
- Both values must be greater than 0.

## EXAMPLE:

- With 15.1 pulses per foot, show feet per minute in tenths. Scaling Display = 60.0 Scaling Input = 15.1.
- With 0.25 pulses per gallon, show whole gallons per hour. (To have greater accuracy, multiply both Input and Display values by 10.) Scaling Display = 36000 Scaling Input = 2.5.

## RATE SCALING INPUT VALUE

0.1 to 999999

Enter the corresponding Rate Input value using the Scaling Style selected.

### Key-in Style:

Enter the Rate Input value using the front panel buttons. This value is always in pulses per second (Hz).\*

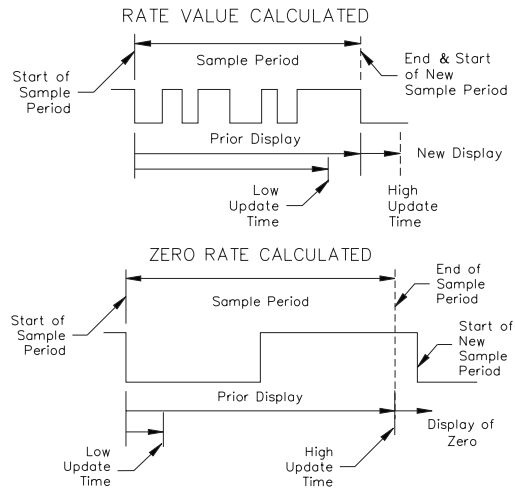

### Apply Style:

The meter initially shows the stored Rate Input value. To retain this value, press **PAR** to advance to the next parameter. To enter a new value, apply the rate input signal to Input A. Press **RST** and the applied input frequency (in Hz) will appear on the display. To insure the correct reading, wait several rate sample periods (see Rate Low Update Time) or until a consistent reading is displayed. Press **PAR** to store the displayed value as the new Rate Input value.

\*For value entry instructions, refer to selection/value entry in the Programming The Meter section.

### INPUT FREQUENCY CALCULATION

The meter determines the input frequency by summing the number of falling edges received during a sample period of time. The sample period begins on the first falling edge. At this falling edge, the meter starts accumulating time towards Low Update and High Update values. Also, the meter starts accumulating the number of falling edges. When the time reaches the Low Update Time value, the meter looks for one more falling edge to end the sample period. If a falling edge occurs (before the High Update Time value is reached), the Rate display will update to the new value and the next sample period will start on the same edge. If the High Update Time value is reached (without receiving a falling edge after reaching Low Update Time), then the sample period will end but the Rate display will be forced to zero. The High Update Time value must be greater than the Low Update Time value. Both values must be greater than 0.0. The input frequency calculated during the sample period, is then shown as a Rate value determined by the scaling calculation.

## 5.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY PARAMETERS (3-dSP)

### FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The **YES** selection allows the **SEL** key to toggle through the enabled displays.

### FRONT PANEL COUNTER RESET ENABLE (RST)

The **YES** selection allows the **RST** key to reset the selected counter(s). The shaded selections are only active when Counter B is enabled (Dual Count Mode or batch counter).

### DISPLAY SCROLL ENABLE

The **YES** selection allows the display to automatically scroll through the enabled displays. Each display is shown for 4 seconds.

### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed.

### PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (**ProLoc**) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all unit parameters to be viewed and modified. Quick Programming mode permits only user selected values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Entering a Security Code from 1-99 enables Quick Programming mode, and displays a sublist to select which values appear in the Quick Programming menu. All of the values set to **YES** in the sublist are accessible in Quick Programming. The values include Setpoints (**SP-1**, **SP-2**), Output Time-outs (**LOut-1**, **LOut-2**), Count Load value (**Cnt Ld**) and Display Intensity (**d-LEU**).

Programming any Security Code other than 0, requires this code to be entered at the **Code** prompt in order to access Full Programming mode. Quick Programming mode, if enabled, is accessed before the **Code** prompt appears.

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "PAR" KEY IS PRESSED	FULL PROGRAMMING MODE ACCESS
not <b>ProLoc</b>	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at <b>Code</b> prompt *
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
<b>ProLoc</b>	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

## FACTORY SERVICE OPERATIONS

## RESTORE FACTORY DEFAULT SETTINGS

Select **YES** to perform either of the Factory Service Operations shown below.

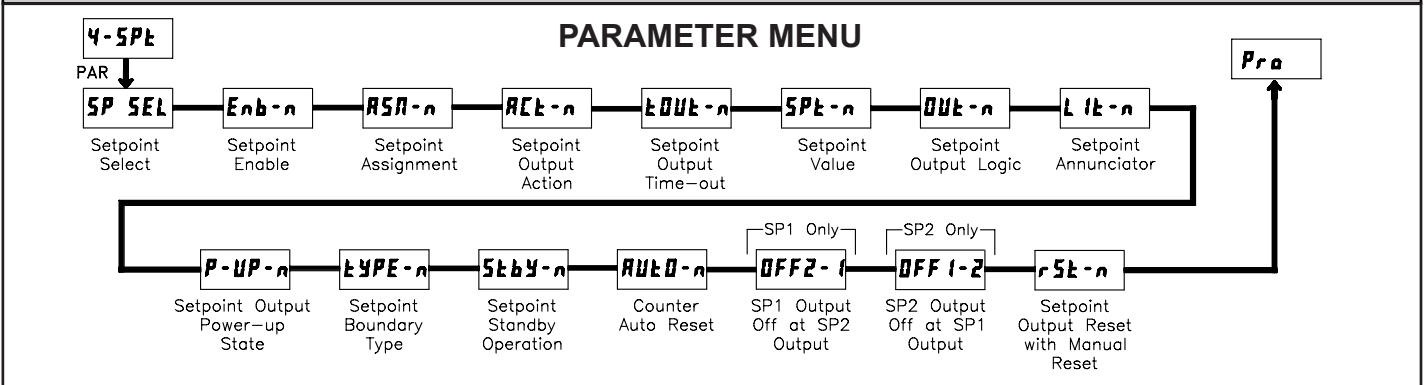

Entering Code 66 will overwrite all user settings with the factory default settings. The meter will display **rESEt** and then return to **Code 00**. Press the **PAR** button to exit the module.

## VIEW MODEL AND VERSION DISPLAY

Entering Code 50 will display the model and version (x.x) of the meter. The display then returns to **Code 00**. Press the **PAR** button to exit the module.

# 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

Some Setpoint parameters will not appear depending on the Setpoint Assignment and Setpoint Output Action selected. The Setpoint Parameter Availability chart below illustrates this.

PARAMETER	DESCRIPTION	COUNTER ASSIGNMENT (A or B)*			RATE ASSIGNMENT		
		TIMED OUT t-OUT	BOUNDARY bOUND	LATCH LATCH	TIMED OUT t-OUT	BOUNDARY bOUND	LATCH LATCH
t-OUT-n	Setpoint Output Time-out Value	Yes	No	No	Yes	No	No
SPt-n	Setpoint Value	Yes	Yes	Yes	Yes	Yes	Yes
OUT-n	Setpoint Output Logic	Yes	Yes	Yes	Yes	Yes	Yes
LIt-n	Setpoint Annunciator	Yes	Yes	Yes	Yes	Yes	Yes
P-UP-n	Setpoint Output Power-up State	No	No	Yes	No	No	Yes
tYPE-n	Setpoint Boundary Type	No	Yes	No	Yes	Yes	Yes
StBY-n	Standby Operation (Low Acting Only)	No	Yes	No	Yes	Yes	Yes
RUt0-n	Counter Auto Reset	Yes	No	Yes	No	No	No
OFF2-1	SP1 Output Off at SP2 (SP1 only)	Yes	No	Yes	No	No	No
OFF1-2	SP2 Output Off at SP1 (SP2 only)	Yes	No	Yes	No	No	No
rSt-n	Output Reset with Manual Reset	Yes	No	Yes	Yes	No	Yes

\* BOUNDARY Setpoint Action not applicable for Counter B assignment.

## SETPOINT SELECT

Select the Setpoint Output to be programmed, starting with Setpoint 1. The “n” in the following parameters reflects the chosen Setpoint number. After the selected setpoint is completely programmed, the display returns to **SP SEL**. Repeat steps for Setpoint 2 if both Setpoints are being used. Select **NO** to exit the Setpoint programming module.

## SETPOINT ENABLE

Select **YES** to enable the chosen setpoint and access the setup parameters. If **NO** is selected, the unit returns to **SP SEL** and the setpoint is disabled.

## SETPOINT ASSIGNMENT

Select the display to which the Setpoint is assigned.

### SETPOINT OUTPUT ACTION

This parameter selects the action of the Setpoint output as described in the chart below. Boundary mode is not applicable for Counter B assignment.

SPT ACTION	DESCRIPTION	OUTPUT ACTIVATES	OUTPUT DEACTIVATES
LATCH	Latched Output Mode	When Count = Setpoint	At Manual Reset (if rSt-n=YES)
t-OUT	Timed Output Mode	When Count = Setpoint	After Setpoint Output Time-Out
BOUND	Boundary Mode (High Acting)	When Count ≥ Setpoint	When Count < Setpoint
	Boundary Mode (Low Acting)	When Count ≤ Setpoint	When Count > Setpoint

### SETPOINT OUTPUT TIME-OUT

This parameter is only active if the Setpoint Action is set to timed output mode (t-OUT). Enter the value in seconds that the output will be active, once the Setpoint Value is reached.

### SETPOINT VALUE

Count A: -99999 to 999999  
 Count B: 0 to 999999  
 Rate: 0 to 999999

Enter the desired Setpoint value. To enter a negative setpoint value, increment digit 6 to display a “-” sign (Counter A only).

### SETPOINT OUTPUT LOGIC

Normal (NO r) turns the output “on” when activated and “off” when deactivated. Reverse (rEU) turns the output “off” when activated and “on” when deactivated.

### SETPOINT ANNUNCIATOR

Normal (NO r) displays the setpoint annunciator when the corresponding output is “on”. Reverse (rEU) displays the setpoint annunciator when the output is “off”.

### SETPOINT OUTPUT POWER-UP STATE

SAUE will restore the output to the same state it was at before the meter was powered down. ON will activate the output at power up. OFF will deactivate the output at power up.

### SETPOINT BOUNDARY TYPE

High Acting Boundary Type activates the output when the assigned display value (ASN-n) equals or exceeds the Setpoint value. Low Acting activates the output when the assigned display value is less than or equal to the Setpoint.

### SETPOINT STANDBY OPERATION

This parameter only applies to Low Acting Boundary Type setpoints. Select YES to disable a Low Acting Setpoint at power-up, until the assigned display value crosses into the output “off” area. Once in the output “off” area, the Setpoint will then function per the description for Low Acting Boundary Type.

### COUNTER AUTO RESET

This parameter automatically resets the Setpoint Assigned Counter (A or B) each time the Setpoint value is reached. The automatic reset can occur at output start, or output end if the Setpoint Output Action is programmed for timed output mode. The Reset-to-Count Load selections (“CLd-”) only apply to Counter A assignment. This reset may be different from the Counter A Reset Action selected in Module 1.

#### SELECTION ACTION

- NO No Auto Reset
- ZEr-St Reset to Zero at the Start of output activation
- CLd-St Reset to Count Load value at the Start of output activation
- ZEr-En Reset to Zero at the End of output activation (timed out only)
- CLd-En Reset to Count Load at the End of output activation (timed out only)

### SETPOINT 1 OUTPUT OFF AT SETPOINT 2 (SP1 Only)

This parameter will deactivate Setpoint 1 output at the Start or End of Setpoint 2 output (O1 off at O2). The “-End” setting only applies if Setpoint 2 Output Action is programmed for timed output.

### SETPOINT 2 OUTPUT OFF AT SETPOINT 1 (SP2 Only)

This parameter will deactivate Setpoint 2 output at the Start or End of Setpoint 1 output (O2 off at O1). The “-End” setting only applies if Setpoint 1 Output Action is programmed for timed output.

### SETPOINT OUTPUT RESET WITH MANUAL RESET

Selecting YES causes the Setpoint output to deactivate (reset) when the Setpoint Assigned Counter is reset. The counter reset can occur by the RST button, User Input or Counter Reset at Power-up.

This output reset will not occur when the Assigned Counter is reset by a Setpoint generated Counter Auto Reset.

# MODEL PAX - 1/8 DIN DIGITAL INPUT PANEL METERS

MODELS: COUNTER/RATE (PAXI) COUNTER (PAXC) RATE (PAXR)

- COUNT, DUAL COUNTER, RATE AND SLAVE DISPLAY
- 0.56" RED SUNLIGHT READABLE DISPLAY
- VARIABLE INTENSITY DISPLAY
- 10 POINT SCALING FOR NON-LINEAR PROCESSES (PAXI)
- FOUR SETPOINT ALARM OUTPUTS (W/Option Card)
- RETRANSMITTED ANALOG OUTPUT (W/Option Card) (PAXI)
- COMMUNICATION AND BUS CAPABILITIES (W/Option Card) (PAXI)
- BUS CAPABILITIES; DEVICENET, MODBUS, AND PROFIBUS-DP
- CRIMSON PROGRAMMING SOFTWARE (PAXI)
- ETHERNET(W/ External Gateway) (PAXI)
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAX Digital Input Panel Meters offer many features and performance capabilities to suit a wide range of industrial applications. Available in three different models, PAXC Counter/Dual Counter, PAXR Rate Meter and the PAXI which offers both counting and rate in the same package. Refer to pages 4 - 5 for the details on the specific models. The PAXC and PAXR offer only the Setpoint Option, while the PAXI is the fully featured version offering all the capabilities as outlined in this bulletin as well as a slave display feature. The optional plug-in output cards allow the opportunity to configure the meter for present applications, while providing easy upgrades for future needs.

The meters employ a bright 0.56" LED display. The meters are available with a red sunlight readable or standard green LED display. The intensity of the display can be adjusted from dark room applications up to sunlight readable, making it ideal for viewing in bright light applications.

The meters accept digital inputs from a variety of sources including switch contacts, outputs from CMOS or TTL circuits, magnetic pickups and all standard RLC sensors. The meter can accept directional, uni-directional or Quadrature signals simultaneously. The maximum input signal varies up to 34 KHz depending on the count mode and function configurations programmed. Each input signal can be independently scaled to various process values.

The Rate Meters provide a MAX and MIN reading memory with programmable capture time. The capture time is used to prevent detection of false max or min readings which may occur during start-up or unusual process events.

The meters have four setpoint outputs, implemented on Plug-in option cards. The Plug-in cards provide dual FORM-C relays (5A), quad FORM-A (3A), or either quad sinking or quad sourcing open collector logic outputs. The setpoint alarms can be configured to suit a variety of control and alarm requirements.

Communication and Bus Capabilities are also available as option cards for the PAXI only. These include RS232, RS485, Modbus, DeviceNet, and Profibus-DP. Readout values and setpoint alarm values can be controlled

through the bus. Additionally, the meters have a feature that allows a remote computer to directly control the outputs of the meter. With an RS232 or RS485 card installed, it is possible to configure the meter using Red Lion's Crimson software. The configuration data can be saved to a file for later recall.

A linear DC output signal is available as an optional Plug-in card for the PAXI only. The card provides either 20 mA or 10 V signals. The output can be scaled independent of the input range and can track any of the counter or rate displays.

Once the meters have been initially configured, the parameter list may be locked out from further modification in its entirety or only the setpoint values can be made accessible.

The meters have been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

Shaded areas are only available for the PAXI

# GENERAL METER SPECIFICATIONS

A

1. **DISPLAY:** 6 digit, 0.56" (14.2 mm) red sunlight readable or standard green LED
2. **POWER:**  
AC Versions:  
AC Power: 85 to 250 VAC, 50/60 Hz, 18 VA  
Isolation: 2300 Vrms for 1 min. to all inputs and outputs. (300 V working)  
DC Versions:  
DC Power: 11 to 36 VDC, 14 W  
(derate operating temperature to 40° C if operating <15 VDC and three plug-in option cards are installed)  
AC Power: 24 VAC, ± 10%, 50/60 Hz, 15 VA  
Isolation: 500 Vrms for 1 min. to all inputs and outputs (50 V working).
3. **SENSOR POWER:** 12 VDC, ±10%, 100 mA max. Short circuit protected
4. **KEYPAD:** 3 programmable function keys, 5 keys total
5. **USER INPUTS:** Three programmable user inputs  
Max. Continuous Input: 30 VDC  
Isolation To Sensor Input Commons: Not isolated  
Logic State: Jumper selectable for sink/source logic

INPUT STATE	SINKING INPUTS	SOURCING INPUTS
	5.1 KΩ pull-up to +12 V	5.1 KΩ pull-down
Active	V <sub>IN</sub> < 0.9 VDC	V <sub>IN</sub> > 3.6 VDC
Inactive	V <sub>IN</sub> > 3.6 VDC	V <sub>IN</sub> < 0.9 VDC

Response Time: 6 msec. typical; function dependent. Certain resets, stores and inhibits respond within 25 μsec if an edge occurs with the associated counter or within 6 msec if no count edge occurs with the associated counter. These functions include *Enter*, *Exit*, *Hold*, *Hold*, *INH*, *Stor*, and *Prfl*. Once activated, all functions are latched for 50 msec min. to 100 msec max. After that period, another edge/level may be recognized.

6. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and display values.
7. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
UL Recognized Component, File #E179259, UL61010A-1, CSA C22.2 No. 1010-1  
Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95  
LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
Type 4X Enclosure rating (Face only), UL50  
IECEE CB Scheme Test Certificate #US/8843/UL  
CB Scheme Test Report #04ME11209-20041018  
Issued by Underwriters Laboratories, Inc.  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529  
IP20 Enclosure rating (Rear of unit), IEC 529

## ELECTROMAGNETIC COMPATIBILITY

### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Simulation of cordless telephones	ENV 50204	Level 3; 10 V/m 900 MHz ±5 MHz 200 Hz, 50% duty cycle

### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

### Note:

Refer to EMC Installation Guidelines section of the bulletin for additional information.

### 8. ENVIRONMENTAL CONDITIONS:

Operating Temperature Range: 0 to 50°C (0 to 45°C with all three plug-in cards installed)  
Storage Temperature Range: -40 to 60°C  
Operating and Storage Humidity: 0 to 85% max. relative humidity non-condensing  
Altitude: Up to 2000 meters

### 9. CONNECTIONS: High compression cage-clamp terminal block

Wire Strip Length: 0.3" (7.5 mm)  
Wire Gauge: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.

### 10. CONSTRUCTION: This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

### 11. WEIGHT: 10.1 oz. (286 g)

# MODEL PAXC - 1/8 DIN COUNTER

A

- 6-DIGIT LED DISPLAY (Alternating 8 digits for counting)
- DUAL COUNT QUAD INPUTS
- UP TO 3 COUNT DISPLAYS
- SETPOINT ALARM OUTPUTS (W/Plug-in card)

## PAXC SPECIFICATIONS

### MAXIMUM SIGNAL FREQUENCIES:

To determine the maximum frequency for the input(s), first answer the questions with a yes (Y) or no (N). Next determine the Count Mode to be used for the counter(s). If dual counters are used with different Count Modes, then the lowest frequency applies to both counters.

FUNCTION QUESTIONS	Single: Counter A or B				Dual: Counter A & B			
	N	N	Y	Y	N	N	Y	Y
Are any setpoints used?	N	N	Y	Y	N	N	Y	Y
Is Counter C used?	N	Y	N	Y	N	Y	N	Y
COUNT MODE	(Values are in KHz)				(Values are in KHz)			
Count x1	34	25	18	15	13	12	9	7.5
Count x2	17	13	9	7	9	7	5	4
Quadrature x1	22	19	12	10	7	6	4	3.5
Quadrature x2	17	13	9	7	7	6	4	3.5
Quadrature x4	8	6	4	3				

### Notes:

1. Counter Modes are explained in the Module 1 programming section.
2. Listed values are with frequency DIP switch set on HI frequency.

### ANNUNCIATORS:

- A - Counter A
- B - Counter B
- C - Counter C
- UF** - Upper significant digit display of counter
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### COUNTER DISPLAYS:

Maximum display: 8 digits: ± 99999999 (greater than 6 digits display Alternates between high order and low order.)

### INPUTS A and B:

DIP switch selectable to accept pulses from a variety of sources including switch contacts, TTL outputs, magnetic pickups and all standard RLC sensors.

LOGIC: Input trigger levels  $V_{IL} = 1.5 \text{ V max.}; V_{IH} = 3.75 \text{ V min.}$

Current sinking: Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9 \text{ mA.}$

Current sourcing: Internal 3.9 K $\Omega$  pull-down, 7.3 mA max. @ 28 VDC,  $V_{MAX} = 30 \text{ VDC.}$

Filter: Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.

### DUAL COUNT MODES:

When any dual count mode is used, then User Inputs 1 and/or 2 will accept the second signal of each signal pair. The user inputs do not have the Logic/Mag, HI/LO Freq, and Sink/Source input setup switches. The user inputs are inherently a logic input with no low frequency filtering. Any mechanical contacts used for these inputs in a dual count mode must be debounced externally. The user input may only be selected for sink/source by the User Jumper placement.

# MODEL PAXR - 1/8 DIN RATE METER

- 5-DIGIT LED DISPLAY
- RATE INDICATION
- MINIMUM/MAXIMUM RATE DISPLAYS
- SETPOINT ALARM OUTPUTS (W/Plug-in card)

## PAXR SPECIFICATIONS

### ANNUNCIATORS:

- r** - Rate
- H** - Maximum (High) Rate
- L** - Minimum (Low) Rate
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### RATE DISPLAY:

- Accuracy: ±0.01%
- Minimum Frequency: 0.01 Hz
- Maximum Frequency: 34 KHz
- Maximum Display: 5 Digits: 99999
- Adjustable Display (low) Update: 0.1 to 99.9 seconds
- Over Range Display: "r **ULOL**"

### INPUT A:

DIP switch selectable to accept pulses from a variety of sources including TTL outputs, magnetic pickups and all standard RLC sensors.

LOGIC: Input trigger levels  $V_{IL} = 1.5 \text{ V max.}; V_{IH} = 3.75 \text{ V min.}$

Current sinking: Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9 \text{ mA.}$

Current sourcing: Internal 3.9 K $\Omega$  pull-down, 7.3 mA max. @ 28 VDC,  $V_{MAX} = 30 \text{ VDC.}$

### MAGNETIC PICKUP:

- Sensitivity: 200 mV peak
- Hysteresis: 100 mV
- Input impedance: 3.9 K $\Omega$  @ 60 Hz
- Maximum input voltage: ±40 V peak, 30 Vrms

# MODEL PAXI - 1/8 DIN COUNTER/RATE METER

A

- COUNT, RATE AND SLAVE DISPLAY
- 6-DIGIT 0.56" RED SUNLIGHT READABLE DISPLAY
- VARIABLE INTENSITY DISPLAY
- 10 POINT SCALING (FOR NON-LINEAR PROCESSES)
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- BUS CAPABILITIES; DEVICENET, MODBUS, AND PROFIBUS-DP
- CRIMSON PROGRAMMING SOFTWARE

## PAXI SPECIFICATIONS

### MAXIMUM SIGNAL FREQUENCIES TABLE

To determine the maximum frequency for the input(s), first answer the questions with a yes (Y) or no (N). Next determine the Count Mode to be used for the counter(s). If dual counters are used with different Count Modes, then the lowest frequency applies to both counters.

FUNCTION QUESTIONS	Single: Counter A or B (with/without rate) or Rate only								Dual: Counter A & B or Rate not assigned to active single counter							
Are any setpoints used?	N	N	N	N	Y	Y	Y	Y	N	N	N	N	Y	Y	Y	Y
Is Prescaler Output used?	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y
Is Counter C used?	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y
<b>COUNT MODE</b>	(Values are in KHz)				(Values are in KHz)				(Values are in KHz)				(Values are in KHz)			
Count x1	34	25	21	17	18	15	13	11	13	12	13	11	9	7.5	9	7
Count x2	17	13	16	12	9	7	8	7	9 *	7 *	9 *	7 *	5 *	4 *	5 *	4 *
Quadrature x1	22	19	20	17	12	10	11	10	7 *	6 *	6 *	5 *	4 *	3.5 *	3.5 *	3 *
Quadrature x2	17	13	16	12	9	7	8	6	7 *	6 *	6 *	5 *	4 *	3.5 *	3.5 *	3 *
Quadrature x4	8	6	8	6	4	3	4	3								
Rate Only	34	N/A	21	N/A	34	N/A	21	N/A								

### Notes:

1. Counter Modes are explained in the Module 1 programming section.
2. If using Rate with single counter with direction or quadrature, assign it to Input A for the listed frequency.
3. \* Double the listed value for Rate frequency.
4. Listed values are with frequency DIP switch set on HI frequency.
5. Derate listed frequencies by 20% during serial communications. (Placing a 5 msec. delay between serial characters will eliminate the derating.)

### ANNUNCIATORS:

- A - Counter A
- B - Counter B
- C - Counter C
- r - Rate
- H - Maximum (High) Rate
- L - Minimum (Low) Rate
- BF - Upper significant digit display of counter
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### RATE DISPLAY:

- Accuracy: ±0.01%
- Minimum Frequency: 0.01 Hz
- Maximum Frequency: see Max Signal Frequencies Table.
- Maximum Display: 5 Digits: 99999
- Adjustable Display (low) Update: 0.1 to 99.9 seconds
- Over Range Display: "r **BLBL**"

### COUNTER DISPLAYS:

- Maximum display: 8 digits: ± 99999999 (greater than 6 digits display
- Alternates between high order and low order.)

### INPUTS A and B:

DIP switch selectable to accept pulses from a variety of sources including switch contacts, TTL outputs, magnetic pickups and all standard RLC sensors.

LOGIC: Input trigger levels  $V_{IL} = 1.5 \text{ V max.}$ ;  $V_{IH} = 3.75 \text{ V min.}$

Current sinking: Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9 \text{ mA.}$

Current sourcing: Internal 3.9 K $\Omega$  pull-down, 7.3 mA max. @ 28 VDC,  $V_{MAX} = 30 \text{ VDC.}$

Filter: Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.

### MAGNETIC PICKUP:

- Sensitivity: 200 mV peak
- Hysteresis: 100 mV
- Input impedance: 3.9 K $\Omega$  @ 60 Hz
- Maximum input voltage: ±40 V peak, 30 Vrms

### DUAL COUNT MODES:

When any dual count mode is used, then User Inputs 1 and/or 2 will accept the second signal of each signal pair. The user inputs do not have the Logic/Mag, HI/LO Freq, and Sink/Source input setup switches. The user inputs are inherently a logic input with no low frequency filtering. Any mechanical contacts used for these inputs in a dual count mode must be debounced externally. The user input may only be selected for sink/source by the User Jumper placement.

### PRESCALER OUTPUT:

- NPN Open Collector:  $I_{SNK} = 100 \text{ mA max.}$  @  $V_{OL} = 1 \text{ VDC max.}$   $V_{OH} = 30 \text{ VDC max.}$  With duty cycle of 25% min. and 50 % max.

# OPTIONAL PLUG-IN OUTPUT CARDS

A

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

## Adding Option Cards

The PAX and MPAX series meters can be fitted with up to three optional plug-in cards. The details for each plug-in card can be reviewed in the specification section below. Only one card from each function type can be installed at one time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The plug-in cards can be installed initially or at a later date.

## PAXI COMMUNICATION CARDS (PAXCDC)

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via Crimson, a Windows® based program, the RS232 or RS485 Cards must be used.

PAXCDC10 - RS485 Serial (Terminal) PAXCDC30 - DeviceNet  
PAXCDC1C - RS485 Serial (Connector) PAXCDC40 - Modbus (Terminal)  
PAXCDC20 - RS232 Serial (Terminal) PAXCDC4C - Modbus (Connector)  
PAXCDC2C - RS232 Serial (Connector) PAXCDC50 - Profibus-DP

### SERIAL COMMUNICATIONS CARD

**Type:** RS485 or RS232

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Data:** 7/8 bits

**Baud:** 300 to 19,200

**Parity:** no, odd or even

**Bus Address:** Selectable 0 to 99, Max. 32 meters per line (RS485)

**Transmit Delay:** Selectable for 2 to 50 msec or 50 to 100 msec (RS485)

### DEVICENET™ CARD

**Compatibility:** Group 2 Server Only, not UCMM capable

**Baud Rates:** 12.5Kbaud, 250 Kbaud, and 500 Kbaud

**Bus Interface:** Phillips 82C250 or equivalent with MIS wiring protection per DeviceNet™ Volume I Section 10.2.2.

**Node Isolation:** Bus powered, isolated node

**Host Isolation:** 500 Vrms for 1 minute (50 V working) between DeviceNet™ and meter input common.

### MODBUS CARD

**Type:** RS485; RTU and ASCII MODBUS modes

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 minute.

Working Voltage: 50 V. Not isolated from all other commons.

**Baud Rates:** 300 to 38400.

**Data:** 7/8 bits

**Parity:** No, Odd, or Even

**Addresses:** 1 to 247.

**Transmit Delay:** Programmable; See Transmit Delay explanation.

### PROFIBUS-DP CARD

**Fieldbus Type:** Profibus-DP as per EN 50170, implemented with Siemens SPC3 ASIC

**Conformance:** PNO Certified Profibus-DP Slave Device

**Baud Rates:** Automatic baud rate detection in the range 9.6 Kbaud to 12 Mbaud  
**Station Address:** 0 to 126, set by the master over the network. Address stored in non-volatile memory.

**Connection:** 9-pin Female D-Sub connector

**Network Isolation:** 500 Vrms for 1 minute (50 V working) between Profibus network and sensor and user input commons. Not isolated from all other commons.

## PROGRAMMING SOFTWARE

Crimson is a Windows® based program that allows configuration of the PAX meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the PAX meter. The PAX program can then be saved in a PC file for future use. A PAX serial plug-in card is required to program the meter using the software.

## SETPOINT CARDS (PAXCDS)

The PAX and MPAX series has 4 available setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

PAXCDS10 - Dual Relay, FORM-C, Normally open & closed  
PAXCDS20 - Quad Relay, FORM-A, Normally open only  
PAXCDS30 - Isolated quad sinking NPN open collector  
PAXCDS40 - Isolated quad sourcing PNP open collector

### DUAL RELAY CARD

**Type:** Two FORM-C relays

**Isolation To Sensor & User Input Commons:** 2000 Vrms for 1 min.

Working Voltage: 240 Vrms

**Contact Rating:**

One Relay Energized: 5 amps @ 120/240 VAC or 28 VDC (resistive load),  
1/8 HP @120 VAC, inductive load

Total current with both relays energized not to exceed 5 amps

**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

**Response Time:** 5 msec. nominal with 3 msec. nominal release

**Time Accuracy:** Counter = ± 0.01% + 10 msec.

Rate = ± 0.01% + 20 msec.

### QUAD RELAY CARD

**Type:** Four FORM-A relays

**Isolation To Sensor & User Input Commons:** 2300 Vrms for 1 min.

Working Voltage: 250 Vrms

**Contact Rating:**

One Relay Energized: 3 amps @ 250 VAC or 30 VDC (resistive load), 1/10 HP @120 VAC, inductive load

Total current with all four relays energized not to exceed 4 amps

**Life Expectancy:** 100K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

**Response Time:** 5 msec. nominal with 3 msec. nominal release

**Time Accuracy:** Counter = ± 0.01% + 10 msec.

Rate = ± 0.01% + 20 msec.

### QUAD SINKING OPEN COLLECTOR CARD

**Type:** Four isolated sinking NPN transistors.

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Rating:** 100 mA max @  $V_{SAT} = 0.7 V$  max.  $V_{MAX} = 30 V$

**Response Time:** Counter = 25 µsec; Rate = Low Update time

**Time Accuracy:** Counter = ± 0.01% + 10 msec.

Rate = ± 0.01% + 20 msec.

### QUAD SOURCING OPEN COLLECTOR CARD

**Type:** Four isolated sourcing PNP transistors.

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Rating:** Internal supply: 24 VDC ± 10%, 30 mA max. total

External supply: 30 VDC max., 100 mA max. each output

**Response Time:** Counter = 25 µsec; Rate = Low Update time

**Time Accuracy:** Counter = ± 0.01% + 10 msec.

Rate = ± 0.01% + 20 msec.

## PAXI LINEAR DC OUTPUT (PAXCDL)

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on various display values. Reverse slope output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

### ANALOG OUTPUT CARD

**Types:** 0 to 20 mA, 4 to 20 mA or 0 to 10 VDC

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Accuracy:** 0.17% of FS (18 to 28°C); 0.4% of FS (0 to 50°C)

**Resolution:** 1/3500

**Compliance:** 10 VDC: 10 KΩ load min., 20 mA: 500 Ω load max.

**Response Time:** 50 msec. max., 10 msec. typ.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

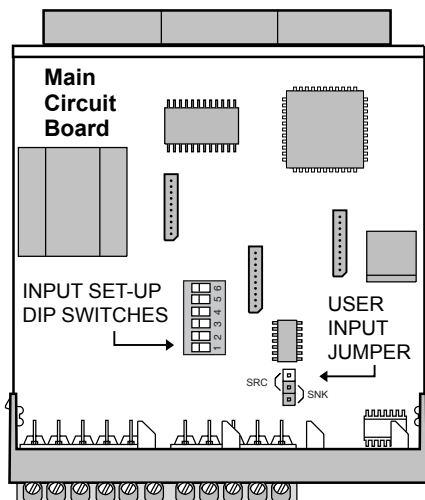

# 2.0 SETTING THE JUMPER AND DIP SWITCHES

To access the jumper and switches, remove the meter base from the meter case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## 2.1 SETTING THE JUMPER

The meter has one jumper for user input logic. When using the user inputs this jumper must be set before applying power. The Main Circuit Board figure shows the location of the jumper and DIP switch.

The user input jumper determines signal logic for the user inputs, when they are used with user functions or for input signal direction. All user inputs are set by this jumper.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## 2.2 SETTING THE INPUT DIP SWITCHES

The meter has six DIP switches for Input A and Input B terminal set-up that must be set before applying power. NOTE: The PAXR only uses switches 1-3.

Input B LO Freq.	<input type="checkbox"/>	6	HI Freq.
Input B SRC.	<input type="checkbox"/>	5	SNK.
Input B MAG.	<input type="checkbox"/>	4	Logic
Input A LO Freq.	<input type="checkbox"/>	3	HI Freq.
Input A SRC.	<input type="checkbox"/>	2	SNK.
Input A MAG.	<input type="checkbox"/>	1	Logic
	<input checked="" type="checkbox"/>		Factory Setting

### SWITCHES 3 and 6

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Adds a damping capacitor for switch contact bounce. Also limits input frequency to 50 Hz and input pulse widths to 10 msec.

### SWITCHES 2 and 5

**SRC.:** Adds internal 3.9 KΩ pull-down resistor, 7.3 mA max. @ 28 VDC, V<sub>MAX</sub> = 30 VDC.

**SNK.:** Adds internal 7.8 KΩ pull-up resistor to +12 VDC, I<sub>MAX</sub> = 1.9 mA.

### SWITCHES 1 and 4

**LOGIC:** Input trigger levels V<sub>IL</sub> = 1.5 V max.; V<sub>IH</sub> = 3.75 V min.

**MAG:** 200 mV peak input (must also have SRC on). Not recommended with counting applications.

# 3.0 INSTALLING PLUG-IN CARDS

A

The Plug-in cards are separately purchased optional cards that perform specific functions. These cards plug into the main circuit board of the meter. The Plug-in cards have many unique functions when used with the PAX. The literature that comes with these cards should be discarded, unless it specifically states in the Plug-in Card literature that the information applies to the PAX.

**Note:** The PAXC and PAXR only use the setpoint option card.

**CAUTION:** The Plug-in card and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## To Install:

1. With the case open, locate the Plug-in card connector for the card type to be installed. The types are keyed by position with different main circuit board connector locations. When installing the card, hold the meter by the rear terminals and not by the front display board.\*
2. Install the Plug-in card by aligning the card terminals with the slot bay in the rear cover. Be sure the connector is fully engaged and the tab on the Plug-in card rests in the alignment slot on the display board.
3. Slide the meter base back into the case. Be sure the rear cover latches fully into the case.
4. Apply the Plug-in card label to the bottom side of the meter in the designated area. Do Not Cover the vents on the top surface of the meter. The surface of the case must be clean for the label to adhere properly.

## Quad Sourcing Open Collector Output Card Supply Select

\* If installing the Quad sourcing Plug-in Card (PAXCDS40), set the jumper for internal or external supply operation before continuing.

# 4.0 WIRING THE METER

A

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).

- b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
    - Ferrite Suppression Cores for signal and control cables:
      - Fair-Rite # 0443167251 (RLC# FCOR0000)
      - TDK # ZCAT3035-1330A
      - Steward # 28B2029-0A0
    - Line Filters for input power cables:
      - Schaffner # FN610-1/07 (RLC# LFIL0000)
      - Schaffner # FN670-1.8/07
      - Corcom # 1 VR3

- Note: Reference manufacturer's instructions when installing a line filter.*
6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
  7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
    - Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### AC Power

Terminal 1: VAC  
Terminal 2: VAC

### DC Power

Terminal 1: +VDC  
Terminal 2: -VDC

## 4.2 USER INPUT WIRING

Before connecting the wires, the User Input Logic Jumper should be verified for proper position. If User Input 1 and/or 2 are wired for quadrature or directional counting, an additional switching device should not be connected to that User Input terminal. Only the appropriate User Input terminal has to be wired.

### Sinking Logic

Terminals 7-9 } Connect external switching device between the  
Terminal 10 } appropriate User Input terminal and User Comm.

The user inputs of the meter are internally pulled up to +12 V with 5.1 K resistance. The input is active when it is pulled low (<0.9 V).

### Sourcing Logic

Terminals 7-9:  
+ VDC through external switching device

Terminal 10:  
-VDC through external switching device

The user inputs of the meter are internally pulled down to 0 V with 5.1 K resistance. The input is active when a voltage greater than 3.6 VDC is applied.

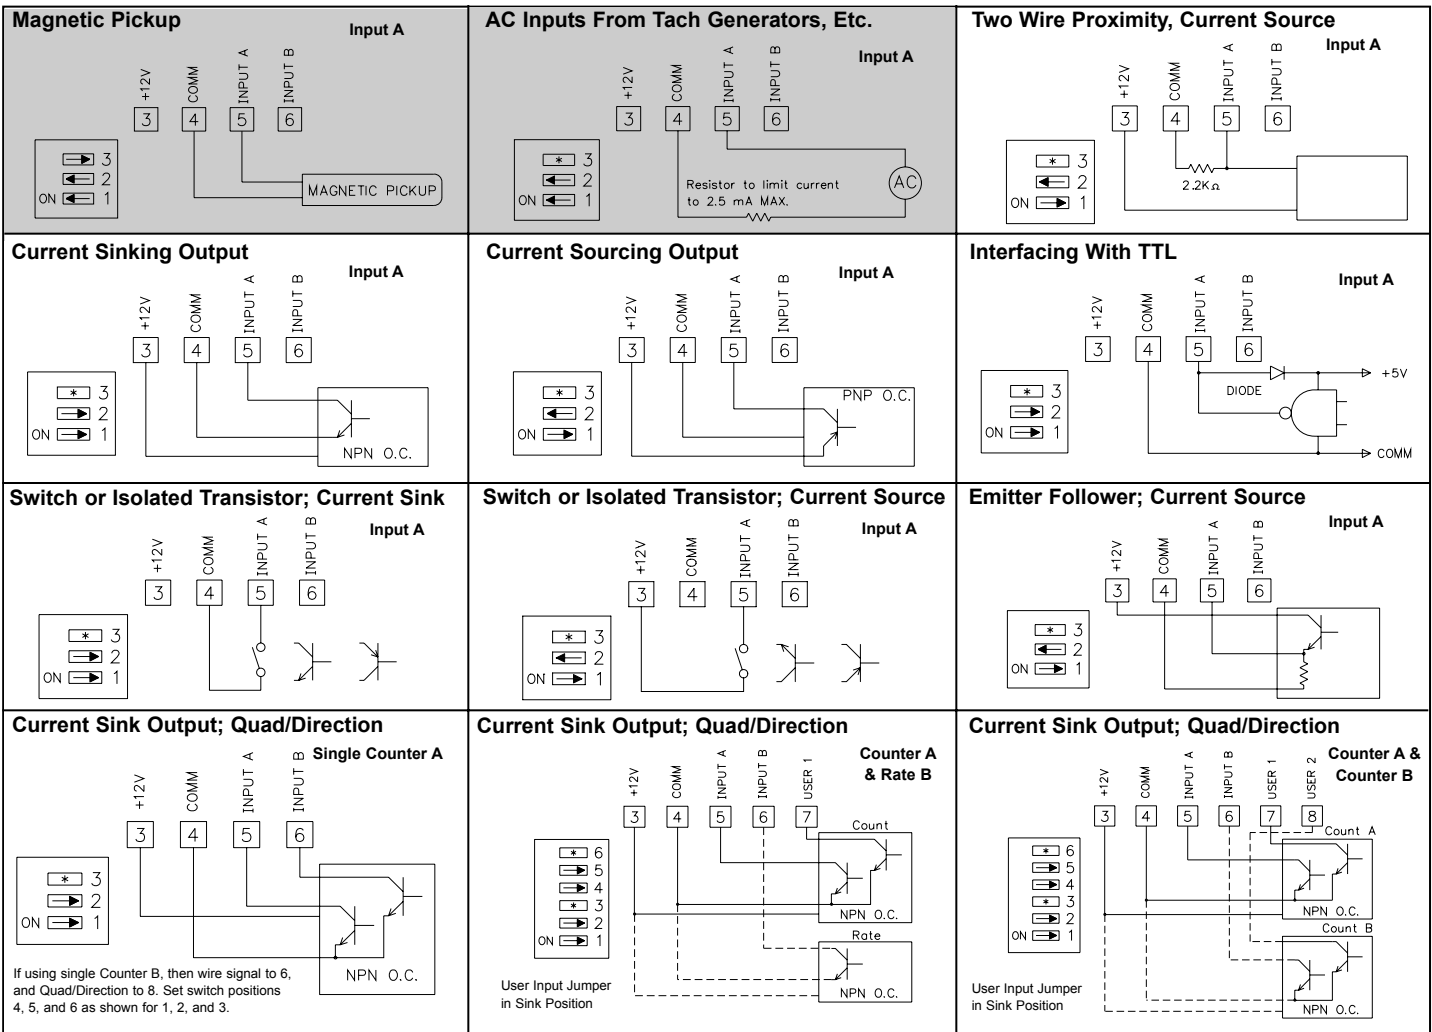

## 4.3 INPUT WIRING

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth ground; and the common of the isolated plug-in cards with respect to input common.

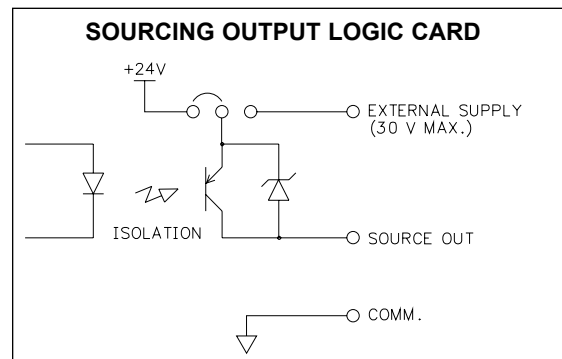

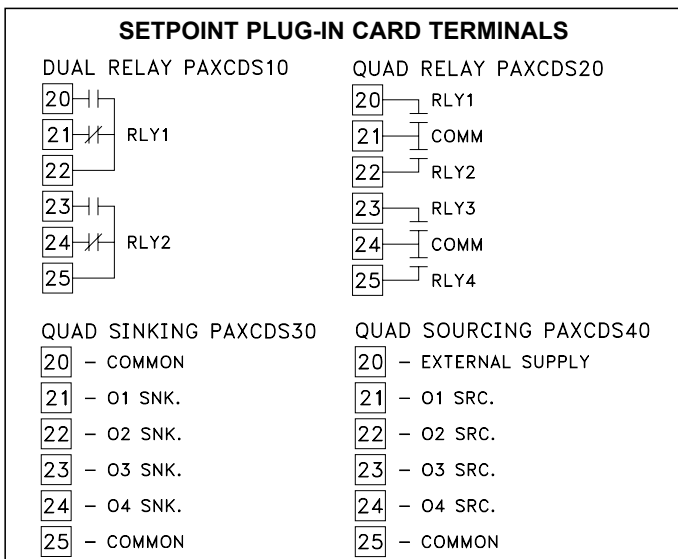

If you are wiring Input B, connect signal to Terminal 6 instead of 5, and set DIP switches 4, 5, and 6 to the positions shown for 1, 2, and 3.

Switch position is application dependent.

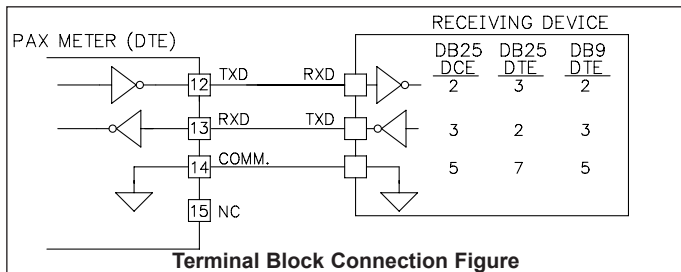

Shaded areas not recommended for counting applications.

## 4.4 SETPOINT (ALARMS) WIRING

## 4.5 PAXI SERIAL COMMUNICATION WIRING

### RS232 Communications

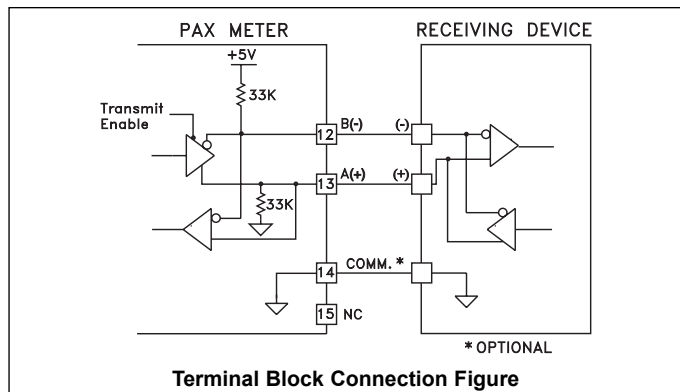

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The PAX emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

### RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the PAX is limited to 19.2k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## 4.6 PAXI ANALOG OUTPUT WIRING

### ANALOG OPTION CARD FIELD TERMINALS

## 4.7 PAXI PRESCALER OUTPUT WIRING

# 5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

### KEY DISPLAY MODE OPERATION

- DSP** Index display through the selected displays.
- PAR** Access Programming Mode
- F1▲** Function key 1; hold for 3 seconds for Second Function 1 \*\*
- F2▼** Function key 2; hold for 3 seconds for Second Function 2 \*\*
- RST** Reset (Function key) \*\*\*

### PROGRAMMING MODE OPERATION

- Quit programming and return to Display Mode
- Store selected parameter and index to next parameter
- Increment selected parameter value or selections
- Decrement selected parameter value or selections
- Advances digit location in parameter values

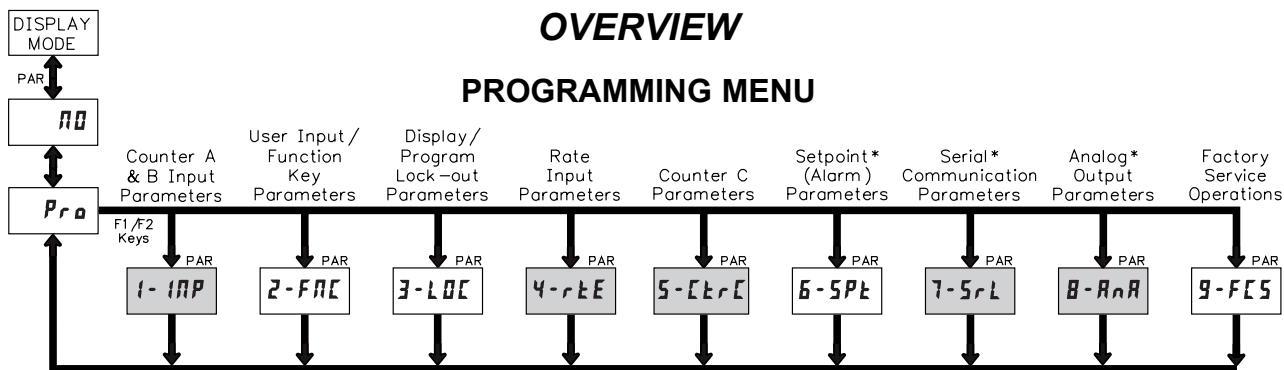

\* Counters B, and C are locked out in Factory Settings (PAXC and PAXI only).

\*\* Factory setting for the F1, and F2 keys is NO mode.

\*\*\* Factory setting for the RST key is **d5Pr5t** (Reset Display).

# 6.0 PROGRAMMING THE METER

A

Shaded areas represent program access that is model dependent.

\* Only accessible with appropriate plug-in card.

## PROGRAMMING MODE ENTRY (PAR KEY)

The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** key. If it is not accessible then it is locked by either a security code, or a hardware lock.

Two types of programming modes are available. Quick Programming Mode permits only certain parameters to be viewed and/or modified. All meter functions continue to operate except the front panel keys change to Programming Mode Operations. Quick Programming Mode is configured in Module 3. Full Programming Mode permits all parameters to be viewed and modified. In this mode, incoming counts may not be recognized correctly, the front panel keys change to Programming Mode Operations and certain user input functions are disabled. Throughout this document, Programming Mode (without Quick in front) always refers to "Full" Programming.

## MODULE ENTRY (ARROW & PAR KEYS)

The Programming Menu is organized into nine modules. These modules group together parameters that are related in function. The display will alternate between **Prm** and the present module. The arrow keys (**F1▲** and **F2▼**) are used to select the desired module. The displayed module is entered by pressing the **PAR** key.

## MODULE MENU (PAR KEY)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Prm**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY (ARROW & PAR KEYS)

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The arrow keys (**F1▲** and **F2▼**) are used to move through the selections/values for that parameter. Pressing the **PAR** key, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the **RST** key may be used to select a specific digit to be changed. Once a digit is selected, the arrow keys are used to increment or decrement that digit to the desired number.

## PROGRAMMING MODE EXIT (DSP KEY or at Prm 110 PAR KEY)

The Programming Mode is exited by pressing the **DSP** key (from anywhere in the Programming Mode) or the **PAR** key (with **Prm 110** displayed). This will commit any stored parameter changes to memory and return the meter to the Display Mode. If a parameter was just changed, the **PAR** key should be pressed to store the change before pressing the **DSP** key. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 for counting and Module 4 for rate. If lost or confused while programming, press the **DSP** key and start over. When programming is complete, it is recommended to record the parameter programming on the Parameter User Chart and lock out parameter programming with a user input or lock-out code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 9. This is a good starting point for programming problems. Most parameters can be left at their Factory Settings without affecting basic start-up. These parameters are identified throughout the module explanations.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

## 6.1 MODULE 1 - COUNT A & B INPUT PARAMETERS (1-1NP)

Module 1 is the programming for Counter A, Counter B and the Prescaler Output. Counter B parameters follow the Prescaler parameters. For maximum input frequency, the counters should be set to mode NONE and the Prescaler to NO when they are not in use. When set to NONE or NO, the remaining related parameters are not accessible. A corresponding annunciator indicates the counter being shown in the Display Mode. An Exchange Parameter Lists feature for scale factors and count load values is explained in Module 2.

## COUNTER A OPERATING MODE

Select the operating mode for Counter A.

SELECTION	MODE	DESCRIPTION
<b>NONE</b>		Does not count.
<b>cnt</b>	Count X1	Adds Input A falling edge.
<b>cntud</b>	Count X1 w/direction	Adds Input A falling edge if Input B is high. Subtracts Input A falling edge if Input B is low.
<b>dcntud</b>	Count X1 w/direction	Adds Input A falling edge if User 1 is high. Subtracts Input A falling edge if User 1 is low.
<b>9uRd1</b>	Quad X1	Adds Input A rising edge when Input B is high. Subtracts Input A falling edge when Input B is high.
<b>9uRd2</b>	Quad X2	Adds Input A rising edge when Input B is high and Input A falling edge when Input B is low. Subtracts Input A falling edge when Input B is high and Input A rising edge when Input B is low.
<b>9uRd4</b>	Quad X4	Adds Input A rising edge when Input B is high, Input A falling edge when Input B is low, Input B rising edge when Input A is low, and Input B falling edge when Input A is high. Subtracts Input A falling edge when Input B is high, Input A rising edge when Input B is low, Input B rising edge when Input A is high, and Input B falling edge when Input A is low.
<b>d9uRd1</b>	Quad X1	Adds Input A rising edge when User 1 is high. Subtracts Input A falling edge when User 1 is high.
<b>d9uRd2</b>	Quad X2	Adds Input A rising edge when User 1 is high and Input A falling edge when User 1 is low. Subtracts Input A falling edge when User 1 is high and Input A rising edge when User 1 is low.
<b>cnt2</b>	Count X2	Adds Input A rising and falling edges.
<b>cntud2</b>	Count X2 w/direction	Adds Input A rising and falling edges if Input B is high. Subtracts Input A rising and falling edge if Input B is low.
<b>dcntud2</b>	Count X2 w/direction	Adds Input A rising and falling edges if User 1 is high. Subtracts Input A rising and falling edge if User 1 is low.

## COUNTER A RESET ACTION

When Counter A is reset, it returns to zero or Counter A count load value. This reset action affects all Counter A resets, except the Setpoint Counter Auto Reset in Module 6.

## COUNTER A DECIMAL POSITION

This selects the decimal point position for Counter A and any setpoint value assigned to Counter A. The selection will also affect Counter A scale factor calculations.

## COUNTER A SCALE FACTOR

The number of input counts is multiplied by the scale factor and the scale multiplier to obtain the desired process value. A scale factor of 1.00000 will result in the display of the actual number of input counts. (Details on scaling calculations are explained at the end of this section.)

## COUNTER A SCALE MULTIPLIER \*

The number of input counts is multiplied by the scale multiplier and the scale factor to obtain the desired process value. A scale multiplier of 1 will result in only the scale factor affecting the display. (Details on scaling calculations are explained at the end of this section.)

## COUNTER A COUNT LOAD VALUE \*

When reset to count load action is selected, Counter A will reset to this value.

## COUNTER A RESET POWER-UP \*

Counter A may be programmed to reset at each meter power-up.

## PAXI: PRESCALER OUTPUT ENABLE \*

This enables the prescaler output. The prescaler output is useful for providing a lower frequency scaled pulse train to a PLC or another external counter. On each falling edge of Input A, the prescaler output register increments by the prescaler scale value (*PrURL*). When the register equals or exceeds 1.0000, a pulse is output and the register is lowered by 1.0000. The prescaler register is reset to zero whenever Counter A is reset (except for Setpoint Counter Auto Reset). (See Prescaler Output Figure.)

## PAXI: PRESCALER SCALE VALUE \*

The prescaler output frequency is the Input A frequency times the prescaler scale value.

PRESCALER OUTPUT VALUE = 0.25

\* Factory Setting can be used without affecting basic start-up.

## COUNTER B OPERATING MODE

Select the operating mode for Counter B.

SELECTION	MODE	DESCRIPTION
<b>NONE</b>		Does not count.
<b>cnt</b>	Count X1	Adds Input B falling edge.
<b>dcntud</b>	Count X1 w/direction	Adds Input B falling edge if User 2 is high. Subtracts Input B falling edge if User 2 is low.
<b>d9uRd1</b>	Quad X1	Adds Input B rising edge when User 2 is high. Subtracts Input B falling edge when User 2 is high.
<b>d9uRd2</b>	Quad X2	Adds Input B rising edge when User 2 is high and Input B falling edge when User 2 is low. Subtracts Input B falling edge when User 2 is high and Input B rising edge when User 2 is low.
<b>cnt2</b>	Count X2	Adds Input B rising and falling edges.
<b>dctud2</b>	Count X2 w/direction	Adds Input B rising and falling edges if User 2 is high. Subtracts Input B rising and falling edge if User 2 is low.

## COUNTER B RESET ACTION

When Counter B is reset, it returns to zero or Counter B count load value. This reset action affects all Counter B resets, except the Setpoint Counter Auto Reset Action in Module 6.

## COUNTER B DECIMAL POSITION

This selects the decimal point position for Counter B and any setpoint value assigned to Counter B. The selection will also affect Counter B scale factor calculations.

## COUNTER B SCALE FACTOR

The number of input counts is multiplied by the scale factor and the scale multiplier to obtain the desired process value. A scale factor of 1.00000 will result in the display of the actual number of input counts. (Details on scaling calculations are explained at the end of this section.)

## COUNTER B SCALE MULTIPLIER \*

The number of input counts is multiplied by the scale multiplier and the scale factor to obtain the desired process value. A scale multiplier of 1 will result in only the scale factor affecting the display. (Details on scaling calculations are explained at the end of this section.)

## COUNTER B COUNT LOAD VALUE \*

When reset to count load action is selected, Counter B will reset to this value.

## COUNTER B RESET POWER-UP \*

Counter B may be programmed to reset at each meter power-up.

\* Factory Setting can be used without affecting basic start-up.

## 8 DIGIT COUNT VALUES

Any counter display value below -99999 or above 999999 (less decimal point) will consist of a two part display. This display alternates between the least 6 significant digits and the remaining most significant digits beginning with "FF" in the display. If the display exceeds ± 99999999 the display will roll to zero and continue counting. Outputs cannot be set to counter values above 6 digits. The annunciator, indicating the counter being displayed, will flash when the value is above 6 digits.

## SCALING CALCULATIONS

Each counter has the ability to scale an input signal to a desired display value. This is accomplished by the counter mode (x-**Cnt**), scale factor (x**SCFAC**), scale multiplier (x**SCALr**) and decimal point (x**dECPt**). The scale factor is calculated using:

$$SF (xSCFAC) = \frac{\text{Desired Display Decimal DDD}}{(\text{Number of pulses per 'single' unit} \times CM \times SM)}$$

Where:

Desired Display Decimal DDD	x <b>dECPt</b>	Counter Decimal Selection
1	0	None
10	0.0	Tenths
100	0.00	Hundredths
1000	0.000	Thousandths
10000	0.0000	Ten Thousandths
100000	0.00000	Hundred Thousandths

**Number of pulses per 'single' unit:** pulses per unit generated by the process (i.e. # of pulses per foot)

**CM:** Counter Mode(x-**Cnt**) times factor of the mode 1,2 or 4.

**SM:** Scale Multiplier (x**SCALr**) selection of 1, 0.1 or 0.01.

**Example:**

- Show feet to the hundredths (0.00) with 100 pulses per foot: Scale Factor would be  $100 / (100 \times 1 \times 1) = 1$  (In this case, the scale multiplier and counter mode factor are 1)
- Show feet with 120 pulses per foot: Scale Factor would be  $1 / (120 \times 1 \times 1) = 0.0083333$ . (In this case, the scale multiplier of 0.01 could be used:  $1 / (120 \times 1 \times 0.01) = 0.83333$  or show to hundredths (0.00):  $100 / (120 \times 1 \times 1) = 0.8333$ .)

## General Rules on Scaling

- It is recommended that, the scale factor be as close as possible to, but not exceeding 1.00000. This can be accomplished by increasing or decreasing the counter decimal point position, using the scale multiplier, or selecting a different count mode.
- To double the number of pulses per unit, use counter modes direction X2 or quad X2. To increase it by four times, use counter mode quad X4. Using these modes will decrease the maximum input frequency.
- A scale factor greater than 1.00000 will cause Counter display rounding. In this case, digit jumps could be caused by the internal count register rounding the display. The precision of a counter application cannot be improved by using a scale factor greater than 1.00000.
- The number of pulses per single unit must be greater than or equal to the DDD value for the scale factor to be less than or equal to one.
- Lowering the scale factor can be accomplished by lowering the counter decimal position. (Example:  $100$  (Hundredths)/ $10$  pulses =  $10.000$  lowering to  $10$  (Tenths)/ $10 = 1.000$ .)

# 6.2 MODULE 2 - USER INPUT AND FRONT PANEL FUNCTION KEY PARAMETERS (2-FNC)

A

Module 2 is the programming for rear terminal user inputs and front panel function keys.

Three rear terminal user inputs are individually programmable to perform specific meter control functions. While in the Display Mode, the function is executed when the user input transitions to the active state. (Refer to the user input specifications for active state response times.) Certain user input functions are disabled in "full" Programming Mode.

Three front panel function **F1**, **F2** and **RST** keys are also individually programmable to perform specific meter control functions. While in the Display Mode, the primary function is executed when the key is pressed. Holding the **F1** and **F2** function keys for three seconds executes a secondary function. It is possible to program a secondary function without a primary function. The front panel key functions are disabled in both Programming Modes.

In most cases, if more than one user input and/or function key is programmed for the same function, the maintained (level trigger) actions will be performed while at least one of those user inputs or function keys are activated. The momentary (edge trigger) actions are performed every time any of those user inputs or function keys transition to the active state. All functions are available to both user inputs and function keys.

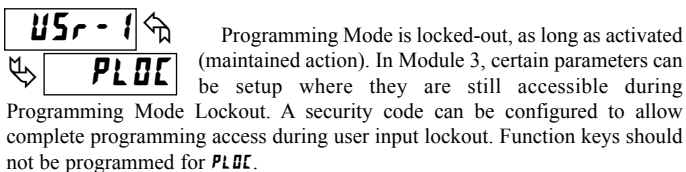

Some of the user functions have a sublist of parameters. The sublist is accessed when **PAR** is pressed at the listed function. The function will only be performed for the parameters entered as **YES**. If a user input or function key is configured for a function with a sublist, then that sublist will need to be scrolled through each time to access the following user inputs or function keys parameters.

With this selection, NO function is performed. This is the factory setting for all user inputs and function keys except the Reset (**RST**) Key.

**NOTE: When a user input is used to accept a quad or directional input signal, then that user input should be programmed for NO function.**

## PROGRAMMING MODE LOCK-OUT

## ADVANCE DISPLAY

When activated (momentary action), the display advances to the next display that is not locked out from the Display Mode.

## RESET DISPLAY

When activated (momentary action), the shown display is reset. This is the factory setting for the Reset (**RST**) Key.

## EXCHANGE PARAMETER LISTS

Two lists of values are available for **SP-1**, **SP-2**, **SP-3**, **SP-4**, **RSEFAC**, **bSEFAC**, **ESCFAC**, **ACNELd**, **BCNELd**, **CCNELd**. The two lists are named **L1SE-A** and **L1SE-B**. If a user input is used to select the list then **L1SE-A** is selected when the user input is not active and **L1SE-B** is selected when the user input is active, (maintained action). If a front panel key is used to select the list then the list will toggle for each key press, (momentary action). The meter will suspend ALL operations for approximately 1 msec. while the new values are loaded. The display will only indicate which list is active when the list is changed or when entering any Programming Mode.

To program the values for **L1SE-A** and **L1SE-B**, first complete the programming of all the parameters. Exit programming and switch to the other list. Re-enter programming and enter the values for **SP-1**, **SP-2**, **SP-3**, **SP-4**, **RSEFAC**, **bSEFAC**, **ESCFAC**, **ACNELd**, **BCNELd**, **CCNELd**. If any other parameters are changed then the other list values must be reprogrammed.

Shaded parameters do not apply to the PAXR.

## PAXI: PRINT REQUEST

The meter issues a block print through the serial port when activated. The data transmitted during the print request is configured in Module 7. If the user input is still active after the transmission is complete (about 100 msec.), an additional transmission will occur. Only one transmission will take place with each function key depression. This selection will only function when a serial communications Plug-in card is installed in the meter.

## PAXI: PRINT REQUEST AND RESET DISPLAYS

The meter issues a block print through the serial port when activated just like the Print Request function. In addition, when activated (momentary action), the meter performs a reset of the displays configured as **YES**. The print aspect of this action only functions when a serial communication plug-in card is installed. The reset action functions regardless.

DISPLAY	DESCRIPTION	FACTORY
<b>A</b> [Nt]	Counter A	<b>NO</b>
<b>b</b> [Nt]	Counter B	<b>NO</b>
<b>C</b> [Nt]	Counter C	<b>NO</b>
<b>H</b> 1	Maximum	<b>NO</b>
<b>L</b> 0	Minimum	<b>NO</b>

### MAINTAINED (LEVEL) RESET AND INHIBIT

The meter performs a reset and inhibits the displays configured as **YES**, as long as activated (maintained action).

DISPLAY	DESCRIPTION	FACTORY
A CLR	Counter A	NO
b CLR	Counter B	NO
C CLR	Counter C	NO
HI	Maximum	NO
LO	Minimum	NO

### PAXR: MAINTAINED (LEVEL) RESET AND INHIBIT

The meter performs a reset and inhibits the displays configured as **YES**, as long as activated (maintained action).

DISPLAY	DESCRIPTION	FACTORY
HI	Maximum	NO
LO	Minimum	NO

### MOMENTARY (EDGE) RESET

When activated (momentary action), the meter resets the displays configured as **YES**. (Momentary resets improve max. input frequencies over maintained resets.)

DISPLAY	DESCRIPTION	FACTORY
A CLR	Counter A	NO
b CLR	Counter B	NO
C CLR	Counter C	NO
HI	Maximum	NO
LO	Minimum	NO

### PAXR: MOMENTARY (EDGE) RESET

When activated (momentary action), the meter resets the displays configured as **YES**. (Momentary resets improve max. input frequencies over maintained resets.)

DISPLAY	DESCRIPTION	FACTORY
HI	Maximum	NO
LO	Minimum	NO

### INHIBIT

The meter inhibits the displays configured as **YES**, as long as activated (maintained action).

DISPLAY	DESCRIPTION	FACTORY
A CLR	Counter A	NO
b CLR	Counter B	NO
C CLR	Counter C	NO
HI	Maximum	NO
LO	Minimum	NO

### STORE DISPLAY

The meter holds (freeze) the displays configured as **YES**, as long as activated (maintained action). Internally the counters and max. and min. values continue to update.

DISPLAY	DESCRIPTION	FACTORY
A CLR	Counter A	NO
b CLR	Counter B	NO
C CLR	Counter C	NO
HI	Maximum	NO
LO	Minimum	NO

### DEACTIVATE SETPOINT MAINTAINED (LEVEL)

The meter deactivates the setpoints configured as **YES**, as long as activated (maintained action). This action only functions with a Setpoint card installed.

DISPLAY	DESCRIPTION	FACTORY
SP-1	Setpoint 1	NO
SP-2	Setpoint 2	NO
SP-3	Setpoint 3	NO
SP-4	Setpoint 4	NO

### DEACTIVATE SETPOINT MOMENTARY (EDGE)

When activated (momentary action), the meter deactivates the setpoints configured as **YES**. This action only functions with a Setpoint card installed.

DISPLAY	DESCRIPTION	FACTORY
SP-1	Setpoint 1	NO
SP-2	Setpoint 2	NO
SP-3	Setpoint 3	NO
SP-4	Setpoint 4	NO

### HOLD SETPOINT STATE

The meter holds the state of the setpoints configured as **YES**, as long as activated (maintained action). This action only functions with a Setpoint plug-in card installed.

DISPLAY	DESCRIPTION	FACTORY
SP-1	Setpoint 1	NO
SP-2	Setpoint 2	NO
SP-3	Setpoint 3	NO
SP-4	Setpoint 4	NO

### ACTIVATE SETPOINT MAINTAINED (LEVEL)

The meter activates the setpoints configured as **YES**, as long as activated (maintained action). This action only functions with a Setpoint card installed.

DISPLAY	DESCRIPTION	FACTORY
SP-1	Setpoint 1	NO
SP-2	Setpoint 2	NO
SP-3	Setpoint 3	NO
SP-4	Setpoint 4	NO

### ACTIVATE SETPOINT MOMENTARY (EDGE)

When activated (momentary action), the meter activates the setpoints configured as **YES**. This action only functions with a Setpoint card installed.

DISPLAY	DESCRIPTION	FACTORY
SP-1	Setpoint 1	NO
SP-2	Setpoint 2	NO
SP-3	Setpoint 3	NO
SP-4	Setpoint 4	NO

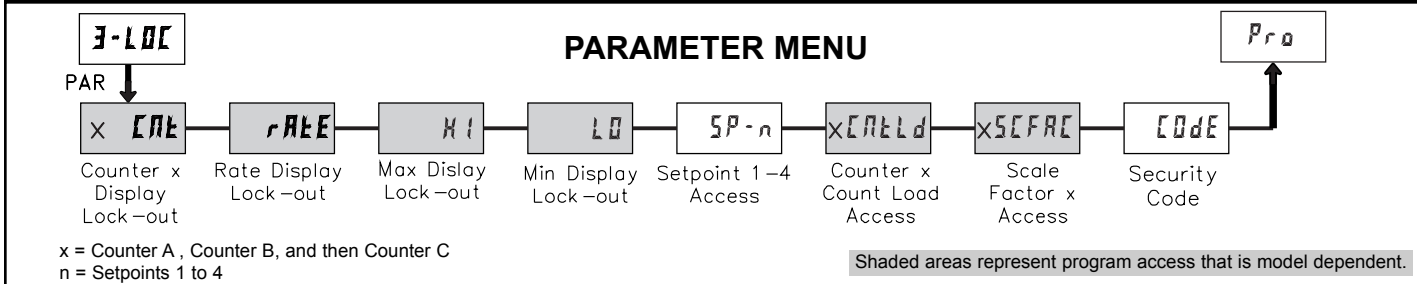

### CHANGE DISPLAY INTENSITY LEVEL

When activated (momentary action), the display intensity changes to the next intensity level (of 4). The four levels correspond to Display Intensity Level (**d-LEV**) settings of 0, 3, 8 & 15. The intensity level, when changed via the User Input/ Function Key, is not retained at power-down, unless Quick Programming or Full Programming mode is entered and exited. The meter will power-up at the last saved intensity level.

# 6.3 MODULE 3 - DISPLAY AND PROGRAM LOCK-OUT PARAMETERS (3-LOC)

A

Module 3 is the programming for Display lock-out and “Full” and “Quick” Program lock-out.

When in the Display Mode, the available displays can be read consecutively by repeatedly pressing the **DSP** key. An annunciator indicates the display being shown. These displays can be locked from being visible. It is recommended that the display be set to **LOC** when the corresponding function is not used.

SELECTION	DESCRIPTION
rEd	Visible in Display Mode
LOC	Not visible in Display Mode

“Full” Programming Mode permits all parameters to be viewed and modified. This Programming Mode can be locked with a security code and/or user input. When locked and the **PAR** key is pressed, the meter enters a Quick Programming Mode. In this mode, setpoint, count load and scale factor values can still be read and/or changed per the selections below. The Display Intensity Level (**d-LEU**) parameter also appears whenever Quick Programming Mode is enabled, and the security code is greater than zero.

SELECTION	DESCRIPTION
rEd	Visible but not changeable in Quick Programming Mode
ENt	Visible and changeable in Quick Programming Mode
LOC	Not visible in Quick Programming Mode

### SETPOINT 1 to 4 ACCESS LOCK-OUT \*

The setpoint displays can be programmed for **LOC**, **rEd**, or **ENt** (See the following table). Accessible only with the Setpoint Plug-in card installed.

### COUNT LOAD A B C ACCESS LOCK-OUT \*

These displays can be programmed for **LOC**, **rEd**, or **ENt**.

### SCALE FACTOR A B C ACCESS LOCK-OUT \*

The Scale Factor values can be programmed for **LOC**, **rEd**, or **ENt**.

### COUNTER A B C DISPLAY LOCK-OUT \* RATE DISPLAY LOCK-OUT \* MAX. MIN. DISPLAY LOCK-OUT \*

These displays can be programmed for **LOC** or **rEd**.

### SECURITY CODE \*

Entry of a non-zero value will cause the prompt **CODE** to appear when trying to access the “Full” Programming Mode. Access will only be allowed after entering a matching security code or universal code of **222**. With this lock-out, a user input would not have to be configured for Program Lock-out. However, this lock-out is overridden by an inactive user input configured for Program Lock-out.

\* Factory Setting can be used without affecting basic start-up.

Shaded areas are model dependent.

### PROGRAMMING MODE ACCESS

SECURITY CODE	USER INPUT CONFIGURED	USER INPUT STATE	WHEN PAR KEY IS PRESSED	“FULL” PROGRAMMING MODE ACCESS
0	not <b>PLOC</b>	—	“Full” Programming	Immediate access.
>0	not <b>PLOC</b>	—	Quick Programming w/Display Intensity	After Quick Programming with correct code # at <b>CODE</b> prompt.
>0	<b>PLOC</b>	Active	Quick Programming w/Display Intensity	After Quick Programming with correct code # at <b>CODE</b> prompt.
>0	<b>PLOC</b>	Not Active	“Full” Programming	Immediate access.
0	<b>PLOC</b>	Active	Quick Programming	No access
0	<b>PLOC</b>	Not Active	“Full” Programming	Immediate access.

Throughout this document, Programming Mode (without Quick in front) always refers to “Full” Programming (all meter parameters are accessible).

# 6.4 MODULE 4 - RATE INPUT PARAMETERS (4-rtE) - PAXR & I

A

Module 4 is the programming for the Rate parameters. For maximum input frequency, Rate assignment should be set to **no** when not in use. When set to **no**, the remaining related parameters are not accessible. The Rate value is shown with an annunciator of 'r' in the Display Mode.

Note: For PAXR, **r INP** is actually **rtE INP** on the unit's display and **rdSP** is actually **rtEdSP** on the unit's display.

## PAXI: RATE ASSIGNMENT

For measuring the rate (speed) of pulses on Input A, select **rRtE-A**. For Input B select **rRtE-b**. This assignment is independent of the counting modes.

## LOW UPDATE TIME (DISPLAY UPDATE) \*

The Low Update Time is the minimum amount of time between display updates for the Rate display. Values of 0.1 and 0.2 seconds will update the display correctly but may cause the display to appear unsteady. The factory setting of 1.0 will update the display every second minimum.

## HIGH UPDATE TIME (DISPLAY ZERO) \*

The High Update Time is the maximum amount of time before the Rate display is forced to zero. (For more explanation, refer to Input Frequency Calculation.) The High Update Time **must** be higher than the Low Update Time and higher than the desired slowest readable speed (one divided by pulses per second). The factory setting of 2.0, will force the display to zero for speeds below 0.5 Hz or a pulse every 2 seconds.

## RATE DECIMAL POSITION

This selects the decimal point position for Rate, Minimum and Maximum rate displays and any setpoint value assigned to these displays. This parameter does not affect rate scaling calculations.

## PAXI: LINEARIZER SEGMENTS

This parameter specifies the number of linear segments used for the Rate Scaling function. Each linear segment has two scaling points which define the upper and lower endpoints of the segment. The number of segments used depends on the linearity of the process and the display accuracy required as described below.

### Linear Application – 2 Scaling Points

Linear processes use a single segment (two scaling points) to provide a linear Rate display from 0 up to the maximum input frequency. For typical zero based frequency measurements (0 Hz = 0 on display), leave **SEES:0** (factory setting). For non-zero based 2 scaling point applications, set **SEES:1**, to enter both the zero segment (**r INP 0** & **rdSP 0**) and segment 1 (**r INP 1** & **rdSP 1**).

### Non-linear Application – Up to 10 Scaling Points

Non-linear processes may utilize up to nine segments (ten scaling points) to provide a piece-wise linear approximation representing the non-linear function. The Rate display will be linear throughout each individual segment (i.e. between sequential scaling points). Thus, the greater the number of segments, the greater the conformity accuracy. Several linearization equations are available in the SFPAX software.

### About Scaling Points

Each Scaling Point is specified by two programmable parameters: A desired Rate Display Value (**rdSP**) and a corresponding Rate Input Value (**r INP**). Scaling points are entered sequentially in ascending order of Rate Input Value.

Two scaling points must be programmed to define the upper and lower endpoints of the first linear segment. Setting **SEES:0**, automatically factory sets the first scaling point to 0.0 for typical single segment, zero based applications. When multiple segments are used, the upper scaling point for a given segment becomes the lower scaling point for the next sequential segment. Thus, for each additional segment used, only one additional scaling point must be programmed.

The following chart shows the Scaling Points, the corresponding Parameter mnemonics, and the Factory Default Settings for each point.

SEGMENT	SCALING POINT	DISPLAY PARAMETER	DISPLAY DEFAULT	INPUT PARAMETER	INPUT DEFAULT
	1	<b>rdSP 0</b>	000000	<b>r INP 0</b>	00000.0
1	2	<b>rdSP 1</b>	001000	<b>r INP 1</b>	01000.0
2	3	<b>rdSP 2</b>	002000	<b>r INP 2</b>	02000.0
3	4	<b>rdSP 3</b>	003000	<b>r INP 3</b>	03000.0
4	5	<b>rdSP 4</b>	004000	<b>r INP 4</b>	04000.0
5	6	<b>rdSP 5</b>	005000	<b>r INP 5</b>	05000.0
6	7	<b>rdSP 6</b>	006000	<b>r INP 6</b>	06000.0
7	8	<b>rdSP 7</b>	007000	<b>r INP 7</b>	07000.0
8	9	<b>rdSP 8</b>	008000	<b>r INP 8</b>	08000.0
9	10	<b>rdSP 9</b>	009000	<b>r INP 9</b>	09000.0

## PAXI: RATE DISPLAY VALUE FOR SCALING POINT 1

Confirm the Rate Display Value for the first Scaling Point is 0. This parameter is automatically set to 0 and does not appear when **SEES:0**. (See Note)

## PAXI: RATE INPUT VALUE FOR SCALING POINT 1

Confirm the Rate Input Value for the first Scaling Point is 0.0. (See Note)

Note: For all linear and most non-linear applications, the Scaling Point 1 parameters (**rdSP 0** and **r INP 0**) should be set to 0 and 0.0 respectively. Consult the factory before using any non-zero values for Scaling Point 1. These parameters are automatically set to 0 and do not appear when **SEES:0**.

## RATE DISPLAY VALUE FOR SCALING POINT 2

Enter the desired Rate Display Value for the second Scaling Point by using the arrow keys.

\* Factory Setting can be used without affecting basic start-up.

## RATE INPUT VALUE FOR SCALING POINT 2

Enter the corresponding Rate Input Value for the second Scaling Point by using the arrow keys. Rate Input values for scaling points can be entered by using the Key-in or the Applied method described below.

### Key-in Method:

Enter the Rate Input value (*r INP*) that corresponds to the entered Rate Display value (*r d5Px*) by pressing the **F1** or **F2** keys. This value is always in pulses per second (Hz).

### Applied Method:

Apply an external rate signal to the appropriate input terminals. At the Rate Input Value (*r INP*) press and hold the **F1** and **F2** keys at the same time. The applied input frequency (in Hz) will appear on the display. (To verify correct reading wait for at least the length of the Low Update Time. Then press and hold the **F1** and **F2** keys at the same time again. The new value should be  $\pm 0.1\%$  of the previous entered value.) Press **PAR** to enter the displayed frequency as the Rate Input value. To prevent the displayed value from being entered, press **DSP**. This will take the meter out of Programming Mode and the previous Rate Input value will remain.

## RATE DISPLAY ROUND \*

Rounding values other than one round the Rate display to the nearest increment selected (e.g. rounding of '5' causes 122 to round to 120 and 123 to round to 125). Rounding starts at the least significant digit of the Rate display.

## LOW CUT OUT \*

The Low Cut Out value forces the Rate display to zero when the Rate display falls below the value entered.

## MAXIMUM CAPTURE DELAY TIME \*

When the Rate value is above the present Maximum rate value for the entered amount of time, the meter will capture that Rate value as the new Maximum value. A delay time helps to avoid false captures of sudden short spikes. Maximum detection will only function if Rate is assigned to Input A or B. The Maximum rate value is shown with an annunciator of 'M' in the display and will continue to function independent of being displayed.

## MINIMUM CAPTURE DELAY TIME \*

When the Rate value is below the present Minimum rate value for the entered amount of time, the meter will capture that Rate value as the new Minimum value. A delay time helps to avoid false captures of sudden short spikes. Minimum detection will only function if Rate is assigned to Input A or B. The Minimum rate value is shown with an annunciator of 'L' in the display and will continue to function independent of being displayed.

## RATE DISPLAY EXCEEDED

If the rate of the input signal causes a display that exceeds the capacity of the Rate display (5 digits, 99999), then the display will indicate an overflow condition by showing "r 01.01". During this overflow condition, the Minimum and Maximum rate values will stay at their values even during resets.

\* Factory Setting can be used without affecting basic start-up.

## RATE SCALING

To scale the Rate, enter a Scaling Display value with a corresponding Scaling Input value. (The Display and Input values can be entered by Key-in or Applied Methods.) These values are internally plotted to a Display value of 0 and Input value of 0 Hz. A linear relationship is formed between these points to yield a rate display value that corresponds to the incoming input signal rate. The PAXI and PAXR are capable of showing a rate display value for any linear process.

## KEY-IN SCALING METHOD CALCULATION

If a display value versus input signal (in pulses per second) is known, then those values can be entered into Scaling Display (*r d5Px*) and Scaling Input (*r INPx*). No further calculations are needed.

If only the number of pulses per 'single' unit (i.e. # of pulses per foot) is known, then it can be entered as the Scaling Input value and the Scaling Display value will be entered as the following:

RATE PER	DISPLAY ( <i>r d5Px</i> )	INPUT ( <i>r INPx</i> )
Second	1	# of pulses per unit
Minute	60	# of pulses per unit
Hour	3600	# of pulses per unit

## NOTES:

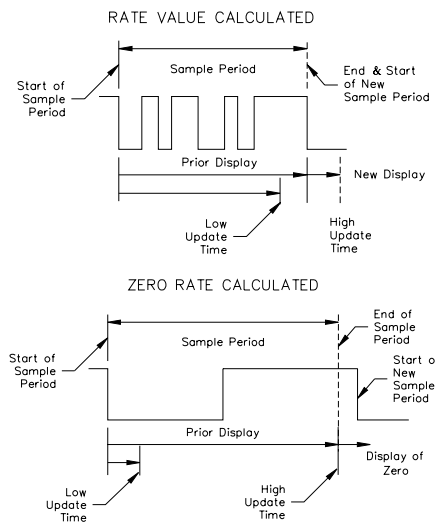

1. If # of pulse per unit is less than 10, then multiply both Input and Display values by 10.
2. If # of pulse per unit is less than 1, then multiply both Input and Display values by 100.
3. If the Display value is raised or lowered, then Input value must be raised or lowered by the same proportion (i.e. Display value for per hour is entered by a third less (1200) then Input value is a third less of # of pulses per unit). The same is true if the Input value is raised or lowered, then Display value must be raised or lowered by the same proportion.
4. Both values must be greater than 0.0.

## EXAMPLE:

1. With 15.1 pulses per foot, show feet per minute in tenths. Scaling Display = 60.0 Scaling Input = 15.1.
2. With 0.25 pulses per gallon, show whole gallons per hour. (To have greater accuracy, multiply both Input and Display values by 10.) Scaling Display = 36000 Scaling Input = 2.5.

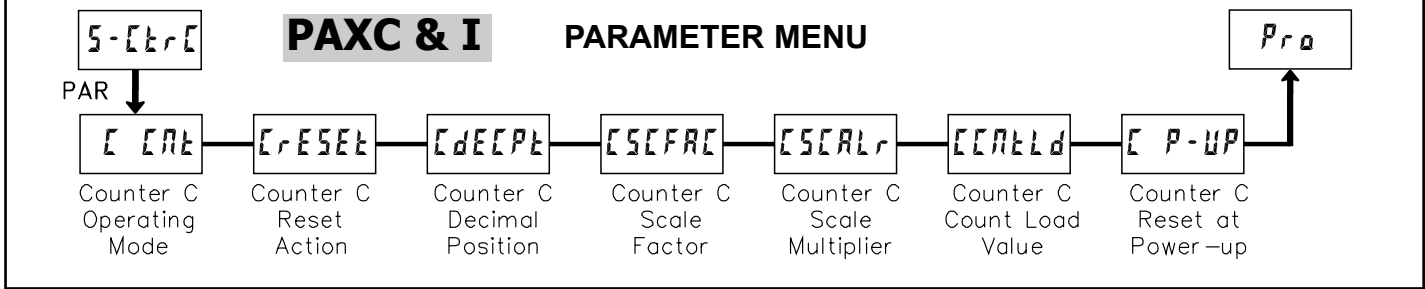

## INPUT FREQUENCY CALCULATION

The meter determines the input frequency by summing the number of falling edges received during a sample period of time. The sample period begins on the first falling edge. At this falling edge, the meter starts accumulating time towards Low Update and High Update values. Also, the meter starts accumulating the number of falling edges. When the time reaches the Low Update Time value, the meter looks for one more falling edge to end the sample period. If a falling edge occurs (before the High Update Time value is reached), the Rate display will update to the new value and the next sample period will start on the same edge. If the High Update Time value is reached (without receiving a falling edge after reaching Low Update Time), then the sample period will end but the Rate display will be forced to zero. The High Update Time value must be greater than the Low Update Time value. Both values must be greater than 0.0. The input frequency calculated during the sample period, is then shown as a Rate value determined by either scaling method.

# 6.5 MODULE 5 - COUNTER C INPUT PARAMETERS (5-ErrE)

A

Module 5 is the programming for Counter C. For maximum input frequency, the counter operating mode should be set to **none** when not in use. When set to **none** the remaining related parameters are not accessible. The C annunciator indicates that Counter C is being shown in the Display Mode. An Exchange Parameter List feature for scale factor and count load values is explained in Module 2.

## COUNTER C OPERATING MODE \*

Select the operating mode for Counter C.

**none** Does not count.

**A** Counter C counts the incoming pulses from Counter A input as per Counter A mode of operation. The signal is scaled only according to Counter C parameters.

**Add Ab** Counter C counts the incoming pulses from Counter A and B inputs as per Counter A and B modes of operation. The result is scaled only according to Counter C parameters. (Example: If Counter A is set for Count X1 mode and Counter B is set for Count X2 mode, then Counter C will increment by 1 for each pulse received on Input A and increment by 2 for each pulse received on Input B less any effects of scaling.)

**Sub Ab** Counter C counts the incoming pulses from Counter A and B inputs as per Counter A and B modes of operation and subtracts the B counts from the A counts. The result is scaled only according to Counter C parameters. (Example: If Counter A is set for Count X1 mode and Counter B is set for Count X2 mode, then Counter C will increment by 1 for each pulse received on Input A and decrement by 2 for each pulse received on Input B less any effects of scaling.)

*Note: When using Add Ab or Sub Ab, Counter A, B and C must all be reset at the same time for the math to be performed on the display values.*

**SLAVE** See Serial Communications for details. (PAXI only)

## COUNTER C RESET ACTION

When Counter C is reset, it returns to zero or Counter C count load value. This reset action affects all Counter C resets, except the Setpoint Counter Auto Reset Action in Module 6.

## COUNTER C DECIMAL POSITION

This selects the decimal point position for Counter C and any setpoint value assigned to Counter C. The selection will also affect Counter C scale factor calculations.

## COUNTER C SCALE FACTOR

The number of input counts is multiplied by the scale factor and the scale multiplier to obtain the desired process value. A scale factor of 1.00000 will result in the display of the actual number of input counts. For **A** (Numeric transmissions) modes of operation, the input signal is scaled directly. For **Add Ab** and **Sub Ab** modes of operation, the math is performed on the input signals and then the result is scaled. To achieve correct results, both Input A and Input B must provide the same amount of pulses per unit of measurement. (Details on scaling calculations are explained at the end of Module 1 section.)

## COUNTER C SCALE MULTIPLIER

The number of input counts is multiplied by the scale multiplier and the scale factor to obtain the desired process value. A scale multiplier of 1 will result in only the scale factor affecting the display. (Details on scaling calculations are explained at the end of Module 1 section.)

## COUNTER C COUNT LOAD VALUE

When reset to count load action is selected, Counter C will reset to this value.

## COUNTER C RESET POWER-UP \*

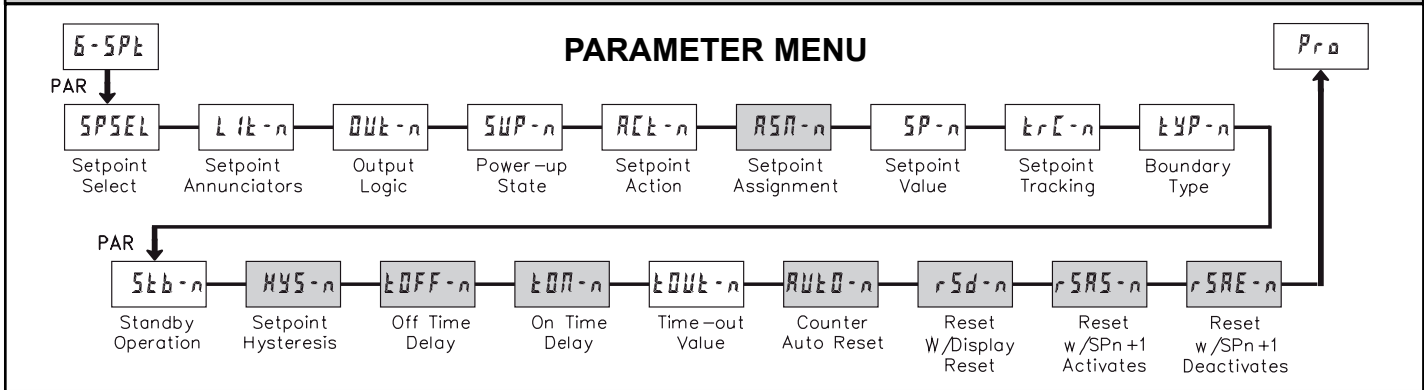

Counter C may be programmed to reset at each meter power-up.

\* Factory Setting can be used without affecting basic start-up.

# 6.6 MODULE 6 - SETPOINT (ALARM) PARAMETERS (6-SPt)

A

Module 6 is the programming for the setpoint (alarms) output parameters. To have setpoint outputs, a setpoint Plug-in card needs to be installed into the PAX (see Ordering Information). Depending on the card installed, there will be two or four setpoint outputs available. This section replaces the bulletin that comes with the setpoint plug-in card. Please discard the separate literature when using the Plug-in card with the Digital PAX. For maximum input frequency, unused Setpoints should be configured for **OFF** action.

The setpoint assignment and the setpoint action determine certain setpoint feature availability. The chart below illustrates this.

## SETPOINT PARAMETER AVAILABILITY

PARAMETER	DESCRIPTION	RATE			COUNTER		
		TIMED OUT tOUT	BOUNDARY bOUNd	LATCH LAtCH	TIMED OUT tOUT	BOUNDARY bOUNd	LATCH LAtCH
LIt-n	Annunciators	Yes	Yes	Yes	Yes	Yes	Yes

### SETPOINT SELECT

Select a setpoint (alarm output) to open the remaining module menu. (The “n” in the following parameters will reflect the chosen setpoint number.) After the chosen setpoint is programmed, the display will default to **SPSEL n0**. Select the next setpoint to be programmed and continue the sequence for each setpoint. Pressing **PAR** at **SPSEL n0** will exit Module 6.

### SETPOINT OUTPUT LOGIC \*

Normal (**n0r**) turns the output “on” when activated and “off” when deactivated. Reverse (**rEU**) turns the output “off” when activated and “on” when deactivated.

### SETPOINT ANNUNCIATORS\*

**OFF** disables the display of the setpoint annunciator. Normal (**n0r**) displays the corresponding setpoint annunciator of an “on” alarm output. Reverse (**rEU**) displays the corresponding setpoint annunciator of an “off” alarm output. **FLASH** flashes the display and the corresponding setpoint annunciator of an “on” alarm output.

### SETPOINT POWER UP STATE \*

**SRAVE** will restore the output to the same state it was at before the meter was powered down. **ON** will activate the output at power up. **OFF** will deactivate the output at power up.

\* Factory Setting can be used without affecting basic start-up.

**SETPOINT ACTION**

↩  
 ↩    OFF    LATCH    TIMEOUT    BOUND

**OFF:** When not using a setpoint, it should be set to **OFF** (no action).

**For Counter Assignments:**

- LATCH** With Latch action, the setpoint output activates when the count value equals the setpoint value. The output remains active until reset. This action is not associated with Boundary types.
- BOUND** With boundary action, the setpoint output activates when the count value is greater than or equal to (for  $LSP = HI$ ) or less than or equal to (for  $LSP = LO$ ) the setpoint value. The setpoint output will deactivate when the count value is less than (for  $LSP = HI$ ) or greater than (for  $LSP = LO$ ) the setpoint value.
- TIMEOUT** With Timed Out action, the setpoint output activates when the count value equals the setpoint value and deactivates after the Time Out value. This action is not associated with Boundary types.

**For Rate Assignments:**

- LATCH** With Latch action, the setpoint output activates when the rate value is equal to the setpoint value. The setpoint output remains active until reset. If after reset, the rate value is greater than or equal to (for  $LSP = HI$ ) or less than or equal to (for  $LSP = LO$ ) the setpoint value, the output will reactivate.
- BOUND** With Boundary action, the setpoint output activates when the rate value is greater than or equal to (for  $LSP = HI$ ) or less than or equal to (for  $LSP = LO$ ) the setpoint value. The setpoint output will deactivate (Auto reset) as determined by the hysteresis value.
- TIMEOUT** With Timed Out action, the setpoint output cycles when the rate value is greater than or equal to (for  $LSP = HI$ ) or less than or equal to (for  $LSP = LO$ ) the setpoint value. The Setpoint Time Out ( $TOU-n$ ) and Setpoint On Delay ( $SDO-n$ ) values determine the cycling times.

**PAXC & I: SETPOINT ASSIGNMENT**

↩    A    B    C    RATE  
 ↩

Select the display that the setpoint is to be assigned.

**SETPOINT VALUE**

↩    -99999 to 999999  
 ↩

Enter the desired setpoint value. Setpoint values can also be entered in the Quick Programming Mode when the setpoint is configured as **ENL** in Module 3. (See Module 2 for Exchange Parameter Lists explanation.)

**SETPOINT TRACKING \***

↩    NO    SP-1    SP-2    SP-3  
 ↩    SP-4    RCLD    BCLD    CLD

If a selection other than NO is chosen, then the value of the setpoint being programmed ("n") will track the entered selection's value. Tracking means that when the selection's value is changed (in the Quick Programming Mode), the "n" setpoint value will also change (or follow) by the same amount.

**SETPOINT BOUNDARY TYPE**

↩    HI    LO  
 ↩

**HI** activates the output when the assigned display value (**ACE-n**) equals or exceeds the setpoint value. **LO** activates the setpoint when the assigned display value is less than or equal to the setpoint.

**SETPOINT STANDBY OPERATION \***

↩    YES    NO  
 ↩

Selecting **YES** will disable low acting setpoints at a power up until the display value crosses into the alarm "off" area. Once in the alarm "off" area, the setpoint will function according to the configured setpoint parameters.

**PAXI & R: SETPOINT HYSTERESIS \***

↩    0 to 9999  
 ↩

The hysteresis value is added to (for  $LSP = LO$ ), or subtracted from (for  $LSP = HI$ ), the setpoint value to determine at what value to deactivate the associated setpoint output. Hysteresis is only available for setpoints assigned to the Rate with boundary action.

**PAXI & R: SETPOINT OFF DELAY \***

↩    0.00 to 99.99 seconds  
 ↩

This is the amount of time the Rate display must meet the setpoint deactivation requirements (below hysteresis for high acting and above hysteresis for low acting) before the setpoint's output deactivates.

**PAXI & R: SETPOINT ON DELAY \***

↩    0.00 to 99.99 seconds  
 ↩

This is the amount of time the Rate display must meet the setpoint activation requirements (below setpoint for  $LSP = LO$  and above setpoint for  $LSP = HI$ ) before the setpoint's output activates. If the Rate Setpoint Action is Timed Out, this is the amount of time the output is off during the on / off output cycling.

**SETPOINT TIME OUT \***

↩    0.00 to 99.99 seconds  
 ↩

If the setpoint action is Timed Out and the setpoint is assigned to Rate, then this is the amount of time the output is on during the on / off output cycling. If the setpoint action is Timed Out and the setpoint is assigned to Count, then this is the amount of time the output will activate once the count value equals the setpoint value.

**PAXC & I: COUNTER AUTO RESET \***

↩    NO    ZER-DAS    CLDAS  
 ↩    ZER-DRE    CLDRE

This automatically resets the display value of the Setpoint Assignment (**ASN-n**) counter each time the setpoint value is reached. This reset may be different than the Counter's Reset Action (**xRESE**) in Module 1 or 5.

SELECTION	ACTION
NO	No auto reset.
ZER-DAS	Reset to zero at the start of output activation.
CLDAS	Reset to count load value at the start of output activation.
ZER-DRE	Reset to zero at the end of output activation. ( <b>TOU</b> action only).
CLDRE	Reset to count load value at the end of output activation. ( <b>TOU</b> action only).

\* Factory Setting can be used without affecting basic start-up.

**PAXC & I: SETPOINT RESET WITH DISPLAY RESET \***

Select **YES**, so the setpoint output will deactivate (reset) when the Setpoint Assignment (**ASn-n**) counter display resets. The only exception is if the assigned counter is reset by a Counter Auto reset generated by another setpoint.

**PAXC & I: SETPOINT RESET WHEN SPn+1 ACTIVATES \***

Select **YES**, so the setpoint output will deactivate (reset) when SPn + 1 activates. (Example: SP1 deactivates when SP2 activates and SP4 when SP1 activates.) The last setpoint will wrap around to the first.

**PAXC & I: SETPOINT RESET WHEN SPn+1 DEACTIVATES \***

Select **YES**, so the setpoint output will deactivate (reset) when SPn + 1 activates and then times out (deactivates). This function may only be used if the SPn+1 is programmed for Setpoint Action of **LOUT**. (Example SP1 deactivates when SP2 is activated and then times out.) The last setpoint will wrap around to the first.

\* Factory Setting can be used without affecting basic start-up.

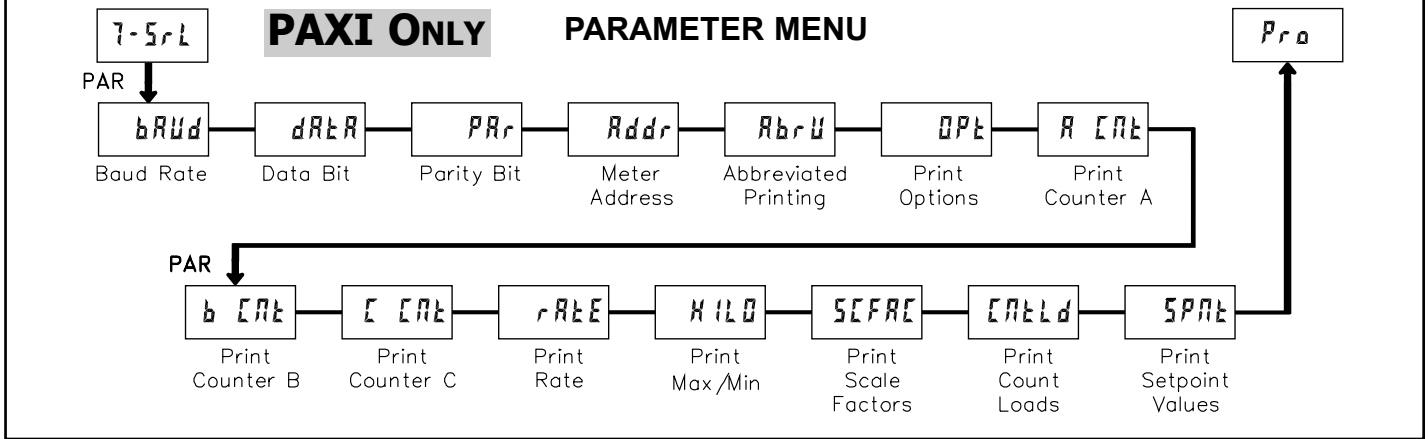

**PAXR & I: SETPOINT (ALARM) FIGURES FOR RATE**

(For Reverse Action, The Alarm state is opposite.)

# 6.7 MODULE 7 - SERIAL COMMUNICATIONS PARAMETERS (7-5rL)

A

Module 7 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the PAXI with those of the host computer or other serial device, such as a terminal or printer. This programming module can only be accessed if an RS232 or RS485 Serial Communications card is installed.

This section also includes an explanation of the commands and formatting required for communicating with the PAXI. In order to establish serial communications, the user must have host software that can send and receive ASCII characters. Red Lion's SFPAX software can be used for configuring the PAXI (See Ordering Information). For serial hardware and wiring details, refer to section 4.5 Serial Communication Wiring.

*This section replaces the bulletin shipped with the RS232 and RS485 serial communications plug-in cards. Discard the separate bulletin when using those serial plug-in cards with the PAXI. Also, this section does NOT apply to the DeviceNet, Modbus, or Profibus-DP communication cards. For details on the operation of the Fieldbus cards, refer to the bulletin shipped with each card.*

### BAUD RATE

**bRUD** ←

↙ **9600**

300	600	1200	2400
4800	9600	19200	

Set the baud rate to match the other serial communications equipment on the serial link. Normally, the baud rate is set to the highest value that all the serial equipment are capable of transmitting and receiving.

### DATA BIT

**dRtR** ←

↙ **7**

7    8

Select either 7 or 8 bit data word lengths. Set the word length to match the other serial communications equipment on the serial link.

### PARITY BIT

**PRr** ←

↙ **Odd**

NO    Odd    EVEN

Set the parity bit to match that of the other serial communications equipment on the serial link. The meter ignores the parity when receiving data and sets the parity bit for outgoing data. If no parity is selected with 7 bit word length, an additional stop bit is used to force the frame size to 10 bits.

### METER UNIT ADDRESS

**Raddr** ←

↙ **00**

00 to 99

Enter the serial meter (node) address. With a single unit, an address is not needed and a value of zero can be used. With multiple units (RS485 applications), a unique 2 digit address number must be assigned to each meter.

### ABBREVIATED PRINTING

**RbrU** ←

↙ **NO**

YES    NO

Select **NO** for full print or Command T transmissions (meter address, parameter data and mnemonics) or **YES** for abbreviated print transmissions (parameter data only). This will affect all the parameters selected in the print options. (If the meter address is 00, it will not be sent during a full transmission.)

### PRINT OPTIONS

**OPt** ←

↙ **NO**

**YES** - Enters the sub-menu to select the meter parameters to appear during a print request. For each parameter in the sub-menu, select **YES** for that parameter information to be sent during a print request or **NO** for that parameter information not to be sent. A print request is sometimes referred to as a block print because more than one parameter information (meter address, parameter data and mnemonics) can be sent to a printer or computer as a block.

PARAMETER	DESCRIPTION	FACTORY	MNEMONIC
<b>R Cnt</b>	Counter A	<b>YES</b>	CTA
<b>b Cnt</b>	Counter B	<b>NO</b>	CTB
<b>C Cnt</b>	Counter C	<b>NO</b>	CTC
<b>rRtE</b>	Rate	<b>NO</b>	RTE
<b>M ILO</b>	Max. & Min.	<b>NO</b>	MIN MAX
<b>SCFAC</b>	A B C Scale Factors	<b>NO</b>	SFA SFB SFC
<b>CntLd</b>	A B C Count Load	<b>NO</b>	LDA LDB LDC
<b>SPnt</b>	1 2 3 4 Setpoints *	<b>NO</b>	SP1 SP2 SP3 SP4

\*Setpoints are plug-in card dependent.

## SENDING SERIAL COMMANDS AND DATA

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a the command terminator character \* or \$. The <CR> is also available as a terminator when Counter C is in the SLAVE mode.

### Command Chart

Command	Description	Notes
N	Node (Meter) Address Specifier	Address a specific meter. Must be followed by <b>two digit</b> node address. Not required when address = 00.
T	Transmit Value (read)	Read a register from the meter. Must be followed by register ID character.
V	Value change (write)	Write to register of the meter. Must be followed by register ID character and numeric data.
R	Reset	Reset a register or output. Must be followed by register ID character
P	Block Print Request (read)	Initiates a block print output. Registers are defined in programming.

### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to invalid commands. The following procedure details construction of a command string:

- The first characters consist of the Node Address Specifier (N) followed by a 2 character address number. The address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
- After the optional address specifier, the next character is the command character.
- The next character is the Register ID. This identifies the register that the command affects. The P command does not require a Register ID character. It prints according to the selections made in print options.
- If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \*, \$ or when Counter C is set for slave mode <CR>. The meter does not begin processing the command string until this character is received. See Timing Diagram figure for differences between terminating characters.

### Register Identification Chart

ID	VALUE DESCRIPTION	REGISTER NAME <sup>1</sup>	COMMAND <sup>2</sup>	TRANSMIT DETAILS <sup>3</sup>
A	Count A	CTA	T, V, R	6 digit (V), 8 digit (T)
B	Count B	CTB	T, V, R	6 digit (V), 8 digit (T)
C	Count C	CTC	T, V, R	6 digit (V), 8 digit (T)
D	Rate	RTE	T, V	5 digit, positive only
E	Min	MIN	T, V, R	5 digit, positive only
F	Max	MAX	T, V, R	5 digit, positive only
G	Scale Factor A	SFA	T, V	6 digit, positive only
H	Scale Factor B	SFB	T, V	6 digit, positive only
I	Scale Factor C	SFC	T, V	6 digit, positive only
J	Count Load A	LDA	T, V	5 negative / 6 positive
K	Count Load B	LDB	T, V	5 negative / 6 positive
L	Count Load C	LDC	T, V	5 negative / 6 positive
M	Setpoint 1	SP1	T, V, R	5 negative / 6 positive
O	Setpoint 2	SP2	T, V, R	5 negative / 6 positive
Q	Setpoint 3	SP3	T, V, R	5 negative / 6 positive
S	Setpoint 4	SP4	T, V, R	5 negative / 6 positive
U	Auto/Manual Register	MMR	T, V	0 - auto, 1 - manual
W	Analog Output Register	AOR	T, V	0 - 4095 normalized
X	Setpoint Register	SOR	T, V	0 - not active, 1 - active

- Register Names are also used as Register Mnemonics during full transmission.
- The registers associated with the P command are set up in Print Options (Module 7).
- Unless otherwise specified, the Transmit Details apply to both T and V Commands.

### Command String Examples:

- Address = 17, Write 350 to Setpoint 1  
String: N17VM350\$
- Address = 5, Read Count A value, response time of 50 - 100 msec. min.  
String: N05TA\*
- Address = 0, Reset Setpoint 4 output  
String: RS\*

### Transmitting Data To the Meter

Numeric data sent to the meter must be limited to Transmit Details listed in the Register Identification Chart. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (ie. The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

*Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.*

### Transmitting Data From the Meter

Data is transmitted from the meter in response to either a transmit command (T), a print block command (P) or User Function print request. The response from the meter is either a full field transmission or an abbreviated transmission. The meter response is established in Module 7.

### Full Transmission

Byte	Description
1, 2	2 byte Node (Meter) Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte numeric data field: 10 bytes for number, one byte for sign, one byte for decimal point
19	<CR> (Carriage return)
20	<LF> (Line feed)
21	<SP> (Space)*
22	<CR> (Carriage return)*
23	<LF> (Line feed)*

\* These characters only appear in the last line of a block print.

The first two characters transmitted (bytes 1 and 2) are the unit address. If the address assigned is 00, two spaces are substituted. A space (byte 3) follows the unit address field. The next three characters (bytes 4 to 6) are the register mnemonic. The numeric data is transmitted next.

The numeric field (bytes 7 to 18) is 12 characters long. When the requested value exceeds eight digits for count values or five digits for rate values, an \* (used as an overflow character) replaces the space in byte 7. Byte 8 is always a space. The remaining ten positions of this field (bytes 9 to 18) consist of a minus sign (for negative values), a floating decimal point (if applicable), and eight positions for the requested value. The data within bytes 9 to 18 is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with <CR> (byte 19), and <LF> (byte 20). When a block print is finished, an extra <SP> (byte 21), <CR> (byte 22), and <LF> (byte 23) are used to provide separation between the transmissions.

### Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 10 bytes for number, one byte for sign, one byte for decimal point
13	<CR> (Carriage return)
14	<LF> (Line feed)
15	<SP> (Space)*
16	<CR> (Carriage return)*
17	<LF> (Line feed)*

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the address and register mnemonics, leaving only the numeric part of the response.

### Meter Response Examples:

- Address = 17, full field response, Count A = 875  
17 CTA 875 <CR><LF>
- Address = 0, full field response, Setpoint 2 = -250.5  
SP2 -250.5<CR><LF>
- Address = 0, abbreviated response, Setpoint 2 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

### Auto/Manual Mode Register (MMR) ID: U

This register sets the controlling mode for the outputs. In Auto Mode (0) the meter controls the setpoint and analog output. In Manual Mode (1) the outputs are defined by the registers SOR and AOR. When transferring from auto mode to manual mode, the meter holds the last output value (until the register is changed by a write). Each output may be independently changed to auto or manual. In a write command string (VU), any character besides 0 or 1 in a field will not change the corresponding output mode.

**Example:** VU00011 places SP4 and Analog in manual.

### Analog Output Register (AOR) ID: W

This register stores the present signal value of the analog output. The range of values of this register is 0 to 4095, which corresponds to the analog output range per the following chart:

Register Value	Output Signal*		
	0-20 mA	4-20 mA	0-10V
0	0.000	4.000	0.000
1	0.005	4.004	0.0025
2047	10.000	12.000	5.000
4094	19.995	19.996	9.9975
4095	20.000	20.000	10.000

*\*Due to the absolute accuracy rating and resolution of the output card, the actual output signal may differ 0.15% FS from the table values. The output signal corresponds to the range selected (0-20 mA, 4-20 mA or 0-10 V).*

Writing to this register (VW) while the analog output is in the Manual Mode causes the output signal level to update immediately to the value sent. While in the Automatic Mode, this register may be written to, but it has no effect until the analog output is placed in the manual mode. When in the Automatic Mode, the meter controls the analog output signal level. Reading from this register (TW) will show the present value of the analog output signal.

**Example:** VW2047 will result in an output of 10.000 mA, 12.000 mA or 5.000V depending on the range selected.

### Setpoint Output Register (SOR) ID: X

This register stores the states of the setpoint outputs. Reading from this register (TX) will show the present state of all the setpoint outputs. A "0" in the setpoint location means the output is off and a "1" means the output is on.

In Automatic Mode, the meter controls the setpoint output state. In Manual Mode, writing to this register (VX) will change the output state. Sending any character besides 0 or 1 in a field or if the corresponding output was not first in manual mode, the corresponding output value will not change. (It is not necessary to send least significant 0s.)

**Example:** VX10 will result in output 1 on and output 2 off.

## COUNTER C SLAVE COMMUNICATIONS

Counter C may be programmed for **SLAVE**, to act as a serial slave display. By doing this, the carriage return <CR> is added as a valid command terminator character for all serial command strings. The <CR> as a terminator may be very useful for standard serial commands, even if Counter C is never displayed or sent a slave message. The \$ terminator should not be used in the slave mode. If numeric values are not to be saved to EPROM then send the value as a literal transmission with <CR> terminator.

The Counter C slave display is right aligned. It has a capacity of displaying six characters. When less than six characters are received, blank spaces will be placed in front of the characters. If more than six characters are sent, then only the last six are displayed. The meter has a 192 character buffer for the slave display. If more than 192 characters are sent, the additional characters are discarded until a terminator is received. Counter C processes numeric and literal transmissions differently.

### Numeric Transmissions

When a string that does not begin with #, T, V, P or R is received, the meter processes it as a Numeric transmission. In this case, only the recognized numbers and punctuation are displayed. All other characters in the string are discarded. If a negative sign appears anywhere in the string the resulting number will be negative. Only the most significant decimal point is retained. If no numerical characters are received, then the numeric value will be zero. The numeric display can be used for setpoint (boundary action only) and analog output functions. When using this display for setpoint and analog output values, the decimal point position must match the programming entered through the front panel. The numeric value is retained in Counter C memory until another Numeric transmission is received.

Recognized Numbers = 0, 1, 2, 3, 4, 5, 6, 7, 8, 9

Recognized Punctuation = period, comma, minus

### Literal Transmissions

When a string that begins with # is received, the meter processes it as a Literal transmission. In this case, any unrecognized characters will be replaced with a space. A Literal display will replace a Numeric value in the Counter C display. However, it will not remove a previous Numeric value from Counter C memory or prevent the Counter C outputs from functioning with the Numeric value. Literal transmissions are only possible when using RS232 or RS485 cards.

Recognized Characters = a, b, c, d, e, f, g, h, i, j, l, n, o, p, q, r, s, t, u, y, z (in upper or lower case)

Recognized Numbers = 0, 1, 2, 3, 4, 5, 6, 7, 8, 9

Recognized Punctuation = period, comma, minus, blank

## COMMAND RESPONSE TIME

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\*, \$ or slave only <CR>) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies (See Timing Diagrams). If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The "\*" or "<CR>" terminating character results in a response time window of 50 msec. minimum and 100 msec. maximum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time window ( $t_2$ ) of 2 msec. minimum and 50 msec. maximum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

## SERIAL TIMING

COMMAND	COMMENT	PROCESS TIME ( $t_2$ )
	Numeric Slave	2-50 msec.
R	Reset	2-50 msec.
#	Literal	2-50 msec.
V	Write	100-200 msec.
T	Transmit	2-50 msec. for \$ 50-100 msec. for * and <CR>
P	Print	2-50 msec. for \$ 50-100 msec. for * and <CR>

### Timing Diagrams

#### NO REPLY FROM METER

#### RESPONSE FROM METER

## COMMUNICATION FORMAT

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character.

The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

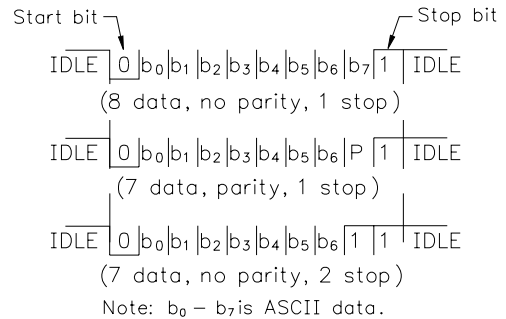

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start bit and Data bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

Character Frame Figure

### Parity bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The PAX meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the PAXI.

## 6.8 MODULE 8 - ANALOG OUTPUT PARAMETERS (B-AAA)

**PAXI ONLY**

Module 8 is the programming for the analog output parameters. To have an analog output signal, an analog output plug-in card needs to be installed (See Ordering Information). This section replaces the bulletin that comes with the analog plug-in card. Please discard the separate literature when using the plug-in card with the PAXI.

### ANALOG TYPE

SELECTION	RANGE
0-20	0 to 20 mA
4-20	4 to 20 mA
0-10	0 to 10 V

Enter the analog output type. For voltage output use terminals 16 and 17. For current output use terminals 18 and 19. Only one range can be used at a time.

### ANALOG ASSIGNMENT

A CnE	b CnE	C CnE
rAxE	LO	HI

Select the display that the analog output is to follow:

- |                         |                    |
|-------------------------|--------------------|
| A CnE = Counter A Value | rAxE = Rate Value  |
| b CnE = Counter B Value | LO = Minimum Value |
| C CnE = Counter C Value | HI = Maximum Value |

### ANALOG LOW SCALE VALUE

Enter the display value within the selected Analog Assignment that corresponds to the low limit of the type selected.

The decimal point is determined by the decimal point setting of the assigned counter or rate. The scale value can not be set to read values with more than 6 digits. Reverse acting output is possible by reversing the scaling values.

### ANALOG HIGH SCALE VALUE

Enter the display value within the selected Analog Assignment that corresponds to the high limit of the type selected.

The decimal point is determined by the decimal point setting of the assigned counter or rate. The scale value can not be set to read values with more than 6 digits. Reverse acting output is possible by reversing the scaling values.

## 6.9 MODULE 9 - FACTORY SERVICE OPERATIONS (9-FCS)

### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (0-15) by using the arrow keys. The display will actively dim or brighten as the levels are changed. This parameter also appears in Quick Programming Mode when enabled.

### RESTORE FACTORY DEFAULTS

Use the arrow keys to display CODE 66 and press PAR. The meter will display rESEt and then returns to CODE 50. Press DSP key to return to the Display Mode. This will overwrite all user settings with the factory settings.

Pressing the PAR and DSP keys at the same time on power-up will load the factory settings and display Err4. This allows operation in the event of a memory failure or corrupted data. Immediately press RST key and reprogram the meter. If the meter is powered down again before pressing the RST key, the existing dynamic data will not be overwritten.

## PAXI: CALIBRATION

The only item in the PAXI meter that can be calibrated is the Analog Output. The Count A and B values are scaled using the parameters in Module 1, Counter C value is scaled using Module 5 and the Rate value is scaled using Module 4. If the meter appears to be indicating incorrectly or inaccurately, refer to the Troubleshooting section.

When Analog Out recalibration is required (generally every 2 years), it should be performed by qualified technicians using appropriate equipment. Calibration does not change any user programmed parameters.

Calibration may be aborted by disconnecting power to the meter before exiting Module 9. In this case, the existing calibration settings remain in effect.

*Note: Allow a 30 minute warm-up period before starting calibration.*

## Analog Output Card Calibration

Before starting, verify that a precision meter with an accuracy of 0.05% or better (voltmeter for voltage output and/or current meter for current output) is connected and ready. Then perform the following procedure:

1. Use the arrow keys to display **Code 48** and press **PAR**.
2. **ALOUT** is displayed. Use the arrow keys to select **YES** and press **PAR**.
3. Using the chart below, step through the five selections to be calibrated. At each prompt, use the PAXI arrow keys to adjust the output so that the external meter display matches the selection being calibrated. When the external reading matches, or if the range is not being calibrated, press **PAR**.

SELECTION	EXTERNAL METER	ACTION
0.0_R	0.00	Adjust if necessary, press <b>PAR</b>
4.0_R	4.00	Adjust if necessary, press <b>PAR</b>
20.0_R	20.00	Adjust if necessary, press <b>PAR</b>
0.0_u	0.00	Adjust if necessary, press <b>PAR</b>
10.0_u	10.00	Adjust if necessary, press <b>PAR</b>

4. When **Code 50** appears, press **PAR** twice and remove the external meters.

## TROUBLESHOOTING

For further assistance, contact technical support at the appropriate company numbers listed.

PROBLEM	REMEDIES
NO DISPLAY	<b>CHECK:</b> Power level, power connections
PROGRAM LOCKED-OUT	<b>CHECK:</b> Active (lock-out) user input <b>ENTER:</b> Security code requested
CERTAIN DISPLAYS ARE LOCKED OUT	<b>CHECK:</b> Module 3 programming
INCORRECT DISPLAY VALUE or NOT COUNTING	<b>CHECK:</b> Input wiring, DIP switch setting, input programming, scale factor calculation, input signal level, user input jumper, lower input signal frequency
USER INPUT NOT WORKING CORRECTLY	<b>CHECK:</b> User input wiring, user input jumper, user input being used for signal, Module 2
OUTPUT DOES NOT WORK	<b>CHECK:</b> Corresponding plug-in card installation, output configuration, output wiring
JITTERY DISPLAY	<b>CHECK:</b> Wiring is per EMC installation guidelines, input signal frequency, signal quality, scaling, update time, DIP switch setting
"r 0101" RATE	<b>CHECK:</b> Lower input signal frequency, reduce rate scaling
MODULES or PARAMETERS NOT ACCESSIBLE	<b>CHECK:</b> Corresponding plug-in card installation, related controlling parameter selected
ERROR CODE (Err 1-4)	<b>PRESS:</b> Reset key (if unable to clear contact factory.)
SERIAL COMMUNICATIONS	<b>CHECK:</b> Wiring, connections, meter and host settings

# PROGRAMMING QUICK OVERVIEW

A

# MODEL PAXI - 1/8 DIN DUAL COUNTER/RATE METER

This is a brief overview of the PAXI. For complete specifications and programming information, see the **PAX Digital Input Panel Meters Bulletin** starting on **page 137**.

- COUNTER, DUAL COUNTER, RATE AND SLAVE DISPLAY
- 6-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- VARIABLE INTENSITY DISPLAY
- 10 POINT SCALING (FOR NON-LINEAR PROCESSES)
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- BUS CAPABILITIES; DEVICENET, MODBUS, AND PROFIBUS-DP
- CRIMSON PROGRAMMING SOFTWARE

## PAXI SPECIFICATIONS

### MAXIMUM SIGNAL FREQUENCIES TABLE

To determine the maximum frequency for the input(s), first answer the questions with a yes (Y) or no (N). Next determine the Count Mode to be used for the counter(s). If dual counters are used with different Count Modes, then the lowest frequency applies to both counters.

FUNCTION QUESTIONS	Single: Counter A or B (with/without rate) or Rate only								Dual: Counter A & B or Rate not assigned to active single counter							
Are any setpoints used?	N	N	N	N	Y	Y	Y	Y	N	N	N	N	Y	Y	Y	Y
Is Prescaler Output used?	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y
Is Counter C used?	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y
<b>COUNT MODE</b>	(Values are in KHz)				(Values are in KHz)				(Values are in KHz)				(Values are in KHz)			
Count x1	34	25	21	17	18	15	13	11	13	12	13	11	9	7.5	9	7

Quadrature x4	8	6	8	6	4	3	4	3								
Rate Only	34	N/A	21	N/A	34	N/A	21	N/A								

### ANNUNCIATORS:

- A - Counter A
- B - Counter B
- C - Counter C
- r - Rate
- H - Maximum (High) Rate
- L - Minimum (Low) Rate
- BF - Upper significant digit display of counter
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### RATE DISPLAY:

- Accuracy: ±0.01%
- Minimum Frequency: 0.01 Hz
- Maximum Frequency: see Max Signal Frequencies Table.
- Maximum Display: 5 Digits: 99999
- Adjustable Display (low) Update: 0.1 to 99.9 seconds
- Over Range Display: "r BLBL"

### COUNTER DISPLAYS:

- Maximum display: 8 digits: ± 99999999 (greater than 6 digits display)
- Alternates between high order and low order.)

### INPUTS A and B:

- DIP switch selectable to accept pulses from a variety of sources including switch contacts, TTL outputs, magnetic pickups and all standard RLC sensors.
- LOGIC: Input trigger levels  $V_{IL} = 1.5 \text{ V max.}$ ;  $V_{IH} = 3.75 \text{ V min.}$
- Current sinking: Internal 7.8 KΩ pull-up to +12 VDC,  $I_{MAX} = 1.9 \text{ mA.}$
- Current sourcing: Internal 3.9 KΩ pull-down, 7.3 mA max. @ 28 VDC,  $V_{MAX} = 30 \text{ VDC.}$
- Filter: Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.
- MAGNETIC PICKUP:
  - Sensitivity: 200 mV peak
  - Hysteresis: 100 mV
  - Input impedance: 3.9 KΩ @ 60 Hz
  - Maximum input voltage: ±40 V peak, 30 Vrms

### DUAL COUNT MODES:

When any dual count mode is used, then User Inputs 1 and/or 2 will accept the second signal of each signal pair. The user inputs do not have the Logic/Mag, HI/LO Freq, and Sink/Source input setup switches. The user inputs are inherently a logic input with no low frequency filtering. Any mechanical contacts used for these inputs in a dual count mode must be debounced externally. The user input may only be selected for sink/source by the User Jumper placement.

### PRESCALER OUTPUT:

- NPN Open Collector:  $I_{SNK} = 100 \text{ mA max. @ } V_{OL} = 1 \text{ VDC max. } V_{OH} = 30 \text{ VDC max.}$  With duty cycle of 25% min. and 50 % max.

# MODEL CUB5 - MINIATURE ELECTRONIC 8-DIGIT DUAL COUNTER AND RATE INDICATOR

This is a brief overview of the CUB5. For complete specifications and programming information, see the **CUB5 Bulletin** starting on **page 102**.

- LCD, REFLECTIVE OR GREEN/RED LED BACKLIGHTING
- 0.46" (11.7 mm) HIGH DIGITS
- OPTIONAL RELAY OUTPUT MODULE
- OPTIONAL COMMS OUTPUT MODULES
- COUNT SPEEDS UP TO 20 KHZ
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- PROGRAMMABLE SCALING FOR COUNT AND RATE
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (UP TO 4 TIMES RESOLUTION)
- ANTI-COINCIDENCE COUNTING (ADD/ADD & ADD/SUB)
- NEMA 4X/IP65 SEALED FRONT BEZEL

## SPECIFICATIONS

### COUNTER DISPLAYS:

**Counter A:** 8-digits, enabled in all count modes

Display Range: -9999999 to 9999999

Overflow Indication: Display flashes "Cnt Over"

**Counter B:** 7-digits, enabled in Dual Counter mode only

Display Designator: "b" to the left side of the display

Display Range: 0 to 9999999 (positive count only)

Overflow Indication: Display flashes "bCntOver"

**Maximum Count Rates:** 50% duty cycle

Without setpoint option card: 20 KHz (all count modes)

With setpoint option card: 20 KHz for any count mode except Quadrature x4 (18 KHz) and Dual Counter (17 KHz)

**RATE DISPLAY:** 6-digits, may be enabled or disabled in any mode

**Display Designator:** "R" to the left side of the display

**Display Range:** 0 to 999999

**Over Range Display:** "R 0.0000"

**Maximum Frequency:** 20 KHz

**Minimum Frequency:** 0.01 Hz

**Accuracy:**  $\pm 0.01\%$

### COUNT/RATE SIGNAL INPUTS (INP A and INP B):

**Input A:** DIP switch selectable to accept pulses from a variety of sources.

See Section 2.0 Setting the DIP Switches for Input A specifications.

**Input B:** Logic signals only

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

Current sinking: Internal 10K $\Omega$  pull-up resistor to +9 to 28 VDC

Filter (LO Freq.): Damping capacitor provided for switch contact bounce.

Limits input frequency to 50 Hz and input pulse widths to 10 msec min.

# C48C SERIES - 1/16 DIN COUNTERS

MODEL C48CS - SINGLE PRESET

MODEL C48CD - DUAL PRESET

MODEL C48CB - THREE PRESET BATCH

B

- LCD, 7 SEGMENT, 2 LINE, 6 DIGIT DISPLAY, POSITIVE REFLECTIVE OR NEGATIVE TRANSMISSIVE MODELS WITH RED TOP LINE AND GREEN BOTTOM LINE BACKLIGHTING
- QUADRATURE SENSING ( Up to 4 times resolution)
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- FIELD REPLACEABLE RELAY OUTPUT BOARDS
- STATUS INDICATORS FOR OUTPUTS
- NEMA 4X/IP65 SEALED BEZEL
- PARAMETER SECURITY VIA PROGRAMMABLE OPERATOR ACCESS PRIVILEGES AND PROTECTED VALUE MENU
- PROGRAMMABLE USER INPUTS AND FRONT PANEL FUNCTION KEY

- HORIZONTAL OR VERTICAL STACKING OF MULTIPLE UNITS
- 85 to 250 VAC OR 18 to 36 VDC/24 VAC POWERED UNITS
- RS485 SERIAL COMMUNICATIONS OPTION
- CHOICE OF NUMERIC DATA ENTRY MODES

UL Recognized Component,  
File # E137808

## DESCRIPTION

The Model C48 Counter is available as a Standard Counter or a Batch Counter. The Standard Counter is available with single or dual presets. The Batch Counter has a main process counter with dual presets and a secondary counter with a single preset. The secondary counter can be selected to function as a batch or a total counter.

The C48C features a 7 segment, 2 line by 6 digit reflective or backlit LCD display. For the backlit versions, the main display line is red and shows the count value or the Batch/Total value when preset 3 or output 3 is viewed in the secondary display. The smaller secondary display line is green and can be used to view the prescaler value, preset values, output time values or Batch/Total count values (Batch model).

The C48C offers a choice of nine programmable counting modes for use in applications requiring bi-directional, anti-coincidence, and quadrature counting. The unit may be programmed to register counts on both edges of the input signal providing frequency doubling capability. DIP switches are used for input configuration set-up and to provide a Program Disable function.

Four front panel push-buttons are used for programming the operating modes and data values, changing the viewed display, and performing user programmable functions, e.g. reset, etc. The C48C can be configured for one of two numeric data entry methods, digit entry or automatic scrolling. The digit entry method allows for the selection and incrementing of digits individually. The automatic scrolling method allows for the progressive change of one through all digit positions by pressing and holding the “up” or “down” button.

The Program Disable DIP switch, a user-programmable code value, and an external user input selected for Program Disable can be utilized to provide multi-level protection against unauthorized changes to data values and unit configuration.

The C48 Counter has programmable User Inputs and a programmable front panel function key. The user inputs can be configured as sinking (active low) or sourcing (active high) inputs via a single plug jumper. The user inputs and the front panel function key can be configured to provide a variety of functions.

The Standard Counter with Dual Presets is available with solid-state or Relay outputs. The Single Preset model has a solid-state and relay output. The Batch Counter has relay outputs for Output 2 and the Batch/Total Output 3, with Output 1 available as solid-state. The Batch Counter is also available with three solid-state outputs. For all C48 Counters, the solid-state outputs are available in a choice of NPN current sinking or PNP current sourcing, open-collector transistor outputs. All relay output boards are field replaceable.

A Prescaler Output model is available as a Dual Preset, with solid-state outputs. The Prescaler Output is useful for providing a lower frequency scaled pulse train to a PLC or another external totalizing counter. The Prescaler Output provides a programmable width output pulse for every count or every 10 counts registered on the display.

The optional RS-485 serial communication interface provides two-way communication between a C48 and other compatible equipment such as a printer, PLC, HMI, or a host computer. In multipoint applications (up to thirty-two), the address number of each C48 on the line can be programmed from 0 to 99. Data from the C48 can be interrogated or changed, and alarm output(s) may be reset by sending the proper command code via serial communications. PC software, SFC48, allows for easy configuration of controller parameters. These settings can be saved to disk for later use or used for multi-controller down loading. On-line help is provided within the software.

Optional programming software (SFC48) is available to program all unit configuration parameters. The software allows unit configurations to be created, uploaded, downloaded, and saved to a file for later use or multi-unit programming.

The unit is constructed of a lightweight, high impact plastic case with a textured front panel and a clear display window. The front panel meets NEMA 4X/IP65 specifications when properly installed. Multiple units can be stacked horizontally or vertically. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the C48 Counters extremely reliable in industrial environments.

## DIMENSIONS “In inches (mm)”

## SPECIFICATIONS

1. **DISPLAY:** 2 Line by 6 digit LCD display. Positive image reflective or negative image transmissive with red (top line) and green (bottom line) backlighting

**Main Display:** 0.3" (7.62 mm) high digits

**Secondary Display:** 0.2" (5.08 mm) high digits

**Annunciators:**

**Value:** PRS, 1, 2, and 3

**Output:** 01, 02, and 03.

2. **POWER REQUIREMENTS:**

**AC Versions:**

**AC Power:** 85 to 250 VAC, 50/60 Hz, 9 VA max.

**DC Power:** 11 to 14 VDC @ 150 mA max. (Non PNP output models)

*Note: Models with PNP current sourcing outputs must be powered from AC.*

**DC Versions (C48XXX1X):**

**CONTINUOUS:**

**DC Power:** 18 to 36 VDC; 5.5 W max.

**AC Power:** 24 VAC  $\pm 10\%$ ; 50/60 Hz; 7 VA max.

*Note: The +10% tolerance range on AC input voltage must be strictly adhered to. DO NOT EXCEED 26.4 VAC.*

**PEAK (START-UP CURRENT):**

**AC or DC Power:** 500 mA peak start-up current for 10 msec max.

**DC OUT (V<sub>src</sub> IN) - Terminal 10**

For units which do not have PNP current sourcing outputs, this terminal provides a DC output for sensor power (+12 VDC  $\pm 15\%$ ). The maximum sensor current is 100 mA.

For units with PNP current sourcing outputs, this terminal serves a dual purpose depending on the application's PNP output voltage level and current requirements.

1. The terminal may be used as a +12 VDC output for sensor power.

In this case, the PNP output voltage level will be +12 VDC ( $\pm 15\%$ ). A maximum of 100 mA is available for the combination of sensor current and PNP output sourcing current.

2. If a higher PNP output voltage level or additional output sourcing current is desired, an external DC supply may be connected between the "DC OUT (V<sub>src</sub> IN)" and "COMM." terminals. This supply will determine the PNP output voltage level, and must be in the range of +13 to +30 VDC.

An external DC supply can also provide the additional output sourcing current required in applications where two or more PNP outputs are "ON" simultaneously. However, the maximum current rating of 100 mA per individual output must not be exceeded, regardless of external supply capacity.

3. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and count values.

4. **SENSOR POWER:** +12 VDC ( $\pm 15\%$ ) @ 100 mA max.

5. **COUNT INPUTS A & B:** Accepts count pulses from a variety of sources, DIP switch selectable.

**Current Sourcing:** 3.9K $\Omega$  pull-down, V<sub>IN</sub> max = 30 VDC

**Current Sinking:** 7.8K $\Omega$  pull-up to 12 VDC; I<sub>SNK</sub> = 1.8 mA max.

**Debounce:** 50 Hz max.

**Lo Bias:** V<sub>IL</sub> = 1.5 VDC max., V<sub>IH</sub> = 3.75 VDC min.

**Hi Bias:** V<sub>IL</sub> = 5.5 VDC max., V<sub>IH</sub> = 7.5 VDC min.

6. **MAX. COUNT RATE:** Model dependent. All listed values are in KHz.

*Note: Max. count rates for X2 & X4 modes are given for 50 % duty cycle signals and quad signals with 90° phase shift.*

\* - Inputs A & B rates summed.

7. **USER INPUTS:** Configurable as current sinking (active low) or current sourcing (active high) inputs via a single plug jumper.

**Current Sinking:** V<sub>IL</sub> = 1.5 VDC max, 22 K $\Omega$  pull-up to 5 VDC.

**Current Sourcing:** V<sub>IH</sub> = 3.5 VDC min., V<sub>IN</sub> max = 30 VDC; 22 K $\Omega$  pull-down.

**Response Time** = 10 msec max.

**Inhibit Response Time** = 250  $\mu$ sec max.

8. **OUTPUTS:** (Output type and quantity, model dependent)

**Solid-State:**

**NPN Open Collector:** I<sub>SNK</sub> = 100 mA max. @ V<sub>OL</sub> = 1.1 VDC max.; V<sub>OH</sub> = 30 VDC max.

**PNP Open Collector:** I<sub>SRC</sub> = 100 mA max. (See note); V<sub>OH</sub> = 12 VDC  $\pm 15\%$  (using internal supply); V<sub>OH</sub> = 13 to 30 VDC (using external supply).

*Note: The internal supply of the C48C can provide a total of 100 mA for the combination of sensor current and PNP output sourcing current. The supply voltage is +12 VDC ( $\pm 15\%$ ), which will be the PNP output voltage level when using only the internal supply.*

*If additional PNP output sourcing current or a higher output voltage level is desired, an external DC supply may be connected between the "DC Out/In" and "Comm." terminals. This supply will determine the PNP output voltage level, and must be in the range of +13 to +30 VDC.*

*An external supply can provide the additional output sourcing current required in applications where two or more outputs are "ON" simultaneously. However, the maximum rating of 100 mA per individual output must not be exceeded, regardless of external supply capacity.*

8. **OUTPUTS:** (Output type and quantity, model dependent) **Cont'd**  
**Relay:** Form A contact, Rating = 5 A @ 250 VAC, 30 VDC (resistive load), 1/10 HP @ 120 VAC (inductive load)  
**Relay Life Expectancy:** 100,000 cycles min. at max. load rating  
**Programmable Timed Output:** User selectable output time resolution.  
**0.01 Second Resolution:** 0.01 to 99.99 sec,  $\pm 0.01\%$  +20 msec max. (Prescalers less than 2)  
**0.1 Second Resolution:** 0.1 to 999.9 sec,  $\pm 0.01\%$  + 100 msec (Prescalers less than 2)  
*Note: For Prescaler values above 2, the timed delay output is affected by the count speed (rate).*
9. **RS485 SERIAL COMMUNICATIONS (Optional):** Up to 32 units can be connected.  
**Baud Rate:** Programmable from 1200 to 9600 baud  
**Address:** Programmable from 0 to 99  
**Data Format:** 10 Bit Frame, 1 start bit, 7 or 8 data bits, 1 or No Parity bit, and 1 stop bit  
**Parity:** Programmable for Odd (7 data bits), Even (7 data bits), or None (8 data bits)
10. **CERTIFICATIONS AND COMPLIANCES:**

- Notes:*  
**AC VERSIONS**  
 1. A power line filter, RLC#LFIL0000 or equivalent, was installed when the unit was DC powered.
- DC VERSIONS**  
 To insure compliance with the EMC standards listed above, do not connect any wires from the terminal(s) labeled "COMM." to the "DC-" supply terminal (12), when powering the unit from a DC supply.
- Refer to EMC Installation Guidelines section of the manual for additional information.
11. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0°C to 50°C  
**Storage Temperature:** -40°C to 70°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.  
**Altitude:** Up to 2000 meters
12. **ELECTRICAL CONNECTIONS:** Wire clamping screw terminals.
13. **CONSTRUCTION:** Black plastic case with collar style panel latch. The panel latch can be installed for horizontal or vertical stacking. Black plastic textured bezel with clear display viewing window. Unit assembly with circuit boards can be removed from the case without removing the case from the panel or disconnecting the wiring. Front panel meets NEMA 4X/IP65 requirements for indoor use, when properly installed. Installation Category II, Pollution Degree 2.
14. **WEIGHT:** 6.0 oz (170 g)

## SINGLE PRESET MODELS

The C48CS has a solid-state output that operates in parallel with a relay output. The solid-state output is available as an NPN or PNP open collector transistor.

## DUAL PRESET MODELS

The C48CD has two outputs that are activated from presets 1 and 2 respectively. These outputs can be relay outputs, or solid-state outputs. The solid-state outputs are available as NPN or PNP open-collector transistors. Units with solid-state outputs can be ordered with an optional prescaler output (C48CP).

## 3 PRESET BATCH MODELS

The C48CB has a secondary counter that can be used for batch counting, or to keep a total count. This second counter can be programmed to operate in one of eight operating modes. Outputs 1 and 2 are assigned to the primary process counter (C1). Output 3 is assigned to the secondary Batch/Total counter (C2). The three preset batch unit can be ordered with solid-state or relay outputs. Units with solid-state outputs have a User Input 2 terminal available. The relay model has a relay output for Output 2 and Output 3 (Batch/Total). Output 1 is available only as solid-state.

## PRESCALER OUTPUT MODELS

The C48CP is a dual preset counter with solid-state outputs. These models have an additional output configured as a prescaler output. Each time the least significant digit of the display increments, the Prescaler output provides a pulse. The width of this pulse is variable in that the output will turn off after a programmed number of count input pulses has occurred (1-9). The Prescaler output can also be programmed to activate when the 10's digit of the display increments, rather than the least significant digit.

*Note: Prescaler Output models are limited to two programmable count modes and prescaler values of 1.00000 or less. See Count Input Modes for available modes.*

## FRONT PANEL FEATURES

The C48 Counters feature a dual line display. In the normal operating mode (main display), the count or batch/total value is shown on the top line and presets, prescaler, or output time values are shown on the bottom line. The bottom line values can be programmed to be viewable only, viewable and changeable, or locked (not viewable) from the main display.

In the operating mode, the presets, prescaler, and output time values are accessible providing that these values are not programmed for 'L'ocked. Values that are accessible (changeable) can be changed immediately when viewed in the secondary display.

### FRONT PANEL KEYPAD

- Performs user Programmed Function

- Cycles through secondary displays.  
 - Enters Protected Value Menu or Programming Mode when pushed and held for 2 seconds.  
 - Scrolls through programming parameters.  
 - Enters Data Values.

- Selects next available mode in programming mode.  
 - Increments digit in Digit Entry mode.  
 - Increments value in Auto Scrolling entry mode.

- Selects Digit to right when in Digit Entry mode.  
 - Decrements value in Auto Scrolling entry mode.

## USER INTERFACE/PROGRAMMING MODES

The operating modes of the C48C are programmed using the front panel keypad. To enter the programming menu, the  key is pushed and held for 2 seconds. Within the programming menu, the  key is used to sequence through the list of programming parameters.

### PROGRAMMING MENU

- Entry** - Digit or Auto Scrolling Data Entry Mode
- Ac PSc** - Accessibility of Prescaler Value
- PScALr** - Prescaler Value
- dEc Pt** - Decimal Point Position
- Cnt In** - Count Input Modes
- OPEr 1** - Counter 1 Operating Mode
- C2 ASn** - Counter 2 Assignment (C48CB only)
- OPEr 2** - Counter 2 Operating Mode (C48CB only)
- Ac PrS** - Accessibility of Preset Values
- PrESEt** - Preset 1, 2, and 3 Values
- P ltrAC** - P1 Track P2 (not available on C48CS)
- Ac Out** - Accessibility of Output Time Values
- OutRES** - Output Resolution
- OutPnt** - Output 1, 2, and 3 Time Values
- rEUOut** - Reverse Output/Relay Logic
- rEUAnu** - Reverse Output Annunciator Logic
- OutPwP** - Power Up Output State
- USr In 1** - User Input 1
- USr In 2** - User Input 2 (Not available on Batch Relay Models)
- USr In b** - User Input b
- USr F 1** - User F1 Key
- Code** - Programming/Protected Parameter menu Code
- ScroLL** - Scroll Display
- SErSEt** - Serial Baud Rate & Parity Settings
- SErAdr** - Serial Unit Address
- SErAbr** - Abbreviate Serial Mnemonics
- PrnOPt** - Print Options
- PrnrSt** - Print & Reset Count Value
- PScORt** - Prescaler Output Pulse (C48CP only)
- PScLEn** - Prescaler Output Pulse Length {width} (C48CP only)
- FRcSEt** - Load Factory Default Settings

(RS485 option only)

### Program Security/Operator Accessible Values

The Program Disable DIP switch, programmable code value, User Input (programmed for Program Disable), and the Accessible Value parameters provide various levels of security against unauthorized programming changes. The accessible values parameters provide individual access or locking of each value.

### Protected Value Menu

The Protected Value Menu allows access to selected presets, prescaler and timed output values without having them viewable or changeable from the main display. To enter the protected menu, the  key is pressed and held, and a programmed code value is entered.

### Programming Numeric Data Values

The Presets may be accessible when the unit is in its operating mode. Pressing the  key will sequence the secondary display through the available preset, prescaler and Batch/Total count values.

To change a data value it must be visible on the secondary display. Pressing the  or  key will allow changing of the value. If the data entry method has been set to "digit entry", pressing the  key multiple times will select other digits. Pressing the  key will increment the selected digit. If the data entry method is set to "Auto scrolling", the data value can be changed by pressing and holding the  or  keys to change one or all digits of the display. The data value will be entered when the  key is pushed, or the old value will be retained if no key activity is detected for 10 seconds.

### Count Input Modes - Cnt In

This parameter controls the count/control function of Inputs A and B. It also allows Input B to be used as a User Input with the same programmable functions as the dedicated User Inputs.

MODE	INPUT A	INPUT B
<b>C1-USr</b>	Count	User Input *
<b>C2-USr</b>	Count (X2)	User Input
<b>C1-Ud</b>	Count	Up/Dn Control *
<b>C2-Ud</b>	Count (X2)	Up/Dn Control
<b>Ad-Sub</b>	Add Count	Subtract Count
<b>Ad-Ad</b>	Add Count	Add Count
<b>QUAd 1</b>	Quad X1 Inputs	
<b>QUAd 2</b>	Quad X2 Inputs	
<b>QUAd 4</b>	Quad X4 Inputs	

\* These are the only count input modes available on the Prescaler Output Model.

### Programmable Operating Modes - OPEr

These modes determine the operational characteristics of the counter. In the tables, 01, 02, and 03, refer to Outputs 1,2, and 3 respectively.

SINGLE PRESET OPERATING MODES	
1	- Manual Reset to Zero, Latched Output
2	- Manual Reset to Zero, Timed Output
3	- Manual Reset to Preset, Latched Output
4	- Manual Reset to Preset, Timed Output
5	- Auto Reset to Zero, Timed Output
6	- Auto Reset to Preset, Timed Output
7	- Auto Reset to Zero at Timed Output End
8	- Auto Reset to Preset at Timed Output End

DUAL PRESET AND BATCH COUNTER 1 OPERATING MODES	
1	- Manual Reset to Zero, Latched Outputs
2	- Manual Reset to Zero, 01 Timed, 02 Latched
3	- Manual Reset to Zero, 01 and 02 Timed
4	- Manual Reset to Zero, 01 off at 02, 02 Latched
5	- Manual Reset to Zero, 01 off at 02, 02 Timed
6	- Manual Reset to Preset 2, Latched Outputs
7	- Manual Reset to Preset 2, 01 Timed, 02 Latched
8	- Manual Reset to Preset 2, 01 and 02 Timed
9	- Manual Reset to Preset 2, 01 off at 02, 02 Latched
10	- Manual Reset to Preset 2, 01 off at 02, 02 Timed
11	- Auto Reset to Zero, 01 and 02 Timed
12	- Auto Reset to Zero, 01 off at 02, 02 Timed
13	- Auto Reset to Preset 2, 01 and 02 Timed
14	- Auto Reset to Preset 2, 01 off at 02, 02 Timed
15	- Auto Reset to Zero at 02 End, 01 and 02 Timed
16	- Auto Reset to Zero at 02 End, 01 off at 02, 02 Timed
17	- Auto Reset to Preset 2 at 02 End, 01 and 02 Timed
18	- Auto Reset to Preset 2 at 02 End, 01 off at 02, 02 Timed

COUNTER 2 OPERATING MODES (C48CB Only)	
1	- Manual Reset to Zero, 03 Latched
2	- Manual Reset to Zero, 03 Timed
3	- Manual Reset to Preset 3, 03 Latched
4	- Manual Reset to Preset 3, 03 Timed
5	- Auto Reset to Zero, 03 Timed
6	- Auto Reset to Zero at 03 Timed Output End
7	- Auto Reset to Preset 3, 03 Timed
8	- Auto Reset to Preset 3 at 03 Timed Output End

## MULTIPLE UNIT STACKING

The C48C is designed for close spacing of multiple units. Units can be stacked either horizontally or vertically. For vertical stacking, install the panel latch with the screws to the sides of the unit. For horizontal stacking, the panel latch screws should be at the top and bottom of the unit. The minimum spacing

from center line to center line of the units is 1.96" (49.8 mm). This spacing is the same for vertical or horizontal stacking.

*Note: When stacking units, provide adequate panel ventilation to ensure that the maximum operating temperature range is not exceeded.*

PANEL LATCH INSTALLED FOR VERTICAL UNIT STACKING

PANEL LATCH INSTALLED FOR HORIZONTAL UNIT STACKING

PANEL CUT-OUT SPACING FOR MULTIPLE UNIT STACKING. HORIZONTAL ARRANGEMENT SHOWN.

## SLOW DOWN & CUT TO LENGTH WITH TOTAL FOOTAGE

To improve production efficiency, a wallpaper manufacturing plant is installing cut to length counters on the roll form machines. Currently, electro-mechanical counters are used for length measurements. The operator slows the machine down upon arriving at the desired length, stops and then cuts. The addition of the C48CB batch counters eliminates the operator's manual observation and control.

The operator programs the required cut length as Preset 2. Preset 1 is preprogrammed for tracking and will automatically follow Preset 2. Preset 1 is used as the slow down, and is set for a value 0.25 yards less than Preset 2. The process count is programmed to automatically reset at the Preset 2 cut length of 11.00 yards, and begin counting for the next roll. Counter 2 is programmed as a totalizer and is recorded and reset (via key switch) at the end of the operator's shift. The C48CB was ordered with the RS-485 serial communication option. Future plans include a data acquisition program to interrogate the C48CB's. A 100 ppr rotary pulse generator is shaft coupled to a 4" pinch roller for length measurement. Display units desired is 0.01 yards. Program Security features are set to allow access to Preset 2 only. This allows the operator to change the required cut length, but prevents accidental changes to other programming parameters that may adversely affect process operation. After all programming is complete, the Program Disable DIP switch is moved to the up position to enable the Program Security function.

### Circumference Of Pinch Roller:

$$\text{circumference} = \pi \times \text{diameter}$$

$$12.56636 = 3.14159 \times 4.00$$

### Pulses Per Yard:

$$\frac{36 \text{ inches}}{1 \text{ yard}} \times \frac{1 \text{ rev}}{12.56636''} = 2.8647913 \text{ rev/yard}$$

$$2.8647913 \text{ rev/yard} \times 100 \text{ ppr/rev} = 286.47913 \text{ pulses/yard}$$

### Prescaler:

$$\text{Prescaler} = \frac{\text{Display units}}{\text{number of pulses}}$$

$$= \frac{100}{286.47913}$$

$$\text{Prescaler} = 0.34907$$

# MODEL PAXLCR - 1/8 DIN PAX LITE DUAL COUNTER AND RATE METER

This is a brief overview of the PAXLCR. For complete specifications and programming information, see the [PAX Lite Dual Counter and Rate Meter Bulletin](#) starting on [page 125](#).

- 6 DIGIT, 0.56" HIGH RED LED DISPLAY
- PROGRAMMABLE SCALING FOR COUNT AND RATE
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (UP TO 4 TIMES RESOLUTION)
- BUILT-IN BATCH COUNTING CAPABILITY
- PROGRAMMABLE USER INPUT
- DUAL 5 AMP FORM C RELAYS
- UNIVERSALLY POWERED
- NEMA 4X/IP65 SEALED FRONT BEZEL

## ANNUNCIATORS:

- A - Counter A value
- B - Counter B value (dual count or batch)
  - Rate value is displayed with no designator
- SP1 - Indicates setpoint 1 output status
- SP2 - Indicates setpoint 2 output status

## COUNTER DISPLAYS:

- Counter A:** 6-digits, enabled in all count modes
  - Display Designator: "A" to the left side of the display
  - Display Range: -99999 to 999999
- Counter B:** 6-digits, enabled in Dual Count mode or Batch Counter
  - Display Designator: "B" to the left side of the display
  - Display Range: 0 to 999999 (positive count only)
- Overflow Indication:** Display "fl fl" alternates with overflowed count value
- Maximum Count Rates:** 50% duty cycle, count mode dependent.
  - With setpoints disabled: 25 KHz, all modes except Quadrature x4 (23 KHz).
  - With setpoint(s) enabled: 20 KHz, all modes except Dual Counter (14 KHz), Quadrature x2 (13 KHz) and Quadrature x4 (12 KHz).

**RATE DISPLAY:** 6-digits, may be enabled or disabled in any count mode

- Display Range:** 0 to 999999
- Over Range Display:** "fl fl"
- Maximum Frequency:** 25 KHz
- Minimum Frequency:** 0.01 Hz
- Accuracy:**  $\pm 0.01\%$

## COUNT/RATE SIGNAL INPUTS (INPUT A and INPUT B):

See Section 2.0 Setting the DIP Switches for complete Input specifications. DIP switch selectable inputs accept pulses from a variety of sources. Both inputs allow selectable active low or active high logic, and selectable input filtering for low frequency signals or switch contact debounce.

**Input A:** Logic level or magnetic pickup signals.

Trigger levels:  $V_{IL} = 1.25$  V max;  $V_{IH} = 2.75$  V min;  $V_{MAX} = 28$  VDC  
Mag. pickup sensitivity: 200 mV peak, 100 mV hysteresis, 40 V peak max.

**Input B:** Logic level signals only

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

# MODEL PAXC - 1/8 DIN COUNTER

This is a brief overview of the PAXC. For complete specifications and programming information, see the **PAX Digital Input Panel Meters Bulletin** starting on **page 137**.

- 6-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY (Alternating 8 digits for counting)
- DUAL COUNT QUAD INPUTS
- UP TO 3 COUNT DISPLAYS
- FOUR SETPOINT ALARM OUTPUTS (W/Plug-in card)

**B**

## PAXC SPECIFICATIONS

### MAXIMUM SIGNAL FREQUENCIES:

To determine the maximum frequency for the input(s), first answer the questions with a yes (Y) or no (N). Next determine the Count Mode to be used for the counter(s). If dual counters are used with different Count Modes, then the lowest frequency applies to both counters.

FUNCTION QUESTIONS	Single: Counter A or B				Dual: Counter A & B			
	N	N	Y	Y	N	N	Y	Y
Are any setpoints used?	N	N	Y	Y	N	N	Y	Y
Is Counter C used?	N	Y	N	Y	N	Y	N	Y
COUNT MODE	(Values are in KHz)				(Values are in KHz)			
Count x1	34	25	18	15	13	12	9	7.5
Count x2	17	13	9	7	9	7	5	4
Quadrature x1	22	19	12	10	7	6	4	3.5
Quadrature x2	17	13	9	7	7	6	4	3.5
Quadrature x4	8	6	4	3				

### Notes:

1. Counter Modes are explained in the Module 1 programming section.
2. Listed values are with frequency DIP switch set on HI frequency.

### ANNUNCIATORS:

- A - Counter A
- B - Counter B
- C - Counter C
- UF** - Upper significant digit display of counter
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### COUNTER DISPLAYS:

Maximum display: 8 digits: ± 99999999 (greater than 6 digits display Alternates between high order and low order.)

### INPUTS A and B:

DIP switch selectable to accept pulses from a variety of sources including switch contacts, TTL outputs, magnetic pickups and all standard RLC sensors.

LOGIC: Input trigger levels  $V_{IL} = 1.5 \text{ V max.}$ ;  $V_{IH} = 3.75 \text{ V min.}$

Current sinking: Internal  $7.8 \text{ K}\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9 \text{ mA.}$   
 Current sourcing: Internal  $3.9 \text{ K}\Omega$  pull-down,  $7.3 \text{ mA max. @ 28 VDC,}$   
 $V_{MAX} = 30 \text{ VDC.}$

Filter: Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.

### DUAL COUNT MODES:

When any dual count mode is used, then User Inputs 1 and/or 2 will accept the second signal of each signal pair. The user inputs do not have the Logic/Mag, HI/LO Freq, and Sink/Source input setup switches. The user inputs are inherently a logic input with no low frequency filtering. Any mechanical contacts used for these inputs in a dual count mode must be debounced externally. The user input may only be selected for sink/source by the User Jumper placement.

# MODEL PAXI - 1/8 DIN DUAL COUNTER/RATE METER

This is a brief overview of the PAXI. For complete specifications and programming information, see the **PAX Digital Input Panel Meters Bulletin** starting on **page 137**.

B

- COUNTER, DUAL COUNTER, RATE AND SLAVE DISPLAY
- 6-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- VARIABLE INTENSITY DISPLAY
- 10 POINT SCALING (FOR NON-LINEAR PROCESSES)
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- BUS CAPABILITIES; DEVICENET, MODBUS, AND PROFIBUS-DP
- CRIMSON PROGRAMMING SOFTWARE

## PAXI SPECIFICATIONS

### MAXIMUM SIGNAL FREQUENCIES TABLE

To determine the maximum frequency for the input(s), first answer the questions with a yes (Y) or no (N). Next determine the Count Mode to be used for the counter(s). If dual counters are used with different Count Modes, then the lowest frequency applies to both counters.

FUNCTION QUESTIONS	Single: Counter A or B (with/without rate) or Rate only								Dual: Counter A & B or Rate not assigned to active single counter							
Are any setpoints used?	N	N	N	N	Y	Y	Y	Y	N	N	N	N	Y	Y	Y	Y
Is Prescaler Output used?	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y
Is Counter C used?	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y
<b>COUNT MODE</b>	(Values are in KHz)				(Values are in KHz)				(Values are in KHz)				(Values are in KHz)			
Count x1	34	25	21	17	18	15	13	11	13	12	13	11	9	7.5	9	7

Quadrature x4	8	6	8	6	4	3	4	3								
Rate Only	34	N/A	21	N/A	34	N/A	21	N/A								

### ANNUNCIATORS:

- A - Counter A
- B - Counter B
- C - Counter C
- r - Rate
- H - Maximum (High) Rate
- L - Minimum (Low) Rate
- BF - Upper significant digit display of counter
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### RATE DISPLAY:

- Accuracy:  $\pm 0.01\%$
- Minimum Frequency: 0.01 Hz
- Maximum Frequency: see Max Signal Frequencies Table.
- Maximum Display: 5 Digits: 99999
- Adjustable Display (low) Update: 0.1 to 99.9 seconds
- Over Range Display: "r BLBL"

### COUNTER DISPLAYS:

- Maximum display: 8 digits:  $\pm 99999999$  (greater than 6 digits display)
- Alternates between high order and low order.)

### INPUTS A and B:

- DIP switch selectable to accept pulses from a variety of sources including switch contacts, TTL outputs, magnetic pickups and all standard RLC sensors.
- LOGIC: Input trigger levels  $V_{IL} = 1.5$  V max.;  $V_{IH} = 3.75$  V min.
- Current sinking: Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9$  mA.
- Current sourcing: Internal 3.9 K $\Omega$  pull-down, 7.3 mA max. @ 28 VDC,  $V_{MAX} = 30$  VDC.
- Filter: Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.
- MAGNETIC PICKUP:
  - Sensitivity: 200 mV peak
  - Hysteresis: 100 mV
  - Input impedance: 3.9 K $\Omega$  @ 60 Hz
  - Maximum input voltage:  $\pm 40$  V peak, 30 Vrms
- DUAL COUNT MODES:

When any dual count mode is used, then User Inputs 1 and/or 2 will accept the second signal of each signal pair. The user inputs do not have the Logic/Mag, HI/LO Freq, and Sink/Source input setup switches. The user inputs are inherently a logic input with no low frequency filtering. Any mechanical contacts used for these inputs in a dual count mode must be debounced externally. The user input may only be selected for sink/source by the User Jumper placement.

### PRESCALER OUTPUT:

- NPN Open Collector:  $I_{SNK} = 100$  mA max. @  $V_{OL} = 1$  VDC max.  $V_{OH} = 30$  VDC max. With duty cycle of 25% min. and 50 % max.

# LEGEND SERIES

**MODEL LGS - Single Preset Counter/Rate Indicator**

**MODEL LGD - Dual Preset Counter/Rate Indicator**

**MODEL LGB - Four Preset Batch/Counter/Rate Indicator**

**MODEL LGM - Six Preset Counter/Rate Indicator**

**B**

## DESCRIPTION

The Legend Series consist of four different models that are multi-function count and rate indicators. There can be up to six presets and six programmable outputs depending upon the unit. The count and rate displays have separate programmable decimal point settings. The unit also has rate peak and valley displays that show the highest and lowest rate readings since they were reset (*peak and valley readings are not retained when power is removed*). There are five Programmable User Inputs, three external remote inputs and two front panel function keys, which allow the user to select from a variety of functions. The two line by eight character alphanumeric display with English menus, allows for easy viewing and simple programming of the units. The four scroll through indication displays can be programmed to show other parameters and if desired, automatically scroll at one of the two programmable rates. A program disable DIP switch used with an external User Input can be utilized to protect the settings and guarantee that no unwanted changes occur during operation.

The standard RS485 serial communication feature provides the capability of two-way communication between the Legend unit and other compatible equipment such as a printer, a programmable controller, or a host computer. The Baud Rate is programmable and ranges from 1200 to 9600. The unit address number can be programmed from 00-99. Up to thirty-two units can be installed on a single pair of wires, each with an individual address. The Count value(s), Preset(s), Rate, Peak, Valley, etc can all be interrogated or changed. The output(s), counters(s), rate and peak readings can be reset, by sending the proper command codes via serial communications or by activating a programmable user input. When a user input, selected for the print request function, is activated, the values specified in the Program Print Options module can be transmitted to a printer.

Optional Programming Software (SFLGP) for IBM® compatible PCs is available to program all of the Legend configuration parameters such as User Inputs, count modes, etc. The software allows unit configurations to be created, uploaded, downloaded, and saved to a file for rapid programming of the Legend.

The Legend offers a choice of seven programmable counting modes for use in applications requiring Bi-directional, Anti-coincidence, and Quadrature counting. A separate external inhibit terminal can be used in conjunction with any of the count modes. The input circuitry is switch selectable to accept signals from a variety of input sources. A unit may be programmed to register counts on both edges of the input signal providing frequency doubling capability.

A Legend unit will indicate an overflow condition when the capacity of a Count display (*Process, Batch, or Total*) is exceeded, by flashing the word "OVERFLOW" in the appropriate display.

All count values and program setting are retained when unit power is removed in nonvolatile memory.

- 2X8 TRANSMISSIVE LCD, NEGATIVE IMAGE, WITH LED BACKLIGHTING
- FOUR USER PROGRAMMABLE INDICATION DISPLAYS
- OPTIONAL PROGRAMMING SOFTWARE
- ENGLISH PROGRAMMING MENUS
- RATE, PEAK & VALLEY INDICATION
- ABILITY TO LOCKOUT OPERATOR ACCESS TO PROGRAMMING PARAMETERS
- ACCEPTS COUNT RATES UP TO 23 KHz (for Model LGS)
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (Up to 4 times resolution)
- COUNT INHIBIT PIN AVAILABLE FOR ALL COUNT MODES
- SEPARATE INPUT SCALING FOR RATE & COUNT
- PROGRAMMABLE CONTROL INPUTS
- INPUTS ARE SWITCH SELECTABLE FOR MAGNETIC PICKUPS
- RELAY OUTPUT(S) (Field Replaceable)
- OUTPUT(S) ASSIGNABLE TO COUNT OR RATE
- SOLID STATE CURRENT SINKING OUTPUT(S)
- 115/230 VAC SWITCH SELECTABLE
- RS485 SERIAL COMMUNICATIONS
- NONVOLATILE MEMORY
- NEMA 4X/IP65 SEALED FRONT PANEL BEZEL

UL Recognized Component,  
File # E137808

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 3.0" (76.2) H x 4.0" (101.6) W.

## DESCRIPTION (Cont'd)

A Legend unit will indicate an overflow condition when the capacity of a Count display (*Process, Batch, or Total*) is exceeded, by flashing the word "OVERFLOW" in the appropriate display.

All count values and program setting are retained when unit power is removed in nonvolatile memory.

The choice of several reset cycle modes along with the compatibility of count and control inputs to other RLC products, provides added versatility for stand-alone and system counter needs.

The rate input uses the time interval method (1/tau) to calculate the rate value. This method insures high resolution at all input rates. The unit counts input pulses and after the programmable minimum update time elapses and the next count edge occurs, the unit will take the number of edges that occurred during the elapsed time to calculate the rate value. The minimum update time can be as low as 0.1 second per update, enabling quick response to rate changes. At slower rates, averaging can be accomplished by programming the Minimum and Maximum Update Time for the desired response. Extensive scaling capabilities allow practically any reading at very slow input rates.

The construction of the Legend series is a light weight high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber keypad meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed. Plug-in style terminal blocks simplify installation and wiring change-outs.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## MODELS - LGS & LGD

The single preset unit has one NPN open collector output and the dual preset unit has two outputs which are activated from presets 1 and 2 respectively. Each output can be assigned to either Rate or Count display. An optional relay board can be installed that operates in parallel with the solid state output(s).

## MODEL - LGB

The process counter is used to monitor the progress of the count within the batch. Presets 1 and 2 are assigned to the Process Counter and activate relay outputs 1 and 2 respectively.

Presets 3 and 4 can be assigned to either the Batch Counter, Totalizer, or Rate indicator. Presets 3 and 4 activate the NPN open collector outputs O3-SNK and O4-SNK respectively.

## MODEL - LGM

The Multi Preset unit has six Presets (1-6) which control NPN open collector outputs 01-SNK to 06-SNK respectively. Preset one through four are assigned to the count display. Presets 5 and 6 can be assigned to either the Rate or Count display.

AVAILABLE INDICATION DISPLAYS AND PRESETS FOR EACH MODEL			
LGS	LGD	LGB	LGM
RATE	RATE	RATE	RATE
PEAK	PEAK	PEAK	PEAK
VALLEY	VALLEY	VALLEY	VALLEY
COUNT	COUNT	PROCESS	COUNT
(1 Preset)	(2 Presets)	BATCH	(6 Presets)
		TOTAL	
		(4 Presets)	

## SPECIFICATIONS

- DISPLAY:** 2x8, 0.3" (7 mm) high characters, negative image transmissive LCD, with yellow/green or red LED backlighting.
- POWER:**  
**AC Operation:** 115/230 VAC  $\pm 10\%$ , 50/60 Hz, 10 VA, switch selectable.  
**DC Operation:** +12 VDC  $\pm 20\%$  @ 250 mA.
- MEMORY:** Non-volatile memory retains all programming information. Count and Preset values are written to non-volatile memory when power is interrupted. All other programming parameters are written to memory when programming mode is exited. If power is removed while in the programming menus, the parameters are restored to previously saved settings.  
**Data Retention:** 10 years minimum
- SENSOR POWER:** +12 VDC  $\pm 25\%$  @ 100 mA.
- INPUTS A and B:** DIP Switch selectable to accept count pulses from a variety of sources including switch contacts, outputs from CMOS or TTL circuits, and all standard RLC sensors.  
**LOGIC:** Input trigger levels  $V_{IL} = 1.5 V_{MAX}$ ;  $V_{IH} = 3.75 V_{MIN}$ .  
**Current sinking:** Internal 7.8 K $\Omega$  pulled up internally to +12 VDC,  $I_{MAX} = 1.6$  mA.

**Current sourcing:** Internal 3.9 K $\Omega$  pull-down, 7.3 mA @ 28 VDC<sub>MAX</sub>.  
**Debounce:** Damping capacitor provided for switch contact bounce.  
 Limits count speed to 50 Hz and input pulse widths to 10 msec min.

## MAGNETIC PICKUP:

**Sensitivity:** 200 mV peak.

**Hysteresis:** 100 mV.

**Input impedance:** 3.9 K $\Omega$  @ 60 Hz.

**Maximum input voltage:**  $\pm 50$  Vp

*Note: For magnetic pickup input, the sink/source DIP switch must be in the SRC position.*

- RATE ACCURACY:**  $\pm 0.01\%$
- RATE MINIMUM INPUT FREQUENCY:** 0.01 Hz.
- MAXIMUM COUNT RATE IN KHZ:**

MODEL	CNT + DIR		QUAD			ADD/ADD	ADD/SUB
	X1	X2	X1	X2	X4	X1*	X1*
LGS (Single Preset)	23	11	9	7	5.5	23	12
LGD (Dual Preset)	20	10	8.5	7	5	20	10
LGB (Batch)	17	8	7	7	4	17	9
LGM (Six Preset)	15	7	7	7	3	15	8

## Notes:

- Maximum count rates given are for Process counter set for Auto reset with the auto cycle preset set to an equivalent of 100 count pulses or greater. With auto cycle presets less than 100 count pulses, with Count SF = 0.5000 and Count Scale Multiplier = X1, would be 50.
- Maximum count rate given for X2 & X4 count modes are given for 50% duty cycle signals and Quad signals with 90° phase shift.  
*\*Inputs A & B count rates summed.*

## 9. CONTROL INPUTS:

**Programmable user inputs (3):** Internal 10 K $\Omega$  pull-up to +5 VDC,  $V_{IL} = 1.0 V_{MAX}$ ;  $V_{IH} = 4.0 V_{MIN}$ ; response time = 10 msec.

**Inhibit:** Internal 10 K $\Omega$  pull-up to +5 VDC,  $V_{IL} = 1.0 V_{MAX}$ ;  $V_{IH} = 4.0 V_{MIN}$ .

## 10. SERIAL COMMUNICATIONS:

**Type:** RS-485 Multi-point Balanced Interface (2 Wire).

*(Can connect up to 32 units on a single pair of wires)*

**Baud Rate:** Programmable from 1200 to 9600.

**Maximum Addresses:** Programmable from 00 to 99.

*(Actual number on a single pair of wires is limited by serial hardware specifications)*

**Transmit Delay:** Programmable for 0.002 or 0.100 second.

**Data Format:** 10 Bit Frame; 1 start bit, 7 data bits, 1 parity bit, and 1 stop bit. Parity is programmable for either ODD, EVEN, or No Parity.

## 11. OUTPUT(S):

**Solid-State:** Current sinking NPN open collector transistor.

$V_{CE} = 1V_{SAT}$  @ 100 mA max.  $V_{OH} = 30$  VDC max.

*(Internal Zener Diode Protection).*

**Relay(s):** Mounted on field-replaceable P.C. board. Form C contacts rated at 5 amps @ 120 VAC/240 VAC or 28 VDC (*resistive load*), 1/8 H.P. @ 120 VAC (*inductive load*). The operate time is 5 msec nominal and the release time is 3 msec nominal.

**Programmable Timed Output(s):** Programmable time ranges from 0.01 to 99.99 seconds,  $\pm 0.05\%$  - 11 msec max.

## 12. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

UL Recognized Component, File #E137808, UL508, CSA 22.2 No. 14

## SPECIFICATIONS (Cont'd)

### Note:

1. When the unit is DC powered from terminal TBA pin 5 (common) and terminal TBA pin 3 (DC OUT/IN) a power line filter was installed, RLC #LFIL0000 or equivalent, so as not to impair the function of the unit.

Refer to the EMC Installation Guidelines section of the manual for additional information.

### 13. ENVIRONMENTAL CONDITIONS:

**Operating Temperature:** 0 to 50°C

**Storage Temperature:** -40 to 70°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's.

**Shock According to IEC 68-2-27:** Operational 20 g's (10g relay), 11 msec in 3 directions.

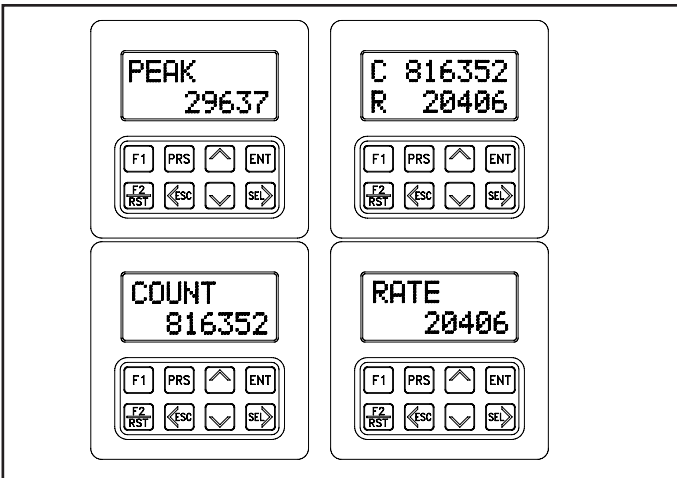

**Altitude:** Up to 2000 meters

14. **CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when installed properly. Installation Category II, Pollution Degree 2. Panel gasket and mounting clips included.

15. **WEIGHT:** 1.5 lbs. (0.68 Kg)

## PROGRAMMING

The Legend Series provides an easy to use, menu driven programming interface. The English prompts, the front panel keypad, and the flashing display aids the operator during programming. In the normal run mode, the main display loop allows the user to scroll through the four programmable indication displays, using the direction keys. From the main loop, presets and scale factors can be accessed directly for changing parameters. All other parameters are accessed through the programming loop. In the programming loop, parameters can be viewed or changed and the operator can exit anywhere in the loop. Shown to the side is part of the main display loop and part of the programming loop of a Dual Preset Legend (LGD) unit. Also shown are four different views of the indication displays.

## PROGRAMMABLE FUNCTIONS

### PRESET(S)

Ranges from -99999 to 999999

Counter Load ranges from -99999 to 999999

### SCALE FACTORS (RATE & COUNT)

Range from 0.0001 to 5.9999

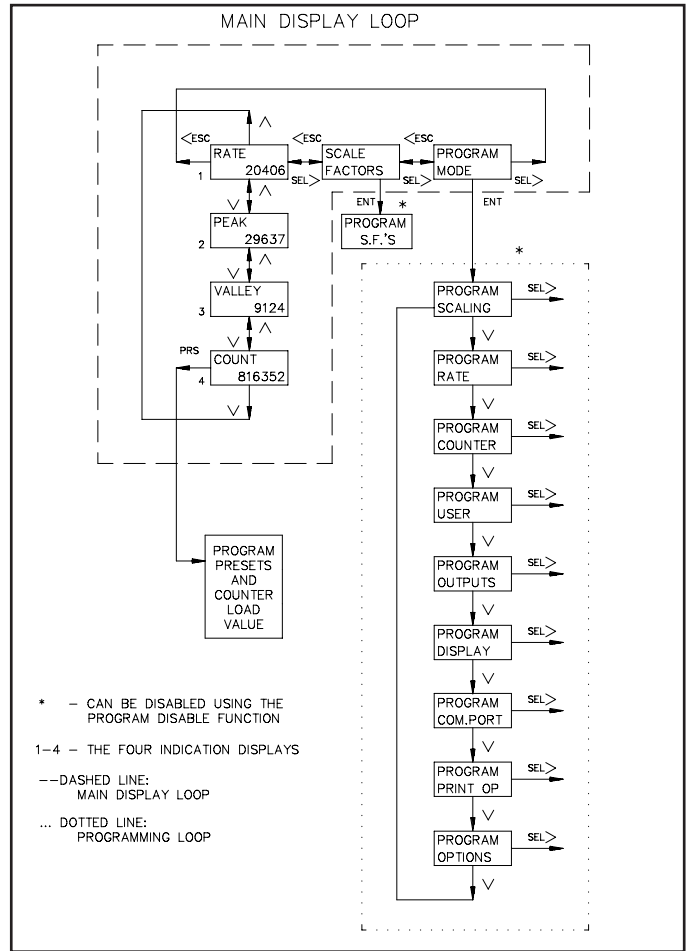

### COUNT SCALE MULTIPLIER

Multiplies the contents of the 9-digit internal counter or the 11-digit internal totalizer by a factor of 1, 0.1, 0.01 or 0.001 to view the desired number of significant digits on the 6-digit Counter display or the 8-digit Totalizer display.

### DECIMAL POINT

Separate decimal point location for Count and Rate displays.

0  
0.0  
0.00  
0.000  
0.0000  
0.00000

### RATE SCALE MULTIPLIERS

Multiplies the contents of the actual internal rate, pulses per second (PPS), by a factor of 0.01, 0.1, 1, 10, 100, or 1000 to view the desired number of significant digits on the 6-digit Rate display. The desired time units that the rate is to be displayed, can also be programmed as per Second (x1), per Minute (x60), or per Hour (x3600).

### UPDATE TIME

The Rate Minimum/Maximum Update Times range from 0.1 to 99.9 seconds which provides averaging capability for non-consistent pulse spacing.

### COUNTING MODES

- Count with Direction
- Count with Direction (X2)
- Quadrature
- Quadrature (X2)
- Quadrature (X4)
- 2-Input Anti-coincidence Add/Add
- 2-Input Anti-coincidence Add/Subtract
- A separate Inhibit input, is available for all count modes.

### RESET MODES

- Manual Reset
- Automatic Reset at Preset
- Reset at Beginning Of Output 1
- Reset at End Of Timed Output 1
- Reset at Beginning Of Output 2
- Reset at End Of Timed Output 2
- Reset at Beginning Of Output 1 or Output 2
- Reset at End Of Timed Output 1 or Output 2

### MODEL LGB ONLY

- Reset at Beginning Of Output 3
- Reset at End Of Timed Output 3
- Reset at Beginning Of Output 4
- Reset at End Of Timed Output 4
- Reset at Beginning Of Output 3 or Output 4
- Reset at End Of Timed Output 3 or Output 4

## PROGRAMMABLE FUNCTIONS (Cont'd)

### RESET ACTION

**Reset to Zero:** Output activates when the count equals the preset value. Count display value returns to zero when reset.

**Reset to Preset:** Output activates when the count equals zero. Count display value returns to preset value when reset.

**Reset to Counter Load:** Output activates when count equals the preset value. Count display value returns to counter load value when reset.

### USER INPUTS

There are three external user inputs and two front panel Function keys that are programmable. When activated each User Input can be programmed to perform one of the following functions:

#### Maintained Reset or Momentary Reset:

Can reset Rate, Peak, Valley, Process\*, Batch\*, Total\*, or Count\* display values and/or any output associated with that display.

*\*Models with the available display.*

#### Reset Output(s):

Places the output(s) in their inactive state. (Momentary action)

#### Set Output(s):

Places the output(s) in their active state. (Momentary action)

#### View Display 1-4:

Will cause the selected indication display (1, 2, 3, or 4) to be displayed and held from anywhere in the main display loop.

#### Change Display:

Will cause the indication display to toggle to the next indication display.

#### Counter Load:

Loads the counter load value into the count display.

#### Print Request:

Transmits the values specified in the Program Print Options module over the serial port.

#### Skip Preset 1, Skip Preset 3 (LGB Only):

Keeps the output from activating and automatic reset from occurring, if programmed, when the count value equals the preset value.

#### Program Disable:

Operates in conjunction with the program disable DIP switch, to provide a variety of program disable modes.

### OUTPUT(S)

#### Output Assignment:

The LGS can have its Output assigned to the Count or the Rate.

The LGD can have Outputs 1 & 2 assigned to the Count or the Rate.

The LGB has Outputs 1 & 2 assigned to the Process. Outputs 3 and 4 can be assigned to the Batch, Total, or Rate.

The LGM can have Outputs 5 and 6 assigned to either Count or Rate and Outputs 1-4 are assigned to the Counter.

#### Output Activation Mode:

Latched

Boundary

Timed - 0.01 to 99.99 seconds

#### Output Reset Mode:

##### Outputs 1 & 2 Only:

End Output 1 @ Output 2 Start

End Output 1 @ Timed Output 2 End

End Output 2 @ Output 1 Start

End Output 2 @ Timed Output 1 End

##### Output(s) Power Up or Power Down State:

The Output's state can be set to be Off (*Inactive*) @ power up.

OR

The Output's state can be saved @ power down and restored at power-up.

*Note: Power down state for Latched Mode Only.*

##### Reset Output when Count is Reset:

This feature can be enabled or disabled.

##### Phase:

Each Output can have its logic state set for Positive (*ON*) Phase or Negative (*OFF*) Phase.

### INDICATION DISPLAYS

There are four configurable indication displays are programmed individually. Each line of each indication display can be programmed to show one of the following Mnemonics; COUNT\*, PROCESS\*, BATCH\*, TOTAL\*, PEAK, VALLEY, OR RATE, and a Numeric value, Output status, Preset value, or the Counter Load value. A single or dual character Mnemonic is displayed to the left of the appropriate Numeric value if the other line is not programmed to display the full mnemonic. Also the indication displays can be set to scroll automatically at a 2.5 or 5 second rate, if desired.

*\* Models with the available display.*

### COMMUNICATION PORT

Baud Rate - 1200 to 9600

Parity - Odd, Even, or No parity

Unit Address - 00 to 99

Transmit Delay - 0.002 or 0.100 seconds

### PRINT OPTIONS

The programmable print options specify which values will be transmitted when a print request is issued. The available options are; Rate, Peak, Valley, Count\*, Totalizer\*, Process\*, Batch\*, Scale Factors, Preset(s), and Counter Load values.

*\* Models with the available display.*

The unit can be programmed to transmit or NOT transmit mnemonics (*unit address & value identifiers*).

### OPERATOR ACCESS TO FRONT PANEL

There are several program disable modes that can be used to limit the operator from programming the parameter values via the front panel keypad. The Program Disable DIP switch can be used alone or in conjunction with a User Input, programmed for the program disable function, to provide the desired level of security.

# LGB APPLICATION

An order requires that sheets of material be cut in two different lengths. The operator would like to change the settings for the second length to be cut with no down time. A Legend series LGB (*Four Preset Batch Counter/Rate Indicator*) is used to satisfy the requirement.

A Length Sensor (LSQ) with a 100 pulse per revolution (PPR) quadrature output is coupled with an LSAHC hinge clamp assembly and a one foot circumference wheel. The LEGEND series LGB is set to the Quadrature X1 mode. With a one foot wheel, the information becomes 100pulses/foot and allows the material to be cut to the nearest 1/100 of a foot. The counter display is programmed for two decimal places to provide a readout in 1/100 of a foot increments.

Preset value  $P_1$  (*Process count*) is programmed for the first length to be cut for the order and Preset value  $P_2$  (*Process count*) for the second length.

The outputs are used to control power to the cutting knife and the counter is programmed to reset when Preset 1 or Preset 2 is reached.

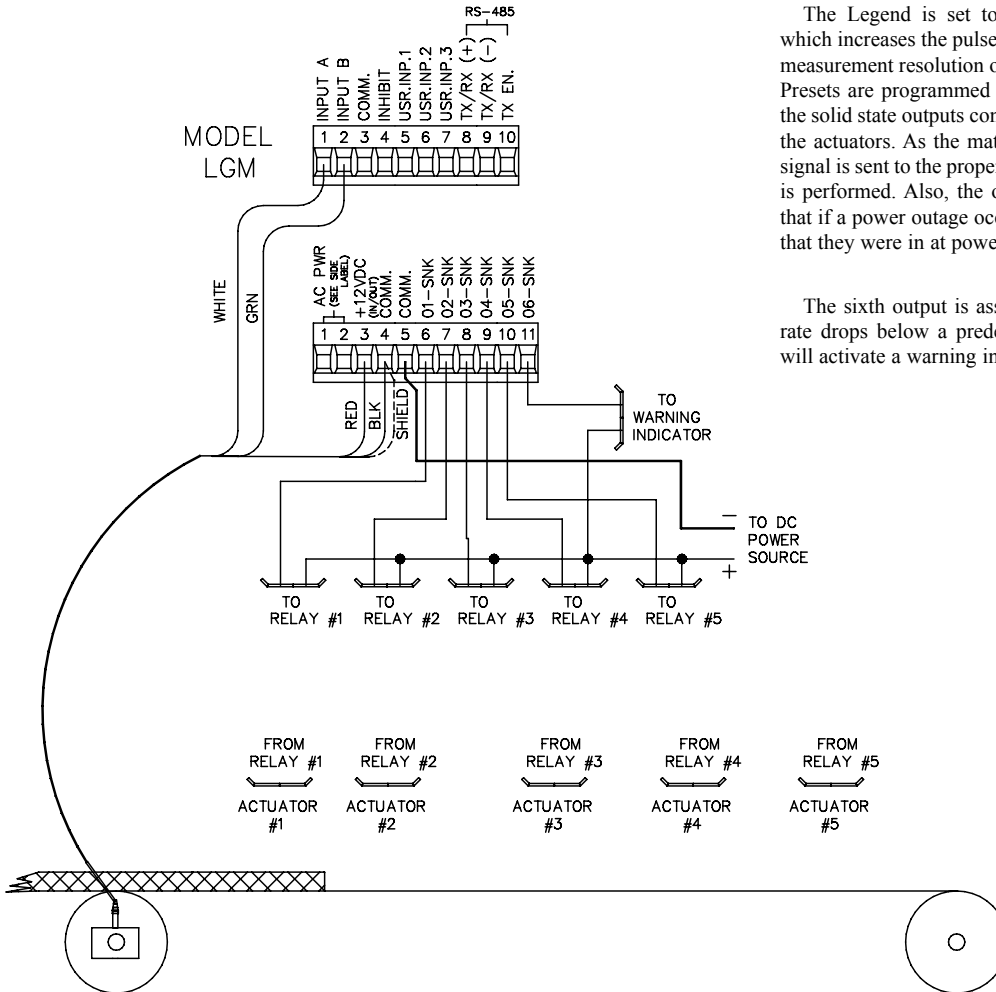

Preset value  $P_3$  (*Batch count*) is programmed to activate User Input 1 (*skip  $P_1$* ) when the total number of pieces is reached for the first order. Preset value  $P_4$  (*Batch count*) is programmed to stop the process after the second order is complete. The totalizer will keep track of the total amount of feet used.

**B**

## LGM APPLICATION

A process performs five different procedures to a piece of raw stock at five different locations. The Legend series LGM with six presets and six solid state outputs is used for this application.

The raw stock comes in ten foot sections and requires five various operations to be performed at 9.00", 23.00", 72.00", 83.00", & 111.00". A rotary pulse generator (RPG) with a 600 pulse per revolution (PPR) quadrature output is coupled to a 1 foot circumference wheel. A quadrature sensor is specified because the stock must be reversed after stations #1 and #4. This allows the Legend to keep track of true position.

The Legend is set to the quadrature X2 mode which increases the pulses to 1200 PPR. This gives a measurement resolution of 1/100 of an inch. The five Presets are programmed with the proper values and the solid state outputs control pilot relays that control the actuators. As the material passes each station, a signal is sent to the proper equipment and the process is performed. Also, the outputs are programmed so that if a power outage occurs they will save the state that they were in at power down.

The sixth output is assigned to rate so that if the rate drops below a predetermined value the output will activate a warning indicator.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	OPTION w/RELAY BOARD	PART NUMBERS 115/230 VAC & +12 VDC

**LEGEND PLUS SERIES**    **MODEL LGPB - Four Preset Batch/Counter/Rate Indicator**  
**MODEL LGPM - Six Preset Counter/Rate Indicator**  
**MODEL LGPBF - Four Preset Foot-Inch Length Counter**

**DESCRIPTION**

The Legend Plus Series consists of two models that are multi-input count and rate indicators. The LGPB features process, batch, and total counting, as well as a time interval rate indicator. The four available presets can be assigned to the process counter or the rate indicator. Outputs three and four can also be assigned to the batch or total indicator. The Legend Plus foot-inch counter provides Process and Total count read-outs in feet and inches. A decimal point is used to separate the foot and inch units. All Process and Total presets are also displayed in feet and inches. The LGPM features six presets, which can be assigned to either the rate or count display.

The Legend Plus has advanced features which allow the units to be more closely coupled to the application. The units feature a 2 line by 8 character alpha-numeric display, allowing the value mnemonics and programming menus to be easily read. The units are available in single or dual color display models. The four scroll-through indication displays can be programmed to show various parameters and automatically scroll, if desired. On dual color models, each indication display can be programmed for either color. The mnemonics corresponding to the main display values (RATE, PROCESS, BATCH, TOTAL) can be individually programmed and modified as desired. For example, the RATE mnemonic can be reprogrammed to display the word SPEED, so that when the rate mnemonic is to be displayed, the mnemonic SPEED is displayed instead.

Two custom display lines are available which enable the user to specify the number of digits of a value to be displayed on the line, along with any alpha-numeric prefix or suffix. This capability allows displays such as: '1000 RPM', '99999 Ft', 'PRC 9999', etc.

The Legend Plus also features messaging capabilities that can inform the user of output actions or other events that occur in a system. Up to ten messages can be programmed. Messages can be requested by an output status change, user input(s), or through serial communications. The messages can be programmed to blink, scroll, time out, and to alternately flash between message and indication display.

On dual color models, the message can be programmed to be displayed in either color. This capability is very useful in drawing the operator's attention to particular messages.

- 2X8 TRANSMISSIVE LCD, NEGATIVE IMAGE, WITH L.E.D. BACKLIGHTING
- PROGRAMMABLE DISPLAY INTENSITY
- OPTIONAL DUAL COLOR DISPLAY (Red and Green)
- FOUR USER PROGRAMMABLE INDICATION DISPLAYS WITH CUSTOMIZABLE MNEMONICS AND DISPLAY LINES
- PROGRAMMABLE MESSAGE CAPABILITIES
- ENGLISH PROGRAMMING MENUS
- RS485 OR RS232 SERIAL COMMUNICATIONS
- OPTIONAL PROGRAMMING SOFTWARE FOR PROGRAMMING MULTIPLE UNITS
- ABILITY TO LOCKOUT OPERATOR ACCESS TO PROGRAMMING PARAMETERS
- PROGRAMMABLE CONTROL INPUTS
- COUNT INPUTS ARE SWITCH SELECTABLE FOR VARIOUS SENSOR OUTPUTS
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (Up to 4 times resolution)
- COUNT INHIBIT TERMINAL AVAILABLE FOR ALL COUNT MODES
- ACCEPTS COUNT RATES UP TO 15 KHz
- ALL OUTPUT(S) ASSIGNABLE TO COUNT OR RATE
- ON & OFF DELAY FOR RATE OUTPUTS
- SOLID STATE CURRENT SINKING OUTPUT(S)
- RELAY OUTPUTS (LGPB only; Field Replaceable)
- SEPARATE INPUT SCALING FOR RATE, COUNT, & TOTAL
- 115/230 VAC SWITCH SELECTABLE
- NEMA 4X/IP65 SEALED FRONT PANEL BEZEL

UL Recognized Component,  
File # E137808

**DIMENSIONS In inches (mm)**

## DESCRIPTION (Cont'd)

The program disable DIP switch, the code value, and an external user input selected for Program Disable can be utilized to provide multi-level protection against unwanted changes to data values and unit configuration.

The Legend Plus features enhanced serial communications. The serial port can be configured for connection to RS485 or RS232 devices. It can be used for data retrieval and for programming various data values.

Optional Legend Plus Programming Software for IBM® compatible PCs is available to program all the Legend configuration parameters, such as messages, count modes, etc. The software allows unit configurations to be created, uploaded, downloaded and saved to a file for rapid programming of the Legend unit.

The six programmable User Inputs can be configured to provide a variety of functions. Four user inputs are located on the upper rear terminal block and the other two inputs are front panel function keys. The User Inputs can be configured to provide functions such as:

Count Inhibit	Reset
Message Request	Message Cancellation
Output Activation	Output Deactivation
Program Disable	View/Freeze Display
Print Request	Skip Presets(outputs)

The units offer a choice of seven programmable counting modes for use in applications requiring Bi-directional, Anti-coincidence, and Quadrature counting. The count inhibit function can be utilized with all of these input response modes by programming User Input 4 for the Inhibit Count function. The input circuitry is switch selectable to accept signals from a variety of sources. In the Anti-coincidence mode both inputs are monitored simultaneously, so that no counts are missed, and the final count can be chosen as the sum or difference of the two inputs.

Rate, Process and Total displays have separate scaling and decimal point placement, for readouts in different units. The Counter Load feature enables the operator to modify the count value. This is useful when flawed material has been counted and it is necessary to adjust the count value accordingly.

The rate operates in the time interval method (1/tau) to calculate the rate value. This method insures high resolution at all input rates. Averaging can be accomplished by programming the Minimum and Maximum Update Time for the desired response. Extensive scaling capabilities allow practically any reading at very slow input rates.

The construction of the Legend Plus unit is a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with silicone rubber keypad meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed. Plug-in style terminal blocks simplify installation and wiring change-outs.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## MODEL - LGPB

The process counter is used to monitor the count within the batch. Presets 1 through 4 can be assigned to the process counter or the rate indicator. Presets 3 and 4 can also be assigned to either the batch counter or totalizer.

Presets 1 and 2 can activate relay outputs 1 and 2 respectively. Presets 3 and 4 can activate the NPN open collector outputs O3-SNK and O4-SNK respectively.

## MODEL - LGPM

The Multi Preset unit has 6 presets which can control NPN open collector outputs O1-SNK to O6-SNK respectively. Presets 1 through 6 can be assigned to either the rate or count display.

STANDARD INDICATION DISPLAYS & PRESETS FOR EACH MODEL

PROCESS	COUNT
BATCH	(6 Presets)
TOTAL	
(4 Presets)	

## SPECIFICATIONS

- DISPLAY:** 2x8, 0.3" (7 mm) high characters, negative image transmissive LCD, with Single (green or red) or Dual Color (green and red) LED backlighting.
- POWER:**  
**AC Operation:** 115/230 VAC ±10%, 50/60 Hz, 10 VA, switch selectable.  
**DC Operation:** +12 VDC ±20% @ 250 mA max.
- MEMORY:** Non-volatile memory retains all programming information. Count and Preset values are written to non-volatile memory when power is interrupted. All other programming parameters are written to memory when programming mode is exited. If power is removed while in the programming menu's the parameters are stored to previously saved settings.  
**Data Retention:** 10 yr. min.  
**Message/Mnemonics Memory:**  
 792 (LGPB) / 804 (LGPM) bytes available (with factory settings loaded).
- SENSOR POWER:** +12 VDC ±25% @ 100 mA.
- INPUTS A and B:** DIP Switch selectable to accept count pulses from a variety of sources including switch contacts, outputs from CMOS or TTL circuits, magnetic pickups and all standard RLC sensors.  
**LOGIC:** Input trigger levels  $V_{IL} = 1.5 V_{MAX}$ ;  $V_{IH} = 3.75 V_{MIN}$ .  
**Current sinking:** Internal 7.8 KΩ pull up to +12 VDC,  $I_{MAX} = 1.9$  mA.  
**Current sourcing:** Internal 3.9 KΩ pull-down, 7.3 mA<sub>MAX</sub> @ 28 VDC.  
**Debounce:** Damping capacitor provided for switch contact bounce. Limits count speed to 50 Hz and input pulse widths to 10 msec min.  
**MAGNETIC PICKUP:**  
**Sensitivity:** 200 mV peak.  
**Hysteresis:** 100 mV.  
**Input impedance:** 3.9 KΩ @ 60 Hz.  
**Maximum input voltage:** ±50 Vp  
*Note: For magnetic pickup input, the sink/source DIP switch must be in the SRC position.*
- RATE ACCURACY:** ±0.01%
- RATE MINIMUM INPUT FREQUENCY:** 0.01Hz.
- MAXIMUM COUNT RATE IN KHZ:**

MODEL	CNT + DIR		QUAD			ADD/ADD	ADD/SUB
	X1	X2	X1	X2	X4	X1*	X1*
LGPB (Batch)	15	7	7	5.5	3	14	7
LGPM (Six Preset)	13	6	6	5	2.5	12	6
LGPF (Foot-Inch)	15	7	7	5.5	3	15	7

### Notes:

- Maximum count rates given are for Process counter set for Auto reset with the auto cycle preset set to an equivalent of 100 count pulses or greater. With auto cycle presets less than 100 counts the maximum count rates may be lower. The actual Preset value for 100 count pulses, with Count SF=0.5000 and Count Scale Multiplier=X1, would be 50.
- Maximum count rate given for X2 & X4 count modes are given for 50% duty cycle signals and Quad signals with 90° phase shift.  
*\*Inputs A & B count rates summed.*
- MAXIMUM COUNT CAPACITY:**  
**Process or Count:** 9 digits internal (non-scaled), 6 digits displayable (scaled)  
**Batch Count:** 6 digits  
**Total Count:** 11 digits internal (non-scaled), 8 digits displayable (scaled)
- CONTROL INPUTS:**  
**Programmable user inputs (4):**  
**USR INP 1 to 3:** Internal 10 KΩ pull-up to +5 VDC,  $V_{IL} = 1.5 V_{MAX}$ ;  $V_{IH} = 3.5 V_{MIN}$ , response time = 30 msec typical, 100 msec max. (count rate dependent).  
**USR INP 4/INH:** Internal 10 KΩ pull-up to +5 VDC,  $V_{IL} = 1.5 V_{MAX}$ ;  $V_{IH} = 3.0 V_{MIN}$ , response time = 30 msec typical, 100 msec max. (count rate dependent).  
**INHIBIT** Response time = 50 μsec max.  
**User Inputs Programmed for Binary Message Request:** Debounce = 100 msec. (Binary message request inputs must be stable for 100 msec before a message is requested).
- SERIAL COMMUNICATIONS:**  
**Type:** Jumper selectable RS485 or RS232.  
 Can connect up to 32 units when using RS485 interface.  
**Baud Rate:** Programmable from 1200 to 9600.  
**Maximum Addresses:** Programmable from 00 to 99. (Actual number on a line is limited by hardware specifications)  
**Transmit Delay:** Programmable for 0.002 or 0.100 second.  
**Data Format:** 10 Bit Frame; 1 start bit, 7 or 8 data bits, 1 or no parity bit, and 1 stop bit. Parity is programmable for ODD (7 data bits), EVEN (7 data bits), or NO Parity (8 data bits).
- OUTPUT(S):**  
**Solid-State:** Current sinking NPN open collector transistor.  
 $V_{CE} = 1.1 V_{SAT}$  @ 100 mA max.  $V_{OH} = 30$  VDC max.  
 (Internal Zener Diode Protection).

**12. OUTPUT(S):** (Cont'd)

**Relay(s):** Mounted on field-replaceable P.C. board. Form C contacts rated at 5 amps @ 120 VAC/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load). The operate time is 5 msec nominal and the release time is 3 msec nominal.

**Programmable Timed Output(s):** Programmable time ranges from 0.01 to 99.99 seconds, ±0.05% - 11 msec max.

**Output Time Required To Request Message:** 50 msec.

**13. ENVIRONMENTAL CONDITIONS:**

**Operating Temperature:** 0 to 50°C

**Storage Temperature:** -40 to 70°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's.

**Shock According to IEC 68-2-27:** Operational 20 g's (10g relay), 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

**14. CERTIFICATIONS AND COMPLIANCES:**

UL Recognized Component, File # E137808, UL508, CSA22.2 No. 14

Recognized to U. S and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

Type 4X Indoor Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #UL1581-176645/USA,

CB Scheme Test Report #97ME50052-081391

Issued by Underwriters Laboratories, Inc.

IEC 61010- 1, EN 61010- 1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY**

**Immunity to EN 50082-2**

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O <sup>1</sup> Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms <sup>1</sup> 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m

**Emissions to EN 50081-2**

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

**Note:**

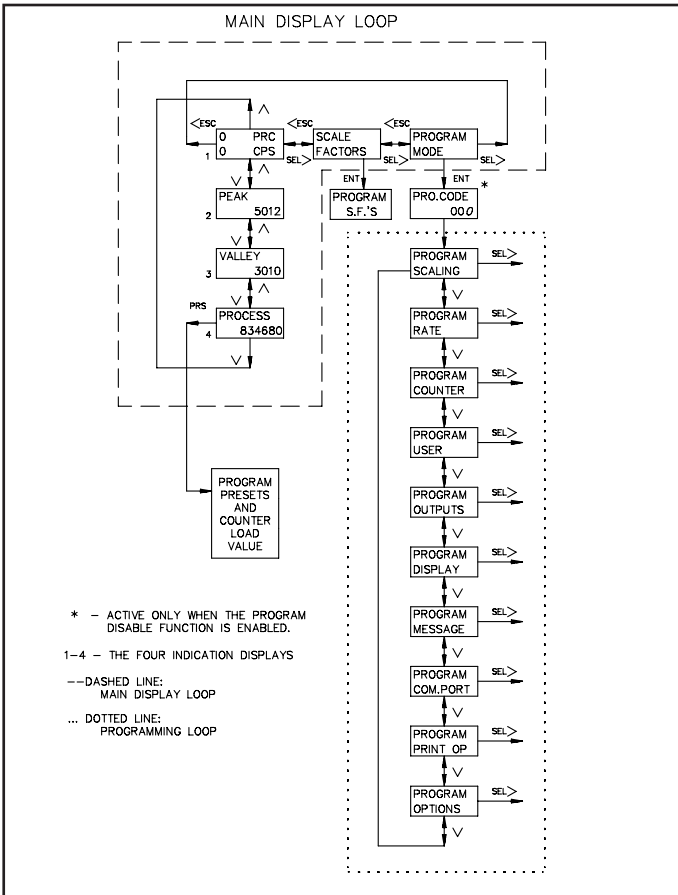

1. When the unit is DC powered from terminal TBA pin 5 (common) and terminal TBA pin 3 (DC OUT/ IN) a power line filter was installed, RLC #LFIL0000 or equivalent, so as not to impair the function of the unit.

Refer to the EMC Installation Guidelines section of the manual for additional information.

**15. CONSTRUCTION:** High impact plastic case with clear viewing window.

The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category II, Pollution Degree 2. (Panel gasket, mounting clips, nut fasteners and screws included with unit.)

**16. WEIGHT:** 1.5 lbs. (0.68 Kg)

**PROGRAMMING**

The Legend Plus Series provides an easy to use, menu driven programming interface. The English prompts, the front panel keypad, and the flashing display aid the operator during programming. In the normal operating mode, the main display loop allows the user to scroll through the four programmable indication displays using the direction keys. From the main loop, presets and scale factors can be accessed directly. All other parameters are accessed through the programming loop, which can be set to require an access code number to enter the loop. In the programming loop, parameters can be viewed or changed and the operator can exit anywhere in the loop. The drawing above shows the main display loop and part of the programming loop of a Legend Plus unit. Also shown above right are four different views of the indication displays.

**PROGRAMMABLE FUNCTIONS**

**PRESET(S)**

Ranges from -99999 to 999999  
Counter Load ranges from -99999 to 999999

**SCALE FACTORS (RATE, COUNT & TOTAL)**

Ranges from 0.0001 to 5.9999. The internal count value is multiplied by the count scale factor and the count scale multiplier to provide the process count display value. The total count is scaled by the count scale factor and the count scale multiplier, and is additionally scaled by the total scale factor. The number of negative edges is multiplied by the rate scale factor, the rate scale multiplier, and the rate conversion factor to calculate the rate value.

**COUNT SCALE MULTIPLIER**

Multiplies the contents of the 9-digit internal counter or the 11-digit internal totalizer by a factor of 1, 0.1, 0.01 or 0.001 to view the desired number of significant digits on the 6-digit Counter display or the 8-digit Totalizer display.

**DECIMAL POINT**

Separate decimal point location for Count, Rate, and Total displays.

- 0
- 0.0
- 0.00
- 0.000
- 0.0000
- 0.00000

**RATE SCALE MULTIPLIERS**

Multiplies the contents of the actual internal rate, pulses per second (PPS), by a factor of 0.01, 0.1, 1, 10, 100, or 1000 to view the desired number of significant digits on the 6-digit Rate display. The desired time units for the rate can be programmed as per Second (x1), per Minute (x60), or per Hour (x3600).

## PROGRAMMABLE FUNCTIONS (Cont'd)

### UPDATE TIME

The Rate Minimum and Maximum Update Times range from 0.1 to 99.9 seconds. This provides averaging capability for non-consistent pulse spacing.  
*Note: The maximum update time must be larger than the minimum update time.*

### COUNTING MODES

Count with Direction  
Count with Direction (X2)  
Quadrature  
Quadrature (X2)  
Quadrature (X4)  
2-Input Anti-coincidence Add/Subtract  
2-Input Anti-coincidence Add/Add  
A separate Inhibit input is available for all count modes.

### RESET MODES

Manual Reset  
Automatic Reset at Preset  
Reset at Beginning Of Output 1  
Reset at End Of Timed Output 1  
Reset at Beginning Of Output 2  
Reset at End Of Timed Output 2  
Reset at Beginning Of Output 1 or Output 2  
Reset at End Of Timed Output 1 or Output 2

### MODEL LGPB ONLY

Reset at Beginning Of Output 3  
Reset at End Of Timed Output 3  
Reset at Beginning Of Output 4  
Reset at End Of Timed Output 4  
Reset at Beginning Of Output 3 or Output 4  
Reset at End Of Timed Output 3 or Output 4

### RESET ACTION

**Reset to Zero:** Count display value returns to zero when reset. Output activates, if programmed, when the count equals the preset value.

**Reset to Preset:** Count display value returns to preset value when reset. Output assigned to the specified preset activates, if programmed, when the count equals zero.

**Reset to Counter Load:** Count display value returns to counter load value when reset. Output activates, if programmed, when count equals the preset value.

### USER INPUTS

There are four external user inputs and two front panel Function keys that are programmable. When activated, each user input can be programmed to perform one of the following functions:

#### Maintained Reset or Momentary Reset:

Can reset Rate, Peak, Valley, Process\*, Batch\*, Total\*, or Count\* display values and/or any output associated with that display.  
*\* On Models with these available display options.*

#### Reset Output(s):

Places the output(s) in their inactive state. (*Momentary action*)

#### Set Output(s):

Places the output(s) in their active state. (*Momentary action*)

#### View Display 1-4:

Causes the selected indication display (1, 2, 3, or 4) to be displayed and held from anywhere in the main display loop. The current display value is frozen (*not updated*) while the display is held.

#### Change Display:

Causes the indication display to toggle to the next indication display.

#### Request Message:

Requests a specific programmed message to activate.

#### Clear Message:

Causes the displayed message to be canceled. (*Maintained action*)

#### Skip Preset:

Keeps the output from activating and automatic reset from occurring, if programmed, when the count value equals the preset value.

#### Counter Load:

Places the counter load value into the count display and operates from that value. (*Maintained action*)

#### Print Request:

Transmits the values specified in the Program Print Options module over the serial port. (*Maintained action*)

### Program Disable:

Can be used alone, or in conjunction with the program disable DIP switch, to provide a variety of program security modes. (*External User Input only*)

### Inhibit Count:

Prevents pulses from being counted on Inputs A and B. (*User Input 4 only*). The rate input is not affected by the inhibit setting and continues to display the rate of the signal at Input A.

### OUTPUT(S)

#### Output Assignment:

The LGPB can have outputs 1 through 4 assigned to the process or the rate. Outputs 3 and 4 can also be assigned to the batch or total. The LGPM can have outputs 1 through 6 assigned to either count or rate.

#### Phase:

Each output can have its active logic state set for positive phase (normally off) or negative phase (normally on).

#### Output Activation Mode:

Latched  
Boundary  
Timed - 0.01 to 99.99 seconds

#### Hi/Lo Acting:

This mode is used in conjunction with all Rate modes and the Boundary count modes. A Lo acting output would perform the Output action when the count/rate is lower than the preset. A Hi acting output would perform the Output action when the count/rate is higher than or equal to the preset.

#### Rate Output On/Off Delay:

Used to prevent output chatter. Output condition must be satisfied for a period of time longer than delay period for output state to change.

**On Delay:** Prevents activation of output(s) for the amount of time programmed.

**Off Delay:** Prevents deactivation of output(s) for the amount of time programmed.

**On & Off Delay:** This mode prevents output state change for specified delay period when turning on or off.

#### Output Reset Mode:

##### Outputs 1 & 2 Only:

End Output 1 @ Output 2 Start  
End Output 1 @ Timed Output 2 End  
End Output 2 @ Output 1 Start  
End Output 2 @ Timed Output 1 End

#### Output(s) Power Up or Power Down State:

The Output's state can be set to be Off (Inactive) @ power up.  
OR

The Output's state can be saved @ power down and restored at power-up.  
OR

The Output's state can be set to be ON (Active) @ power up.

*Note: Power down state for Latched Mode Only.*

#### Reset Output when Count is Reset:

This feature can be enabled or disabled.

#### Request Message:

Each output can be programmed to request a specific message when the output conditions are satisfied.

### INDICATION DISPLAYS

Each of the four indication displays is programmed individually. Each line of each indication display can be programmed to show a value mnemonic, a numeric value, the output status, a preset value, the counter load value, or a custom display line. The mnemonics are factory set to; RATE, PEAK, VALLEY, COUNT\*, PROCESS\*, BATCH\*, TOTAL\*, and OVERFLOW. Each mnemonic can be individually changed to a mnemonic tailored to a specific application. The first character of the full mnemonic is displayed to the left of the appropriate numeric value if the other line is not programmed to display the full mnemonic. Each of the 4 indication displays can be programmed to be green or red on dual color models.

*\* On Models with these available display options.*

#### Scroll Speed:

None  
2.5 Seconds  
5.0 Seconds

#### Display Intensity:

The brightness of the display can be adjusted from 1 to 5, with 5 as the brightest. There is a separate adjustment for each color.

## PROGRAMMABLE FUNCTIONS (Cont'd)

### INDICATION DISPLAYS (Cont'd)

#### Custom Display Line:

The Legend Plus has two Custom Display Lines which allow the user to specify the number of digits to be displayed on the line, along with any alphanumeric prefix or suffix.

#### Program Mnemonic:

Allows the user to modify the mnemonics (RATE, PROCESS, BATCH, etc.) to a mnemonic of your choice. For example, RATE can be changed to read SPEED.

### MESSAGES

There are ten messages that can be programmed in the Legend. The following attributes can be set for each message.

#### Message Text:

**Standard Characters** - Lower/Upper case letters, numbers, punctuation symbols

**Extended Characters** (Including most European characters)

#### Message Priority:

1 to 8 (1 = highest priority)

#### Message Type:

**1 line block** - message scrolls in block fashion on the top line of the display, bottom line contains programmed indication display.

**2 line block** - message scrolls in block fashion on both lines of the display

**1 line scroll** - message scrolls right to left on the top line of the display, bottom line contains programmed indication display

**2 line scroll** - Top line scrolls right to left, bottom line is blanked

#### Maintained/Momentary Request:

A Maintained Request setting enables messages to be restored or redisplayed, when the display is available if the input/output action requesting the message is still active.

A Momentary Message setting will allow only one request per message requesting input/output action. Lower priority messages will be canceled by higher priority messages.

#### Blinking Message:

Enables the message to blink when displayed. Only available with 1 or 2 line block messages.

#### Multiplex:

Setting this parameter to yes will cause the unit to display the message for 2 seconds, then display the programmed display for 2 seconds. Only available with 1 or 2 line block messages.

#### Message Cancellation:

The displayed message is canceled when:

A message of equal or higher priority is requested.

Message times out (Timed) and input/output is deactivated.

User input or output is deactivated (Til End).

User input programmed for clear message is activated.

#### Message Time:

Ranges from 1 to 599 Seconds.

#### Message Color: (Dual Color Option only)

Green or Red

### COMMUNICATION PORT

Jumper selectable for RS-485 or RS-232

Baud Rate - 1200 to 9600

Parity - Odd (7 data bits), Even (7 data bits), or No parity (8 data bits)

Unit Address - 00 to 99

Transmit Delay - 0.002 or 0.100 seconds

### PRINT OPTIONS

The programmable print options specify which values are transmitted when a print request is issued. The available options are; Rate, Peak, Valley, Count\*, Process\*, Batch\*, Total\*, Scale Factors, Preset(s), Counter Load values, and Message 0.

\* On Models with these available display options.

The unit can be programmed to transmit or NOT to transmit mnemonics (unit address & value identifiers). The mnemonic transmitted is the first three characters of the programmed display mnemonic. For total, only the first character is transmitted. A transmit and reset count capability allows the selected count values to automatically reset after the value is printed (transmitted).

### OPERATOR ACCESS TO FRONT PANEL

There are several program disable modes that can be used to limit the operator from programming the parameter values via the front panel keypad. The Program Disable DIP switch can be used alone or in conjunction with a User Input, programmed for the program disable function and a programmable code value, to provide the desired level of security.

## MODEL LGPB APPLICATION

A local canning plant wishes to improve the display and control capabilities of its nine process lines. There is a requirement to add message interaction for the operators during process operation. The following application facts and requirements have been specified by the plant engineer.

1. The cans are sensed by a photo-electric device specially suited for can manufacturing. The device produces one pulse per can.
2. The can count for the process of boxing the cans is the first requirement. The can count is never changed, there are always 24 cans to each box. An output is required at 20 cans to slow the line temporarily until the second output is turned on. The second output changes the gate direction to begin the next grouping of 24. The second output has a time delay output of 2 seconds. After the time delay, both outputs are reset and ready for the next process cycle.
3. A count of the number of batches is required for each 8-hour shift. This count is recorded and reset by the manufacturing computer.
4. A total count of cans produced per 24-hour period is required. This count is also transmitted to the manufacturing computer, and reset as required via the communication link.
5. A display of cans per minute is required with minimum and maximum speed limits. Output 3 activates below 100 counts per minute and Output 4 activates above 500 counts per minute.
6. The four desired displays are process, batch, total, and rate. These are to be scrolled via the front panel.
7. The customer also wants the following messages displayed when the listed events occur:  
Output 3 - Line #4 Slow  
Output 4 - Overspd STOP! (Wants this display to stand out and have top priority)  
Proximity 1 - Check Label Glue  
Proximity 2 - Check Top Supply  
Proximity 3 - System Fault! Stop Line #4! (Wants this display to stand out and have top priority)

8. Once the unit is set up, the only front panel access should be for a reset of the process count and viewing of the displays.

The following page is a chart of the necessary programming for the Legend Plus unit.

# DITAK 8 - ADJUSTABLE TIMEBASE 5-DIGIT RATE INDICATOR

- LCD, POSITIVE REFLECTIVE OR NEGATIVE TRANSMISSIVE WITH YELLOW/GREEN OR RED BACKLIGHTING
- 0.6 INCH (15.2 mm) HIGH DIGITS
- ADJUSTABLE TIMEBASE FROM 4 MSEC TO 32 SEC
- INTERNAL LITHIUM BATTERY PROVIDES OVER 7 YEARS OF CONTINUOUS OPERATION
- NEMA 4X/IP65 SEALED FRONT PANEL BEZEL
- ACCEPTS MAGNETIC OR LOGIC TYPE SIGNAL INPUTS
- WIRE CONNECTIONS MADE VIA SCREW CLAMP TYPE TERMINALS

## DESCRIPTION

The Ditak 8 is a self-powered rate indicator which features selectable Timebase Increments by setting the appropriate DIP switches on the rear of the unit. The internal 3.0 VDC lithium battery will operate continuously for at least 7 years. It has a 5-digit LCD display with 0.6 inch (15.2 mm) high digits. The displays are available in positive image reflective (black digits, reflective background) or negative image transmissive (illuminated digits, dark background) with red or yellow/green backlighting. Backlight version units require power from an external 9 to 28 VDC supply.

The unit is constructed of a lightweight, high impact plastic case with a clear viewing window. The sealed front panel meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

The optional Micro Line/Sensor Power Supply (MLPS1000) is designed to attach to the rear of an installed Ditak 8. The optional supply can be powered from 85 to 250 VAC, and can provide power for the backlighting of a unit and most sensors.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## SPECIFICATIONS

- DISPLAY:** 5-Digit LCD, 0.6" (15.2 mm) high digits.
- POWER SOURCE:** Internal 3.0 V lithium battery provides over 7 years of continuous service (battery life is dependent upon usage).
- BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC @ 35 mA. Above 26 VDC, derate operating temperature to 50°C. Must use the MLPS1 or a Class 2 or SELV rated power supply.
- SIGNAL INPUT:** 0 to 10 KHz from a magnetic or bi-polar output (with a 50% duty cycle). Min. input sensitivity is 0.9 V. Max. input = 28 VDC.
- TIMEBASE:** Adjustable in 1/256 sec (3.906 msec) increments via DIP switches located at the rear of the unit. Timebase ranges from 3.906 msec to 31.998 sec; 0.01% ±1 digit accuracy.
- ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature:** 0 to 60°C (Above 50°C derate backlight operating voltage to 26 VDC max.)
  - Storage Temperature:** -40 to 80°C
  - Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 60°C.
  - Altitude:** Up to 2000 meters
- CONSTRUCTION:** High impact plastic case with clear viewing window (Panel gasket and mounting clip included). Installation Category I, Pollution Degree 2.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
DT8	Adjustable Timebase Tachometer	DT800000
	Adjustable Timebase Tachometer with Yellow/Green Backlighting	DT800010
	Adjustable Timebase Tachometer with Red Backlighting	DT800020
MLPS	Micro Line Sensor/Power Supply	MLPS1000

For more information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC distributor.

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

## SPECIFICATIONS (Cont'd)

### 8. CERTIFICATIONS AND COMPLIANCES:

#### SAFETY

IEC 1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

Type 4X Enclosure rating (Face only), UL50

#### ELECTROMAGNETIC COMPATIBILITY

##### Emissions and Immunity to EN 61326

##### Immunity:

Electrostatic discharge	EN 61000-4-2	Criterion B 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion B 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

##### Emissions:

Emissions	EN 55011	Class B
-----------	----------	---------

#### Notes:

1. Criterion A: Normal operation within specified limits.
2. Criterion B: Temporary loss of performance from which the unit self-recovers.

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

### 9. WEIGHT: 3.4 oz (96.4 g)

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

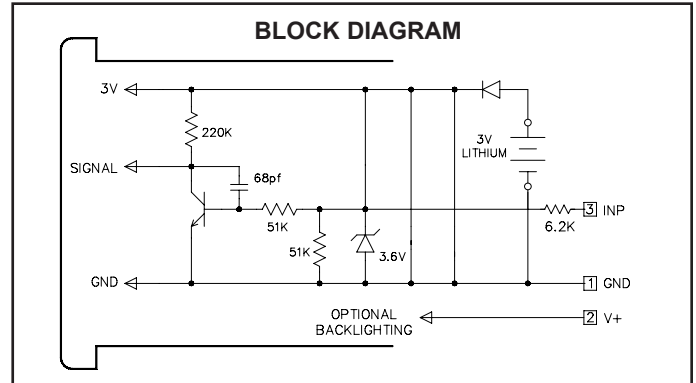

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via rear screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker. When wiring the unit, use the label to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire into the screw-clamp terminal and tighten the screw until the wire is clamped tightly. Each terminal can accept up to two #14 AWG wires.

The backlighting for a backlight version unit is powered between Terminal 2 (V+) and Terminal 1 (GND).

## Variable Frequency AC Inputs, Signal Source Powered

## Variable Frequency AC Inputs, Signal Source Powered

Minimum  $V_{AC}$  for operation is 0.9 V peak.

## Logic Pulse Inputs From Other Circuits & Sensors

## REAR PANEL DIP SWITCHES

When viewing the Ditak 8 from the rear, there are two banks of DIP switches located along the top edge of the PC board. The bank of eight switches to the left is labeled SWA and the bank of six switches to the right is labeled SWB. All of the SWA switches and five of the SWB switches are used to select the desired Timebase. The remaining switch of SWB is used to select Frequency Doubling.

**WARNING:** Lithium battery may explode if incinerated.

## FREQUENCY DOUBLING

DIP switch SWB 6 is the “Frequency Doubling” switch. When it is in the “ON” position, frequency doubling is disabled. When set to the “OFF” position, it is enabled and twice the number of input pulses are registered in the unit. This doubling of the input rate allows the Timebase Increment Total to be halved, thus allowing a faster update time for a given display value.

## TIMEBASE SELECTION

The Ditak 8 has a Timebase selection range from 3.906 msec to 31.998 sec. SWA 1 is set to the “ON” position for the minimum Timebase setting. SWA 1 through SWB 5 are set to the “ON” position for the maximum Timebase setting. A specific Timebase setting is achieved by adding the appropriate individual Timebase increments.

SWITCH	TIMEBASE INCREMENTS	SWITCH	TIMEBASE INCREMENTS
SWA 1	1	SWB 1	256
SWA 2	2	SWB 2	512
SWA 3	4	SWB 3	1024
SWA 4	8	SWB 4	2048
SWA 5	16	SWB 5	4096
SWA 6	32	SWB 6	FREQ. DBL.
SWA 7	64		
SWA 8	128		

The Timebase increment total is computed according to the following formula:

$$\text{TIMEBASE INCREMENT TOTAL (TBIT)} = \frac{\text{DR} \times 15,361}{\text{RPM} \times \text{PPR} \times \text{FQ.DBL.}}$$

### WHERE:

DR	=	Desired Reading
RPM	=	Revolutions Per Minute
PPR	=	Pulses Per Revolution
FQ.DBL.	=	Frequency Doubling disable (times 1 switch on, times 2 switch off)

**Example:** Find the appropriate Timebase DIP switch setting for desired parameters.

Desired Readout (DR)	=	2500
Revolutions Per Minute (RPM)	=	1250
Pulses Per Revolution (PPR)	=	50
FQ.DBL.	=	ON (times 1 switch on)

$$\text{TIMEBASE INCREMENT TOTAL (TBIT)} = \frac{2500 \times 15,361}{1250 \times 50 \times 1}$$

$$\text{TBIT} = 614.44$$

$$\text{TBIT} = 614 \text{ \{round to the nearest whole number\}}$$

$$\text{TBIT} = 614$$

DIP SWB 2	-	<u>512</u>	
		102	- Needed
DIP SWA 7	-	<u>64</u>	
		38	- Needed
DIP SWA 6	-	<u>32</u>	
		6	- Needed
DIP SWA 3	-	<u>4</u>	
		2	- Needed
DIP SWA 2	-	<u>2</u>	
		0	- Needed

Note: If no timebase switches are turned on, the Ditak 8 will default to 3.906 msec timebase.

DIP switches SWA 2, 3, 6, 7, and SWB 2 are all set to the “ON” position for a Timebase Increment Total of 614. If it is desired to know what the approximate Timebase is in seconds, use the following formula:

$$\begin{aligned} \text{TBIT} \times 0.003906 &= \text{Time in seconds} \\ 614 \times 0.003906 &= 2.398 \text{ sec.} \end{aligned}$$

## TYPICAL APPLICATION

### CONVEYOR BELT SPEED INDICATOR

It is desired to display the rate of a conveyor belt used to carry PC Boards through an infrared soldering chamber that is variable from 0 to 10 feet per minute. The rate must be adjusted depending on the size of the boards being soldered. The display of the rate indicator must read in feet per minute. The shaft of the variable speed motor contains a keyway. A speed of 100 RPM will produce a belt speed of 10 ft/min. A proximity sensor is used to monitor the speed of the shaft. The Ditak 8 can be used to display the belt speed in this application. The output signal of the sensor is connected to the Ditak 8 Terminal 3 (INP). The sensor common and shield are connected to the Ditak 8 Terminal 1 (GND). The Timebase setting is to be determined by using the formula.

$$\text{TIMEBASE INCREMENT TOTAL (TBIT)} =$$

$$\frac{\text{DR} \times 15,361}{\text{RPM} \times \text{PPR} \times \text{FQ.DBL.}} = \frac{10 \times 15,361}{100 \times 1 \times 1}$$

Desired Reading	=	10
MAX RPM Of Shaft	=	100
Pulses Per Revolution	=	1
FQ.DBL.	=	ON (times 1 switch on)

$$\text{TBIT} = 1536.1$$

$$\text{TBIT} = 1536 \text{ \{round to the nearest whole number\}}$$

$$\text{TBIT} = 1536$$

DIP SWB 3	-	<u>1024</u>	
		512	- Needed
DIP SWB 2	-	<u>512</u>	
		0	- Needed

With these DIP switch settings, the Timebase would be approximately 5.99 sec (1536 x 0.003906 = 5.995). To reduce the display update time, the “Frequency Doubling” switch can be enabled (set to the “OFF” position). Therefore, only half the Timebase will be necessary (768 x 0.003906 = 2.99 sec.).

$$\text{TBIT} = 768$$

DIP SWB 2	-	<u>512</u>	
		256	- Needed
DIP SWB 1	-	<u>256</u>	
		0	- Needed
DIP SWB 6	-	OFF	- Frequency Doubling Enabled

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

## INSTALLATION

The Ditak 8 meets NEMA 4X/IP65 requirements for indoor use, when properly installed. The units are intended to be mounted into an enclosed panel. A sponge rubber gasket, mounting clip, two screws, and nut fasteners are provided to install and seal the unit in the panel cut-out.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean panel opening.
2. Slide the panel gasket over the rear of the unit to the back of the bezel.
3. Slide nut fastener into slot on mounting clip and then insert mounting screw through nut on both sides of mounting clip. Tip of mounting screw should NOT project through hole on clip.
4. Install Ditak unit through panel cut-out.
5. Slide mounting clip over rear of unit until clip is against back of panel. The mounting clip and Ditak housing have a latching feature to hold the unit in place until tightened.

*Note: Hold the Ditak front bezel in place when sliding the mounting clip into position.*

6. Alternately tighten each mounting screw to ensure uniform gasket pressure. Visually inspect the gasket for proper seal. The gasket should be compressed approximately 75 to 80% of its original thickness.
7. If the gasket is not adequately compressed and the mounting screws cannot be tightened any further, loosen mounting screws and insure that the clip is latched as close as possible to the panel.
8. Repeat step #6 for tightening the mounting screws.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

# MODEL CUB5 - MINIATURE ELECTRONIC 8-DIGIT DUAL COUNTER AND RATE INDICATOR

This is a brief overview of the CUB5. For complete specifications and programming information, see the **CUB5 Bulletin** starting on **page 102**.

- LCD, REFLECTIVE OR GREEN/RED LED BACKLIGHTING
- 0.46" (11.7 mm) HIGH DIGITS
- OPTIONAL RELAY OUTPUT MODULE
- OPTIONAL COMMS OUTPUT MODULES
- COUNT SPEEDS UP TO 20 KHZ
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- PROGRAMMABLE SCALING FOR COUNT AND RATE
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (UP TO 4 TIMES RESOLUTION)
- ANTI-COINCIDENCE COUNTING (ADD/ADD & ADD/SUB)
- NEMA 4X/IP65 SEALED FRONT BEZEL

## SPECIFICATIONS

### COUNTER DISPLAYS:

**Counter A:** 8-digits, enabled in all count modes

Display Range: -9999999 to 99999999

Overflow Indication: Display flashes "Err" "Over"

**Counter B:** 7-digits, enabled in Dual Counter mode only

Display Designator: "b" to the left side of the display

Display Range: 0 to 9999999 (positive count only)

Overflow Indication: Display flashes "Err" "Over"

**Maximum Count Rates:** 50% duty cycle

Without setpoint option card: 20 KHz (all count modes)

With setpoint option card: 20 KHz for any count mode except Quadrature x4 (18 KHz) and Dual Counter (17 KHz)

**RATE DISPLAY:** 6-digits, may be enabled or disabled in any mode

**Display Designator:** "R" to the left side of the display

**Display Range:** 0 to 999999

**Over Range Display:** "R 000000"

**Maximum Frequency:** 20 KHz

**Minimum Frequency:** 0.01 Hz

**Accuracy:** ±0.01%

**COUNT/RATE SIGNAL INPUTS (INP A and INP B):**

**Input A:** DIP switch selectable to accept pulses from a variety of sources.

See Section 2.0 Setting the DIP Switches for Input A specifications.

**Input B:** Logic signals only

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

Current sinking: Internal 10K $\Omega$  pull-up resistor to +9 to 28 VDC

Filter (LO Freq.): Damping capacitor provided for switch contact bounce.

Limits input frequency to 50 Hz and input pulse widths to 10 msec min.

# MODEL PAXLR - PAX<sup>®</sup> LITE RATE METER

- RATE INDICATION
- 6-DIGIT, 0.56" (14.2 mm) HIGH LED DISPLAYS
- INPUT RATES UP TO 25 KHZ
- ACCEPTS A WIDE VARIETY OF SENSORS
- PROGRAMMABLE SCALING
- PROGRAMMABLE UPDATE TIME
- PROGRAMMABLE DECIMAL POINTS
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAX<sup>®</sup> Lite Rate Meter, Model PAXLR, provides the versatility and flexibility needed to accommodate virtually any rate measuring application. The meter has the ability to scale for direct readout in terms of the units being measured. Whether a machine produces bottles, cloth, wire, or beverage mix, operation is enhanced when the rate readout is expressed directly in bottles/min., feet/min., gallons/min., or whatever units are needed in plant applications.

The PAXLR can accommodate magnetic pickups, logic sensors, and NPN open collector sensors. The pulses are received and scaled, so the desired display can be achieved. The meter is programmed through both the front panel buttons and DIP switches. Once the programming is complete, the front panel buttons can be disabled by a DIP switch setting.

The meter has been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough, yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

# ORDERING INFORMATION

## Meter Part Numbers

R0 - 6 Digit Rate Meter

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 6-digit, 0.56" (14.2 mm), 7-segment LED.  
Decimal points are programmed by front panel keys.
- POWER:**
  - AC Power:** 115/230 VAC, switch selectable. Allowable power line variation  $\pm 10\%$ , 50/60 Hz, 6 VA. @ 100 mA max.
  - Isolation:** 2300 Vrms for 1 min. to input and DC Out/In.
  - DC Power:** 10 to 16 VDC @ 0.1 A max.
- SENSOR POWER:** 9 to 17.5 VDC @ 100 mA max.
- KEYPAD:** 3 programming keys, the ▼ (Down Arrow) key can also function as the front panel reset button.
- INPUT:** (DIP switch selectable)  
Accepts pulses from a variety of sources including NPN-OC, PNP-OC, TTL Outputs, Magnetic Pickups and all standard Red Lion® sensors.  
**Logic:** Input trigger levels  $V_{IL} = 1.5$  V max.;  $V_{IH} = 3.75$  V min.  
**Current Sinking:** Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9$  mA  
**Current Sourcing:** Internal 3.9 K $\Omega$  pull-down, 8 mA max. @ 30 VDC max.  
**MAGNETIC PICK-UP:**
  - Sensitivity:** 200 mV peak
  - Hysteresis:** 100 mV
  - Input impedance:** 3.9K $\Omega$  @ 60 Hz
  - Maximum input voltage:**  $\pm 40$  V peak, 30 Vrms
- INPUT FREQUENCY RANGE:**
  - Max Frequency:** 25 KHz
  - Min Frequency:** 0.01 Hz
  - Accuracy:**  $\pm 0.01\%$
- MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and display values.
- ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature:** 0° to 60°C
  - Storage Temperature:** -40° to 60°C
  - Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)
  - Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2g's.
  - Shock According to IEC 68-2-27:** Operational 30 g (10g relay), 11 msec in 3 directions.
  - Altitude:** Up to 2000 meters
- CERTIFICATIONS AND COMPLIANCES:**
  - SAFETY**
    - UL Recognized Component, File # E179259, UL61010A-1, CSA C22.2 No. 61010-1
    - Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.
    - UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95
    - LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards
    - Type 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate # US/8843A/UL  
CB Scheme Test Report # 04ME11209-20041018  
Issued by Underwriters Laboratories, Inc.  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529  
IP20 Enclosure rating (Rear of unit), IEC 529

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	2 kV power 2 kV signal
Surge	EN 61000-4-5	1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

### Emissions:

Emissions	EN 55011	Class B
-----------	----------	---------

### Notes:

1. *Criterion A: Normal operation within specified limits.*
2. *EMI filter placed on the DC power supply, when DC powered: Corcom #1VB3 or Schaffner #FN610-1/07 (RLC #LFIL0000).*

## 10. CONNECTIONS:

High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gage Capacity: 30-14 AWG copper wire.  
Torque: 4.5 inch-lbs (0.51 N-m) max.

## 11. CONSTRUCTION:

This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

## 12. WEIGHT:

12 oz (340 g)

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE SWITCHES

The meter has switches that must be checked and/or changed prior to applying power. To access the power switch, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Power Selection Switch

Caution: Insure the AC power selection switch is set for the proper voltage before powering-up the meter. The meter is shipped from the factory in the 230 VAC position.

## Set-Up DIP Switches

A DIP switch is located at the rear of the meter, and is fully accessible when the unit is in the case. It is used for the selection of the input parameters and program disable.

### SWITCH 1

**SNK.:** Adds internal 7.8 K $\Omega$  pull-up resistor to + 12 VDC, I<sub>MAX</sub> = 1.9 mA.

### SWITCH 2

**SRC.:** Adds internal 3.9 K $\Omega$  pull-down resistor, 8 mA max. @ 30 VDC max.

### SWITCH 3

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Limits input frequency to 50 Hz and input pulse widths to 10 msec.

### SWITCH 4

**LOGIC:** Input trigger levels V<sub>IL</sub> = 1.5 V max.; V<sub>IH</sub> = 3.75 V max.

**MAG:** 200 mV peak input (must have SRC on).

### SWITCH 5

**Enable Programming:** Enables programming through the front panel buttons.

**Disables Programming:** Disables the front panel buttons from any programming changes.

### SWITCH 6

**Not Active for the Rate Meter**

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.

- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
- Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
 

Snubber: RLC# SNUB0000.

# 3.1 POWER WIRING

## AC Power

Terminal 1: VAC  
Terminal 2: VAC

## DC Power

Terminal 3: +VDC  
Terminal 4: COMM

# 3.2 INPUT WIRING

## Magnetic Pickup

## AC Inputs From Tach Generators, Etc.

## Two Wire Proximity, Current Source

## Current Sinking Output

## Current Sourcing Output

## Interfacing With TTL

## Emitter Follower; Current Source

\*Switch position is application dependent.

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

KEY	DISPLAY MODE OPERATION	PROGRAMMING MODE OPERATION
PAR	Access Programming Mode	Store selected parameter and index to next parameter
▲	No Function	Increment selected digit of parameter value
▼	No Function	Select digit position in parameter value

# 5.0 SCALING THE METER

## RATE SCALING

To scale the Rate, enter a Scaling Display value with a corresponding Scaling Input value. These values are internally plotted to a Display value of 0 and Input value of 0 Hz. A linear relationship is formed between these points to yield a rate display value that corresponds to the incoming input signal rate. The location of the scaling point should be near the process end limit for the best possible accuracy. The PAXLR is capable of showing a rate display value for any linear process.

## SCALING CALCULATION

If a display value versus input signal (in pulses per second) is known, then those values can be entered into Scaling Display ( $r_k - d5P$ ) and Scaling Input ( $r_k - i1P$ ). No further calculations are needed.

If only the number of pulses per 'single' unit (i.e. # of pulses per foot) is known, then it can be entered as the Scaling Input value and the Scaling Display value will be entered as the following:

RATE PER	DISPLAY ( $r_k - d5P$ )	INPUT ( $r_k - i1P$ )
Second	1	# of pulses per unit
Minute	60	# of pulses per unit
Hour	3600	# of pulses per unit

## NOTES:

- If # of pulses per unit is less than 10, then multiply both Input and Display values by 10.
- If # of pulses per unit is less than 1, then multiply both Input and Display values by 100.
- If the Display value is raised or lowered, then Input value must be raised or lowered by the same proportion (i.e. Display value for per hour is entered by a third less (1200) then Input value is a third less of # of pulses per unit). The same is true if the Input value is raised or lowered, then Display value must be raised or lowered by the same proportion.
- Both values must be greater than 0.0.

## EXAMPLE:

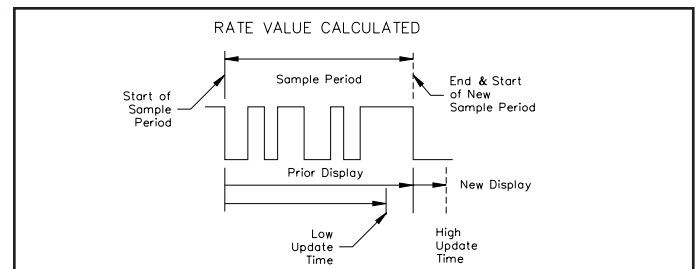

- With 15.1 pulses per foot, show feet per minute in tenths.  
Scaling Display = 60.0 Scaling Input = 15.1
- With 0.25 pulses per gallon, show whole gallons per hour. (To have greater accuracy, multiply both Input and Display values by 10.)  
Scaling Display = 36000 Scaling Input = 2.5

## RATE DISPLAY OVERFLOW

The rate of the input signal along with the programmed scaling values can cause the calculated rate display to exceed the meter's 6-digit capacity. If this occurs, the display will show "01.01.01" to indicate an overflow condition.

## INPUT FREQUENCY CALCULATION

The meter determines the input frequency by summing the number of falling edges received during a sample period of time. The sample period begins on the first falling edge. At this falling edge, the meter starts accumulating time towards Low Update and High Update values. Also, the meter starts accumulating the number of falling edges. When the time reaches the Low Update Time value, the meter looks for one more falling edge to end the sample period. If a falling edge occurs (before the High Update Time value is reached), the Rate display will update to the new value and the next sample period will start on the same edge. If the High Update Time value is reached (without receiving a falling edge after reaching Low Update Time), then the sample period will end but the Rate display will be forced to zero. The High Update Time value must be greater than the Low Update Time value. Both values must be greater than 0.0. The input frequency calculated during the sample period, is then shown as a Rate value determined by either scaling method.

# 6.0 PROGRAMMING THE METER

The Rate Indicator has five programmable parameters which are entered in the sequence shown above, using the front panel push buttons.

Before programming, refer to the section on Scaling the Meter to determine the Rate Scaling Display Value and Rate Scaling Input Value to use for the specific application.

*Note: Programming mode can be locked out with the Program Disable DIP switch. With the switch in the Disabled (up) position the meter will not enter programming mode. Refer to the section on DIP switch setup.*

## PROGRAMMING MODE ENTRY

Press the **PAR** key to enter Programming Mode. The meter briefly displays **Pr0** followed by the first programming parameter described below.

## PROGRAMMING PARAMETERS

In programming mode, the display alternates between the parameter and the current selection or value for that parameter. The dual display with arrows is used below to illustrate the alternating display. The selection choices or value range for each parameter is shown to the right of the alternating display.

### DECIMAL POSITION

This parameter selects the decimal point position on the display. The selection does not affect scaling calculations.

Press the arrow keys (**▲** or **▼**) to sequence through the selection list until the desired selection is shown. Press the **PAR** key to save the displayed selection and advance to the next parameter.

### ENTERING NUMERICAL VALUES

The parameters which follow are displayed as a multi-digit numerical values with one selected digit flashing (initially the far left digit). Press the **▲** (up arrow) key to increment the value of the selected (flashing) digit. Holding the **▲** key automatically scrolls the value of the selected digit.

Press the **▼** (down arrow) key to select the next digit position to the right. Use the **▲** key to increment the value of this digit to the desired number. Press the **▼** key again to select the next digit to be changed. Holding the **▼** key automatically scrolls through each digit position.

Repeat the "select and set" sequence until all digits are displaying the desired numerical value. Press the **PAR** key to save the displayed value and advance to the next parameter.

### LOW UPDATE TIME (DISPLAY UPDATE)

The Low Update Time is the minimum amount of time between display updates. The factory setting of 1.0 allows a minimum of one second between updates. Low values below 0.3 seconds will update the display correctly, but may cause the display to appear unsteady.

For more details on display updating, refer to Input Frequency Calculation.

### HIGH UPDATE TIME (DISPLAY ZERO)

The High Update Time is the maximum amount of time before the display is forced to zero. The High Update Time **must** be higher than the Low Update Time and also higher than the desired slowest readable speed (one divided by pulses per second). The factory setting of 2.0 will force the display to zero for speeds below 0.5 Hz or one pulse every 2 seconds.

For more details on display updating, refer to Input Frequency Calculation.

### RATE SCALING DISPLAY VALUE

Enter the desired Rate Display value to be shown for the corresponding Rate Input value entered below. For more explanation, refer to Rate Scaling.

If a decimal point was selected in the Decimal Position (**dEC Pt**) parameter, it will be displayed at the same position for this parameter value.

### RATE SCALING INPUT VALUE

Enter the Rate Input value that corresponds to the Rate Display value entered above. This value is always in pulses per second (Hz). For more explanation, refer to Rate Scaling.

### PROGRAMMING MODE EXIT

The meter exits Programming Mode when the **PAR** key is pressed to save the Rate Scaling Input Value. The meter briefly displays **End** upon exiting Programming Mode. All programmed selections are now transferred to the non-volatile memory and the meter returns to the Rate display.

(If power loss occurs during programming mode, verify parameter changes and reprogram, if necessary, when power is restored.)

### PROGRAMMING MODE TIME OUT

The Programming Mode has an automatic time out feature. If no keypad activity is detected for approximately 60 seconds, the meter automatically exits Programming Mode. The meter briefly displays **End** and returns to the Rate display. When automatic timeout occurs, any changes that were made to the parameter currently being programmed, will not be saved.

### FACTORY SETTINGS

The factory settings for the programming parameters are shown above in the alternating display illustrations. The factory settings can be easily restored by removing power from the meter, and then pressing and holding the **PAR** key while power is reapplied. The meter displays **rESEt** until the **PAR** key is released. The normal power-up sequence then resumes, with the factory settings loaded and saved in non-volatile memory.

*Note: The Program Disable DIP switch must be in the Enabled (down) position to allow loading factory settings. See section on DIP switch setup.*

# MODEL PAXLCR - 1/8 DIN PAX LITE DUAL COUNTER AND RATE METER

This is a brief overview of the PAXLCR. For complete specifications and programming information, see the **PAX Lite Dual Counter and Rate Meter Bulletin** starting on **page 125**.

- 6 DIGIT, 0.56" HIGH RED LED DISPLAY
- PROGRAMMABLE SCALING FOR COUNT AND RATE
- BI-DIRECTIONAL COUNTING, UP/DOWN CONTROL
- QUADRATURE SENSING (UP TO 4 TIMES RESOLUTION)
- BUILT-IN BATCH COUNTING CAPABILITY
- PROGRAMMABLE USER INPUT
- DUAL 5 AMP FORM C RELAYS
- UNIVERSALLY POWERED
- NEMA 4X/IP65 SEALED FRONT BEZEL

C

## ANNUNCIATORS:

- A - Counter A value
- B - Counter B value (dual count or batch)
  - Rate value is displayed with no designator
- SP1 - Indicates setpoint 1 output status
- SP2 - Indicates setpoint 2 output status

## COUNTER DISPLAYS:

- Counter A:** 6-digits, enabled in all count modes
  - Display Designator: "A" to the left side of the display
  - Display Range: -99999 to 999999
- Counter B:** 6-digits, enabled in Dual Count mode or Batch Counter
  - Display Designator: "B" to the left side of the display
  - Display Range: 0 to 999999 (positive count only)
- Overflow Indication:** Display "fl. fl." alternates with overflowed count value
- Maximum Count Rates:** 50% duty cycle, count mode dependent.
  - With setpoints disabled: 25 KHz, all modes except Quadrature x4 (23 KHz).
  - With setpoint(s) enabled: 20 KHz, all modes except Dual Counter (14 KHz), Quadrature x2 (13 KHz) and Quadrature x4 (12 KHz).

## RATE DISPLAY: 6-digits, may be enabled or disabled in any count mode

- Display Range:** 0 to 999999
- Over Range Display:** "fl. fl."
- Maximum Frequency:** 25 KHz
- Minimum Frequency:** 0.01 Hz
- Accuracy:** ±0.01%

## COUNT/RATE SIGNAL INPUTS (INPUT A and INPUT B):

- See Section 2.0 Setting the DIP Switches for complete Input specifications. DIP switch selectable inputs accept pulses from a variety of sources. Both inputs allow selectable active low or active high logic, and selectable input filtering for low frequency signals or switch contact debounce.
- Input A:** Logic level or magnetic pickup signals.
  - Trigger levels:  $V_{IL} = 1.25 \text{ V max}$ ;  $V_{IH} = 2.75 \text{ V min}$ ;  $V_{MAX} = 28 \text{ VDC}$
  - Mag. pickup sensitivity: 200 mV peak, 100 mV hysteresis, 40 V peak max.
- Input B:** Logic level signals only
  - Trigger levels:  $V_{IL} = 1.0 \text{ V max}$ ;  $V_{IH} = 2.4 \text{ V min}$ ;  $V_{MAX} = 28 \text{ VDC}$

# MODEL PAXR - 1/8 DIN RATE METER

This is a brief overview of the PAXR. For complete specifications and programming information, see the **PAX Digital Input Panel Meters Bulletin** starting on **page 137**.

- 5-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- RATE INDICATION
- MINIMUM/MAXIMUM RATE DISPLAYS
- FOUR SETPOINT ALARM OUTPUTS (W/Plug-in card)
- VARIABLE INTENSITY DISPLAY

## PAXR SPECIFICATIONS

### ANNUNCIATORS:

- r - Rate
- H - Maximum (High) Rate
- L - Minimum (Low) Rate
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### RATE DISPLAY:

- Accuracy:  $\pm 0.01\%$
- Minimum Frequency: 0.01 Hz
- Maximum Frequency: 34 KHz
- Maximum Display: 5 Digits: 99999
- Adjustable Display (low) Update: 0.1 to 99.9 seconds
- Over Range Display: "r **0L0L**"

### INPUT A:

- DIP switch selectable to accept pulses from a variety of sources including TTL outputs, magnetic pickups and all standard RLC sensors.
- LOGIC: Input trigger levels  $V_{IL} = 1.5$  V max.;  $V_{IH} = 3.75$  V min.
- Current sinking: Internal  $7.8$  K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9$  mA.
- Current sourcing: Internal  $3.9$  K $\Omega$  pull-down,  $7.3$  mA max. @ 28 VDC,  $V_{MAX} = 30$  VDC.
- MAGNETIC PICKUP:
  - Sensitivity: 200 mV peak
  - Hysteresis: 100 mV
  - Input impedance:  $3.9$  K $\Omega$  @ 60 Hz
  - Maximum input voltage:  $\pm 40$  V peak, 30 Vrms

# MODEL PAXI - 1/8 DIN DUAL COUNTER/RATE METER

This is a brief overview of the PAXI. For complete specifications and programming information, see the **PAX Digital Input Panel Meters Bulletin** starting on **page 137**.

- COUNTER, DUAL COUNTER, RATE AND SLAVE DISPLAY
- 6-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- VARIABLE INTENSITY DISPLAY
- 10 POINT SCALING (FOR NON-LINEAR PROCESSES)
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)

## PAXI SPECIFICATIONS

### MAXIMUM SIGNAL FREQUENCIES TABLE

To determine the maximum frequency for the input(s), first answer the questions with a yes (Y) or no (N). Next determine the Count Mode to be used for the counter(s). If dual counters are used with different Count Modes, then the lowest frequency applies to both counters.

FUNCTION QUESTIONS	Single: Counter A or B (with/without rate) or Rate only								Dual: Counter A & B or Rate not assigned to active single counter							
	N	N	N	N	Y	Y	Y	Y	N	N	N	N	Y	Y	Y	Y
Are any setpoints used?	N	N	N	N	Y	Y	Y	Y	N	N	N	N	Y	Y	Y	Y
Is Prescaler Output used?	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y	N	N	Y	Y
Is Counter C used?	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y	N	Y
COUNT MODE	(Values are in KHz)				(Values are in KHz)				(Values are in KHz)				(Values are in KHz)			
Count x1	34	25	21	17	18	15	13	11	13	12	13	11	9	7.5	9	7

Quadrature x4	8	6	8	6	4	3	4	3								
Rate Only	34	N/A	21	N/A	34	N/A	21	N/A								

### ANNUNCIATORS:

- A - Counter A
- B - Counter B
- C - Counter C
- r - Rate
- H - Maximum (High) Rate
- L - Minimum (Low) Rate
- BF - Upper significant digit display of counter
- SP1 - setpoint 1 output state
- SP2 - setpoint 2 output state
- SP3 - setpoint 3 output state
- SP4 - setpoint 4 output state

### RATE DISPLAY:

- Accuracy:  $\pm 0.01\%$
- Minimum Frequency: 0.01 Hz
- Maximum Frequency: see Max Signal Frequencies Table.
- Maximum Display: 5 Digits: 99999
- Adjustable Display (low) Update: 0.1 to 99.9 seconds
- Over Range Display: "r **OL OL**"

### COUNTER DISPLAYS:

- Maximum display: 8 digits:  $\pm 99999999$  (greater than 6 digits display)
- Alternates between high order and low order.)

### INPUTS A and B:

- DIP switch selectable to accept pulses from a variety of sources including switch contacts, TTL outputs, magnetic pickups and all standard RLC sensors.
- LOGIC: Input trigger levels  $V_{IL} = 1.5$  V max.;  $V_{IH} = 3.75$  V min.
- Current sinking: Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9$  mA.
- Current sourcing: Internal 3.9 K $\Omega$  pull-down, 7.3 mA max. @ 28 VDC,  $V_{MAX} = 30$  VDC.
- Filter: Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec. minimum.
- MAGNETIC PICKUP:
  - Sensitivity: 200 mV peak
  - Hysteresis: 100 mV
  - Input impedance: 3.9 K $\Omega$  @ 60 Hz
  - Maximum input voltage:  $\pm 40$  V peak, 30 Vrms

### DUAL COUNT MODES:

When any dual count mode is used, then User Inputs 1 and/or 2 will accept the second signal of each signal pair. The user inputs do not have the Logic/Mag, HI/LO Freq, and Sink/Source input setup switches. The user inputs are inherently a logic input with no low frequency filtering. Any mechanical contacts used for these inputs in a dual count mode must be debounced externally. The user input may only be selected for sink/source by the User Jumper placement.

### PRESCALER OUTPUT:

- NPN Open Collector:  $I_{SNK} = 100$  mA max. @  $V_{OL} = 1$  VDC max.  $V_{OH} = 30$  VDC max. With duty cycle of 25% min. and 50 % max.

# MODEL PAXLPT - PAX<sup>®</sup> LITE PROCESS TIME METER

- PROCESS TIME INDICATION
- 6-DIGIT, 0.56" (14.2 mm) HIGH LED DISPLAYS
- DISPLAY MODES 999999 OR 999-59
- INPUT RATES UP TO 25 KHZ
- ACCEPTS A WIDE VARIETY OF SENSORS
- PROGRAMMABLE SCALING
- PROGRAMMABLE DECIMAL POINTS
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAX<sup>®</sup> Lite Process Time Meter, Model PAXLPT, displays a value representing the time between a beginning and end point of a process, such as a conveyor oven.

The PAXLPT's display will update inversely in relation to the input signal frequency. As input frequency increases (representing speed), the PAXLPT time display will decrease indicating a reduction in the duration of process time. For example, the bake time through an oven will decrease the faster the conveyor runs.

The display can be programmed for two operating modes. Operating in the 6 digit mode, the PAXLPT can readout in any whole value, such as seconds, minutes, or hours. This mode also provides capability for decimal points. The 5 digit mode functions as a chronometer, which has a maximum display value of 999-59. This formats the display to allow the meter to readout in hours and minutes, minutes and seconds, etc.

The PAX<sup>®</sup> Lite Process Time Indicator also has a feature called "moving window average". This allows one time disturbances, or irregularly spaced items to be averaged over eight inputs, thus keeping display fluctuations to a minimum while still updating the display on every pulse. This feature can be enabled or disabled by a rear DIP switch.

The PAXLPT can accept many different types of sensors including magnetic pickups, logic sensors, and NPN open collector sensors, as well as switch contact closure sensors.

The meter has been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

# ORDERING INFORMATION

## Meter Part Numbers

PT - 6 Digit Process Time Meter

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 6-digit, 0.56" (14.2 mm), 7-segment LED.  
Decimal points are programmed by front panel keys (6 digit mode only)
- POWER:**  
**AC Power:** 115/230 VAC, switch selectable. Allowable power line variation  $\pm 10\%$ , 50/60 Hz, 6 VA.  
**Isolation:** 2300 Vrms for 1 min. to input and DC Out/In.  
**DC Power:** 10 to 16 VDC @ 0.1 A max.
- SENSOR POWER:** 9 to 17.5 VDC @ 100 mA max.
- KEYPAD:** 3 programming keys
- INPUT:** (DIP switch selectable)  
Accepts pulses from a variety of sources including NPN-OC, PNP-OC, TTL Outputs, Magnetic Pickups and all standard Red Lion® sensors.  
**Logic State:** Active Low  
**Input trigger levels**  $V_{IL} = 1.5 \text{ V max.}; V_{IH} = 3.75 \text{ V min.}$   
**Current Sinking:** Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.9 \text{ mA}$   
**Current Sourcing:** Internal 3.9 K $\Omega$  pull-down, 8 mA max. @ 30 VDC max.  
**MAGNETIC PICK-UP:**  
**Sensitivity:** 200 mV peak  
**Hysteresis:** 100 mV  
**Input impedance:** 3.9K $\Omega$  @ 60 Hz  
**Maximum input voltage:**  $\pm 40 \text{ V peak}$ , 30 Vrms
- INPUT FREQUENCY RANGE:**  
**Max Frequency:** 25 KHz  
**Min Frequency:** 0.05 Hz  
**Accuracy:**  $\pm 0.02\%$   
*Note: When the input pulse rate is 3 Hz or lower, the unit will utilize, if enabled, a technique known as a "moving window average." (This continually averages the last eight input pulses.)*
- MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters.
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0° to 60°C  
**Storage Temperature:** -40° to 60°C  
**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)  
**Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2g's.  
**Shock According to IEC 68-2-27:** Operational 25 g (10g relay), 11 msec in 3 directions.  
**Altitude:** Up to 2000 meters
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
UL Recognized Component, File # E179259, UL61010A-1, CSA C22.2 No. 61010-1  
Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle
<b>Emissions:</b>		
Emissions	EN 55011	Class B

**Notes:**

1. *Criterion A: Normal operation within specified limits.*
2. *EMI filter placed on the DC power supply, when DC powered: Corcom #IVB3 or Schaffner #FN610-1/07 (RLC #LFIL0000).*

- 10. CONNECTIONS:** High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gage Capacity: 30-14 AWG copper wire.  
Torque: 4.5 inch-lbs (0.51 N-m) max.
- 11. CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.
- 12. WEIGHT:** 12 oz (340 g)

## 1.0 INSTALLING THE METER

### Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

### Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPER AND SWITCHES

The meter has a jumper and switches, which must be checked and/or changed prior to applying power. To access the power switch and the jumper, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Power Selection Switch

Caution: Insure the AC power selection switch is set for the proper voltage before powering-up the meter. The meter is shipped from the factory in the 230 VAC position.

## Mode Selection Jumper

Inside the meter is also the Mode Selection Jumper, located near the display board. This jumper will select operation in the 6 digit mode or 5 digit (chronometer) mode. When the jumper is positioned toward the display board, the unit will be in the 6 digit mode of operation. With the jumper positioned away from the display board, the meter is in the 5 digit (chronometer) mode. This unit ships from the factory in the 6 digit mode.

## Set-Up DIP Switches

A DIP switch is located at the rear of the meter, and is fully accessible when the unit is in the case. It is used for the selection of the input parameters and program disable. For the correct input setup, refer to 3.2 Input Wiring.

## SWITCH 1

**SNK.:** Adds internal 7.8 KΩ pull-up resistor to + 12 VDC,  $I_{MAX} = 1.9$  mA

## SWITCH 2

**SRC.:** Adds internal 3.9 KΩ pull-down resistor, 8 mA max. @ 30 VDC max.

## SWITCH 3

**HI Frequency:** Removes damping capacitor and allows max. frequency.

**LO Frequency:** Limits input frequency to 50 Hz and input pulse widths to 10 msec.

## SWITCH 4

**LOGIC:** Input trigger levels  $V_{IL} = 1.5$  V max.;  $V_{IH} = 3.75$  V max.

**MAG:** 200 mV peak input (must have SRC on)

## SWITCH 5

**Enable Programming:** Enables programming through the front panel buttons

**Disables Programming:** Disables the front panel buttons from any programming changes

## SWITCH 6

**Enable Averaging:** Enables moving windows averaging feature.

**Disable Averaging:** Disables moving windows averaging feature.

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.

3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC# FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward # 28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC# LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
  - Snubber: RLC# SNUB0000.

C

# 5.0 SCALING THE METER

In many industrial applications, a meter is required to display the process time of an operation or event. The pulses from a sensor are received by the PAXLPT, and then scaled to produce just such a readout. The following formula will help provide the scaling values to achieve the desired readout.

$$SF = DR \times PPS$$

**WHERE:**

- SF = Scale Factor
- DR = Desired Readout\*
- PPS = Pulses per Second

To calculate the PPS multiply the RPM (Revolutions per Minute) by the PPR (Pulses per Revolution) and divide by 60.

$$\frac{RPM \times PPR}{60}$$

*\*For applications requiring a decimal point, select and program the appropriate decimal point. When calculating the Scale Factor, use the whole value of the number to be displayed, for example, 50.0 minutes, the Desired Readout in this case is 500. Do not use decimal points in the Desired Readout when calculating the scale factor.*

**For calculated SF values less than 59,999**

If the Scale Factor is a value less than 59,999, it can be entered directly into the meter as the Scale Factor and the Scale Multiplier can be left at 1.

**For calculated SF values greater than 59,999**

If the Scale Factor is a value over 59,999 (maximum value), the Scale Multiplier must be used to reduce the calculated Scale Factor value until it is less than 59,999. The Scale Multiplier divides the calculated Scale Factor value by 1, 10, 100 and 1000, thus reducing the calculated value accordingly. Select the appropriate Scale Multiplier value that allows the Scale Factor to be a value under 59,999. Both the Scale Factor and Scale Multiplier can then be entered into the meter.

**Example 1 (6 Digit):**

$$DR = 150 \text{ minutes}$$

$$PPS = \frac{450 \text{ RPM} \times 60 \text{ PPR}}{60}$$

$$PPS = 450$$

$$SF = DR \times PPS$$

$$SF = 150 \times 450$$

$$SF = 67,500$$

Since the SF value is greater than 59,999, the SM will be needed to reduce the calculated value to value less than 59,999. Using the SM of 10, the 67,500 value is divide by 10, reducing the SF to a value of 6750. The meter can be programmed for a SF of 6750 and a SM of 10.

**Example 2 (5 Digit):**

$$DR = 2 \text{ hours and } 23 \text{ minutes (2-23)}$$

$$PPS = \frac{138 \text{ RPM} \times 100 \text{ PPR}}{60}$$

$$PPS = 230$$

To calculate the Scale Factor for a 5 Digit application, first convert the DR to its base units.

$$DR = 2 \text{ (hours)} \times 60 + 23$$

$$DR = 120 + 23$$

$$DR = 143 \text{ minutes}$$

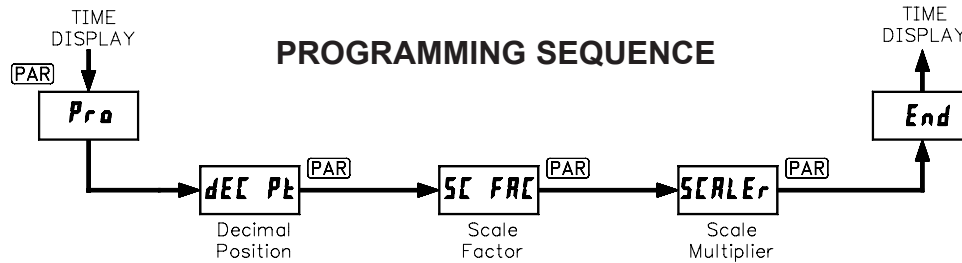

$$SF = DR \times PPS$$

$$SF = 143 \times 230$$

$$SF = 32,890$$

Since the SF value is less than 59,999, it can be entered directly as the SF and the SM will be 1. *Note: When programmed for the 5 Digit mode, the meter will convert the D.R. back to the hours and minutes format.*

# 6.0 PROGRAMMING THE METER

The Process Time Indicator has three programmable parameters which are entered in the sequence shown above, using the front panel push buttons.

Before programming, please refer to the section on Scaling the Meter to determine the Decimal Position, Scale Factor and Scale Multiplier to use for the specific application.

*Note: Programming mode can be locked out with the Program Disable DIP switch. With the switch in the Disabled (up) position the meter will not enter programming mode. Refer to the section on DIP switch setup.*

## PROGRAMMING MODE ENTRY

Press the **PAR** key to enter Programming Mode. The meter briefly displays **Pro** followed by the first programming parameter described below.

## PROGRAMMING PARAMETERS

In programming mode, the display alternates between the parameter and the current selection or value for that parameter. The dual display with arrows is used below to illustrate the alternating display. The selection choices or value range for each parameter is shown to the right of the alternating display.

### DECIMAL POSITION (6-digit version only)

This parameter selects the decimal point position on the display. The selection is used when calculating the Scale Factor. This parameter only appears when the meter is configured for the conventional (6-digit) display.

Press the arrow keys (**▲** or **▼**) to sequence through the selection list until the desired selection is shown. Press the **PAR** key to save the displayed selection and advance to the next parameter.

### SCALE FACTOR

The Scale Factor is used in combination with the Scale Multiplier to obtain the desired process time readout. (See details on Scaling the Meter.)

The Scale Factor is displayed as a five-digit value with one selected digit flashing (initially digit 5). Press the **▲** (up arrow) key to increment the value of the selected (flashing) digit. Holding the **▲** key automatically scrolls the value of the selected digit.

Press the **▼** (down arrow) key to select the next digit position to the right. Use the **▲** key to increment the value of this digit to the desired number. Press the **▼** key again to select the next digit to be changed. Repeat the "select and set" sequence until all digits are displaying the desired Scale Factor value. Press the **PAR** key to save the displayed value and advance to the next parameter. Holding the **▼** key automatically scrolls through each digit position.

### SCALE MULTIPLIER

The Scale Multiplier is used in combination with the Scale Factor to obtain the desired process time readout. (See details on Scaling the Meter.)

Press the arrow keys (**▲** or **▼**) to sequence through the selection list until the desired selection is displayed. Press the **PAR** key to save the selection and exit programming mode.

## PROGRAMMING MODE EXIT

The meter exits Programming Mode when the **PAR** key is pressed to save the Scale Multiplier selection. The meter briefly displays **End** upon exiting Programming Mode. All programmed selections are now transferred to the non-volatile memory and the meter returns to the Process Time display.

(If power loss occurs during programming mode, verify parameter changes and reprogram, if necessary, when power is restored.)

## PROGRAMMING MODE TIME OUT

The Programming Mode has an automatic time out feature. If no keypad activity is detected for approximately 60 seconds, the meter automatically exits Programming Mode. The meter briefly displays **End** and returns to the Process Time display. When automatic timeout occurs, any changes that were made to the parameter currently being programmed, will not be saved.

## FACTORY SETTINGS

The factory settings for the programming parameters are shown above in the alternating display illustrations. The factory settings can be easily restored by removing power from the meter, and then pressing and holding the **PAR** key while power is reapplied. The meter displays **rESEt** until the **PAR** key is released. The normal power-up sequence then resumes, with the factory settings loaded and saved in non-volatile memory.

*Note: The Program Disable DIP switch must be in the Enabled (down) position to allow loading factory settings. See section on DIP switch setup.*

## DESCRIPTION

The Motor Drive Controller (MDC) regulates motor speed by varying an isolated DC control signal to a motor drive system. There are two modes of operation, Master and Follower.

Master Mode provides control of a motor directly via programmed speed setpoints in the MDC. Regulation is maintained by a feedback frequency to the MDC taken from the motor shaft or a downstream shaft pulse encoder. Follower Mode controls a motor's speed as a ratio to a second motor's speed or outside frequency source. Ratio setpoints are programmed into the MDC causing the motor to "follow" the lead motor or frequency at a fixed speed ratio.

Master Mode has two speed setpoints and two ramp setpoints. Follower Mode has two ratio setpoints and two ramp setpoints. Both modes share a jog speed setpoint and a jog ramp setpoint. All setpoints are retained in non-volatile memory when the unit is powered down.

The Motor Drive Controller has the added feature of allowing real time adjustment of the Speed (*Master Mode*) or Ratio (*Follower Mode*) setpoint while the unit is operating a motor drive system. The setpoint may be adjusted via the front panel keypad using the "Up" or "Down" arrow keys, or via 2 User Inputs programmed for increment setpoint and decrement setpoint.

User flexibility is provided through the two-line by eight-character alphanumeric display. The display features English language menus for easy viewing and simplified programming. The four scroll-through indication displays can be programmed to show various parameters and to automatically scroll, if desired. A program disable DIP switch used with an external User Input can be utilized to protect the settings and guarantee that no unwanted changes occur during operation.

There are five dedicated control inputs on the MDC:

- RUN
- RAMP STOP
- FAST STOP
- JOG
- OPEN LOOP

There are six programmable control inputs: two front panel function keys and four remote user inputs. The F1 and F2 keys are factory programmed for RUN and R-STOP respectively. This eliminates the need for external switches in some applications.

There are three solid state outputs, two are programmable alarms and one is a dedicated Drive Enable output. Programmable alarm functions include:

- High Alarm
- Low Alarm
- Deviation Alarm
- Zero Speed
- Disabled

These may be programmed for boundary or latching operation, high or low acting.

Changing speed setpoints and programming information is easily accomplished by scrolling through menus and selecting the correct parameter. There are three main modules or menu loops:

- Display Module
- User Setpoint Module
- Programming Module

Scaling is accomplished by entering the desired values for feedback pulses per revolution (PPR), the maximum RPM, and the maximum display value.

## DESCRIPTION (Cont'd)

The unit is factory configured for an isolated 0 to 10 VDC drive output signal. The output drive signal can be adjusted to span from 0 to 15 VDC via an accessible potentiometer. The drive output is jumper selectable for an external reference. To use the external reference, the MDC is connected to the drive in place of an external potentiometer.

The Motor Drive Controller has a light weight, high impact plastic case with a clear viewing window. The sealed front panel meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed. Plug-in style terminal blocks simplify installation and wiring change-outs.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## SPECIFICATIONS:

- DISPLAY:** 2x8, 0.3" (7 mm) high characters, negative image transmissive LCD, with red LED backlighting.
- POWER:** 115/230 VAC  $\pm 10\%$ , 50/60 Hz, 10 VA, switch selectable.
- MEMORY:** Non-volatile E<sup>2</sup>PROM retains all programming information and values when power is removed or interrupted.  
**Power Cycles(ON/OFF):** 100,000 min.  
**Data Retention:** 10 years min.
- SENSOR POWER:** +12 VDC  $\pm 25\%$  @ 100 mA.
- INPUTS (LEAD AND FEEDBACK):** DIP Switch selectable to accept input pulses from a variety of sources including outputs from CMOS or TTL circuits and all standard RLC sensors.

### Input Freq:

1 Hz to 20 KHz (Master Mode), 1 Hz to 12 KHz (Follower Mode).

**Logic:** Input trigger levels  $V_{IL} = 1.5 V_{MAX}$ ;  $V_{IH} = 3.75 V_{MIN}$ .

**Current Sinking:** Internal 7.8 K $\Omega$  pull-up to +12 VDC,  $I_{MAX} = 1.6$  mA.

**Current Sourcing:** Internal 3.9 K $\Omega$  pull-down, 7.3 mA @ 28 VDC<sub>MAX</sub>.

### Magnetic Pickup:

**Sensitivity:** 200 mV PEAK.

**Hysteresis:** 100 mV.

**Input impedance:** 3.9 K $\Omega$  @ 60 Hz.

**Maximum input voltage:**  $\pm 50$  V PEAK.

*Note: For magnetic pickup input, the Sink/Source DIP switch must be in the SRC position.*

- CONTROL LOOP RESPONSE:** 10 msec (Master Mode), 20 msec (Follower Mode).
- CONTROL ACCURACY:**  
0.01% of Speed Setpoint (Master Mode)  
0.02% of Ratio Setpoint (Follower Mode)  
**Minimum Frequency Resolution:** 0.00125 Hz
- ERROR TRIM:**  $\pm 4095$  BITS.
- ERROR GAIN:** 0 to 99%.
- RAMP RATE:** (Ramp 1, Ramp 2, and Jog Ramp)  
1 Hz to 20 KHz/sec, set in user units/sec.  
0.0001 to 1.9999 ratio units/sec (Ramp 1 & 2 in Follower Mode).
- CONTROL INPUTS:**  
Internal 10 K $\Omega$  pull-up to +5 VDC.  $V_{IL} = 1.0 V_{MAX}$ ,  $V_{IH} = 4.0 V_{MIN}$ .  
Response time = 10 msec nominal, 30 msec max.

### INPUTS

RUN  
FAST STOP  
RAMP STOP  
JOG  
OPEN LOOP  
USER INPUTS(4)

### SWITCH CONNECTIONS

Momentary N.O.  
Momentary N.C.  
Momentary N.C.

Function Specific

## 12. OUTPUTS:

### Drive Enable, Alarm 1, and Alarm 2:

Solid state, current sinking NPN Open collector transistor.

$V_{CE} = 1.1 V_{SAT}$  @ 100 mA max.,  $V_{OH} = 30$  VDC max.

(Internal zener diode protection.)

### Response Time:

**Drive Enable:** 10 msec nominal; 30 msec max.

**Alarm 1&2:** Programmable

**Normal:** 1 sec nominal, 2 sec max.

**Fast:** 20 msec nominal, 40 msec max.

**Isolated Drive Output:** Jumper selectable internal/external reference 5 mA max.

**Internal Reference:** Pot adjustable from 0 to 5 VDC min. through 0 to 15 VDC max. span.

**External Reference:** 15 VDC max. (positive polarity only).

**Isolation:** 2300 Vrms for 1 minute

250 V working

## 13. CERTIFICATIONS AND COMPLIANCES: ELECTROMAGNETIC COMPATIBILITY

### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 90 MHz $\pm 5$ MHz 200 Hz, 50% duty cycle

### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

*Note: Refer to the EMC Installation Guidelines for additional information.*

## 14. ENVIRONMENTAL CONDITIONS:

**Operating Temperature:** 0 to 50°C

**Storage Temperature:** -40 to 70°C

**Operating and Storage Humidity:** 85% max. RH (non-condensing) from 0°C to 50°C.

**Altitude:** Up to 2000 meters

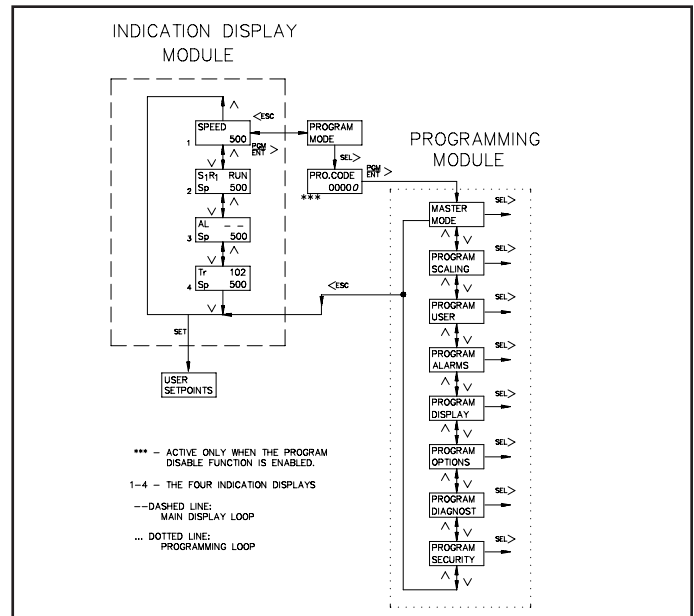

## 15. CONSTRUCTION:

High impact plastic case with clear viewing window. The front panel meets NEMA4 X/IP65 requirements for indoor use when properly installed. Installation Category II, Pollution Degree 2. Panel gasket and mounting clips included.

## 16. WEIGHT: 1.5 lbs. (0.68 Kg).

## PROGRAMMING

Programming the MDC unit is accomplished through the front panel keypad, which allows the user to enter into Main Menu, Sub-Menus, and Edit Menus. The English language prompts, the flashing parameter values, and the front panel keypad aid the operator during programming. In the normal run mode, the main display loop allows the user to scroll through the four programmable indication displays, using the direction keys. From the main loop, setpoints, alarm values and a gain value may be accessed directly for changes, without entering the programming loop. All other parameters are accessed through the programming loop, which can be set to require an access code number for loop entry. In the programming loop, parameters can be viewed or changed and the operator can exit anywhere in the loop.

# PROGRAMMABLE FUNCTIONS

## MODES

- Master
- Follower

## SCALING

- Pulses per Revolution Feedback (PPR FB) ranges from 1 to 59999
- Maximum RPM Feedback (MAX RPM FB) ranges from 1 to 59999
- Display Decimal Point (DSP DP) ranges from 0 to 0.00000
- Maximum Display Units (DSP UNIT) ranges from 1 to 99999
- \*Pulses per Revolution Lead (PPR LD) ranges from 1 to 59999
- \*Maximum RPM Lead (MAX RPM LD) ranges from 1 to 59999

\*These parameters are available in Follower Mode only.

Note: Values may be programmed in the range listed, provided that the maximum equivalent frequency does not exceed 20971 Hz. If this occurs, "OVLW" will flash and a new entry will be required.

## SETPOINTS

- 2 SPEED (Master Mode)** - ranges from 0 to 99999 (or Display Unit Max.).
- 2 RAMP RATE (Master Mode)** - ranges from 1 to 99999.
- 2 RATIO (Follower Mode)** - ranges from 0.0000 to 1.9999.
- 2 RAMP RATE (Follower Mode)** - ranges from 0.0001 to 1.9999 ratio units.
- 1 JOG SPEED** - ranges from 0 to 99999 (or Display Unit Maximum).
- 1 JOG RAMP RATE** - ranges from 1 to 99999.
- 2 ALARM** - ranges from 0 to 99999.
- 1 GAIN** - ranges from 0 to 99.

Note: Values may be programmed in the ranges listed, provided that the maximum equivalent frequency does not exceed 20,971 Hz ( 20 KHz/sec for Ramp Rate). If this occurs, a message will flash and the maximum is automatically entered by the unit.

## USER INPUTS

There are four programmable external user inputs and two programmable front panel function keys. The options for each user input are the same, except for the two function keys (F1/RUN & F2/STP), which have additional options.

### No Mode:

If a user input terminal or a function key is activated, it will be ignored.

### View Display 1-4:

Causes the selected indication display (1, 2, 3, or 4) to be displayed and held from anywhere in the main display loop.

### Change Display:

Causes the indication display to toggle to the next indication display.

### Reset Alarm(s) Output:

Places the alarm(s) output(s) in its inactive state.

### Setpoint Select/Toggle:

Selects Setpoint 1 or Setpoint 2 for the active speed (or ratio) setpoint. This is a maintained select action for User Inputs 1 to 4, and a momentary toggle action for F1 or F2.

### Ramp Select/Toggle:

Selects Ramp 1 or Ramp 2 for the active acceleration and deceleration ramp rate. This is a maintained select action for User Inputs 1 to 4, and a momentary toggle action for F1 or F2.

### Ramp Override:

Overrides the acceleration/deceleration ramp routine causing the unit to jump to the ramp endpoint.

### Setpoint Increment:

Only an external User Input can be used for this option. The currently active speed or ratio setpoint is incremented when the User Input is made active. If the input remains active for more than 5 display unit increments, the scroll rate will progressively increase.

### Setpoint Decrement:

Only an external User Input can be used for this option. The currently active speed or ratio setpoint is decremented when the User Input is made active. If the input remains active for more than 5 display unit increments, the scroll rate will progressively increase.

### Program Disable:

Only an external user input can be used for this option. When used with the program disable DIP switch, this option can limit operator access to programmable parameters.

### Run (F1 only):

Pressing the F1 button causes the MDC to accelerate the motor from Stop mode to the active speed setpoint using the active ramp rate.

### R-Stop(F1 or F2 only):

Pressing the function key programmed for R-Stop causes the unit to decelerate the motor from its active speed to Stop mode using the active ramp rate.

### F-Stop(F1 or F2 only):

Pressing the function key programmed for F-Stop causes the unit to execute a fast stop, taking the motor from its current speed immediately to the stop mode. The deceleration is limited only by the motor and drive.

### Jog(F1 or F2 only):

This function is only available from the Stop mode. Pressing and holding the function key programmed for Jog causes the unit to accelerate the motor to the jog speed setpoint using the jog ramp rate.

## ALARMS

### Type Of Alarm:

**High Alarm:** Alarm output activates when the feedback input is greater than or equal to the alarm value.

**Low Alarm:** Alarm output activates when the feedback input is less than or equal to the alarm value.

**Deviation Alarm:** The alarm output activates when the feedback input is outside a ± band.

**Zero Speed Alarm:** Alarm output activates when the feedback input receives no input pulse for at least one second.

**Disabled:** The alarm output is inactive when disabled.

### Phase:

Each output can have its active logic state set for Positive phase (ON) or Negative phase (OFF).

### Latched Or Boundary:

An alarm programmed for a latched output stays active until it is manually reset by a User Input. An alarm programmed for boundary output stays active as long as the alarm condition exists, after which the output returns to its inactive state.

### Fast Or Normal Update:

The normal update rate for the alarm outputs is once each second. The fast update rate occurs at an interval less than or equal to 40 msec.

## INDICATION DISPLAYS

If an indication display is to show two different numeric values, one for each line, there will be a single or dual character mnemonic to the left of the numeric value. Each line of each indication display can be programmed to show mnemonics or a numeric value. The following list shows the single or dual character mnemonics that will be displayed when value is selected and the mnemonics for each programmable option.

VAL	MNE	DESCRIPTION
S1 99999	SETPT. 1	Speed or ratio setpoint 1
S2 99999	SETPT. 2	Speed or ratio setpoint 2
Sp 99999	SPEED	Actual speed in user display units (feedback)
R 1.999	RATIO	Actual ratio (follower mode)
%D 100.0	% DEV.	% deviation of actual speed from target speed
%O 100.0	% OUTPUT	Analog drive output- % of full scale voltage
FB 20971	FB. FREQ	Feedback frequency in pulses/sec (Hz.)
LD 12000	LD. FREQ	Lead frequency in pulses/sec (Hz.)
A1 99999	ALARM 1	Alarm 1 setpoint
A2 99999	ALARM 2	Alarm 2 setpoint
Tr 4095	TRIM	Error correction in bits (-4095 to +4095)

## STATUS DISPLAYS

### Operating Status:

Setpoint 1, ramp rate 1, Stop mode

### Alarm Output Status:

Alarm 1 active, alarm 2 inactive

### Operating Status:

The operating status display indicates the currently active speed or ratio setpoint (S1 or S2), the currently active ramp rate (R1 or R2), and the mode of operation (RUN, STP, or JOG). An arrow will replace the "R" for the currently active ramp rate indication when an actual ramp up or down is in progress.

### Alarm Status:

The alarm status display indicates that an alarm output is active when the corresponding output number (1 or 2) is displayed. When an alarm output is inactive, a dash is displayed.

## OPERATOR ACCESS

This is used with the program disable DIP switch or an external user input that is selected for the program disable function. When a setpoint is selected as NO, it can be viewed, but NOT changed from the front panel keypad. The following setpoint values can be disabled from front panel access programming:

Speed/Ratio Setpoint 1 and 2	Jog Speed
Ramp Rate 1 and 2	Jog Ramp
Alarm Setpoint 1 and 2	Gain
Setpoint Scroll Menu	

## USER SETTINGS

The operator can reset ALL parameters to the factory settings if desired.

## PROGRAM DIAGNOSTICS

This allows testing of the various MDC inputs and outputs. It is especially useful after unit installation to independently test the operation of external switches, relays, the feedback transducer, and the motor drive system.

**Inputs** - The MDC displays an alphanumeric character to indicate a Dedicated Function Input or a User Input is active. This allows the user to check switch operation and wiring connections to the Inputs.

**Alarm Outputs** - The up and down arrow keys are used to select an alarm output and set it to the active or inactive state. This allows the user to check the operation of devices wired to the alarm outputs and the wiring connections.

**Drive Output** - This function allows the user to test the Drive System. A % Output value is entered through the front panel keypad causing the motor to run at the corresponding open loop speed. The display indicates the motor's feedback frequency.

## PROGRAM SECURITY

The programmable code number is used in conjunction with the program disable DIP switch and/or a user input programmed for the program disable function to limit operator access to programming.

## FOLLOWER MODE APPLICATION

A fertilizer production facility is mixing pellets containing Nitrogen with pellets that contain Phosphorus. A chemical ratio of 1:1 is determined by the speed of two different conveyors. Because of differences in the gearing of the conveyor and concentration of the pellets, the Nitrogen conveyor motor must run at 3 times the speed of the Phosphorus conveyor motor in order to produce a 1:1 mixture. The maximum speed of both motors is 2000 RPM. Set the follower MDC scaling to produce a 1:1 mixture of Nitrogen and Phosphorus when a setpoint of 1.0000 is entered. Display speed units are in RPM's. Both the lead and feedback frequency are taken from 60 tooth gears on each motor shaft.

- 1) Choose the Phosphorus conveyor motor for the follower MDC. It runs slower than the Nitrogen conveyor motor.
- 2) Set the Pulses per revolution feedback to 60.
- 3) Set the MAX RPM feedback to 2000. This is the conveyor motor's maximum operating speed.
- 4) Set display decimal point to 0.
- 5) Set display unit to 2000. The display speed unit maximum is 2000 at a MAX RPM FB of 2000. If the display units wanted were conveyor feet/minute or Phosphorus pellets in lbs/sec, the equivalent display value for 2000 RPM would be entered.
- 6) Set the pulses per revolution lead to 60.
- 7) Setting the MAX RPM Lead:

This is the Lead RPM that would be necessary to have a 1:1 mixture if the Follower Speed was MAX RPM FB (2000 RPM). Since the Nitrogen conveyor motor must run 3 times as fast as the Phosphorus motor, MAX RPM LD =  $3 * 2000 = 6000$  RPM. Set MAX RPM LD = 6000 RPM. This is the correct value, even though the Nitrogen conveyor motor would never actually run at 6000 RPM. A ratio setpoint of 1.0000 on the MDC is now equal to a 1:1 mixture of Phosphorus and Nitrogen.

## MASTER MODE APPLICATION

A pump delivers a maximum of 30.0 gallons per minute with a shaft speed of 1750 RPM. A shaft pulse encoder generates 60 pulses/revolution. Set the MDC scaling to control and display pumping speed in tenths of a gallon/minute. In the Program Scaling Module:

- 1) Set the pulses per revolution feedback to 60.
- 2) Set the maximum RPM feedback to 1750. This is the pump shaft's maximum operating speed.
- 3) Set display decimal point to 0.0. Display units are in 0.1 gpm.
- 4) Set max display units to 30.0. The display speed unit maximum is 30.0 at a MAX RPM FB of 1750.

MDC	Motor Drive Controller with Red Backlighting	115/230VAC MDC00100

# MODELS HHT & HHTP - ACCURATE 5-DIGIT PRECISION MEASURING HAND HELD TACHOMETERS

- **MICRO-COMPUTER CIRCUITRY**

The exclusive one chip Micro-computer LSI-circuit and crystal time base is used to accurately provide a wide measurement range.

- **MEMORY**

The last maximum/minimum reading will be automatically stored in memory and can be displayed by pressing the "MEMORY" switch.

- **ERROR-FREE READING**

Highly visible LCD display, with Leading Zero Blanking gives exact RPM with no guessing or errors and saves battery energy.

- **RUGGED AND LIGHTWEIGHT CONSTRUCTION**

The use of durable, long-lasting components, including a strong, lightweight ABS-plastic housing assures maintenance-free performance for many years. The housing has been carefully shaped to fit comfortably in either hand.

- **BATTERIES INCLUDED**

Model HHT  
Contact Type

Model HHTP  
Photo Type

## DESCRIPTION

The CONTACT TACHOMETER (Model HHT) incorporates precision bearings instead of gears to ensure long life while providing minimal loading to the rotating shaft. A built-in photo-sensor and slotted disc detect the number of revolutions for a high degree of accuracy. By simply pressing the "MEASURE" button and lightly contacting the conical tip against the center hole of a rotating shaft, the RPM will be displayed and updated every second. By attaching the circumferential speed wheel (included), the Model HHT can measure surface speed in "Switch Selectable" units of either feet per minute (FT/MIN) or meters per minute (M/MIN).

The PHOTO TACHOMETER (Model HHTP) provides for non-contact RPM measurements which enhances operator safety when measuring high speed shafts. By pressing the "MEASURE" button and aiming the Visible Light Beam at a piece of reflective tape (included) on the rotating shaft, RPM will be displayed and updated every second. A display indicator blinks once each revolution to ensure that the reflecting mark is within the 2" to 12" sensing distance of the Model HHTP.

Both units can display Memory values which are obtained immediately before turning off the "MEASURE" button. The last value, Maximum value and Minimum value can be displayed by pushing the "MEMORY" button as follows:

1. First Push and Hold = Last value displayed:  
"LA" and last value alternately displayed.
2. Second Push and Hold = Maximum value displayed:  
"UP" and maximum value alternately displayed.
3. Third Push and Hold = Minimum value displayed:  
"DN" and minimum value alternately displayed.

These memory features are useful when the measurement to be made is in a "hard-to-access" area where the display is not visible to the operator.

A "LO" (low battery) display is incorporated in both units and is a visible reminder when batteries are to be replaced.

## BATTERY REPLACEMENT

- A) When it is necessary to replace the batteries (battery voltage less than approx. 4.5 V), "LO" will appear in the display.
- B) Slide the battery cover away from the instrument and remove the batteries.
- C) Install new batteries correctly into the case. Permanent damage to the tachometer circuit may result from incorrect installation.

## CONTACT TACHOMETER SPECIFICATIONS

1. **MEASUREMENT RANGE:**  
0.5 to 8,000 RPM  
0.05 to 1999.9 m/min.  
0.2 to 6560 ft/min.
2. **RESOLUTION:**  
0.1 RPM (0.5 to 999.9 RPM)  
1 RPM (over 1000 RPM)  
0.01 m/min. (0.05 to 99.99 m/min.)  
0.1 m/min. (over 1000 m/min.)  
0.1 ft/min. (0.1 to 999.9 ft/min.)  
1 ft/min. (over 1000 ft/min.)
3. **ACCURACY:**  $\pm(0.05\% \text{ full scale} + 1 \text{ digit})$
4. **SAMPLE TIME:** 1 sec. (over 6 RPM)
5. **POWER CONSUMPTION:** Approximately 10 mA.
6. **ACCESSORIES INCLUDED:** RPM adapters (1 cone, 1 funnel), Surface speed test wheel, Carrying Case, Instruction Manual.
7. **WEIGHT:** 0.58 lb. (260 g) including battery

## PHOTO TACHOMETER SPECIFICATIONS

1. **MEASUREMENT RANGE:** 5 to 99,999 RPM (one reflecting mark)
2. **RESOLUTION:** 0.1 RPM (0.5 to 999.9 RPM)  
1 RPM (over 1000 RPM)
3. **ACCURACY:**  $\pm(0.05\% \text{ full scale} + 1 \text{ digit})$
4. **SAMPLING TIME:** 1 sec. (over 60 RPM)
5. **DETECTING DISTANCE:** (2-6 inches) (50 to 150 mm) Typical max. 12 inches (300 mm) depending upon ambient light.
6. **POWER CONSUMPTION:** Approximately 150 mA (Operation).  
Approximately 20 mA (Memory Recall)
7. **ACCESSORIES INCLUDED:** Carrying Case, 23.6 inches (600 mm) Reflective tape, Instruction Manual.
8. **WEIGHT:** 0.55 lb. (250 g) including battery

## COMMON SPECIFICATIONS

1. **DISPLAY:** 5-digit, 0.4" high LCD.
2. **MEMORY TIME:** 10 sec. nominal.
3. **TIME BASE:** Quartz crystal.
4. **BATTERY:** 4 x 1.5 V AA size.
5. **OPERATING TEMPERATURE:** 32°F to 120°F (0°C to 50°C).
6. **SIZE:** 6.7" x 2.8" x 1.5" (170 mm x 72 mm x 37 mm)

# MODEL CUB7T0 PROGRAMMABLE GENERAL PURPOSE ELECTRONIC TIMER

- 9 PROGRAMMABLE TIMER RANGES
- 3 (8 Digit 0.35") LCD DISPLAY OPTIONS (Reflective, Red Transmissive, Yellow/Green Transmissive) with "Timer Active" annunciator
- CONTACT INPUT
- REPLACEABLE INTERNAL LITHIUM BATTERY (provides up to 6 years of uninterrupted operation)
- BOTH FRONT PANEL PROGRAM AND RESET BUTTONS ARE INDIVIDUALLY ENABLED
- WIRE CONNECTIONS VIA SCREW CLAMP TYPE TERMINALS
- FRONT PANEL AND REMOTE RESET INPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## DESCRIPTION

The CUB7T0 is an 8-digit miniature programmable timer with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective (CUB7T000), Negative Image Transmissive with yellow/green backlighting (CUB7T010) or red backlighting (CUB7T020). The backlight versions require an external 9 to 28 VDC power supply. The display will wrap around from a full display of "99999999" to "00000000" when an overflow occurs. An annunciator, located in the upper left hand corner of the display, blinks at 2 Hz when the signal input is activated. The CUB7T0 operates from a switch contact or an open collector NPN transistor.

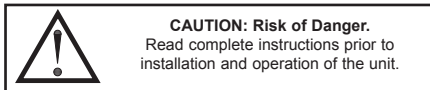

The CUB7T timers use a CMOS LSI chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7T series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber buttons meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## SPECIFICATIONS

1. **DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
2. **POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 6 years of continuous operation. (Battery life is dependent upon usage. Contacts that remain closed for long periods of time reduce battery life.)
3. **BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C. Must use a NEC Class 2 or SELV rated power supply.
4. **ANNUNCIATOR:** Annunciator in the upper left corner of the display flashes at a 2 Hz rate when the signal input is activated.
5. **SIGNAL INPUT:** (LS terminal #4)  
**Contact Input (CUB7T0xx):** Switch Contact or solid state Transistor Switch to Common. Contact burden 15  $\mu$ A max. A maintained closed switch to COM will actuate the timer.
6. **REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.
7. **ACCURACY:** 0.025%
8. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC (Backlight versions).  
**Storage Temperature:** -30 to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.  
**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5g's.  
**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.  
**Altitude:** Up to 2000 meters
9. **CONNECTIONS:** Wire clamping screw terminals.  
 Wire Strip Length: 0.3" (7.5 mm)  
 Wire Gage: 30-14 AWG copper wire  
 Torque: 5 inch-lbs (0.565 N-m) max
10. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
 UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
 Type 4X Indoor Enclosure rating (Face only), UL50

IEC-61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY**

**Immunity to EN 50082-2**

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power <sup>1</sup>
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

**Emissions to EN 50081-1**

RF interference	EN 55022	Enclosure class B
-----------------	----------	-------------------

**Notes**

1. Backlit powered units require a power line filter to be installed, RLC LFIL0000 or equivalent, so as not to impair the function of the backlighting.

Refer to EMC Installation Guidelines for additional information.

11. **CONSTRUCTION:** High impact plastic case with clear viewing window. The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.

12. **WEIGHT:** 2 oz. (57 grams) [with battery]

**TIMER RANGE SELECTION**

The CUB7T's timer range can be modified in the Program mode. The Program mode uses the PGM button (refer to photo) to switch between Program and Operate modes. The RESET button (refer to photo) is used to select the desired timer range.

Note: Timer range and accumulated time on the display will be lost if the battery is removed from the unit

Connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable front push buttons. Press the PGM button to enter Program Mode, allowing selection of the desired timer range. The display will show 00000.000 (Timer Range 0.001 sec). Repeatedly pressing the RST button will cycle through the available timer ranges as shown in the table. When the desired timer range is displayed, press PGM to load the range and return to operating mode. (The CUB7T will remain in Program Mode until the PGM button is pressed.) Remove the wire from the HS (Program Enable) terminal to prevent accidental changes to the timer range. Any new time accumulated will be at the new rate selected.

Note: To avoid incorrect display information, it is recommended that the CUB7T be reset after making programming changes.

DISPLAY DURING PROGRAMMING	Timer Range
00000.000	0.001 Sec
111111.11	0.01 Sec
222222.2	0.1 Sec
333333.33	1 Sec
444444.4	0.1 Min
555555.5	1 Min
666666.66	0.01 Hr
777777.7	0.1 Hr
888888.88	1 Hr
9999.99.99	Factory Use Only

**INSTALLATION**

The CUB7T meets NEMA 4X/IP65 requirements for indoor use when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

**Installation Environment**

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the push buttons of the unit.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket.
3. Slide the panel gasket over the rear of the counter body to the back of the bezel. Install CUB7T unit through the panel cut-out.
4. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
5. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7T housing.
6. Note: It is necessary to hold the unit in place when sliding mounting clip into position.
7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
8. If the gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that the mounting clip is latched as close as possible to the panel.
9. Repeat from step #5 for tightening mounting screws.

**TROUBLESHOOTING**

For further technical assistance, contact technical support at the appropriate company numbers listed.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove the battery cover, push upward in the direction of the arrow on the rear cover (See drawing at right), until the cover unlatches. Pull the cover straight out from unit to fully remove.
3. Remove old battery\* and replace it with an RLC battery (BNL10000). Observe proper polarity when replacing the battery as shown in the drawing.
4. Replace the cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7T when properly installed.

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress

power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated.

## L.S. INPUT; CONTACT VERSIONS

Connecting the "L.S." Input to Common with a mechanical or solid-state switch activates the timer. Releasing the connection, deactivates the timer. The switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2  $\mu$ A.

SWITCH  
CONTACT  
INPUT

NPN  
O.C. TRANSISTOR  
OR (N) FET  
INPUT

PNP  
O.C. TRANSISTOR  
OR (P) FET  
INPUT

Reed switches, mercury wetted contacts, snap action limit switches, and silver alloy relay contacts with wiping action are usually satisfactory for input activation. Motor starter contacts, tungsten contacts, and brush-type contacts should not be used.

## RESET AND PROGRAM OPTIONS

Connecting a wire from the RST EN (Reset Enable) or the HS (Program Enable) Input terminals to Common will enable the front panel Reset or Program buttons respectively.

Pulling the "RST." input low causes the timer to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. The Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2  $\mu$ A.

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

## BACKLIGHT OPTION

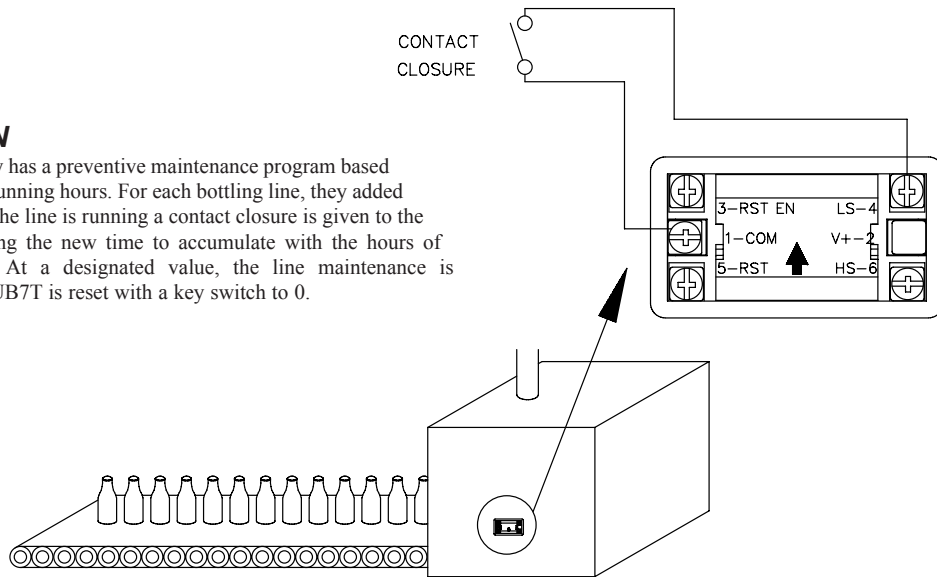

Optional backlight versions of the CUB7T require an external 9 to 26 VDC power supply. The external supply is connected between the V+ and common terminals as shown in the drawing.

D

## APPLICATION

A bottling company has a preventive maintenance program based on the accumulative running hours. For each bottling line, they added a CUB7T000. When the line is running a contact closure is given to the CUB7T timer allowing the new time to accumulate with the hours of previous operations. At a designated value, the line maintenance is performed and the CUB7T is reset with a key switch to 0.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER

# MODEL CUB7T1 PROGRAMMABLE GENERAL PURPOSE ELECTRONIC TIMER

- 9 PROGRAMMABLE TIMER RANGES
- 3 (8 Digit 0.35") LCD DISPLAY OPTIONS (Reflective, Red Transmissive, Yellow/Green Transmissive) with "Timer Active" annunciator
- REPLACEABLE INTERNAL LITHIUM BATTERY (provides up to 6 years of uninterrupted operation)
- BOTH FRONT PANEL PROGRAM AND RESET BUTTONS ARE INDIVIDUALLY ENABLED
- WIRE CONNECTIONS VIA SCREW CLAMP TYPE TERMINALS
- FRONT PANEL AND REMOTE RESET INPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## DESCRIPTION

The CUB7T1 is an 8-digit miniature programmable timer with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective (CUB7T100), Negative Image Transmissive with yellow/green backlighting (CUB7T110) or red backlighting (CUB7T120). The backlight versions require an external 9 to 28 VDC power supply. The display will wrap around from a full display of "99999999" to "00000000" when an overflow occurs. An annunciator, located in the upper left hand corner of the display, blinks at 2 Hz when the signal input is activated. The CUB7T1 operates from a signal voltage of 10 to 300 V (AC 50/60 Hz or DC).

The CUB7T timers use a CMOS LSI chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7T series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber buttons meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the bulletin or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## SPECIFICATIONS

1. **DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
2. **POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 6 years of continuous operation. (Battery life is dependent upon usage. Contacts that remain closed for long periods of time reduce battery life.)
3. **BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C.
4. **ANNUNCIATOR:** Annunciator in the upper left corner of the display flashes at a 2 Hz rate when the signal input is activated.
5. **SIGNAL INPUT:** (LS terminal #4)

**Voltage Input (CUB7T1xx):** 10 V min. to 300 V max. (AC 50/60 Hz. or DC) to Common. 150 V max. for backlight versions. Input current 0.5 mA max. *ANY off-state leakage current may activate the timer.* Constant voltage applied to the input will actuate the timer. Due to the internal digital filtering to this input, up to 30 msec of error may be added per activation of the signal input.

6. **REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.
7. **ACCURACY:** 0.025% (+ up to 30 msec per activation of signal input—CUB7T1xx only)
8. **ENVIRONMENTAL CONDITIONS:**

**Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC (Backlight versions).

**Storage Temperature:** -30 to 80°C

**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

9. **CERTIFICATIONS AND COMPLIANCES:**

#### 10. CONSTRUCTION: High impact plastic case with clear viewing window.

The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.

#### 11. WEIGHT: 2 oz. (57 grams) [with battery]

D

## TIMER RANGE SELECTION

The CUB7T's timer range can be modified in the Program mode. The Program mode uses the PGM button (refer to photo) to switch between Program and Operate modes. The RESET button (refer to photo) is used to select the desired timer range.

Note: Timer range and accumulated time on the display will be lost if the battery is removed from the unit

Connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable front push buttons. Press the PGM button to enter Program Mode, allowing selection of the desired timer range. The display will show 00000.000 (Timer Range 0.001 sec). Repeatedly pressing the RST button will cycle through the available timer ranges as shown in the table. When the desired timer range is displayed, press PGM to load the range and return to operating mode. (The CUB7T will remain in Program Mode until the PGM button is pressed.) Remove the wire from the HS (Program Enable) terminal to prevent accidental changes to the timer range. Any new time accumulated will be at the new rate selected.

Note: To avoid incorrect display information, it is recommended that the CUB7T be reset after making programming changes.

DISPLAY DURING PROGRAMMING	Timer Range
00000.000	0.001 Sec
111111.11	0.01 Sec
222222.2	0.1 Sec
333333.33	1 Sec
444444.4	0.1 Min
555555.5	1 Min
666666.66	0.01 Hr
777777.7	0.1 Hr
888888.88	1 Hr
9999.99.99	Factory Use Only

## INSTALLATION

The CUB7T meets NEMA 4X/IP65 requirements for indoor use when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

### Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the push buttons of the unit.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket.
3. Slide the panel gasket over the rear of the counter body to the back of the bezel. Install CUB7T unit through the panel cut-out.
4. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
5. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7T housing.
6. Note: It is necessary to hold the unit in place when sliding mounting clip into position.
7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
8. If the gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that the mounting clip is latched as close as possible to the panel.
9. Repeat from step #5 for tightening mounting screws.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove the battery cover, push upward in the direction of the arrow on the rear cover (See drawing at right), until the cover unlatches. Pull the cover straight out from unit to fully remove.
3. Remove old battery\* and replace it with an RLC battery (BNL10000). Observe proper polarity when replacing the battery as shown in the drawing.
4. Replace the cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7T when properly installed.

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC #FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward #28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC #LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

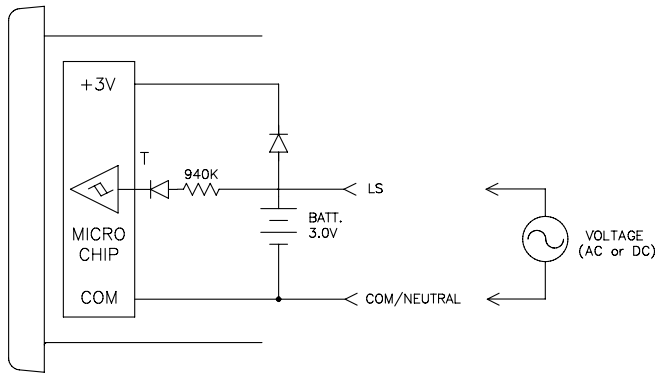

**WARNING:** Lithium battery may explode if incinerated.

**CAUTION:** All leads will be at the same line potential as the input leads.

D

## L.S. INPUT; VOLTAGE VERSIONS

The CUB7T accepts most machine control voltage signals. The input accepts AC (50/60 Hz) or DC control voltages from 10 to 300 V. The unit times when voltage is applied between the LS input and Common. *Any off-state leakage current may activate the timer.*

**WARNING:** Any lead may be at hazardous live input potential. External wiring and devices connected to the unit must be rated the same as applied signal input voltage and be properly isolated from Class 2 or SELV circuitry.

## RESET AND PROGRAM OPTIONS

Connecting a wire from the RST EN (Reset Enable) or the HS (Program Enable) Input terminals to Common will enable the front panel Reset or Program buttons respectively.

Pulling the "RST." input low causes the timer to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. The Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2  $\mu$ A.

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

D

## BACKLIGHT OPTION

Optional backlight versions of the CUB7T require an external 9 to 26 VDC power supply. The external supply is connected between the V+ and common terminals as shown in the drawing.

**WARNING:** When connecting the wiring for a backlit CUB7T measuring an AC input voltage, the neutral of the single phase AC signal is connected to Terminal 1 (COM), and line (hot) is connected to Terminal 4 (LS). The DC supply for the backlighting is connected as shown in the drawing. Three phase AC applications require an isolation transformer.

## APPLICATION

A laundromat owner wants to monitor the cost of operating his dryers. He needs to know how many hours each dryer has operated. A CUB7T100 (Voltage Input; Positive Image Reflective) is mounted on the back panel of each dryer. The signal input is connected across the motor of the dryer. The CUB7T will accumulate time while the dryer is running. On a regular basis the owner records the cumulative operating hours for each dryer and calculates if he needs to make any necessary adjustments. The timer can be reset via key switch.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION		PART NUMBER
*CUB7T	VOLTAGE INPUT	Timer; Positive Image Reflective	CUB7T100
		Timer, w/Yel-Grn Backlighting	CUB7T110
		Timer; w/Red Backlighting	CUB7T120
BNL		Replacement 3 V Lithium Battery	BNL10000

\*Battery is included with unit.

# MODEL CUB7T3 PROGRAMMABLE GENERAL PURPOSE ELECTRONIC TIMER

- 9 PROGRAMMABLE TIMER RANGES
- 3 (8 Digit 0.35") LCD DISPLAY OPTIONS (Reflective, Red Transmissive, Yellow/Green Transmissive) with "Timer Active" annunciator
- REPLACEABLE INTERNAL LITHIUM BATTERY (provides up to 6 years of uninterrupted operation)
- BOTH FRONT PANEL PROGRAM AND RESET BUTTONS ARE INDIVIDUALLY ENABLED
- WIRE CONNECTIONS VIA SCREW CLAMP TYPE TERMINALS
- FRONT PANEL AND REMOTE RESET INPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## DESCRIPTION

The CUB7T3 is an 8-digit miniature programmable timer with large 0.35 inch (8.90 mm) high digits. It has an LCD read-out available in Positive Image Reflective (CUB7T300), Negative Image Transmissive with yellow/green backlighting (CUB7T310) or red backlighting (CUB7T320). The backlight versions require an external 9 to 28 VDC power supply. The display will wrap around from a full display of "99999999" to "00000000" when an overflow occurs. An annunciator, located in the upper left hand corner of the display, blinks at 2 Hz when the signal input is activated. The CUB7T3 operates from a signal voltage of 10 to 30 V (AC 50/60 Hz or DC).

The CUB7T timers use a CMOS LSI chip, mounted on a gold-plated substrate, that is electrically connected by ultrasonic wire-bonding. Proven micro-electronic assembly and manufacturing techniques provide these units with the reliability and dependability required for industrial service.

The CUB7T series is housed in a lightweight, high impact plastic case with a clear viewing window. The sealed front panel with the silicone rubber buttons meets NEMA 4X/IP65 specifications for wash-down and/or dusty environments, when properly installed.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the bulletin or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## SPECIFICATIONS

1. **DISPLAY:** 8-digit LCD, 0.35" (8.90 mm) high digits.
2. **POWER SOURCE:** Replaceable Internal 3.0 V lithium battery to provide up to 6 years of continuous operation. (Battery life is dependent upon usage. Contacts that remain closed for long periods of time reduce battery life.)
3. **BACKLIGHT POWER REQUIREMENTS:** 9 to 28 VDC; 35 mA. typical, 50 mA max. Above 26 VDC, derate max. operating temperature to 40°C. Must use a NEC Class 2 or SELV rated power supply.
4. **ANNUNCIATOR:** Annunciator in the upper left corner of the display flashes at a 2 Hz rate when the signal input is activated.
5. **SIGNAL INPUT:** (LS terminal #4)  
**Voltage Input:** 10 V min. to 30 V max. (AC 50/60 Hz. or DC) to Common. *ANY off-state leakage current may activate the timer.* Constant voltage applied to the input will actuate the timer. Due to the internal digital filtering to this input, up to 30 msec of error may be added per activation of the signal input. Must use a NEC or a Class 2 or SELV rated power supply.
6. **REMOTE RESET:** 15 msec min. pulse width (active low) from 3.0 V bipolar output, an open collector transistor, or a switch contact to common.
7. **ACCURACY:** 0.025%
8. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** 0 to 50°C Derate max. operating temperature to 40°C above 26 VDC (Backlight versions).  
**Storage Temperature:** -30 to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.  
**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.  
**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.  
**Altitude:** Up to 2000 meters
9. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
Type 4X Indoor Enclosure rating (Face only), UL50

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY**

**Immunity to EN 50082-2**

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power <sup>1</sup>
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

**Emissions to EN 50081-1**

RF interference	EN 55022	Enclosure class B
-----------------	----------	-------------------

**Notes**

1. Backlit powered units require a power line filter to be installed, RLC LFL10000 or equivalent, so as not to impair the function of the backlighting.

Refer to EMC Installation Guidelines for additional information.

**9. CONNECTIONS:** Wire clamping screw terminals.

Wire Strip Length: 0.3" (7.5 mm)

Wire Gauge: 30-14 AWG copper wire

Torque: 5 inch-lbs (0.565 N-m) max

**10. CONSTRUCTION:** High impact plastic case with clear viewing window.

The front panel meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category I, Pollution Degree 2. Panel gasket and mounting clip included.

**11. WEIGHT:** 2 oz. (57 grams) [with battery]

**TIMER RANGE SELECTION**

The CUB7T's timer range can be modified in the Program mode. The Program mode uses the PGM button (refer to photo) to switch between Program and Operate modes. The RESET button (refer to photo) is used to select the desired timer range.

Note: Timer range and accumulated time on the display will be lost if the battery is removed from the unit

Connect wires between RST EN (Reset Enable) and COM. (Common); and between HS (Program Enable) and COM. (Common) to enable front push buttons. Press the PGM button to enter Program Mode, allowing selection of the desired timer range. The display will show 00000.000 (Timer Range 0.001 sec). Repeatedly pressing the RST button will cycle through the available timer ranges as shown in the table. When the desired timer range is displayed, press PGM to load the range and return to operating mode. (The CUB7T will remain in Program Mode until the PGM button is pressed.) Remove the wire from the HS (Program Enable) terminal to prevent accidental changes to the timer range. Any new time accumulated will be at the new rate selected.

Note: To avoid incorrect display information, it is recommended that the CUB7T be reset after making programming changes

DISPLAY DURING PROGRAMMING	Timer Range
00000.000	0.001 Sec
111111.11	0.01 Sec
222222.2	0.1 Sec
333333.33	1 Sec
444444.4	0.1 Min
555555.55	1 Min
666666.66	0.01 Hr
777777.7	0.1 Hr
888888.88	1 Hr
9999.99.99	Factory Use Only

**INSTALLATION**

The CUB7T meets NEMA 4X/IP65 requirements for indoor use when properly installed. The units are intended to be mounted into an enclosed panel. The viewing window and reset button are factory sealed for a washdown environment. A sponge rubber gasket and mounting clip are provided for installing the unit in the panel cut-out.

**Installation Environment**

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the push buttons of the unit.

The following procedure assures proper installation:

1. Cut panel opening to specified dimensions. Remove burrs and clean around panel opening.
2. Carefully remove and discard the center section of the gasket.
3. Slide the panel gasket over the rear of the counter body to the back of the bezel. Install CUB7T unit through the panel cut-out.
4. Insert the mounting screws onto both sides of mounting clip. Tip of screw should NOT project from hole in mounting clip.
5. Slide the mounting clip over the rear of the unit until the clip is against the back of the panel. The mounting clip has latching features which engage into mating features on the CUB7T housing.
6. Note: It is necessary to hold the unit in place when sliding mounting clip into position.
7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness. If not, gradually turn mounting screws to further compress gasket.
8. If the gasket is not adequately compressed and the mounting screws can no longer be turned, loosen mounting screws, and check that the mounting clip is latched as close as possible to the panel.
9. Repeat from step #5 for tightening mounting screws.

## BATTERY INSTALLATION

1. Remove all power to the unit before removing battery cover.
2. To remove the battery cover, push upward in the direction of the arrow on the rear cover (See drawing at right), until the cover unlatches. Pull the cover straight out from unit to fully remove.
3. Remove old battery\* and replace it with an RLC battery (BNL10000). Observe proper polarity when replacing the battery as shown in the drawing.
4. Replace the cover. The battery cover is keyed so that it cannot be placed upside down. The arrow on the rear of the cover should point toward the top of the CUB7T when properly installed.

\* - Dispose of properly.

**WARNING:** Lithium battery may explode if incinerated.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

The electrical connections are made via screw-clamp terminals located on the back of the unit. All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the battery cover to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the screw-clamp and tighten down the screw until the wire is clamped in tightly. Each terminal can accept up to two #14 AWG wires.

**WARNING:** Lithium battery may explode if incinerated.

D

## L.S. INPUT; VOLTAGE VERSIONS

The CUB7T3 accepts most machine control voltage signals. The input accepts AC (50/60 Hz) or DC control voltages from 10 to 30 V. The unit times when voltage is applied between the LS input and Common. *Any off-state leakage current may activate the timer.*

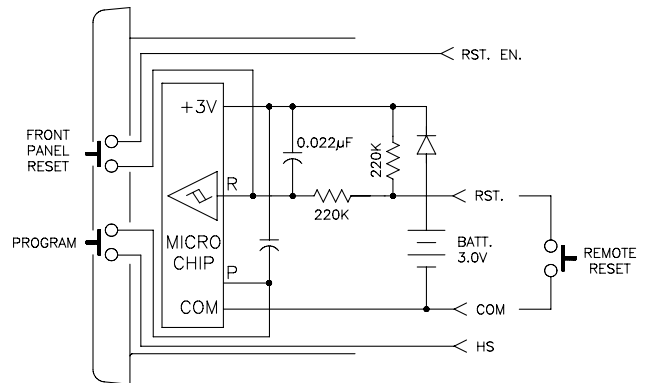

## RESET AND PROGRAM OPTIONS

Connecting a wire from the RST EN (Reset Enable) or the HS (Program Enable) Input terminals to Common will enable the front panel Reset or Program buttons respectively.

Pulling the "RST." input low causes the timer to reset. The "RST." can be pulled low by either a mechanical switch or solid-state transistor switch. The Switch load is 15  $\mu$ A (max. voltage drop 0.5 V) when ON. The OFF-state leakage current must be less than 2  $\mu$ A.

*Note: The RC protection circuit on the "RST." Input causes a delay of approximately 15 msec in Reset response.*

## BACKLIGHT OPTION

Optional backlight versions of the CUB7T require an external 9 to 26 VDC power supply. The external supply is connected between the V+ and common terminals as shown in the drawing.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

# MODEL CUB5T - MINIATURE ELECTRONIC PRESET TIMER AND CYCLE COUNTER

- LCD, REFLECTIVE OR RED/GREEN LED BACKLIGHTING
- 0.46" (11.7 mm) HIGH DIGITS
- 7-DIGIT BI-DIRECTIONAL TIMING CAPABILITY
- 6-DIGIT CYCLE COUNTING CAPABILITY
- OPTIONAL RELAY OUTPUT MODULE
- OPTIONAL SERIAL COMMUNICATIONS MODULE (RS232 or RS485)
- SELECTABLE TIMER RANGES AND OPERATING MODES
- ELAPSED TIMER AND PRESET TIMER FUNCTIONALITY
- DISPLAY COLOR CHANGE CAPABILITY AT PRESET OUTPUT
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The CUB5T provides the ultimate in timer flexibility, from its complete user programming to the optional relay output and serial communications capability. The meter functions as an Elapsed Timer or Preset Timer. It also has a built-in Cycle Counter. The display can be toggled either manually or automatically between the Timer and Cycle Counter values. With eight different input operating modes and 18 selectable timer ranges, the meter can be programmed for a wide variety of timing applications.

The CUB5T has an LCD display with 0.46" (11.7 mm) high digits. The LCD is available in two versions, reflective (CUB5TR00) and backlight (CUB5TB00). The backlight version is user selectable for red or green backlighting with variable display intensity.

The Timer has two signal inputs and eight input operating modes. These modes provide level active or edge triggered start/stop operation. A Display Hold mode will display the elapsed time for one cycle, while the next cycle continues timing internally. The Timer Reset modes will automatically reset the timer value when a time start edge is applied to the input. This allows sequential timing cycles without having to manually reset the Timer.

In addition to the Timer inputs, a programmable User Input is available to perform a variety of meter functions. All inputs are current sinking (active low) and accept a variety of logic and open-collector output signal sources. Relay and switch contacts can also be used as signal sources, when the software input debounce filter is enabled.

The capability of the CUB5T can be easily expanded with the addition of a field installable option module. When the CUB5RLY0 relay output module is added, the meter becomes a Preset Timer. The Setpoint Output can be assigned to the Timer or Cycle Counter values, and configured to suit a variety of control and alarm requirements. Serial communications capability for RS232 or RS485 is added with a serial option module (CUB5COM).

The CUB5T can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5T. The MLPS1 is powered from an 85 to 250 VAC source and provides up to 400 mA to drive the meter and sensors.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

## GENERAL METER SPECIFICATIONS

- DISPLAY:** 8 digit LCD 0.46" (11.7 mm) high digits  
**CUB5TR00:** Reflective LCD with full viewing angle  
**CUB5TB00:** Selectable transmissive red or green backlight LED with viewing angle optimized. Display color change capability at preset when using a relay module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS1 or a Class 2 or SELV rated power supply.

MODEL NUMBER	DISPLAY COLOR	INPUT CURRENT WITHOUT CUB5RLY0	INPUT CURRENT WITH CUB5RLY0
CUB5TR00	---	10 mA	30 mA
CUB5TB00	Red (max intensity)	85 mA	115 mA
CUB5TB00	Green (max intensity)	95 mA	125 mA

- TIMER DISPLAY:** 7-digits  
**Display Designator:** "t" to the left side of the display  
**Display Range:** 0 to 9999999  
**Overflow/Underflow Indication:** Display flashes "t 00Er"  
**Minimum Digit Resolution:** 0.001 Sec.  
**Maximum Single Digit Resolution:** 1 Hr.  
**Timing Accuracy:** ±0.01%
- CYCLE COUNTER DISPLAY:** 6-digits, may be disabled if not used  
**Display Designator:** "f" to the left side of the display  
**Display Range:** 0 to 999999  
**Overflow/Underflow Indication:** Display flashes "f 00Er"  
**Maximum Count Rate:**  
 All Count Sources except Input B: 10 Hz  
 Input B Count Source:  
 With Timer Input Filter ON: 10 Hz  
 With Timer Input Filter OFF: 500 Hz
- TIMER SIGNAL INPUTS (INPA and INP B)**  
 Logic Inputs, Current Sinking (active low)  
**Input A:**  
 Internal 7.8KΩ pull-up resistor to +9 to 28 VDC  
 Trigger levels:  $V_{IL} = 1.25$  V max;  $V_{IH} = 2.75$  V min;  $V_{MAX} = 28$  VDC  
**Input B:**  
 Internal 10KΩ pull-up resistor to +9 to 28 VDC  
 Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
**Inputs A and B:**  
 Timer Input Pulse Width: 1 msec min.  
 Timer Start/Stop Response Time: 1 msec max.  
 Filter: Software filtering provided for relay or switch contact debounce.  
 Filter enabled or disabled through programming. If enabled, results in 50 msec start/stop response time for successive pulses applied to the same input terminal.
- USER INPUT (USR):** Programmable function input  
 Logic Input, Current Sinking (active low)  
 Internal 10KΩ pull-up resistor to +9 to 28 VDC  
**Trigger levels:**  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)
- MEMORY:** Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and timer/counter values when power is removed.
- CONNECTIONS:** Wire clamping screw terminals  
**Wire Strip Length:** 0.3" (7.5 mm)  
**Wire Gauge:** 30-14 AWG copper wire  
**Torque:** 5 inch-lbs (0.565 N-m) max.
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range for CUB5TR00:** -35 to 75°C

Operating Temperature Range for CUB5TB00 depends on display color and intensity level as per below:

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
Green Display	1 & 2	-35 to 75°C
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C

**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 40 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

### 10. CERTIFICATIONS AND COMPLIANCES:

#### SAFETY

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

#### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

#### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A
		4 kV contact discharge
		8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A
		10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A
		2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A
		1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A
Power frequency magnetic fields	EN 61000-4-8	Criterion A
		3 V/rms 30 A/m

#### Emissions:

Emissions EN 55011 Class A

#### Notes:

1. Criterion A: Normal operation within specified limits.

Refer to EMC Installation Guidelines for additional information.

11. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category I, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.

12. **WEIGHT:** 3.2 oz (100 g)

# OPTIONAL PLUG-IN CARDS

## ADDING OPTION CARDS

The CUB5T meters can be fitted with optional relay card and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

### RELAY CARD

**Type:** Single FORM-C relay

**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.

**Working Voltage:** 150 Vrms

**Contact Rating:** 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive

**Life Expectancy:** 100,000 minimum operations

**Response Time:**

Turn On Time: 4 msec max.

Turn Off Time: 4 msec max.

**Time Accuracy:**  $\pm 0.01\%$

**WARNING: Disconnect all power to the meter before installing Plug-in card.**

### RS485 SERIAL COMMUNICATIONS CARD

**Type:** RS485 multi-point balanced interface (non-isolated)

**Baud Rate:** 300 to 38400

**Data Format:** 7/8 bits; odd, even, or no parity

**Bus Address:** 0 to 99; max 32 meters per line

**Transmit Delay:** Selectable. 2 msec min. or 50 msec min.

### RS232 SERIAL COMMUNICATIONS CARD

**Type:** RS232 half duplex (non-isolated)

**Baud Rate:** 300 to 38400

**Data Format:** 7/8 bits; odd, even, or no parity

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel.

The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 DIP SWITCHES

The DIP switches on the main circuit board are not used with the CUB5T and must be left in the factory set position (all down). Setting any switch to the up position may cause improper operation of the meter.

## 3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter after the rear cover is removed.

**WARNING:** Disconnect all power to the meter before installing Plug-in Card.

### REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## 4.0 WIRING THE METER

### WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC# FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward # 28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC# LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
  - Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### DC Power

+9 to +28 VDC: +VDC

Power Common: -VDC

## 4.2 USER INPUT WIRING

### Sinking Logic

INP COMM } Connect external switching device between the  
USR } User Input terminal and Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low.

## 4.3 INPUT WIRING

**CAUTION:** Power input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the power input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth ground; and the common of the plug-in cards with respect to input common.

### Current Sinking Output

### Interfacing With TTL

### Switch or Isolated Transistor; Current Sink

## 4.4 SETPOINT (OUTPUT) WIRING

## 4.5 SERIAL COMMUNICATION WIRING

# 5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

**KEY DISPLAY MODE OPERATION**  
**SEL** Select display (timer or cycle counter)  
**RST** Reset value(s) per Front Panel Reset setting

**ENTERING PROGRAM MODE**  
 Press and hold for 2 seconds to activate

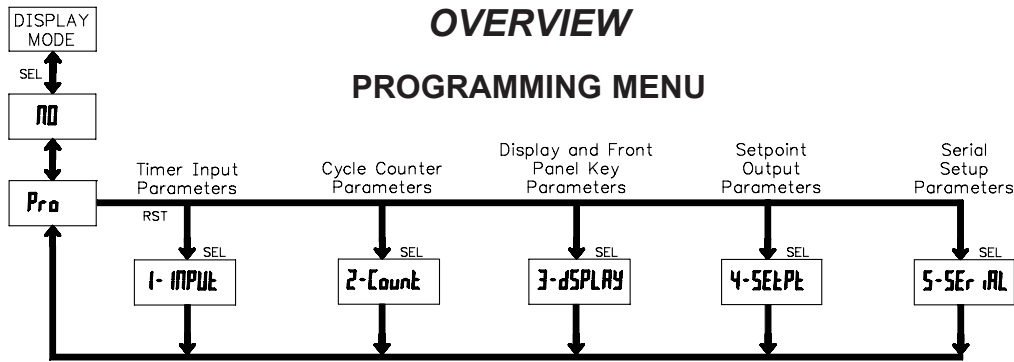

**PROGRAMMING MODE OPERATION**  
 Store selected parameter and index to next parameter  
 Advances through the program menu  
 Increments selected parameter value or selection

## OPERATING MODE DISPLAY DESIGNATORS

“1” - To the left of the display is the timer value.  
 “E” - To the left of the display is the cycle counter value.  
 “1” - To the upper left of the display indicates the setpoint status.

If display scroll is enabled, the display will toggle automatically every four seconds between the timer and cycle counter values.

# 6.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL KEY)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** key. If it is not accessible, then it is locked by either a security code, or a hardware lock (See Module 3).

## MODULE ENTRY (SEL & RST KEYS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between **Pra** and the present module. The **RST** key is used to select the desired module. The displayed module is entered by pressing the **SEL** key.

## MODULE MENU (SEL KEY)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pra Pr0**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** key is used to move through the selections/values for that parameter. Pressing the **SEL** key, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** key to access the value. The right hand most digit will begin to flash. Pressing the **RST** key again increments the digit by one or the user can hold the **RST** key and the digit will automatically scroll. The **SEL** key will advance to the next digit. Pressing and holding the **SEL** key will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL KEY)

The Programming Mode is exited by pressing the **SEL** key with **Pra Pr0** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 3. This is useful when encountering programming problems.

Pressing the **RST** key on power-up will load the factory settings and display **rESEt**. This allows operation in the event of a memory failure or corrupted data.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 6.1 MODULE 1 - TIMER INPUT PARAMETERS (1- INPUT)

## TIMER RANGE

**RANGE**    18 TIMER RANGE SELECTIONS  
(S = SEC; M = MIN; H = HR; d = DAY)

5555555

RANGE SELECTION	MAXIMUM DISPLAY	DISPLAY RESOLUTION	RANGE SELECTION	MAXIMUM DISPLAY	DISPLAY RESOLUTION
<b>SECONDS</b>					
5555555	9999999	1 SEC	MMMMSS	999959	1 SEC
5555555	9999999	0.1 SEC	MMSS	999599	0.1 SEC
5555555	9999999	0.01 SEC	MMSS	995999	0.01 SEC
5555555	9999999	0.001 SEC	<b>HOURS/MINUTES</b>		
MMMM	9999999	1 MIN	HHMM	999599	1 MIN

HHMM	9995999	0.01 HR			

## TIMER INPUT OPERATION

**INPUT OP**    LEVEL    EdGE-1    EdGE-2    HOld-2

LEVEL    LEU rSt    Ed-1 rSt    Ed-2 rSt    HOld rSt

This parameter determines how the Timer Input Signals affect the Run/Stop status of the Timer. Timing diagrams are shown below for level active and edge triggered (1-input or 2-input) operation. For single input modes (Input A only), Input B provides a level active Timer Inhibit function. In the Display Hold mode, the timer display value remains held and only updates when a Timer Start (Input A) or Timer Stop (Input B) edge occurs.

The timer reset (rSt) operating modes are identical to the other modes in the diagrams, except the timer display value is reset at the Time Start edges.

The Timer can also be stopped at a Timer Stop Value or at Setpoint output activation or deactivation. This type of Stop condition is cleared when a Timer Reset occurs, or another start edge is applied on the timer input.

*For Reset Modes (rSt), the timer is reset at Time Start edge.*

### LEVEL, LEU rSt

### EdGE-1, Ed-1 rSt

### EdGE-2, Ed-2 rSt

### HOld-2, HOld rSt

## TIMER INPUT FILTER

**FILTER**    ON    OFF

ON

Provides a 50 msec software debounce for the Timer Inputs (A and B). Select ON when using relays or switch contacts as a signal source.

## TIMING DIRECTION

**t-dir**    UP    dn

UP

Bi-directional timing capability. Select the timing direction desired for the application.

## TIMER START VALUE

**t-Start**    0000000 to 9999999

0000000

The Timer returns to this value whenever a Timer Reset occurs. The value is entered in the same display format as the Timer Range selected. Non-zero values are normally used for "timing down" applications, but they can also provide an offset value when timing up.

## TIMER STOP VALUE

**t-STOP**    NO    YES

NO

The Timer stops when this value is reached regardless of the signal levels on the timer inputs. Selecting YES displays a sub-menu where the Stop Value is entered in the same display format as the Timer Range selected. This stop condition is cleared when a Timer Reset occurs or another start edge is applied on the timer input. Select NO if a Stop Value is not desired.

**StOP VAL**    0000000 to 9999999

0000000

## FLASH TIMER ANNUNCIATOR

**t-FLASH**    NO    YES

YES

Select YES to have the timer annunciator (t) flash when the timer is running.

## TIMER RUN STATE AT POWER-UP

**Run P-UP**    StOP    SAUE

StOP

Determines the Run/Stop state of the Timer at Power-up. This parameter does not apply to LEVEL Input Operation.

StOP - Timer Stopped at power-up, regardless of prior Run/Stop state  
SAUE - Timer assumes the Run/Stop state it was in prior to power-down

## TIMER RESET AT POWER-UP

The Timer can be programmed to Reset at each meter power-up.

## USER INPUT FUNCTION (Cont'd)

DISPLAY	MODE	DESCRIPTION
Inhibit	Inhibit	Inhibit timing or counting for the selected value(s).
Edge Level	Display Intensity Level (Edge Triggered)	Increase intensity one level for each activation. (backlight version only)
Print	Print Request	Serial transmit of the active parameters selected in the Print Options menu (Module 5).
Print and Reset	Print and Reset	Same as Print Request followed by a momentary reset of the selected value(s).
Reset Output	Reset Output	Edge triggered deactivation of the Setpoint Output.

## USER INPUT FUNCTION

DISPLAY	MODE	DESCRIPTION
NO	No Function	User Input disabled.
Program Lock	Program Mode Lock-out	See Programming Mode Access chart (Module 3).
Display Select	Display Select (Edge triggered)	Toggle display with each activation.
Maintained Reset	Maintained Reset	Level active reset of the selected value(s).
Display Hold	Display Hold	Freeze display for the selected value(s) while allowing time or counts to accumulate internally.
Hold and Reset	Hold and Reset	Edge triggered reset of the selected value(s) after storing the time or count.

## USER INPUT ASSIGNMENT

L-VALUE  
C-VALUE  
both L-C

The User Input Assignment only applies if the cycle counter is enabled and a selection of reset, display hold, hold and reset, inhibit, or print and reset is selected in the User Input Function menu.

D

# 6.2 MODULE 2 - CYCLE COUNTER PARAMETERS (2-Count)

### CYCLE COUNTER ENABLE

When set to NO, the remaining Cycle Counter parameters are not accessible.

### CYCLE COUNTER COUNTING DIRECTION

Bi-directional counting capability. Select the counting direction desired for the application.

### CYCLE COUNTER COUNT SOURCE

This parameter selects the source from which the Cycle Counter derives counts. The Timer Reset (L-RESET) selection generates a count when either a manual or automatic timer reset occurs (See Module 4 for programming Automatic Reset). The Input B (INPUT b) selection generates a count each time Input B is activated. This selection overrides the timer inhibit function of Input B, when the timer is programmed for Level or Edge-I operating mode (See Module 1 for Timer Input Operating Modes).

The User Input (USR INP) selection generates a count each time the User Input is activated. When selected as the count source, the User Input can still be set to perform a User Function described in Module 1. In this case, the Cycle Counter will count the number of times the selected User Function occurred.

The Output ON/OFF selections generate a count when the Setpoint output either activates or deactivates. These selections will only generate counts when an optional Setpoint module is installed.

### CYCLE COUNTER START VALUE

The Cycle Counter returns to this value whenever a Counter Reset occurs. Non-zero values are normally used for "down counting" applications, but can also provide an offset value when counting up.

### CYCLE COUNTER RESET AT POWER-UP

The Cycle Counter can be programmed to Reset at each meter power-up.

# 6.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY PARAMETERS (3-DISPLAY)

## FRONT PANEL DISPLAY SELECT ENABLE (SEL)

SEL Enb  YES  NO

YES

The **YES** selection allows the **SEL** button to toggle between the timer and cycle counter displays.

## FRONT PANEL RESET ENABLE (RST)

RSt Enb  YES  NO  both t-C  dSPRAY

YES  t-VALUE  dSPRAY

NO  t-VALUE  dSPRAY

The **YES** selection allows the **RST** button to reset the selected value(s). The shaded selections only appear if the cycle counter is enabled.

## DISPLAY SCROLL ENABLE

d-ScroLL  YES  NO

NO

The **YES** selection allows the display to automatically scroll between the timer and cycle counter values. The scroll rate is about every 4 seconds.

## DISPLAY COLOR (BACKLIGHT UNIT ONLY)

d-COLOR  rEd  grn

rEd

Enter the desired display color, red or green. This parameter is active for backlight units only.

## DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

d-LEVEL  1 to 5

5

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

## PROGRAMMING SECURITY CODE

Pro CodE  0 to 999

000

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (*Pro Loc*) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values and Timer Stop value to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the *Pro CodE* prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the *Pro CodE* prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" KEY IS PRESSED	FULL PROGRAMMING MODE ACCESS
not <i>Pro Loc</i>	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at <i>Pro CodE</i> prompt *
		100-999	<i>Pro CodE</i> prompt	With correct code entry at <i>Pro CodE</i> prompt *
<i>Pro Loc</i>	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	<i>Pro CodE</i> prompt	With correct code entry at <i>Pro CodE</i> prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

## LOAD FACTORY DEFAULT SETTINGS

FACt SEt  NO  YES

NO

The **YES** selection will return the meter to the factory default settings. The meter will display **rESEt** and then return to **Pro**, at which time all settings have been changed.

Pressing the **RST** key on power-up will load the factory settings and display **rESEt**. This allows operation in the event of a memory failure or corrupted data.

# 6.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SEtPt)

The Setpoint Output Parameters are only active when the optional relay module is installed in the meter. Some parameters will not appear depending on the Setpoint Assignment and Setpoint Output Action selected.

## SETPOINT ASSIGNMENT

Select the display for Setpoint assignment.

## SETPOINT OUTPUT ACTION

This parameter selects the action of the Setpoint output as shown below.

SPT ACTION	DESCRIPTION	OUTPUT ACTIVATES	OUTPUT DEACTIVATES
LAtCH	Latched Output Mode	When Time or Count = Setpoint On value	At Manual Reset (if SPt rSt = YES)
t-OUt	Timed Output Mode	When Time or Count = Setpoint On value	After Setpoint Output Time-Out
ON-OFF	On-Off Output Mode	When Time or Count = Setpoint On value	When Time or Count = Setpoint Off value

## SETPOINT ON

This parameter determines when the Setpoint output will activate. The output can activate at a programmed Setpoint Value or can be set to activate when the Timer starts (t-5tRt) or stops (t-5tOP).

Selecting **VALUE** displays a sub-menu where the Setpoint Value is entered. If the Setpoint is assigned to the Timer, the value is entered in the same display format as the selected Timer Range.

## SETPOINT OFF

The Setpoint Off parameter only appears if the Setpoint Action is set to On-Off Output mode (ON-OFF). In this mode, the Setpoint OFF parameter determines when the Setpoint Output will deactivate. The output can be programmed to deactivate at a Setpoint Off Value or can be set to deactivate when the Timer starts (t-5tRt) or stops (t-5tOP).

Selecting **VALUE** displays a sub-menu where the Setpoint Off Value is entered. If the Setpoint is assigned to the Timer, the value is entered in the same display format as the selected Timer Range.

## SETPOINT OUTPUT TIME-OUT

This parameter is only active if the Setpoint Action is set to Timed Output mode (t-OUt). Enter the time duration the Setpoint Output will remain ON once it is activated. This value is always entered in minutes, seconds, and hundredths of seconds format. The maximum value is 99 minutes 59.99 seconds.

## STOP TIMER

Stops the Timer when the Setpoint output activates (Out-ON) or deactivates (Out-OFF). Select **NO** if the output should not affect the Timer Run/Stop status.

The Timer Stop condition is cleared when a Timer Reset occurs, or a Time Start edge is applied on the Timer input.

## TIMER/COUNTER AUTO RESET

Automatically resets the Setpoint Assigned display value when the Setpoint Output activates (Out-ON) or deactivates (Out-OFF). Select **NO** if the output should not cause a display reset.

## SETPOINT OUTPUT RESET WITH DISPLAY RESET

Select **YES** to have the Setpoint Output deactivate (reset) when the Setpoint Assigned display resets. Reset can occur by the **RST** button or the User Input, if programmed for that function. Select **NO** if the Setpoint output should not reset when the display resets.

## CHANGE DISPLAY COLOR w/SETPOINT OUTPUT STATE

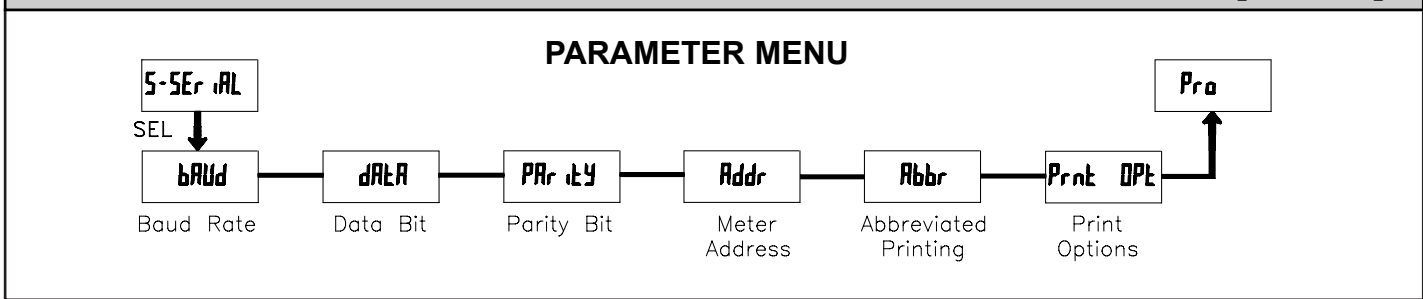

This parameter enables the backlight CUB5T to switch the display color when the Setpoint output activates. When the output deactivates, the display color will revert to the normal operating mode color. This parameter is only active for the backlight version.

## SETPOINT OUTPUT POWER-UP STATE

**SAUE** will restore the output to the same state it was at before the meter was powered down. **ON** will activate the output at power up. **OFF** will deactivate the output at power up. This parameter is not active when the Setpoint Action is selected for timed output mode.

# 6.5 MODULE 5 - SERIAL COMMUNICATIONS PARAMETERS (5-SERIAL)

Module 5 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the CUB5T with those of the host computer or other serial device. The Serial Setup Parameters are only accessible when an optional RS232 or RS485 serial communications module is installed in the meter.

*This section replaces the bulletin shipped with the RS232 and RS485 serial communications plug-in cards. Discard the separate bulletin when using those serial plug-in cards with the CUB5T.*

## BAUD RATE

BAUD	300	1200	4800	19200
	600	2400	9600	38400

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

## DATA BIT

DATA	7-bit	8-bit
------	-------	-------

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

## PARITY BIT

PARITY	NO	ODD	EVEN
--------	----	-----	------

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to NO, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

ADDR	0 to 99
------	---------

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING

ABBR	NO	YES
------	----	-----

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select NO for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select YES for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS

PRINT OPT	NO	YES
-----------	----	-----

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting YES displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as YES in the sublist will be transmitted during a block print. Parameters entered as NO will not be sent.

The "Print All" (PRINT ALL) option selects all meter values for transmitting (YES), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. For example, the Cycle Counter and Cycle Counter Start values will only be sent when the Cycle Counter is enabled. If disabled, these parameters are inactive and will not be transmitted. Likewise, the Setpoint parameters will not be sent unless an optional setpoint card is installed in the meter.

DISPLAY	DESCRIPTION	FACTORY SETTING	MNEMONIC
VALUE	Timer	YES	TMR
VALUE	Cycle Counter	NO	CNT
START	Timer Start	NO	TST
STOP	Timer Stop	NO	TSP
CNT START	Counter Start	NO	CST
SP ON	Setpoint ON	NO	SPT
SP OFF	Setpoint OFF	NO	SOF
SP TIMEOUT	Setpoint Time-out	NO	STO

# Sending Serial Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character, \* or \$.

## Command Chart

Command	Description	Notes
N	Node (meter) Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by a register ID character.
V	Value Change (write)	Write to register of the meter. Must be followed by a register ID character and numeric data.
R	Reset	Reset a value or the output. Must be followed by a register ID character
P	Block Print Request (read)	Initiates a block print output. Registers in the print block are selected in Print Options.

## Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

- The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
- After the optional address specifier, the next character is the command character.
- The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints all the active selections chosen in the Print Options menu parameter.
- If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See timing diagram figure for differences in meter response time when using the \* and \$ terminating characters.

# Receiving Data From The Meter

Data is transmitted from the meter in response to either a transmit command (T), a block print request command (P) or a User Input print request. The response from the meter is either a full field transmission or an abbreviated transmission, depending on the selection chosen in Module 5.

## Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte data field; 9 bytes for number and three bytes for decimal points
19	<CR> (carriage return)
20	<LF> (line feed)
21	<SP>* (Space)
22	<CR>* (carriage return)
23	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The first two characters transmitted are the meter address. If the address assigned is 0, two spaces are substituted. A space follows the meter address field. The next three characters are the register mnemonic, as shown in the Register Identification Chart.

The numeric data is transmitted next. The numeric field (bytes 7 to 18) is 12 characters long. When a display overflow exists for a requested timer or cycle counter value, an \* (used as an overflow character) replaces a space in byte 7. Byte 8 is always a space.

The remaining ten positions of this field consist of seven positions for the requested value with decimal points positioned for the selected timer range. The

## Register Identification Chart

ID	Value Description	MNEMONIC	Applicable Commands	Transmit Details (T and V)
A	Timer	TMR	T, V, R	7 digit, per Timer Range
B	Cycle Counter	CNT	T, V, R	6 digit
C	Timer Start	TST	T, V	7 digit, per Timer Range
D	Timer Stop	TSP	T, V	7 digit, per Timer Range
E	Counter Start	CST	T, V	6 digit
F	Setpoint ON (Reset Output)	SPT	T, V, R	per Setpoint Assignment, same as Timer or Counter
G	Setpoint OFF	SOF	T, V	per Setpoint Assignment, same as Timer or Counter
H	Setpoint Time-out	STO	T, V	6 digit, mm.ss.ss format

## Command String Examples:

- Node address = 17, Write 350 to the Setpoint On value  
String: N17VF350\$
- Node address = 5, Read Timer value, response time of 50 msec min  
String: N5TA\*
- Node address = 0, Reset Setpoint output  
String: RF\*
- Node address = 31, Request a Block Print Output, response time of 2 msec min  
String: N31P\$

## Transmitting Data to the Meter

Numeric data sent to the meter must be limited to Transmit Details listed in the Register Identification Chart. Leading zeros are ignored. The meter ignores any decimal point and conforms the number to the appropriate display format. (For example: The Timer range is set for tenths of a second and 25 is written to the Timer Start register. The value of the register is now 2.5 seconds. In this case, write a value of 250 to equal 25.0 seconds).

Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.

data within bytes 9 to 18 is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with a <CR> and <LF>. After the last line of a block print, an extra <SP>, <CR> and <LF> are added to provide separation between the print blocks.

## Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 9 bytes for number and three bytes for decimal points
13	<CR> (carriage return)
14	<LF> (line feed)
15	<SP>* (Space)
16	<CR>* (carriage return)
17	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and register mnemonic, leaving only the numeric part of the response.

## Meter Response Examples:

- Node address = 17, full field response, Cycle Counter = 875  
17 CNT 875 <CR><LF>
- Node address = 0, full field response, Setpoint On value = 250.5  
SPT 250.5<CR><LF>
- Node address = 0, abbreviated response, Setpoint On value= 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Command Response Time

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\* or \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

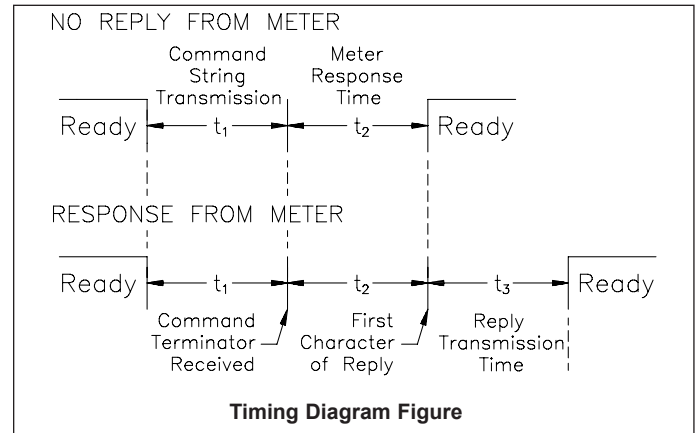

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time of 50 msec. minimum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time ( $t_2$ ) of 2 msec. minimum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

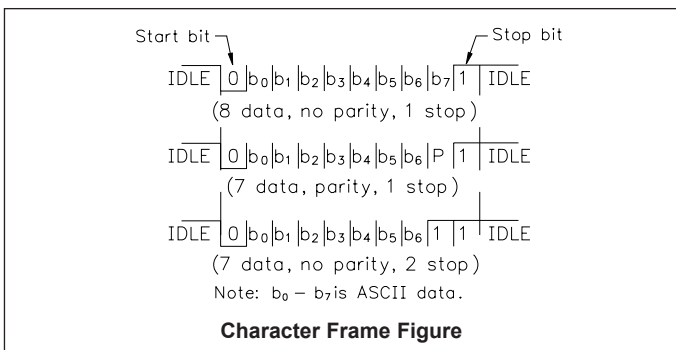

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character. The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start Bit and Data Bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

### Parity Bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The CUB5T meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop Bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the meter.

# CUB5T PROGRAMMING QUICK OVERVIEW

Press and hold SEL key to enter Programming Mode.

## C48T SERIES - 1/16 DIN TIMERS

MODEL C48TS - SINGLE PRESET

MODEL C48TD - DUAL PRESET

- LCD, 7 SEGMENT, 2 LINE, 6 DIGIT DISPLAY, POSITIVE REFLECTIVE OR NEGATIVE TRANSMISSIVE MODELS WITH RED TOP LINE AND GREEN BOTTOM LINE BACKLIGHTING
- SOLID STATE AND RELAY OUTPUT MODELS
- FIELD REPLACEABLE RELAY OUTPUT BOARDS
- STATUS INDICATORS FOR OUTPUTS
- NEMA 4X/IP65 SEALED FRONT BEZEL
- PROGRAMMABLE USER INPUTS AND FRONT PANEL FUNCTION KEY
- PARAMETER SECURITY VIA PROGRAMMABLE OPERATOR ACCESS PRIVILEGES AND PROTECTED VALUE MENU

- HORIZONTAL OR VERTICAL STACKING OF MULTIPLE UNITS
- 85 to 250 VAC or 18 to 36 VDC/24 VAC POWERED UNITS
- RS485 SERIAL COMMUNICATIONS OPTION
- CHOICE OF NUMERIC DATA ENTRY MODES

UL Recognized Component,  
File # E137808

### DESCRIPTION

The Model C48 Timer is available in Single or Dual Preset models. The C48T features a 7 segment, 2 line by 6 digit reflective or backlit LCD display. For the backlit versions, the main display line is red and shows the timer value. The smaller secondary display line is green, and can be used to view the preset values or output time values.

The C48 timer can be configured for a variety of different operating modes to meet most timing application requirements. Twelve timing ranges are available from thousandths of a second to hours and minutes. Decimal Points are used to separate the time units (hours, minutes, seconds). Timing can be cumulative or can reset and start upon each power cycle. "On Delay" or "Off Delay", "Single Shot", "Repetitive auto cycling" modes are all supported.

The Timer can also be configured to Continue or Stop timing upon reaching Preset. The display can be programmed to stop at the preset value (Reset to Zero mode) or zero (Reset to Preset mode), or automatically reset to zero or preset and hold. Once stopped, the timer can be restarted by manually resetting it, or it can be programmed to restart when power is reapplied.

The C48 Timer has a Run/Stop Input, 3 programmable User Inputs, and a programmable front panel function key. The Run/Stop and User Inputs can be configured as sinking (active low) or sourcing (active high) inputs via a single plug jumper. The user inputs and the front panel function key can be configured to provide a variety of functions.

Four front panel push-buttons are used for programming the operating modes and data values, changing the viewed display, and performing user programmable functions, e.g. reset, etc. The C48T can be configured for one of two numeric data entry methods, digit entry or automatic scrolling. The digit entry method allows for the selection and incrementing of digits individually. The automatic scrolling method allows for the progressive change of one through all digit positions by pressing and holding the "up" or "down" button.

The Dual Preset models are available with solid-state or Relay outputs. The Single Preset model has a solid-state and relay output in parallel. All solid-state outputs are available in a choice of NPN current sinking or PNP current sourcing, open-collector transistor outputs. All relay output boards are field replaceable.

The optional RS-485 serial communication interface provides two-way communication between a C48 and other compatible equipment such as a printer, PLC, HMI, or a host computer. In multipoint applications (up to thirty-two), the address number of each C48 on the line can be programmed from 0 to 99. Data from the C48 can be interrogated or changed, and alarm output(s) may be reset by sending the proper command code via serial communications. PC software, SFC48, allows for easy configuration of controller parameters. These settings can be saved to disk for later use or used for multi-controller down loading. On-line help is provided within the software.

The unit is constructed of a lightweight, high impact plastic case with a textured front panel and a clear display window. The front panel meets NEMA 4X/IP65 specifications when properly installed. Multiple units can be stacked horizontally or vertically. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the C48 Timers extremely reliable in industrial environments.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## SPECIFICATIONS

1. **DISPLAY:** 2 Line by 6 digit LCD display; Positive image reflective or negative image transmissive with red (top line) and green (bottom line) backlighting.

**Main Display:** 0.3" (7.62 mm) high digits

**Secondary Display:** 0.2" (5.08 mm) high digits

**Annunciators:**

**Value:** PRS, 1, and 2

**Output:** 01 and 02

2. **POWER REQUIREMENTS:**

**AC Versions (C48CXXX0X):**

**AC Power:** 85 to 250 VAC, 50/60 Hz, 9 VA max.

**DC Power:** 11 to 14 VDC @ 150 mA max. (Non PNP output models)

*Note: Models with PNP current sourcing outputs must be powered from AC.*

**DC Versions (C48CXXX1X):**

**CONTINUOUS:**

**DC Power:** 18 to 36 VDC; 5.5 W max.

**AC Power:** 24 VAC  $\pm 10\%$ ; 50/60 Hz; 7 VA max.

*Note: The  $+10\%$  tolerance range on AC input voltage must be strictly adhered to. DO NOT EXCEED 26.4 VAC.*

**PEAK (START-UP CURRENT):**

**AC or DC Power:** 500 mA peak start-up current for 10 msec max.

**DC OUT ( $V_{SRC IN}$ ) - Terminal 10**

For units which do not have PNP current sourcing outputs, this terminal provides a DC output for sensor power (+12 VDC  $\pm 15\%$ ). The maximum sensor current is 100 mA.

For units with PNP current sourcing outputs, this terminal serves a dual purpose depending on the application's PNP output voltage level and current requirements.

1. The terminal may be used as a +12 VDC output for sensor power. In this case, the PNP output voltage level will be +12 VDC ( $\pm 15\%$ ). A maximum of 100 mA is available for the combination of sensor current and PNP output sourcing current.

2. If a higher PNP output voltage level or additional output sourcing current is desired, an external DC supply may be connected between the "DC OUT ( $V_{SRC IN}$ )" and "COMM." terminals. This supply will determine the PNP output voltage level, and must be in the range of +13 to +30 VDC.

An external DC supply can also provide the additional output sourcing current required in applications where two or more PNP outputs are "ON" simultaneously. However, the maximum current rating of 100 mA per individual output must not be exceeded, regardless of external supply capacity.

3. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and timer values.

4. **SENSOR POWER:** +12 VDC ( $\pm 15\%$ ) @ 100 mA max.

5. **INPUTS:** Run/Stop, Ustr. In1, Ustr In2, and Ustr. In3.

Configurable as current sinking (active low) or current sourcing (active high) inputs via a single plug jumper.

**Current Sinking (active low):**  $V_{IL}$  = 1.5 VDC max, 22 K $\Omega$  pull-up to 5 VDC.

**Current Sourcing (active high):**  $V_{IH}$  = 3.5 VDC min.,  $V_{IN}$  max = 30 VDC; 22 K $\Omega$  pull-down.

**Run/Stop Response Time:** 250  $\mu$ sec max.

**User Input Response Time:** 5 msec max.

6. **TIME ACCURACY:**  $\pm 0.01\%$

7. **OUTPUTS:** (Output type and quantity are model dependent)

**Solid-State:**

**NPN Open Collector:**  $I_{SNK}$  = 100 mA max. @  $V_{OL}$  = 1.1 VDC max;  $V_{OH}$  = 30 VDC max.

**PNP Open Collector:**  $I_{SRC}$  = 100 mA max. (See note);  $V_{OH}$  = 12 VDC  $\pm 15\%$  (using internal supply);  $V_{OH}$  = 13 to 30 VDC (using external supply).

*Note: The internal supply of the C48T can provide a total of 100 mA for the combination of sensor current and PNP output sourcing current. The supply voltage is +12 VDC ( $\pm 15\%$ ), which will be the PNP output voltage level when using only the internal supply.*

*If additional PNP output sourcing current or a higher output voltage level is desired, an external DC supply may be connected between the "DC Out/In" and "Comm." terminals. This supply will determine the PNP output voltage level, and must be in the range of +13 to +30 VDC.*

*An external supply can provide the additional output sourcing current required in applications where two or more outputs are "ON" simultaneously. However, the maximum rating of 100 mA per individual output must not be exceeded, regardless of external supply capacity.*

**Relay:** Form A contact, Rating = 5 A @ 250 VAC, 30 VDC (resistive load), 1/10 HP @ 120 VAC (inductive load)

**Relay Life Expectancy:** 100,000 cycles min. at max. load rating

**Programmable Timed Output(s):** User selectable output time resolution

**0.01 Second Resolution:** 0.01 to 99.99 seconds,  $\pm 0.01\%$  + 10 msec max.

**0.1 Second Resolution:** 0.1 to 999.9 Seconds,  $\pm 0.01\%$  + 100 msec max.

8. **RS485 SERIAL COMMUNICATIONS (Optional):** Up to 32 units can be connected.

**Baud Rate:** Programmable from 1200 to 9600 baud

**Address:** Programmable from 0 to 99

**Data Format:** 10 Bit Frame, 1 start bit, 7 or 8 data bits, 1 or No Parity bit, and 1 stop bit

**Parity:** Programmable for Odd (7 data bits), Even (7 data bits), or None (8 data bits)

9. **CERTIFICATIONS AND COMPLIANCES:**

UL Recognized Component, File #E137808

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

**ELECTROMAGNETIC COMPATIBILITY**

**Immunity to EN 50082-2**

Electrostatic discharge EN 61000-4-2 Level 2; 4 Kv contact  
Level 3; 8 Kv air

Electromagnetic RF fields EN 61000-4-3 Level 3; 10 V/m  
80 MHz - 1 GHz

Fast transients (burst) EN 61000-4-4 Level 4; 2 Kv I/O  
Level 3; 2 Kv power

RF conducted interference EN 61000-4-6 Level 3; 10 V/rms  
150 KHz - 80 MHz

Simulation of cordless telephone ENV50204 Level 3; 10 V/m  
900 MHz  $\pm 5$  MHz  
200 Hz, 50% duty cycle

**Emissions to EN 50081-2**

RF interference EN 55011 Enclosure class A

*Notes:*

*AC VERSIONS*

*1. A power line filter, RLC#LFIL0000 or equivalent, was installed when the unit was DC powered.*

*DC VERSIONS*

*To insure compliance with the EMC standards listed above, do not connect any wires from the terminal(s) labeled "COMM." to the "DC-" supply terminal (12), when powering the unit from a DC supply.*

*Refer to EMC Installation Guidelines section of the manual for additional information.*

10. **ENVIRONMENTAL CONDITIONS:**

**Operating Temperature:** 0°C to 50°C

**Storage Temperature:** -40°C to 70°C

**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.

**Altitude:** Up to 2000 meters

11. **ELECTRICAL CONNECTION:** Wire clamping screw terminals.

12. **CONSTRUCTION:** Black plastic case with collar style panel latch. The panel latch can be installed for horizontal or vertical stacking. Black plastic textured bezel with clear display viewing window. Unit assembly with circuit boards can be removed from the case without removing the case from the panel or disconnecting the wiring. This unit is rated for NEMA 4X/IP65 indoor use. Installation Category II, Pollution Degree 2.

13. **WEIGHT:** 6.0 oz. (170 g)

## SINGLE PRESET MODELS

The C48TS offers a choice of twelve timing ranges with eighteen different operating modes. The unit has a solid-state output that operates in parallel with a relay output. The solid-state output is available as an NPN or PNP open collector transistor.

## DUAL PRESET MODELS

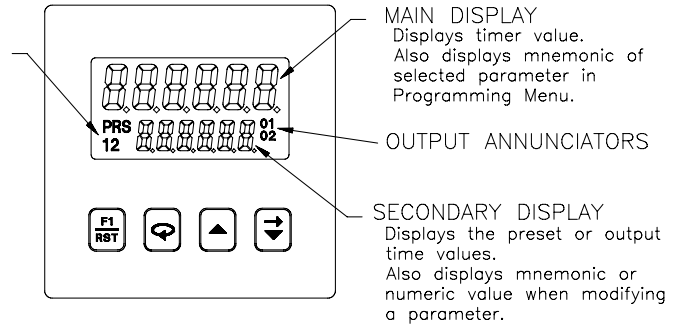

The C48TD offers a choice of twelve timing ranges with 42 operating modes. The unit is available with solid-state or relay outputs. The solid-state outputs are available as NPN or PNP open collector transistors.

## FRONT PANEL FEATURES

The C48 Timer features a dual line display. In the normal operating mode (main display), the timer value is shown on the top line and preset or output time values are shown on the bottom line. The Presets or Output time values can be programmed to be viewable only, viewable and changeable, or locked (not viewable) from the main display.

In the normal operating mode, the presets and output time values are accessible providing that these values are not programmed for 'L'ocked. Values that are accessible (changeable) can be changed immediately when viewed in the secondary display.

**VALUE ANNUNCIATORS**  
Indicate which value is being viewed or modified.

## USER INTERFACE/PROGRAMMING MODES

The operating modes of the C48T are programmed using the front panel keypad. To enter the programming menu, the key is pushed and held for 2 seconds. Within the programming menu, the key is used to sequence through the list of programming parameters.

### PROGRAMMING MENU

DISPLAY	PARAMETER DESCRIPTION
<i>Entry</i>	- Digit or Auto Scrolling Data Entry Mode
<i>trAnGE</i>	- Timer Range Modes (See Table on following page)
<i>OPER</i>	- Timer Operating Modes (See Table on following page)
<i>rStPwP</i>	- Reset at Power up
<i>Rc PrS</i>	- Accessibility of Preset Values
<i>PrESEt</i>	- Preset 1 and 2 Values
<i>P1trRc</i>	- P1 Track P2 (C48TD only)
<i>Rc Out</i>	- Accessibility of Output Time Values
<i>OutRES</i>	- Output Resolution
<i>OutPwt</i>	- Output 1 and 2 Time Values
<i>rEUOut</i>	- Reverse Output/Relay Logic
<i>rEUAnn</i>	- Reverse Output Annunciator Logic
<i>OutPwP</i>	- Power up Output State
<i>USr In1</i>	- User Input 1
<i>USr In2</i>	- User Input 2
<i>USr In3</i>	- User Input 3
<i>USr F1</i>	- User F1 Key
<i>Code</i>	- Programming/Protected Parameter Menu Code
<i>ScroLL</i>	- Scroll Display
<i>SErSEt</i>	- Serial Baud Rate and Parity Settings
<i>SErAdr</i>	- Serial Unit Address
<i>SErAbr</i>	- Abbreviate Serial Mnemonics
<i>PrnOPt</i>	- Print Options
<i>PrnrSt</i>	- Print and Reset Time Value
<i>FRcSEt</i>	- Load Factory Default Settings

(RS485 option only)

## FRONT PANEL KEYPAD

- Performs user Programmed Function
- Cycles through secondary displays.  
- Enters Programming Mode or Protected Value Menu when pushed and held for 2 seconds.  
- Scrolls through programming displays.  
- Enters Data Values.
- Selects next available mode in programming mode.  
- Increments digit in Digit Entry mode.  
- Increments value in Auto Scrolling entry mode.
- Selects Data Entry mode for displayed data values.  
- Selects Digit to right when in Digit Entry mode.  
- Decrements value in Auto Scrolling entry mode.

### Program Security/Operator Accessible Values

The Program Disable Plug Jumper, Programmable Code Value, User Input (programmed for Program Disable), and the Accessible value parameter settings provide various levels of security against unauthorized programming changes. The accessible value parameters provide individual access or locking of each value.

### Protected Value Menu

The Protected Value Menu allows access to selected presets and timed output values without having them viewable or changeable from the main display. To enter the protected menu, the key is pressed and held, and a programmed code value is entered.

### Timer Range Modes - *trAnGE*

The timer can be configured to operate in one of 12 time ranges. The table below shows the various ranges available with the time resolution of each range.

MODE	RANGE	RESOLUTION
<i>SEC.000</i>	999.999 Seconds	0.001 sec
<i>SEC.00</i>	9999.99 Seconds	0.01 sec
<i>SEC.0</i>	99999.9 Seconds	0.1 sec
<i>SEC</i>	999999 Seconds	1 sec
<i>rn.000</i>	999.999 Minutes	0.001 min
<i>rn.00</i>	9999.99 Minutes	0.01 min
<i>rn.0</i>	99999.9 Minutes	0.1 min
<i>rnSEC</i>	9999.59 Minutes.Seconds	1 sec
<i>rnSEC.0</i>	999.59.0 Minutes.Seconds.0	0.1 sec
<i>hrnSEC</i>	99.59.59 Hours.Minutes.Seconds	1 sec
<i>hrn.00</i>	99.59.99 Hours.Minutes.00	0.01 min
<i>hrn.0</i>	999.59.9 Hours.Minutes.0	0.1 min

## Programmable Operating Modes - *DPEr*

These modes determine the operational characteristics of the timer. In the tables, 01 and 02 refer to Output 1 and Output 2 respectively.

SINGLE PRESET OPERATING MODES	
1 - Manual Reset to Zero, Latched Output	10 - Stop Timer at 01, Manual Reset to Zero, Timed Output
2 - Manual Reset to Zero, Timed Output	11 - Stop Timer at 01, Manual Reset to Preset, Latched Output
3 - Manual Reset to Preset, Latched Output	12 - Stop Timer at 01, Manual Reset to Preset, Timed Output
4 - Manual Reset to Preset, Timed Output	13 - Stop Timer at 01, Auto Reset to Zero, Latched Output
5 - Auto Reset to Zero, Timed Output	14 - Stop Timer at 01, Auto Reset to Zero, Timed Output
6 - Auto Reset to Preset, Timed Output	15 - Stop Timer at 01, Auto Reset to Preset, Latched Output
7 - Auto Reset to Zero at 01 End, Timed Output	16 - Stop Timer at 01, Auto Reset to Preset, Timed Output
8 - Auto Reset to Preset at 01 End, Timed Output	17 - Stop Timer at 01, Auto Reset to Zero at 01 End, Timed Output
9 - Stop Timer at 01, Manual Reset to Zero, Latched Output	18 - Stop Timer at 01, Auto Reset to Preset at 01 End, Timed Output

DUAL PRESET OPERATING MODES	
1 - Manual Reset to Zero, Latched Outputs	22 - Stop Timer at 02, Manual Reset to Zero, 01 off at 02, 02 Latched
2 - Manual Reset to Zero, 01 Timed, 02 Latched	23 - Stop Timer at 02, Manual Reset to Zero, 01 off at 02, 02 Timed
3 - Manual Reset to Zero, 01 and 02 Timed	24 - Stop Timer at 02, Manual Reset to Preset 2, Latched Outputs
4 - Manual Reset to Zero, 01 off at 02, 02 Latched	25 - Stop Timer at 02, Manual Reset to Preset 2, 01 Timed, 02 Latched
5 - Manual Reset to Zero, 01 off at 02, 02 Timed	26 - Stop Timer at 02, Manual Reset to Preset 2, 01 and 02 Timed

12 - Auto Reset to Zero, 01 off at 02, 02 Timed	33 - Stop Timer at 02, Auto Reset to Zero, 01 off at 02, 02 Timed
13 - Auto Reset to Preset 2, 01 and 02 Timed	34 - Stop Timer at 02, Auto Reset to Preset 2, Latched Outputs
14 - Auto Reset to Preset 2, 01 off at 02, 02 Timed	35 - Stop Timer at 02, Auto Reset to Preset 2, 01 Timed, 02 Latched
15 - Auto Reset to Zero at 02 End, 01 and 02 Timed	36 - Stop Timer at 02, Auto Reset to Preset 2, 01 and 02 Timed
16 - Auto Reset to Zero at 02 End, 01 off at 02, 02 Timed	37 - Stop Timer at 02, Auto Reset to Preset 2, 01 off at 02, 02 Latched
17 - Auto Reset to Preset 2 at 02 End, 01 and 02 Timed	38 - Stop Timer at 02, Auto Reset to Preset 2, 01 off at 02, 02 Timed
18 - Auto Reset to Preset 2 at 02 End, 01 off at 02, 02 Timed	39 - Stop Timer at 02, Auto Reset to Zero at 02 End, 01 and 02 Timed
19 - Stop Timer at 02, Manual Reset to Zero, Latched Outputs	40 - Stop Timer at 02, Auto Reset to Zero at 02 End, 01 off at 02, 02 Timed
20 - Stop Timer at 02, Manual Reset to Zero, 01 Timed, 02 Latched	41 - Stop Timer at 02, Auto Reset to Preset 2 at 02 End, 01 and 02 Timed
21 - Stop Timer at 02, Manual Reset to Zero, 01 and 02 Timed	42 - Stop Timer at 02, Auto Reset to Preset 2 at 02 End, 01 off at 02, 02 Timed

## MULTIPLE UNIT STACKING

The C48T is designed for close spacing of multiple units. Units can be stacked either horizontally or vertically. For vertical stacking, install the panel latch with the screws to the sides of the unit. For horizontal stacking, the panel latch screws should be at the top and bottom of the unit. The minimum spacing

from center line to center line of the units is 1.96" (49.8 mm). This spacing is the same for vertical or horizontal stacking.

*Note: When stacking units, provide adequate panel ventilation to ensure that the maximum operating temperature range is not exceeded.*

PANEL CUT-OUT SPACING FOR MULTIPLE UNIT STACKING. HORIZONTAL ARRANGEMENT SHOWN.

# APPLICATION

## ONE SHOT TIMING CYCLE

Proper wash down mixture for a food processing plant is an important factor in maintaining the clean environment required. A disinfectant solution is added to the mixing/holding tank used for the wash down cycle. When the holding tank is near empty, a level transducer activates the filler pump. A C48TS is used to turn on the disinfectant solution pump for a preprogrammed amount of time during the filling process of the holding tank.

When the filler pump starts, a momentary contact closure activates User Input 1, resetting the C48 Timer. The timer begins the timing cycle since the

run terminal is connected to common. The normally open relay contacts close at the timer reset signal activating the disinfectant solution pump. When the programmed preset is reached, timing stops and the relay deactivates, turning off the pump controlling the disinfectant solution. The C48 Timer's preset cycle time may be changed according to the manufacturer's concentration level of the disinfectant.

# MODEL PAX-1/8 DIN PRESET TIMER (PAXTM) & REAL-TIME CLOCK (PAXCK)

- 6-DIGIT 0.56" RED SUNLIGHT READABLE DISPLAY
- 4 SEPARATE DISPLAYS (Timer, Counter, Real-Time Clock, and Date)
- CYCLE COUNTING CAPABILITY
- PROGRAMMABLE FUNCTION KEYS/USER INPUTS
- FOUR SETPOINT ALARM OUTPUTS (W/Plug-in card)
- COMMUNICATIONS AND BUS CAPABILITIES (W/Plug-in card)
- BUS CAPABILITIES: DEVICENET, MODBUS and PROFIBUS-DP
- CRIMSON® PROGRAMMING SOFTWARE
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAXTM (PAX® Timer) and PAXCK (PAX® Clock/Timer) offer many features and performance capabilities to suit a wide range of industrial applications. Both can function as an Elapsed Timer or Preset Timer, while the PAXCK also offers Real-Time Clock with Date capability. The Plug-in option cards allow the opportunity to configure the meter for the present application, while providing easy upgrades for future needs.

Both units can function as an Elapsed Time Indicator. By using two separate signal inputs and 23 selectable timer ranges, the meters can be programmed to meet most any timing application. With the addition of a Plug-in Setpoint card, they can easily become a dual or quad output preset timer.

The PAXCK can also operate as a Real-Time Clock (RTC), with the Real-Time Clock Card already installed. The meter is capable of displaying time in 12 or 24-hour time formats. The 12-hour format can be displayed in hours and minutes, with or without an AM/PM indication or in hours, minutes, and seconds. The 24-hour format can be displayed in hours and minutes or in hours, minutes, and seconds. The PAXCK is also capable of a calendar display in which the day, month and/or year can be displayed. The meter will recognize leap years, and can automatically adjust for Daylight Savings Time. The Real-Time Clock has the ability to externally synchronize with other PAXCK meters to provide a uniform display network throughout the plant.

If the application calls for both a Preset Timer and a Real-Time Clock at the same time, the PAXCK can handle this requirement as well. The meter provides up to four different displays, accessed via front panel push buttons or external inputs. The displays are Timer (TMR), which displays the current timer value; Count (CNT), which displays the current cycle counter value; Date (DAT), which displays the current programmed date; and Real-Time Clock, which displays the current time. A battery-backed Real-Time Clock plug-in card is provided with the PAXCK. This card, which includes a lithium coin-cell battery, will maintain the time and date when main power is removed.

The meters accept inputs from a variety of sources including switch contacts and outputs from CMOS or TTL circuits. The input can be configured to trigger on the edge or level of the incoming pulse. Internal jumpers are available to allow the selection for sinking inputs (active low) or sourcing inputs (active high).

The front panel keys and three user inputs are programmable to perform various meter functions. One of the functions includes exchanging parameter lists, allowing for two separate listings of setpoint values, timer start/stop values, counter start/stop values and RTC daily on and off values.

The meters can have up to four setpoint outputs, determined by the optional plug-in cards. The setpoint plug-in cards provide dual FORM-C relays (5A), quad FORM-A relays (3A) or either quad sinking or quad sourcing open collector logic outputs. The outputs can be assigned to the timer, counter, RTC date, and RTC time. The outputs can also be independently configured to suit a variety of control and alarm requirements.

Plug-in cards can also provide serial communications. These include RS232, RS485, Modbus, DeviceNet, and Profibus-DP. Display values, setpoint alarm values and setpoint states can be controlled through serial communications. With the RS232 or RS485 communication card installed, it is possible to configure the meter using a Windows® based program. The meter configuration data can be saved to a file for later recall.

Once the meters have been initially configured, the parameter list may be locked out from further modification entirely, or the setpoint, timer start/stop values, counter start/stop values, RTC time SET, and Display Intensity can be made accessible. This lockout is possible through a security code or user input.

The meters have been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

# GENERAL METER SPECIFICATIONS

1. **DISPLAY:** 6 digit, 0.56" (14.2 mm) red sunlight readable or standard green LED
2. **POWER:**  
AC Versions (PAXCK000, PAXTM000):  
AC Power: 85 to 250 VAC, 50/60 Hz, 18 VA  
Isolation: 2300 Vrms for 1 min. to all inputs and outputs. (300 V working)  
DC Versions (PAXCK010, PAXTM010):  
DC Power: 11 to 36 VDC, 14 W  
(Derate operating temperature to 40°C if operating <15 VDC and three Plug-in cards are installed)  
AC Power: 24 VAC,  $\pm 10\%$ , 50/60 Hz, 15 VA  
Isolation: 500 Vrms for 1 min. to all inputs and outputs (50 V working)
3. **SENSOR POWER:** 12 VDC,  $\pm 10\%$ , 100 mA max. Short circuit protected.
4. **ANNUNCIATORS:**
- |                                    |                         |
|------------------------------------|-------------------------|
| TMR - Timer Display                | SP1 - Setpoint 1 Output |
| CNT - Cycle Counter Display        | SP2 - Setpoint 2 Output |
| DAT - Real-Time Clock Date Display | SP3 - Setpoint 3 Output |
| - Real-Time Clock Time Display     | SP4 - Setpoint 4 Output |
5. **KEYPAD:** 3 programmable function keys, 5 keys total.
6. **TIMER DISPLAY:**  
Timer Range: 23 Selectable Ranges  
Timing Accuracy:  $\pm 0.01\%$   
Minimum Digit Resolution: 0.001 Sec.  
Maximum Least Significant Digit Resolution: 1 Hr.  
Maximum Display: 999999
7. **CYCLE COUNTER DISPLAY:**  
Counter Range: 0 to 999999  
Digit Resolution: 1 cycle  
Maximum Count Rate: 50 Hz
8. **REAL-TIME/DATE DISPLAY (PAXCK):**  
Real-Time Display: 5 display formats  
Hr/Min/Sec (12 or 24 Hr. format); Hr/Min (24 Hr.); Hr/Min (12 Hr. with or without AM/PM indication)  
Date Display: 7 display formats  
Month/Day or Day/Month (numeric or 3-letter Month format);  
Month/Day/Year or Day/Month/Year (all numeric);  
Day of Week/Day (3-letter Day of Week format)
9. **REAL-TIME CLOCK CARD:** Field replaceable plug-in card  
Time Accuracy:  $\pm 5$  secs./Month (1 min./year) with end-user calibration  
Battery: Lithium 2025 coin cell  
Battery Life Expectancy: 10 yrs. typical  
Synchronization Interface: Two-wire multi-drop network (RS485 hardware), 32 units max., operates up to 4000 ft.  
Isolation To Timer & User Input Commons: 500 Vrms for 1 min.  
Working Voltage: 50 V. Not isolated from all other commons.
10. **TIMER INPUTS A and B:**  
Logic inputs configurable as Current Sinking (active low) or Current Sourcing (active high) via a single plug jumper.  
Current Sinking (active low):  $V_{IL} = 0.9$  V max., 22K $\Omega$  pull-up to +12 VDC.  
Current Sourcing (active high):  $V_{IH} = 3.6$  V min., 22K $\Omega$  pull-down, Max. Continuous Input: 30 VDC.  
Timer Input Pulse Width: 1 msec min.  
Timer Start/Stop Response Time: 1 msec max.  
Filter: Software filtering provided for switch contact debounce. Filter enabled or disabled through programming.  
If enabled, filter results in 50 msec start/stop response time for successive pulses on the same input terminal.
11. **USER INPUTS:** Three programmable user inputs  
Logic inputs configurable as Current Sinking (active low) or Current Sourcing (active high) through a single plug jumper.  
Current Sinking (active low):  $V_{IL} = 0.9$  V max., 22K $\Omega$  pull-up to +12 VDC.  
Current Sourcing (active high):  $V_{IH} = 3.6$  V min., 22K $\Omega$  pull-down, Max. Continuous Input: 30 VDC.  
Isolation To Timer Input Common: Not isolated  
Response Time: 10 msec
12. **MEMORY:** Non-volatile E<sup>2</sup>PROM retains all programming parameters and display values.
13. **ENVIRONMENTAL CONDITIONS:**  
Operating Temperature Range: 0 to 50°C (0 to 45°C with all three plug-in cards installed)  
Storage Temperature Range: -40 to 60°C  
Operating and Storage Humidity: 0 to 85% max. RH non-condensing  
Vibration According to IEC 68-2-6: Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's.  
Shock According to IEC 68-2-27: Operational 25 g (10g relay), 11 msec in 3 directions.  
Altitude: Up to 2000 meters
14. **CERTIFICATIONS AND COMPLIANCE:**
- SAFETY**  
UL Recognized Component, File # E179259, UL61010A-1, CSA C22.2 No. 61010-1  
Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

15. **CONNECTIONS:** High compression, cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gauge: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.
16. **CONSTRUCTION:** This meter is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.
17. **WEIGHT:** 10.1 oz. (286 g)

# OPTIONAL PLUG-IN CARDS AND ACCESSORIES

**WARNING:** Disconnect all power to the unit before installing Plug-in cards.

## Adding Option Cards

The PAX and MPAX series meters can be fitted with up to three optional plug-in cards. The details for each plug-in card can be reviewed in the specification section below. Only one card from each function type can be installed at one time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Real-Time Clock Card (PAXRTC). The plug-in cards can be installed initially or at a later date.

## COMMUNICATION CARDS (PAXCDC)

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via RLCPro, a Windows® based program, the RS232 or RS485 Cards must be used.

PAXCDC10 - RS485 Serial (Terminal) PAXCDC30 - DeviceNet  
PAXCDC1C - RS485 Serial (Connector) PAXCDC40 - Modbus (Terminal)  
PAXCDC20 - RS232 Serial (Terminal) PAXCDC4C - Modbus (Connector)  
PAXCDC2C - RS232 Serial (Connector) PAXCDC50 - Profibus-DP

### SERIAL COMMUNICATIONS CARD

**Type:** RS485 or RS232  
**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.  
Working Voltage: 50 V. Not Isolated from all other commons.  
**Data:** 7/8 bits  
**Baud:** 300 to 19,200  
**Parity:** No, Odd or Even  
**Bus Address:** Selectable 0 to 99, Max. 32 meters per line (RS485)  
**Transmit Delay:** Selectable for 2 to 50 msec or 50 to 100 msec (RS485)

### DEVICENET™ CARD

**Compatibility:** Group 2 Server Only, not UCMM capable  
**Baud Rates:** 125 Kbaud, 250 Kbaud, and 500 Kbaud  
**Bus Interface:** Phillips 82C250 or equivalent with MIS wiring protection per DeviceNet™ Volume 1 Section 10.2.2.  
**Node Isolation:** Bus powered, isolated node  
**Host Isolation:** 500 Vrms for 1 minute (50 V working) between DeviceNet™ and meter input common.

### MODBUS CARD

**Type:** RS485; RTU and ASCII MODBUS modes  
**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 minute.  
Working Voltage: 50 V. Not isolated from all other commons.  
**Baud Rates:** 300 to 38,400.  
**Data:** 7/8 bits  
**Parity:** No, Odd, or Even  
**Addresses:** 1 to 247.  
**Transmit Delay:** Programmable; See Transmit Delay explanation.

### PROFIBUS-DP CARD

**Fieldbus Type:** Profibus-DP as per EN 50170, implemented with Siemens SPC3 ASIC  
**Conformance:** PNO Certified Profibus-DP Slave Device  
**Baud Rates:** Automatic baud rate detection in the range 9.6 Kbaud to 12 Mbaud  
**Station Address:** 0 to 126, set by the master over the network. Address stored in non-volatile memory.  
**Connection:** 9-pin Female D-Sub connector  
**Network Isolation:** 500 Vrms for 1 minute (50 V working) between Profibus network and sensor and user input commons. Not isolated from all other commons.

## SETPOINT CARDS (PAXCDS)

The PAX and MPAX series has 4 available setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

PAXCDS10 - Dual Relay, FORM-C, Normally open & closed  
PAXCDS20 - Quad Relay, FORM-A, Normally open only  
PAXCDS30 - Isolated quad sinking NPN open collector  
PAXCDS40 - Isolated quad sourcing PNP open collector

### DUAL RELAY CARD

**Type:** Two FORM-C relays  
**Isolation To Timer & User Input Commons:** 2300 Vrms for 1 min.  
Working Voltage: 240 Vrms  
**Contact Rating:**  
One Relay Energized: 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC, inductive load  
Total current with both relays energized not to exceed 5 amps  
**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads  
**Response Time:** 5 msec. nominal with 3 msec. nominal release  
**Timed Output Accuracy:** ±0.01% -10 msec.

### QUAD RELAY CARD

**Type:** Four FORM-A relays  
**Isolation To Timer & User Input Commons:** 2300 Vrms for 1 min.  
Working Voltage: 250 Vrms  
**Contact Rating:**  
One Relay Energized: 3 amps @ 250 VAC or 30 VDC (resistive load), 1/10 HP @ 120 VAC, inductive load  
Total current with all four relays energized not to exceed 4 amps  
**Life Expectancy:** 100K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads  
**Response Time:** 5 msec. nominal with 3 msec. nominal release  
**Timed Output Accuracy:** ±0.01% -10 msec.

### QUAD SINKING OPEN COLLECTOR CARD

**Type:** Four isolated sinking NPN transistors.  
**Isolation To Timer & User Input Commons:** 500 Vrms for 1 min.  
Working Voltage: 50 V. Not Isolated from all other commons.  
**Rating:** 100 mA max @  $V_{SAT} = 0.7 V$  max.  $V_{MAX} = 30 V$   
**Response Time:** 400 µsec. nominal with 2 msec. nominal turnoff  
**Timed Output Accuracy:** ±0.01% -10 msec.

### QUAD SOURCING OPEN COLLECTOR CARD

**Type:** Four isolated sourcing PNP transistors.  
**Isolation To Timer & User Input Commons:** 500 Vrms for 1 min.  
Working Voltage: 50 V. Not Isolated from all other commons.  
**Rating:** Internal supply: 24 VDC ± 10% , 30 mA max. total  
External supply: 30 VDC max., 100 mA max. each output  
**Response Time:** 400 µsec. nominal with 2 msec. nominal turnoff  
**Timed Output Accuracy:** ±0.01% -10 msec.

## PROGRAMMING SOFTWARE

The Crimson® software is a Windows® based program that allows configuration of the PAX® meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the meter. The meter's program can then be saved in a PC file for future use. A PAX® serial plug-in card is required to program the meter using the software.

# 1.0 INSTALLING THE METER

## Installation

The meter meets NEMA 4X/IP65 requirements for indoor use when properly installed. The meter is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the meter. Slide the panel gasket over the rear of the meter to the back of the bezel. The meter should be installed fully assembled. Insert the meter into the panel cutout.

While holding the meter in place, push the panel latch over the rear of the meter so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the meter is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The meter should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the meter near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the meter.

D

# 2.0 SETTING THE JUMPERS

To access the jumpers, remove the meter base from the meter case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## Timer Input Logic Jumper

One jumper is used for the logic state of both timer inputs. Select the proper position to match the input being used.

## User Input Logic Jumper

One jumper is used for the logic state of all user inputs. If the user inputs are not used, it is not necessary to check or move this jumper.

## JUMPER SELECTIONS

The  indicates factory setting.

↓ REAR TERMINALS ↓

# 3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased optional cards that perform specific functions. These cards plug into the main circuit board of the meter. The Plug-in cards have many unique functions when used with the meters.

**CAUTION:** The Plug-in card and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## To Install:

1. With the case open, locate the Plug-in card connector for the card type to be installed. The types are keyed by position with different main circuit board connector locations. When installing the card, hold the meter by the rear terminals and not by the front display board.\*
2. Install the Plug-in card by aligning the card terminals with the slot bay in the rear cover. Be sure the connector is fully engaged and the tab on the Plug-in card rests in the alignment slot on the display board.
3. Slide the meter base back into the case. Be sure the rear cover latches fully into the case.
4. Apply the Plug-in card label to the bottom side of the meter. Do Not Cover the vents on the top surface of the meter. The surface of the case must be clean for the label to adhere properly. Apply the label to the area designated by the large case label.

## Quad Sourcing Open Collector Output Card Supply Select

\* If installing the Quad sourcing Plug-in Card (PAXCDS40), set the jumper for internal or external supply operation before continuing.

# 4.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).

- b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
  - Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### AC Power

Terminal 1: VAC  
Terminal 2: VAC

### DC Power

Terminal 1: +VDC  
Terminal 2: -VDC

## 4.2 TIMER INPUT WIRING

Before connecting the wires, the Timer Input logic jumper should be verified for proper position.

### Two Wire Proximity, Current Source

### Current Sinking Output

### Current Sourcing Output

### Switch or Isolated Transistor; Current Sink

### Switch or Isolated Transistor; Current Source

### Interfacing With TTL

### Emitter Follower; Current Source

**CAUTION:** Timer Input common is NOT isolated from User Input common. In order to preserve the safety of the meter application, the timer input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the User Input Common with respect to earth ground; and the common of the isolated plug-in cards with respect to input common.

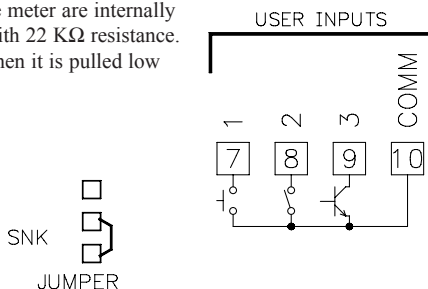

## 4.3 USER INPUT WIRING

Before connecting the wires, the Timer Input logic jumper should be verified for proper position. When the user input is configured for cycle count, in module 4, the count input should be wired between terminals 7 & 10.

### Sinking Logic

Terminals 7-9 } Connect external switching device between the  
Terminal 10 } appropriate User Input terminal and User Comm.

The user inputs of the meter are internally pulled up to +12 V with 22 KΩ resistance. The input is active when it is pulled low (<0.9 V).

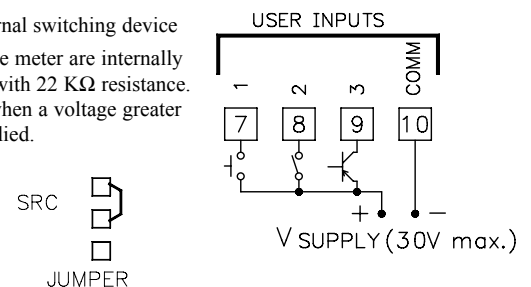

### Sourcing Logic

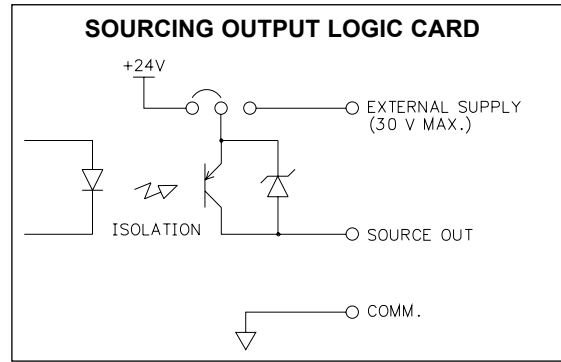

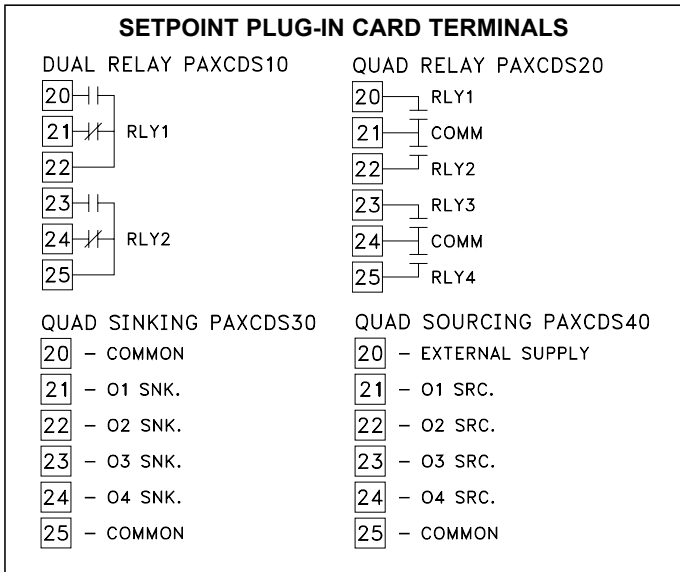

Terminals 7-9: + VDC through external switching device

Terminal 10: -VDC through external switching device

The user inputs of the meter are internally pulled down to 0 V with 22 KΩ resistance. The input is active when a voltage greater than 3.6 VDC is applied.

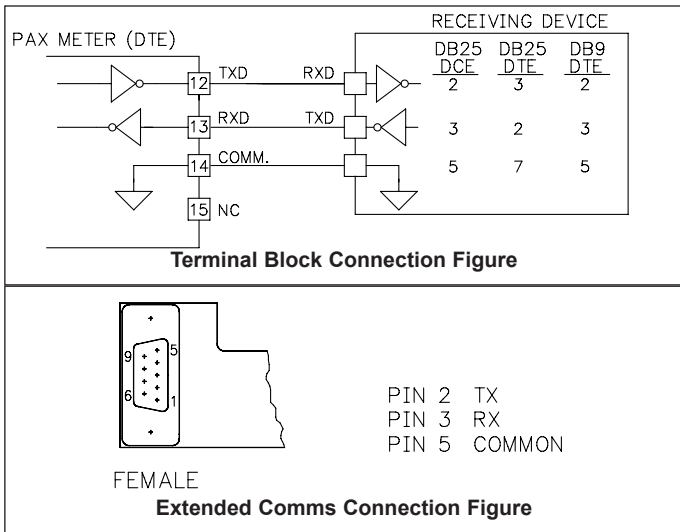

## 4.4 SETPOINT (ALARMS) WIRING

## 4.5 SERIAL COMMUNICATION WIRING

### RS232 Communications

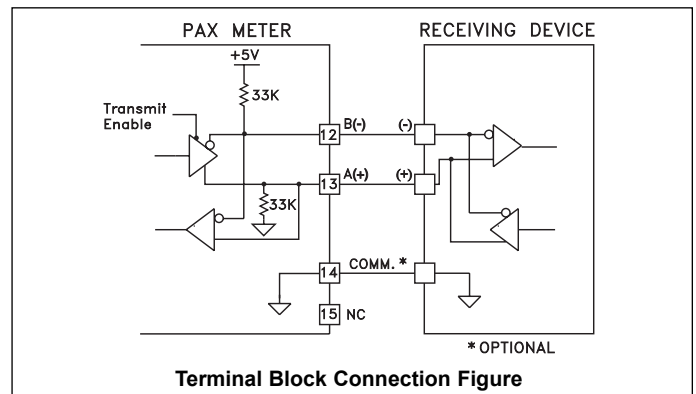

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The PAX emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

### RS485 Communications

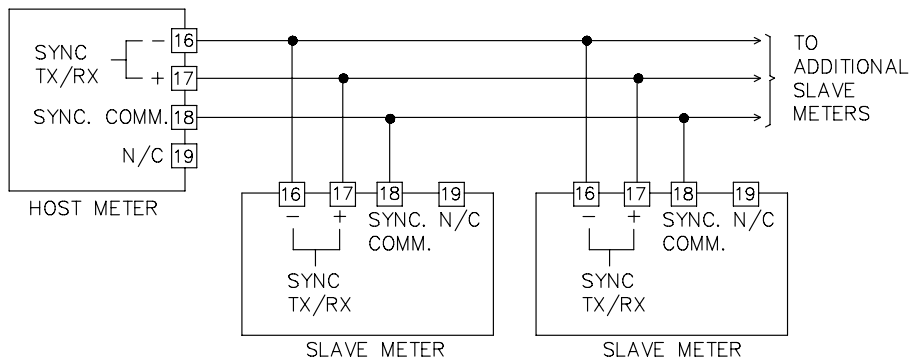

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the PAX is limited to 19.2k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## 4.6 REAL-TIME CLOCK WIRING (PAXCK)

Time synchronization between multiple PAXCK meters can be accomplished through a hardware interface on the Real-Time Clock option card. This RS485 type interface allows connection of up to 32 PAXCK meters in a two-wire multidrop network, at distances up to 4000 ft.

In a synchronization network, one PAXCK meter is programmed as the Host, while all other meters are programmed as Slaves. Once every hour, the Host meter outputs a time synchronization pulse onto the network. Upon receiving the synchronization pulse, each Slave meter automatically adjusts the minutes and seconds of its RTC Time setting to synchronize with the Host.

Real-Time Clock Synchronization Figure

\*\* Factory setting for the F1 and F2 keys is NO mode.

\*\*\* Factory setting for the RST key is *dr5k-E* (Reset Display)

# 6.0 PROGRAMMING THE METER

\* Only accessible with appropriate plug-in card.

## DISPLAY MODE

The meter normally operates in the Display Mode. In this mode, the meter displays can be viewed consecutively by pressing the **DSP** key. The annunciators to the left of the display indicate which display is currently shown; Timer (TMR), Cycle Counter (CNT), or Date (DAT). The Time Display for the Real-Time Clock is shown with no annunciator. Any of these displays can be locked from view through programming. (See Module 3.)

## PROGRAMMING MODE

Two programming modes are available.

**Full Programming Mode** permits all parameters to be viewed and modified. Upon entering this mode, the front panel keys change to Programming Mode operations. This mode should not be entered while a process is running, since the meter timing functions and User Input response may not operate properly while in Full Programming Mode.

**Quick Programming Mode** permits only certain parameters to be viewed and/or modified. When entering this mode, the front panel keys change to Programming Mode operations, and all meter functions continue to operate properly. Quick Programming Mode is configured in Module 3. The Display Intensity Level "d-LEv" parameter is only available in the Quick Programming Mode when the security code is non-zero. For a description, see Module 9—Factory Service Operations. Throughout this document, Programming Mode (without Quick in front) always refers to "Full" Programming Mode.

## PROGRAMMING TIPS

The Programming Menu is organized into nine modules. (See above.) These modules group together parameters that are related in function. It is recommended to begin programming with Module 1 and proceed through each

module in sequence. Note that Modules 5 through 8 are only accessible when the appropriate plug-in option card is installed. If lost or confused while programming, press the **DSP** key to exit programming mode and start over. When programming is complete, it is recommended to record the meter settings on the Parameter Value Chart and lock-out parameter programming with a User Input or lock-out code. (See Modules 2 and 3 for lock-out details.)

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 9. This is a good starting point if encountering programming problems. Throughout the module description sections which follow, the factory setting for each parameter is shown below the parameter display. In addition, all factory settings are listed on the Parameter Value Chart following the programming section.

## ALTERNATING SELECTION DISPLAY

In the module description sections which follow, the dual display with arrows appears for each programming parameter. This is used to illustrate the display alternating between the parameter (top display) and the parameter's Factory Setting (bottom display). In most cases, selections or value ranges for the parameter will be listed on the right.

## STEP BY STEP PROGRAMMING INSTRUCTIONS:

### PROGRAMMING MODE ENTRY (PAR KEY)

The Programming Mode is entered by pressing the **PAR** key. If this mode is not accessible, then meter programming is locked by either a security code or a hardware lock. (See Modules 2 and 3 for programming lock-out details.)

### MODULE ENTRY (ARROW & PAR KEYS)

Upon entering the Programming Mode, the display alternates between **Pr o** and the present module (initially **00**). The arrow keys (**F1▲** and **F2▼**) are used to select the desired module, which is then entered by pressing the **PAR** key.

### PARAMETER (MODULE) MENU (PAR KEY)

Each module has a separate parameter menu. These menus are shown at the start of each module description section which follows. The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr o 00**. From this point, programming may continue by selecting and entering additional modules. (See **MODULE ENTRY** above.)

### PARAMETER SELECTION ENTRY (ARROW & PAR KEYS)

For each parameter, the display alternates between the parameter and the present selection or value for that parameter. For parameters which have a list of selections, the arrow keys (**F1▲** and **F2▼**) are used to sequence through the list until the desired selection is displayed. Pressing the **PAR** key stores and activates the displayed selection, and also advances the meter to the next parameter.

### NUMERICAL VALUE ENTRY (ARROW, RST & PAR KEYS)

For parameters which require a numerical value entry, the arrow keys can be used to increment or decrement the display to the desired value. When an arrow key is pressed and held, the display automatically scrolls up or scrolls down. The longer the key is held, the faster the display scrolls.

In addition, the **RST** key can be used in combination with the arrow keys to enter numerical values. The **RST** key is pressed to select a specific digit to be changed, which blinks when selected. Once a digit is selected, the arrow keys are used to increment or decrement that digit to the desired number. The **RST** key is then pressed again to select the next digit to be changed. This "select and set" sequence is repeated until each digit is displaying the proper number. Pressing the **PAR** key stores and activates the displayed value, and also advances the meter to the next parameter.

### PROGRAMMING MODE EXIT (DSP KEY or PAR KEY at Pr o 00)

The Programming Mode is exited by pressing the **DSP** key (from anywhere in the Programming Mode) or the **PAR** key (with **Pr o 00** displayed). This will commit any stored parameter changes to memory and return the meter to the Display Mode. If a parameter was just changed, the **PAR** key should be pressed to store the change before pressing the **DSP** key. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

# 6.1 MODULE 1 - TIMER INPUT PARAMETERS (1-17P)

Module 1 is the programming module for the Timer Input Parameters. In the Display Mode, the TMR annunciator indicates the Timer display is currently being shown. An **EXCHANGE PARAMETER LISTS** feature, which includes the Timer Start and Timer Stop Values, is explained in Module 2.

## TIMER RANGE

**23 TIMER RANGE SELECTIONS**  
(S = SEC; M = MIN; H = HR; d = DAY)

RANGE SELECTION	MAXIMUM DISPLAY	DISPLAY RESOLUTION	RANGE SELECTION	MAXIMUM DISPLAY	DISPLAY RESOLUTION

## TIMER INPUT OPERATION

This parameter determines how the Timer Input Signals affect the "Run/Stop" status of the Timer. The timing diagrams below reflect a Sinking input setup (active low). A Sourcing input setup (active high) is available through plug jumper selection (see Section 2.0). In this case, the logic levels of the timing diagrams would be inverted.

The Timer can also be stopped using a Timer Stop Value or a Setpoint. This type of Stop condition is cleared when a Timer Reset occurs, or another start edge is applied.

For **LEVEL** and **EdGE-1** operation, Input B provides a level active Timer Inhibit function. This function is also available through a User Input (see Module 2). Timing diagrams are shown below for "LEVEL" through "HoLd-2" modes. The "LEUrSt" through "HrSt-2" modes are identical except the timer display value is also reset at "Time Start" edges. In the "HoLd-2" and "HrSt-2" modes, the timer display value remains held and only updates when a Timer Start (Input A) or Timer Stop (Input B) edge occurs.

### LEVEL, LEUrSt \*

### EdGE-1, Edr5-1 \*

\* - Timer is reset at Time Start edge.

### EdGE-2, Edr5-2 \*

### HoLd-2, HrSt-2 \*

\* - Timer is reset at Time Start edge.

## TIMER INPUT FILTERING

Provides a 50 msec debounce for the Timer Inputs (A and B). Select **ON** when using relays or switch contacts as a signal source.

## TIMING DIRECTION

Timing direction can be reversed through a User Input. (See Module 2.)

## TIMER START VALUE

000000 to 999999

The Timer returns to this value whenever a Timer Reset occurs. The value is entered in the same display format as the Timer Range selected. Non-zero values are normally used for "timing down" applications, but they can also provide an "offset" value when timing up.

## TIMER STOP VALUE

NO YES

The Timer stops when this value is reached, regardless of the signal levels on the Timer Inputs. Selecting **YES** will display the **VALUE** sub-menu where the Stop Value can be set or changed. The Stop Value is entered in the same display format as the Timer Range selected. This Stop condition is cleared when a Timer Reset occurs. Select **NO** if a Stop Value is not being used.

000000 to 999999

### FLASH TIMER ANNUNCIATOR

This parameter allows the Timer annunciator (TMR) to flash when the Timer is running or stopped/inhibited. Select **NO** if a flashing indicator is not desired.

### TIMER RESET AT POWER-UP

The Timer can be programmed to Reset at each meter power-up.

### TIMER INPUT STATE AT POWER-UP

Determines the “Run/Stop” State of the Timer at Power-up. This parameter does not apply to **LEVEL** timer input operation.

**STOP** - Timer Stopped at power-up, regardless of prior run/stop state

**SAVE** - Timer assumes the same run/stop state it was in prior to power-down

## 6.2 MODULE 2 - USER INPUT AND FRONT PANEL FUNCTION KEY PARAMETERS (2-FNC)

Module 2 is the programming module for the rear terminal User Inputs and front panel Function Keys.

Three rear terminal User Inputs are individually programmable to perform specific meter control functions. While in the Display Mode, the function is executed when the User Input transitions to the active state. Refer to the User Input specifications for active state response times. Certain User Input functions are disabled in “Full” Programming Mode. User Inputs should be programmed while in the inactive state.

Three front panel Function Keys, **F1**, **F2** and **RST**, are also individually programmable to perform specific meter control functions. While in the Display Mode, the primary function is executed when the key is pressed. Holding the **F1** or **F2** Function Keys for three seconds executes a secondary function. It is possible to program a secondary function without a primary function. The front panel key functions are disabled in both Programming Modes.

In most cases, if more than one User Input and/or Function Key is programmed for the same function, the maintained (level active) functions will be performed while at least one of those User Inputs or Function Keys are activated. The momentary (edge triggered) functions are performed every time any of those User Inputs or Function Keys transition to the active state.

Some functions have a sublist of parameters, which appears when **PAR** is pressed at the listed function. A sublist provides yes/no selection for Display Values or Setpoints which pertain to the programmed function. The function will only be performed on the parameters entered as **YES** in the sublist. If a User Input or Function Key is configured for a function with a sublist, then that sublist will need to be scrolled through each time, in order to access any parameters for the User Inputs or Function Keys which follow.

### NO FUNCTION

With this selection, NO function is performed. This is the factory setting for all user inputs and function keys except the Reset (**RST**) Key.

### PROGRAMMING MODE LOCK-OUT

Programming Mode is locked-out, as long as activated (maintained action). In Module 3, certain parameters can be setup where they are still accessible during Programming Mode Lock-out. A security code can be configured to allow complete programming access during User Input lock-out. This parameter does not apply to the function keys. Program only one user input for this function.

### EXCHANGE PARAMETER LISTS

Two lists of parameter entries are available for the Timer/Counter Start and Stop Values; Setpoint On/Off and Time-Out Values; and Setpoint Daily On/Off Occurrence (for Real-Time Clock option). The two lists are named **L 15k-A** and **L 15k-B**. If a User Input is used to select the list, then **L 15k-A** is selected when the User Input is in the inactive state and **L 15k-B** is selected when the User Input is in the active state (maintained action). If a front panel Function Key is used to select the list, then the list will toggle for each key press (momentary action). The display will only indicate which list is active when the list is changed or when entering any Programming Mode.

To program the values for **L 15k-A** and **L 15k-B**, first complete the programming of all the parameters. Exit programming and switch to the other list. Re-enter programming and enter the Timer/Counter Start and Stop Values (**E STrk**, **E SStp**, **E STrk**, **E SStp**), and if applicable, the Setpoint On/Off and Time-Out Values (**SP-1**, **SP-2**, **SP-3**, **SP-4**, **SPDF-1**, **SPDF-2**, **SPDF-3**, **SPDF-4**, **EOUt-1**, **EOUt-2**, **EOUt-3**, **EOUt-4**), and the Setpoint Daily On/Off Occurrence (**d ON-1**, **d ON-2**, **d ON-3**, **d ON-4**, **dOFF-1**, **dOFF-2**, **dOFF-3**, **dOFF-4**). If any other parameters are changed, the other list values must be reprogrammed. Program only one user input for this function.

*Note: When downloading the Crimson® program containing List A/B, make sure that both the software and meter have the same list active. The active list in the Crimson® program is the one being displayed in Input Setup and/or Setpoint Alarms category.*

### DISPLAY SELECT (Level Active)

When active (maintained action), the meter continuously scrolls through all displays that are not “locked-out” in the Display mode. (See Module 3 for Display Lock-out details.) A sub-menu provides Scrolling Speed selection.

### DISPLAY SELECT (Edge Triggered)

When activated (momentary action), the meter advances to the next display that is not “locked-out” in the Display mode. (See Module 3 for Display Lock-out details.)

### DISPLAY RESET (Level Active)

When active (maintained action), the meter continually resets only the currently shown display. If the RTC Time or Date is displayed, this function applies to the **Outputs** assigned to the RTC, and does not Reset the actual RTC Time or Date display. (See Module 6 for details on Output Assignment and Output Reset with Display Reset.)

### DISPLAY RESET (Edge Triggered)

When activated (momentary action), the meter resets **only** the currently shown display. This is the factory setting for the Reset (**RST**) key. If the RTC Time or Date is displayed, this function applies to the **Outputs** assigned to the RTC, and does not Reset the actual RTC Time or Date display. (See Module 6 for details on Output Assignment and Output Reset with Display Reset.)

### MAINTAINED RESET (Level Active)

When active (maintained action), the meter continually resets the displays entered as **YES** in the sublist. The sublist appears when the **PAR** key is pressed. This function does not apply to the RTC Time or Date displays.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO

### MOMENTARY RESET (Edge Triggered)

When activated (momentary action), the meter resets the displays entered as **YES** in the sublist. Function does not apply to RTC Time or Date displays.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO

### DISPLAY HOLD (Level Active)

When active (maintained action), the meter “freezes” the display values entered as **YES** in the sublist, while normal meter operation continues internally. Program only one user input for this function.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO
rEt-d	RTC Date	NO
rEt-t	RTC Time	NO

### DISPLAY HOLD and RESET (Level Active Reset)

When activated, the meter “freezes” the display values entered as **YES** in the sublist, before performing an internal **Maintained Reset** on the selected displays. This function does not apply to the RTC Time or Date displays.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO

### DISPLAY HOLD and RESET (Edge Triggered Reset)

When activated, the meter “freezes” the display values entered as **YES** in the sublist, before performing an internal **Momentary Reset** on the selected displays. This function does not apply to the RTC Time or Date displays. Program only one user input for this function.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO

### INHIBIT (Level Active)

When active (maintained action), timing and counting ceases for the displays entered as **YES** in the sublist. The inhibit function is not a **t StEt** or **t StEP** event in Setpoint programming. This function does not apply to RTC Time or Date displays. Program only one user input for this function.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO

### CHANGE DIRECTION (Level Active)

When active (maintained action), the timing or counting direction for the display entered as **YES** in the sublist, will be reversed from the direction set by the Timing Direction (**t-d ir**) and/or Counting Direction (**C-d ir**) parameters in Modules 1 and 4. (Program only one User Input per display for this function.) This function does not apply to RTC Time or Date displays.

DISPLAY	DESCRIPTION	FACTORY
t-dSP	Timer	NO
C-dSP	Cycle Counter	NO

### CHANGE DISPLAY INTENSITY LEVEL

When activated (momentary action), the display intensity changes to the next intensity level (of 4). The four levels correspond to Display Intensity Level (*d-LEU*) settings of 0, 3, 8 & 15. The intensity level, when changed via the User Input/Function Key, is not retained at power-down, unless Quick Programming or Full Programming mode is entered and exited. The unit will power-up at the last saved intensity level.

*Note: The next two parameters only appear when an RS232 or RS485 Serial Communications Card is installed in the meter.*

### PRINT REQUEST

When activated, the meter issues a block print through the serial port. The specific values transmitted during a print request are selected with the Print Options parameter in Module 7. For User Inputs (level active), the meter transmits blocks repeatedly as long as the input is active. For Function Keys, (edge triggered) only one block is transmitted per key press.

### PRINT REQUEST and RESET (Edge Triggered)

When activated (momentary action), the meter first issues a block print through the serial port, and then performs a **Momentary Reset** on the displays entered as *YES* in the sublist. The specific values transmitted in the print block are selected with the Print Options parameter in Module 7. Only one transmit and reset occurs per User Input activation or Function Key press.

DISPLAY	DESCRIPTION	FACTORY
<i>t-dSP</i>	Timer	<i>NO</i>
<i>C-dSP</i>	Cycle Counter	<i>NO</i>

*Note: The remaining parameters only appear when a Setpoint Card is installed in the meter.*

### OUTPUT HOLD (Level Active)

When active (maintained action), the meter "holds" (maintains) the present output state for all Setpoints entered as *YES* in the sublist. Does not apply to Output Set and Reset User Inputs. Program only one user input for this function.

DISPLAY	DESCRIPTION	FACTORY
<i>SP-1</i>	Setpoint 1	<i>NO</i>
<i>SP-2</i>	Setpoint 2	<i>NO</i>
<i>SP-3</i>	Setpoint 3	<i>NO</i>
<i>SP-4</i>	Setpoint 4	<i>NO</i>

### OUTPUT SET (Level Active)

When activated (maintained action), the meter continually activates the output for all Setpoints entered as *YES* in the sublist.

DISPLAY	DESCRIPTION	FACTORY
<i>SP-1</i>	Setpoint 1	<i>NO</i>
<i>SP-2</i>	Setpoint 2	<i>NO</i>
<i>SP-3</i>	Setpoint 3	<i>NO</i>
<i>SP-4</i>	Setpoint 4	<i>NO</i>

### OUTPUT SET (Edge Triggered)

When activated (momentary action), the meter activates the output for all Setpoints entered as *YES* in the sublist.

DISPLAY	DESCRIPTION	FACTORY
<i>SP-1</i>	Setpoint 1	<i>NO</i>
<i>SP-2</i>	Setpoint 2	<i>NO</i>
<i>SP-3</i>	Setpoint 3	<i>NO</i>
<i>SP-4</i>	Setpoint 4	<i>NO</i>

### OUTPUT RESET (Level Active)

When activated (maintained action), the meter continually deactivates the output for all Setpoints entered as *YES* in the sublist.

DISPLAY	DESCRIPTION	FACTORY
<i>SP-1</i>	Setpoint 1	<i>NO</i>
<i>SP-2</i>	Setpoint 2	<i>NO</i>
<i>SP-3</i>	Setpoint 3	<i>NO</i>
<i>SP-4</i>	Setpoint 4	<i>NO</i>

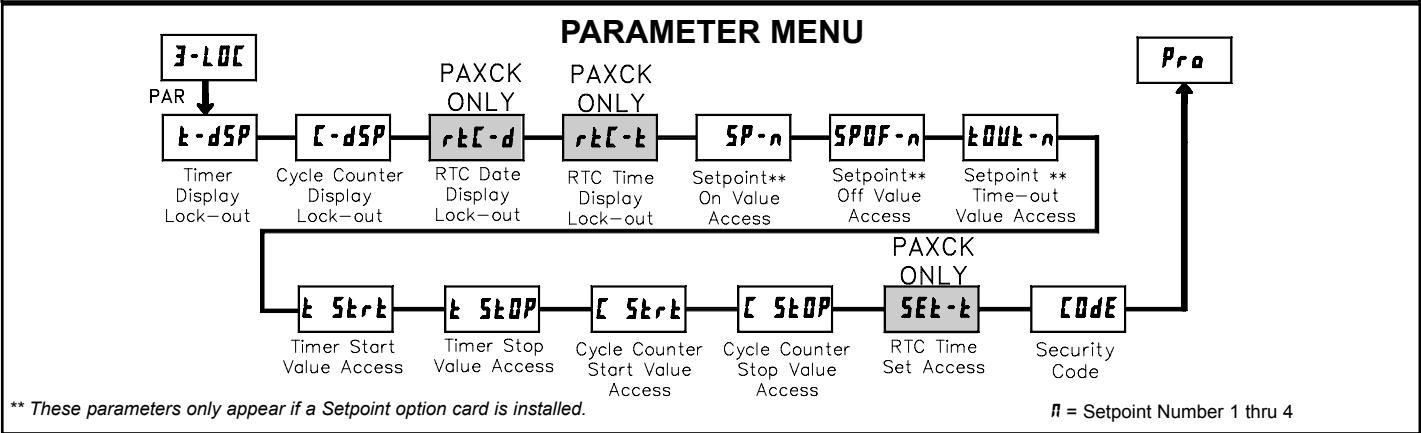

### OUTPUT RESET (Edge Triggered)

When activated (momentary action), the meter deactivates the output for all Setpoints entered as *YES* in the sublist.

DISPLAY	DESCRIPTION	FACTORY
<i>SP-1</i>	Setpoint 1	<i>NO</i>
<i>SP-2</i>	Setpoint 2	<i>NO</i>
<i>SP-3</i>	Setpoint 3	<i>NO</i>
<i>SP-4</i>	Setpoint 4	<i>NO</i>

# 6.3 MODULE 3 - DISPLAY AND PROGRAM LOCK-OUT PARAMETERS (3-LOC)

Module 3 is the programming module for setting the Display Lock-out Parameters and the “Quick Programming Mode” Value Access Parameters. In the Quick Programming mode, after the PROGRAM LOCKOUT PARAMETERS and before the Security Code (CODE), a Display Intensity Level (d-LEU) parameter is available when the security code is non-zero. It allows the display intensity to be set to 1 of 16 levels (0-15).

### TIMER & CYCLE COUNTER START/STOP VALUE ACCESS

Timer & Counter Start/Stop Values can be programmed for rEd, ENt, or LOC.

### DISPLAY LOCK-OUT PARAMETERS

When operating in the Display Mode, the meter displays can be viewed consecutively by repeatedly pressing the DSP key. The annunciators to the left of the display indicate which display is currently shown. Timer (TMR), Cycle Counter (CNT), or Date (DAT). The Time Display for the Real-Time Clock is shown with no annunciator. Any of these displays can be locked from view with the DISPLAY LOCK-OUT parameters. Using these parameters, each display can be programmed for “Read” or “Lock” defined as follows:

SELECTION	DISPLAY	DESCRIPTION
Read	rEd	Visible in Display Mode
Lock	LOC	Not visible in Display Mode

### TIMER DISPLAY LOCK-OUT CYCLE COUNTER DISPLAY LOCK-OUT

#### PAXCK: REAL-TIME CLOCK DATE/TIME DISPLAY LOCK-OUT

These displays can be programmed for rEd or LOC. When a particular meter function is not used, the Display Lock-out should be set to LOC for that display.

### PROGRAM LOCK-OUT PARAMETERS (VALUE ACCESS)

“Full” Programming Mode permits all parameters to be viewed and modified. This programming mode can be locked with a Security Code and/or a User Input. When locked, and the PAR key is pressed, the meter enters a Quick Programming Mode. In this mode, access to Setpoint Values, Timer & Cycle Counter Start/Stop Values, and Time Setting for the Real-Time Clock can be programmed for “Read”, “Enter”, or “Lock” defined as follows:

SELECTION	DISPLAY	DESCRIPTION
Read	rEd	Visible, not changeable, in Quick Programming Mode
Enter	ENt	Visible and changeable in Quick Programming Mode
Lock	LOC	Not visible in Quick Programming Mode

### SETPOINT 1 to 4 VALUE ACCESS \*\* (n = 1 thru 4)

Setpoint Values for SP1 thru SP4 can be programmed for rEd, ENt, or LOC. SPdF-n and tOUT-n are only displayed when they apply to the Setpoint Action (rEtC-n) programmed for that particular Setpoint. (See Module 6 for details.)

### PAXCK: REAL-TIME CLOCK TIME SETTING ACCESS

This parameter can be programmed for ENt or LOC. Selecting ENt allows setting or changing the RTC Time in Quick Programming mode.

### SECURITY CODE

Entry of a non-zero value will cause the CODE prompt to appear when trying to access the “Full” Programming Mode. Access will only be allowed after entering a matching security code or the universal unlock code of 222. With this lock-out, a User Input would not have to be used for the Program Lock-out function. Note however, the Security Code lock-out is overridden when an User Input, configured for Program Lock-out (PLdC), is not active (See Chart.)

### PROGRAMMING MODE ACCESS

SECURITY CODE	USER INPUT SELECTION	USER INPUT STATE	MODE WHEN “PAR” KEY IS PRESSED	FULL PROGRAMMING MODE ACCESS
0	not PLdC	————	Full Programming	Immediate access
not 0	not PLdC	————	Quick Programming	After Quick Programming with correct Security code entry
not 0	PLdC	Active	Quick Programming	After Quick Programming with correct Security code entry
not 0	PLdC	Not Active	Full Programming	Immediate access
0	PLdC	Active	Quick Programming	No access
0	PLdC	Not Active	Full Programming	Immediate access

Throughout this bulletin, Programming Mode (without Quick in front) always refers to “Full” Programming.

## 6.4 MODULE 4 - CYCLE COUNTER PARAMETERS (4-CNT)

Module 4 is the programming module for the Cycle Counter Parameters. In the Display Mode, the CNT annunciator indicates the Cycle Counter display is currently being shown. An **EXCHANGE PARAMETER LISTS** feature, which includes the Cycle Counter Start and Stop Values, is explained in Module 2.

### CYCLE COUNTER COUNT SOURCE

<b>C Src</b>	<i>none</i>	<i>USER-1</i>	<i>t-rSt</i>
<i>none</i>	01-ON 01-OFF 03-ON 03-OFF	02-ON 02-OFF 04-ON 04-OFF	

This parameter selects the source from which a count is added to or subtracted from the Cycle Counter. Select *none* if the Cycle Counter is not being used, which will exit the module and bypass the remaining parameters.

When *USER-1* is selected, a count is generated each time the User 1 Input is activated. When selected as the count source, User Input 1 can still be programmed to perform a User Function described in Module 2, if desired. In this case, the Cycle Counter would be counting the number of times the particular User Function occurred.

The Timer Reset (*t-rSt*) selection generates a count when either a manual or automatic reset occurs. (See Module 6 for programming Automatic Resets.)

The Output ON/OFF selections generate a count when the chosen output either activates or deactivates. These selections only appear when a Setpoint Card is installed. O3 and O4 selections only appear for Quad Setpoint cards.

### CYCLE COUNTER COUNTING DIRECTION

<b>C dir</b>	<i>UP</i>	<i>DN</i>
<i>UP</i>		

Counting direction can be reversed through a User Input. (See Module 2.)

### CYCLE COUNTER START VALUE

<b>C Start</b>	000000 to 999999
000000	

The Cycle Counter returns to this value whenever a Cycle Counter Reset occurs. Non-zero values are normally used for “down counting” applications, but they can also provide an “offset” value when counting up.

### CYCLE COUNTER STOP VALUE

<b>C Stop</b>	<i>NO</i> <i>YES</i>
<i>NO</i>	

The Cycle Counter stops counting when this value is reached, regardless of the operation of the Timer. Selecting *YES* will display the *VALUE* sub-menu where the Stop Value can be set or changed. The Stop condition is cleared when a Cycle Counter Reset occurs. Select *NO* if a Stop Value is not used.

<b>VALUE</b>	000000 to 999999
000000	

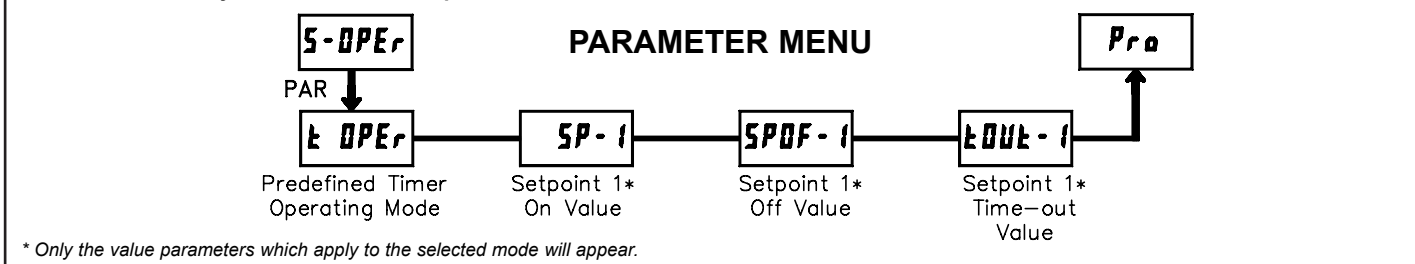

### CYCLE COUNTER RESET AT POWER-UP

<b>C P-UP</b>	<i>NO</i> <i>YES</i>
<i>NO</i>	

The Cycle Counter can be programmed to Reset at each meter power-up.

## 6.5 MODULE 5 - TIMER OPERATING MODES (5-OPER)

This module can only be accessed if a Setpoint Card is installed.

\* Only the value parameters which apply to the selected mode will appear.

### PREDEFINED TIMER OPERATING MODE

<b>t OPER</b>	<i>ON-dLY</i> - On-Delay Timing
<i>NO</i>	<i>OF-dLY</i> - Off-Delay Timing
	<i>rEPERt</i> - Repeat Cycle Timing
	<i>dLY INt</i> - On-Delay/Interval Timing
	<i>INt-L</i> - Interval Timing (Level Triggered)
	<i>INt-E</i> - Interval Timing (Edge Triggered)

This parameter is used to select Predefined Operating Modes for the Timer. These modes cover a variety of timing applications frequently encountered in industrial control processes. When using a Predefined mode, the operator needs only to set the actual Setpoint On/Off or Time-out values for the particular application. However, each programming parameter will still be accessible, in order to make modifications to the predefined settings if desired.

The Predefined modes control the activation and deactivation of Output 1, in relation to Start and Reset signals applied to the Timer inputs. (See timing diagrams which follow.) When a selection other than *NO* is chosen, the parameters for Setpoint 1 (*SP-1*) in Module 6 are automatically configured to implement the selected operating mode. For some modes, parameters in Modules 1 and 2 are also automatically configured to properly implement the predefined mode. Refer to the chart shown with the timing diagrams for the specific parameters loaded for each predefined mode. Also, note the specific external wiring or plug jumper settings required for some modes.

The Setpoint On/Off or Time-out values for the specific application should be entered directly in Module 5 after selecting the operating mode. Only the value parameters which apply to the selected mode are displayed. These values can also be entered through Module 6, Setpoint (Alarm) Parameters, if desired.

Select *NO* if not using a Predefined Operating Mode, in which case Setpoint parameters must all be individually programmed for the particular application.

# Timing Diagrams for Predefined Timer Operating Modes

NOTE: Input A is shown as a Sourcing input (active high). If a Sinking input (active low) is used, the logic levels for Input A would be inverted.

The input signal must be wired to both the Input A and User Input 1 terminals. The Timer Input plug jumper and the User Input plug jumper must both be set to the same position (either both SNK or both SRC).

The input signal must be wired to both the Input A and User Input 1 terminals. The Timer Input plug jumper and the User Input plug jumper must be set to opposite positions (one SNK, one SRC) and the Input signal must be a current sinking type (i.e. pulls input to common).

## Parameter Settings for Predefined Timer Operating Modes

### MODULE 1 - Timer Input Parameters (1-INP)

DISPLAY	PARAMETER	ON-dLY	OF-dLY	rEPERt	dLY INt	INt-L	INt-E
INP OP	Timer Input Operation	EdrS-2	EdrS-2	EdrS-2	EdrS-2	LEUrSt	EdrS-2

### MODULE 2 - User Input Parameters (2-FRE)

DISPLAY	PARAMETER	ON-dLY	OF-dLY	rEPERt	dLY INt	INt-L	INt-E
USER-1	User Input 1	N/A	rSt-L	N/A	N/A	OrSt-E	N/A
rSt	Reset Key	NO	NO	NO	NO	(SP1-YES) NO	NO

### MODULE 6 - Setpoint Parameters (6-SPt)

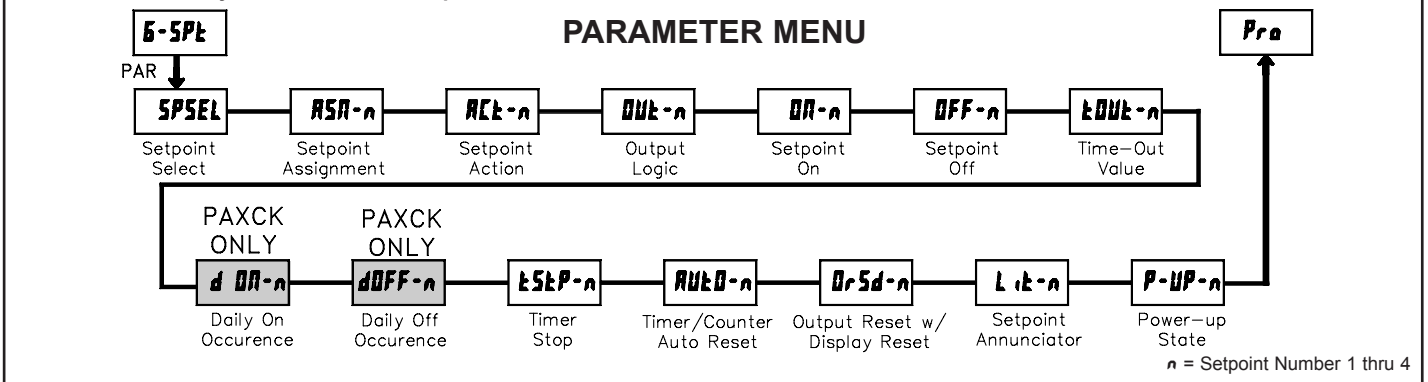

DISPLAY	PARAMETER	ON-dLY	OF-dLY	rEPERt	dLY INt	INt-L	INt-E
SPSEL	Setpoint Select	SP-1	SP-1	SP-1	SP-1	SP-1	SP-1
ASN-1	Setpoint Assignment	t-dSP	t-dSP	t-dSP	t-dSP	t-dSP	t-dSP
ACT-1	Setpoint Action	LArEtX	ON-OFF	ON-OFF	t-OUt	ON-OFF	t-OUt
OUt-1	Output Logic	NOr	NOr	NOr	NOr	NOr	NOr
ON-1	Setpoint On	UrLUe	t-StEt	UrLUe	UrLUe	t-StEt	t-StEt
SP-1	Setpoint On Value	T*	N/A	T1*	T1*	N/A	N/A
OFF-1	Setpoint Off	N/A	UrLUe	UrLUe	N/A	UrLUe	N/A
SPOF-1	Setpoint Off Value	N/A	T*	T2*	N/A	T*	N/A
tOUt-1	Time-out Value	N/A	N/A	N/A	T2*	N/A	T*
tStP-1	Timer Stop	NO	O-OFF	NO	O-OFF	O-OFF	O-OFF
RUrO-1	Timer/Counter Auto Reset	NO	NO	O-OFF	NO	NO	NO
OrSd-1	Output Reset w/display Reset	NO	NO	NO	NO	NO	NO
LIt-1	Setpoint Annunciator	NOr	NOr	NOr	NOr	NOr	NOr
P-UP-1	Power-up State	OFF	OFF	OFF	OFF	OFF	OFF

\* Refer to timing diagrams. These parameters are the actual Setpoint On/Off or Time-Out values set by the user for the specific application.

# 6.6 MODULE 6 - SETPOINT (ALARM) PARAMETERS (6-5P6)

This module can only be accessed if a Setpoint Card is installed.

Module 6 is the programming module for the Setpoint (Alarm) Output Parameters. This programming module can only be accessed if a Setpoint card is installed. Depending on the card installed, there will be two or four Setpoint outputs available. The Setpoint Assignment and Setpoint Action parameters determine the applicable Setpoint features, and dictate which subsequent parameters will appear for the Setpoint being programmed.

This section of the bulletin replaces the bulletin shipped with the Dual and Quad Setpoint plug-in cards. Discard the separate bulletin when using Setpoint plug-in cards with the PAXCK and PAXTM.

## SETPOINT SELECT

Select the Setpoint (alarm) output to be programmed. This provides access to the parameters for that particular Setpoint. The “n” in the following parameter displays, reflects the chosen Setpoint number (1 thru 4). After the chosen Setpoint is programmed, the display returns to SPSEL none. Select the next Setpoint to be programmed and continue this sequence for each Setpoint. Select none to exit the module. SP-3 and SP-4 apply to Quad Setpoint cards only.

## SETPOINT ASSIGNMENT

Select the meter display to which the Setpoint is assigned: Timer (t-dSP), Cycle Counter (l-dSP), Real-Time Clock Date display (rtk-d) or Real-Time Clock Time display (rtk-k). (The rtk-d and rtk-k selections only appear if a Real-Time Clock option card is installed.)

By selecting none, the Setpoint is not assigned to a specific display. However, the output can still be activated (set) and deactivated (reset) by various “events”. Such events include the Timer starting or stopping, or another Setpoint output turning On or Off. The output can also be set and reset through a User Input function or through serial communications.

## SETPOINT ACTION

This parameter determines the mode for output *deactivation* as shown below. Output *activation* is controlled by the SETPOINT ON parameter setting.

DISPLAY	DESCRIPTION	OUTPUT DEACTIVATES
Latched	Latched Output Mode	At Reset (Manual or Automatic)
t-OUT	Timed Output Mode	After “Time-Out Value” Elapses
ON-OFF	On-Off Output Mode	Based on “Setpoint Off” Setting

The t-OUT and ON-OFF selections are not available when Setpoint is assigned to rtk-d.

## OUTPUT LOGIC

Normal Output Logic (none) turns the output “on” when activated and “off” when deactivated. Reverse Output Logic (rEU) turns the output “off” when activated and “on” when deactivated.

## SETPOINT ON

This parameter determines when the Setpoint output will activate. Output activation can occur at a specific Setpoint Value (URLUE) or can be triggered by various “events”, as shown in the parameter list. Such events include the Timer starting (t-5trk) or stopping (t-5tOP), or by the action (event) that causes another Setpoint output to turn On or Off. When programmed for an event, the Setpoint must not be used as the Setpoint On event for another Setpoint.

Selecting URLUE displays a sub-menu where the Setpoint value is entered. The Setpoint value is based on the meter display to which the Setpoint is assigned (RSN-n). When assigned to the Timer or Cycle Counter, the Setpoint value is entered in the same format as the assigned display. When assigned to the Real-Time Clock Date Display (rtk-d), the date value is entered in month.day.year format (mddyy). When assigned to the Real-Time Clock Time Display (rtk-k), the Setpoint value is always entered in HH-MM format (Hours-Minutes with AM/PM selection). In Setpoint One-shot mode (See Daily On Occurrence), the One-shot Setpoint is enabled (armed) by scrolling the AM/PM digit until the 2nd digit decimal point is lit.

## SETPOINT OFF

The Setpoint Off parameter only appears when the Setpoint Action (ACT-n) is programmed for On-Off Output mode (ON-OFF). In this mode, this parameter determines when the Setpoint output will deactivate. Output deactivation can occur at a specific Setpoint Off Value (URLUE) or can be triggered by various “events”, as shown in the parameter list. Such events include the Timer starting (t-5trk) or stopping (t-5tOP), or by the action (event) that causes another Setpoint output to turn On or Off. When programmed for an event, the Setpoint must not be used as the Setpoint Off event for another Setpoint.

Selecting URLUE will display a sub-menu where the Setpoint Off value is entered. The Setpoint Off value is based on the meter display to which the Setpoint is assigned (RSN-n). When assigned to the Timer or Cycle Counter, the value is entered in the same format as the assigned display. When assigned to the Real-Time Clock Date Display (rtk-d), the date value is entered in month.day.year format (mddyy). When assigned to the Real-Time Clock Time Display (rtk-k), the value is always entered in HH-MM format (Hours-Minutes with AM/PM selection).

## TIME-OUT VALUE

**tOUT-n** ↵  
↵ **00.0 100**

000002 to 995999

The Time-Out Value only appears when the Setpoint Action (**ACT-n**) is programmed for Timed Output mode (**t-OUT**). In this mode, the Time-Out Value is the Setpoint Output time duration, from activation to deactivation. This value is always entered in minutes, seconds, and hundredths of seconds format. The maximum Time-Out Value is 99 minutes 59.99 seconds.

## PAXCK: DAILY ON OCCURRENCE

**d ON-n** ↵  
↵ **NO**

**NO YES**

This parameter only appears when the Setpoint is assigned (**ASP-n**) to the Real-Time Clock Time display (**rct-t**). This parameter determines the days of the week when the Setpoint output will activate.

Selecting **YES** displays a sublist for choosing the days of the week. On all days entered as **YES** in the sublist, the output will activate. On all days entered as **NO**, the output will not activate. The output activation is repetitive, and will occur every week on the chosen day(s).

DISPLAY	DESCRIPTION	FACTORY
<b>Sun</b>	Sunday	<b>NO</b>
<b>Mon</b>	Monday	<b>YES</b>
<b>Tue</b>	Tuesday	<b>YES</b>
<b>Wed</b>	Wednesday	<b>YES</b>
<b>Thu</b>	Thursday	<b>YES</b>
<b>Fri</b>	Friday	<b>YES</b>
<b>Sat</b>	Saturday	<b>NO</b>

### Setpoint One-Shot Mode

If all days are set to **NO**, the Setpoint will operate in “One-shot” mode. When a One-shot setpoint is enabled (armed), the setpoint output will activate at the set time and disable itself from activating again. To enable or re-enable a one-shot alarm, go to the Setpoint value entry display and press the Up or Dn key repeatedly while the AM/PM digit is selected (flashing). When the 2nd digit decimal point is lit, the Setpoint is enabled. The Setpoint enable status is saved at power-down. The enable state of the Setpoint is not affected or changed when the Parameter List is exchanged.

The setpoint will turn off (de-activate) as programmed per the Setpoint Action selected. If **ON-OFF** mode is selected, program all the Daily Off days to **YES** to have the Setpoint turn off at the next Daily Off Occurrence. The One-shot status can also be viewed or set from the Setpoint Off value entry display.

## PAXCK: DAILY OFF OCCURRENCE

**dOFF-n** ↵  
↵ **NO**

**NO YES**

This parameter only appears when the Setpoint is assigned (**ASP-n**) to the Real-Time Clock Time display (**rct-t**) and when the Setpoint Action (**ACT-n**) is programmed for On-Off Output mode (**ON-OFF**). In this mode, this parameter determines the days of the week when the Setpoint output will deactivate.

Selecting **YES** displays a sublist for choosing the days of the week. On all days entered as **YES** in the sublist, the output will deactivate. On all days entered as **NO**, the output will not deactivate. The output deactivation is repetitive, and will occur every week on the chosen day(s).

DISPLAY	DESCRIPTION	FACTORY
<b>Sun</b>	Sunday	<b>NO</b>
<b>Mon</b>	Monday	<b>YES</b>
<b>Tue</b>	Tuesday	<b>YES</b>
<b>Wed</b>	Wednesday	<b>YES</b>
<b>Thu</b>	Thursday	<b>YES</b>
<b>Fri</b>	Friday	<b>YES</b>
<b>Sat</b>	Saturday	<b>NO</b>

## TIMER STOP

**tSTP-n** ↵  
↵ **NO**

**NO ON-OFF**

Timer stops when the Setpoint output activates (**ON-OFF**) or deactivates (**OFF-OFF**). Select **NO** if the output should not affect the Timer Run/Stop status.

Stopping the Timer as a result of this parameter does not constitute a **t-STOP** condition (event) for the Setpoint On or Setpoint Off parameters.

## TIMER/COUNTER AUTO RESET

**RUtD-n** ↵  
↵ **NO**

**NO ON-OFF**

When the Setpoint output activates (**ON-OFF**) or deactivates (**OFF-OFF**), the meter automatically resets the Setpoint Assignment display (**ASP-n**). Select **NO** if the Setpoint output should not cause the assigned display to reset. Does not apply to manual activations or deactivations by user input, function key, or serial communications.

## OUTPUT RESET WITH DISPLAY RESET

**OrSD-n** ↵  
↵ **NO**

**NO YES**

When **YES** is selected, the Setpoint output will reset when the Setpoint Assignment display (**ASP-n**) resets. Select **NO** if the Setpoint output should not reset when the assigned display resets.

## SETPOINT ANNUNCIATOR

**Lit-n** ↵  
↵ **NOr**

**NOr rEU FLASH OFF**

This parameter controls the illumination of the LED annunciator for the corresponding Setpoint output (**SPn**) as follows:

- Normal (**NOr**) – Annunciator displayed when output is “on” (activated)
- Reverse (**rEU**) – Annunciator displayed when output is “off” (deactivated)
- Flash (**FLASH**) – Annunciator and display flashes when output is “on” (activated)
- Off (**OFF**) – Annunciator disabled

## SETPOINT POWER-UP STATE

**P-UP-n** ↵  
↵ **OFF**

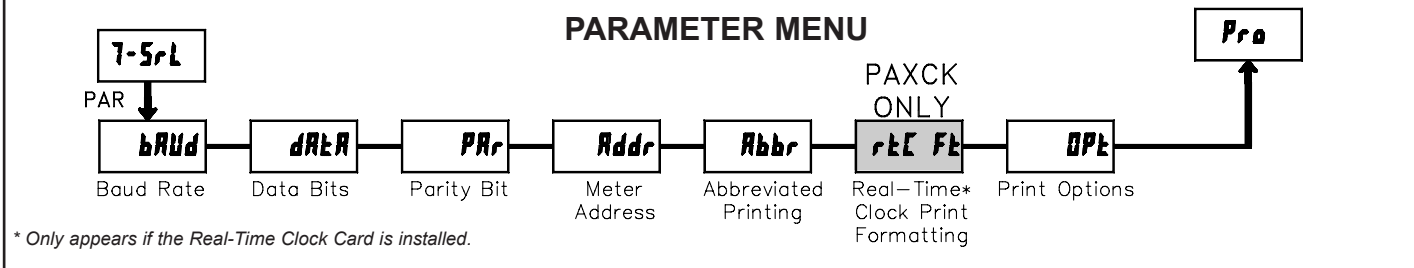

**OFF ON SAVE**

Determines the on/off state of the Setpoint output at power-up. Regardless of output logic setting (normal or reverse).

- OFF** – Deactivates the Setpoint output at power-up
- ON** – Activates the Setpoint output at power-up
- SAVE** – Restores the output to the state it was in prior to power-down

# 6.7 MODULE 7 - SERIAL COMMUNICATIONS PARAMETERS (7-5rL)

This module can only be accessed if a Serial Communications Card is installed.

Module 7 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the PAX with those of the host computer or other serial device, such as a terminal or printer. This programming module can only be accessed if an RS232 or RS485 Serial Communications card is installed.

This section also includes an explanation of the commands and formatting required for communicating with the PAX. In order to establish serial communications, the user must have host software that can send and receive ASCII characters. Red Lion's Crimson® software can be used for configuring the PAX. (See ordering information.) For serial hardware and wiring details, refer to section 4.5 Serial Communication Wiring.

*This section of the PAXTM/CK bulletin replaces the bulletin shipped with the RS232 and RS485 serial communications plug-in cards. Discard the separate bulletin when using those serial plug-in cards with the PAXTM/CK. Also, this section does NOT apply to the DeviceNet, Modbus, or Profibus-DP communication cards. For details on the operation of the Fieldbus cards, refer to the bulletin shipped with each card.*

## BAUD RATE

bAUd ↕

300	600	1200	2400
4800	9600	19200	

↕ 9600

Set the baud rate to match the other serial communications equipment on the serial link. Normally, the baud rate is set to the highest value at which all the serial equipment are capable of transmitting and receiving data.

## DATA BITS

dAtE ↕

↕ 7

7 8

Select either 7- or 8-bit data word lengths. Set the word length to match the other serial communications equipment on the serial link.

## PARITY BIT

PAr ↕

↕ Odd

NO Odd EVEN

This parameter only appears when the Data Bits parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial communications equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to NO, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

AdDr ↕

↕ 00

00 to 99

Enter the serial meter (node) address. With a single meter, an address is not needed and a value of zero can be used. With multiple meters (RS485 applications), a unique 2 digit address number must be assigned to each meter.

Addresses 98 and 99 are reserved to configure a unit as a serial real-time clock master. See Serial Real-time Clock Master Addressing.

## ABBREVIATED PRINTING

Abbr ↕

↕ NO

NO YES

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value (T) command or a Block Print Request (P) command. Select NO for a Full print transmission, which consists of the meter address, mnemonics, and parameter data. Select YES for abbreviated print transmissions, consisting of the parameter data only. This setting affects all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 00, the address will not be sent during a Full transmission.)

## PAXCK: REAL-TIME CLOCK PRINT FORMATTING

rTc Fmt ↕

↕ YES

NO YES

This parameter determines the formatting of the Real-Time Clock (RTC) values transmitted from the meter in response to a Transmit Value (T) command or a Block Print Request (P) command. This parameter appears only when a Real-Time Clock plug-in option card is installed.

When YES is selected, RTC values are formatted as per the RTC Time and Date Display Formats programmed in Module 8. The Day of Week value is sent as a character string.

When NO is selected, the meter sends the RTC values as numeric data only. This selection allows the RTC values to be recognized by the Red Lion HMI products. RTC Time/Date units are separated by a ".". The Day is sent as a single number as shown below.

TIME - Hours (24-Hr. format), Minutes, Seconds (HHMMSS)  
 DATE - Month, Day, Year (mmddy)  
 DAY - 1 = Sunday thru 7 = Saturday

## PRINT OPTIONS

OPt ↕

↕ NO

This parameter selects the meter values transmitted in response to a Print Request. A Print Request is sometimes referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting YES displays a sublist for choosing the meter parameters to appear in the block print. All parameters entered as YES in the sublist will be transmitted during a block print. Parameters entered as NO will not be sent.

DISPLAY	PARAMETER	FACTORY	MNEMONIC
t-dSP	Timer	YES	TMR
c-dSP	Cycle Counter	NO	CNT
rTc-d	RTC Date*	NO	DAT
rTc-t	RTC Time*	NO	TIM
SPt	Setpoint Values*	NO	SP1 SP2 SP3 SP4
SPtOF	Setpoint Off/Time-Out Values*	NO	SO1 SO2 SO3 SO4
StP	Timer/Cnt Start & Stop Values	NO	TST TSP CST CSP

\* These values are plug-in card dependent.

## SERIAL RTC MASTER ADDRESSING

A meter, having software code version 2.3 or greater, with a Real Time Clock Card and an RS485 Serial Communication Card installed, can act as a Serial RTC Master, when programmed with meter address 98 or 99. With this feature, whenever the Master meter's time, date or day is changed, through quick or main programming, it will transmit and make the same change to the other PAXCK's on the RS485 bus. Only one meter should be configured as Master. This Master, with address 98 or 99, should also be programmed as the "Host" in module **B-rtc** under Clock Synchronization. With it programmed as Host, the other PAXCK Slaves will update hours, minutes and seconds to the Host once an hour and the Real-Time Clock Wiring (terminals 16-18) will not be necessary.

Meter addresses 98 and 99 are distinguished as follows: With address 98, the meter will transmit the change to all meters on the RS485 bus addressed as "0". This is useful when using both newer or older software code version meters, or when another master (computer, operator interface) is not being used.

With address 99, the meter will transmit the change to all, software code version 2.3 or greater, meters on the RS485 bus using a global broadcast address suffix. This is useful when it is necessary to have unique or other than 0 serial meter addresses or when having a computer or operator interface connected.

## SENDING SERIAL COMMANDS AND DATA

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by the command terminator character \* or \$.

### Command Chart

COMMAND	DESCRIPTION	NOTES
N	Node (Meter) Address Specifier	Address a specific meter. Must be followed by node address. Not required when address = 00.
T	Transmit Value (read)	Read a register from the meter. Must be followed by register ID character.
V	Value change (write)	Write to register of the meter. Must be followed by register ID character and numeric data.
R	Reset	Reset a register or output. Must be followed by register ID character
P	Block Print Request (read)	Initiates a block print output. Registers are defined in programming.

### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to invalid commands. The following procedure details construction of a command string:

- The first characters consist of the Node Address Specifier (N) followed by a 1 or 2 character address number. The address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. The address suffix, "?" is the global broadcast address specifier. A command string that is sent with N? prefix will be accepted by all PAXCKs on the RS485 network (software code version 2.3 or greater). This is useful for setting all meters to the current time, date or day that may have unique meter addresses on a bus. It is important not to send (P)rint or (T)ransmit commands using N? prefix, as it will result in multiple meters responding at the same time. This is the only command that may be used in conjunction with other commands.
- After the optional address specifier, the next character is the command character.
- The next character is the Register ID. This identifies the register that the command affects. The P command does not require a Register ID character. It prints according to the selections made in print the options. If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See Timing Diagram figure for differences between terminating characters.

*Note: On a change value command (V), if the command string is terminated with the \* character, all values are stored in E<sup>2</sup>PROM memory. Values are not stored if the \$ terminator is used.*

## Register Identification Chart

ID	VALUE DESCRIPTION	REGISTER NAME <sup>1</sup>	COMMAND <sup>2</sup>	TRANSMIT DETAILS <sup>3</sup>
A	Timer Value	TMR	T, V, R	6 digit
B	Cycle Counter Value	CNT	T, V, R	6 digit
C	RTC Time Value	TIM	T, V	6 digit
D	RTC Date Value	DAT	T, V	6 digit
E	Setpoint 1	SP1	T, V, R	6 digit
F	Setpoint 2	SP2	T, V, R	6 digit
G	Setpoint 3	SP3	T, V, R	6 digit
H	Setpoint 4	SP4	T, V, R	6 digit
I	Setpoint 1 Off Value	SO1	T, V	6 digit
J	Setpoint 2 Off Value	SO2	T, V	5 digit
K	Setpoint 3 Off Value	SO3	T, V	6 digit
L	Setpoint 4 Off Value	SO4	T, V	6 digit
M	Timer Start Value	TST	T, V	6 digit
O	Cycle Counter Start Value	CST	T, V	6 digit
Q	Timer Stop Value	TSP	T, V	6 digit
S	Cycle Counter Stop Value	CSP	T, V	6 digit
U	Auto/Man Register	MMR	T, V	0 - auto, 1 - manual
W	Day of Week Value	DAY	T, V	1 = Sun...7 = Sat
X	Setpoint Register	SOR	T, V	0 - not active, 1 - active

- Register Names are also used as Register Mnemonics during full transmission.
- The registers associated with the P command are set up in Print Options (Module 7).
- Unless otherwise specified, the Transmit Details apply to both T and V Commands.

### Command String Examples:

- Address = 17, Write 350 to Setpoint 1  
String: N17VE350\$
- Address = 5, Cycle Counter value, response time of 50 to 100 msec. min.  
String: N05TB\*
- Address = 0, Reset Timer value  
String: RA\*

### Transmitting Data To the Meter

Numeric data sent to the meter must be limited to Transmit Details listed in the Register Identification Chart. Leading zeros are ignored. The meter ignores any decimal point and conforms the number to the scaled resolution. (ie. The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

#### For RTC Time [C] and Date [D] Value:

Time - 24 Hours, Minutes, Seconds (HHMMSS)

Ex: 083000 = 8:30 AM, 144500 = 2:45 PM

Date - Month, Day, Year (mmdyy)

Ex: 123101 = December 31, 2001

Day - 1 = Sunday through 7 = Saturday

EX: 3 = Tuesday

#### Notes:

- Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.
- The date and day must be set separately.

### Transmitting Data From the Meter

Data is transmitted from the meter in response to either a transmit command (T), a print block command (P) or User Function print request. The response from the meter is either a full field transmission or an abbreviated transmission. The meter response is established in Module 7.

## Full Transmission (Rbbr = 00)

BYTE	DESCRIPTION
1, 2	2 byte Node (Meter) Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte numeric data field: 6 bytes for number, up to 3 for decimal points.
19	<CR> (Carriage return)
20	<LF> (Line feed)
21	<SP> (Space) <sup>✱</sup>
22	<CR> (Carriage return) <sup>✱</sup>
23	<LF> (Line feed) <sup>✱</sup>

<sup>✱</sup> These characters only appear in the last line of a block print.

The first two characters transmitted are the unit address. If the address assigned is 0, two spaces are substituted. A space follows the unit address field. The next three characters are the register mnemonic.

The numeric data is transmitted next. The numeric field is 12 characters long (decimal points are loaded depending on timer range selected). The data is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with <CR> and <LF>. When a block print is finished, an extra <SP>, <CR>, and <LF> are used to provide separation between the transmissions.

## Abbreviated Transmission (Rbbr = 4E5)

BYTE	DESCRIPTION
1-12	12 byte data field, 6 bytes for number, up to 3 bytes for decimal points.
13	<CR> (Carriage return)
14	<LF> (Line feed)
15	<SP> (Space) <sup>✱</sup>
16	<CR> (Carriage return) <sup>✱</sup>
17	<LF> (Line feed) <sup>✱</sup>

<sup>✱</sup> These characters only appear in the last line of a block print.

The abbreviated response suppresses the address and register mnemonics, leaving only the numeric part of the response.

**Note:** Transmissions are formatted to match the way the parameter is displayed. This includes setpoints.

**Example:** SP1 assigned to RTC. RTC format = 12:00 P.  
SP1 printout = 12:00 P.

**Note:** When communicating with a Red Lion Controls HMI unit, set rkk Fk in programming module 7 (serial) to 00. This formats the RTC parameters to:  
Time - 24 Hours, Minutes, Seconds  
Date - Month, Day, Year  
Day - 1 = Sunday through 7 = Saturday  
Decimal points are substituted for all punctuation.

## Meter Response Examples:

- Address = 17, full field response, Cycle Counter = 875  
17 CNT 875 <CR><LF>
- Address = 0, full field response, Setpoint 2 = 250.5  
SP2 250.5<CR><LF>
- Address = 0, abbreviated response, Setpoint 2 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Auto/Manual Mode Register (MMR) ID: U

This register sets the controlling mode for the outputs. In Auto Mode (0) the meter controls the setpoint output. In Manual Mode (1) the outputs are defined by the registers SOR. When transferring from auto mode to manual mode, the meter holds the last output value (until the register is changed by a write). Each output may be independently changed to auto or manual. In a write command string (VU), any character besides 0 or 1 in a field will not change the corresponding output mode.

**Example:** VU0011 places SP3 and SP4 in manual.

## Setpoint Output Register (SOR) ID: X

This register is used to view or change the states of the setpoint outputs. Reading from this register (TX) will show the present state of all the setpoint outputs. A "0" in the setpoint location means the output is inactive and a "1" means the output is active. The output logic parameter in Module 6 will affect the active logic state.

In Automatic Mode, the meter controls the setpoint output state. In Manual Mode, writing to this register (VX) will change the output state. Sending any character besides 0 or 1 in a field or if the corresponding output was not first in manual mode, the corresponding output value will not change.

**Example:** VX10\* will result in output 1 active and output 2 inactive.

## COMMAND RESPONSE TIME

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

Refer to the Timing Diagrams below. At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\*, \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time window of 50 msec. minimum and 100 msec. maximum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time window ( $t_2$ ) of 2 msec. minimum and 50 msec. maximum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

## SERIAL TIMING

COMMAND	COMMENT	PROCESS TIME ( $t_2$ )
R	Reset	2-50 msec.
V	Write	100-200 msec.
T	Transmit	2-50 msec. for \$ 50-100 msec. for *
P	Print	2-50 msec. for \$ 50-100 msec. for *

### Timing Diagrams

#### NO REPLY FROM METER

#### RESPONSE FROM METER

## COMMUNICATION FORMAT

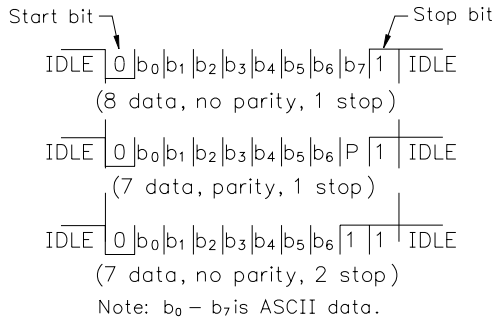

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character.

The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -25 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +25 V	a-b > +200 mV

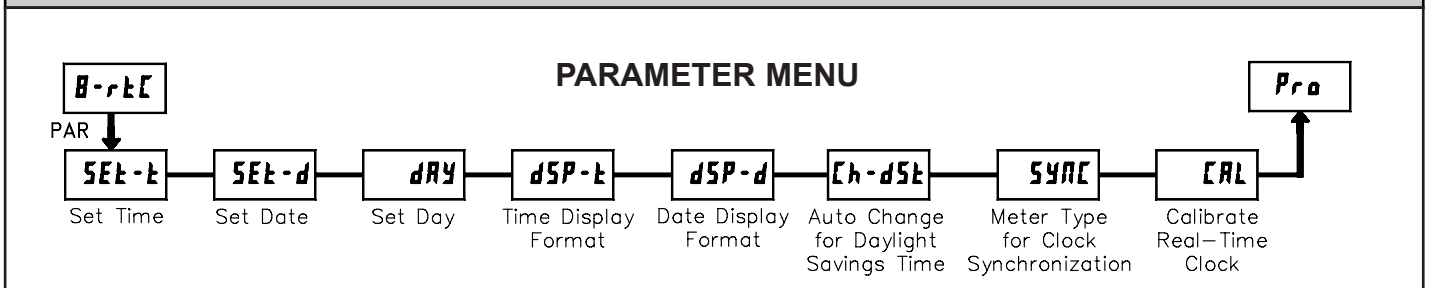

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters. Each ASCII character is “framed” with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

Character Frame Figure

## 6.8 MODULE 8 - REAL-TIME CLOCK PARAMETERS (RtC) - PAXCK

Module 8 is the programming module for the Real-Time Clock (RTC) Date and Time Parameters. In the Display Mode, the DAT annunciator indicates the RTC Date is currently being shown. The RTC Time display is shown with no annunciator. This programming module can only be accessed if a Real-Time Clock card is installed.

### SET TIME

This parameter sets the Time for the Real-Time Clock. Selecting YES will display the sub-menu where the Time can be set or changed. The RTC Time is entered in “Hours-Minutes”, 12-hour format, with AM/PM indication. When the PAR key is pressed, the new Time is entered and begins running. The “Seconds” always start from 00 when the Time is entered. Select NO to advance to the next parameter without changing the Time.

### SET DATE

This parameter sets the Date for the Real-Time Clock. Selecting YES will display the sub-menu where the Date can be set or changed. The RTC Date is entered in “Month.Day.Year” format (two-digit values). When the PAR key is pressed, the new Date is entered. Select NO to advance to the next parameter without changing the Date.

### SET DAY

Set the Day of the week for the Real-Time Clock.

## TIME DISPLAY FORMAT

Select the format in which the Real-Time Clock Time will be displayed. The format selections depict the *range* for the RTC Time display, and DO NOT represent the *current* RTC Time. When the meter is operating in the Display Mode, the RTC Time display is shown with no annunciator.

## DATE DISPLAY FORMAT

Select the format in which the Real-Time Clock Date will be displayed. The format selections depict the *range* for the RTC Date display, and DO NOT represent the *current* RTC Date. When the meter is operating in the Display Mode, the RTC Date display is indicated by the DAT annunciator.

## AUTO CHANGE FOR DAYLIGHT SAVINGS TIME

Selecting **YES** allows the meter to automatically adjust the RTC Time for Daylight Savings Time. (Adjustment dates are U.S.A. standard only.) Avoid setpoints that occur during adjustment (Sundays 1 to 3 AM).

## METER TYPE FOR CLOCK SYNCHRONIZATION

Time synchronization between multiple PAXCK meters can be accomplished through a hardware interface on the Real-Time Clock option card. This RS485 type interface allows connection of up to 32 PAXCK meters in a two-wire multidrop network, at distances up to 4000 ft. (See Section 4.6, Real-Time Clock Wiring).

In a Synchronization network, one PAXCK meter is programmed as the Host (**HOST**), while all other meters are programmed as Slaves (**SLAVE**). Once every hour (at 30 min. past the hour), the Host meter outputs a time synchronization pulse onto the network. Upon receiving the synchronization pulse, each Slave meter automatically adjusts the Minutes and Seconds of its RTC Time setting to synchronize with the Host. *Synchronization, using the Real-Time Clock Wiring, adjusts the Minutes and Seconds only, and does not change the Hours, AM/PM, Day or Date settings in the Slave meter's RTC.*

Full-time synchronization (hours, minutes and seconds) is possible for PAXCKs that are connected in an RS485 network (RS485 Serial Option cards required). In this configuration, one meter is designated as the Serial RTC Master by setting the meter's address as 98 or 99 (see Serial Real-time Clock Addressing in Master Module 7). Every hour (at 30 min past the hour), the Serial RTC Master / Host will transmit the full time (Hours, minutes, seconds) to all meters through the RS485 serial card wiring network. The time, date, or day will also be transmitted and updated in the Slaves when changed in the programming of the Serial RTC Master. Only one meter should be configured as Master and that meter should also be configured as the Host.

## CALIBRATE REAL-TIME CLOCK

The Real-Time Clock circuit uses a crystal controlled oscillator for high accuracy timekeeping. The oscillator is factory calibrated\* and optimized for 25°C ambient temperature operation. Since the PAXCK is designed to operate over a wide temperature range, and since the accuracy of a crystal oscillator varies with ambient temperature, some drift in the RTC time may be observed over an extended period. This is primarily seen in high or low temperature installations. To compensate for the wide operating temperature range, a calibration or "Offset" value can be entered, which effectively slows down or speeds up the clock to maintain accurate timekeeping.

To calibrate the RTC, install the meter in its normal operating environment, and set the time based on a known accurate reference (such as the WWV broadcast or the Atomic Clock reference which is available via the internet). After 30 days of normal operation, compare the RTC time to the reference, and note the amount of time gained or lost. Refer to the tables on the next page for the proper Offset value to enter, given the amount of time drift observed.

Selecting **YES** for the **CAL** parameter displays the **OFFSET** sub-menu where the present Offset value can be viewed or changed. The tables below show the value to enter, given the amount of time gained or lost in a 30-day period.

*Values 00 and 32 provide no Offset, and are not shown in the tables.*

IF RTC CLOCK GAINED TIME: USE VALUE FROM THIS TABLE			
SECONDS GAINED IN 30 DAYS	ENTER THIS OFFSET VALUE	SECONDS GAINED IN 30 DAYS	ENTER THIS OFFSET VALUE
5	01	90	17
11	02	95	18
16	03	100	19

158	47	327	63
169	48		

## 6.9 MODULE 9 - FACTORY SERVICE OPERATIONS (9-F[5])

### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (0-15) by using the arrow keys. The display will actively dim or brighten as the levels are changed. This parameter also appears in Quick Programming Mode when enabled.

### RESTORE FACTORY DEFAULTS

Use the **RST** and/or arrow keys to display **CODE 066** and press **PAR**. The meter will display **rESEt** and then returns to **CODE 050**. Press **DSP** key to return to the Display Mode. This will overwrite all programmed user settings with the Factory Default Settings shown in the Parameter Value Chart. For the PAXCK, the Time and Date stored in the Real-Time Clock, as well as the RTC Claibration Offset value, are NOT overwritten by this parameter. However, the Time and Date Display Formats will revert back to the Factory Default Settings.

## TROUBLESHOOTING

For further assistance, contact technical support at the appropriate company numbers listed.

## PAXCK Application

A big application request has always been for Real-Time Clocks to display time throughout the plant. The challenge has been to keep all the various clock locations synchronized with the right time. With the new PAXCK Timer/Real-Time Clock this problem is history. The clocks can be provided in three different sizes, the PAXCK (0.56 inch LEDs), the LPAXCK (1.5 inch LEDs), or the EPAX (4 inch LEDs). You can mix and match any number of the two versions, up to a maximum of 32 units. Simply select one of the units in the system as the host and the balance are programmed as slaves. The host will send out a synchronization pulse every hour to correct the time on any clock unit wired in the system.

Real-Time Clock Synchronization Network

# MODEL PAXCK - 1/8 DIN REAL-TIME CLOCK

This is a brief overview of the PAXCK. For complete specifications and programming information, see the **PAX 1/8 DIN Preset Timer (PAXTM) & Real-time Clock (PAXCK) Bulletin** starting on **page 268**.

- 6-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- 4 SEPARATE DISPLAYS (Timer, Counter, Real-Time Clock, and Date)
- CYCLE COUNTING CAPABILITY
- PROGRAMMABLE FUNCTION KEYS/USER INPUTS
- FOUR SETPOINT ALARM OUTPUTS (W/Plug-in card)
- COMMUNICATIONS AND BUS CAPABILITIES (W/Plug-in card)
- BUS CAPABILITIES: DEVICENET, MODBUS and PROFIBUS-DP
- CRIMSON PROGRAMMING SOFTWARE
- NEMA 4X/IP65 SEALED FRONT BEZEL

## PAXCK SPECIFICATIONS

### 4. ANNUNCIATORS:

TMR - Timer Display	SP1 - Setpoint 1 Output
CNT - Cycle Counter Display	SP2 - Setpoint 2 Output
DAT - Real-Time Clock Date Display	SP3 - Setpoint 3 Output
- Real-Time Clock Time Display	SP4 - Setpoint 4 Output

### REAL-TIME/DATE DISPLAY (PAXCK):

Real-Time Display: 5 display formats

Hr/Min/Sec (12 or 24 Hr. format); Hr/Min (24 Hr.); Hr/Min (12 Hr. with or without AM/PM indication)

Date Display: 7 display formats

Month/Day or Day/Month (numeric or 3-letter Month format);  
Month/Day/Year or Day/Month/Year (all numeric);

Day of Week/Day (3-letter Day of Week format)

### REAL-TIME CLOCK CARD: Field replaceable plug-in card

Time Accuracy:  $\pm 5$  secs./Month (1 min./year) with end-user calibration

Battery: Lithium 2025 coin cell

Battery Life Expectancy: 10 yrs. typical

Synchronization Interface: Two-wire multi-drop network (RS485 hardware), 32 units max., operates up to 4000 ft.

Isolation To Timer & User Input Commons: 500 Vrms for 1 min.

Working Voltage: 50 V. Not isolated from all other commons.

### TIMER INPUTS A and B:

Logic inputs configurable as Current Sinking (active low) or Current Sourcing (active high) via a single plug jumper.

Current Sinking (active low):  $V_{IL} = 0.9$  V max., 22K $\Omega$  pull-up to +12 VDC.

Current Sourcing (active high):  $V_{IH} = 3.6$  V min., 22K $\Omega$  pull-down, Max. Continuous Input: 30 VDC.

Timer Input Pulse Width: 1 msec min.

Timer Start/Stop Response Time: 1 msec max.

Filter: Software filtering provided for switch contact debounce. Filter enabled or disabled through programming.

If enabled, filter results in 50 msec start/stop response time for successive pulses on the same input terminal.

# MODEL CUB5V - MINIATURE ELECTRONIC 5-DIGIT DC VOLTMETER

- FOUR SELECTABLE D.C. RANGES  
0 to 200 mV, 2 V, 20 V, 200 V
- MINIMUM AND MAXIMUM DISPLAY CAPTURE
- LCD, REFLECTIVE OR RED/GREEN LED BACKLIGHTING
- 0.48" (12.2 mm) HIGH DIGITS
- OPTIONAL SETPOINT OUTPUT MODULES
- OPTIONAL SERIAL COMMUNICATIONS MODULES (RS232 or RS485)
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- FRONT PANEL OR CRIMSON PROGRAMMABLE
- DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The CUB5 provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The CUB5V accepts a DC Voltage input signal and provides a display in the desired unit of measure. The meter also features minimum and maximum display capture, display offset, units indicator, and programmable user input. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.48" (12.2 mm) high digits. The LCD is available in two versions, reflective and red/green backlight. The backlight version is user selectable for the desired color and also has variable display intensity.

The capability of the CUB5 can be easily expanded with the addition of option modules. Setpoint capability is field installable with the addition of the setpoint output modules. Serial communications capability for RS232 or RS485 is added with a serial option module.

The CUB5 can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5. The MLPS1 is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

## VOLTAGE

The CUB5V is the DC Volt meter. It features 4 voltage input ranges, that are selected by the user via a programming jumper and software input range selection. The ranges consist of following: 0 to 200 mV, 2 V, 20 V, 200 V. Users should select the appropriate voltage range that covers their maximum input.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

E

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

## GENERAL METER SPECIFICATIONS

- DISPLAY:** 5 digit LCD 0.48" (12.2 mm) high digits  
**CUB5VR00:** Reflective LCD with full viewing angle  
**CUB5VB00:** Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection.

MODEL NO.	DISPLAY COLOR	INPUT CURRENT @ 9 VDC WITHOUT CUB5RLY0	INPUT CURRENT @ 9 VDC WITH CUB5RLY0
CUB5VR00	---	10 mA	40 mA
CUB5VB00	Red (max intensity)	85 mA	115 mA
CUB5VB00	Green (max intensity)	95 mA	125 mA

- INPUT RANGES:** Jumper Selectable  
**D.C. Voltages:** 200 mV, 2 V, 20 V, 200 V

4. **SIGNAL INPUTS:**

INPUT RANGE	ACCURACY @23 °C, less than 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
200 mVDC	0.1% of span	1.027 MΩ	75 VDC	10 μV	70 ppm / °C
2 VDC	0.1% of span	1.027 MΩ	75 VDC	.1 mV	70 ppm / °C
20 VDC	0.1% of span	1.027 MΩ	250 VDC	1 mV	70 ppm / °C
200 VDC	0.1% of span	1.027 MΩ	250 VDC	10 mV	70 ppm / °C

5. **OVERRANGE RATINGS, PROTECTION & INDICATION:**

9 to 28 VDC power circuit is not isolated from the signal circuit.

**Input Overrange Indication:** "OL.OL."

**Input Underrange Indication:** "UL.UL."

**Display Overrange/Underrange Indication:** "....."/"-....."

- A/D CONVERTER:** 16 bit resolution
- DISPLAY RESPONSE TIME:** 500 msec min.
- NORMAL MODE REJECTION:** 60 dB 50/60 Hz
- USER INPUT (USR):** Programmable input. Connect terminal to common (USR COMM) to activate function. Internal 10KΩ pull-up resistor to +9 to 28 VDC.  
**Threshold Levels:**  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)
- CONNECTIONS:** Wire clamping screw terminals  
**Wire Strip Length:** 0.3" (7.5 mm)  
**Wire Gauge:** 30-14 AWG copper wire  
**Torque:** 5 inch-lbs (0.565 N-m) max.
- MEMORY:** Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and max/min values when power is removed.
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range for CUB5VR00:** -35 to 75°C  
**Operating Temperature Range for CUB5VB00 depends on display color and intensity level as per below:**

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
	Green Display	1 & 2
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C

**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category I, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.

14. **CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY**

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

**Immunity to Industrial Locations:**

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power

Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m

**Emissions:**

Emissions EN 55011 Class A

**Notes:**

1. *Criterion A: Normal operation within specified limits.*

- WEIGHT:** 3.2 oz (100 g)

# OPTIONAL PLUG-IN CARDS

## ADDING OPTION CARDS

The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

**WARNING: Disconnect all power to the unit before installing Plug-in card.**

*Note: Measurement errors may occur if signal input common is shared with another circuit common (ie, serial common, Dual Sinking Output option card, or Power Supply common) on multiple units.*

### SINGLE RELAY CARD

- Type: Single FORM-C relay
- Isolation To Sensor & User Input Commons: 1400 Vrms for 1 min.
- Working Voltage: 150 Vrms
- Contact Rating: 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive
- Life Expectancy: 100,000 minimum operations
- Response Time:
  - Turn On Time: 4 msec max.
  - Turn Off Time: 4 msec max.

### DUAL SINKING OUTPUT CARD

- Type: Non-isolated switched DC, N Channel open drain MOSFET
- Current Rating: 100 mA max.
- $V_{DS\ ON}$ : 0.7 V @ 100 mA
- $V_{DS\ MAX}$ : 30 VDC
- Offstate Leakage Current: 0.5 mA max.

### RS485 SERIAL COMMUNICATIONS CARD

- Type: RS485 multi-point balanced interface (non-isolated)
- Baud Rate: 300 to 38.4k
- Data Format: 7/8 bits; odd, even, or no parity
- Bus Address: 0 to 99; max 32 meters per line
- Transmit Delay: Selectable (refer to CUB5COM bulletin)

### RS232 SERIAL COMMUNICATIONS CARD

- Type: RS232 half duplex (non-isolated)
- Baud Rate: 300 to 38.4k
- Data Format: 7/8 bits; odd, even, or no parity

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPERS

## INPUT RANGE JUMPER

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum input to avoid overloads. To access the jumper, remove the rear cover of the meter.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 4.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when

- Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  - Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  - In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

- Fair-Rite # 0443167251 (RLC# FCOR0000)
- TDK # ZCAT3035-1330A
- Steward # 28B2029-0A0

Line Filters for input power cables:

- Schaffner # FN610-1/07 (RLC# LFIL0000)
- Schaffner # FN670-1.8/07
- Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
- Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI. Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### DC Power

+9 to +28 VDC: +VDC  
Power Common: -VDC

**CAUTION:** 9 to 28 VDC power circuit is not isolated from the signal circuit.

## 4.2 USER INPUT WIRING

### Sinking Logic

USR COMM } Connect external switching device between the  
USR } User Input terminal and User Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<0.7 V).

## 4.3 INPUT WIRING

**CAUTION:** Power input common is NOT isolated from user and input commons. In order to preserve the safety of the meter application, the power input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the signal or user inputs and input common terminals. Appropriate considerations must then be given to the potential of the user and input commons with respect to earth ground; and the common of the plug-in cards with respect to input common.

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

### Voltage Signal (self powered)

JUMPER POSITION	MAX INPUT VOLTAGE
200 mV / 2 VDC	75 VDC
20V / 200 VDC	250 VDC

## 4.4 SETPOINT (OUTPUT) WIRING

### SINGLE SETPOINT RELAY PLUG-IN CARD

### ELECTRICAL CONNECTIONS

### DUAL SETPOINT N-FET OPEN DRAIN PLUG-IN CARD

### ELECTRICAL CONNECTIONS

Output Common is not isolated from DC Power Common. Load must be wired between OSNK terminal and V+ of the load supply.

## 4.5 SERIAL COMMUNICATION WIRING

### SERIAL COMMUNICATIONS PLUG-IN CARD

### RJ11 CONNECTOR PIN OUTS

# 5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION	ENTERING PROGRAM MODE	PROGRAMMING MODE OPERATION
SEL	Index display through enabled values	Press and hold for 2 seconds to activate	Store selected parameter and index to next parameter
RST	Resets values (MIN/MAX) or outputs		Advances through the program menu Increments selected parameter value or selection

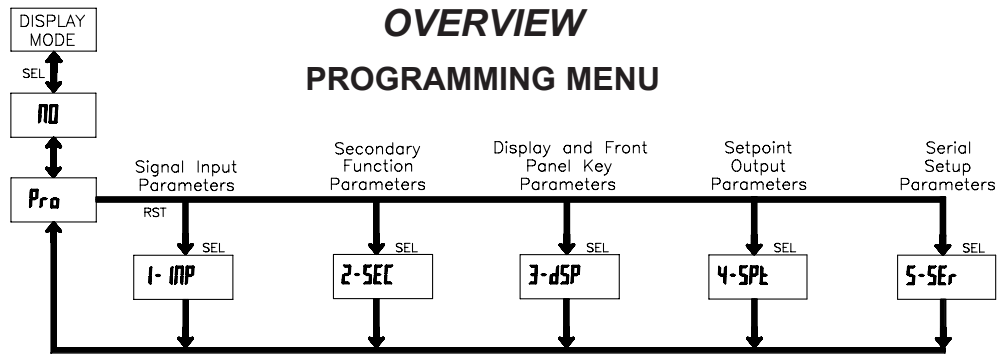

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
MIN - Minimum display capture value

"1" - To the right of the display indicates setpoint 1 output activated.  
"2" - To the right of the display indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 6.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** button. If it is not accessible then it is locked by either a security code, or a hardware lock.

## MODULE ENTRY (SEL & RST BUTTONS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between **Pr0** and the present module. The **RST** button is used to select the desired module. The displayed module is entered by pressing the **SEL** button.

## MODULE MENU (SEL BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr0**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** button is used to move through the selections/values for that parameter. Pressing the **SEL** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** button to access the value. The right hand most digit will begin to flash. Pressing the **RST** button again increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will advance to the next digit. Pressing and holding the **SEL** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL BUTTON)

The Programming Mode is exited by pressing the **SEL** button with **Pr0** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 6.1 MODULE 1 - SIGNAL INPUT PARAMETERS (I-IMP)

## CUB5V INPUT RANGE

SELECTION	RANGE RESOLUTION	SELECTION	RANGE RESOLUTION
0.2u	200.00 mV	20u	20.000 V
2u	2.0000 V	200u	200.00 V

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## DISPLAY DECIMAL POINT

0	00	000	0000	00000
---	----	-----	------	-------

Select the decimal point location for the Input, MIN and MAX displays. This selection also affects the *dSP1* and *dSP2* parameters and setpoint values.

## DISPLAY OFFSET VALUE

- 19999 to 19999
------------------

The display can be corrected with an offset value. This can be used to compensate for signal variations or sensor errors. This value is automatically updated after a Zero Display to show how far the display is offset. A value of zero will remove the effects of offset.

## FILTER SETTING

0 1 2 3
---------

If the displayed value is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## FILTER BAND

0 to 99 display units
-----------------------

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

## SCALING STYLE

KEY	APLY
-----	------

If Input Values and corresponding Display Values are known, the Key-in (*KEY*) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (*APLY*) scaling style must be used.

## INPUT VALUE FOR SCALING POINT 1

0 to 29999
------------

For Key-in (*KEY*) style, enter the first Input Value using the front panel buttons. (The Input Range selection sets the decimal location for the Input Value).

For Apply (*APLY*) style, the meter shows the previously stored Input Value. To retain this value, press the **SEL** button to advance to the next parameter. To change the Input Value, press the **RST** button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the **SEL** button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 1

- 19999 to 99999
------------------

Enter the first Display Value by using the front panel buttons. This is the same for *KEY* and *APLY* scaling styles. The decimal point follows the *DECPT* selection.

## INPUT VALUE FOR SCALING POINT 2

0 to 29999
------------

For Key-in (*KEY*) style, enter the known second Input Value using the front panel buttons.

For Apply (*APLY*) style, the meter shows the previously stored Input Value for Scaling Point 2. To retain this value, press the **SEL** button to advance to the next parameter. To change the Input Value, press the **RST** button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the **SEL** button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 2

- 19999 to 99999
------------------

Enter the second Display Value by using the front panel buttons. This is the same for *KEY* and *APLY* scaling styles.

## General Notes on Scaling

- When using the Apply (*APLY*) scaling style, input values for scaling points must be confined to the signal input limits of the selected range.
- The same Input Value should not correspond to more than one Display Value. (Example: 10 V can not equal 0 and 10.)
- For input levels beyond the programmed Input Values, the meter extends the Display Value by calculating the slope from the two coordinate pairs (*IMP1* / *dSP1* & *IMP2* / *dSP2*).

## USER INPUT FUNCTION

DISPLAY MODE	DESCRIPTION
<b>NO</b> No Function	User Input disabled.
<b>P-Loc</b> Program Mode Lock-out	See Programming Mode Access chart (Module 3).
<b>ZEro</b> Zero Input (Edge triggered)	Zero the Input Display value causing Display Reading to be Offset.
<b>rESEt</b> Reset (Edge triggered)	Resets the assigned value(s) to the current input value.
<b>d-Hld</b> Display Hold	Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
<b>d-SEL</b> Display Select (Edge Triggered)	Advance once for each activation.
<b>d-LEV</b> Display Intensity Level (Edge Triggered)	Increase intensity one level for each activation (backlight version only).
<b>COLOr</b> Backlight Color (Edge Triggered)	Change backlight color with each activation (backlight version only).

## DISPLAY MODE

DISPLAY MODE	DESCRIPTION
<b>Pr int</b> Print Request	Serial transmit of the active parameters selected in the Print Options menu (Module 5).
<b>P-rSt</b> Print and Reset	Same as Print Request followed by a momentary reset of the assigned value(s).
<b>rSt-1</b> Setpoint 1 Reset	Resets setpoint 1 output.
<b>rSt-2</b> Setpoint 2 Reset	Resets setpoint 2 output.
<b>rSt-12</b> Setpoint 1 and 2 Reset	Reset both setpoint 1 and 2 outputs.

## USER INPUT ASSIGNMENT

<b>H1</b>	<b>H1-L0</b>
<b>L0</b>	<b>dSP</b>

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, display hold, or print and reset is selected in the User Input Function menu.

## 6.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-5EE)

### MAX DISPLAY ENABLE

**NO** **YES**

Enables the Maximum Display Capture capability.

### RESTORE FACTORY DEFAULT SETTINGS

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display **rESEt** and then return to **Code 00**. Press the **SEL** button to exit the module.

### MAX CAPTURE DELAY TIME

**00** to **9999** sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### VIEW VERSION DISPLAY

Entering Code 55 will display the version (x.x) of the meter. The display then returns to **Code 00**. Press the **SEL** button to exit the module.

### MIN DISPLAY ENABLE

**NO** **YES**

Enables the Minimum Display Capture capability.

### CALIBRATION

The CUB5V uses stored voltage calibration values to provide accurate voltage measurements. Over time, the electrical characteristics of the components inside the meter will slowly change, with the result that the stored calibration values no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the CUB5V involves an input voltage calibration, which should only be performed by individuals experienced in calibrating electronic equipment. Allow a 30 minute warm up before performing any calibration related procedures. The following procedures should be performed at an ambient temperature of 15 to 35°C (59 to 95°F).

*CAUTION: The accuracy of the calibration equipment will directly affect the accuracy of the CUB5V.*

### Voltage Calibration

1. Connect a precision DC voltage source with an accuracy of 0.01% or better to the INP+ (positive) and COMM (negative) terminals of the CUB5V. Set the output of the voltage source to zero.
2. With the display at **Code 48**, press and hold the **SEL** button for 2 seconds. Unit will display **CR 00**.
3. Press the **RST** button to select the range to be calibrated.
4. Press the **SEL** button. Display reads **000**.
5. With the voltage source set to zero (or a dead short applied to the input), press **SEL**. Display reads **CR 1** for about 8 seconds.
6. When the display reads the selected range, apply full-scale input signal for the range. (Note: For 200V range, apply 100V as indicated on the display.) Press **SEL**. Display reads **CR 1** for about 8 seconds.
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads **CR 00**, press the **SEL** button to exit calibration.

### MIN CAPTURE DELAY TIME

**00** to **9999** sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

**NO** **YES**

Select **YES** to perform either of the Factory Service Operations shown below.

# 6.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

## DISPLAY UPDATE TIME

This parameter sets the display update time in seconds.

## DISPLAY COLOR (BACKLIGHT UNIT ONLY)

Enter the desired display color, red or green. This parameter is active for backlight units only.

## FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The YES selection allows the SEL button to toggle through the enabled displays.

## DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

## FRONT PANEL RESET ENABLE (RST)

This selection allows the RST button to reset the selected value(s).

## ZERO DISPLAY WITH DISPLAY RESET

This parameter enables the RST button or user input to zero the input display value, causing the display reading to be offset.

Note: For this parameter to operate, the RST button or User Input being used must be set to dSP and the Input value must be displayed. If these conditions are not met, the display will not zero.

## DISPLAY SCROLL ENABLE

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

## UNITS INDICATOR SELECTION

This parameter activates the Units Indicator on the display. There are two methods of selecting the Indicator. List will present a group of Units preprogrammed into the meter. Segments allows the user to choose which of the segments should light.

## PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at CodE prompt *
		100-999	CodE prompt	With correct code entry at CodE prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	CodE prompt	With correct code entry at CodE prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

# 6.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

## PARAMETER MENU

The Setpoint Output Parameters are only active when an optional output module is installed in the meter.

### SETPOINT SELECT

NO SP-1 SP-2

Enter the setpoint (output) to be programmed. The *n* in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to SPSEL. Repeat steps for each setpoint to be programmed. Select **NO** to exit the module. The number of setpoints available is setpoint output card dependent.

### SETPOINT 2 ENABLE

YES NO

Select **YES** to enable Setpoint 2 and access the setup parameters. If **NO** is selected, the unit returns to SPSEL and setpoint 2 is disabled.

### SETPOINT ACTION

HI-bL LO-bL HI-Ub LO-Ub

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bL = High Acting, with balanced hysteresis
- LO-bL = Low Acting, with balanced hysteresis
- HI-Ub = High Acting, with unbalanced hysteresis
- LO-Ub = Low Acting, with unbalanced hysteresis

### SETPOINT VALUE

-19999 to 99999

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

### HYSTERESIS VALUE

1 to 59999

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

### ON TIME DELAY

00 to 5999 Sec

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OFF TIME DELAY

00 to 5999 Sec

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OUTPUT RESET ACTION

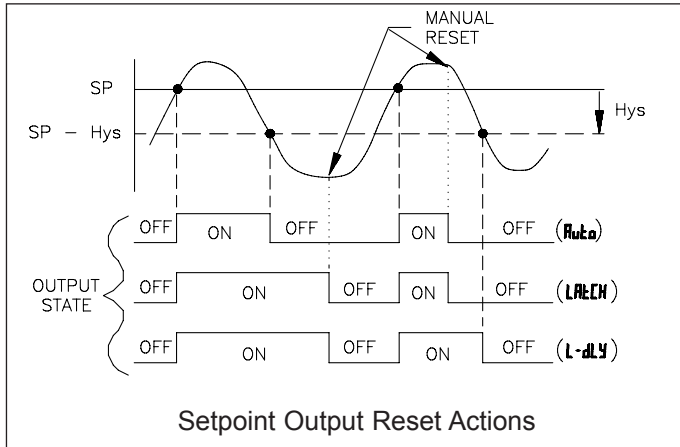

Auto LATCH L-dLY

Enter the reset action of the output. See figure for details.  
**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST**

button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dly** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dly** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

### STANDBY OPERATION

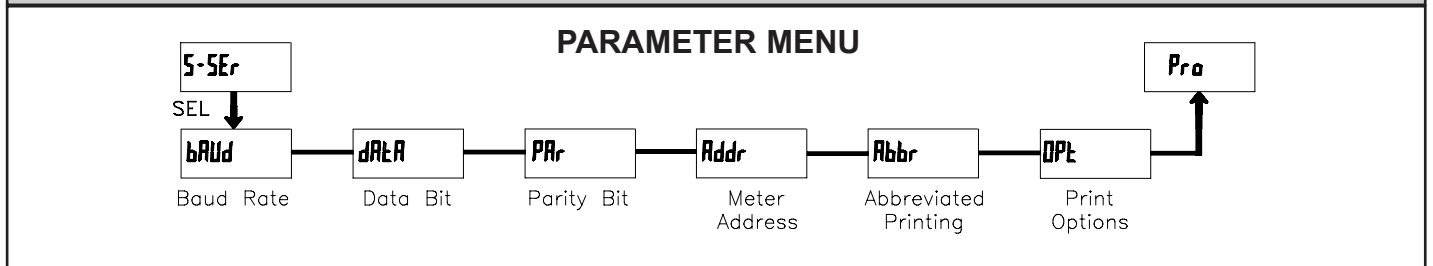

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset Action.

### CHANGE DISPLAY COLOR w/OUTPUT STATE

This parameter enables the backlight **CUB5** to switch the backlight color when the output state changes. This parameter is only active for the backlight version.

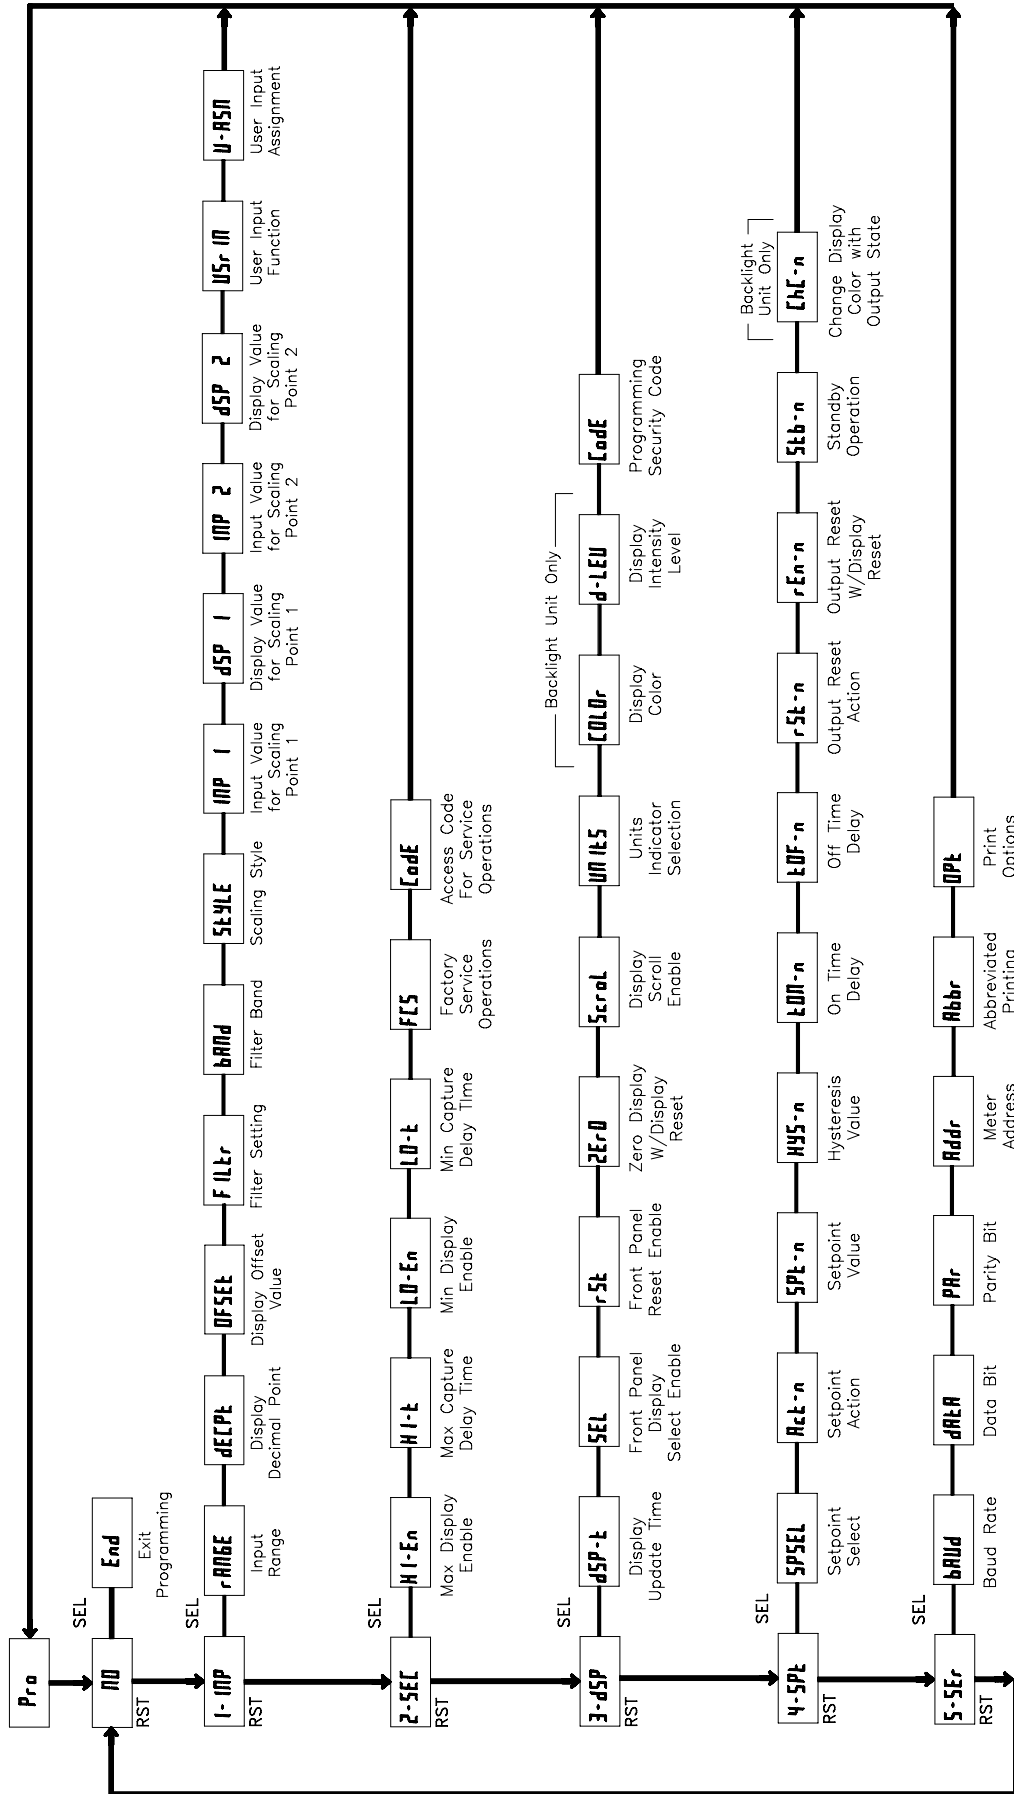

## 6.5 MODULE 5 - SERIAL SETUP PARAMETERS (5-5Er)

The Serial Setup Parameters are only active when the optional RS232 or RS485 serial communications module is installed in the meter. Refer to the CUB5COM bulletin for complete details on CUB5 serial communications.

# CUB5V PROGRAMMING QUICK OVERVIEW

Press and hold SEL button to enter Programming Mode.

# MODEL CUB5I - MINIATURE ELECTRONIC 5-DIGIT DC CURRENT METER

- FOUR SELECTABLE D.C. RANGES  
200  $\mu$ A, 2 mA, 20 mA, 200 mA
- MINIMUM AND MAXIMUM DISPLAY CAPTURE
- LCD, REFLECTIVE OR RED/GREEN LED BACKLIGHTING
- 0.48" (12.2 mm) HIGH DIGITS
- OPTIONAL SETPOINT OUTPUT MODULES
- OPTIONAL SERIAL COMMUNICATIONS MODULES (RS232 or RS485)
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- FRONT PANEL OR CRIMSON PROGRAMMABLE
- DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The CUB5 provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The CUB5I accepts a DC Current input signal and provides a display in the desired unit of measure. The meter also features minimum and maximum display capture, display offset, units indicator, and programmable user input. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.48" (12.2 mm) high digits. The LCD is available in two versions, reflective and red/green backlight. The backlight version is user selectable for the desired color and also has variable display intensity.

The capability of the CUB5 can be easily expanded with the addition of option modules. Setpoint capability is field installable with the addition of the setpoint output modules. Serial communications capability for RS232 or RS485 is added with a serial option module.

The CUB5 can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5. The MLPS1 is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

## CURRENT

The CUB5I is the DC Current meter. It features 4 current input ranges, that are selected by the user via a programming jumper and software input range selection. The ranges consist of following: 200  $\mu$ A, 2 mA, 20 mA, or 200 mA. Users should select the appropriate current range that covers their maximum signal input.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

E

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

# ORDERING INFORMATION

TYPE	MODEL NO.	DESCRIPTION	PART NUMBER
CUB5	CUB5I	DC Current Meter with reflective display	CUB5IR00
		DC Current with backlight display	CUB5IB00
Optional Plug-in Cards	CUB5RLY	Single Relay Output Card	CUB5RLY0
	CUB5SNK	Dual Sinking Open Collector Output Card	CUB5SNK0
	CUB5COM	RS485 Serial Communications Card	CUB5COM1
		RS232 Serial Communications Card	CUB5COM2
	CUB5USB	USB Programming Card for CUB5 Products <sup>1</sup>	CUB5USB0
Accessories	MLPS1	Micro-Line Power Supply, 85 to 250 VAC	MLPS1000
	CBLPROG	RS232 Programming Cable (DB9-RJ11)	CBLPROG0
	CBPRO	RS485 Programming Cable (DB9-RJ11)	CBPRO007
	SFCRD	Crimson 2 PC Configuration Software for Windows ME, 2000, XP <sup>2</sup>	SFCRD200
	CBLUSB	USB Programming Cable	CBLUSB00

<sup>1</sup> The USB Programming Card is not UL Approved.

<sup>2</sup> Crimson 2 software is a free download from <http://www.redlion.net/>

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 5 digit LCD 0.48" (12.2 mm) high digits  
**CUB5IR00:** Reflective LCD with full viewing angle  
**CUB5IB00:** Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS1 or a Class 2 or SELV rated power supply.

MODEL NO.	DISPLAY COLOR	INPUT CURRENT @ 9 VDC WITHOUT CUB5RLY0	INPUT CURRENT @ 9 VDC WITH CUB5RLY0
CUB5IR00	---	10 mA	40 mA
CUB5IB00	Red (max intensity)	85 mA	115 mA
CUB5IB00	Green (max intensity)	95 mA	125 mA

- INPUT RANGES:** Jumper Selectable  
**D.C. Currents:** 200  $\mu$ A, 2 mA, 20 mA, or 200 mA
- SIGNAL INPUTS:**

INPUT RANGE	ACCURACY @23 °C, less than 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
200 $\mu$ A	0.1% of span	1.111 K $\Omega$	15 mA	10 nA	70 ppm / °C
2 mA	0.1% of span	111 $\Omega$	50 mA	.1 $\mu$ A	70 ppm / °C
20 mA	0.1% of span	11 $\Omega$	150 mA	1 $\mu$ A	70 ppm / °C
200 mA	0.1% of span	1 $\Omega$	500 mA	10 $\mu$ A	70 ppm / °C

- OVERRANGE RATINGS, PROTECTION & INDICATION:**  
9 to 28 VDC power circuit is not isolated from the signal circuit.  
**Input Overrange Indication:** "OL OL"  
**Input Underrange Indication:** "UL UL"  
**Display Overrange/Underrange Indication:** "....."/"-----"  
**DISPLAY RESPONSE TIME:** 500 msec min.
- NORMAL MODE REJECTION:** 60 dB 50/60 Hz
- USER INPUT (USR):** Programmable input. Connect terminal to common (USR COMM) to activate function. Internal 10K $\Omega$  pull-up resistor to +9 to 28 VDC.  
**Threshold Levels:**  $V_{IL}$  = 1.0 V max;  $V_{IH}$  = 2.4 V min;  $V_{MAX}$  = 28 VDC  
**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)
- MEMORY:** Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and max/min values when power is removed.

#### 10. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range for CUB5IR00:** -35 to 75°C

**Operating Temperature Range for CUB5IB00 depends on display color and intensity level as per below:**

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
	Green Display	1 & 2
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C

**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

- CONNECTIONS:** Wire clamping screw terminals

**Wire Strip Length:** 0.3" (7.5 mm)

**Wire Gauge:** 30-14 AWG copper wire

**Torque:** 5 inch-lbs (0.565 N-m) max.

- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category I, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.

- CERTIFICATIONS AND COMPLIANCES:**

#### SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 61010-1

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #US/9257C/UL

CB Scheme Test Report #E179259-V01-S02

Issued by Underwriters Laboratories, Inc.

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

#### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

#### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m

#### Emissions:

Emissions EN 55011 Class A

Notes:

1. Criterion A: Normal operation within specified limits.

- WEIGHT:** 3.2 oz (100 g)

# OPTIONAL PLUG-IN CARDS

## ADDING OPTION CARDS

The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

**WARNING: Disconnect all power to the unit before installing Plug-in card.**

*Note: Measurement errors may occur if signal input common is shared with another circuit common (ie, serial common, Dual Sinking Output option card, or Power Supply common) on multiple units.*

### SINGLE RELAY CARD

**Type:** Single FORM-C relay

**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.

Working Voltage: 150 Vrms

**Contact Rating:** 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive

**Life Expectancy:** 100,000 minimum operations

**Response Time:**

Turn On Time: 4 msec max.

Turn Off Time: 4 msec max.

### DUAL SINKING OUTPUT CARD

**Type:** Non-isolated switched DC, N Channel open drain MOSFET

**Current Rating:** 100 mA max.

$V_{DS\ ON}$ : 0.7 V @ 100 mA

$V_{DS\ MAX}$ : 30 VDC

**Offstate Leakage Current:** 0.5 mA max.

### RS485 SERIAL COMMUNICATIONS CARD

**Type:** RS485 multi-point balanced interface (non-isolated)

**Baud Rate:** 300 to 38.4k

**Data Format:** 7/8 bits; odd, even, or no parity

**Bus Address:** 0 to 99; max 32 meters per line

**Transmit Delay:** Selectable (refer to CUB5COM bulletin)

### RS232 SERIAL COMMUNICATIONS CARD

**Type:** RS232 half duplex (non-isolated)

**Baud Rate:** 300 to 38.4k

**Data Format:** 7/8 bits; odd, even, or no parity

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPERS

## INPUT RANGE JUMPER

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum signal input to avoid overloads. To access the jumper, remove the rear cover of the meter.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 4.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

- c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### DC Power

+9 to +28 VDC: +VDC

Power Common: -VDC

**CAUTION:** 9 to 28 VDC power circuit is not isolated from the signal circuit.

## 4.2 USER INPUT WIRING

### Sinking Logic

USR COMM } Connect external switching device between the  
USR } User Input terminal and User Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<0.7 V).

### 4.3 INPUT WIRING

**CAUTION:** Power input common is NOT isolated from user and input commons. In order to preserve the safety of the meter application, the power input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the signal or user inputs and input common terminals. Appropriate considerations must then be given to the potential of the user and input commons with respect to earth ground; and the common of the plug-in cards with respect to input common.

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

#### Input Signal (self powered)

COMM	INP+	JUMPER POSITION	MAX INPUT CURRENT
-	+	200 $\mu$ A	15 mA
-	+	2 mA	50 mA
-	+	20 mA	150 mA
-	+	200 mA	500 mA

#### Series Loop (must use separate supply for sensor power and each CUB5)

#### 2 Wire With External Power

#### 2 Wire With MLPS1 Power

#### 2 Wire With Separate Sensor And CUB5 Power

### 4.4 SETPOINT (OUTPUT) WIRING

#### SINGLE SETPOINT RELAY PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

#### DUAL SETPOINT N-FET OPEN DRAIN PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

Output Common is not isolated from DC Power Common. Load must be wired between OSNK terminal and V+ of the load supply.

### 4.5 SERIAL COMMUNICATION WIRING

#### SERIAL COMMUNICATIONS PLUG-IN CARD

#### RJ11 CONNECTOR PIN OUTS

# 5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION	ENTERING PROGRAM MODE	PROGRAMMING MODE OPERATION
SEL	Index display through enabled values	Press and hold for 2 seconds to activate	Store selected parameter and index to next parameter
RST	Resets values (MIN/MAX) or outputs		Advances through the program menu Increments selected parameter value or selection

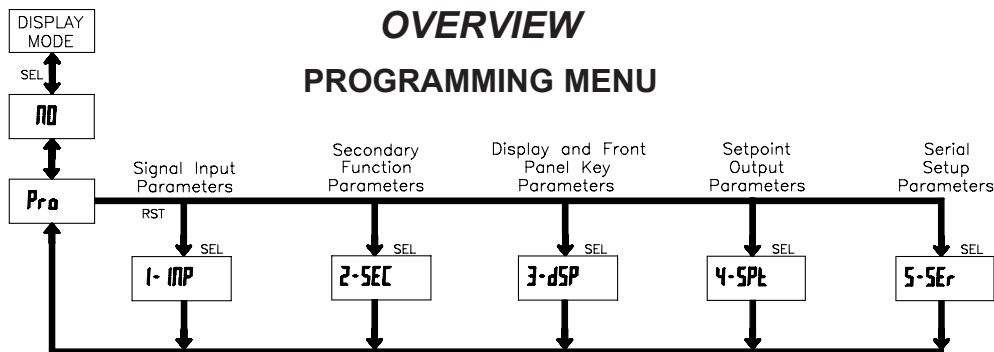

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
MIN - Minimum display capture value

"1" - To the right of the display indicates setpoint 1 output activated.  
"2" - To the right of the display indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 6.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** button. If it is not accessible then it is locked by either a security code, or a hardware lock.

## MODULE ENTRY (SEL & RST BUTTONS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between *Pr0* and the present module. The **RST** button is used to select the desired module. The displayed module is entered by pressing the **SEL** button.

## MODULE MENU (SEL BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to *Pr0*. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** button is used to move through the selections/values for that parameter. Pressing the **SEL** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** button to access the value. The right hand most digit will begin to flash. Pressing the **RST** button again increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will advance to the next digit. Pressing and holding the **SEL** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL BUTTON)

The Programming Mode is exited by pressing the **SEL** button with *Pr0* displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 6.1 MODULE 1 - SIGNAL INPUT PARAMETERS (I- INP)

## CUB5I INPUT RANGE

SELECTION	RANGE RESOLUTION	SELECTION	RANGE RESOLUTION
2000A	200.00 μA	002A	20.000 mA
0002A	2.0000 mA	02A	200.00 mA

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## DISPLAY DECIMAL POINT

0	00	000	0000	00000
---	----	-----	------	-------

Select the decimal point location for the Input, MIN and MAX displays. This selection also affects the dSP1 and dSP2 parameters and setpoint values.

## DISPLAY OFFSET VALUE

- 19999 to 19999
------------------

The display can be corrected with an offset value. This can be used to compensate for signal variations or sensor errors. This value is automatically updated after a Zero Display to show how far the display is offset. A value of zero will remove the effects of offset.

## FILTER SETTING

0 1 2 3
---------

If the displayed value is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## FILTER BAND

0 to 99 display units
-----------------------

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

## SCALING STYLE

KEY	APLY
-----	------

If Input Values and corresponding Display Values are known, the Key-in (KEY) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (APLY) scaling style must be used.

## INPUT VALUE FOR SCALING POINT 1

0 to 29999
------------

For Key-in (KEY) style, enter the first Input Value using the front panel buttons. (The Input Range selection sets the decimal location for the Input Value).

For Apply (APLY) style, the meter shows the previously stored Input Value. To retain this value, press the SEL button to advance to the next parameter. To change the Input Value, press the RST button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the SEL button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 1

- 19999 to 99999
------------------

Enter the first Display Value by using the front panel buttons. This is the same for KEY and APLY scaling styles. The decimal point follows the dECPt selection.

## INPUT VALUE FOR SCALING POINT 2

0 to 29999
------------

For Key-in (KEY) style, enter the known second Input Value using the front panel buttons.

For Apply (APLY) style, the meter shows the previously stored Input Value for Scaling Point 2. To retain this value, press the SEL button to advance to the next parameter. To change the Input Value, press the RST button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the SEL button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 2

- 19999 to 99999
------------------

Enter the second Display Value by using the front panel buttons. This is the same for KEY and APLY scaling styles.

## General Notes on Scaling

- When using the Apply (APLY) scaling style, input values for scaling points must be confined to the range limits shown.
- The same Input Value should not correspond to more than one Display Value. (Example: 20 mA can not equal 0 and 20.)
- For input levels beyond the programmed Input Values, the meter extends the Display Value by calculating the slope from the two coordinate pairs (INP1 / dSP1 & INP2 / dSP2).

## USER INPUT FUNCTION

DISPLAY MODE	DESCRIPTION
NO	No Function User Input disabled.
P-Loc	Program Mode Lock-out See Programming Mode Access chart (Module 3).
ZErD	Zero Input (Edge triggered) Zero the Input Display value causing Display Reading to be Offset.
rE5Et	Reset (Edge triggered) Resets the assigned value(s) to the current input value.
d-HLd	Display Hold Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
d-5Et	Display Select (Edge Triggered) Advance once for each activation.
d-LEU	Display Intensity Level (Edge Triggered) Increase intensity one level for each activation (backlight version only).
COLDr	Backlight Color (Edge Triggered) Change backlight color with each activation (backlight version only).

## DISPLAY MODE

DISPLAY MODE	DESCRIPTION
Pr int	Print Request Serial transmit of the active parameters selected in the Print Options menu (Module 5).
P-r5t	Print and Reset Same as Print Request followed by a momentary reset of the assigned value(s).
r5t-1	Setpoint 1 Reset Resets setpoint 1 output.
r5t-2	Setpoint 2 Reset Resets setpoint 2 output.
r5t-12	Setpoint 1 and 2 Reset Reset both setpoint 1 and 2 outputs.

## DESCRIPTION

## USER INPUT ASSIGNMENT

HI	HI-LO
LO	dSP

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, display hold, or print and reset is selected in the User Input Function menu.

## 6.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-5Et)

### MAX DISPLAY ENABLE

NO YES

Enables the Maximum Display Capture capability.

### MAX CAPTURE DELAY TIME

00 to 9999 sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN DISPLAY ENABLE

NO YES

Enables the Minimum Display Capture capability.

### MIN CAPTURE DELAY TIME

00 to 9999 sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

NO YES

Select YES to perform either of the Factory Service Operations shown below.

### RESTORE FACTORY DEFAULT SETTINGS

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rE5Et and then return to Code 00. Press the SEL button to exit the module.

### VIEW VERSION DISPLAY

Entering Code 50 will display the version (x.x) of the meter. The display then returns to Code 00. Press the SEL button to exit the module.

### CALIBRATION

The CUB5I uses stored current calibration values to provide accurate current measurements. Over time, the electrical characteristics of the components inside the CUB5I will slowly change with the result that the stored calibration values no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the CUB5I involves a current calibration which should only be performed by individuals experienced in calibrating electronic equipment. Allow 30 minute warm up before performing any calibration related procedure. The following procedures should be performed at an ambient temperature of 15 to 35 °C (59 to 95 °F).

*CAUTION: The accuracy of the calibration equipment will directly affect the accuracy of the CUB5I.*

### Current Calibration

1. Connect the negative lead of a precision DC current source with an accuracy of 0.01% or better to the COMM terminal. Leave the positive lead of the DC current source unconnected.
2. With the display at Code 48, press and hold the SEL button for 2 seconds. Unit will display [RL NO]
3. Press the RST button to select the range to be calibrated.
4. Press the SEL button. Display reads 0.0A
5. With the positive lead of the DC current source unconnected, press SEL. Display reads [RL] for about 8 seconds.
6. When the display reads the selected range, connect the positive lead of the DC current source to INP+ and apply full-scale input signal for the range. (Note: For 200 mA range, apply 100 mA as indicated on the display.)
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads [RL NO], press the SEL button to exit calibration.

# 6.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

## PARAMETER MENU

### DISPLAY UPDATE TIME

This parameter sets the display update time in seconds.

### DISPLAY COLOR (BACKLIGHT UNIT ONLY)

Enter the desired display color, red or green. This parameter is active for backlight units only.

### FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The YES selection allows the SEL button to toggle through the enabled displays.

### DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

### FRONT PANEL RESET ENABLE (RST)

This selection allows the RST button to reset the selected value(s).

### PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

### ZERO DISPLAY WITH DISPLAY RESET

This parameter enables the RST button or user input to zero the input display value, causing the display reading to be offset.

Note: For this parameter to operate, the RST button or User Input being used must be set to dSP and the Input value must be displayed. If these conditions are not met, the display will not zero.

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming with a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

### DISPLAY SCROLL ENABLE

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

### UNITS INDICATOR SELECTION

This parameter activates the Units Indicator on the display. There are two methods of selecting the Indicator. List will present a group of Units preprogrammed into the meter. Segments allows the user to choose which of the segments should light.

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at CodE prompt *
		100-999	CodE prompt	With correct code entry at CodE prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	CodE prompt	With correct code entry at CodE prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

# 6.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

The Setpoint Output Parameters are only active when an optional output module is installed in the meter.

## SETPOINT SELECT

Enter the setpoint (output) to be programmed. The *n* in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to SPSEL. Repeat steps for each setpoint to be programmed. Select **NO** to exit the module. The number of setpoints available is setpoint output card dependent.

## SETPOINT 2 ENABLE

Select **YES** to enable Setpoint 2 and access the setup parameters. If **NO** is selected, the unit returns to SPSEL and setpoint 2 is disabled.

## SETPOINT ACTION

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bL = High Acting, with balanced hysteresis
- LO-bL = Low Acting, with balanced hysteresis
- HI-Ub = High Acting, with unbalanced hysteresis
- LO-Ub = Low Acting, with unbalanced hysteresis

## SETPOINT VALUE

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

## HYSTERESIS VALUE

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

## ON TIME DELAY

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

## OFF TIME DELAY

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

## OUTPUT RESET ACTION

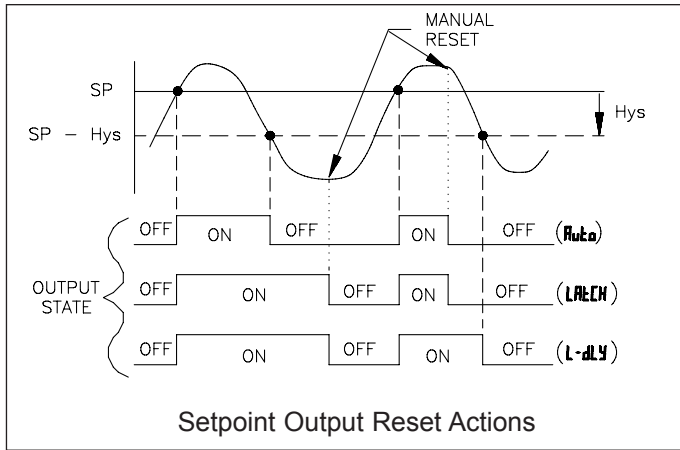

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST**

button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the corresponding "on" output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dly** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding "on" output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dly** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **d5P** and the Input value must be displayed. If these conditions are not met, the output will not reset.

### STANDBY OPERATION

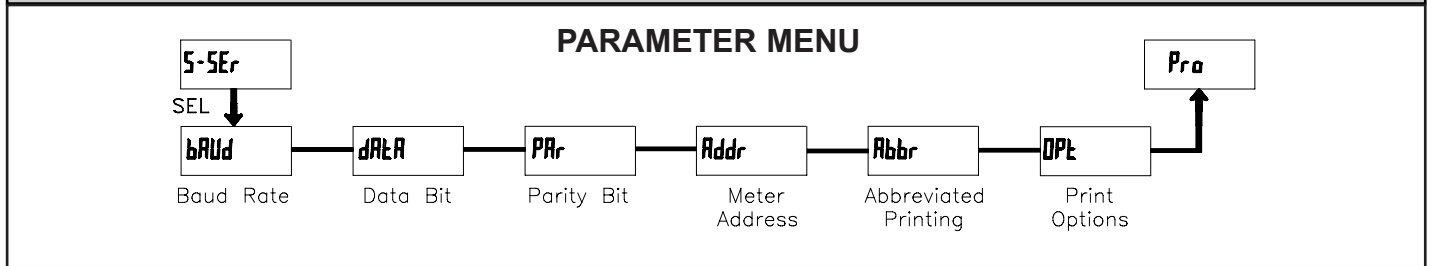

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset Action.

### CHANGE DISPLAY COLOR w/OUTPUT STATE

This parameter enables the backlight CUB5 to switch the backlight color when the output state changes. This parameter is only active for the backlight version.

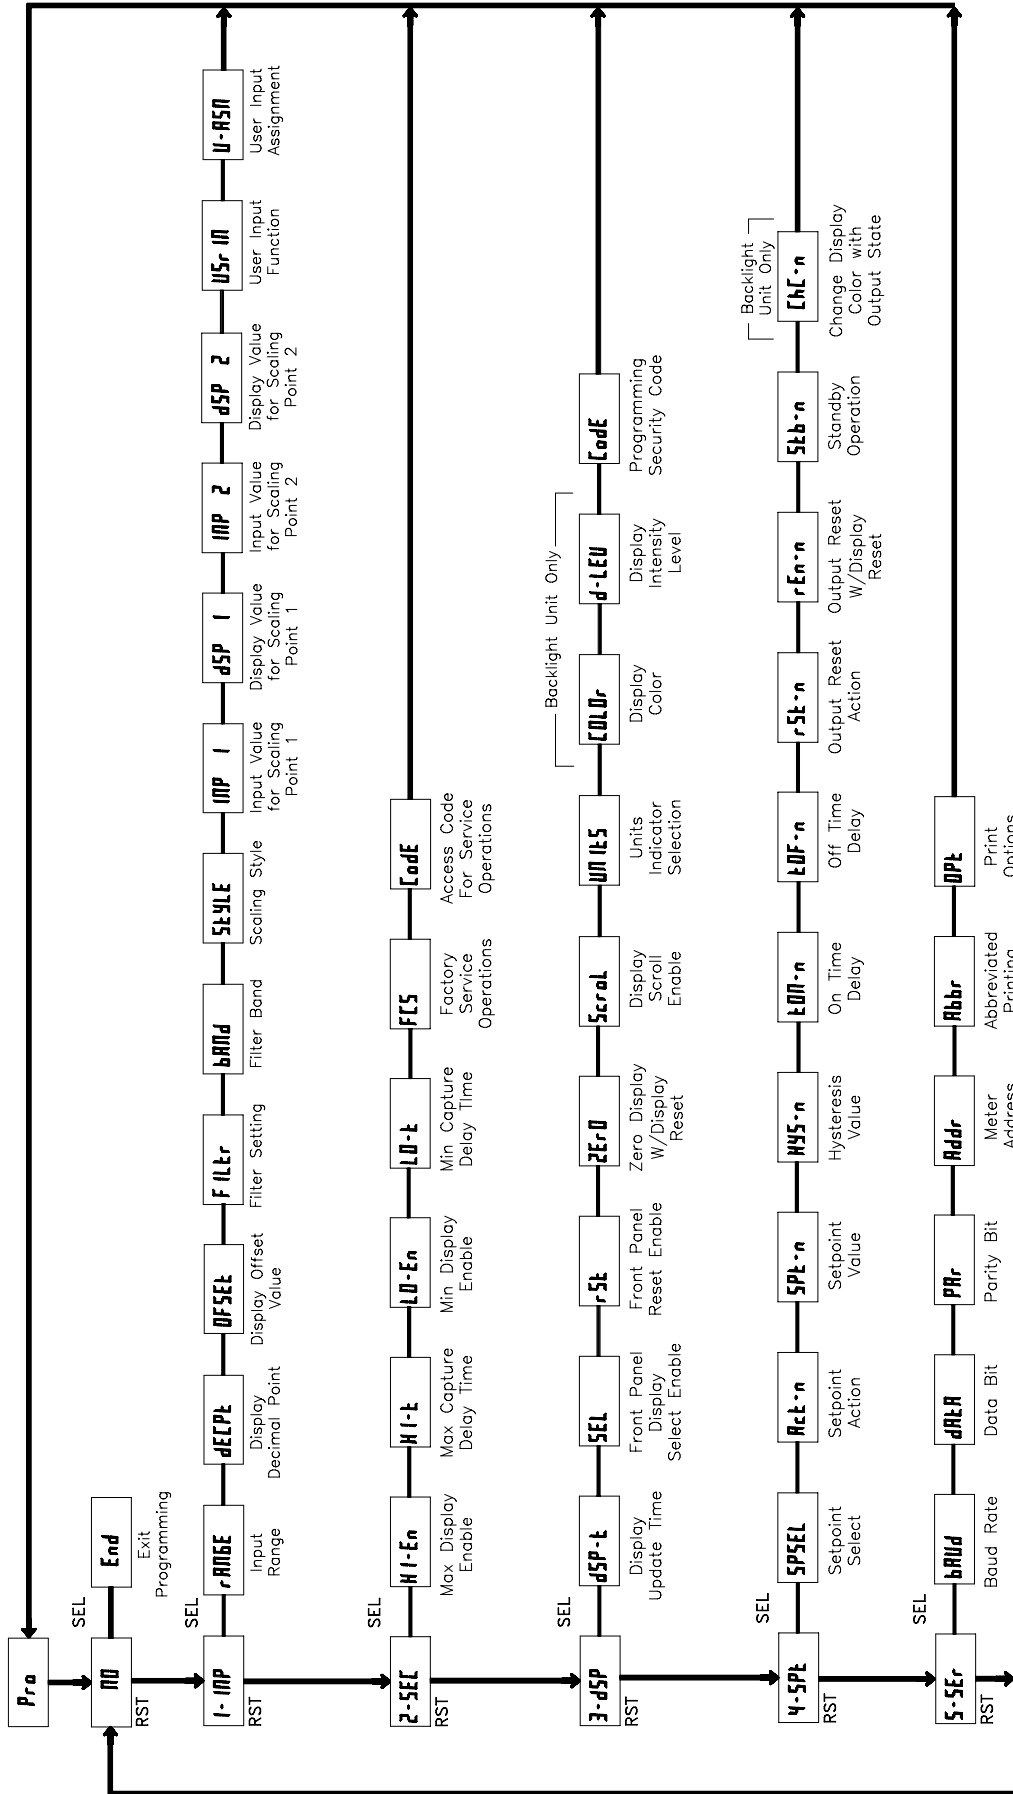

## 6.5 MODULE 5 - SERIAL SETUP PARAMETERS (5-5Er)

The Serial Setup Parameters are only active when the optional RS232 or RS485 serial communications module is installed in the meter. Refer to the CUB5COM bulletin for complete details on CUB5 serial communications.

# CUB5I PROGRAMMING QUICK OVERVIEW

Press and hold **SEL** button to enter Programming Mode.

# MODEL PAXLI - PAX LITE CURRENT METERS & MODEL PAXLV - PAX LITE VOLTMETERS

- **FOUR MULTI-RANGE UNITS COVER:**
  - 199.9  $\mu$ A to 1.999 A \*, 199.9 mV (AC or DC)
  - 1.999 V to 300 V (AC or DC)
- **3 1/2-DIGIT, 0.56" (14.2 mm) HIGH LED DISPLAY W/POLARITY**
- **BUILT-IN SCALING PROVISIONS**
- **SELECTABLE DECIMAL POINT LOCATION**
- **AUTO ZEROING CIRCUITS**
- **OVER-RANGE INDICATION**
- **NEMA 4X/IP65 SEALED FRONT BEZEL**
- **OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT**

\* Accessory Shunts Available For Higher Current Ranges.

## GENERAL DESCRIPTION

PAX Lite Current and Volt Meters are premium quality instruments designed for tough industrial applications. With multi-range capability, built-in provision for scaling, and DIP switch selectable decimal points, these meters offer the ultimate in application flexibility. Four models cover your voltage and current indicator needs. The meter can provide direct readout from pressure, speed or flow transducers, or any other variable that can be translated to voltage or current. The built-in scaling allows the display to be scaled to the desired engineering unit.

The 3 1/2 -digit bi-polar display (minus sign displayed when current or voltage is negative) features a 0.56" high, 7-segment LEDs for easy reading. The meter is also available with custom units label capability. Using the PAX label kit (PAXLBK30), the selected label is installed behind the panel, keeping it safe from washdown or other environmental conditions. A DIP switch is used to control the backlight for the units label.

The meters have a NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, allowing the meter to provide a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## DEFINITION OF TERMS

**INSTALLATION CATEGORY (overvoltage category) I, (CAT I):**  
Signal level, special equipment or parts of equipment, telecommunication, electronic, etc. with smaller transient overvoltages than Installation Category (overvoltage category) II. (See IEC 664 & IEC 61010)

**INSTALLATION CATEGORY (overvoltage category) II, (CAT II):**  
Local level, appliances, portable equipment, etc. with smaller transient overvoltages than Installation Category (overvoltage category) III. (See IEC 664 & IEC 61010)

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

		100 Amp DC Current Shunt	APSCM100

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 3 1/2-digit, 0.56" (14.2 mm) high, 7-segment LED, (-) minus sign displayed when current or voltage is negative. Decimal points inserted before 1st, 2nd, or 3rd least significant digits by DIP switch selection.
- POWER:** 115/230 VAC, switch selectable. Allowable power line variation  $\pm 10\%$ , 50/60 Hz, 6 VA.

**Isolation:** 2300 Vrms for 1 min. between input and supply

**Working Voltage:** 300 V max., CAT II

- INPUT RANGES/RESOLUTION:** (Selectable by jumper connections.):

AC Voltmeters	AC Current Meters	DC Voltmeters	DC Current Meters
0-1.999 V/1 mV	0-199.9 $\mu$ A/0.1 $\mu$ A	$\pm 1.999$ V/1 mV	$\pm 199.9$ $\mu$ A/0.1 $\mu$ A
0-19.99 V/10 mV	0-1.999 mA/1 $\mu$ A	$\pm 19.99$ V/10 mV	$\pm 1.999$ mA/1 $\mu$ A
0-199.9 V/100 mV	0-19.99 mA/10 $\mu$ A	$\pm 199.9$ V/100 mV	$\pm 19.99$ mA/10 $\mu$ A
0-300 V/1 V	0-199.9 mA/100 $\mu$ A	$\pm 300$ V/1 V	$\pm 199.9$ mA/100 $\mu$ A
	0-1.999 A/1 mA		$\pm 1.999$ A/1 mA
	0-199.9 mV/100 $\mu$ V		$\pm 199.9$ mV/100 $\mu$ V

**Working Voltage:** 300 V max., CAT II

- ACCURACY:**

**AC Voltmeters:**  $\pm(0.1\%$  of Reading + 3 digits) (45-500 Hz)

**AC Current Meters (45-500 Hz):**

**199.9  $\mu$ A/199.9 mV, 1.999 mA, 19.99 mA:**  $\pm(0.1\%$  of Reading + 3 digits)

**199.9 mA:**  $\pm(0.15\%$  of Reading + 3 digits)

**1 A:**  $\pm(0.5\%$  of Reading + 3 digits)

**DC Voltmeters:**  $\pm(0.1\%$  of Reading + 1 digit)

**DC Current Meters:**

**199.9  $\mu$ A/199.9 mV, 1.999 mA, 19.99 mA:**  $\pm(0.1\%$  of Reading + 1 digit)

**199.9 mA:**  $\pm(0.15\%$  of Reading + 1 digit)

**1.999 A:**  $\pm(0.5\%$  of Reading + 1 digit)

*Note: Any individual range may be recalibrated (scaled) to 0.1% accuracy with appropriate calibration equipment.*

- OVER-RANGE INDICATION:** on all modes is indicated by blanking 3 least significant digits.
- MAX. VOLTAGE ON LOWEST INPUT RANGE:** 75 VAC or DC (Both voltmeters and current meters).
- MAX. VOLTAGE ON TERMINAL BLOCK:** 300 VAC or DC (Both voltmeters and current meters).
- MAX. CURRENTS (FOR CURRENT METERS):**  
**199.9  $\mu$ A through 19.99 mA:** 10 times max. range current  
**199.9 mA:** 1 A  
**1.999 A:** 3 A

*Caution: In circuits where fault currents can exceed the maximum shunt current, a fast-blow fuse should be installed in series with the input signal. Otherwise, a slow blow 10 amp fuse is recommended that will allow for start-up over current situations, while still protecting the instrument.*

- TEMPERATURE COEFFICIENTS:**

Current meters	Voltmeters
DC: $\pm 100$ PPM/ $^{\circ}$ C	DC: $\pm 75$ PPM/ $^{\circ}$ C
AC: $\pm 200$ PPM/ $^{\circ}$ C	AC: $\pm 150$ PPM/ $^{\circ}$ C

- ENVIRONMENTAL CONDITIONS:**

**Operating Temperature:** 0 $^{\circ}$  to 60 $^{\circ}$ C

**Storage Temperature:** -40 $^{\circ}$  to 80 $^{\circ}$ C

**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing)

**Altitude:** Up to 2000 meters

- RESPONSE TIME TO STEP CHANGE INPUT:** 1 sec. nominal
- READING RATE:** 2.5 readings/sec., nominal

- NORMAL MODE REJECTION:** 50 dB 50/60 Hz (DC units only)
- COMMON MODE REJECTION:** 110 dB DC or 50/60 Hz (DC units only)
- COMMON MODE VOLTAGE (COMM. TO EARTH):** 350 volt peak
- CERTIFICATIONS AND COMPLIANCES:**

## SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA C22.2 No. 61010-1

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #UL/8843A/UL

CB Scheme Test Report #04ME11209-20041018

Issued by Underwriters Laboratories, Inc.

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

## ELECTROMAGNETIC COMPATIBILITY:

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion B 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion B 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle; 40 % variation

### Emissions:

Emissions	EN 55011	Class B
-----------	----------	---------

### Notes:

- Criterion A: Normal operation within specified limits.*
- Criterion B: Temporary loss of performance from which the unit self-recovers.*

- CONNECTIONS:** High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gage: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.
- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 use. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Panel gasket and mounting clip included.
- WEIGHT:** 0.65 lbs. (0.24 Kg)

# ACCESSORIES

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled by a DIP switch.

## EXTERNAL CURRENT SHUNTS (APSCM)

To measure DC current signals greater than 2 ADC, a shunt must be used. The APSCM010 current shunt converts a maximum 10 ADC signal into 100.0 mV. The APSCM100 current shunt converts a maximum 100 ADC signal into 100.0 mV. The continuous current through the shunt is limited to 115% of the rating.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

# 2.0 SETTING THE JUMPERS AND SWITCHES

The meter has an input jumper and switches, which must be checked and/or changed prior to applying power. To access the input jumper and switches, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Power Selection Switch

Caution: Insure the AC power selection switch is set for the proper voltage before powering the meter. The meter is shipped from the factory in the 230 VAC position.

## Input Range Jumper

A jumper is used for selection of the voltage or current input range. Select the proper input range that will be high enough to avoid input signal overload. It is important that only one jumper position is used at a time. Avoid placing a jumper across two different input ranges.

## Set-Up DIP Switches

A DIP switch is located inside the meter. It is used for the selection of decimal points, backlight annunciator, and scaling. Selecting the "ON" position enables the function.

SWITCH	FUNCTION
1	Decimal Point 1 (000.0)
2	Decimal Point 2 (00.00)
3	Decimal Point 3 (0.000)
4	Backlight Annunciator for Units Label
5	Enables the Scaling Pot

## PAXLI Jumper Selection

### JUMPER SELECTIONS

The  $\surd$  indicates factory setting.

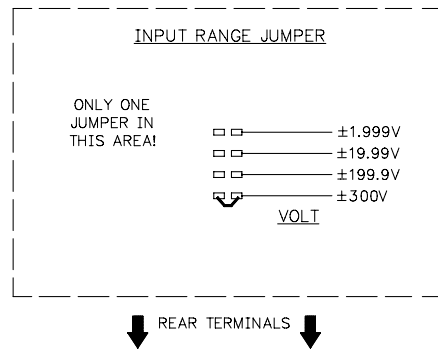

# PAXLV Jumper Selection

## JUMPER SELECTIONS

The  indicates factory setting.

## 3.0 WIRING THE METER

### WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC#SNUB0000.

Terminal 3: - Amps DC/AC

# 4.0 SCALING THE METER

## PAXLV

### DIRECT VOLTMETER READOUT

When the application requires direct voltmeter readout, the Scale Switch should remain in the "OFF" position. The Input Range Jumper is set to the voltage range being applied. It is possible to select a range higher than being applied to get lower resolution. The Decimal Point switches are set to resolution of the selected Input Range Jumper.

### SCALING VOLTMETER READOUT

In many industrial applications, a voltmeter is required to display a reading in terms of PSI, RPM, or some other unit of measure. The signal voltage being measured can be generated by a transducer that senses the variations and delivers a linear output voltage. To provide the desired readout at the specified voltage, the voltmeter must be scaled.

Place the Scale Switch in the "ON" position. This enables the Scale Potentiometer which is accessible from the back of the meter. (Enabling the Scale Potentiometer does NOT affect the calibration of the meter.) Place the Decimal Point Switches to the proper location. To properly set the Input Range Jumper, the Division Factor must be determined by first using the below formula. After the Division Factor is calculated, use the Division Factor Range Selection Chart to choose the proper Input Range Jumper setting. Apply the meter power and the voltage signal. Adjust the Scale Potentiometer to the desired value.

This scaling only effects the span. There is no offset scaling. This means that only zero voltage can display a value of zero.

DIVISION FACTOR FORMULA:

$$\frac{VT \times D.D.P.}{D.R.} = D.F.$$

### WHERE:

VT = Maximum Transducer Output  
D.D.P. = Display Decimal Point  
D.F. = Division Factor  
D.R. = Desired Reading

### D.D.P.

0.000 = 1 The Display Decimal Point  
00.00 = 10 (D.D.P.) is determined by  
000.0 = 100 the desired decimal point  
0000 = 1000 placement in the readout.

After the Division Factor for the application has been calculated, the proper voltage range jumper can be selected. Use the "Division Factor Range Selection Chart" to choose the proper jumper setting.

### DIVISION FACTOR RANGE SELECTION CHART

D.F.	Use Input Position
0.1 to 1.2	Pos 1: 0-1.999 VDC
1.2 to 10.5	Pos 2: 0-19.99
10.5 to 100.5	Pos 3: 0-199.9
100.5 to 1300	Pos 4: 0-300

*Note: Only one voltage jumper should be selected. Install the jumper before the voltage signal is applied.*

### BLOCK DIAGRAM PAXLV

**EXAMPLE:** A relative humidity transducer delivers a 7.0 VDC voltage at a relative humidity of 75%.

$$D.F. = \frac{VT \times D.D.P.}{D.R.} = \frac{7.0 \times 1000}{75} = 93.3$$

This Division Factor is between 10.5 and 100.5, therefore jumper position 3 (199.9 V) is selected. The Scaling Potentiometer is then adjusted for the desired readout at a known relative humidity.

# PAXLI

## DIRECT CURRENT METER READOUT

When the application requires direct current meter readout, the Scale Switch should remain in the "OFF" position. The Input Range Jumper is set to the current range being applied. It is possible to select a range higher than being applied to get lower resolution. The Decimal Point switches are set to resolution of the selected Input Range Jumper.

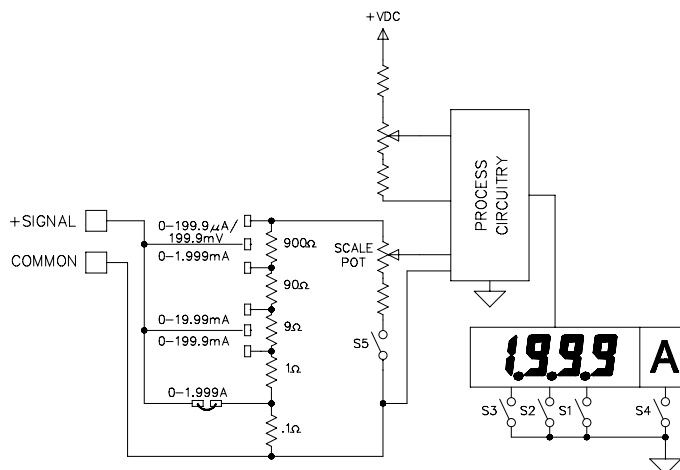

## SCALING CURRENT METER READOUT

In many industrial applications, a current meter is required to display a reading in terms of PSI, RPM, or some other unit of measure. The signal voltage being measured can be generated by a transducer that senses the variations and delivers a linear output voltage. To provide the desired readout at the specified current, the current meter must be scaled.

Place the Scale Switch in the "ON" position. This enables the Scale Potentiometer which is accessible from the back of the meter. (Enabling the Scale Potentiometer does NOT affect the calibration of the meter.) Place the Decimal Point Switches to the proper location. The Input Range Jumper is set to the current range being applied. Apply the meter power and the current signal. Adjust the Scale Potentiometer to the desired value. Scaling to obtain a numerical readout higher than the normal value of the current can also be accomplished, in most cases, by selecting a lower current range. However, the maximum current for the range must not be exceeded. (See Specifications for maximum input currents.)

This scaling only effects the span. There is no offset scaling. This means that only zero amps can display a value of zero.

## BLOCK DIAGRAM PAXLI

**EXAMPLE:** The Pax Current Meter has been connected to measure a circuit current to 120.0 mA maximum. However, in this application, the display is to indicate percent of load current with 120.0 mA equivalent to 100.0 percent. The scale potentiometer is adjusted to reduce the normal 120.0 mA signal input display reading of 120.0 to indicate the desired reading of 100.0 on the display. Scaling to obtain a numerical readout higher than the normal value of the current can also be accomplished in most cases by selecting a lower current range. However, the maximum current for the range must not be exceeded. (See Specifications for maximum input currents.)

# 5.0 TROUBLESHOOTING

PROBLEM	REMEDIES
NO DISPLAY	<b>CHECK:</b> Power switch and line voltage
INCORRECT DISPLAY	<b>CHECK:</b> Input jumper position <b>CHECK:</b> Scaling adjustment pot DIP switch position <b>ADJUST:</b> Scaling pot <b>VERIFY:</b> Input Signal
OVER-RANGE INDICATION	<b>CHECK:</b> Input jumper position <b>VERIFY:</b> Input signal

For further assistance, contact technical support at the appropriate company numbers listed.

# 6.0 CALIBRATION

The meter has been fully calibrated at the factory. Scaling to convert the input signal to a desired display value is performed by enabling the scale pot DIP switch. If the meter appears to be indicating incorrectly or inaccurately, refer to Troubleshooting before attempting to calibrate the meter.

When recalibration is required (generally every 2 years), it should only be performed by qualified technicians using appropriate equipment.

## Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better and an external meter with an accuracy of 0.005% or better.

Before starting, verify that the Input Range Jumper is set for the range to be calibrated. Also verify that the precision signal source is connected and ready. Allow a 30 minute warm-up period before calibrating the meter.

Then perform the following procedure:

1. Place jumper in 2 V range (PAXLV) or 2 mA range (PAXLI).
2. Set the DIP switch off to disable the scaling pot.
3. Apply half scale input signal.
4. Adjust calibration potentiometer as necessary for the display to read 1000 (ignore decimal point).
5. Apply zero signal and ensure display reads zero.
6. Apply full scale signal and ensure display reads 999.

*Note: Any individual range may be recalibrated (scaled) to 0.1% accuracy with appropriate calibration equipment.*

# MODEL PAXLIT - PAX LITE 5 AMP AC CURRENT METER

- 5 AMP AC CURRENT INPUT\*
- 3 1/2-DIGIT, 0.56" (14.2 mm) HIGH LED DISPLAY
- SELECTABLE DECIMAL POINT LOCATION
- BUILT-IN SCALING PROVISIONS
- OVER-RANGE INDICATION
- NEMA 4X/IP65 SEALED FRONT BEZEL
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT

\* Accessory Shunts Available For Higher Current Ranges.

## GENERAL DESCRIPTION

PAXLIT 5 Amp AC Current Meter provides the capability of measuring large AC currents. The internal current shunt in the PAXLIT can measure up to 5 Amps AC current directly. Using an external current transformer, AC currents of up to 1,999 Amps can be measured and displayed.

The PAXLIT can be scaled, using the scaling potentiometer, to display between 200 and 1999 when measuring full scale current. Using the DIP switch selectable decimal points, the display can be customized for practically any application.

The 3½-digit bi-polar display (minus sign displayed when current is negative) features a 0.56" high, 7-segment LEDs for easy reading. The meter is also available with custom units label capability. Using the PAX label kit (PAXLBK30), the selected label is installed behind the panel, keeping it safe from washdown or other environmental conditions. A DIP switch is used to control the backlight for the units label.

The meters have a NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, allowing the meter to provide a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## DEFINITION OF TERMS

### INSTALLATION CATEGORY (overvoltage category) I, (CAT I):

Signal level, special equipment or parts of equipment, telecommunication, electronic, etc. with smaller transient overvoltages than Installation Category (overvoltage category) II. (See IEC 664 & IEC 61010)

### INSTALLATION CATEGORY (overvoltage category) II, (CAT II):

Local level, appliances, portable equipment, etc. with smaller transient overvoltages than Installation Category (overvoltage category) III. (See IEC 664 & IEC 61010)

CAUTION: Read complete instructions prior to installation and operation of the unit.

CAUTION: Risk of electric shock.

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 3 1/2-digit, 0.56" (14.2 mm) high, 7-segment LED. Decimal points inserted before 1st, 2nd, or 3rd least significant digits by DIP switch selection.
- POWER:** 115/230 VAC, switch selectable. Allowable power line variation  $\pm 10\%$ , 50/60 Hz, 6 VA.  
**Isolation:** 2300 Vrms for 1 min. between input and supply  
**Working Voltage:** 300 V max., CAT II
- SIGNAL INPUT:**  
**Range:** 0 to 5 Amps AC @ 45 to 400 Hz  
**Resolution:** 2.5 mA  
**Working Voltage:** 300 V max., CAT II
- ACCURACY:**  $\pm(0.5\%$  of reading + 5 digits).
- OVER-RANGE INDICATION:** is indicated by blanking 3 least significant digits.
- MAX SHUNT CURRENT:** 50 Amps for 1 sec.; 8 Amps continuous.  
*Caution: In circuits where fault currents can exceed the maximum shunt current, a fast-blow fuse should be installed in series with the input signal. Otherwise, a slow blow 8 Amp fuse is recommended that will allow for start-up over current situations, while still protecting the instrument.*
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0° to 60°C  
**Storage Temperature:** -40° to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing)  
**Altitude:** Up to 2000 meters
- RESPONSE TIME TO STEP CHANGE INPUT:** 1 sec. nominal
- READING RATE:** 2.5 readings/sec., nominal
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion B 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion B 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle; 40 % variation
<b>Emissions:</b> Emissions	EN 55011	Class B

### Notes:

- Criterion A: Normal operation within specified limits.*
  - Criterion B: Temporary loss of performance from which the unit self-recovers.*
- CONNECTIONS:** High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gage: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.
  - CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 use. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Panel gasket and mounting clip included.
  - WEIGHT:** 0.65 lbs. (0.24 Kg)

## ACCESSORIES

### UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled by a DIP switch.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

# 2.0 SETTING THE SWITCHES

The meter has switches, which must be checked and/or changed prior to applying power. To access the switch, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Power Selection Switch

Caution: Insure the AC power selection switch is set for the proper voltage before powering the meter. The meter is shipped from the factory in the 230 VAC position.

## Set-Up DIP Switches

A DIP switch is located inside the meter. It is used for the selection of decimal points, backlight annunciator, and scaling. Selecting the "ON" position enables the function.

SWITCH	FUNCTION
1	Decimal Point 1 (000.0)
2	Decimal Point 2 (00.00)
3	Decimal Point 3 (0.000)
4	Backlight Annunciator for Units Label
5	Enables the Scaling Pot

E

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC#SNUB0000.

## 3.1 POWER WIRING

### AC Power

Terminal 1: VAC

Terminal 2: VAC

## 3.2 INPUT SIGNAL WIRING

### Current Signal (self powered)

Terminal 4: + Amps AC

Terminal 3: - Amps AC

# 4.0 SCALING THE METER

## FACTORY SCALING

The meter is calibrated from the factory for 5 Amps AC current input to show 1999. This scaling will be used when the Scale Switch is in the "OFF" position.

## SCALING READOUT

Place the Scale Switch in the "ON" position. This enables the Scale Potentiometer which is accessible from the back of the meter. (Enabling the Scale Potentiometer does NOT affect the calibration of the meter.) Place the Decimal Point Switches to the proper location. Apply the meter power and the current signal. Adjust the Scale Potentiometer to the desired value.

This scaling only effects the span. There is no offset scaling. This means that only zero current can display a value of zero.

At 5 Amps AC current input, the display can be scaled from 1999 down to 200 by using the scaling potentiometer. For display values below 200, turn on the appropriate Decimal Point Switch and then adjust the potentiometer to achieve the desired display value. Example: A customer wants to display 50 Amps because he is using a 50:5 CT. In this case, he must turn DIP switch 1 on for a decimal point and DIP switch 5 on for scaling. Then apply the 5 Amp signal and turn the scaling pot until 50.0 is shown on the display.

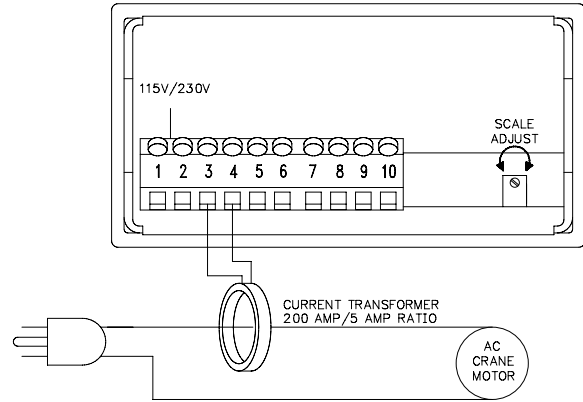

# 5.0 APPLICATION

## MOTOR CURRENT MEASUREMENT USING A CURRENT TRANSFORMER

The PAXLIT 5 Amp AC Current Meter is configured by simply connecting the “COMM.” (Terminal 3) and the “5AMP” (Terminal 4) to the external current transformer. The current carrying wire to be sensed is passed through the center of the current transformer. The resolution of the display, in this case, is 0.1 Amp, therefore, “Switch #1” is selected.

The meter is now ready to be scaled. The installer has access to a calibrated portable digital current meter capable of measuring the motor current. Scaling will be accomplished by adjusting the scaling pot on the PAXLIT meter to agree with the portable digital current meter. The operator turns on the AC motor and lifts a large weight to load the motor. The installer then simply adjusts the scaling adjustment, located at the rear of the unit, until the display is equal to the value indicated on the portable current meter. The meter will now indicate the load current of the motor precisely.

**CAUTION:** It is recommended that the current transformer be internally protected or that a voltage clamping circuit be provided, preventing dangerous high voltage across the CT secondary windings in case of accidental opening of the secondary output leads when the primary is energized.

In order to prevent risk of electric shock ensure CT is installed according to local NEC regulations for installation of current instrument transformers.

# 6.0 TROUBLESHOOTING

PROBLEM	REMEDIES
NO DISPLAY	<b>CHECK:</b> Power switch and line voltage
INCORRECT DISPLAY	<b>CHECK:</b> Scaling adjustment pot DIP switch position <b>ADJUST:</b> Scaling pot <b>VERIFY:</b> Input Signal
OVER-RANGE INDICATION	<b>VERIFY:</b> Input signal

For further assistance, contact technical support at the appropriate company numbers listed.

# 7.0 CALIBRATION

The meter has been fully calibrated at the factory. Scaling to convert the input signal to a desired display value is performed by enabling the scale pot DIP switch. If the meter appears to be indicating incorrectly or inaccurately, refer to Troubleshooting before attempting to calibrate the meter.

When recalibration is required (generally every two years), it should only be performed by qualified technicians using appropriate equipment.

## Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.05% or better and an external meter with an accuracy of 0.005% or better.

Before starting, verify that the precision signal source is connected and ready. Allow a 30 minute warm-up period before calibrating the meter.

Then perform the following procedure:

1. Set the DIP switch off to disable the scaling pot.
2. Apply half scale input signal.
3. Adjust calibration potentiometer as necessary for the display to read 1000 (ignore decimal point)
4. Apply zero signal and ensure display reads zero.
5. Apply full scale signal and ensure display reads 1999.

E

# MODEL PAXLHV - PAX LITE AC VOLTAGE MONITOR

- 3-DIGIT, 0.56" (14.2 mm) HIGH LED DISPLAY
- AUTO ZEROING CIRCUIT
- NEMA 4X/IP65 SEALED FRONT BEZEL
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT
- UP TO 600 VAC MAX

## GENERAL DESCRIPTION

The Model PAXLHV is designed for AC voltage monitoring. The half-wave rectified input signal is calibrated to indicate the RMS value of a pure sinusoidal wave-form. The front bezel meets NEMA 4X/IP65 requirements when properly installed.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION:** Read complete instructions prior to installation and operation of the unit.

**CAUTION:** Risk of electric shock.

4	Backlight Annunciator for Units Label

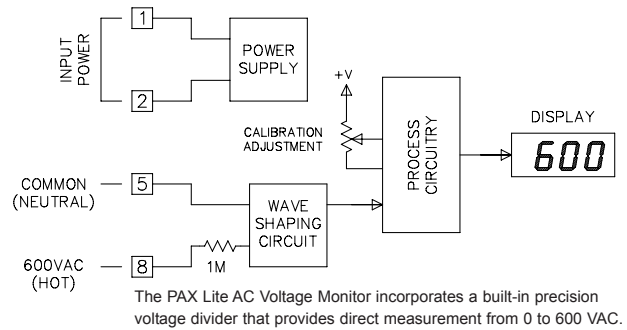

E

# 3.0 WIRING THE METER

## WIRING OVERVIEW

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. As depicted in the drawing of the Model PAXLHV, all connections are made on the terminal block located at the rear of the unit.

## BLOCK DIAGRAM

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electromagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be mounted in a metal enclosure, that is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the meter is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

- Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VB3

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## 3.1 POWER WIRING

Primary AC power is connected to terminal 1 and 2 (Marked AC Power, located on the left-hand side of the terminal block). For best results, the AC power should be relatively "Clean" and within the specified  $\pm 10\%$  variation limit. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off, should be avoided.

### AC Power

Terminal 1: VAC

Terminal 2: VAC

## 3.2 INPUT SIGNAL WIRING

Input connections are made on terminal 5 and 8. When powering the PAXLHV with the same voltage that is being measured, terminal 5 (COMM.) should be connected to neutral for the most stable reading on the display. If an unstable display results from measuring a voltage that is isolated from the supply voltage, reversing the supply voltage connections may correct this condition.

### Voltage Input

Terminal 5: Common

Terminal 8: 600 VAC

# MODEL PAXLA - PAX LITE DC VOLT/CURRENT/PROCESS METER

- 5 DIGIT, 0.56" HIGH RED LED DISPLAY
- PROGRAMMABLE SCALING AND DECIMAL POINTS
- PROGRAMMABLE USER INPUT
- DUAL 5 AMP FORM C RELAY
- UNIVERSALLY POWERED
- NEMA 4X/IP65 SEALED FRONT BEZEL
- OPTIONAL CUSTOM UNIT OVERLAY W/ BACKLIGHT
- MINIMUM AND MAXIMUM DISPLAY CAPTURE

## GENERAL DESCRIPTION

The PAXLA is a versatile meter available as a DC volt, current, or process meter with scaling and dual Form C relay outputs. The meter is programmed through the front panel buttons and the use of jumpers. The RST Key will also function as a front panel display reset.

Once the front panel programming is complete, the buttons can be disabled by a user input setting. The meter has been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXLA	Volt/Current/Process Meter with dual Relay Output	PAXLA000
PAXLBK	Unit Label Kit Accessory	PAXLBK10

## SPECIFICATIONS

- DISPLAY:** 5 digit, 0.56" (14.2 mm) intensity adjustable Red LED (-19999 to 99999)
- POWER REQUIREMENTS:**  
AC POWER: 50 to 250 VAC 50/60 Hz, 12 VA  
Isolation: 2300 Vrms for 1 min. to all inputs and outputs  
DC POWER: 21.6 to 250 VDC, 6 W  
DC Out: +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC  
+24 VDC @ 50 mA if input voltage is less than 50 VDC
- INPUT RANGES:** Jumper Selectable  
**D.C. Voltages:** 200 mV, 2 V, 20 V, 200 V, 10 V

INPUT RANGE	ACCURACY @ 23 °C LESS THAN 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
200 mV	0.1% of span	1.033 MΩ	75 VDC	10 μV	70 ppm /°C
2 V	0.1% of span	1.033 MΩ	75 VDC	0.1 mV	70 ppm /°C
20 V	0.1% of span	1.033 MΩ	250 VDC	1 mV	70 ppm /°C
200 V	0.1% of span	1.033 MΩ	250 VDC	10 mV	70 ppm /°C
10 V	0.1% of span	538 KΩ	75 V	1 mV	70 ppm /°C

**D.C. Currents:** 200 μA, 2 mA, 20 mA, 200 mA

INPUT RANGE	ACCURACY @ 23 °C LESS THAN 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
200 μA	0.1% of span	1.111 KΩ	15 mA	10 nA	70 ppm /°C
2 mA	0.1% of span	111 Ω	50 mA	0.1 μA	70 ppm /°C
20 mA	0.1% of span	11 Ω	150 mA	1 μA	70 ppm /°C
200 mA	0.1% of span	1 Ω	500 mA	10 μA	70 ppm /°C

**D.C. Process:** 4 to 20 mA, 1 to 5 VDC, 0/1 to 10 VDC

INPUT RANGE	SELECT RANGE
4 - 20 mA	Use the 20 mA range
1 - 5 VDC	Use the 10V range
1 - 10 VDC	Use the 10V range

- OVERRANGE/UNDERRANGE INDICATION:**  
**Input Overrange Indication:** "OL OL"  
**Input Underrange Indication:** "UL UL"  
**Display Overrange/Underrange Indication:** "....."/"....."
- A/D CONVERTER:** 16 bit resolution
- UPDATE RATES:**  
A/D conversion rate: 20 readings/sec.  
Display update: 500 msec min.

## DIMENSIONS In inches (mm)

## 7. USER INPUT:

User Input: Software selectable pull-up (24.7 K $\Omega$ ) or pull-down resistor (20 K $\Omega$ ) that determines active high or active low input logic.

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
Response Time: 5 msec typ.; 100 msec debounce (activation and release)

## 8. MEMORY:

Nonvolatile E<sup>2</sup>PROM retains all programming parameters when power is removed.

## 9. OUTPUT:

Type: Single FORM-C relay

Isolation To Sensor & User Input Commons: 1400 Vrms for 1 min.

Working Voltage: 150 Vrms

Contact Rating: 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)

Life Expectancy: 100,000 minimum operations

Response Time:

Turn On Time: 4 msec max.

Turn Off Time: 4 msec max.

## 10. ENVIRONMENTAL CONDITIONS:

Operating temperature: 0 to 50 °C

Storage temperature: -40 to 70 °C

Operating and storage humidity: 0 to 85% max. RH (non-condensing)

Altitude: Up to 2,000 meters

## 11. CONNECTIONS:

High compression cage-clamp terminal block

Wire Strip Length: 0.3" (7.5 mm)

Wire Gage: 30-14 AWG copper wire

Torque: 4.5 inch-lbs (0.51 N-m) max.

## 12. CONSTRUCTION:

This unit is rated for NEMA 4X/IP65 outdoor use. IP20

Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

## 13. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

Type 4X Enclosure rating (Face only), UL50

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion B 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

### Emissions:

Emissions	EN 55011	Class A
-----------	----------	---------

### Notes:

1. Criterion A: Normal operation within specified limits.

2. Criterion B: Temporary loss of performance from which the unit self-recovers.

## 14. WEIGHT:

10.4 oz. (295 g)

E

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## 2.0 SETTING THE JUMPERS

### INPUT RANGE JUMPER

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum signal input to avoid overloads.

To access the jumpers, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start on the other side latch.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## 3.0 WIRING THE METER

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

### WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

### 3.1 POWER WIRING

**Power**

Terminal 1: VAC/DC +  
Terminal 2: VAC/DC -

**DC Out Power**

Terminal 3: + 24 VDC OUT  
Terminal 4: Common

### 3.2 USER INPUT WIRING

Terminal 8: User Input  
Terminal 9: User Comm

**Sinking Logic**

**Sourcing Logic**

### 3.3 SETPOINT (OUTPUT) WIRING

Terminal 10: NC 1  
Terminal 11: NO 1  
Terminal 12: Relay 1 Common  
Terminal 13: NC 2  
Terminal 14: NO 2  
Terminal 15: Relay 2 Common

E

### 3.4 INPUT SIGNAL WIRING

**CAUTION:** Analog common is NOT isolated from user input common. In order to preserve the safety of the meter application, the Analog and DC power common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Input and Input Common terminals. Appropriate considerations must then be given to the potential of the input common with respect to earth ground. Always connect the analog signal common to terminal 7.

**Voltage Signal (self powered)**

Terminal 5: +VDC  
Terminal 7: -VDC

**Current Signal (self powered)**

Terminal 6: +ADC  
Terminal 7: -ADC

**Current Signal (2 wire requiring excitation)**

Terminal 3: +EXC  
Terminal 6: +ADC

**Current Signal (3 wire requiring excitation)**

Terminal 6: +ADC (signal)  
Terminal 7: -ADC (common)  
Terminal 3: +EXC

**Voltage Signal (3 wire requiring excitation)**

Terminal 5: +VDC (signal)  
Terminal 7: -VDC (common)  
Terminal 3: +EXC

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION
PAR	Access Programming Mode
SEL	Index display through selected displays
RST	Resets display

PROGRAMMING MODE OPERATION
Store selected parameter and index to next parameter
Advance through selection list/select digit position in parameter value
Increment selected digit of parameter value

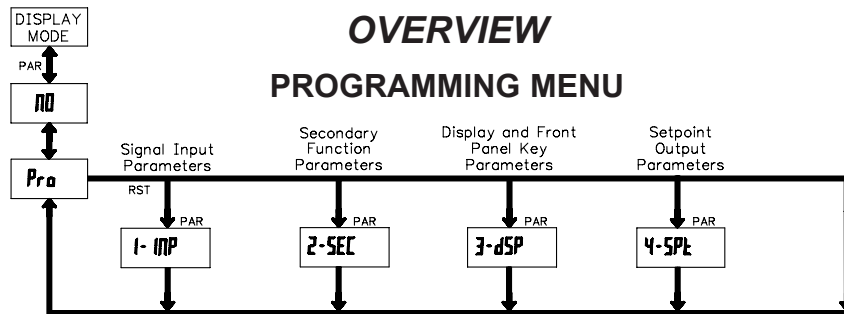

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
 MIN - Minimum display capture value

"SP1" - Below the display indicates setpoint 1 output activated.  
 "SP2" - Below the display indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (PAR BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** button. If it is not accessible, then it is locked by either a security code or a hardware lock.

## MODULE ENTRY (SEL & PAR BUTTONS)

The Programming Menu is organized into four modules. These modules group together parameters that are related in function. The display will alternate between **Pro** and the present module. The **SEL** button is used to select the desired module. The displayed module is entered by pressing the **PAR** button.

## MODULE MENU (PAR BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pro no**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL** and **RST** buttons are used to move through the selections/values for that parameter. Pressing the **PAR** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST** button increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will select the next digit to the left. Pressing the **PAR** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (PAR BUTTON)

The Programming Mode is exited by pressing the **PAR** button with **Pro no** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS (1-IMP)

## INPUT RANGE

SELECTION	RANGE	RESOLUTION	SELECTION	RANGE	RESOLUTION
200uA	200.00	μA	0.02A	20.000	mA
0.002A	2.0000	mA	0.2A	200.00	mA
0.2V	200.00	mV	20V	20.000	V
2V	2.0000	V	200V	200.00	V
10V	10.000	V			

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## DISPLAY DECIMAL POINT

SELECTION	DECIMAL POINT POSITION
0	0
00	00
000	000
0000	0000
00000	00000

Select the decimal point location for the Input, MIN and MAX displays. This selection also affects the dSP 1 and dSP 2 parameters and setpoint values and offset value.

## DISPLAY OFFSET VALUE

SELECTION	OFFSET RANGE
0.00	- 19999 to 19999

The display can be corrected with an offset value. This can be used to compensate for signal variations or sensor errors. This value is automatically updated after a Zero Display to show how far the display is offset. A value of zero will remove the effects of offset. The decimal point follows the dECPt selection.

## FILTER SETTING

SELECTION	FILTER LEVEL
0	0 1 2 3

If the displayed value is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## FILTER BAND

SELECTION	FILTER BAND RANGE
0	0 to 199 display units

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

## SCALING STYLE

SELECTION	SCALING STYLE
KEY	KEY
APLY	APLY

If Input Values and corresponding Display Values are known, the Key-in (KEY) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (APLY) scaling style must be used.

## INPUT VALUE FOR SCALING POINT 1

SELECTION	INPUT VALUE RANGE
0.00	0 to 29999

For Key-in (KEY) style, enter the first Input Value using the front panel buttons. (The Input Range selection sets the decimal location for the Input Value).

For Apply (APLY) style, the meter shows the previously stored Input Value. To retain this value, press the SEL button to advance to the next parameter. To change the Input Value, press the RST button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the SEL button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 1

SELECTION	DISPLAY VALUE RANGE
0.00	- 19999 to 99999

Enter the first Display Value by using the front panel buttons. This is the same for KEY and APLY scaling styles. The decimal point follows the dECPt selection.

## INPUT VALUE FOR SCALING POINT 2

SELECTION	INPUT VALUE RANGE
100.00	0 to 29999

For Key-in (KEY) style, enter the known second Input Value using the front panel buttons.

For Apply (APLY) style, the meter shows the previously stored Input Value for Scaling Point 2. To retain this value, press the SEL button to advance to the next parameter. To change the Input Value, press the RST button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the SEL button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 2

SELECTION	DISPLAY VALUE RANGE
100.00	- 19999 to 99999

Enter the second Display Value by using the front panel buttons. This is the same for KEY and APLY scaling styles. The decimal point follows the dECPt selection.

## General Notes on Scaling

- When using the Apply (APLY) scaling style, input values for scaling points must be confined to the range limits shown.
- The same Input Value should not correspond to more than one Display Value. (Example: 20 mA can not equal 0 and 20.)
- For input levels beyond the programmed Input Values, the meter extends the Display Value by calculating the slope from the two coordinate pairs (IMP 1 / dSP 1 & IMP 2 / dSP 2).

## USER INPUT FUNCTION

DISPLAY MODE	DESCRIPTION
<b>NO</b> No Function	User Input disabled.
<b>P-Loc</b> Program Mode Lock-out	See Programming Mode Access chart (Module 3).
<b>ZEr0</b> Zero Input (Edge triggered)	Zero the Input Display value causing Display Reading to be Offset.
<b>rESEt</b> Reset (Edge triggered)	Resets the assigned value(s) to the current input value.
<b>d-HLd</b> Display Hold	Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
<b>d-SEL</b> Display Select (Edge Triggered)	Advance once for each activation.
<b>d-LEU</b> Display Intensity Level (Edge Triggered)	Increase intensity one level for each activation.
<b>rSt-1</b> Setpoint 1 Reset	Resets setpoint 1 output.
<b>rSt-2</b> Setpoint 2 Reset	Resets setpoint 2 output.
<b>rSt-12</b> Setpoint 1 and 2 Reset	Reset both setpoint 1 and 2 outputs.

## USER INPUT ASSIGNMENT

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, or display hold is selected in the User Input Function menu.

## USER INPUT ACTIVE LEVEL

Select whether the user input is configured as active low or active high.

## 5.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-SEC)

### MAX DISPLAY ENABLE

Enables the Maximum Display Capture capability.

### FACTORY SERVICE OPERATIONS

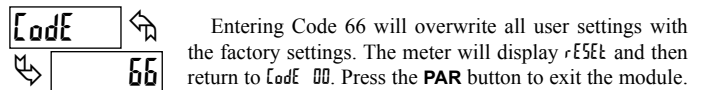

Select YES to perform any of the Factory Service Operations shown below.

### MAX CAPTURE DELAY TIME

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### RESTORE FACTORY DEFAULT SETTINGS

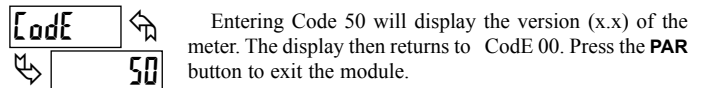

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rESEt and then return to Code 00. Press the PAR button to exit the module.

### MIN DISPLAY ENABLE

Enables the Minimum Display Capture capability.

### VIEW MODEL AND VERSION DISPLAY

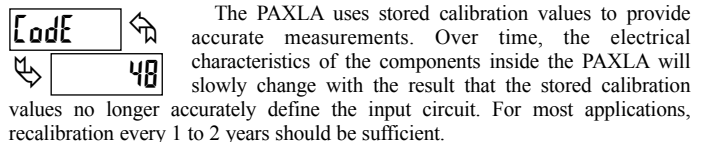

Entering Code 50 will display the version (x.x) of the meter. The display then returns to Code 00. Press the PAR button to exit the module.

### MIN CAPTURE DELAY TIME

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### CALIBRATION

The PAXLA uses stored calibration values to provide accurate measurements. Over time, the electrical characteristics of the components inside the PAXLA will slowly change with the result that the stored calibration values no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the PAXLA involves a calibration which should only be performed by individuals experienced in calibrating electronic equipment. Allow 30 minute warm up before performing any calibration related procedure. The following procedures should be performed at an ambient temperature of 15 to 35 °C (59 to 95 °F).

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the PAXLA.

## Current Calibration

1. Connect the negative lead of a precision DC current source with an accuracy of 0.01% or better to the COMM terminal. Leave the positive lead of the DC current source unconnected.
2. With the display at Code 48, press the **PAR** button. Unit will display [RL] 00
3. Press the **RST** button to select the range to be calibrated.
4. Press the **PAR** button. Display reads 000
5. With the positive lead of the DC current source unconnected, press **PAR**. Display reads [RL] for about 8 seconds.
6. When the display reads the selected range, connect the positive lead of the DC current source to the current input and apply full-scale input signal for the range. (Note: For 200 mA range, apply 100 mA as indicated on the display.) Press **PAR**. Display reads [RL] for about 8 seconds.
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads [RL] 00, press the **PAR** button to exit calibration.

## Voltage Calibration

1. Connect a precision DC voltage source with an accuracy of 0.01% or better to the volt input and COMM terminals of the PAXLA. Set the output of the voltage source to zero.
2. With the display at Code 48, press the **PAR** button. Unit will display [RL] 00.
3. Press the **RST** button to select the range to be calibrated.
4. Press the **PAR** button. Display reads 000.
5. With the voltage source set to zero (or a dead short applied to the input), press **PAR**. Display reads [RL] for about 8 seconds.
6. When the display reads the selected range, apply full-scale input signal for the range. (Note: For 200V range, apply 100V as indicated on the display.) Press **PAR**. Display reads [RL] for about 8 seconds.
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads [RL] 00, press the **PAR** button to exit calibration.

# 5.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

### DISPLAY UPDATE TIME

This parameter sets the display update time in seconds.

### DISPLAY SCROLL ENABLE

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

### FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The YES selection allows the SEL button to toggle through the enabled displays.

### UNITS LABEL BACKLIGHT\*

The Units Label Kit Accessory contains a sheet of custom unit overlays which can be installed in to the meter's bezel display assembly. The backlight for these custom units is activated by this parameter.

### FRONT PANEL RESET ENABLE (RST)

This selection allows the RST button to reset the selected value(s).

### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (1-3). The display will actively dim or brighten as levels are changed.

### ZERO DISPLAY WITH DISPLAY RESET

This parameter enables the RST button or user input to zero the input display value, causing the display reading to be offset.

Note: For this parameter to operate, the RST button or User Input being used must be set to dSP and the Input value must be displayed. If these conditions are not met, the display will not zero.

## PROGRAMMING SECURITY CODE

000 to 999

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the  $\text{CodE}$  prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the  $\text{CodE}$  prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "PAR" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at $\text{CodE}$ prompt *
		100-999	$\text{CodE}$ prompt	With correct code entry at $\text{CodE}$ prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	$\text{CodE}$ prompt	With correct code entry at $\text{CodE}$ prompt *
	Not Active	0-999	Full Programming	Immediate Access

## 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

### SETPOINT SELECT

NO SP-1 SP-2

Enter the setpoint (output) to be programmed. The  $n$  in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to  $SPSEL$ . Repeat steps for each setpoint to be programmed. Select  $NO$  to exit the module.

### SETPOINT ENABLE

YES NO

Select  $YES$  to enable Setpoint  $n$  and access the setup parameters. If  $NO$  is selected, the unit returns to  $SPSEL$  and Setpoint  $n$  is disabled.

### SETPOINT ACTION

H1-bL L0-bL H1-Ub L0-Ub

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- H1-bL = High Acting, with balanced hysteresis
- L0-bL = Low Acting, with balanced hysteresis
- H1-Ub = High Acting, with unbalanced hysteresis
- L0-Ub = Low Acting, with unbalanced hysteresis

### SETPOINT VALUE

- 99999 to 99999

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

### HYSTERESIS VALUE

1 to 99999

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

### ON TIME DELAY

00 to 5999 Sec

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OFF TIME DELAY

00 to 5999 Sec

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OUTPUT RESET ACTION

Auto LATCH L-dLY

Enter the reset action of the output. See figure for details.

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The “on” output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, or meter power cycle. When the user input or **RST** button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dLY** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dLY** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

NO YES

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

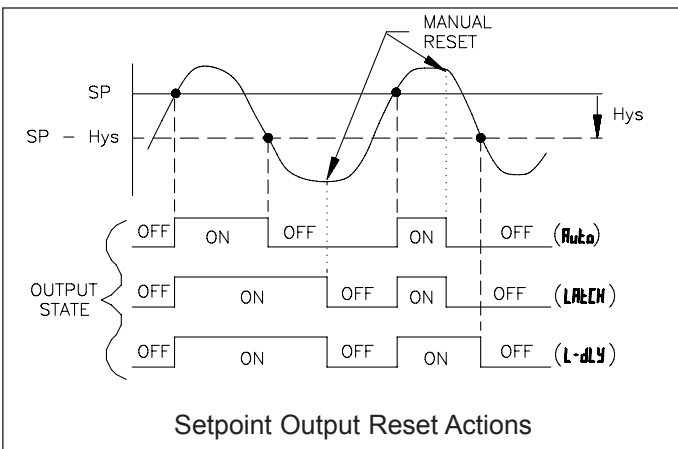

### STANDBY OPERATION

NO YES

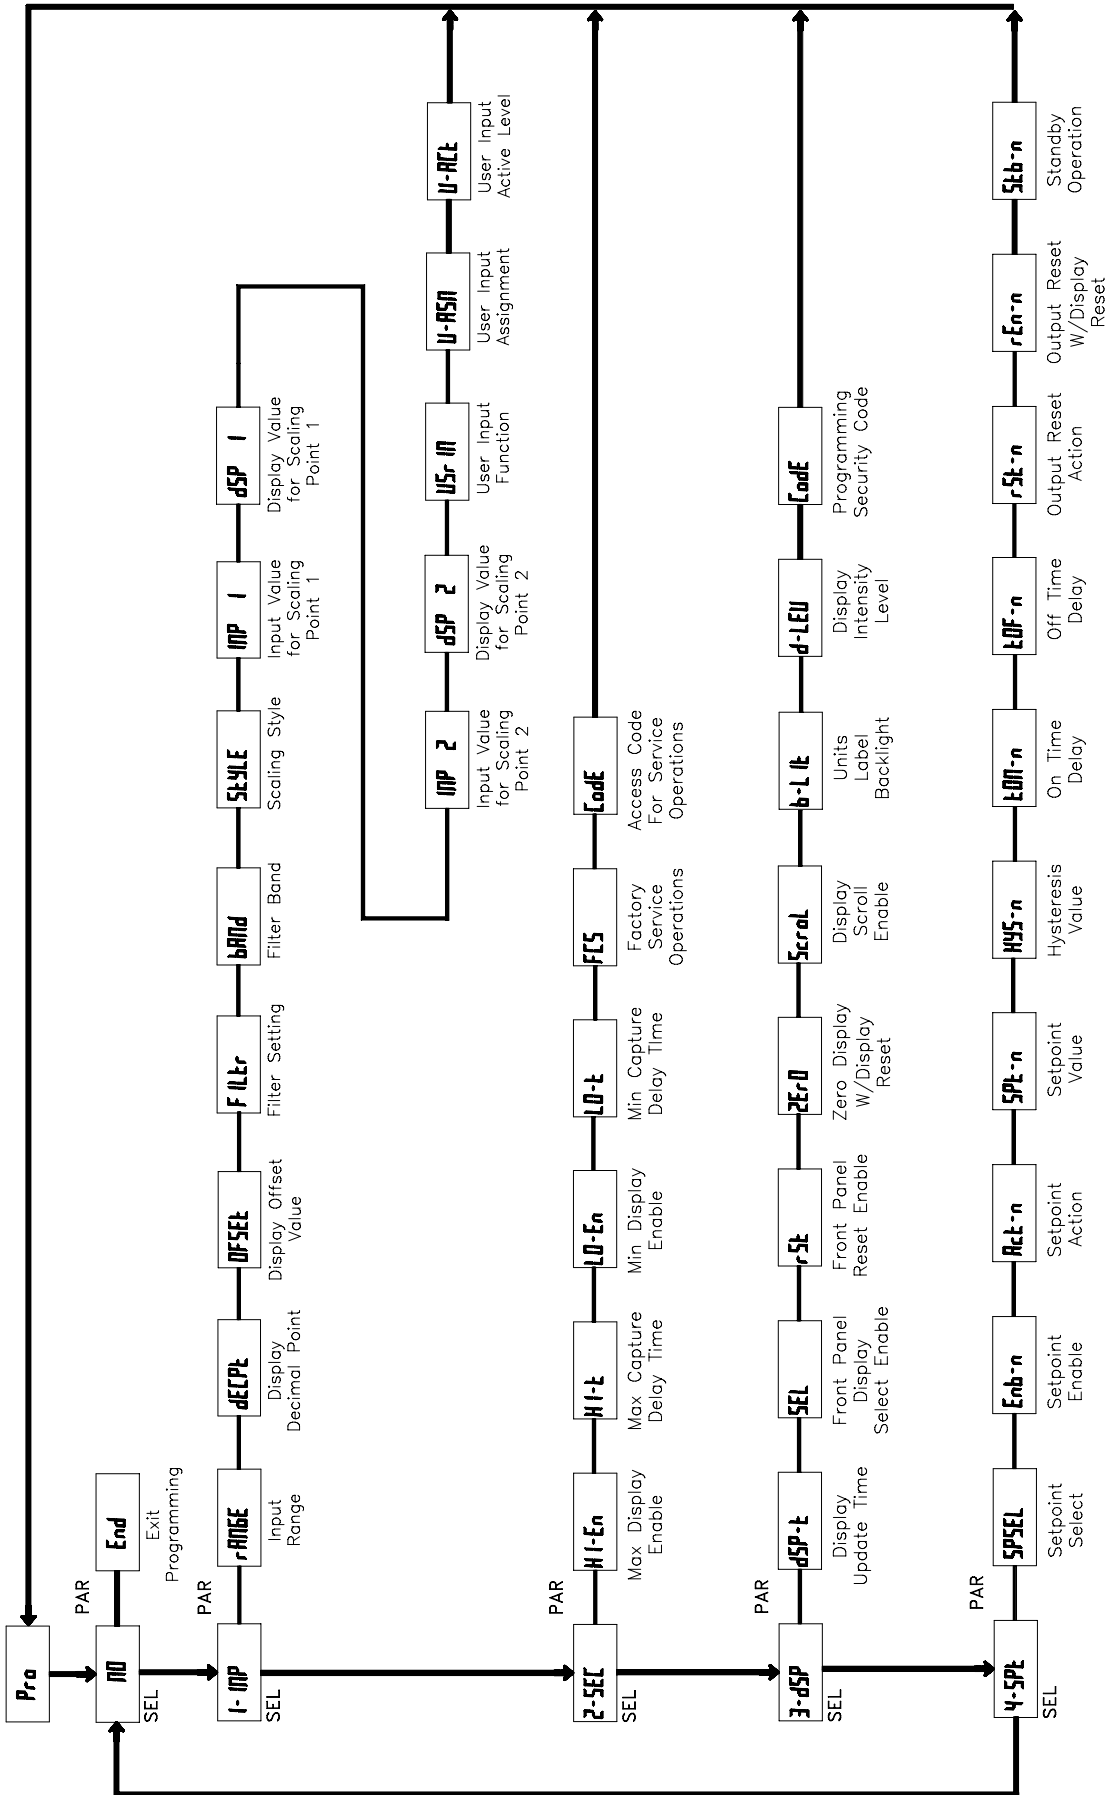

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset Action.

# MODEL DP5 – 1/8 DIN ANALOG INPUT PANEL METERS

- PROCESS, VOLTAGE, CURRENT, AND TEMPERATURE INPUTS
- 5-DIGIT 0.56" HIGH LED DISPLAY
- PROGRAMMABLE FUNCTION KEYS/USER INPUT
- 9 DIGIT TOTALIZER (INTEGRATOR) WITH BATCHING
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The DP5 Panel Meters offer many features and performance capabilities to suit a wide range of industrial applications. These meters are available in three different models to handle various analog inputs, including DC Voltage/Current, Process, and Temperature Inputs. Refer to pages 4 and 5 for the details on the specific models.

The meters provide a MAX and MIN reading memory with programmable capture time. The capture time is used to prevent detection of false max or min readings which may occur during start-up or unusual process events.

The signal totalizer (integrator) can be used to compute a time-input product. This can be used to provide a readout of totalized flow, calculate service intervals of motors or pumps, etc. The totalizer can also accumulate batch weighing operations.

Once the meters have been initially configured, the parameter list may be locked out from further modification.

The meters have been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

1. **DISPLAY:** 5 digit, 0.56" (14.2 mm) red LED, (-19999 to 99999)
  2. **POWER:**  
AC Versions:  
AC Power: 85 to 250 VAC, 50/60 Hz, 10 VA  
Isolation: 2300 Vrms for 1 min. to all inputs.  
DC Versions:  
DC Power: 11 to 36 VDC, 11 W  
AC Power: 24 VAC,  $\pm 10\%$ , 50/60 Hz, 10 VA  
Isolation: 500 Vrms for 1 min. to all inputs (50 V working).
  3. **ANNUNCIATORS:**  
MAX - maximum readout selected  
MIN - minimum readout selected  
TOT - totalizer readout selected, flashes when total overflows  
Units Label - optional units label backlight
  4. **KEYPAD:** 3 programmable function keys, 5 keys total
  5. **A/D CONVERTER:** 16 bit resolution
  6. **UPDATE RATES:**  
A/D conversion rate: 10 readings/sec.  
Step response: 200 msec. max. to within 99% of final readout value (digital filter and internal zero correction disabled)  
700 msec. max. (digital filter disabled, internal zero correction enabled)  
Display update rate: 1 to 10 updates/sec.  
Max./Min. capture delay time: 0 to 3275 sec.
  7. **DISPLAY MESSAGES:**  
"OLOL" - Appears when measurement exceeds + signal range.  
"ULUL" - Appears when measurement exceeds - signal range  
DP5T: "OPEN" - Appears when open sensor is detected.  
DP5T: "SHrt" - Appears when shorted sensor is detected (*RTD only*)  
". . ." - Appears when display values exceed + display range.  
"- . ." - Appears when display values exceed - display range.
  8. **INPUT CAPABILITIES:** See specific product specifications, pages 4-5
  9. **EXCITATION POWER:** See specific product specifications, pages 4-5
  10. **LOW FREQUENCY NOISE REJECTION:**  
Normal Mode:  $> 60$  dB @ 50 or 60 Hz  $\pm 1\%$ , digital filter off  
Common Mode:  $> 100$  dB, DC to 120 Hz
  11. **USER INPUT:** One software defined user input  
Max. Continuous Input: 30 VDC  
Isolation To Sensor Input Common: Not isolated. Do not tie commons together.  
Response Time : 50 msec. max.  
Logic State: Jumper selectable for sink/source logic
- | INPUT STATE | SINKING INPUTS<br>22 K $\Omega$ pull-up to +5 V | SOURCING INPUTS<br>22 K $\Omega$ pull-down |
|-------------|---|--|
| Active      | $V_{IN} < 0.9$ VDC                              | $V_{IN} > 3.6$ VDC                         |
| Inactive    | $V_{IN} > 3.6$ VDC                              | $V_{IN} < 0.9$ VDC                         |
12. **TOTALIZER:**  
Time Base: second, minute, hour, or day  
Time Accuracy: 0.01% typical  
Decimal Point: 0 to 0.0000  
Scale Factor: 0.001 to 65.000  
Low Signal Cut-out: -19,999 to 99,999  
Total: 9 digits, display alternates between high order and low order readouts
  13. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and display values.

14. **ENVIRONMENTAL CONDITIONS:**  
Operating Temperature Range: 0 to 50°C  
Storage Temperature Range: -40 to 60°C  
Operating and Storage Humidity: 0 to 85% max. RH non-condensing  
Altitude: Up to 2000 meters
  15. **CERTIFICATIONS AND COMPLIANCES:**

- Notes:*  
1. *Self-recoverable loss of performance during EMI disturbance at 10 V/m: Measurement input signal may deviate during EMI disturbance.*  
*For operation without loss of performance:*  
*Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent) I/O and power cables are routed in metal conduit connected to earth ground.*  
*Refer to EMC Installation Guidelines section of the bulletin for additional information.*
16. **CONNECTIONS:** High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gauge: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.
  17. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.
  18. **WEIGHT:** 7 oz. (200 g)

# MODEL DP5D - UNIVERSAL DC INPUT

- FOUR VOLTAGE RANGES (300 VDC Max)
- FIVE CURRENT RANGES (2A DC Max)
- 24 VDC TRANSMITTER POWER

## DP5D SPECIFICATIONS

### INPUT RANGES:

INPUT RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
±200 µADC	0.03% of reading +0.03 µA	0.12% of reading +0.04µA	1.11 Kohm	15 mA	10 nA
±2 mADC	0.03% of reading +0.3 µA	0.12% of reading +0.4 µA	111 ohm	50 mA	0.1 µA
±20 mADC	0.03% of reading +3µA	0.12% of reading +4 µA	11.1 ohm	150 mA	1 µA
±200 mADC	0.05% of reading +30 µA	0.15% of reading +40 µA	1.1 ohm	500 mA	10 µA
±2 ADC	0.5% of reading +0.3 mA	0.7% of reading +0.4 mA	0.1 ohm	3 A	0.1 mA
±200 mVDC	0.03% of reading +30 µV	0.12% of reading +40 µV	1.066 Mohm	100 V	10 µV
±2 VDC	0.03% of reading +0.3 mV	0.12% of reading +0.4 mV	1.066 Mohm	300 V	0.1 mV
±20 VDC	0.03% of reading +3 mV	0.12% of reading +4 mV	1.066 Mohm	300 V	1 mV
±300 VDC	0.05% of reading +30 mV	0.15% of reading +40 mV	1.066 Mohm	300 V	10 mV

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85%RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

### EXCITATION POWER:

Transmitter Power: 24 VDC, ±5%, regulated, 50 mA max.

# MODEL DP5P - PROCESS INPUT

- DUAL RANGE INPUT (20 mA or 10 VDC)
- 24 VDC TRANSMITTER POWER

## DP5P SPECIFICATIONS

### SENSOR INPUTS:

INPUT (RANGE)	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	DISPLAY RESOLUTION
20 mA (-2 to 26 mA)	0.03% of reading +2 µA	0.12% of reading +3 µA	20 ohm	150 mA	1 µA
10 VDC (-1 to 13 VDC)	0.03% of reading +2 mV	0.12% of reading +3 mV	500 Kohm	300 V	1 mV

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85%RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

### EXCITATION POWER:

Transmitter Power: 24 VDC, ±5%, regulated, 50 mA max.

# MODEL DP5T - THERMOCOUPLE AND RTD INPUT

- THERMOCOUPLE AND RTD INPUTS
- CONFORMS TO ITS-90 STANDARDS
- TIME-TEMPERATURE INTEGRATOR

## DP5T SPECIFICATIONS

### READOUT:

Resolution: Variable: 0.1, 0.2, 0.5, or 1, 2, or 5 degree

Scale: F or C

Offset Range: -19,999 to 99,999 display units

### THERMOCOUPLE INPUTS:

Input Impedance: 20 MΩ

Lead Resistance Effect: 0.03μV/ohm

Max. Continuous Overvoltage: 30 V

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	STANDARD	WIRE COLOR	
					ANSI	BS 1843
T	-200 to 400°C -270 to -200°C	1.2°C **	2.1°C	ITS-90	(+) blue (-) red	(+) white (-) blue
E	-200 to 871°C -270 to -200°C	1.0°C **	2.4°C	ITS-90	(+) purple (-) red	(+) brown (-) blue
J	-200 to 760°C	1.1°C	2.3°C	ITS-90	(+) white (-) red	(+) yellow (-) blue
K	-200 to 1372°C -270 to -200°C	1.3°C **	3.4°C	ITS-90	(+) yellow (-) red	(+) brown (-) blue
R	-50 to 1768°C	1.9°C	4.0°C	ITS-90	no standard	(+) white (-) blue
S	-50 to 1768°C	1.9°C	4.0°C	ITS-90	no standard	(+) white (-) blue
B	100 to 300°C 300 to 1820°C	3.9°C 2.8°C	5.7°C 4.4°C	ITS-90	no standard	no standard
N	-200 to 1300°C -270 to -200°C	1.3°C **	3.1°C	ITS-90	(+) orange (-) red	(+) orange (-) blue
C (W5/W26)	0 to 2315°C	1.9°C	6.1°C	ASTM E988-90***	no standard	no standard

\*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 15 to 75% RH environment; and Accuracy over a 0 to 50°C and 0 to 85% RH (non condensing) environment. Accuracy specified over the 0 to 50°C operating range includes meter tempco and ice point tracking effects. The specification includes the A/D conversion errors, linearization conformity, and thermocouple ice point compensation. Total system accuracy is the sum of meter and probe errors. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

\*\* The accuracy over the interval -270 to -200°C is a function of temperature, ranging from 1°C at -200°C and degrading to 7°C at -270°C. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

\*\*\* These curves have been corrected to ITS-90.

### RTD INPUTS:

Type: 3 or 4 wire, 2 wire can be compensated for lead wire resistance

Excitation current: 100 ohm range: 165 μA

10 ohm range: 2.6 mA

Lead resistance: 100 ohm range: 10 ohm/lead max.

10 ohm range: 3 ohms/lead max.

Max. continuous overload: 30 V

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	STANDARD ***
100 ohm Pt alpha = .00385	-200 to 850°C	0.4°C	1.6°C	IEC 751
100 ohm Pt alpha = .003919	-200 to 850°C	0.4°C	1.6°C	no official standard
120 ohm Nickel alpha = .00672	-80 to 260°C	0.2°C	0.5°C	no official standard
10 ohm Copper alpha = .00427	-100 to 260°C	0.4°C	0.9°C	no official standard

### DIRECT READOUT:

Input range: -10 to 65 mV

0 to 400 ohms, high range

0 to 25 ohms, low range

Display range: -19999 to 99999

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)
Direct mV range	-10 to 65mV (1 μV res.)	0.02% of reading + 4μV	0.12% of reading + 5μV
Direct 100 ohm range	0 to 400 Ω (10 MΩ res.)	0.02% of reading + 0.04 Ω	0.12% of reading + 0.05 Ω
Direct 10 ohm range	0 to 25 Ω (1 MΩ res.)	0.04% of reading + 0.005 Ω	0.20% of reading + 0.007 Ω

## ACCESSORIES

### UNITS LABEL KIT (PAXLBK) - Not required for DP5T

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled in the programming.

Each DP5T meter is shipped with °F and °C overlay labels which can be installed into the meter's bezel display assembly.

# 1.0 INSTALLING THE METER

## Installation

The DP5 meets NEMA 4X/IP65 requirements for indoor use when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPERS

The meter can have up to two jumpers that must be checked and / or changed prior to applying power. The two jumpers are: Input Range and User Input Logic. The following Jumper Selection Figures show an enlargement of the jumper area.

To access the jumpers, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## User Input Logic Jumper

This jumper selects the logic state of the user input. If the user input is not used, it is not necessary to check or move this jumper.

## DP5D Jumper Selection

### JUMPER SELECTIONS

The  indicates factory setting.

## Input Range Jumper

One jumper is used for voltage or current input ranges. Select the proper input range high enough to avoid input signal overload. Only one jumper is allowed in this area. Do not have a jumper in both the voltage and current ranges at the same time. Avoid placing the jumper across two ranges.

## DP5P Jumper Selection

### JUMPER SELECTIONS

The  $\frown$  indicates factory setting.

## DP5T Jumper Selection

### RTD Input Jumper

One jumper is used for RTD input ranges. Select the proper range to match the RTD probe being used. It is not necessary to remove this jumper when not using RTD probes.

### JUMPER SELECTIONS

The  $\frown$  indicates factory setting.

↓ REAR TERMINALS ↓

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.

3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
4. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
  - Snubber: RLC#SNUB0000.

## 3.1 POWER WIRING

### AC Power

Terminal 1: VAC  
Terminal 2: VAC

### DC Power

Terminal 1: +VDC  
Terminal 2: -VDC

## 3.2 INPUT SIGNAL WIRING

### DP5D INPUT SIGNAL WIRING

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

#### Voltage Signal (self powered)

Terminal 3: +VDC  
Terminal 5: -VDC

#### Current Signal (self powered)

Terminal 4: +ADC  
Terminal 5: -ADC

#### Current Signal (2 wire requiring excitation)

Terminal 4: -ADC  
Terminal 6: +ADC

#### Current Signal (3 wire requiring excitation)

Terminal 4: +ADC (signal)  
Terminal 5: -ADC (common)  
Terminal 6: +VOLT supply

#### Voltage Signal (3 wire requiring excitation)

Terminal 3: +VDC (signal)  
Terminal 5: -VDC (common)  
Terminal 6: +VOLT supply

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Input and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common.

#### Potentiometer Signal (3 wire requiring excitation)

Terminal 3: Wiper  
Terminal 5: Low end of pot.  
Terminal 6: High end of pot.  
Input Range Jumper: 300 Volt  
Module 1 Input Range: 300 Volt

*Note: The Apply signal scaling style should be used because the signal will be in volts.*

### DP5P INPUT SIGNAL WIRING

#### Voltage Signal (self powered)

Terminal 3: +VDC  
Terminal 5: -VDC

#### Current Signal (self powered)

Terminal 4: +ADC  
Terminal 5: -ADC

#### Current Signal (2 wire requiring excitation)

#### Voltage Signal (3 wire requiring excitation)

Terminal 3: +VDC (signal)  
Terminal 5: -VDC (common)  
Terminal 6: +VOLT supply

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Input and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common.

## DP5T INPUT SIGNAL WIRING

### Thermocouple

### 3-Wire RTD

### 2-Wire RTD

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Input and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common.

## 3.3 USER INPUT WIRING

Before connecting the wires, the User Input Logic Jumper should be verified for proper position. If not using the User Input then skip this section.

### Sinking Logic

Terminal 8: } Connect external switching device between the  
Terminal 7: } User Input terminal and User Comm.

In this logic, the user input of the meter is internally pulled up to +5 V with 22 K resistance. The input is active when it is pulled low (<0.9 V).

### Sourcing Logic

Terminal 8: + VDC thru external switching device  
Terminal 7: -VDC thru external switching device

In this logic, the user input of the meter is internally pulled down to 0 V with 22 K resistance. The input is active when a voltage greater than 3.6 VDC is applied.

E

## 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

### KEY DISPLAY MODE OPERATION

- DSP** Index display through max/min/total/input readouts
- PAR** Access parameter list
- F1▲** Function key 1; hold for 3 seconds for Second Function 1\*\*
- F2▼** Function key 2; hold for 3 seconds for Second Function 2\*\*
- RST** Reset (Function key)\*\*

### PROGRAMMING MODE OPERATION

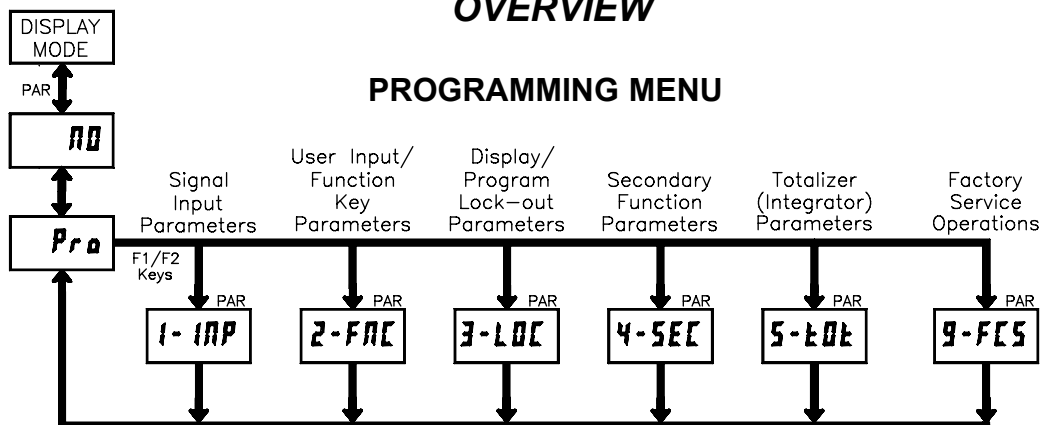

- Quit programming and return to display mode
- Store selected parameter and index to next parameter
- Increment selected parameter value
- Decrement selected parameter value
- Hold with F1▲, F2▼ to scroll value by x1000

\* Display Readout Legends may be locked out in Factory Settings.

\*\* Factory setting for the F1, F2, and RST keys is NO mode.

# 5.0 PROGRAMMING THE METER

## OVERVIEW

### DISPLAY MODE

The meter normally operates in the Display Mode. In this mode, the meter displays can be viewed consecutively by pressing the **DSP** key. The annunciators to the left of the display indicate which display is currently shown; Max Value (MAX), Min Value (MIN), or Totalizer Value (TOT). Each of these displays can be locked from view through programming. (See Module 3) The Input Display Value is shown with no annunciator.

### PROGRAMMING MODE

Two programming modes are available.

**Full Programming Mode** permits all parameters to be viewed and modified.

Upon entering this mode, the front panel keys change to Programming Mode operations. This mode should not be entered while a process is running, since the meter functions and User Input response may not operate properly while in Full Programming Mode.

**Quick Programming Mode** permits only certain parameters to be viewed and/or modified. When entering this mode, the front panel keys change to Programming Mode operations, and all meter functions continue to operate properly. Quick Programming Mode is configured in Module 3. Throughout this document, Programming Mode (without Quick in front) always refers to "Full" Programming Mode.

### PROGRAMMING TIPS

The Programming Menu is organized into nine modules (See above). These modules group together parameters that are related in function. It is recommended to begin programming with Module 1 and proceed through each module in sequence. If lost or confused while programming, press the **DSP** key to exit programming mode and start over. When programming is complete, it is recommended to record the meter settings on the Parameter Value Chart and lock-out parameter programming with a User Input or lock-out code. (See Modules 2 and 3 for lock-out details.)

### FACTORY SETTINGS

Factory Settings may be completely restored in Module 9. This is a good starting point if encountering programming problems. Throughout the module description sections which follow, the factory setting for each parameter is shown below the parameter display. In addition, all factory settings are listed on the Parameter Value Chart following the programming section.

### ALTERNATING SELECTION DISPLAY

In the module description sections which follow, the dual display with arrows appears for each programming parameter. This is used to illustrate the display alternating between the parameter (top display) and the parameter's Factory Setting (bottom display). In most cases, selections or value ranges for the parameter will be listed on the right.

### STEP BY STEP PROGRAMMING INSTRUCTIONS:

#### PROGRAMMING MODE ENTRY (PAR KEY)

The Programming Mode is entered by pressing the **PAR** key. If this mode is not accessible, then meter programming is locked by either a security code or a hardware lock. (See Modules 2 and 3 for programming lock-out details.)

#### MODULE ENTRY (ARROW & PAR KEYS)

Upon entering the Programming Mode, the display alternates between *Pr0* and the present module (initially *Pr0*). The arrow keys (**F1▲** and **F2▼**) are used to select the desired module, which is then entered by pressing the **PAR** key.

#### PARAMETER (MODULE) MENU (PAR KEY)

Each module has a separate parameter menu. These menus are shown at the start of each module description section which follows. The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to *Pr0 Pr0*. From this point, programming may continue by selecting and entering additional modules. (See **MODULE ENTRY** above.)

#### PARAMETER SELECTION ENTRY (ARROW & PAR KEYS)

For each parameter, the display alternates between the parameter and the present selection or value for that parameter. For parameters which have a list of selections, the arrow keys (**F1▲** and **F2▼**) are used to sequence through the list until the desired selection is displayed. Pressing the **PAR** key stores and activates the displayed selection, and also advances the meter to the next parameter.

#### NUMERICAL VALUE ENTRY (ARROW, RST & PAR KEYS)

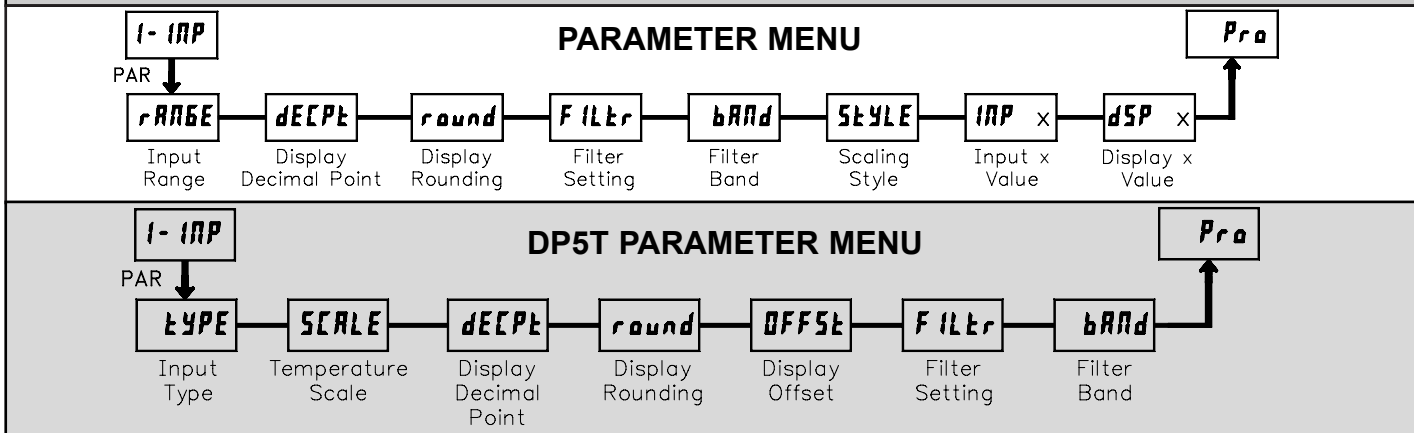

For parameters which require a numerical value entry, the arrow keys can be used to increment or decrement the display to the desired value. When an arrow key is pressed and held, the display automatically scrolls up or scrolls down. The longer the key is held, the faster the display scrolls.

The **RST** key can be used in combination with the arrow keys to enter large numerical values, when the **RST** key is pressed along with an arrow key, the display scrolls by 1000's. Pressing the **PAR** key stores and activates the displayed value, and also advances the meter to the next parameter.

#### PROGRAMMING MODE EXIT (DSP KEY or PAR KEY at *Pr0 Pr0*)

The Programming Mode is exited by pressing the **DSP** key (from anywhere in the Programming Mode) or the **PAR** key (with *Pr0 Pr0* displayed). This will commit any stored parameter changes to memory and return the meter to the Display Mode. If a parameter was just changed, the **PAR** key should be pressed to store the change before pressing the **DSP** key. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS (1- INP)

Refer to the appropriate Input Range for the selected meter. Use only one Input Range, then proceed to Display Decimal Point.

## DP5D INPUT RANGE

SELECTION	RANGE	RESOLUTION	SELECTION	RANGE	RESOLUTION
300u	200uA	±200.00 µA	0.2u	±200.00 mV	
	0.002A	±2.0000 mA	2u	±2.0000 V	
	0.02A	±20.000 mA	20u	±20.000 V	
	0.2A	±200.00 mA	300u	±300.00 V	
	2A	±2.0000 A			

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## DP5P INPUT RANGE

SELECTION	RANGE	RESOLUTION
0.02A	±20.000 mA	
10u	±10.000 V	

Select the input range that corresponds to the external signal.

## DP5T INPUT TYPE

SELECTION	TYPE	SELECTION	TYPE
tC-t	T TC	tC-c	C TC
tC-E	E TC	Pt385	RTD platinum 385
tC-J	J TC	Pt392	RTD platinum 392
tC-K	K TC	Ni672	RTD nickel 672
tC-r	R TC	Cu427	RTD copper 10 Ω
tC-S	S TC	uLl	Direct mV range
tC-b	B TC	rES-H	Direct ohms range high
tC-n	N TC	rES-L	Direct ohms range low

Select the input type that corresponds to the input sensor. For RTD types, check the RTD Input Jumper for matching selection. For sensor verification and testing, use the direct readout modes.

## TEMPERATURE SCALE

Select the temperature scale. This selection applies for Input, MAX, MIN, and TOT displays. This does not change the user installed Custom Units Overlay display. If changed, those parameters that relate to the temperature scale should be checked.

## DISPLAY DECIMAL POINT

Select the decimal point location for the Input, MAX and MIN displays. (The TOT display decimal point is a separate parameter.) This selection also affects round, dSP1 and dSP2 parameters.

## DISPLAY ROUNDING\*

Rounding selections other than one, cause the Input Display to 'round' to the nearest rounding increment selected (ie. rounding of '5' causes 122 to round to 120 and 123 to round to 125). Rounding starts at the least significant digit of the Input Display. Remaining parameter entries (scaling point values, etc.) are not automatically adjusted to this display rounding selection.

## DP5T: TEMPERATURE DISPLAY OFFSET\*

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors, errors due to variances in probe placement or adjusting the readout to a reference thermometer. This value is automatically updated after a Zero Display to show how far the display is offset. A value of zero will remove the affects of offset.

### FILTER SETTING\*

00 to 250 seconds

The input filter setting is a time constant expressed in tenths of a second. The filter settles to 99% of the final display value within approximately 3 time constants. This is an Adaptive Digital Filter which is designed to steady the Input Display reading. A value of '0' disables filtering.

### FILTER BAND\*

00 to 250 display units

The digital filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the digital filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the digital filter permanently engaged.

The remaining parameters in Module 1 do not apply to the DP5T.

### SCALING STYLE

KEY key-in data  
APPLY apply signal

If Input Values and corresponding Display Values are known, the Key-in (KEY) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (APPLY) scaling style must be used. After using the Apply (APPLY) scaling style, this parameter will default back to KEY but the scaling values will be shown from the previous applied method.

### INPUT VALUE FOR SCALING POINT 1

- 99999 to 99999

For Key-in (KEY), enter the known first Input Value by using the arrow keys. (The Input Range selection sets up the decimal location for the Input Value). For Apply (APPLY), apply the input signal to the meter, adjust the signal source externally until the desired Input Value appears. In either method, press the PAR key to enter the value being displayed. The DSP key can be pressed without changing the previously stored INP 1 value in the APPLY style.

Note: APPLY style - Pressing the RST key will advance the display to the next scaling display point without storing the input value.

### DISPLAY VALUE FOR SCALING POINT 1

- 99999 to 99999

Enter the first coordinating Display Value by using the arrow keys. This is the same for KEY and APPLY scaling styles. The decimal point follows the DECP selection.

### INPUT VALUE FOR SCALING POINT 2

- 99999 to 99999

For Key-in (KEY), enter the known second Input Value by using the arrow keys. For Apply (APPLY), adjust the signal source externally until the next desired Input Value appears.

### DISPLAY VALUE FOR SCALING POINT 2

- 99999 to 99999

Enter the second coordinating Display Value by using the arrow keys. This is the same for KEY and APPLY scaling styles.

### General Notes on Scaling

1. Input Values for scaling points should be confined to the limits of the Input Range.
2. The same Input Value should not correspond to more than one Display Value. (Example: 20 mA can not equal 0 and 10.) This is referred to as read out jumps (vertical scaled segments).
3. The same Display Value can correspond to more than one Input Value. (Example: 0 mA and 20 mA can equal 10.) This is referred to as readout dead zones (horizontal scaled segments).
4. The maximum scaled Display Value spread between range maximum and minimum is limited to 65,535. For example using +20 mA range the maximum +20 mA can be scaled to is 32,767 with 0 mA being 0 and Display Rounding of 1. (Decimal points are ignored.) The other half of 65,535 is for the lower half of the range 0 to -20 mA even if it is not used. With Display Rounding of 2, +20 mA can be scaled for  $(32,767 \times 2 =) 65,535$  but with even Input Display values shown.
5. For input levels beyond the first programmed Input Value, the meter extends the Display Value by calculating the slope from the first two coordinate pairs (INP 1 / DSP 1 & INP 2 / DSP 2). If INP 1 = 4 mA and DSP 1 = 0, then 0 mA would be some negative Display Value. The calculations stop at the limits of the Input Range.
6. For input levels beyond the last programmed Input Value, the meter extends the Display Value by calculating the slope from the two sequential coordinate pairs. The calculations stop at the limits of the Input Range.

\* Factory Setting can be used without affecting basic start-up.

# 5.2 MODULE 2 - USER INPUT AND FRONT PANEL FUNCTION KEY PARAMETERS (2-FNC)

The user input is programmable to perform specific meter control functions. While in the Display Mode or Program Mode, the function is executed the instant the user input transitions to the active state.

The front panel function keys are also individually programmable to perform specific meter control functions. While in the Display Mode, the primary function is executed the instant the key is pressed. Holding the function key for three seconds executes a secondary function. It is possible to program a secondary function without a primary function.

In most cases, if the user input and/or one of the function keys is programmed for the same function, the maintained (level trigger) actions will be performed while the user input or at least one of the function keys are activated. The momentary (edge trigger) actions will be performed every time the user input or function keys transition to the active state.

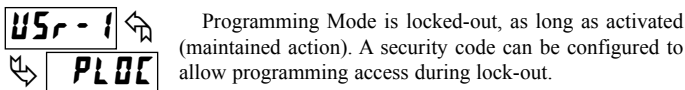

**Note:** In the following explanations, not all selections are available for both the user input and front panel function keys. Alternating displays are shown with each selection. Those selections showing both displays are available for both. If a display is not shown, it is not available for that selection. *U5r-1* will represent the user input. *F1* will represent all five function keys.

### NO FUNCTION

No function is performed if activated. This is the factory setting for the user input and all function keys. No function can be selected without affecting basic start-up.

### PROGRAMMING MODE LOCK-OUT

Programming Mode is locked-out, as long as activated (maintained action). A security code can be configured to allow programming access during lock-out.

### ZERO (TARE) DISPLAY

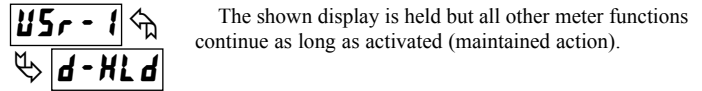

The Zero (Tare) Display provides a way to zero the Input Display value at various input levels, causing future Display readings to be offset. This function is useful in weighing applications where the container or material on the scale should not be included in the next measurement value. When activated (momentary action), *rESEt* flashes and the Display is set to zero. At the same time, the Display value (that was on the display before the Zero Display) is subtracted from the Display Offset Value and is automatically stored as the new Display Offset Value (*BFF5t*). If another Zero (tare) Display is performed, the display will again change to zero and the Display reading will shift accordingly.

### RELATIVE/ABSOLUTE DISPLAY

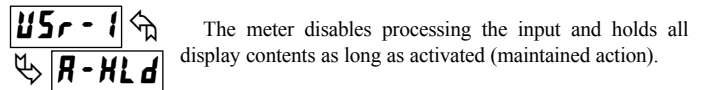

This function will switch the Input Display between Relative and Absolute. The Relative is a net value that includes the Display Offset Value. The Input Display will normally show the Relative unless switched by this function. Regardless of the display selected, all meter functions continue to operate based on relative values. The Absolute is a gross value (based on Module 1 **DSP** and **INP** entries) without the Display Offset Value. The Absolute display is selected as long as the user input is activated (maintained action) or at the transition of the function key (momentary action). When the user input is released, or the function key is pressed again, the input display switches back to Relative display. *AbS* (absolute) or *rEL* (relative) is momentarily displayed at transition to indicate which display is active.

### HOLD DISPLAY

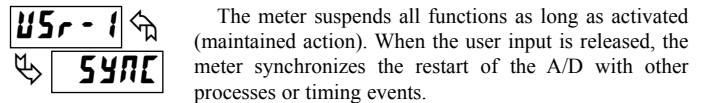

The shown display is held but all other meter functions continue as long as activated (maintained action).

### HOLD ALL FUNCTIONS

The meter disables processing the input and holds all display contents as long as activated (maintained action).

### SYNCHRONIZE METER READING

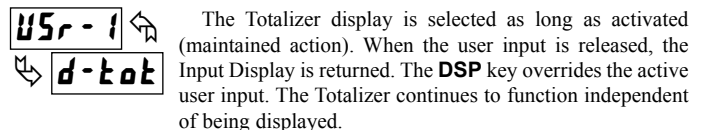

The meter suspends all functions as long as activated (maintained action). When the user input is released, the meter synchronizes the restart of the A/D with other processes or timing events.

### STORE BATCH READING IN TOTALIZER

The Input Display value is one time added (batched) to the Totalizer at transition to activate (momentary action). The Totalizer retains a running sum of each batch operation until the Totalizer is reset. When this function is selected, the normal operation of the Totalizer is overridden.

### SELECT TOTALIZER DISPLAY

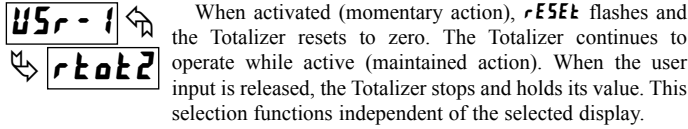

The Totalizer display is selected as long as activated (maintained action). When the user input is released, the Input Display is returned. The **DSP** key overrides the active user input. The Totalizer continues to function independent of being displayed.

### RESET TOTALIZER

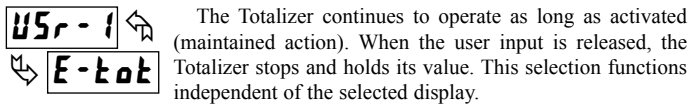

When activated (momentary action), **rESEt** flashes and the Totalizer resets to zero. The Totalizer then continues to operate as it is configured. This selection functions independent of the selected display.

### RESET AND ENABLE TOTALIZER

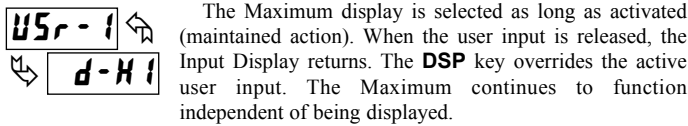

When activated (momentary action), **rESEt** flashes and the Totalizer resets to zero. The Totalizer continues to operate while active (maintained action). When the user input is released, the Totalizer stops and holds its value. This selection functions independent of the selected display.

### ENABLE TOTALIZER

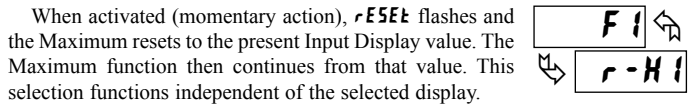

The Totalizer continues to operate as long as activated (maintained action). When the user input is released, the Totalizer stops and holds its value. This selection functions independent of the selected display.

### SELECT MAXIMUM DISPLAY

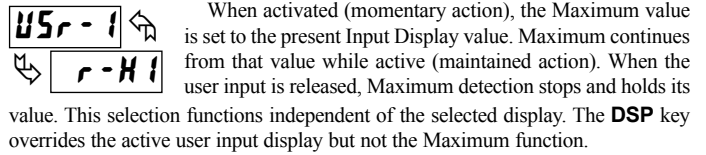

The Maximum display is selected as long as activated (maintained action). When the user input is released, the Input Display returns. The **DSP** key overrides the active user input. The Maximum continues to function independent of being displayed.

### RESET MAXIMUM

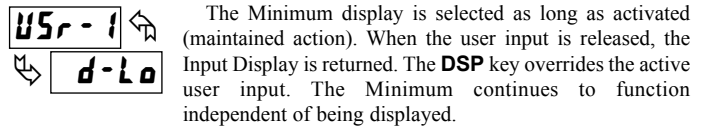

When activated (momentary action), **rESEt** flashes and the Maximum resets to the present Input Display value. The Maximum function then continues from that value. This selection functions independent of the selected display.

### RESET, SELECT, ENABLE MAXIMUM DISPLAY

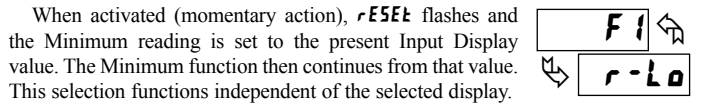

When activated (momentary action), the Maximum value is set to the present Input Display value. Maximum continues from that value while active (maintained action). When the user input is released, Maximum detection stops and holds its value. This selection functions independent of the selected display. The **DSP** key overrides the active user input display but not the Maximum function.

### SELECT MINIMUM DISPLAY

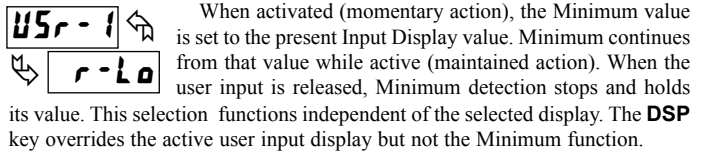

The Minimum display is selected as long as activated (maintained action). When the user input is released, the Input Display is returned. The **DSP** key overrides the active user input. The Minimum continues to function independent of being displayed.

### RESET MINIMUM

When activated (momentary action), **rESEt** flashes and the Minimum reading is set to the present Input Display value. The Minimum function then continues from that value. This selection functions independent of the selected display.

### RESET, SELECT, ENABLE MINIMUM DISPLAY

When activated (momentary action), the Minimum value is set to the present Input Display value. Minimum continues from that value while active (maintained action). When the user input is released, Minimum detection stops and holds its value. This selection functions independent of the selected display. The **DSP** key overrides the active user input display but not the Minimum function.

### RESET MAXIMUM AND MINIMUM

When activated (momentary action), **rESEt** flashes and the Maximum and Minimum readings are set to the present Input Display value. The Maximum and Minimum function then continues from that value. This selection functions independent of the selected display.

## 5.3 MODULE 3 - DISPLAY AND PROGRAM LOCK-OUT PARAMETERS (3-LOC)

### MAXIMUM DISPLAY LOCK-OUT\* MINIMUM DISPLAY LOCK-OUT\* TOTALIZER DISPLAY LOCK-OUT\*

These displays can be programmed for **LOC** or **rEd**. When programmed for **LOC**, the display will not be shown when the **DSP** key is pressed regardless of Program Lock-out status. It is suggested to lock-out the display if it is not needed. The associated function will continue to operate even if its display is locked-out.

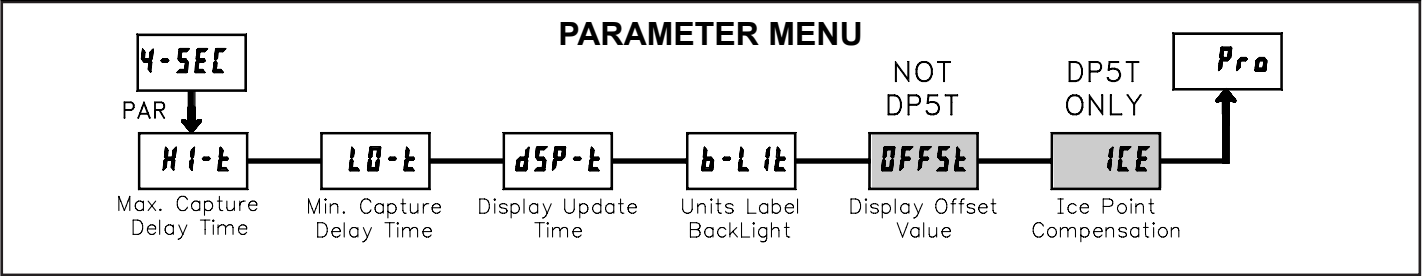

### PROGRAM MODE SECURITY CODE\*

By entering any non-zero value, the prompt **Code 0** will appear when trying to access the Program Mode. Access will only be allowed after entering a matching security code or universal code of **222**. With this lock-out, a user input would not have to be configured for Program Lock-out. However, this lock-out is overridden by an inactive user input configured for Program Lock-out.

\* Factory Setting can be used without affecting basic start-up.

# 5.4 MODULE 4 - SECONDARY FUNCTION PARAMETERS (4-5EE)

### MAX CAPTURE DELAY TIME\*

0.1 to 32750 sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN CAPTURE DELAY TIME\*

0.1 to 32750 sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### DISPLAY UPDATE RATE\*

1    2    5    10 updates/sec.

This parameter determines the rate of display update. When set to 10 updates/second, the internal re-zero compensation is disabled, allowing for the fastest possible output response.

### UNITS LABEL BACKLIGHT\*

ON    OFF

The Units Label Kit Accessory contains a sheet of custom unit overlays which can be installed in to the meter's bezel display assembly. The backlight for these custom units is activated by this parameter.

### DISPLAY OFFSET VALUE\*

This parameter does not apply for the DP5T.

- 19999 to 19999

Unless a Zero Display was performed or an offset from Module 1 scaling is desired, this parameter can be skipped. The Display Offset Value is the difference from the Absolute (gross) Display value to the Relative (net) Display value for the same input level. The meter will automatically update this Display Offset Value after each Zero Display. The Display Offset Value can be directly keyed-in to intentionally add or remove display offset. See Relative / Absolute Display and Zero Display explanations in Module 2.

### DP5T: ICE POINT COMPENSATION\*

ON    OFF

This parameter turns the internal ice point compensation on or off. Normally, the ice point compensation is on. If using external compensation, set this parameter to off. In this case, use copper leads from the external compensation point to the meter.

\* Factory Setting can be used without affecting basic start-up.

# 5.5 MODULE 5 - TOTALIZER (INTEGRATOR) PARAMETERS (5-101)

The totalizer accumulates (integrates) the Input Display value using one of two modes. The first is using a time base. This can be used to compute a time-temperature product. The second is through a user input or function key programmed for Batch (one time add on demand). This can be used to provide a readout of temperature integration, useful in curing and sterilization applications. If the Totalizer is not needed, its display can be locked-out and this module can be skipped during programming.

## TOTALIZER DECIMAL POINT\*

For most applications, this matches the Input Display Decimal Point (dECPt). If a different location is desired, refer to Totalizer Scale Factor.

## TOTALIZER TIME BASE

This is the time base used in Totalizer accumulations. If the Totalizer is being accumulated through a user input programmed for Batch, then this parameter does not apply.

## TOTALIZER SCALE FACTOR\*

For most applications, the Totalizer reflects the same decimal point location and engineering units as the Input Display. In these cases, the Totalizer Scale Factor is 1.000. The Totalizer Scale Factor can be used to scale the Totalizer to a different value than the Input Display. Common possibilities are:

1. Changing decimal point location (example tenths to whole)
2. Changing engineering units (example inches to meters)
3. Changing both decimal point location and engineering units.
4. Average over a controlled time frame.

Details on calculating the scale factor are shown later.

If the Totalizer is being accumulated through a user input programmed for Batch, then this parameter does not apply.

## TOTALIZER LOW CUT VALUE\*

A low cut value disables Totalizer when the Input Display value falls below the value programmed.

## TOTALIZER POWER UP RESET\*

The Totalizer can be reset to zero on each meter power-up by setting this parameter to reset.

## TOTALIZER HIGH ORDER DISPLAY

When the total exceeds 5 digits, the front panel annunciator TOT flashes. In this case, the meter continues to totalize up to a 9 digit value. The high order 4 digits and the low order 5 digits of the total are displayed alternately. The letter "h" denotes the high order display.

## TOTALIZER BATCHING

The Totalizer Time Base and scale factor are overridden when a user input or function key is programmed for store batch (bAt). In this mode, when the user input or function key is activated, the Input Display reading is one time added to the Totalizer (batch). The Totalizer retains a running sum of each batch operation until the Totalizer is reset. This is useful in weighing operations, when the value to be added is not based on time but after a filling event.

## TOTALIZER USING TIME BASE

Totalizer accumulates as defined by:

$$\frac{\text{Input Display} \times \text{Totalizer Scale Factor}}{\text{Totalizer Time Base}}$$

Where:

- Input Display - the present input reading
- Totalizer Scale Factor - 0.001 to 65.000
- Totalizer Time Base - (the division factor of tBASE)

Example: The input reading is at an average of 10.0°C per hour. The Totalizer is used to verify this average reading in a controlled time frame of 4 hours. Because the Input Display and Totalizer are both in tenths of °C, the Totalizer Scale Factor is 1. However, the Totalizer Time Base is hours (3600) divided by the 4 hours in the controlled time frame to yield a Totalizer Scale Factor of 0.250. By placing these values in the equation, the Totalizer will accumulate every second as follows:

$$\frac{10.0 \times 0.250}{3600} = 0.00069 \text{ accumulates each second}$$

- This results in:
- 0.04167 accumulates each minute
- 2.5 accumulates each hour
- 10.0 reached at the end of 4 hours

## TOTALIZER SCALE FACTOR CALCULATION EXAMPLES

1. When changing the Totalizer Decimal Point (dECPt) location from the Input Display Decimal Point (dECPt), the required Totalizer Scale Factor is multiplied by a power of ten.

Example: Input (dECPt) = 0.0

Input (dECPt) = 0.00

Totalizer dECPt	Scale Factor
0.00	10
0.0	1
0	.1
x10	.01
x100	.001

Totalizer dECPt	Scale Factor
0.000	10
0.00	1
0.0	.1
0	.01
x10	.001

(x = Totalizer display is round by tens or hundreds)

2. When changing the Totalizer engineering units, the Totalizer Scale Factor is the known conversion multiplier from Input Display units to Totalizer units. Example: If Input Display is feet and the Totalizer needs to be in yards, the conversion multiplier from feet to yards is 0.333. Enter 0.333 as the Totalizer scale factor.
3. When changing both the Totalizer engineering units and Totalizer Decimal Point the two calculations are multiplied together. Example: Input Display = feet in tenths (0.0) with Totalizer = whole yards (0), the scale factor would be 0.033.
4. To obtain an average reading within a controlled time frame, the selected Totalizer Time Base is divided by the given time period expressed in the same timing units. Example: Average temperature per hour in a 4 hour period, the scale factor would be 0.250. To achieve a controlled time frame, connect an external timer to a user input programmed for rSt. The timer will control the start (reset) and the stopping (hold) of the totalizer.

\* Factory Setting can be used without affecting basic start-up.

# 5.9 MODULE 9 - FACTORY SERVICE OPERATIONS (9-F[5])

## RESTORE FACTORY DEFAULTS

Use the arrow keys to display **CodE 55** and press **PAR**. The meter will display **rESEt** and then return to **CodE 5B**. Press **DSP** key to return to Display Mode. This will overwrite all user settings with the factory settings.

## CALIBRATION

The meter has been fully calibrated at the factory. Scaling to convert the input signal to a desired display value is performed in Module 1. If the meter appears to be indicating incorrectly or inaccurately, refer to Troubleshooting before attempting to calibrate the meter.

When recalibration is required (generally every 2 years), it should only be performed by qualified technicians using appropriate equipment. Calibration does not change any user programmed parameters. However, it may affect the accuracy of the input signal values previously stored using the Apply (**APLY**) Scaling Style.

Calibration may be aborted by disconnecting power to the meter before exiting Module 9. In this case, the existing calibration settings remain in effect.

## DP5P - Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better.

Before starting, verify that the precision signal source is connected to the correct terminals and ready. Allow a 30 minute warm-up period before calibrating the meter. **no** and **PAR** can be chosen to exit the calibration mode without any changes taking place.

Then perform the following procedure:

1. Use the arrow keys to display **CodE 4B** and press **PAR**.
2. Choose the range to be calibrated by using the arrow keys and press **PAR**.
3. When the zero range limit appears on the display, apply the appropriate:
  - Voltage range: dead short applied
  - Current range: open circuit
4. Press **PAR** and **----** will appear on the display for about 10 seconds.
5. When the top range limit appears on the display, apply the appropriate:
  - Voltage range: 10 VDC
  - Current range: 20 mADC
6. Press **PAR** and **----** will appear on the display for about 10 seconds.
7. When **no** appears, press **PAR** twice.
8. If the meter is not field scaled, then the input display should match the value of the input signal.
9. Repeat the above procedure for each input range to be calibrated.

## DP5D - Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better.

Before starting, verify that the Input Range Jumper is set for the range to be calibrated. Also verify that the precision signal source is connected and ready. Allow a 30 minute warm-up period before calibrating the meter. **no** and **PAR** can be chosen to exit the calibration mode without any changes taking place.

Then perform the following procedure:

1. Use the arrow keys to display **CodE 4B** and press **PAR**.
2. Choose the range to be calibrated by using the arrow keys and press **PAR**.
3. When the zero range limit appears on the display, apply the appropriate:
  - Voltage ranges: dead short applied
  - Current ranges: open circuit
4. Press **PAR** and **----** will appear on the display for about 10 seconds.
5. When the top range limit appears on the display, apply the appropriate:
  - Voltage ranges: top range value applied (The 300 V range is the exception. It is calibrated with a 100 V signal.)
  - Current ranges: top range value
6. Press **PAR** and **----** will appear on the display for about 10 seconds.
7. When **no** appears, press **PAR** twice.
8. If the meter is not field scaled, then the input display should match the value of the input signal.
9. Repeat the above procedure for each input range to be calibrated.

## DP5T - Input Calibration

**Warning:** Calibration of this meter requires precision instrumentation operated by qualified technicians. It is recommended that a calibration service calibrates the meter.

Before selecting any of the calibration procedures, the input to the meter must be at 0 mV or 0 ohms. Set the digital filter in Module 1 to 1 second. Allow a 30 minute warm-up period before calibrating the meter. The **no** and **PAR** can be chosen to exit calibration mode without any changes taking place.

### 10 OHM RTD Range Calibration

1. Set the Input Range Jumper to 10 ohm.
2. Use the arrow keys to display **CodE 4B** and press **PAR**. Then choose **r - 10** and press **PAR**.
3. At **0 r**, apply a direct short to input terminals 3, 4 and 5 using a three wire link. Wait 10 seconds, then press **PAR**.
4. At **15 r**, apply a precision resistance of 15 ohms (with an accuracy of 0.01% or better) using a three wire link, to input terminals 3, 4 and 5. Wait 10 seconds, then press **PAR**.
5. Connect the RTD, return to the Display Mode and verify the input reading (with 0 Display Offset) is correct. If not correct repeat calibration.

### 100 OHM RTD Range Calibration

1. Set the Input Range Jumper to 100 ohm.
2. Use the arrow keys to display **CodE 4B** and press **PAR**. Then choose **r - 100** and press **PAR**.
3. At **0 r**, apply a direct short to input terminals 3, 4 and 5 using a three wire link. Wait 10 seconds, then press **PAR**.
4. At **300 r**, apply a precision resistance of 300 ohms (with an accuracy of 0.01% or better) using a three wire link, to terminals 3, 4 and 5. Wait 10 seconds, press **PAR**.
5. Connect the RTD, return to the Display Mode and verify the input reading (with 0 Display Offset) is correct. If not correct repeat calibration.

### THERMOCOUPLE Range Calibration

1. Use the arrow keys to display **Lo dE 4B** and press **PAR**. Then choose **tE** and press **PAR**.
2. At **00 u**, apply a dead short or set calibrator to zero to input terminals 4 and 5. Wait 10 seconds, then press **PAR**.
3. At **5000 u**, apply 50.000 mV input signal (with an accuracy of 0.01% or better) to input terminals 4 and 5. Wait 10 seconds, then press **PAR**.
4. Return to the Display Mode.
5. Continue with Ice Point Calibration.

### ICE POINT Calibration

1. The ambient temperature must be within 20°C to 30°C.
2. Connect a thermocouple (types T, E, J, K, or N only) with an accuracy of 1°C or better to the meter.
3. Verify the readout Display Offset is 0, Temperature Scale is °C, Display Resolution is 0.0, and the Input Range is set for the connected thermocouple.
4. Place the thermocouple in close thermal contact to a reference thermometer probe. (Use a reference thermometer with an accuracy of 0.25°C or better.) The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (A calibration bath could be used in place of the thermometer.)
5. In the Normal Display mode, compare the readouts.
6. If a difference exists then continue with the calibration.
7. Enter Module 9, use the arrow keys to display **Lo dE 4B** and press **PAR**. Then choose **tE** and press **PAR**.
8. Calculate a new Ice Point value using: existing Ice Point value + (reference temperature - Display Mode reading). All values are based on °C.
9. Enter the new Ice Point value.
10. Return to the Display Mode and verify the input reading (with 0 Display Offset) is correct. If not correct repeat steps 8 through 10.

## TROUBLESHOOTING

PROBLEM	REMEDIES
NO DISPLAY	CHECK: Power level, power connections
PROGRAM LOCKED-OUT	CHECK: Active (lock-out) user input ENTER: Security code requested
MAX, MIN, TOT LOCKED-OUT	CHECK: Module 3 programming
INCORRECT INPUT DISPLAY VALUE	CHECK: Module 1 programming, Input Range Jumper position, input connections, input signal level, Module 4 Display Offset is zero, press DSP for Input Display PERFORM: Module 9 Calibration (If the above does not correct the problem.)
"OLOL" in DISPLAY (SIGNAL HIGH)	CHECK: Module 1 programming, Input Range Jumper position, input connections, input signal level
"ULUL" in DISPLAY (SIGNAL LOW)	CHECK: Module 1 programming, Input Range Jumper position, input connections, input signal level
JITTERY DISPLAY	INCREASE: Module 1 filtering, rounding, input range CHECK: Wiring is per EMC installation guidelines
ERROR CODE (Err 1-4)	PRESS: Reset KEY (If cannot clear contact factory.)

For further assistance, contact technical support at the appropriate company numbers listed.

# MODEL PAX – 1/8 DIN ANALOG INPUT PANEL METERS

**MODELS: VOLT/CURRENT (PAXD) PROCESS (PAXP) AC TRUE RMS VOLT AND CURRENT (PAXH) STRAIN GAGE (PAXS) THERMOCOUPLE/RTD (PAXT)**

- PROCESS, VOLTAGE, CURRENT, TEMPERATURE, AND STRAIN GAGE INPUTS
- 5-DIGIT 0.56" RED SUNLIGHT READABLE DISPLAY
- VARIABLE INTENSITY DISPLAY
- 16 POINT SCALING FOR NON-LINEAR PROCESSES
- PROGRAMMABLE FUNCTION KEYS/USER INPUTS
- 9 DIGIT TOTALIZER (INTEGRATOR) WITH BATCHING
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- CRIMSON PROGRAMMING SOFTWARE
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAX<sup>®</sup> Analog Panel Meters offer many features and performance capabilities to suit a wide range of industrial applications. Available in five different models to handle various analog inputs, including DC Voltage/Current, AC Voltage/Current, Process, Temperature, and Strain Gage Inputs. Refer to pages 4 through 6 for the details on the specific models. The optional plug-in output cards allow the opportunity to configure the meter for present applications, while providing easy upgrades for future needs.

The meters employ a bright 0.56" LED display. The unit is available with a red sunlight readable or a standard green LED. The intensity of display can be adjusted from dark room applications up to sunlight readable, making it ideal for viewing in bright light applications.

The meters provide a MAX and MIN reading memory with programmable capture time. The capture time is used to prevent detection of false max or min readings which may occur during start-up or unusual process events.

The signal totalizer (integrator) can be used to compute a time-input product. This can be used to provide a readout of totalized flow, calculate service intervals of motors or pumps, etc. The totalizer can also accumulate batch weighing operations.

The meters have four setpoint outputs, implemented on Plug-in option cards. The Plug-in cards provide dual FORM-C relays (5A), quad FORM-A (3A), or either quad sinking or quad sourcing open collector logic outputs. The setpoint alarms can be configured to suit a variety of control and alarm requirements.

Communication and Bus Capabilities are also available as option cards. These include RS232, RS485, Modbus, DeviceNet, and Profibus-DP. Readout values and setpoint alarm values can be controlled through the bus. Additionally, the meters have a feature that allows a remote computer to directly control the outputs of the meter. With an RS232 or RS485 card installed, it is possible to configure the meter using a Windows<sup>®</sup> based program. The configuration data can be saved to a file for later recall.

A linear DC output signal is available as an optional Plug-in card. The card provides either 20 mA or 10 V signals. The output can be scaled independent of the input range and can track either the input, totalizer, max or min readings.

Once the meters have been initially configured, the parameter list may be locked out from further modification in its entirety or only the setpoint values can be made accessible.

The meters have been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Risk of Danger**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

1. **DISPLAY:** 5 digit, 0.56" (14.2 mm) red sunlight readable or standard green LEDs, (-19999 to 99999)

2. **POWER:**

AC Versions:

AC Power: 85 to 250 VAC, 50/60 Hz, 15 VA

Isolation: 2300 Vrms for 1 min. to all inputs and outputs.

DC Versions (Not available on PAXH):

DC Power: 11 to 36 VDC, 11 W

(derate operating temperature to 40° C if operating <15 VDC and three plug-in option cards are installed)

AC Power: 24 VAC, ± 10%, 50/60 Hz, 15 VA

Isolation: 500 Vrms for 1 min. to all inputs and outputs (50 V working).

3. **ANNUNCIATORS:**

MAX - maximum readout selected

MIN - minimum readout selected

TOT - totalizer readout selected, flashes when total overflows

SP1 - setpoint alarm 1 is active

SP2 - setpoint alarm 2 is active

SP3 - setpoint alarm 3 is active

SP4 - setpoint alarm 4 is active

Units Label - optional units label backlight

4. **KEYPAD:** 3 programmable function keys, 5 keys total

5. **A/D CONVERTER:** 16 bit resolution

6. **UPDATE RATES:**

A/D conversion rate: 20 readings/sec.

Step response: 200 msec. max. to within 99% of final readout value

(digital filter and internal zero correction disabled)

700 msec. max. (digital filter disabled, internal zero correction enabled)

PAXH Only: 1 sec max. to within 99% of final readout value (digital filter disabled)

Display update rate: 1 to 20 updates/sec.

Setpoint output on/off delay time: 0 to 3275 sec.

Analog output update rate: 0 to 10 sec

Max./Min. capture delay time: 0 to 3275 sec.

7. **DISPLAY MESSAGES:**

"OLOL" - Appears when measurement exceeds + signal range.

"ULUL" - Appears when measurement exceeds - signal range

PAXT: "SHrt" - Appears when shorted sensor is detected. (RTD only)

PAXT: "OPEN" - Appears when open sensor is detected.

"..." - Appears when display values exceed + display range.

"..." - Appears when display values exceed - display range.

"E..." - Appears when Totalizer exceeds 9 digits.

"h..." - Denotes the high order display of the Totalizer.

8. **INPUT CAPABILITIES:** See specific product specifications, pages 4-6

9. **EXCITATION POWER:** See specific product specifications, pages 4-6

10. **LOW FREQUENCY NOISE REJECTION:** (Does not apply to PAXH)

Normal Mode: > 60 dB @ 50 or 60 Hz ±1%, digital filter off

Common Mode: >100 dB, DC to 120 Hz

11. **USER INPUTS:** Three programmable user inputs

Max. Continuous Input: 30 VDC

Isolation To Sensor Input Common: Not isolated. (Not PAXH)

PAXH: Isolation to Sensor Input Common: 1400 Vrms for 1 min.

Working Voltage: 125 V

Response Time: 50 msec. max.

Logic State: Jumper selectable for sink/source logic

INPUT STATE	SINKING INPUTS 22 KΩ pull-up to +5 V	SOURCING INPUTS 22 KΩ pull-down
Active	$V_{IN} < 0.9 \text{ VDC}$	$V_{IN} > 3.6 \text{ VDC}$
Inactive	$V_{IN} > 3.6 \text{ VDC}$	$V_{IN} < 0.9 \text{ VDC}$

12. **TOTALIZER:**

Function:

Time Base: second, minute, hour, or day

Batch: Can accumulate (gate) input display from a user input

Time Accuracy: 0.01% typical

Decimal Point: 0 to 0.0000

Scale Factor: 0.001 to 65.000

Low Signal Cut-out: -19,999 to 99,999

Total: 9 digits, display alternates between high order and low order readouts

13. **CUSTOM LINEARIZATION:**

Data Point Pairs: Selectable from 2 to 16

Display Range: -19,999 to 99,999

Decimal Point: 0 to 0.0000

PAXT: Ice Point Compensation: user value (0.00 to 650.00 μV/°C)

14. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and display values.

15. **ENVIRONMENTAL CONDITIONS:**

Operating Temperature Range: 0 to 50°C (0 to 45°C with all three plug-in cards installed)

Vibration According to IEC 68-2-6: Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2g's.

Shock According to IEC 68-2-27: Operational 25 g (10g relay), 11 msec in 3 directions.

Storage Temperature Range: -40 to 60°C

Operating and Storage Humidity: 0 to 85% max. RH non-condensing

Altitude: Up to 2000 meters

16. **CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**

UL Recognized Component, File #E179259, UL61010A-1, CSA C22.2 No. 61010-1

PAXT Only: File # E156876, UL873, CSA C22.2 No. 24

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

-----------------	----------	--

Notes:

1. Self-recoverable loss of performance during EMI disturbance at 10 V/m: Measurement input and/or analog output signal may deviate during EMI disturbance.

For operation without loss of performance:

Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent) I/O and power cables are routed in metal conduit connected to earth ground.

Refer to EMC Installation Guidelines section of the bulletin for additional information.

17. **CONNECTIONS:** High compression cage-clamp terminal block

Wire Strip Length: 0.3" (7.5 mm)

Wire Gauge: 30-14 AWG copper wire

Torque: 4.5 inch-lbs (0.51 N-m) max.

18. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

19. **WEIGHT:** 10.4 oz. (295 g)

# MODEL PAXD - UNIVERSAL DC INPUT

- FOUR VOLTAGE RANGES (300 VDC Max)
- FIVE CURRENT RANGES (2A DC Max)
- THREE RESISTANCE RANGES (10K Ohm Max)
- SELECTABLE 24 V, 2 V, 1.75 mA EXCITATION

## PAXD SPECIFICATIONS

### INPUT RANGES:

INPUT RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
±200 µADC	0.03% of reading +0.03 µA	0.12% of reading +0.04µA	1.11 Kohm	15 mA	10 nA
±2 mADC	0.03% of reading +0.3 µA	0.12% of reading +0.4 µA	111 ohm	50 mA	0.1 µA
±20 mADC	0.03% of reading +3µA	0.12% of reading +4 µA	11.1 ohm	150 mA	1 µA
±200 mADC	0.05% of reading +30 µA	0.15% of reading +40 µA	1.1 ohm	500 mA	10 µA
±2 ADC	0.5% of reading +0.3 mA	0.7% of reading +0.4 mA	0.1 ohm	3 A	0.1 mA
±200 mVDC	0.03% of reading +30 µV	0.12% of reading +40 µV	1.066 Mohm	100 V	10 µV
±2 VDC	0.03% of reading +0.3 mV	0.12% of reading +0.4 mV	1.066 Mohm	300 V	0.1 mV
±20 VDC	0.03% of reading +3 mV	0.12% of reading +4 mV	1.066 Mohm	300 V	1 mV
±300 VDC	0.05% of reading +30 mV	0.15% of reading +40 mV	1.066 Mohm	300 V	10 mV
100 ohm	0.05% of reading +30 Mohm	0.2% of reading +40 Mohm	0.175 V	30 V	0.01 ohm
1000 ohm	0.05% of reading +0.3 ohm	0.2% of reading +0.4 ohm	1.75 V	30 V	0.1 ohm
10 Kohm	0.05% of reading +1 ohm	0.2% of reading +1.5 ohm	17.5 V	30 V	1 ohm

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85% RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

### EXCITATION POWER:

Transmitter Power: 24 VDC, ±5%, regulated, 50 mA max.  
 Reference Voltage: 2 VDC, ±2%  
 Compliance: 1 kohm load min. (2 mA max.)  
 Temperature coefficient: 40 ppm/°C max.  
 Reference Current: 1.75 mADC, ±2%  
 Compliance: 10 kohm load max.  
 Temperature coefficient: 40 ppm/°C max.

# MODEL PAXP - PROCESS INPUT

- DUAL RANGE INPUT (20 mA or 10 VDC)
- 24 VDC TRANSMITTER POWER

## PAXP SPECIFICATIONS

### SENSOR INPUTS:

INPUT (RANGE)	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	DISPLAY RESOLUTION
20 mA (-2 to 26 mA)	0.03% of reading +2 µA	0.12% of reading +3 µA	20 ohm	150 mA	1 µA
10 VDC (-1 to 13 VDC)	0.03% of reading +2 mV	0.12% of reading +3 mV	500 Kohm	300 V	1 mV

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85%RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

### EXCITATION POWER:

Transmitter Power: 24 VDC, ±5%, regulated, 50 mA max.

# MODEL PAXH - AC TRUE RMS VOLT AND CURRENT

- FOUR VOLTAGE RANGES (300 VAC Max)
- FIVE CURRENT RANGES (5 A Max)
- ACCEPTS AC OR DC COUPLED INPUTS
- THREE WAY ISOLATION: POWER, INPUT AND OUTPUTS

## PAXH SPECIFICATIONS

### INPUT RANGES:

 Isolation To Option Card Commons and User Input Commons: 125 Vrms  
 Isolation To AC Power Terminals: 250 Vrms

INPUT RANGE	ACCURACY*	IMPEDANCE (60 Hz)	MAX CONTINUOUS OVERLOAD	MAX DC BLOCKING	RESOLUTION
200 mV	0.1% of reading +0.4 mV	686 Kohm	30 V	±10 V	0.01 mV
2 V	0.1% of reading +2 mV	686 Kohm	30 V	±50 V	0.1 mV
20 V	0.1% of reading +20 mV	686 Kohm	300 V	±300 V	1 mV
300 V	0.2% of reading +0.3 V	686 Kohm	300 V	±300 V***	0.1 V

C (W5/W26)	0 to 2315°C	1.9°C	6.1°C	ASTM E988-90***	no standard	no standard

\*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 15 to 75% RH environment; and Accuracy over a 0 to 50°C and 0 to 85% RH (non condensing) environment. Accuracy specified over the 0 to 50°C operating range includes meter tempo and ice point tracking effects. The specification includes the A/D conversion errors, linearization conformity, and thermocouple ice point compensation. Total system accuracy is the sum of meter and probe errors. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

\*\* The accuracy over the interval -270 to -200°C is a function of temperature, ranging from 1°C at -200°C and degrading to 7°C at -270°C. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

\*\*\* These curves have been corrected to ITS-90.

### RTD INPUTS:

Type: 3 or 4 wire, 2 wire can be compensated for lead wire resistance

Excitation current: 100 ohm range: 165 μA

10 ohm range: 2.6 mA

Lead resistance: 100 ohm range: 10 ohm/lead max.

10 ohm range: 3 ohms/lead max.

Max. continuous overload: 30 V

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	STANDARD ***
100 ohm Pt alpha = .00385	-200 to 850°C	0.4°C	1.6°C	IEC 751
100 ohm Pt alpha = .003919	-200 to 850°C	0.4°C	1.6°C	no official standard
120 ohm Nickel alpha = .00672	-80 to 260°C	0.2°C	0.5°C	no official standard
10 ohm Copper alpha = .00427	-100 to 260°C	0.4°C	0.9°C	no official standard

### CUSTOM RANGE: Up to 16 data point pairs

Input range: -10 to 65 mV

0 to 400 ohms, high range

0 to 25 ohms, low range

Display range: -19999 to 99999

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)
Custom mV range	-10 to 65mV (1 μV res.)	0.02% of reading + 4μV	0.12% of reading + 5μV
Custom 100 ohm range	0 to 400 Ω (10 MΩ res.)	0.02% of reading + 0.04 Ω	0.12% of reading + 0.05 Ω
Custom 10 ohm range	0 to 25 Ω (1 MΩ res.)	0.04% of reading + 0.005 Ω	0.20% of reading + 0.007 Ω

## ACCESSORIES

### UNITS LABEL KIT (PAXLBK) - Not required for PAXT

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled in the programming.

Each PAXT meter is shipped with °F and °C overlay labels which can be installed into the meter's bezel display assembly.

### EXTERNAL CURRENT SHUNTS (APSCM)

To measure DC current signals greater than 2 ADC, a shunt must be used. The APSCM10 current shunt converts a maximum 10 ADC signal into 100.0 mV. The APSCM100 current shunt converts a maximum 100 ADC signal into 100.0 mV. The continuous current through the shunt is limited to 115% of the rating.

# OPTIONAL PLUG-IN OUTPUT CARDS

**WARNING:** Disconnect all power to the unit before installing Plug-in cards.

## Adding Option Cards

The PAX and MPAX series meters can be fitted with up to three optional plug-in cards. The details for each plug-in card can be reviewed in the specification section below. Only one card from each function type can be installed at one time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The plug-in cards can be installed initially or at a later date.

### PAXH Isolation Specifications For All Option Cards

**Isolation To Sensor Commons:** 1400 Vrms for 1 min.

Working Voltage: 125 V

**Isolation to User Input Commons:** 500 Vrms for 1 min.

Working Voltage 50 V

## COMMUNICATION CARDS (PAXCDC)

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via RLCPro, a Windows® based program, the RS232 or RS485 Cards must be used.

PAXCDC10 - RS485 Serial

PAXCDC40 - Modbus

PAXCDC20 - RS232 Serial

PAXCDC50 - Profibus-DP

PAXCDC30 - DeviceNet

### SERIAL COMMUNICATIONS CARD

**Type:** RS485 or RS232

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Data:** 7/8 bits

**Baud:** 300 to 19,200

**Parity:** no, odd or even

**Bus Address:** Selectable 0 to 99, Max. 32 meters per line (RS485)

**Transmit Delay:** Selectable for 2 to 50 msec or 50 to 100 msec (RS485)

### DEVICENET™ CARD

**Compatibility:** Group 2 Server Only, not UCMM capable

**Baud Rates:** 125 Kbaud, 250 Kbaud, and 500 Kbaud

**Bus Interface:** Phillips 82C250 or equivalent with MIS wiring protection per DeviceNet™ Volume I Section 10.2.2.

**Node Isolation:** Bus powered, isolated node

**Host Isolation:** 500 Vrms for 1 minute (50 V working) between DeviceNet™ and meter input common.

### MODBUS CARD

**Type:** RS485; RTU and ASCII MODBUS modes

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 minute.

Working Voltage: 50 V. Not isolated from all other commons.

**Baud Rates:** 300 to 38400.

**Data:** 7/8 bits

**Parity:** No, Odd, or Even

**Addresses:** 1 to 247.

**Transmit Delay:** Programmable; See Transmit Delay explanation.

### PROFIBUS-DP CARD

**Fieldbus Type:** Profibus-DP as per EN 50170, implemented with Siemens SPC3 ASIC

**Conformance:** PNO Certified Profibus-DP Slave Device

**Baud Rates:** Automatic baud rate detection in the range 9.6 Kbaud to 12 Mbaud  
**Station Address:** 0 to 126, set by the master over the network. Address stored in non-volatile memory.

**Connection:** 9-pin Female D-Sub connector

**Network Isolation:** 500 Vrms for 1 minute (50 V working) between Profibus network and sensor and user input commons. Not isolated from all other commons.

## PROGRAMMING SOFTWARE

The Crimson® software is a Windows® based program that allows configuration of the PAX® meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the meter. The meter's program can then be saved in a PC file for future use. A PAX® serial plug-in card is required to program the meter using the software.

## SETPOINT CARDS (PAXCDS)

The PAX and MPAX series has 4 available setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

PAXCDS10 - Dual Relay, FORM-C, Normally open & closed

PAXCDS20 - Quad Relay, FORM-A, Normally open only

PAXCDS30 - Isolated quad sinking NPN open collector

PAXCDS40 - Isolated quad sourcing PNP open collector

### DUAL RELAY CARD

**Type:** Two FORM-C relays

**Isolation To Sensor & User Input Commons:** 2000 Vrms for 1 min.

Working Voltage: 240 Vrms

**Contact Rating:**

One Relay Energized: 5 amps @ 120/240 VAC or 28 VDC (resistive load),  
1/8 HP @ 120 VAC, inductive load

Total current with both relays energized not to exceed 5 amps

**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

### QUAD RELAY CARD

**Type:** Four FORM-A relays

**Isolation To Sensor & User Input Commons:** 2300 Vrms for 1 min.

Working Voltage: 250 Vrms

**Contact Rating:**

One Relay Energized: 3 amps @ 240 VAC or 30 VDC (resistive load), 1/10 HP @ 120 VAC, inductive load

Total current with all four relays energized not to exceed 4 amps

**Life Expectancy:** 100K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

### QUAD SINKING OPEN COLLECTOR CARD

**Type:** Four isolated sinking NPN transistors.

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Rating:** 100 mA max @  $V_{SAT} = 0.7$  V max.  $V_{MAX} = 30$  V

### QUAD SOURCING OPEN COLLECTOR CARD

**Type:** Four isolated sourcing PNP transistors.

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Rating:** Internal supply: 24 VDC  $\pm 10\%$ , 30 mA max. total

External supply: 30 VDC max., 100 mA max. each output

### ALL FOUR SETPOINT CARDS

**Response Time:** 200 msec. max. to within 99% of final readout value (digital filter and internal zero correction disabled)

700 msec. max. (digital filter disabled, internal zero correction enabled)

## LINEAR DC OUTPUT (PAXCDL)

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on various display values. Reverse slope output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

### ANALOG OUTPUT CARD

**Types:** 0 to 20 mA, 4 to 20 mA or 0 to 10 VDC

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Accuracy:** 0.17% of FS (18 to 28°C); 0.4% of FS (0 to 50°C)

**Resolution:** 1/3500

**Compliance:** 10 VDC: 10 K $\Omega$  load min., 20 mA: 500  $\Omega$  load max.

**Powered:** Self-powered

**Update time:** 200 msec. max. to within 99% of final output value (digital filter and internal zero correction disabled)

700 msec. max. (digital filter disabled, internal zero correction enabled)

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

PANEL CUT-OUT

# 2.0 SETTING THE JUMPERS

The meter can have up to four jumpers that must be checked and / or changed prior to applying power. The following Jumper Selection Figures show an enlargement of the jumper area.

To access the jumpers, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Input Range Jumper

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum input to avoid overloads. The selection is different for each meter. See the Jumper Selection Figure for appropriate meter.

## Excitation Output Jumper

If your meter has excitation, this jumper is used to select the excitation range for the application. If excitation is not being used, it is not necessary to check or move this jumper.

## User Input Logic Jumper

This jumper selects the logic state of all the user inputs. If the user inputs are not used, it is not necessary to check or move this jumper.

### PAXH:

#### Signal Jumper

This jumper is used to select the signal type. For current signals, the jumper is installed. For voltage signals, remove the jumper from the board. (For 2 V inputs, this removed jumper can be used in the "2 V only" location.)

#### Couple Jumper

This jumper is used for AC / DC couple. If AC couple, then the jumper is removed from the board. If DC couple is used, then the jumper is installed.

## PAXD Jumper Selection

### Input Range Jumper

One jumper is used for voltage/ohms or current input ranges. Select the proper input range high enough to avoid input signal overload. Only one jumper is allowed in this area. Do not have a jumper in both the voltage and current ranges at the same time. Avoid placing the jumper across two ranges.

### JUMPER SELECTIONS

The  indicates factory setting.

# PAXP Jumper Selection

## JUMPER SELECTIONS

The  $\curvearrowright$  indicates factory setting.

↓ REAR TERMINALS ↓

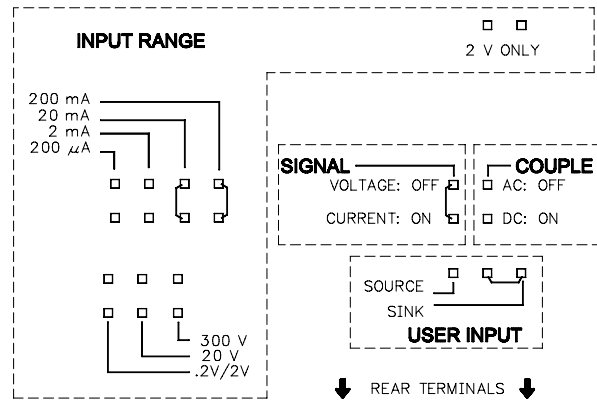

# PAXH Jumper Selection

**CAUTION:** To maintain the electrical safety of the meter, remove unneeded jumpers completely from the meter. Do not move the jumpers to positions other than those specified.

## JUMPER SELECTIONS

The  $\curvearrowright$  indicates factory setting.

↓ REAR TERMINALS ↓

E

### Input Range Jumper

For most inputs, one jumper is used to select the input range. However, for the following ranges, set the jumpers as stated:

**5 A:** Remove all jumpers from the input range.

**2 V:** Install one jumper in “.2/2V” position and one jumper in “2 V only”.

**All Other Ranges:** One jumper in the selected range only.

Do not have a jumper in both the voltage and current ranges at the same time. Avoid placing a jumper across two ranges.

### Signal Jumper

One jumper is used for the input signal type. For current signals, the jumper is installed. For voltage signals, remove the jumper from the board. (For 2 V inputs, this removed jumper can be used in the “2 V only” location.)

### Couple Jumper

One jumper is used for AC / DC couple. If AC couple is used, then the jumper is removed from the board. If DC couple is used, then the jumper is installed.

# PAXS Jumper Selection

## Bridge Excitation

One jumper is used to select bridge excitation to allow use of the higher sensitivity 24 mV input range. Use the 5 V excitation with high output (3 mV/V) bridges. The 5 V excitation also reduces bridge power compared to 10 V excitation.

A maximum of four 350 ohm load cells can be driven by the internal bridge excitation voltage.

## JUMPER SELECTIONS

The  $\curvearrowright$  indicates factory setting.

↓ REAR TERMINALS ↓

## PAXT Jumper Selection

### RTD Input Jumper

One jumper is used for RTD input ranges. Select the proper range to match the RTD probe being used. It is not necessary to remove this jumper when not using RTD probes.

### JUMPER SELECTIONS

The  $\curvearrowright$  indicates factory setting.

↓ REAR TERMINALS ↓

## 3.0 WIRING THE METER

### WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. With use of the lower input ranges or signal sources with high source impedance, the use of shielded cable may be necessary. This helps to guard against stray AC pick-up. Attach the shield to the input common of the meter. Line voltage monitoring and 5A CT applications do not usually require shielding.
3. To minimize potential noise problems, power the meter from the same power branch, or at least the same phase voltage as that of the signal source.

4. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
5. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
6. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

7. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
8. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC#SNUB0000.

Input Range Jumper: 2 Volt  
Module 1 Input Range: 2 Volt

*Note: The Apply signal scaling style should be used because the signal will be in volts.*

E

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common; and the common of the isolated plug-in cards with respect to input common.

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common; and the common of the isolated plug-in cards with respect to input common.

## PAXH INPUT SIGNAL WIRING

Before connecting signal wires, the Signal, Input Range and Couple Jumpers should be verified for proper position.

### Voltage Signal

### Current Signal (Amps)

### Current Signal (Milliamps)

**CAUTION:** Connect only one input signal range to the meter. Hazardous signal levels may be present on unused inputs.

**CAUTION:** The isolation rating of the input common of the meter with respect to the option card commons and the user input common Terminal 8 (If used) is 125 Vrms; and 250 Vrms with respect to AC Power (meter Terminals 1 & 2). To be certain that the ratings are not exceeded, these voltages should be verified by a high-voltage meter before wiring the meter.

#### CAUTION:

1. Where possible, connect the neutral side of the signal (including current shunts) to the input common of the meter. If the input signal is sourced from an active circuit, connect the lower impedance (usually circuit common) to the input signal common of the meter.
2. For phase-to-phase line monitoring where a neutral does not exist, or for any other signal input in which the isolation voltage rating is exceeded, an isolating potential transformer must be used to isolate the input voltage from earth. With the transformer, the input common of the meter can then be earth referenced for safety.
3. When measuring line currents, the use of a current transformer is recommended. If using external current shunts, insert the shunt in the neutral return line. If the isolation voltage rating is exceeded, the use of an isolating current transformer is necessary.

## PAXS INPUT SIGNAL WIRING

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

### 2-Wire Single Ended Input

### 4-Wire Bridge Input

### 6-Wire Bridge Input

## DEADLOAD COMPENSATION

In some cases, the combined deadload and liveload output may exceed the range of the 24 mV input. To use this range, the output of the bridge can be offset a small amount by applying a fixed resistor across one arm of the bridge. This shifts the electrical output of the bridge downward to within the operating range of the meter. A 100 K ohm fixed resistor shifts the bridge output approximately -10 mV (350 ohm bridge, 10 V excitation).

Connect the resistor between +SIG and -SIG. Use a metal film resistor with a low temperature coefficient of resistance.

## BRIDGE COMPLETION RESISTORS

For single strain gage applications, bridge completion resistors must be employed externally to the meter. Only use metal film resistors with a low temperature coefficient of resistance.

Load cells and pressure transducers are normally implemented as full resistance bridges and do not require bridge completion resistors.

## PAXT INPUT SIGNAL WIRING

### Thermocouple

### 3-Wire RTD

### 2-Wire RTD

**CAUTION:** Sensor input common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common; and the common of the isolated plug-in cards with respect to input common.

### 3.3 USER INPUT WIRING

Before connecting the wires, the User Input Logic Jumper should be verified for proper position. If not using User Inputs, then skip this section. Only the appropriate User Input terminal has to be wired.

#### Sinking Logic

Terminal 8-10: } Connect external switching device between  
Terminal 7: } appropriate User Input terminal and User Comm.

In this logic, the user inputs of the meter are internally pulled up to +5 V with 22 K resistance. The input is active when it is pulled low (<0.9 V).

#### Sourcing Logic

Terminal 8-10: + VDC thru external switching device  
Terminal 7: -VDC thru external switching device

In this logic, the user inputs of the meter are internally pulled down to 0 V with 22 K resistance. The input is active when a voltage greater than 3.6 VDC is applied.

### PAXH ONLY

#### Sinking Logic

Terminals 9-11 } Connect external  
Terminal 8 } switching device between  
appropriate User Input  
terminal and User Comm.

In this logic, the user inputs of the meter are internally pulled up to +5 V with 22 K resistance. The input is active when it is pulled low (<0.9 V).

#### Sourcing Logic

Terminals 9-11: + VDC through external switching device  
Terminal 8: -VDC through external switching device

In this logic, the user inputs of the meter are internally pulled down with 22 K resistance. The input is active when a voltage greater than 3.6 VDC is applied.

### 3.4 SETPOINT (ALARMS) WIRING

### 3.5 SERIAL COMMUNICATION WIRING

### 3.6 ANALOG OUTPUT WIRING

See appropriate plug-in card bulletin for details.

## 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

#### KEY DISPLAY MODE OPERATION

- DSP** Index display through max/min/total/input readouts
- PAR** Access parameter list
- F1▲** Function key 1; hold for 3 seconds for Second Function 1\*\*
- F2▼** Function key 2; hold for 3 seconds for Second Function 2\*\*
- RST** Reset (Function key)\*\*

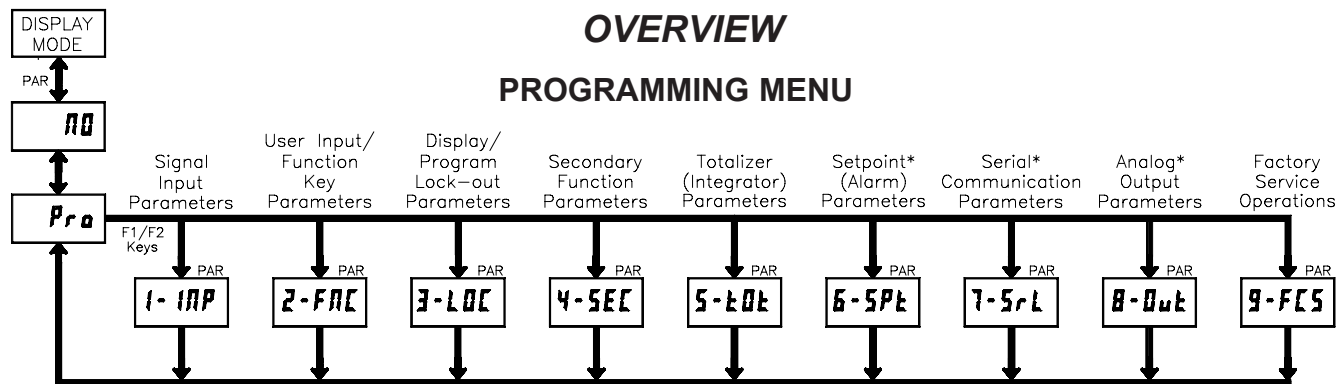

#### PROGRAMMING MODE OPERATION

- Quit programming and return to display mode
- Store selected parameter and index to next parameter
- Increment selected parameter value
- Decrement selected parameter value
- Hold with F1▲, F2▼ to scroll value by x1000

\* Display Readout Legends may be locked out in Factory Settings.

\*\* Factory setting for the F1, F2, and RST keys is NO mode.

# 5.0 PROGRAMMING THE METER

\* Only accessible with appropriate plug-in card.

## DISPLAY MODE

The meter normally operates in the Display Mode. In this mode, the meter displays can be viewed consecutively by pressing the **DSP** key. The annunciators to the left of the display indicate which display is currently shown; Max Value (MAX), Min Value (MIN), or Totalizer Value (TOT). Each of these displays can be locked from view through programming. (See Module 3) The Input Display Value is shown with no annunciator.

## PROGRAMMING MODE

Two programming modes are available.

**Full Programming Mode** permits all parameters to be viewed and modified. Upon entering this mode, the front panel keys change to Programming Mode operations. This mode should not be entered while a process is running, since the meter functions and User Input response may not operate properly while in Full Programming Mode.

**Quick Programming Mode** permits only certain parameters to be viewed and/or modified. When entering this mode, the front panel keys change to Programming Mode operations, and all meter functions continue to operate properly. Quick Programming Mode is configured in Module 3. The Display Intensity Level “**d-LEv**” parameter is available in the Quick Programming Mode only when the security code is non-zero. For a description, see Module 9—Factory Service Operations. Throughout this document, Programming Mode (without Quick in front) always refers to “Full” Programming Mode.

## PROGRAMMING TIPS

The Programming Menu is organized into nine modules (See above). These modules group together parameters that are related in function. It is recommended to begin programming with Module 1 and proceed through each module in sequence. Note that Modules 6 through 8 are only accessible when the appropriate plug-in option card is installed. If lost or confused while programming, press the **DSP** key to exit programming mode and start over. When programming is complete, it is recommended to record the meter settings on the Parameter Value Chart and lock-out parameter programming with a User Input or lock-out code. (See Modules 2 and 3 for lock-out details.)

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 9. This is a good starting point if encountering programming problems. Throughout the module description sections which follow, the factory setting for each parameter is shown below the parameter display. In addition, all factory settings are listed on the Parameter Value Chart following the programming section.

## ALTERNATING SELECTION DISPLAY

In the module description sections which follow, the dual display with arrows appears for each programming parameter. This is used to illustrate the display alternating between the parameter (top display) and the parameter's Factory Setting (bottom display). In most cases, selections or value ranges for the parameter will be listed on the right.

## STEP BY STEP PROGRAMMING INSTRUCTIONS:

### PROGRAMMING MODE ENTRY (PAR KEY)

The Programming Mode is entered by pressing the **PAR** key. If this mode is not accessible, then meter programming is locked by either a security code or a hardware lock. (See Modules 2 and 3 for programming lock-out details.)

### MODULE ENTRY (ARROW & PAR KEYS)

Upon entering the Programming Mode, the display alternates between **Pr0** and the present module (initially **Pr0**). The arrow keys (**F1▲** and **F2▼**) are used to select the desired module, which is then entered by pressing the **PAR** key.

### PARAMETER (MODULE) MENU (PAR KEY)

Each module has a separate parameter menu. These menus are shown at the start of each module description section which follows. The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr0 Pr0**. From this point, programming may continue by selecting and entering additional modules. (See **MODULE ENTRY** above.)

### PARAMETER SELECTION ENTRY (ARROW & PAR KEYS)

For each parameter, the display alternates between the parameter and the present selection or value for that parameter. For parameters which have a list of selections, the arrow keys (**F1▲** and **F2▼**) are used to sequence through the list until the desired selection is displayed. Pressing the **PAR** key stores and activates the displayed selection, and also advances the meter to the next parameter.

### NUMERICAL VALUE ENTRY (ARROW, RST & PAR KEYS)

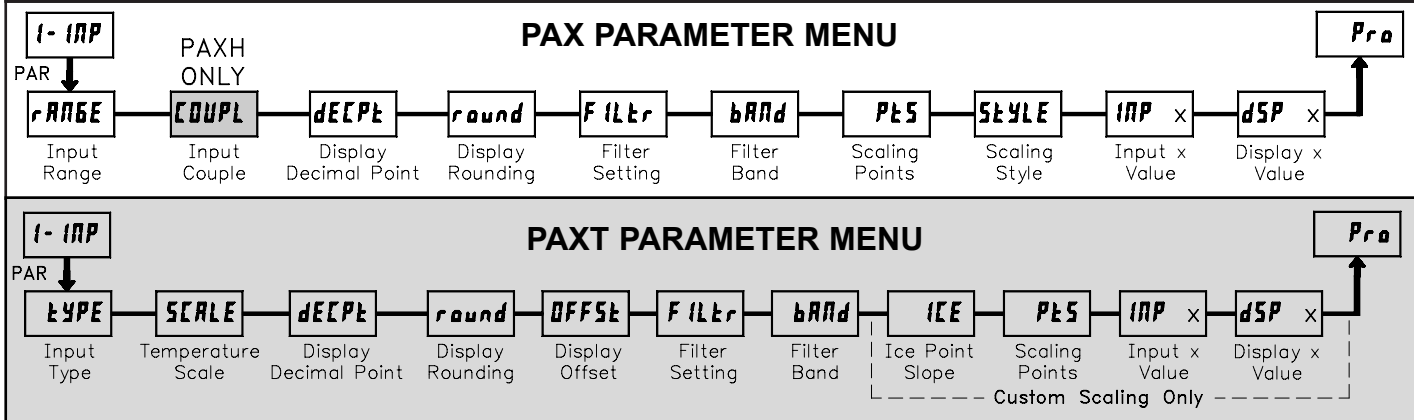

For parameters which require a numerical value entry, the arrow keys can be used to increment or decrement the display to the desired value. When an arrow key is pressed and held, the display automatically scrolls up or scrolls down. The longer the key is held, the faster the display scrolls.

The **RST** key can be used in combination with the arrow keys to enter large numerical values. When the **RST** key is pressed along with an arrow key, the display scrolls by 1000's. Pressing the **PAR** key stores and activates the displayed value, and also advances the meter to the next parameter.

### PROGRAMMING MODE EXIT (DSP KEY or PAR KEY at Pr0 Pr0)

The Programming Mode is exited by pressing the **DSP** key (from anywhere in the Programming Mode) or the **PAR** key (with **Pr0 Pr0** displayed). This will commit any stored parameter changes to memory and return the meter to the Display Mode. If a parameter was just changed, the **PAR** key should be pressed to store the change before pressing the **DSP** key. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS (1-INP)

Refer to the appropriate Input Range for the selected meter. Use only one Input Range, then proceed to Display Decimal Point.

## PAXS INPUT RANGE

<b>RANGE</b>	SELECTION	RANGE RESOLUTION
0.02u	0.02u	±24 mV
	0.2u	±240 mV

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## PAXD INPUT RANGE

<b>RANGE</b>	SELECTION	RANGE RESOLUTION	SELECTION	RANGE RESOLUTION
300u	200uA	±200.00 µA	2u	±2.0000 V
	0.002A	±2.0000 mA	20u	±20.000 V
	0.02A	±20.000 mA	300u	±300.00 V
	0.2A	±200.00 mA	100o	100.00 ohm
	2A	±2.0000 A	1000o	1000.0 ohm
	0.2u	±200.00 mV	10k0	10000 ohm

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## PAXT INPUT TYPE

<b>tYPE</b>	SELECTION	TYPE	SELECTION	TYPE
t-c-t	t-c-t	T TC	t-c-c	C TC
t-c-E	Pt385	E TC	Pt385	RTD platinum 385
t-c-J	Pt392	J TC	Pt392	RTD platinum 392
t-c-Y	n.672	K TC	n.672	RTD nickel 672
t-c-r	Cu427	R TC	Cu427	RTD copper 10 Ω
t-c-S	C5-tc	S TC	C5-tc	Custom TC
t-c-b	C5-rH	B TC	C5-rH	Custom RTD High
t-c-n	C5-rL	N TC	C5-rL	Custom RTD Low

Select the input type that corresponds to the input sensor. For RTD types, check the RTD Input Jumper for matching selection. For custom types, the Temperature Scale parameter is not available, the Display Decimal Point is expanded, and Custom Sensor Scaling must be completed.

## PAXT TEMPERATURE SCALE

<b>SCALE</b>	oF	oC
	oF	

Select the temperature scale. This selection applies for Input, MAX, MIN, and TOT displays. This does not change the user installed Custom Units Overlay display. If changed, those parameters that relate to the temperature scale should be checked. This selection is not available for custom sensor types.

## PAXP INPUT RANGE

<b>RANGE</b>	SELECTION	RANGE RESOLUTION
0.02A	0.02A	20.000 mA
	10u	10.000 V

Select the input range that corresponds to the external signal.

## PAXH INPUT RANGE

<b>RANGE</b>	SELECTION	RANGE RESOLUTION	SELECTION	RANGE RESOLUTION
5A	0.2u	200.00 mV	0.002A	2.0000 mA
	2u	2.0000 V	0.02A	20.000 mA
	20u	20.000 V	0.2A	200.00 mA
	300u	300.0 V	5A	5.000 A
	200uA	200.00 µA		

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## PAXH INPUT COUPLE

<b>COUPL</b>	AC	or	DC
	AC		

The input signal can be either AC coupled (rejecting the DC components of the signal) or DC coupled (measures both the AC and DC components of the signal). The coupling jumper and the setting of this parameter must match.

## DISPLAY DECIMAL POINT

<b>DECPt</b>	0	00	000	0000	00000
	0				

For the PAXT, these are only available with Custom Scaling.

Select the decimal point location for the Input, MAX and MIN displays. (The TOT display decimal point is a separate parameter.) This selection also affects round, dSP I and dSP2 parameters and setpoint values.

### DISPLAY ROUNDING\*

round 1

10 20 50 100

These bottom selections are not available for the PAXT.

Rounding selections other than one, cause the Input Display to 'round' to the nearest rounding increment selected (ie. rounding of '5' causes 122 to round to 120 and 123 to round to 125). Rounding starts at the least significant digit of the Input Display. Remaining parameter entries (scaling point values, setpoint values, etc.) are not automatically adjusted to this display rounding selection.

### SCALING POINTS\*

PE5 2 to 16

2

#### Linear - Scaling Points (2)

For linear processes, only 2 scaling points are necessary. It is recommended that the 2 scaling points be at opposite ends of the input signal being applied. The points do not have to be the signal limits. Display scaling will be linear between and continue past the entered points up to the limits of the Input Signal Jumper position. Each scaling point has a coordinate-pair of Input Value (*INP*) and an associated desired Display Value (*dSP*).

#### Nonlinear - Scaling Points (Greater than 2)

For non-linear processes, up to 16 scaling points may be used to provide a piece-wise linear approximation. (The greater the number of scaling points used, the greater the conformity accuracy.) The Input Display will be linear between scaling points that are sequential in program order. Each scaling point has a coordinate-pair of Input Value (*INP*) and an associated desired Display Value (*dSP*). Data from tables or equations, or empirical data could be used to derive the required number of segments and data values for the coordinate pairs. In the SFPAX software, several linearization equations are available.

### SCALING STYLE

This parameter does not apply for the PAXT. Scaling values for the PAXT must be keyed-in.

STYLE KEY key-in data

KEY APPLY apply signal

If Input Values and corresponding Display Values are known, the Key-in (*KEY*) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (*APPLY*) scaling style must be used. After using the Apply (*APPLY*) scaling style, this parameter will default back to *KEY* but the scaling values will be shown from the previous applied method.

### FILTER SETTING\*

Filter 0.0 to 25.0 seconds

1.0

The input filter setting is a time constant expressed in tenths of a second. The filter settles to 99% of the final display value within approximately 3 time constants. This is an Adaptive Digital Filter which is designed to steady the Input Display reading. A value of '0' disables filtering.

### FILTER BAND\*

band 0.0 to 25.0 display units

1.0

The digital filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the digital filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units. A band setting of '0' keeps the digital filter permanently engaged.

For the PAXT, the following parameters only apply to Custom Sensor Scaling.

### PAXT: ICE POINT SLOPE

ICE 0 to 650.00  $\mu\text{V}/^\circ\text{C}$

0.00

This parameter sets the slope value for ice point compensation for the Custom TC range (*ES-EE*) only. The fixed thermocouple ranges are automatically compensated by the meter and do not require this setting. To calculate this slope, use  $\mu\text{V}$  data obtained from thermocouple manufacturers' tables for two points between  $0^\circ\text{C}$  and  $50^\circ\text{C}$ . Place this corresponding  $\mu\text{V}$  and  $^\circ\text{C}$  information into the equation:

$$\text{slope} = (\mu\text{V}_2 - \mu\text{V}_1) / (\text{C}_2 - \text{C}_1)$$

Due to the nonlinear output of thermocouples, the compensation may show a small offset error at room temperatures. This can be compensated by the offset parameter. A value of 0 disables internal compensation when the thermocouple is externally compensated.

\* Factory Setting can be used without affecting basic start-up.

### INPUT VALUE FOR SCALING POINT 1

INP 1 - 19999 to 99999

0.00

For Key-in (*KEY*), enter the known first Input Value by using the arrow keys. The Input Range selection sets up the decimal location for the Input Value. With 0.02A Input Range, 4mA would be entered as 4.000. For Apply (*APPLY*), apply the input signal to the meter, adjust the signal source externally until the desired Input Value appears. In either method, press the **PAR** key to enter the value being displayed.

Note: *APPLY* style - Pressing the **RST** key will advance the display to the next scaling display point without storing the input value.

### DISPLAY VALUE FOR SCALING POINT 1

dSP 1 - 19999 to 99999

0.00

Enter the first coordinating Display Value by using the arrow keys. This is the same for *KEY* and *APPLY* scaling styles. The decimal point follows the *dECP* selection.

### INPUT VALUE FOR SCALING POINT 2

INP 2 - 19999 to 99999

100.00

For Key-in (*KEY*), enter the known second Input Value by using the arrow keys. For Apply (*APPLY*), adjust the signal source externally until the next desired Input Value appears. (Follow the same procedure if using more than 2 scaling points.)

## DISPLAY VALUE FOR SCALING POINT 2

Enter the second coordinating Display Value by using the arrow keys. This is the same for **PEY** and **RPLY** scaling styles. (Follow the same procedure if using more than 2 scaling points.)

### General Notes on Scaling

1. Input Values for scaling points should be confined to the limits of the Input Range Jumper position.
2. The same Input Value should not correspond to more than one Display Value. (Example: 20 mA can not equal 0 and 10.) This is referred to as read out jumps (vertical scaled segments).
3. The same Display Value can correspond to more than one Input Value. (Example: 0 mA and 20 mA can equal 10.) This is referred to as readout dead zones (horizontal scaled segments).

4. The maximum scaled Display Value spread between range maximum and minimum is limited to 65,535. For example using +20 mA range the maximum +20 mA can be scaled to is 32,767 with 0 mA being 0 and Display Rounding of 1. (Decimal points are ignored.) The other half of 65,535 is for the lower half of the range 0 to -20 mA even if it is not used. With Display Rounding of 2, +20 mA can be scaled for 65,535 (32,767 x 2) but with even Input Display values shown.
5. For input levels beyond the first programmed Input Value, the meter extends the Display Value by calculating the slope from the first two coordinate pairs ( $INP1 / dSP1$  &  $INP2 / dSP2$ ). If  $INP1 = 4$  mA and  $dSP1 = 0$ , then 0 mA would be some negative Display Value. This could be prevented by making  $INP1 = 0$  mA /  $dSP1 = 0$ ,  $INP2 = 4$  mA /  $dSP2 = 0$ , with  $INP3 = 20$  mA /  $dSP3 =$  the desired high Display Value. The calculations stop at the limits of the Input Range Jumper position.
6. For input levels beyond the last programmed Input Value, the meter extends the Display Value by calculating the slope from the last two sequential coordinate pairs. If three coordinate pair scaling points were entered, then the Display Value calculation would be between  $INP2 / dSP2$  &  $INP3 / dSP3$ . The calculations stop at the limits of the Input Range Jumper position.

## 5.2 MODULE 2 - USER INPUT AND FRONT PANEL FUNCTION KEY PARAMETERS (2-FNC)

The three user inputs are individually programmable to perform specific meter control functions. While in the Display Mode or Program Mode, the function is executed the instant the user input transitions to the active state.

The front panel function keys are also individually programmable to perform specific meter control functions. While in the Display Mode, the primary function is executed the instant the key is pressed. Holding the function key for three seconds executes a secondary function. It is possible to program a secondary function without a primary function.

In most cases, if more than one user input and/or function key is programmed for the same function, the maintained (level trigger) actions will be performed while at least one of those user inputs or function keys are activated. The momentary (edge trigger) actions will be performed every time any of those user inputs or function keys transition to the active state.

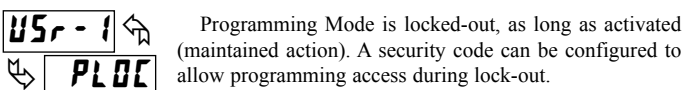

**Note:** In the following explanations, not all selections are available for both user inputs and front panel function keys. Alternating displays are shown with each selection. Those selections showing both displays are available for both. If a display is not shown, it is not available for that selection. **USR-1** will represent all three user inputs. **F1** will represent all five function keys.

### NO FUNCTION

No function is performed if activated. This is the factory setting for all user inputs and function keys. No function can be selected without affecting basic start-up.

### PROGRAMMING MODE LOCK-OUT

Programming Mode is locked-out, as long as activated (maintained action). A security code can be configured to allow programming access during lock-out.

### ZERO (TARE) DISPLAY

The Zero (Tare) Display provides a way to zero the Input Display value at various input levels, causing future Display readings to be offset. This function is useful in weighing applications where the container or material on the scale should not be included in the next measurement value. When activated (momentary action), **rESEt** flashes and the Display is set to zero. At the same time, the Display value (that was on the display before the Zero Display) is subtracted from the Display Offset Value and is automatically stored as the new Display Offset Value (**OFFSEt**). If another Zero (tare) Display is performed, the display will again change to zero and the Display reading will shift accordingly.

### RELATIVE/ABSOLUTE DISPLAY

This function will switch the Input Display between Relative and Absolute. The Relative is a net value that includes the Display Offset Value. The Input Display will normally show the Relative unless switched by this function. Regardless of the display selected, all meter functions continue to operate based on relative values. The Absolute is a gross value (based on Module 1 **DSP** and **INP** entries) without the Display Offset Value. The Absolute display is selected as long as the user input is activated (maintained action) or at the transition of the function key (momentary action). When the user input is released, or the function key is pressed again, the input display switches back to Relative display. **AbS** (absolute) or **rEL** (relative) is momentarily displayed at transition to indicate which display is active.

## HOLD DISPLAY

The shown display is held but all other meter functions continue as long as activated (maintained action).

## HOLD ALL FUNCTIONS

The meter disables processing the input, holds all display contents, and locks the state of all outputs as long as activated (maintained action). The serial port continues data transfer.

## SYNCHRONIZE METER READING

The meter suspends all functions as long as activated (maintained action). When the user input is released, the meter synchronizes the restart of the A/D with other processes or timing events.

## STORE BATCH READING IN TOTALIZER

The Input Display value is one time added (batched) to the Totalizer at transition to activate (momentary action). The Totalizer retains a running sum of each batch operation until the Totalizer is reset. When this function is selected, the normal operation of the Totalizer is overridden.

## SELECT TOTALIZER DISPLAY

The Totalizer display is selected as long as activated (maintained action). When the user input is released, the Input Display is returned. The DSP key overrides the active user input. The Totalizer continues to function including associated outputs independent of being displayed.

## RESET TOTALIZER

When activated (momentary action), rESEk flashes and the Totalizer resets to zero. The Totalizer then continues to operate as it is configured. This selection functions independent of the selected display.

## RESET AND ENABLE TOTALIZER

When activated (momentary action), rESEk flashes and the Totalizer resets to zero. The Totalizer continues to operate while active (maintained action). When the user input is released, the Totalizer stops and holds its value. This selection functions independent of the selected display.

## ENABLE TOTALIZER

The Totalizer continues to operate as long as activated (maintained action). When the user input is released, the Totalizer stops and holds its value. This selection functions independent of the selected display.

## SELECT MAXIMUM DISPLAY

The Maximum display is selected as long as activated (maintained action). When the user input is released, the Input Display returns. The DSP key overrides the active user input. The Maximum continues to function independent of being displayed.

## RESET MAXIMUM

When activated (momentary action), rESEk flashes and the Maximum resets to the present Input Display value. The Maximum function then continues from that value. This selection functions independent of the selected display.

## RESET, SELECT, ENABLE MAXIMUM DISPLAY

When activated (momentary action), the Maximum value is set to the present Input Display value. Maximum continues from that value while active (maintained action). When the user input is released, Maximum detection stops and holds its value. This selection functions independent of the selected display. The DSP key overrides the active user input display but not the Maximum function.

## SELECT MINIMUM DISPLAY

The Minimum display is selected as long as activated (maintained action). When the user input is released, the Input Display is returned. The DSP key overrides the active user input. The Minimum continues to function independent of being displayed.

## RESET MINIMUM

When activated (momentary action), rESEk flashes and the Minimum reading is set to the present Input Display value. The Minimum function then continues from that value. This selection functions independent of the selected display.

## RESET, SELECT, ENABLE MINIMUM DISPLAY

When activated (momentary action), the Minimum value is set to the present Input Display value. Minimum continues from that value while active (maintained action). When the user input is released, Minimum detection stops and holds its value. This selection functions independent of the selected display. The DSP key overrides the active user input display but not the Minimum function.

## RESET MAXIMUM AND MINIMUM

When activated (momentary action), rESEk flashes and the Maximum and Minimum readings are set to the present Input Display value. The Maximum and Minimum function then continues from that value. This selection functions independent of the selected display.

## CHANGE DISPLAY INTENSITY LEVEL

When activated (momentary action), the display intensity changes to the next intensity level (of 4). The four levels correspond to Display Intensity Level (d-LEu) settings of 0, 3, 8, and 15. The intensity level, when changed via the User Input/ Function Key, is not retained at power-down, unless Quick Programming or Full Programming mode is entered and exited. The meter will power-up at the last saved intensity level.

## SETPOINT SELECTIONS

The following selections are accessible only with the Setpoint plug-in card installed. Refer to the Setpoint Card Bulletin shipped with the Setpoint plug-in card for an explanation of their operation.

Setpoint Card Only

- L 15t - Select main or alternate setpoints
- r - 1 - Reset Setpoint 1 (Alarm 1)
- r - 2 - Reset Setpoint 2 (Alarm 2)
- r - 3 - Reset Setpoint 3 (Alarm 3)
- r - 4 - Reset Setpoint 4 (Alarm 4)
- r - 34 - Reset Setpoint 3 & 4 (Alarm 3 & 4)
- r - 234 - Reset Setpoint 2, 3 & 4 (Alarm 2, 3 & 4)
- r - ALL - Reset Setpoint All (Alarm All)

## PRINT REQUEST

U5r-1  
Print

F1  
Print

The meter issues a block print through the serial port when activated. The data transmitted during a print request is programmed in Module 7. If the user input is still active after the transmission is complete (about 100 msec), an additional transmission occurs. As long as the user input is held active, continuous transmissions occur.

## 5.3 MODULE 3 - DISPLAY AND PROGRAM LOCK-OUT PARAMETERS (3-LOC)

Module 3 is the programming for Display lock-out and “Full” and “Quick” Program lock-out.

When in the Display Mode, the available displays can be read consecutively by repeatedly pressing the **DSP** key. An annunciator indicates the display being shown. These displays can be locked from being visible. It is recommended that the display be set to **LOC** when the corresponding function is not used.

SELECTION	DESCRIPTION
rEd	Visible in Display Mode
LOC	Not visible in Display Mode

“Full” Programming Mode permits all parameters to be viewed and modified. This Programming Mode can be locked with a security code and/or user input. When locked and the **PAR** key is pressed, the meter enters a Quick Programming Mode. In this mode, the setpoint values can still be read and/or changed per the selections below. The Display Intensity Level (**d-LEU**) parameter also appears whenever Quick Programming Mode is enabled and the security code is greater than zero.

SELECTION	DESCRIPTION
rEd	Visible but not changeable in Quick Programming Mode
ENt	Visible and changeable in Quick Programming Mode
LOC	Not visible in Quick Programming Mode

\* Factory Setting can be used without affecting basic start-up.

### MAXIMUM DISPLAY LOCK-OUT\* MINIMUM DISPLAY LOCK-OUT\* TOTALIZER DISPLAY LOCK-OUT\*

These displays can be programmed for **LOC** or **rEd**. When programmed for **LOC**, the display will not be shown when the **DSP** key is pressed regardless of Program Lock-out status. It is suggested to lock-out the display if it is not needed. The associated function will continue to operate even if its display is locked-out.

### SP-1 SP-2 SP-3 SP-4 SETPOINT ACCESS\*

The setpoint displays can be programmed for **LOC**, **rEd** or **ENt** (See the following table). Accessible only with the Setpoint plug-in card installed.

### PROGRAM MODE SECURITY CODE\*

By entering any non-zero value, the prompt **Code 0** will appear when trying to access the Program Mode. Access will only be allowed after entering a matching security code or universal code of **222**. With this lock-out, a user input would not have to be configured for Program Lock-out. However, this lock-out is overridden by an inactive user input configured for Program Lock-out.

### PROGRAMMING MODE ACCESS

SECURITY CODE	USER INPUT CONFIGURED	USER INPUT STATE	WHEN PAR KEY IS PRESSED	“FULL” PROGRAMMING MODE ACCESS
0	not <b>PLDC</b>	—	“Full” Programming	Immediate access.
>0	not <b>PLDC</b>	—	Quick Programming w/Display Intensity	After Quick Programming with correct code # at <b>Code</b> prompt.
>0	<b>PLDC</b>	Active	Quick Programming w/Display Intensity	After Quick Programming with correct code # at <b>Code</b> prompt.
>0	<b>PLDC</b>	Not Active	“Full” Programming	Immediate access.
0	<b>PLDC</b>	Active	Quick Programming	No access
0	<b>PLDC</b>	Not Active	“Full” Programming	Immediate access.

Throughout this document, Programming Mode (without Quick in front) always refers to “Full” Programming (all meter parameters are accessible).

# 5.4 MODULE 4 - SECONDARY FUNCTION PARAMETERS (4-5EE)

## PARAMETER MENU

### MAX CAPTURE DELAY TIME\*

0.0 to 3275.0 sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN CAPTURE DELAY TIME\*

0.0 to 3275.0 sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### DISPLAY UPDATE RATE\*

1 2 5 10 20 updates/sec.

This parameter determines the rate of display update. When set to 20 updates/second, the internal re-zero compensation is disabled, allowing for the fastest possible output response.

### PAXS: AUTO-ZERO TRACKING

0 to 250 sec.

### PAXS: AUTO-ZERO BAND

1 to 4095

The meter can be programmed to automatically compensate for zero drift. Drift may be caused by changes in the transducers or electronics, or accumulation of material on weight systems.

Auto-zero tracking operates when the readout remains within the tracking band for a period of time equal to the tracking delay time. When these conditions are met, the meter re-zeroes the readout. After the re-zero operation, the meter resets and continues to auto-zero track.

The auto-zero tracking band should be set large enough to track normal zero drift, but small enough to not interfere with small process inputs.

For filling operations, the fill rate must exceed the auto-zero tracking rate. This avoids false tracking at the start of the filling operation.

$$\text{Fill Rate} \geq \frac{\text{tracking band}}{\text{tracking time}}$$

Auto-zero tracking is disabled by setting the auto-zero tracking parameter = 0.

### UNITS LABEL BACKLIGHT\*

ON OFF

The Units Label Kit Accessory contains a sheet of custom unit overlays which can be installed in to the meter's bezel display assembly. The backlight for these custom units is activated by this parameter.

### DISPLAY OFFSET VALUE\*

This parameter does not apply for the PAXT.

- 19999 to 19999

Unless a Zero Display was performed or an offset from Module 1 scaling is desired, this parameter can be skipped. The Display Offset Value is the difference from the Absolute (gross) Display value to the Relative (net) Display value for the same input level. The meter will automatically update this Display Offset Value after each Zero Display. The Display Offset Value can be directly keyed-in to intentionally add or remove display offset. See Relative / Absolute Display and Zero Display explanations in Module 2.

### PAXT: ICE POINT COMPENSATION\*

ON OFF

This parameter turns the internal ice point compensation on or off. Normally, the ice point compensation is on. If using external compensation, set this parameter to off. In this case, use copper leads from the external compensation point to the meter. If using Custom TC range, the ice point compensation can be adjusted by a value in Module 1 when this is yes.

\* Factory Setting can be used without affecting basic start-up.

# 5.5 MODULE 5 - TOTALIZER (INTEGRATOR) PARAMETERS (5-101)

The totalizer accumulates (integrates) the Input Display value using one of two modes. The first is using a time base. This can be used to compute a time-temperature product. The second is through a user input or function key programmed for Batch (one time add on demand). This can be used to provide a readout of temperature integration, useful in curing and sterilization applications. If the Totalizer is not needed, its display can be locked-out and this module can be skipped during programming.

## TOTALIZER DECIMAL POINT\*

For most applications, this matches the Input Display Decimal Point (dECPt). If a different location is desired, refer to Totalizer Scale Factor.

## TOTALIZER TIME BASE

This is the time base used in Totalizer accumulations. If the Totalizer is being accumulated through a user input programmed for Batch, then this parameter does not apply.

## TOTALIZER SCALE FACTOR\*

For most applications, the Totalizer reflects the same decimal point location and engineering units as the Input Display. In these cases, the Totalizer Scale Factor is 1.000. The Totalizer Scale Factor can be used to scale the Totalizer to a different value than the Input Display. Common possibilities are:

1. Changing decimal point location (example tenths to whole)
2. Average over a controlled time frame.

Details on calculating the scale factor are shown later.

If the Totalizer is being accumulated through a user input programmed for Batch, then this parameter does not apply.

## TOTALIZER LOW CUT VALUE\*

A low cut value disables Totalizer when the Input Display value falls below the value programmed.

## TOTALIZER POWER UP RESET\*

The Totalizer can be reset to zero on each meter power-up by setting this parameter to reset.

\* Factory Setting can be used without affecting basic start-up.

## TOTALIZER HIGH ORDER DISPLAY

When the total exceeds 5 digits, the front panel annunciator **TOT** flashes. In this case, the meter continues to totalize up to a 9 digit value. The high order 4 digits and the low order 5 digits of the total are displayed alternately. The letter "h" denotes the high order display. When the total exceeds a 9 digit value, the Totalizer will show "E . . ." and will stop.

## TOTALIZER BATCHING

The Totalizer Time Base and scale factor are overridden when a user input or function key is programmed for store batch (bAt). In this mode, when the user input or function key is activated, the Input Display reading is one time added to the Totalizer (batch). The Totalizer retains a running sum of each batch operation until the Totalizer is reset. This is useful in weighing operations, when the value to be added is not based on time but after a filling event.

## TOTALIZER USING TIME BASE

Totalizer accumulates as defined by:

$$\frac{\text{Input Display} \times \text{Totalizer Scale Factor}}{\text{Totalizer Time Base}}$$

Where:

- Input Display - the present input reading
- Totalizer Scale Factor - 0.001 to 65.000
- Totalizer Time Base - (the division factor of tBASE)

Example: The input reading is at a constant rate of 10.0 gallons per minute. The Totalizer is used to determine how many gallons in tenths has flowed. Because the Input Display and Totalizer are both in tenths of gallons, the Totalizer Scale Factor is 1. With gallons per minute, the Totalizer Time Base is minutes (60). By placing these values in the equation, the Totalizer will accumulate every second as follows:

$$\frac{10.0 \times 1.000}{60} = 0.1667 \text{ gallon accumulates each second}$$

This results in:

- 10.0 gallons accumulates each minute
- 600.0 gallons accumulates each hour

## TOTALIZER SCALE FACTOR CALCULATION EXAMPLES

1. When changing the Totalizer Decimal Point (dECPt) location from the Input Display Decimal Point (dECPt), the required Totalizer Scale Factor is multiplied by a power of ten.

Example:

Input (dECPt) = 0

Totalizer dECPt	Scale Factor
0.0	10
0	1
x10	0.1
x100	0.01
x1000	0.001

Input (dECPt) = 0.0

Totalizer dECPt	Scale Factor
0.00	10
0.0	1
0	0.1
x10	0.01
x100	0.001

Input (dECPt) = 0.00

Totalizer dECPt	Scale Factor
0.000	10
0.00	1
0.0	0.1
0	0.01
x10	0.001

(x = Totalizer display is round by tens or hundreds)

2. To obtain an average reading within a controlled time frame, the selected Totalizer Time Base is divided by the given time period expressed in the same timing units.

Example: Average temperature per hour in a 4 hour period, the scale factor would be 0.250. To achieve a controlled time frame, connect an external timer to a user input programmed for rAt2. The timer will control the start (reset) and the stopping (hold) of the totalizer.

Modules 6, 7, and 8 are accessible only with the appropriate plug-in cards installed. A quick overview of each Module is listed below. Refer to the corresponding plug-in card bulletin for a more detailed explanation of each parameter selection.

## 5.6 MODULE 6 - SETPOINT (ALARM) PARAMETERS (6-5Pt)

Repeat programming for each setpoint.

<b>SPSEL - SELECT SETPOINT</b>	<i>n0</i>	<i>SP-1</i>	<i>SP-3</i>
		<i>SP-2</i>	<i>SP-4</i>
<b>RAct-n - SETPOINT ACTION</b>	<i>OFF</i>	<i>dE-HI</i>	
	<i>Rb-HI</i>	<i>dE-LO</i>	
	<i>Rb-LO</i>	<i>bRNd</i>	
	<i>RU-HI</i>	<i>totLo</i>	
	<i>RU-LO</i>	<i>totHI</i>	
<b>SP-n - SETPOINT VALUE</b>	<i>-19999 to 99999</i>		
<b>HYS-n - SETPOINT HYSTERESIS</b>	<i>1 to 65000</i>		

<b>tOn-n - ON TIME DELAY</b>	<i>00</i>	<i>to 32750</i>	<i>sec</i>
<b>tOff-n - OFF TIME DELAY</b>	<i>00</i>	<i>to 32750</i>	<i>sec</i>
<b>out-n - OUTPUT LOGIC</b>	<i>nor</i>	<i>rEu</i>	
<b>rSt-n - RESET ACTION</b>	<i>RUto</i>	<i>LARLZ</i>	<i>LARLZ</i>
<b>Stb-n - STANDBY OPERATION</b>	<i>n0</i>	<i>YES</i>	
<b>LIt-n - SETPOINT ANNUNCIATORS</b>	<i>OFF</i>	<i>rEu</i>	
	<i>nor</i>	<i>FLASH</i>	
<b>brn-n - PROBE BURN-OUT ACTION</b>	<i>0n</i>	<i>OFF</i>	
<b>PAXT ONLY</b>			

## 5.7 MODULE 7 - SERIAL COMMUNICATIONS PARAMETERS (7-5rL)

This module is for RS232 and RS485.

<b>bRud - BAUD RATE</b>	<i>300</i>	<i>4800</i>
	<i>600</i>	<i>9600</i>
	<i>1200</i>	<i>19200</i>
	<i>2400</i>	
<b>dAR - DATA BITS</b>	<i>7</i>	<i>8</i>
<b>PR - PARITY BIT</b>	<i>Odd</i>	<i>n0</i>
	<i>EVEN</i>	

<b>Addr - METER ADDRESS</b>	<i>0</i>	<i>to 99</i>
<b>Rbr - ABBREVIATED PRINTING</b>	<i>n0</i>	<i>YES</i>
<b>OPt - PRINT OPTIONS</b>	<i>n0</i>	
	<i>YES</i>	<i>Gross</i>
		<i>TArE</i>
		<i>INP</i>
		<i>HILO</i>
		<i>tot</i>
		<i>SPnL</i>

These two options are for the PAXS ONLY.

## 5.8 MODULE 8 - ANALOG OUTPUT PARAMETERS (8-0ut)

<b>tYPE - ANALOG TYPE</b>	<i>0-20</i>	<i>0-10</i>
	<i>4-20</i>	
<b>RS IN - ANALOG ASSIGNMENT</b>	<i>INP</i>	<i>LO</i>
	<i>HI</i>	<i>tot</i>

<b>AN-LO - ANALOG LOW SCALE VALUE</b>	<i>-19999</i>	<i>to 99999</i>
<b>AN-HI - ANALOG HIGH SCALE VALUE</b>	<i>-19999</i>	<i>to 99999</i>
<b>udt - ANALOG UPDATE TIME</b>	<i>00</i>	<i>to 100</i>
		<i>sec.</i>
<b>burn - PROBE BURN-OUT ACTION</b>	<i>HI</i>	<i>LO</i>
<b>PAXT ONLY</b>		

# 5.9 MODULE 9 - FACTORY SERVICE OPERATIONS (9-F[5])

## PARAMETER MENU

### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (0-15) by using the arrow keys. The display will actively dim or brighten as the levels are changed. This parameter also appears in Quick Programming Mode when enabled.

### RESTORE FACTORY DEFAULTS

Use the arrow keys to display **Code 66** and press **PAR**. The meter will display **rESEt** and then return to **Code 50**. Press **DSP** key to return to Display Mode. This will overwrite all user settings with the factory settings.

### CALIBRATION

The meter has been fully calibrated at the factory. Scaling to convert the input signal to a desired display value is performed in Module 1. If the meter appears to be indicating incorrectly or inaccurately, refer to Troubleshooting before attempting to calibrate the meter.

When recalibration is required (generally every 2 years), it should only be performed by qualified technicians using appropriate equipment. Calibration does not change any user programmed parameters. However, it may affect the accuracy of the input signal values previously stored using the Apply (**RPLY**) Scaling Style.

Calibration may be aborted by disconnecting power to the meter before exiting Module 9. In this case, the existing calibration settings remain in effect.

### PAXP - Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better and an external meter with an accuracy of 0.005% or better.

Before starting, verify that the precision signal source is connected to the correct terminals and ready. Allow a 30 minute warm-up period before calibrating the meter. **na** and **PAR** can be chosen to exit the calibration mode without any changes taking place.

Then perform the following procedure:

1. Use the arrow keys to display **Code 48** and press **PAR**.
2. Choose the range to be calibrated by using the arrow keys and press **PAR**. (**na** and **PAR** can be chosen to exit the calibration mode without any changes taking place.)
3. When the zero range limit appears on the display, apply the appropriate:
  - Voltage range: dead short applied
  - Current range: open circuit
4. Press **PAR** and **----** will appear on the display for about 10 seconds.
5. When the top range limit appears on the display, apply the appropriate:
  - Voltage range: 10 VDC
  - Current range: 20 mADC
6. Press **PAR** and **----** will appear on the display for about 10 seconds.
7. When **na** appears, press **PAR** twice.
8. If the meter is not field scaled, then the input display should match the value of the input signal.
9. Repeat the above procedure for each input range to be calibrated.

### PAXH - Input Calibration

**WARNING:** In the PAXH, DC signals are used to calibrate the AC ranges. Calibration of the PAXH requires a DC voltmeter with an accuracy of 0.025% and a precision DC signal source capable of:

1. +1% of full scale, DC
2. -1% of full scale, DC
3. +100% of full scale, DC; (300 V range = +100 V calibration)
4. -100% of full scale, DC; (300 V range = -100 V calibration)

Before starting, verify the Input Range and Signal Jumpers are set for the range to be calibrated and the Couple jumper is installed for DC. Also verify the DC signal source is connected and ready. Allow a 30 minute warm-up period before calibrating the meter. **na** and **PAR** can be chosen to exit the calibration mode without any changes taking place.

Then perform the following procedure:

1. Press the arrow keys to display **Code 48** and press **PAR**.
2. The meter displays **RL**. Use the arrow keys to select the range that matches the Signal Jumper setting. Press **PAR**.
3. Apply the signal matching the meter prompt.
4. Press **PAR** and **-----** will appear on the display, wait for next prompt.
5. Repeat steps 3 and 4 for the remaining three prompts.
6. When **na** appears, press **PAR** twice.
7. If the meter is scaled to show input signal, the Input Display should match the value of the input signal in the Display Mode.
8. Repeat the above procedure for each range to be calibrated or to recalibrate the same range. It is only necessary to calibrate the input ranges being used.
9. When all desired calibrations are completed, remove the external signal source and restore original configuration and jumper settings. If AC is being measured, continue with AC Couple Offset Calibration.

### PAXD - Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better and an external meter with an accuracy of 0.005% or better. Resistance inputs require a resistance substitution device with an accuracy of 0.01% or better.

Before starting, verify that the Input Ranger Jumper is set for the range to be calibrated. Also verify that the precision signal source is connected and ready. Allow a 30 minute warm-up period before calibrating the meter. **na** and **PAR** can be chosen to exit the calibration mode without any changes taking place.

Then perform the following procedure:

1. Use the arrow keys to display **Code 48** and press **PAR**.
2. Choose the range to be calibrated by using the arrow keys and press **PAR**.
3. When the zero range limit appears on the display, apply the appropriate:
  - Voltage ranges: dead short applied
  - Current ranges: open circuit
  - Resistance ranges: dead short with current source connected
4. Press **PAR** and **----** will appear on the display for about 10 seconds.
5. When the top range limit appears on the display, apply the appropriate:
  - Voltage ranges: top range value applied (The 300 V range is the exception. It is calibrated with a 100 V signal.)
  - Current ranges: top range value
  - Resistance ranges: top range value (The ohms calibration requires connection of the internal current source through a resistance substitution device and the proper voltage range selection.)
6. Press **PAR** and **----** will appear on the display for about 10 seconds.
7. When **na** appears, press **PAR** twice.
8. If the meter is not field scaled, then the input display should match the value of the input signal.
9. Repeat the above procedure for each input range to be calibrated.

## AC Couple Offset Calibration - PAXH

It is recommended that Input Calibration be performed first.

1. With meter power removed, set the Input Range Jumper for 20 V, the Couple Jumper for DC, and set the Signal Jumper for voltage by removing the jumper.
2. Connect a wire (short) between Volt (terminal 6) and COMM (terminal 4).
3. Apply meter power.
4. In Module 1, program as follows: Range: **20u**; Couple: **dC**; Decimal Point: **0**; Round: **f**; Filter: **0.5**; Band: **20**; Points: **2**; Style: **VEY**; INP1: **0000**; DSP1: **0**; INP2: **20000**; DSP2: **20000**
5. In Module 4, program as follows: Hi-t: **00**; Lo-t: **32711**
6. Press **PAR** then **DSP** to exit programming and view the Input Display.
7. The readout displays the DC coupled zero input, record the value.
8. Remove the meter power and set the Couple Jumper to AC by removing the jumper.
9. Maintaining the short between terminals 4 and 6, reapply the meter power.
10. Keeping all programming the same, view the Input Display.
11. The readout now displays the AC coupled zero input, record the value.
12. In Module 9, Use the arrow keys to display **CalE 48** and press **PAR**.
13. Press the down arrow key twice to **RE-0F** and press **PAR**.
14. Calculate the offset **OFFSt** using the following formula:  

$$OFFSt = AC \text{ coupled reading (step 11)} - DC \text{ coupled reading (step 7)}$$
15. Use the arrow keys to enter the calculated **OFFSt**.
16. Press **PAR** three times, to exit programming.
17. Remove the meter power and remove the short from terminals 4 and 6.
18. Restore the original jumper and configuration settings.

## PAXS - Input Calibration

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better and an external meter with an accuracy of 0.005% or better.

Before starting, connect -SIG (terminal 4) to COMM (terminal 5). This allows a single ended signal to be used for calibration. Connect the calibration signal to +SIG (terminal 3) and -SIG (terminal 4). Verify the Input Range jumper is in the desired position. Allow a 30 minute warm-up period before calibrating the meter. **no** and **PAR** can be chosen to exit the calibration mode without any changes taking place. Perform the following procedure:

1. Press the arrow keys to display **CalE 48** and press **PAR**.
2. Choose the range to be calibrated by using the arrow keys and press **PAR**.
3. When the zero range limit appears on the display, apply 0 mV between +SIG and -SIG.
4. Press **PAR** and ---- will appear, wait for next prompt.
5. When the top range limit appears on the display, apply the corresponding +SIG and -SIG voltage (20 mV or 200 mV).
6. Press **PAR** and ---- will appear, on the display for about 10 seconds.
7. When **no** appears, press **PAR** twice to exit programming.
8. Repeat the above procedure for each range to be calibrated or to recalibrate the same range. It is only necessary to calibrate the input ranges being used.
9. When all desired calibrations are completed, remove -SIG to COMM connection and external signal source.
10. Restore original configuration and jumper settings.

## PAXT - Input Calibration

**Warning:** Calibration of this meter requires precision instrumentation operated by qualified technicians. It is recommended that a calibration service calibrates the meter.

Before selecting any of the calibration procedures, the input to the meter must be at 0 mV or 0 ohms. Set the digital filter in Module 1 to 1 second. Allow a 30 minute warm-up period before calibrating the meter. The **no** and **PAR** can be chosen to exit calibration mode without any changes taking place.

### 10 OHM RTD Range Calibration

1. Set the Input Range Jumper to 10 ohm.
2. Use the arrow keys to display **CalE 48** and press **PAR**. Then choose **r - 10** and press **PAR**.
3. At **0 r**, apply a direct short to input terminals 3, 4 and 5 using a three wire link. Wait 10 seconds, then press **PAR**.
4. At **15 r**, apply a precision resistance of 15 ohms (with an accuracy of 0.01% or better) using a three wire link, to input terminals 3, 4 and 5. Wait 10 seconds, then press **PAR**.
5. Connect the RTD, return to the Display Mode and verify the input reading (with 0 Display Offset) is correct. If not correct repeat calibration.

### 100 OHM RTD Range Calibration

1. Set the Input Range Jumper to 100 ohm.
2. Use the arrow keys to display **CalE 48** and press **PAR**. Then choose **r - 100** and press **PAR**.
3. At **0 r**, apply a direct short to input terminals 3, 4 and 5 using a three wire link. Wait 10 seconds, then press **PAR**.
4. At **300 r**, apply a precision resistance of 300 ohms (with an accuracy of 0.01% or better) using a three wire link, to terminals 3, 4 and 5. Wait 10 seconds, press **PAR**.
5. Connect the RTD, return to the Display Mode and verify the input reading (with 0 Display Offset) is correct. If not correct repeat calibration.

### THERMOCOUPLE Range Calibration

1. Use the arrow keys to display **CalE 48** and press **PAR**. Then choose **tC** and press **PAR**.
2. At **00 u**, apply a dead short or set calibrator to zero to input terminals 4 and 5. Wait 10 seconds, then press **PAR**.
3. At **500 u**, apply 50.000 mV input signal (with an accuracy of 0.01% or better) to input terminals 4 and 5. Wait 10 seconds, then press **PAR**.
4. Return to the Display Mode.
5. Continue with Ice Point Calibration.

### ICE POINT Calibration

1. Remove all option cards or invalid results will occur.
2. The ambient temperature must be within 20°C to 30°C.
3. Connect a thermocouple (types T, E, J, K, or N only) with an accuracy of 1°C or better to the meter.
4. Verify the readout Display Offset is 0, Temperature Scale is °C, Display Resolution is 0.0, and the Input Range is set for the connected thermocouple.
5. Place the thermocouple in close thermal contact to a reference thermometer probe. (Use a reference thermometer with an accuracy of 0.25°C or better.) The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (A calibration bath could be used in place of the thermometer.)
6. In the Normal Display mode, compare the readouts.
7. If a difference exists then continue with the calibration.
8. Enter Module 9, use the arrow keys to display **CalE 48** and press **PAR**. Then choose **tE** and press **PAR**.
9. Calculate a new Ice Point value using: existing Ice Point value + (reference temperature - Display Mode reading). All values are based on °C.
10. Enter the new Ice Point value.
11. Return to the Display Mode and verify the input reading (with 0 Display Offset) is correct. If not correct repeat steps 8 through 10.

### ANALOG OUTPUT CARD CALIBRATION

Before starting, verify that the precision voltmeter (voltage output) or current meter (current output) is connected and ready. Perform the following procedure:

1. Use the arrow keys to display **CalE 48** and press **PAR**.
2. Use the arrow keys to choose **OUT** and press **PAR**.
3. Using the chart below, step through the five selections to be calibrated. At each prompt, use the PAX arrow keys to adjust the external meter display to match the selection being calibrated. When the external reading matches, or if this range is not being calibrated, press **PAR**.

SELECTION	EXTERNAL METER	ACTION
<b>0.0 R</b>	0.00	Adjust if necessary, press <b>PAR</b>
<b>4.0 R</b>	4.00	Adjust if necessary, press <b>PAR</b>
<b>20.0 R</b>	20.00	Adjust if necessary, press <b>PAR</b>
<b>0.0 u</b>	0.00	Adjust if necessary, press <b>PAR</b>
<b>10.0 u</b>	10.00	Adjust if necessary, press <b>PAR</b>

4. When **no** appears remove the external meters and press **PAR** twice.

# TROUBLESHOOTING

PROBLEM	REMEDIES
NO DISPLAY	CHECK: Power level, power connections
PROGRAM LOCKED-OUT	CHECK: Active (lock-out) user input ENTER: Security code requested
MAX, MIN, TOT LOCKED-OUT	CHECK: Module 3 programming
INCORRECT INPUT DISPLAY VALUE	CHECK: Module 1 programming, Input Range Jumper position, input connections, input signal level, Module 4 Display Offset is zero, press DSP for Input Display PERFORM: Module 9 Calibration (If the above does not correct the problem.)
"LOLO" in DISPLAY (SIGNAL HIGH)	CHECK: Module 1 programming, Input Range Jumper position, input connections, input signal level
"ULUL" in DISPLAY (SIGNAL LOW)	CHECK: Module 1 programming, Input Range Jumper position, input connections, input signal level

# MODEL PAXH - AC TRUE RMS VOLT AND CURRENT

This is a brief overview of the PAXH. For complete specifications and programming information, see the [PAX Analog Input Panel Meters Bulletin](#) starting on [page 378](#).

- 5-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- FOUR VOLTAGE RANGES (300 VAC Max)
- FIVE CURRENT RANGES (5 A Max)
- ACCEPTS AC OR DC COUPLED INPUTS
- THREE WAY ISOLATION: POWER, INPUT AND OUTPUTS
- FOUR SETPOINT ALARM OUTPUTS (w/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (w/OPTION CARD)

## PAXH SPECIFICATIONS

### INPUT RANGES:

Isolation To Option Card Commons and User Input Commons: 125 Vrms  
 Isolation To AC Power Terminals: 250 Vrms

INPUT RANGE	ACCURACY*	IMPEDANCE (60 Hz)	MAX CONTINUOUS OVERLOAD	MAX DC BLOCKING	RESOLUTION
200 mV	0.1% of reading +0.4 mV	686 Kohm	30 V	±10 V	0.01 mV
2 V	0.1% of reading +2 mV	686 Kohm	30 V	±50 V	0.1 mV

5 A	0.5% of reading +5 mA	0.02 ohm	7 A**	±7 A***	1 mA

\*Conditions for accuracy specification:

- 20 minutes warmup
- 18-28°C temperature range, 10-75% RH non-condensing
- 50 Hz - 400 Hz sine wave input
- 1% to 100% of range
- Add 0.1% reading + 20 counts error over 0-50°C range
- Add 0.2% reading + 10 counts error for crest factors up to 3, add 1% reading up to 5
- Add 0.5% reading + 10 counts of DC component
- Add 1% reading + 20 counts error over 20 Hz to 10 KHz range

\*\* Non-repetitive surge rating: 15 A for 5 seconds

\*\*\* Inputs are direct coupled to the input divider and shunts. Input signals with high DC component levels may reduce the usable range.

**MAX CREST FACTOR (Vp/Vrms):** 5 @ Full Scale Input

**INPUT COUPLING:** AC or AC and DC

**INPUT CAPACITANCE:** 10 pF

**COMMON MODE VOLTAGE:** 125 VAC working

**COMMON MODE REJECTION:** (DC to 60 Hz) 100 dB

# MODEL CUB4LP - LOOP POWERED PROCESS INDICATOR

## MODEL CUB4CL - CURRENT LOOP INDICATOR

- DUAL RANGE, 4 to 20 mA OR 10 to 50 mA
- 3½-DIGIT, 0.6" (15.2 mm) HIGH DIGITS
- POSITIVE IMAGE TRANSFLECTIVE LCD WITH RED BACKLIGHT OR POSITIVE IMAGE REFLECTIVE LCD (CUB4LP)
- POSITIVE IMAGE TRANSFLECTIVE LCD WITH RED BACKLIGHT OR NEGATIVE IMAGE TRANSMISSIVE WITH RED OR YELLOW/GREEN BACKLIGHT (CUB4CL)
- SPAN AND OFFSET CAPABILITY
- NEGATIVE AND OVERRANGE INDICATION
- SELECTABLE DECIMAL POINT POSITION
- NEMA 4X/IP65 SEALED FRONT PANEL BEZEL
- FITS DIN STANDARD CUT-OUT 2.68" (68 mm) X 1.30" (33 mm)

FOR USE IN HAZARDOUS LOCATIONS:  
 Class I, Division 2, Groups A, B, C, and D  
 Class II, Division 2, Groups F and G  
 Class III, Division 2

### DESCRIPTION

The CUB4LP and CUB4CL are additions to the CUB4 product line. The CUB4LP uses a 4 to 20 mA or a 10 to 50 mA input signal as operating power. The input signal is also used to power the backlighting on the CUB4LP40 unit. The CUB4CL uses a 4 to 20 mA or a 10 to 50 mA input signal to power the unit. An external power supply is used to power the CUB4CL backlighting to provide a brighter, more consistent display and a lower compliance voltage.

The units have a 3½-digit LCD display with 0.6" (15.2 mm) high digits and a DIP switch selectable decimal point. The CUB4LP display is available in positive image reflective (dark digits, reflective background) or positive image transfective (dark digits, illuminated background) with red backlighting. The CUB4CL display is available in positive image transfective (dark digits, illuminated background) with red or yellow/green backlighting or negative image transmissive (illuminated digits, dark background) with red or yellow/green backlighting.

The ability to scale the display allows indication in any desired unit of measurement such as temperature, pressure, humidity, fluid flow, etc. The unit is calibrated at the factory with 0.0 displayed @ 4 mA input and 100.0 displayed @ 20 mA input.

The units are contained in a lightweight, high impact plastic case with a clear viewing window. When properly installed, the sealed front panel meets NEMA 4X/IP65 specifications for wash-down and dusty environments.

### SAFETY SUMMARY

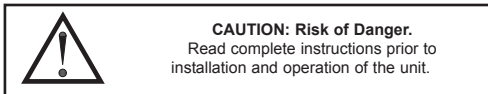

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

WARNING - EXPLOSION HAZARD - SUBSTITUTION OF COMPONENTS MAY IMPAIR SUITABILITY FOR CLASS I, DIVISION 2 / CLASS II, DIVISION 2 / CLASS III, DIVISION 2

### SPECIFICATIONS

- DISPLAY:** 3½-digit (-1999 to 9999), 0.6" (15.2 mm) high digits.  
 The CUB4LP is available with a positive image reflective LCD or a red backlit positive image transfective LCD. The intensity of the backlighting will vary with the input signal.  
 The CUB4CL is available with a positive image transfective LCD with red or yellow/green backlighting or a negative image transmissive with red or yellow/green backlight.  
 A minus sign is displayed when the indicator is adjusted for a negative offset.  
**Ovrrange:** Ovrrange is indicated by a "1" in the most significant digit and the blanking of the three least significant digits.
- EXTERNAL BACKLIGHT POWER:** (CUB4CL only)  
 9 - 28 VDC, @ 35 mA typ., 50 mA max. Power Supplies must be Class 2 (NEC) or SELV rated. Above 26 VDC, derate the operating temperature to 50°C.
- DECIMAL POINTS:** Three DIP switch selectable, decimal point positions allow the display to be read in tenths, hundredths or thousandths.

## SPECIFICATIONS (Cont'd)

### 4. MAXIMUM VOLTAGE DROP:

- 3.2 VDC for CUB4LP00
- 4.0 VDC for CUB4LP40
- 3.2 VDC for CUB4CL all models

### 5. EQUIVALENT RESISTANCE:

- CUB4LP00:** 800  $\Omega$  max. @ 4 mA; 160  $\Omega$  max. @ 20 mA  
320  $\Omega$  max. @ 10 mA; 65  $\Omega$  max. @ 50 mA
- CUB4LP40:** 1000  $\Omega$  max. @ 4 mA; 200  $\Omega$  max. @ 20 mA  
400  $\Omega$  max. @ 10 mA; 80  $\Omega$  max. @ 50 mA
- CUB4CL (all models):** 800  $\Omega$  max. @ 4 mA; 160  $\Omega$  max. @ 20 mA  
320  $\Omega$  max. @ 10 mA; 65  $\Omega$  max. @ 50 mA

### 6. MAXIMUM ALLOWABLE INPUT CURRENT: 100 mA

### 7. SCALING RANGE:

**Span:** Two potentiometers provide a coarse and fine span adjustment. Span range = 0 to 2000.

**Offset:** Two potentiometers provide a coarse and fine zero offset adjustment. Offset range = -1999 to 1999.

### 8. LINEARITY: (@ 23°C, Less than 85% RH) $\pm(0.1\% + 1 \text{ digit})$ .

### 9. READING RATE: 2.5 per second, nominal.

### 10. RESPONSE TIME: 1.5 seconds to settle for a step change.

### 11. NORMAL MODE REJECTION: 60 dB 50/60 Hz

### 12. TEMPERATURE EFFECTS:

**Span Temperature Coefficient:** 100 PPM/°C

**Offset Temperature Coefficient:** 0.2 digits/°C

### 13. CONSTRUCTION: High impact plastic case with clear viewing window. (Panel gasket and mounting clips included.) This unit is rated for NEMA 4X/IP65 indoor use. Installation Category I, Pollution Degree 2

### 14. CERTIFICATIONS AND COMPLIANCES:

#### SAFETY

- UL Listed, File #E184589, UL1604, CSA 22.2 No. 213-M1987 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards
- Type 4X Indoor Enclosure rating (Face only), UL50
- IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control and laboratory use, Part 1.
- IP65 Enclosure rating (Face only), IEC 529

## ELECTROMAGNETIC COMPATIBILITY

### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>1</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms <sup>2</sup> 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m

### Emissions to EN 50081-1

RF interference	EN 55011	Enclosure class B Power mains class B
-----------------	----------	--

#### Notes:

1. Self-recoverable loss of performance during EMI disturbance at 10 V/m: Process Signal may deviate during EMI disturbance. For operation without loss of performance: Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent) connected to earth ground.
2. Self-recoverable loss of performance during EMI disturbance at 10 Vrms. Process signal may deviate during EMI disturbance. For operation without loss of performance: Install 1 ferrite core, RLC #FCOR0000 or equivalent, to signal cable at the unit.

Refer to the EMC Installation Guidelines of this bulletin for additional information.

### 15. ENVIRONMENTAL CONDITIONS:

**Operating Temperature:** 0° to 60°C  
(Derate backlight voltage to 26 VDC above 50°C.)

**Storage Temperature:** -40° to 80°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 60°C.

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

### 16. WEIGHT: 3.3 oz. (93.5 g)

## INSTALLATION

When properly installed, the CUB4LP/CL meets NEMA 4X/IP65 requirements for indoor use. The units are intended to be mounted into an enclosed panel. A sponge rubber gasket, mounting clip, two screws, and nut fasteners are provided to install and seal the unit in the panel cutout.

### Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

The following procedure assures proper installation:

1. Cut the panel opening to the specified dimensions. Remove burrs and clean the panel opening.
2. Slide nut fastener into slot on mounting clip and then insert mounting screw through nut on both sides of mounting clip. The tip of mounting screw should not project through hole on clip.
3. Slide the panel gasket over the rear of the unit to the back of the bezel. Install CUB4LP/CL unit through panel cutout.
4. Slide mounting clip over rear of unit until the clip is against back of panel. The mounting clip and CUB4LP/CL housing have a latching feature to hold the unit in place until tightened.

*Note: Hold the CUB4LP/CL front bezel in place when sliding the mounting clip into position.*

5. Alternately tighten each mounting screw to ensure uniform gasket pressure. Visually inspect the gasket for proper seal. The gasket should be compressed

to approximately 75 to 80% of its original thickness. (Recommended torque is 28 to 36 in-oz.)

6. If the gasket is not adequately compressed and the mounting screws cannot be tightened any further, loosen the mounting screws and insure that the clip is latched as closely as possible to the panel.
7. Repeat Step #6 for tightening the mounting screws.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. Cable length, routing and shield termination are very important and can mean the difference between a successful installation or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

- Signal or control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

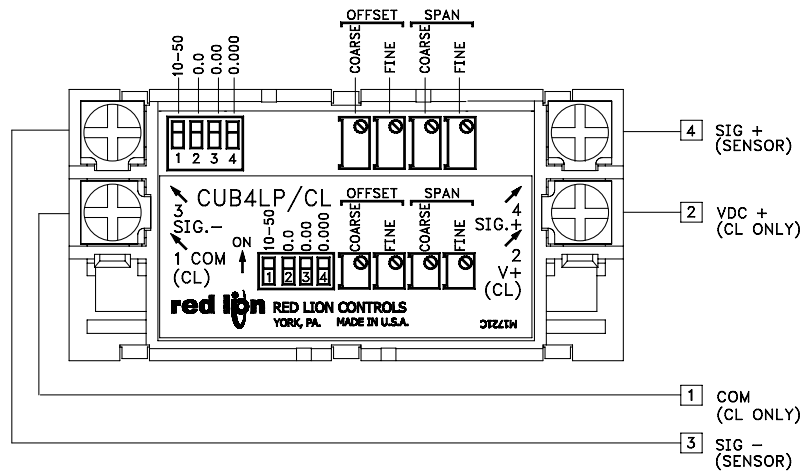

**Note:** Reference manufacturer's instructions when installing a line filter.

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker.

The electrical connections are made via screw-clamp terminals located on the back of the unit. When wiring the unit, use the label to identify the wire position with the proper function. Strip the wire, leaving approximately 1/4" of bare wire (stranded wires should be tinned with solder). Insert the wire into the screw-clamp terminal and tighten the screw until the wire is clamped tightly. Each terminal can accept up to two #14 AWG wires.

## CUB4LP/CL SIGNAL INPUT

The current range is selected by setting DIP switch S1 to the OFF position for a 4 to 20 mA input or ON for a 10 to 50 mA input. Attach the signal wires to terminals 3 (SIG-) and 4 (SIG+) observing the correct polarity. The (SIG-) signal input circuit is not reverse polarity protected.

## Backlight Power (CUB4CL only)

Attach a 9 to 28 VDC supply to terminals 1 (COM) and 2 (V+) to power the backlight. Terminals 3 (SIG-) and 1 (COM) are AC coupled with a capacitor. This limits the isolation between these terminals to 50 VDC maximum.

## OFFSET ADJUSTMENTS

The minimum currents are not zero based with 4 to 20 mA and 10 to 50 mA signals. To obtain a zero minimum display reading, the display must be offset. The display on the CUB4LP/CL can be offset by adjusting the Coarse and Fine Offset pots.

## SPAN ADJUSTMENTS

Span is defined as the numerical range that the display traverses, disregarding the decimal point, when the input signal is varied from minimum to maximum (4 to 20 mA or 10 to 50 mA). For example; if a unit is to display 250 @ 4 mA and 1000 @ 20 mA, the span is 750 (the difference between 250 and 1000). Had the minimum display been -250, the span would be 1250 (1000 - (-250) = 1250). The CUB4LP/CL can be set to operate over a wide span range by adjusting the Coarse and Fine Span adjustment pots. The Coarse Span pot is used to get the display to within a couple of counts of the desired reading, and the Fine Span pot is used to adjust for the exact reading.

**WARNING - EXPLOSION HAZARD - DO NOT DISCONNECT EQUIPMENT UNLESS POWER HAS BEEN SWITCHED OFF OR THE AREA IS KNOWN TO BE NON-HAZARDOUS.**

**THIS EQUIPMENT IS SUITABLE FOR USE IN:**  
 Class I, Division 2, Groups A, B, C, and D  
 Class II, Division 2, Groups F and G  
 Class III, Division 2 or Non Hazardous locations.

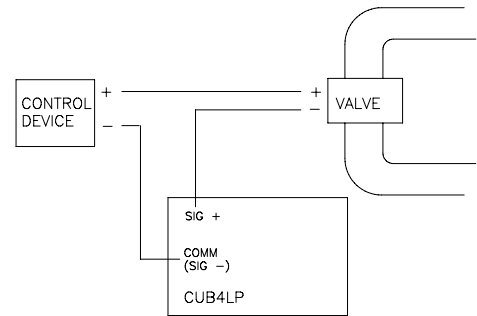

## DECIMAL POINT POSITION SELECTION

The decimal point position is DIP switch selectable for one of three locations. The CUB4LP/CL can be set up to read in 10ths, 100ths, or 1000ths. If all the DIP switches are set to the "OFF" position, no decimal point will appear on the display. The DIP switches are located at the rear of the unit.

## APPLICATION EXAMPLE

Operation of a refinery process required a local display of the position of a remote pipeline valve. The display would indicate 0 (zero) when the valve was fully closed with an input signal of 4 mA. When the valve was fully open the display would indicate 100 with an input signal of 20 mA.

Both the CUB4LP and the CUB4CL meet the necessary requirements.

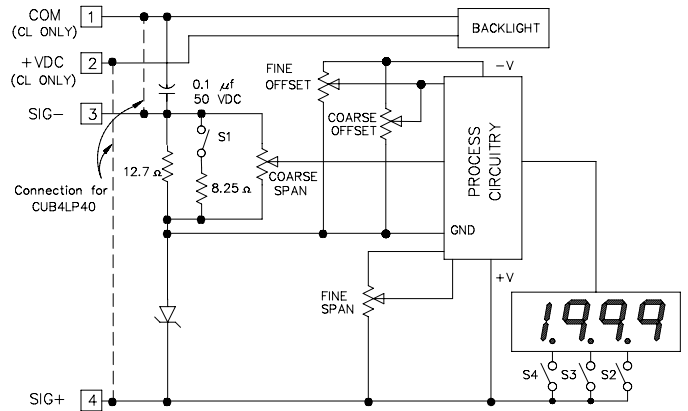

## CALIBRATING THE DISPLAY

Calibrating the CUB4LP/CL requires either an accurate adjustable constant current supply or the CUB4LP/CL can be installed and scaled with the process sensor connected to the CUB4LP/CL. To calibrate the unit, proceed as follows.

1. Set DIP switching for the desired current range.
2. Select the desired decimal point position.
3. Apply the minimum input signal to the CUB4LP/CL and adjust the COARSE OFFSET to display the approximate desired minimum value.
4. Apply the maximum input signal to the CUB4LP/CL and adjust the COARSE SPAN to display the approximate desired maximum value.
5. Repeat steps 3 and 4 until the minimum and maximum values are within the desired values.
6. Apply the minimum input signal to the CUB4LP/CL and adjust the FINE OFFSET to display the exact desired minimum value.
7. Apply the maximum input signal to the CUB4LP/CL and adjust the FINE SPAN to display the exact desired maximum value.
8. Apply the minimum input signal and verify that the display indicates correctly.
9. Apply the maximum input signal and verify that the display indicates correctly.
10. Repeat Steps 6 through 9 until display reads exact.

*Note: The CUB4LP/CL display is factory calibrated to indicate 0.0 to 100.0 with an input of 4 to 20 mA at approximately 25°C.*

# MODEL CUB5P - MINIATURE ELECTRONIC 5-DIGIT PROCESS METER

- THREE SELECTABLE D.C. RANGES  
0 to 10 V, 0(4) to 20 mA, 0 to 50 mA
- MINIMUM AND MAXIMUM DISPLAY CAPTURE
- LCD, REFLECTIVE OR RED/GREEN LED BACKLIGHTING
- 0.48" (12.2 mm) HIGH DIGITS
- OPTIONAL SETPOINT OUTPUT MODULES
- OPTIONAL SERIAL COMMUNICATIONS MODULES (RS232 or RS485)
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- FRONT PANEL OR CRIMSON PROGRAMMABLE
- DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The CUB5 Series provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The CUB5 accepts a DC voltage or current input signal and provides a display in the desired unit of measure. The meter also features minimum and maximum display capture, display offset, units indicator, and programmable user input. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.48" (12.2 mm) high digits. The LCD is available in two versions, reflective or red/green backlight. The backlight version is user selectable for the desired color and also has variable display intensity.

The capability of the CUB5 can be easily expanded with the addition of option modules. The setpoint output cards are field installable with programmable setpoints. Serial communications capability for RS232 or RS485 can be added with a serial option module.

The CUB5 can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5. The MLPS1 is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

## INPUT

The CUB5P is a DC Process meter. It features voltage and current input ranges, that are selected by the user via a programming jumper and software input range selection. The ranges consist of the following: 0 to 10 V, 0(4) to 20 mA, or 0 to 50 mA. Users should select the appropriate voltage range that covers their maximum input.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

# ORDERING INFORMATION

TYPE	MODEL NO.	DESCRIPTION	PART NUMBER
CUB5	CUB5P	Process Meter with reflective display	CUB5PR00
		Process Meter with backlight display	CUB5PB00
Optional Plug-in Cards	CUB5RLY	Single Relay Output Card	CUB5RLY0
	CUB5SNK	Dual Sinking Open Collector Output card	CUB5SNK0
	CUB5COM	RS485 Serial Communications Card	CUB5COM1
		RS232 Serial Communications Card	CUB5COM2
	CUB5USB	USB Programming Card for CUB5 Products	CUB5USB0
Accessories	MLPS1	Micro-Line Power Supply, 85 to 250 VAC	MLPS1000
	CBLPROG	RS232 Programming Cable (DB9-RJ11)	CBLPROG0
	CBPRO	RS485 Programming Cable (DB9-RJ11)	CBPRO007
	SFCRD	Crimson 2 PC Configuration Software for Windows 98, ME, 2000, XP <sup>1</sup>	SFCRD200
	CBLUSB	USB Programming Cable	CBLUSB0

<sup>1</sup> Crimson 2 software is a free download from <http://www.redlion.net/>

## GENERAL METER SPECIFICATIONS

- DISPLAY:** 5 digit LCD 0.48" (12.2 mm) high digits  
**CUB5PR00:** Reflective LCD with full viewing angle  
**CUB5PB00:** Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS1 or a Class 2 or SELV rated power supply.

MODEL NO.	DISPLAY COLOR	INPUT CURRENT @ 9 VDC WITHOUT CUB5RLY0	INPUT CURRENT @ 9 VDC WITH CUB5RLY0
CUB5PR00	---	10 mA	40 mA
CUB5PB00	Red (max intensity)	85 mA	115 mA
CUB5PB00	Green (max intensity)	95 mA	125 mA

- INPUT RANGES:** Jumper Selectable  
0 to 10 V, 0(4) to 20 mA, 0 to 50 mA
- SENSOR INPUTS:**

INPUT RANGE	ACCURACY @23 °C, less than 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
20 / 50 mA	0.1% of span	10 Ω	150 mA	1 μA	70 ppm / °C
10 VDC	0.1% of span	538 KΩ	30 V	1 mV	70 ppm / °C

- OVERRANGE RATINGS, PROTECTION & INDICATION:**

9 to 28 VDC power circuit is not isolated from the signal circuit.

**Input Overrange Indication:** "OL OL".

**Input Underrange Indication:** "UL UL".

**Display Overrange/Underrange Indication:** "....."/"....."

- DISPLAY RESPONSE TIME:** 500 msec min.
- NORMAL MODE REJECTION:** 60 dB 50/60 Hz
- USER INPUT (USR):** Programmable input. Connect USR terminal to USR COMM to activate function. Internal 10KΩ pull-up resistor to +9 to 28 VDC.  
**Threshold Levels:**  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)
- CONNECTIONS:** Wire clamping screw terminals  
**Wire Strip Length:** 0.3" (7.5 mm)  
**Wire Gauge:** 30-14 AWG copper wire  
**Torque:** 5 inch-lbs (0.565 N-m) max.
- MEMORY:** Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and max/min values when power is removed.
- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category I, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.
- ENVIRONMENTAL CONDITIONS:**

**Operating Temperature Range for CUB5PR00:** -35 to 75°C

**Operating Temperature Range for CUB5PB00 depends on display color and intensity level as per below:**

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
	Green Display	1 & 2
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C

**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)

**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5 g's.

**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.  
**Altitude:** Up to 2000 meters

- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 61010-1 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #US/9257C/UL

CB Scheme Test Report #E179259-V01-S02

Issued by Underwriters Laboratories, Inc.

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m

### Emissions:

Emissions EN 55011 Class A

Notes:

1. *Criterion A: Normal operation within specified limits. Refer to EMC Installation Guidelines for additional information.*

- WEIGHT:** 3.2 oz (100 g)

# OPTIONAL PLUG-IN CARDS

## ADDING OPTION CARDS

The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

**WARNING: Disconnect all power to the unit before installing Plug-in card.**

*Note: Measurement errors may occur if signal input common is shared with another circuit common (ie, serial common, Dual Sinking Output option card, or Power Supply common) on multiple units.*

### SINGLE RELAY CARD

- Type: Single FORM-C relay
- Isolation To Sensor & User Input Commons: 1400 Vrms for 1 min.
- Working Voltage: 150 Vrms
- Contact Rating: 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive
- Life Expectancy: 100,000 minimum operations
- Response Time:
  - Turn On Time: 4 msec max.
  - Turn Off Time: 4 msec max.

### DUAL SINKING OUTPUT CARD

- Type: Non-isolated switched DC, N Channel open drain MOSFET
- Current Rating: 100 mA max.
- $V_{DS\ ON}$ : 0.7 V @ 100 mA
- $V_{DS\ MAX}$ : 30 VDC
- Offstate Leakage Current: 0.5 mA max.

### RS485 SERIAL COMMUNICATIONS CARD

- Type: RS485 multi-point balanced interface (non-isolated)
- Baud Rate: 300 to 38.4k
- Data Format: 7/8 bits; odd, even, or no parity
- Bus Address: 0 to 99; max 32 meters per line
- Transmit Delay: Selectable (refer to CUB5COM bulletin)

### RS232 SERIAL COMMUNICATIONS CARD

- Type: RS232 half duplex (non-isolated)
- Baud Rate: 300 to 38.4k
- Data Format: 7/8 bits; odd, even, or no parity

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPERS

## INPUT RANGE JUMPER

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum input signal to avoid overloads. To access the jumper, remove the rear cover of the meter.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 4.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

- Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  - Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  - In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
- Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

## 4.1 POWER WIRING

### DC Power

+9 to +28 VDC: +VDC

Power Common: -VDC

**CAUTION:** 9 to 28 VDC power circuit is not isolated from the signal circuit.

## 4.2 USER INPUT WIRING

### Sinking Logic

USR COMM } Connect external switching device between the  
USR } User Input terminal and User Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<0.7 V).

### 4.3 INPUT WIRING

**CAUTION:** Power input common is NOT isolated from user and input commons. In order to preserve the safety of the meter application, the power input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the signal or user inputs and input common terminals. Appropriate considerations must then be given to the potential of the user and input commons with respect to earth ground; and the common of the plug-in cards with respect to input common.

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

#### Input Signal (self powered)

#### Series Loop (must use separate supply for sensor power and each CUB5)

#### 2 Wire With External Power

#### 2 Wire With MLPS Power

#### 2 Wire With Separate Sensor And CUB5 Power

### 4.4 SETPOINT (OUTPUT) WIRING

#### SINGLE SETPOINT RELAY PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

#### DUAL SETPOINT N-FET OPEN DRAIN PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

Output Common is not isolated from DC Power Common. Load must be wired between OSNK terminal and V+ of the load supply.

### 4.5 SERIAL COMMUNICATION WIRING

#### SERIAL COMMUNICATIONS PLUG-IN CARD

#### RJ11 CONNECTOR PIN OUTS

# 5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION	ENTERING PROGRAM MODE	PROGRAMMING MODE OPERATION
<b>SEL</b>	Index display through enabled values	Press and hold for 2 seconds to activate	Store selected parameter and index to next parameter
<b>RST</b>	Resets values (MIN/MAX) or outputs		Advances through the program menu Increments selected parameter value or selection

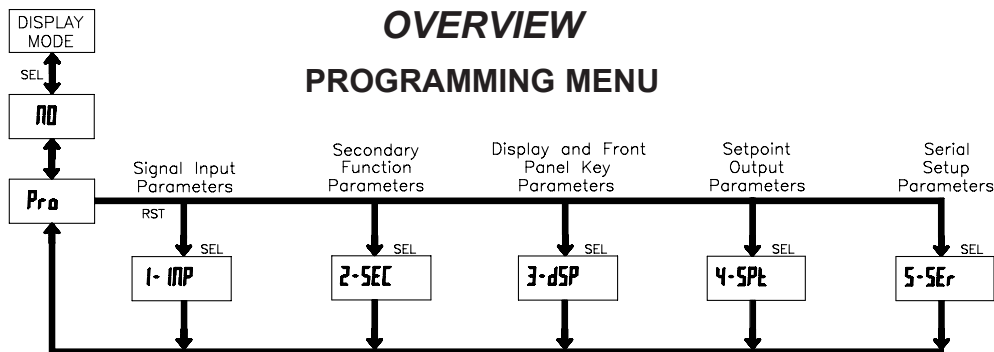

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
MIN - Minimum display capture value

"1" - To the right of the display indicates setpoint 1 output activated.  
"2" - To the right of the display indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 6.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** button. If it is not accessible then it is locked by either a security code, or a hardware lock.

## MODULE ENTRY (SEL & RST BUTTONS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between *Pr0* and the present module. The **RST** button is used to select the desired module. The displayed module is entered by pressing the **SEL** button.

## MODULE MENU (SEL BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to *Pr0*. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** button is used to move through the selections/values for that parameter. Pressing the **SEL** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** button to access the value. The right hand most digit will begin to flash. Pressing the **RST** button again increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will advance to the next digit. Pressing and holding the **SEL** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL BUTTON)

The Programming Mode is exited by pressing the **SEL** button with *Pr0* displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 6.1 MODULE 1 - SIGNAL INPUT PARAMETERS (1-IMP)

## CUB5P INPUT RANGE

**RANGE**    SELECTION    RANGE RESOLUTION    SELECTION    RANGE RESOLUTION

10V    10V    10.000 V    002R    20.000 mA

005R    50.000 mA

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

## DISPLAY DECIMAL POINT

**dECPt**    0    00    000    0000    00000

0000

Select the decimal point location for the Input, MIN and MAX displays. This selection also affects the *dSP 1* and *dSP 2* parameters and setpoint values.

## DISPLAY OFFSET VALUE

**dFSEt**    - 19999 to 19999

0000

The display can be corrected with an offset value. This can be used to compensate for signal variations or sensor errors. This value is automatically updated after a Zero Display to show how far the display is offset. A value of zero will remove the effects of offset.

## FILTER SETTING

**FILLr**    0 1 2 3

1

If the displayed value is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## FILTER BAND

**bAND**    0 to 99 display units

10

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

## SCALING STYLE

**SEYLE**    KEY    APPLY

KEY

If Input Values and corresponding Display Values are known, the Key-in (*KEY*) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (*APPLY*) scaling style must be used.

## INPUT VALUE FOR SCALING POINT 1

**IMP 1**    0 to 59999

0000

For Key-in (*KEY*) style, enter the known first Input Value using the front panel buttons. (The Input Range selection sets the decimal location for the Input Value).

For Apply (*APPLY*) style, the meter shows the previously stored Input Value. To retain this value, press the **SEL** button to advance to the next parameter. To change the Input Value, press the **RST** button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the **SEL** button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 1

**dSP 1**    - 19999 to 99999

0000

Enter the first Display Value using the front panel buttons. This is the same for *KEY* and *APPLY* scaling styles. The decimal point follows the *dECPt* selection.

## INPUT VALUE FOR SCALING POINT 2

**IMP 2**    0 to 59999

10000

For Key-in (*KEY*) style, enter the known second Input Value using the front panel buttons.

For Apply (*APPLY*) style, the meter shows the previously stored Input Value for Scaling Point 2. To retain this value, press the **SEL** button to advance to the next parameter. To change the Input Value, press the **RST** button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the **SEL** button to enter the value being displayed.

## DISPLAY VALUE FOR SCALING POINT 2

**dSP 2**    - 19999 to 99999

10000

Enter the second Display Value using the front panel buttons. This is the same for *KEY* and *APPLY* scaling styles.

## General Notes on Scaling

- When using the Apply (*APPLY*) scaling style, input values for scaling points must be confined to signal limits of the selected range.
- The same Input Value should not correspond to more than one Display Value. (Example: 10 V can not equal 0 and 10.)
- For input levels beyond the programmed Input Values, the meter extends the Display Value by calculating the slope from the two coordinate pairs (*IMP 1* / *dSP 1* & *IMP 2* / *dSP 2*).

## USER INPUT FUNCTION

DISPLAY MODE	DESCRIPTION
NO	No Function User Input disabled.
P-Loc	Program Mode Lock-out See Programming Mode Access chart (Module 3).
ZEro	Zero Input (Edge triggered) Zero the Input Display value causing Display Reading to be Offset.
rESEt	Reset (Edge triggered) Resets the assigned value(s) to the current input value.
d-HLd	Display Hold Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
d-SEL	Display Select (Edge Triggered) Advance once for each activation.
d-LEU	Display Intensity Level (Edge Triggered) Increase intensity one level for each activation (backlight version only).
COLOr	Backlight Color (Edge Triggered) Change backlight color with each activation (backlight version only).

## DISPLAY MODE

DISPLAY MODE	DESCRIPTION
Print	Print Request Serial transmit of the active parameters selected in the Print Options menu (Module 5).
Print	Print and Reset Same as Print Request followed by a momentary reset of the assigned value(s).
Setpoint 1	Setpoint 1 Reset Resets setpoint 1 output.
Setpoint 2	Setpoint 2 Reset Resets setpoint 2 output.
Setpoint 1 and 2	Setpoint 1 and 2 Reset Reset both setpoint 1 and 2 outputs.

## USER INPUT ASSIGNMENT

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, display hold, or print and reset is selected in the User Input Function menu.

## 6.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-5EE)

### MAX DISPLAY ENABLE

NO YES

Enables the Maximum Display Capture capability.

### RESTORE FACTORY DEFAULT SETTINGS

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rESEt and then return to Code 00. Press the SEL button to exit the module.

### MAX CAPTURE DELAY TIME

00 to 9999 sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### VIEW VERSION DISPLAY

Entering Code 50 will display the version (x.x) of the meter. The display then returns to Code 00. Press the SEL button to exit the module.

### MIN DISPLAY ENABLE

NO YES

Enables the Minimum Display Capture capability.

### CALIBRATION

The CUB5P uses stored calibration values to provide accurate voltage and current measurements. Over time, the electrical characteristics of the components inside the meter could slowly change, therefore the stored calibration values may no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the CUB5P involves a voltage or current calibration, which should only be performed by individuals experienced in calibrating electronic equipment. Allow a 30 minute warm up for equipment and unit before performing any calibration related procedures. The following procedures should be performed at an ambient temperature of 15 to 35°C (59 to 95°F).

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the CUB5P.

### Calibration

- Connect the negative lead of a precision DC source with an accuracy of 0.01% or better to the COMM. Leave the positive lead of the DC source unconnected.
- With the display at Code 48, press and hold the SEL button for 2 seconds. Unit will display rRL 00.
- Press the RST button to select the range to be calibrated.
- Press the SEL button. Display reads 000 (00 u for voltage).
- Apply 0 signal:  
Current: leave the positive lead of the DC source unconnected.  
Voltage: apply a short to the input or connect the positive lead of the DC source to INP+ and set the source to 0.  
Press SEL. Display reads rRL for about 8 seconds.
- When the display reads the selected range (10 V, 20 mA, or 50 mA), connect the positive lead of the DC source to INP+ and apply the full scale input signal for the range. Press SEL. Display reads rRL for about 8 seconds.
- Repeat steps 3 through 6 for each input range to be calibrated. When display reads rRL 00, press the SEL button to exit calibration.

### MIN CAPTURE DELAY TIME

00 to 9999 sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

NO YES

Select YES to perform either of the Factory Service Operations shown below.

# 6.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

## PARAMETER MENU

### DISPLAY UPDATE TIME

This parameter sets the display update time in seconds.

### DISPLAY COLOR (BACKLIGHT UNIT ONLY)

Enter the desired display color, red or green. This parameter is active for backlight units only.

### FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The YES selection allows the SEL button to toggle through the enabled displays.

### DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

### FRONT PANEL RESET ENABLE (RST)

This selection allows the RST button to reset the selected value(s).

### PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

### ZERO DISPLAY WITH DISPLAY RESET

This parameter enables the RST button or user input to zero the input display value, causing the display reading to be offset.

Note: For this parameter to operate, the RST button or User Input being used must be set to dSP and the Input value must be display. If these conditions are not met, the display will not zero.

### DISPLAY SCROLL ENABLE

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

### UNITS INDICATOR SELECTION

This parameter activates the Units Indicator on the display. There are two methods of selecting the Indicator. List will present a group of Units preprogrammed into the meter. Segments allows the user to choose which of the segments should light.

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at CodE prompt *
		100-999	CodE prompt	With correct code entry at CodE prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	CodE prompt	With correct code entry at CodE prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

# 6.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

## PARAMETER MENU

The Setpoint Output Parameters are only active when an optional output module is installed in the meter.

### SETPOINT SELECT

Enter the setpoint (output) to be programmed. The *n* in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to SPSEL. Repeat steps for each setpoint to be programmed. Select **NO** to exit the module. The number of setpoints available is setpoint output card dependent.

### SETPOINT 2 ENABLE

Select **YES** to enable Setpoint 2 and access the setup parameters. If **NO** is selected, the unit returns to SPSEL and setpoint 2 is disabled.

### SETPOINT ACTION

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bL = High Acting, with balanced hysteresis
- LO-bL = Low Acting, with balanced hysteresis
- HI-Ub = High Acting, with unbalanced hysteresis
- LO-Ub = Low Acting, with unbalanced hysteresis

### SETPOINT VALUE

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

### HYSTERESIS VALUE

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

### ON TIME DELAY

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OFF TIME DELAY

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OUTPUT RESET ACTION

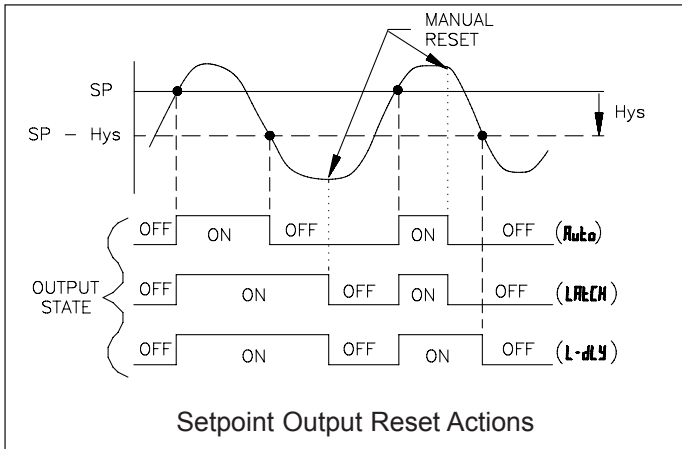

Enter the reset action of the output. See figure for details.

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST**

button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dLY** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dLY** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

### STANDBY OPERATION

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset action.

### CHANGE DISPLAY COLOR w/OUTPUT STATE

This parameter enables the backlight CUB5 to switch the backlight color when the output state changes. This parameter is only active for the backlight version.

## 6.5 MODULE 5 - SERIAL SETUP PARAMETERS (5-5Er)

### PARAMETER MENU

The Serial Setup Parameters are only active when the optional RS232 or RS485 serial communications module is installed in the meter. Refer to the CUB5COM bulletin for complete details on CUB5 serial communications.

# CUB5P PROGRAMMING QUICK OVERVIEW

Press and hold SEL button to enter Programming Mode.

# MODEL PAXLCL - PAX LITE CURRENT LOOP METER

- DUAL RANGE, 4 to 20 mA or 10 to 50 mA \*
- 3 1/2-DIGIT, 0.56" (14.2 mm) HIGH LED READOUT
- 24 VDC EXCITATION SUPPLY
- WIDE SPAN & OFFSET SCALING RANGE
- OVER-RANGE INDICATION
- SELECTABLE DECIMAL POINTS
- NEMA 4X/IP65 SEALED FRONT BEZEL
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT

\* Also adapts to 0 to 50, 0 to 20, 0 to 10, 1 to 5 mA ranges as well as bi-polar inputs.

## GENERAL DESCRIPTION

The premium features of the PAX Lite Series can now be applied to measurement of process variables. With its high sensitivity and programmability, the PAX Lite Current Loop Meter can be set up for a wide variety of applications. In most plants the PAXLCL can be used for 90 to 95% of current loop meter needs for readout of pressure, flow, temperature, level and other variables. The meter has been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, the meter provides a tough yet reliable application solution. This allows the PAXLCL to be used in dirty, hostile environments and in wash-down areas. The 3 1/2-digit bi-polar display (minus sign displayed when current or voltage is negative) features 0.56" (14.2 mm) high, 7-segment LEDs for easy reading.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

CAUTION: Read complete instructions prior to installation and operation of the unit.

CAUTION: Risk of electric shock.

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 3 1/2-digit, 0.56" (14.2 mm) high, 7-segment LED, (-) minus sign displayed when current or voltage is negative. Decimal points inserted before 1st, 2nd, or 3rd least significant digits by DIP switch selection.
- OVER-RANGE INDICATION:** Indicated by blanking 3 least significant digits.
- POWER:**  
**AC Power:** 85 to 250 VAC, 50/60 HZ, 6 VA  
**Isolation:** 2300 Vrms for 1 min. between input and supply (300 V working voltage).
- INPUT SENSITIVITY:** (Numerical Readout Change/mA)  
260 units/mA @ 4 to 20 mA input  
105 units/mA @ 10 to 50 mA input  
(max. allowable input current, 170 mA)
- COMPLIANCE:** Voltage drop across input at max. signal current, less than 600 mV for both 4 to 20 and 10 to 50 mA ranges.
- INPUT RESISTANCE:**  
**4 to 20 mA - 29.2  $\Omega$**   
**10 to 50 mA - 11.8  $\Omega$**
- SCALING RANGE:**  
**SPAN:** 32 coarse steps (*binary progression with 5 DIP switches*) Each step providing approx. 8.125 numerical units/mA/step sensitivity for 4 to 20 mA input and 3.25 units/mA/step for 10 to 50 mA input.  
**OFFSET:** 16 coarse steps (*binary progression with 4 DIP switches*) with  $\pm$  switch to add or subtract offset. Each step adds or subtracts approximately 175 from the numerical display for a total offset range of  $\pm 2700$ .
- LINEARITY:**  $\pm(0.05\% \pm 1 \text{ digit})$
- READING RATE:** 2.5 updated readings/second, nominal.
- RESPONSE TIME:** 1 second to settle for step change.
- LOW FREQUENCY NOISE REJECTION:**  
**Normal Mode Rejection:** 63 dB @ 50/60 Hz  
**Common Mode Rejection:** 100 dB, DC to 50/60 Hz
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0° to 60°C  
**Storage Temperature:** -40° to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing)  
**Span Temperature Coeff.:** 100 PPM/°C  
**Offset Temperature Coeff.:** 100 PPM/°C  
**Altitude:** Up to 2000 meters
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion B 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

### Emissions:

Emissions	EN 55011	Class B
-----------	----------	---------

### Notes:

1. *Criterion A: Normal operation within specified limits.*

2. *Criterion B: Temporary loss of performance from which the unit self-recovers.*

- EXCITATION SUPPLY:** 24 VDC @ 50 mA max. Regulated and isolated.
- CONNECTIONS:** High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gauge: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.
- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Panel gasket and mounting clip included.
- WEIGHT:** 0.65 lbs (0.24 kg)

# ACCESSORIES

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit (PAXLBK30). The backlight is controlled by a DIP switch.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

# 2.0 SETTING THE SWITCHES

The meter has switches, which must be checked and/or changed prior to applying power. To access the switches, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Set-Up DIP Switches

Two banks of DIP switches are located inside the meter. The 10 position bank of switches are used for calibrating the meter. The values of these switches are discussed in section 5.0 Calibrating the Meter.

The bank of 4 switches located near the front display are used for the selection of decimal points and backlight annunciator. Selecting "ON" position enables the function.

SWITCH	FUNCTION
1	Decimal Point 1 (000.0)
2	Decimal Point 2 (00.00)
3	Decimal Point 3 (0.000)
4	Backlight Annunciator for Units Label

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

# EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection.

Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC#SNUB0000.

## 3.1 POWER WIRING

### AC Power

Terminal 1: VAC

Terminal 2: VAC

## 3.2 INPUT SIGNAL WIRING

### 2-WIRE, EXTERNAL EXCITATION

### 2-WIRE, WITH EXCITATION (Series Conn.)

### 2-WIRE, WITH EXCITATION (Parallel Conn.)

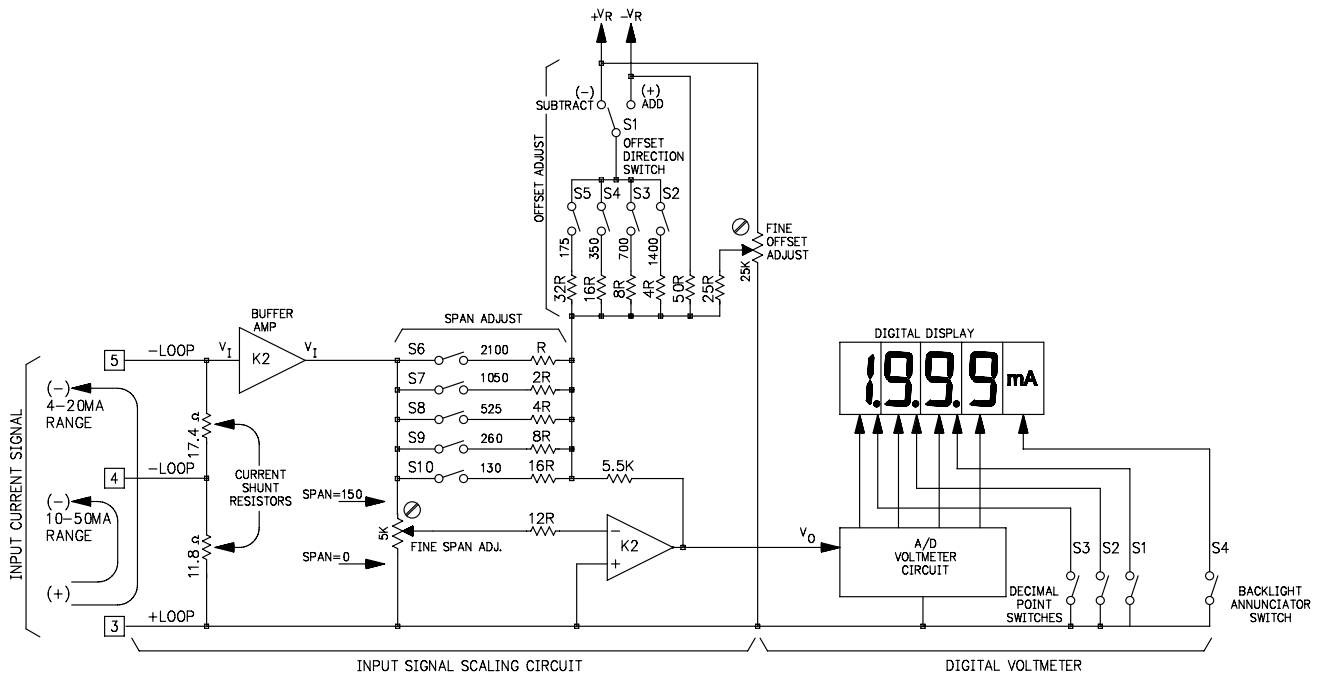

### NOTES

1. When shielded wire leads are used, connect the shield to earth ground at the meter and insulate the other end to avoid contact with machine ground.
2. Never run signal leads in conduit, bundles, or race ways with power conductors. Avoid runs close to contactors, relays, solenoids, transformers, and other potential sources of electrical noise.

# 4.0 SCALING THE METER

## PAXLCL SCHEMATIC

### DESCRIPTION OF OPERATION

The PAX Lite Current Loop Meter consists of a digital volt meter combined with an analog scaling circuit (shown above). The unit was designed primarily for use with 4-20 mA and 10-50 mA current loop signal circuits. However, it can also be adapted to other current ranges, such as 0-50 mA, 0-20 mA, 0-10 mA, and in a great many applications it can be used even with 0-5 mA and 1-5 mA current loops. In addition, input current can be reversed in polarity resulting in negative numerical readout with a minus (-) sign displayed. Input terminals 3 and 4 are connected in series with 10-50 mA current loops, and Terminal 3 and 5 are series connected with 4-20 mA loops. In either case, the voltage drop generated across the shunt resistor(s) ranges from approximately 0.12 V min. (@ 4 or 10 mA) to 0.59 V max. (@ 20 or 50 mA). The buffer amplifier (K1) conditions and filters the input signal voltage and applies it to the input of the scaling circuit. The procedure for scaling PAX Lite Current Loop Meters is simplified by dividing the scaling process into two separate components, span adjustments and offset adjustments which are defined in the following discussion.

### SPAN ADJUSTMENTS

Span is defined as the numerical range that the display traverses, disregarding decimal points, when the input signal current is varied from minimum (4 or 10 mA) to maximum (20 or 50 mA). For example, if a unit is to display 25.0 @ 4 mA and 100.0 @ 20 mA, the span is 750 (the difference between 250 and 1000). Had the minimum display been -25.0 @ 4 mA and +100.0 @ 20 mA, the span would be 1250 (1000 - (-250) = 1250). (Note: the terms "GAIN", "SCALE", and "SENSITIVITY" are also frequently used interchangeably with the term "SPAN.") The PAX Lite Current Loop Meter can be set up over a very wide span range by means of the coarse DIP switches S6-S10, and the fine screwdriver adjustment pot, located at the back cover. The coarse span switches add parallel input resistors to the summing amplifier (K2), thereby increasing its gain, or sensitivity, as more summing resistors are added. Effectively, adding more parallel input resistors, increases the slope of the transfer curve (at right) and increases the numerical readout for a given input signal current change. The input summing resistor values are weighted in a binary progression, so they can be switched in combinations to give 32 discrete steps of span. The fine adjust control brackets these coarse steps and can be adjusted to the exact span needed.

The approximate span contributed by each switch is shown on the rear label. These values are based on the standard current-loop spans of 4 to 20 mA (16 mA current variation) and 10-50 mA (40 mA current variation). In other words, if S7 only is turned "ON", the numerical readout will display a change approximately 1050 for a current swing of 16 mA (4-20 mA input) or 40 mA (10-50 mA input). If S8 were also turned "ON", the numerical readout would swing approximately 1575 (1050 for S7 + 525 for S8) for the same signal current variation. The fine control has a continuous span range of approximately 0-150.

### OFFSET ADJUSTMENTS

In the foregoing discussion of span, the transfer curves were shown as "ZERO-BASED", i.e., the numerical readout displays "0" when the signal current goes to zero. With current loop ranges such as 0-5 or 0-10, or 0-20 mA, and with Bi-Polar (+/-) signals, this is often the desired condition. However, with 4-20 and 10-50 mA current loops, the minimum current level of 4 or 10 mA usually represents the zero level of the parameter being displayed. There are also many applications where the minimum (or zero level) represents some value that does not fall on a zero based transfer curve. To accommodate non-zero based applications, the PAX Lite Current Loop Meter has provisions for offsetting the transfer curve over a wide range. Essentially, offset moves the transfer curve up or down to change its intercept with the numerical readout axis, but it does not change the slope (SPAN) of the transfer curve. In the PAX Lite Current Loop Meter, offset is accomplished by adding (or subtracting) a constant at the input of the summing amplifier (K2). This offset constant is summed in with a switched binary resistor network and a fine adjust offset control in a similar manner to that used for span adjustment. Switches S2-S5 can be turned on in combinations to give 16 different coarse offset levels. Each switch is labeled to show the approximate amount of offset contributed when it is turned "ON". Switch 1 selects the polarity of the switched-in offset value and allows offsetting the transfer curve "UP" (adding the offset constant) or "DOWN" (subtracting). The fine offset control has a numerical readout range of  $\pm 100$  and brackets all the coarse switched ranges.

# 5.0 CALIBRATING THE METER

Direct calibration in the signal loop is usually not practical due to the difficulty in varying the measured parameter and the confusing interaction that occurs between span and offset adjustments. However, the PAXLCL can be quickly and easily bench calibrated using a commercially available current calibrator or the calibration set-up shown below.

## CALIBRATION PROCEDURE

The procedure outlined below minimizes span/offset interaction and simplifies calibration. In Steps 1 to 4 the unit is “nulled” to zero readout with zero input signal current. In Steps 5 and 6, the span adjustments are made to establish the required slope of the transfer curve. Then in Step 7, the transfer curve is shifted up or down as required by setting the offset adjustments. In Step 8, the final “tweaking” adjustments are made at minimum and maximum signal current. Setting the decimal points in Step 9 completes the calibration.

Before calibrating, the READOUT SPAN (Rs) and SWING CURRENT (Is) must be determined.

### WHERE:

$R_s = (\text{Max. Numerical Display}) - (\text{Min. Numerical Display})$  (Disregard Decimal Points)

$I_s = (\text{Current @ Max. Display}) - (\text{Current @ Min. Display})$

### Example:

Readout is to be 0.00 @ 4 mA and 10.00 @ 20 mA.

READOUT SPAN (Rs) = 1000 - 0 = 1000

SWING CURRENT (Is) = 20 mA - 4 mA = 16

## CALIBRATION STEPS

1. Power down the meter and remove it from its case. Turn off all offset and span adjustment switches (S2-S10 down). S1 has no effect when zeroing and can be in either position.
2. Turn the span control pot fully counter-clockwise (20 turns max.).
3. Turn on a combination of span adjust switches (6-10) to obtain a total value closest to (but not greater than) the READOUT SPAN (Rs) desired (1000 in this example). The following chart gives an approximate span adjustment value for each switch:

SWITCH NUMBER	SPAN VALUE
6	2100
7	1050
8	525
9	260
10	130

4. Place unit in its case and apply power. Apply zero current. Adjust the indicator to read zero using the offset adjustment pot.
5. Apply the SWING CURRENT (Is) (16 mA in the example) to the input. Set the exact READOUT SPAN value (1000) with span adj.pot.
6. Apply zero current to see if the zero value has shifted. If it has, re-zero with the offset pot, then repeat Step 5.
7. After the span has been adjusted, set the signal current to the minimum level (4 mA in the example). Record the meter reading (in this example the reading will be 250). Subtract the desired reading at minimum current value (0 in the example) from the recorded reading (0-250 = -250). Power down the meter and remove it from its case. Set the offset add/subtract switch S1 (subtract = on), and the offset switches (S2-S5) to obtain a total value closest to (but no more than) the difference between the desired reading at minimum current value and the observed reading. The following chart gives an approximate offset adjustment value for each switch:

SWITCH NUMBER	OFFSET VALUE
2	1400
3	700
4	350
5	175

Place the meter in its case and apply power. Using the offset adjust pot, adjust the readout to equal the desired reading at the minimum current value (0 in the example).

8. Adjust the input signal current to its maximum value to see if the proper readout is obtained (1000 @ 20 mA in the example). If the readout is slightly off, adjust the span pot to obtain the true reading. Then, recheck the reading at the minimum input current (4 mA) and readjust the offset pot if necessary. Repeat the maximum and minimum readout adjustments until the unit displays the proper readout at both extremes.
9. Set decimal points as desired using the three decimal point switches. The unit can now be installed.

## TROUBLESHOOTING

For further assistance, contact technical support at the appropriate company numbers listed.

# 6.0 APPLICATIONS

## Example 1:

A PAXLCL is to be calibrated to match a flow transducer whose output is 10 mA @ 0 GPM and 50 mA @ 1375 GPM.

READOUT SPAN (Rs) = 1375 - 0 = 1375

SWING CURRENT (Is) = 50 mA - 10 mA = 40 mA

### ADJUSTMENTS (Refer to the transfer curve below)

- Null the unit to zero readout @ 0 current per Steps 1 to 4 of the calibration steps.
- Set the coarse and fine span adjustments to get a readout of 1375 @ 40 mA per Steps 5 and 6. *Note: With the full standard swing of 40 mA, the coarse span switch reference markings can be used to determine settings as follows: S7 ON (1050) + S9 ON (260) = 1310 Span set with switches. 375 (needed) - 1310 (with SW's) = 65 w. fine span adj.*
- Set offset to readout 0 @ 10 mA per Step 7. *Note: The read out observed when the 10 mA min. current is first applied can be used to determine the offset switch settings.* In this example the readout will be (+) 344 when the 10 mA min. current is first applied. Applying -344 offset then reduces the readout to zero @ 10 mA.
- Check readout at max. (50 mA) and min. (10 mA) and fine tune (tweak) as required per Step 8.

## Example 3 (± Display):

A differential pressure transducer has a range of ±1500 PSI with a 4 to 20 mA output (-1500 @ 4 mA, +1500 @ 20 mA).

READOUT SPAN (Rs) = +1500 - (-1500) = 3000

SWING CURRENT (Is) = 20 mA(max) - 4 mA(min) = 16 mA

*Note: Since the display readout is limited to 1999 numerical indication, the full READOUT SPAN of 3000 cannot be obtained during zero based span adjustment. However, dividing both the READOUT SPAN and SWING CURRENT by two, i.e. 1500 readout @ 8 mA, allows the span adjustment to be made for the proper transfer curve slope.*

### ADJUSTMENTS

- Null the unit per Steps 1 to 4.
- Set transfer curve slope with span adjustments per Steps 5 and 6, to get a readout of +1500 @ 8 mA.
- Apply (-) offset per Step 7 to get a reading of -1500 @ 4 mA.
- Check min. and max. extremes and tweak if required to get desired readout @ 4 and 20 mA per Step 8.

## Example 2 (Negative Slope):

A level measuring device puts out 6 mA when a storage tank is full and 15 mA when the tank is empty. The PAXLCL is to readout 90.0 tons at full tank and zero when empty.

READOUT SPAN (Rs) = 900 - 0 = 900 (Disregard Decimal Points)

SWING CURRENT (Is) = 6 mA (@ max rdg) - 15 mA (@ min rdg) = -9 mA

In this case, the signal current is reverse [Term 3 (-) with respect to Term 5 (+)] causing the readout to go "down" (increasingly negative) as the negative current increases.

### ADJUSTMENTS

- Null the unit per Steps 1 to 4.
- Set slope of transfer curve with span adjustments to get readout of -900 @ -9 mA per Steps 5 and 6.
- Move transfer curve up by applying (+) offset per Step 7 until readout is +900 @ -6 mA.
- Check extreme readings per Step 8, 0 readout @ -15 mA and +900 readout @ -6 mA. Set D.P. Switch S1 and replace unit in case.

# MODEL PAXLPV - PAX LITE PROCESS VOLT METER

- WIDE SPAN & OFFSET SCALING RANGE
- 3 1/2-DIGIT, 0.56" (14.2 mm) HIGH LED READOUT
- 24 VDC EXCITATION SUPPLY
- OVER-RANGE INDICATION
- SELECTABLE DECIMAL POINTS
- NEMA 4X/IP65 SEALED FRONT BEZEL
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT
- ±25 VOLT DC MAXIMUM INPUT

## GENERAL DESCRIPTION

The premium features of the PAX Lite Series can now be applied to measurement of process variables. With its high sensitivity and programmability, the PAX Lite Process Volt Meter can be set up for a wide variety of applications. In most plants the PAXLPV can be used for 90 to 95% of Process Volt meter needs for readout of pressure, flow, temperature, level and other variables. The meter has been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, the meter provides a tough yet reliable application solution. This allows the PAXLPV to be used in dirty, hostile environments and in wash-down areas. The 3½-digit bi-polar display (minus sign displayed when voltage is negative) features 0.56" (14.2 mm) high, 7-segment LEDs for easy reading.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

1. **DISPLAY:** 3 1/2-digit, 0.56" (14.2 mm) high, 7-segment LED, (-) minus sign displayed when current or voltage is negative. Decimal points inserted before 1st, 2nd, or 3rd least significant digits by DIP switch selection.
2. **OVER-RANGE INDICATION:** Indicated by blanking 3 least significant digits.
3. **POWER:**  
**AC Power:** 85 to 250 VAC, 50/60 HZ, 6 VA  
**Isolation:** 2300 Vrms for 1 min. to all inputs.
4. **INPUT SENSITIVITY:** (Numerical Readout Change/Volt) Adjustable from 40 units/volt to 1000 units/volt. Max. allowable input voltage,  $\pm 25$  volts DC.
5. **INPUT RESISTANCE:** 1 M  $\Omega$
6. **SCALING RANGE:**  
**SPAN:** 32 coarse steps (*binary progression with 5 DIP switches*) Each step providing approx. 40 numerical units/volt/step sensitivity. Fine adjust brackets the coarse step increments.  
**OFFSET:** 16 coarse steps (*binary progression with 4 DIP switches*) with  $\pm$  switch to add or subtract offset. Each step adds or subtracts approximately 175 from the numerical display for a total offset range of  $\pm 2700$ . Fine control brackets the steps.
7. **LINEARITY:**  $\pm(0.05\% \pm 1 \text{ digit})$
8. **READING RATE:** 2.5 updated readings / second, nominal.
9. **RESPONSE TIME:** 1 second to settle for step change.
10. **LOW FREQUENCY NOISE REJECTION:**  
**Normal Mode Rejection:** 63 dB @ 50/60 Hz  
**Common Mode Rejection:** 100 dB, DC to 50/60 Hz
11. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0° to 60°C  
**Storage Temperature:** -40° to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing)  
**Span Temperature Coeff.:** 100 PPM/°C  
**Offset Temperature Coeff.:** 100 PPM/°C  
**Altitude:** Up to 2000 meters
12. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
 UL Recognized Component, File # E179259, UL61010A-1, CSA C22.2 No. 1010-1  
 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
 UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
 Type 4X Enclosure rating (Face only), UL50  
 IEC EE CB Scheme Test Certificate # US/8843A/UL  
 CB Scheme Test Report # 04ME11209-20041018  
 Issued by Underwriters Laboratories, Inc.

 IP65 Enclosure rating (Face only), IEC 529  
 IP20 Enclosure rating (Rear of unit), IEC 529

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion B 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

### Emissions:

Emissions	EN 55011	Class B
-----------	----------	---------

### Notes:

1. *Criterion A: Normal operation within specified limits.*
2. *Criterion B: Temporary loss of performance from which the unit self-recovers.*

13. **EXCITATION SUPPLY:** 24 VDC @ 50 mA max. Regulated and isolated.
14. **CONNECTIONS:** High compression cage-clamp terminal block  
 Wire Strip Length: 0.3" (7.5 mm)  
 Wire Gauge: 30-14 AWG copper wire  
 Torque: 4.5 inch-lbs (0.51 N-m) max.
15. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 indoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Panel Gasket and mounting clip included.
16. **WEIGHT:** 0.65 lbs (0.24 kg)

# ACCESSORIES

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit (PAXLBK30). The backlight is controlled by a DIP switch.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

# 2.0 SETTING THE SWITCHES

The meter has switches that must be checked and/or changed prior to applying power. To access the switches, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Set-Up DIP Switches

Two banks of DIP switches are located inside the meter. The 10 position bank of switches are used for calibrating the meter. The values of these switches are discussed in section 5.0 Calibrating the Meter.

The bank of 4 switches located near the front display are used for the selection of decimal points and backlight annunciator. Selecting "ON" position enables the function.

SWITCH	FUNCTION
1	Decimal Point 1 (000.0)
2	Decimal Point 2 (00.00)
3	Decimal Point 3 (0.000)
4	Backlight Annunciator for Units Label

E

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

6. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.

Snubber: RLC#SNUB0000.

# 4.0 SCALING THE METER

## PAXLPV SCHEMATIC

### DESCRIPTION OF OPERATION

The PAX Lite Process Volt Meter consists of a digital volt meter combined with an analog scaling circuit (shown above). Input voltage can be reversed in polarity resulting in negative numerical readout with a minus (-) sign displayed. Input terminals 3 and 4 are connected to the signal voltage. The buffer amplifier (K1) conditions and filters the input signal voltage and applies it to the input of the scaling circuit. The procedure for scaling PAX Lite Process Volt Meters is simplified by dividing the scaling process into two separate components, span adjustments and offset adjustments which are defined in the following discussion.

### SPAN ADJUSTMENTS

Span is defined as the numerical range that the display traverses, disregarding decimal points, when the input signal is varied from minimum to maximum. For example, if a unit is to display 25.0 @ 1 V and 100.0 @ 5 V, the span is 750 (the difference between 250 and 1000). Had the minimum display been -25.0 @ 1 V and +100.0 @ 5 V, the span would be 1250 (1000 - (-250) = 1250). (Note: the terms "GAIN," "SCALE," and "SENSITIVITY" are also frequently used interchangeably with the term "SPAN.") The PAX Lite Process Volt Meter can be set up over a very wide span range by means of the coarse DIP switches S6-S10, and the fine screwdriver adjustment pot, located at the back cover. The coarse span switches add parallel input resistors to the summing amplifier (K2), thereby increasing its gain, or sensitivity, as more summing resistors are added. Effectively, adding more parallel input resistors increases the slope of the transfer curve (at right) and increases the numerical readout for a given input signal change. The input summing resistor values are weighted in a binary progression, so they can be switched in combinations to give 32 discrete steps of span. The fine adjust control brackets these coarse steps and can be adjusted to the exact span needed.

The approximate span contributed by each switch is shown on the rear label. The values shown are "units per volt." For example, if S6 only is turned "ON," the numerical readout will change approximately 550 units for a signal voltage change of 1 volt. If S7 were also turned "ON," the numerical readout would change approximately 825 units for a signal voltage change of 1 volt. The span adjust pot has a continuous span range of approximately 0- 45.

### OFFSET ADJUSTMENTS

Effectively, adding more parallel input resistors increases the slope of the transfer curve (at right) and increases the numerical readout for a given input signal change. In the foregoing discussion of span, the transfer curves were shown as "ZERO-BASED," i.e., the numerical readout displays "0" when the signal goes to zero. With voltage ranges such as 0-5 V or 0-10 V, and with Bi-Polar (+/-) signals this is often the desired condition. However, with voltage ranges such as 1-5 V or 1-10 V, the minimum voltage level usually represents the zero level of the parameter being displayed. There are also many applications where the minimum (or zero level) represents some value that does not fall on a zero based transfer curve. To accommodate non-zero based applications, the PAX Lite Process Volt Meter has provisions for offsetting the transfer curve over a wide range. Essentially, offset moves the transfer curve up or down to change its intercept with the numerical readout axis, but it does not change the slope (SPAN) of the transfer curve. In the PAX Lite Process Volt Meter, offset is accomplished by adding (or subtracting) a constant at the input of the summing amplifier (K2). This offset constant is summed in with a switched binary resistor network and a fine adjust offset control in a similar manner to that used for span adjust. Switches S2-S5 can be turned on in combinations to give 16 different coarse offset levels. Each switch is labeled to show the approximate amount of offset contributed when it is turned "ON." Switch 1 selects the polarity of the switched-in offset value and allows offsetting the transfer curve "UP" (adding the offset constant) or "DOWN" (subtracting). The offset adjust pot has a numerical readout range of +/-100 and brackets all the coarse switched ranges.

# 5.0 CALIBRATING THE METER

Direct calibration in the signal loop is usually not practical due to the difficulty in varying the measured parameter and the confusing interaction that occurs between span and offset adjustments. However, the PAXLPV can be quickly and easily bench calibrated using a commercially available calibrator.

## CALIBRATION PROCEDURE

The procedure outlined in the calibration steps below, minimizes span/offset interaction and simplifies calibration. In Steps 1 to 4 the unit is “nulled” to zero readout with zero input signal voltage. In Steps 5 and 6, the span adjustments are made to establish the required slope of the transfer curve. Then in Step 7, the transfer curve is shifted up or down as required by setting the offset adjustments. In Step 8, the final “tweaking” adjustments are made at minimum and maximum signal voltage. Setting the decimal points in Step 9 completes the calibration. Before calibrating, the READOUT SPAN (Rs), SWING VOLTAGE (Vs), and SPAN PER VOLT (Rs/Vs) must be determined.

## WHERE:

$$Rs = (\text{Max. Numerical Display}) - (\text{Min. Numerical Display}) \quad (\text{Disregard Decimal Points})$$

$$Vs = (\text{Voltage @ Max. Display}) - (\text{Voltage @ Min. Display})$$

$$Rs/Vs = \frac{\text{READOUT SPAN (Rs)}}{\text{SWING VOLTAGE (Vs)}}$$

## Example:

Readout is to be 0.00 @ 1 V and 10.00 @ 5 V.

$$\text{READOUT SPAN (Rs)} = 1000 - 0 = 1000$$

$$\text{SWING VOLTAGE (Vs)} = 5 \text{ V} - 1 \text{ V} = 4 \text{ V}$$

$$\text{SPAN PER VOLT (Rs/Vs)} = 1000 / 4 \text{ V} = 250$$

---

## CALIBRATION STEPS

1. Power down the meter and remove it from its case. Turn off all offset and span adjustment switches (S2-S10 down). S1 has no effect when zeroing and can be in either position.
2. Turn the span control pot. fully counter-clockwise (20 turns max.).
3. Turn on a combination of span adjust switches (6-10) to obtain a total value closest to (but not greater than) the SPAN PER VOLT desired (250 in this example). The following chart gives an approximate span adjustment value for each switch:

SWITCH NUMBER	SPAN VALUE
6	550
7	275
8	140
9	75
10	40

4. Place unit in its case and apply power. Apply zero volts. Adjust the indicator to read zero using the offset adjustment pot.
5. Apply the SWING VOLTAGE (Vs) (4 V in this example) to the input. Set the exact READOUT SPAN value (1000) with span adj. pot.
6. Apply zero volts to see if the zero value has shifted. If it has, re-zero with the offset pot, then repeat Step 5.
7. After the span has been adjusted, set the signal voltage to the minimum level (1 V in the example). Record the meter reading (in this example the reading will be 250). Subtract the desired reading at minimum voltage value (0 in the example) from the recorded reading (0-250 = - 250). Power down the meter and remove it from its case. Set the offset add/subtract switch S1

(subtract = on), and the offset switches (S2-S5) to obtain a total value closest to (but no more than) the difference between the desired reading at minimum voltage value and the observed reading. The following chart gives an approximate offset adjustment value for each switch:

SWITCH NUMBER	OFFSET VALUE
2	1400
3	700
4	350
5	175

- Place the meter in its case and apply power. Using the offset adjust pot, adjust the readout to equal the minimum voltage value (0 in the example).
8. Adjust the input signal voltage to its maximum value to see if the proper readout is obtained (1000 @ 5 V in the example). If the readout is slightly off, adjust the span pot to obtain the true reading. Then, recheck the reading at the minimum input voltage (1 V) and readjust the offset pot if necessary. Repeat the maximum and minimum readout adjustments until the unit displays the proper readout at both extremes.
  9. Set decimal points as desired using the three decimal point switches. The unit can now be installed.

## TROUBLESHOOTING

For further assistance, contact technical support at the appropriate company numbers listed.

# 6.0 APPLICATIONS

## Example 1 ( $\pm$ Display):

A differential pressure transducer has a range of  $\pm 15$  PSI with a 1-6 V output (-15 @ 1 V, +15 @ 6 V)

READOUT SPAN ( $R_s$ ) = +1500 - (-1500) = 3000  
 SWING VOLTAGE ( $V_s$ ) = 6 V (max) - 1 V (min) = 5 V  
 SPAN PER VOLT ( $R_s/V_s$ ) = 3000 / 5 V = 600

Note: Since the display readout is limited to 1999 numerical indication, the full READOUT SPAN of 3000 cannot be obtained during zero based span adjustment. However, dividing both the READOUT SPAN and SWING VOLTAGE by two, i.e. 1500 readout @ 2.5 V, allows the span adjustment to be made for the proper transfer curve slope.

### ADJUSTMENTS

- Null the unit to zero readout @ 0 V per Steps 1 to 4 of the calibration steps.
- Set transfer curve slope with span adjustments per Steps 5 and 6 to get a readout of +1500 @ 2.5 V (SPAN PER VOLT = 600).
- Apply (-) offset per Step 7 to get a reading of -1500 @ 1 V.
- Check min. and max. extremes and tweak if required to get desired readout @ 1 V and 6 V per step 8. Set D.P. switch S2 and replace unit in case.

## Example 3 (Negative Slope):

A liquid level sensor puts out 1 V when a storage tank is full and 11 V when the tank is empty. The PAXLPV is to read out 100.0 when the tank is full and zero when the tank is empty.

READOUT SPAN ( $R_s$ ) = 1000 - 0 = 1000  
 SWING VOLTAGE ( $V_s$ ) = 1 V (max) - 11 V (min) = -10 V  
 SPAN PER VOLT ( $R_s/V_s$ ) = 1000 / -10 V = -100

In this case, the signal voltage is reversed [Term. 3 (+) with respect to Term. 4 (-)] causing the readout to go "down" (increasingly negative) as the negative voltage increases (hence, the negative (-) SPAN PER VOLT).

### ADJUSTMENTS

- Null the unit per Steps 1 to 4 of the calibration steps.
- Set the slope of the transfer curve with the span adjustments to get a readout of -1000 @ -10V (SPAN PER VOLT = -100) per Steps 5 and 6.
- Move the transfer curve up by applying (+) offset per Step 7 until readout is +1000 @ -1 V.
- Check extreme readings per Step 8 0 readout @ -11 V and +1000 @ -1 V. Set D.P. switch S1 ON and replace unit in case.

## Example 2 (Positive Offset):

PAXLPV is to be calibrated to match a flow transducer whose output is 0 V @ 40 GPM and 5 V @ 650 GPM.

READOUT SPAN ( $R_s$ ) = 650 - 40 = 610  
 SWING VOLTAGE ( $V_s$ ) = 5 V (max) - 0 V (min) = 5 V  
 SPAN PER VOLT ( $R_s/V_s$ ) = 610 / 5 V = 122

### ADJUSTMENTS

- Null the unit per Steps 1 to 4 of the calibration steps.
- Set the coarse and fine span adjustments to get a readout of 610 @ 5 V (SPAN PER VOLT = 122) per Steps 5 and 6.
- Set offset to readout 40 @ 0 V per Step 7.
- Check the readout @ max. (5 V) and min. (0 V) and fine tune (tweak) as required per Step 8.

# MODEL DP5P - PROCESS INPUT

This is a brief overview of the DP5P. For complete specifications and programming information, see the [DP5 Analog Input Panel Meters Bulletin](#) starting on [page 358](#).

- DUAL RANGE INPUT (20 mA or 10 VDC)
- 5-DIGIT 0.56" HIGH RED LED DISPLAY
- PROGRAMMABLE FUNCTION KEYS/USER INPUT
- 24 VDC TRANSMITTER POWER
- NEMA 4X/IP65 SEALED FRONT BEZEL

## DP5P SPECIFICATIONS

### SENSOR INPUTS:

INPUT (RANGE)	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	DISPLAY RESOLUTION
20 mA (-2 to 26 mA)	0.03% of reading +2 μA	0.12% of reading +3 μA	20 ohm	150 mA	1 μA
10 VDC (-1 to 13 VDC)	0.03% of reading +2 mV	0.12% of reading +3 mV	500 Kohm	300 V	1 mV

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85%RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

### EXCITATION POWER:

Transmitter Power: 24 VDC, ±5%, regulated, 50 mA max.

## MODEL PAXP - PROCESS INPUT

This is a brief overview of the DP5P. For complete specifications and programming information, see the [PAX Analog Input Panel Meters Bulletin](#) starting on [page 378](#).

- 5-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- DUAL RANGE INPUT (20 mA or 10 VDC)
- 24 VDC TRANSMITTER POWER
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- CRIMSON PROGRAMMING SOFTWARE

INPUT (RANGE)	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	DISPLAY RESOLUTION
20 mA (-2 to 26 mA)	0.03% of reading +2 $\mu$ A	0.12% of reading +3 $\mu$ A	20 ohm	150 mA	1 $\mu$ A
10 VDC (-1 to 13 VDC)	0.03% of reading +2 mV	0.12% of reading +3 mV	500 Kohm	300 V	1 mV

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85%RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

### EXCITATION POWER:

Transmitter Power: 24 VDC,  $\pm$ 5%, regulated, 50 mA max.

# MODEL PAXDP – 1/8 DIN DUAL PROCESS INPUT METER

- ACCEPTS TWO 4 - 20 mA OR 0 - 10 VDC INPUT SIGNALS
- PROGRAMMABLE A/D CONVERSION RATE, 5 TO 105 READINGS PER SECOND
- 5-DIGIT 0.56" RED SUNLIGHT READABLE DISPLAY
- VARIABLE INTENSITY DISPLAY
- LINEARIZATION/SQUARE ROOT EXTRACTION INPUT RANGE
- PROGRAMMABLE FUNCTION KEYS/USER INPUTS
- 9 DIGIT TOTALIZER (INTEGRATOR) WITH BATCHING
- OPTIONAL CUSTOM UNITS OVERLAY W/BACKLIGHT
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- RETRANSMITTED ANALOG OUTPUT (W/OPTION CARD)
- NEMA 4X/IP65 SEALED FRONT BEZEL
- PC SOFTWARE AVAILABLE FOR METER CONFIGURATION

## GENERAL DESCRIPTION

The PAXDP Dual Process Input Meter offers many features and performance capabilities to suit a wide range of industrial applications. Available in two models, AC or DC power, the meter has the capability to accept two, 4 to 20 mA or 0 to 10 VDC input signals. Each input signal can be independently scaled and displayed. In addition, a math function can be performed on the two signals, C + A + B, C - A - B, C + A - B, AB / C, CA / B, or C (A / B - 1). Any of the three meter values can have Alarms, Comms, and/or a Retrmitted Analog Output capability by simply adding optional cards. The optional plug-in output cards allow the opportunity to configure the meter for current applications, while providing easy upgrades for future needs.

The update rate of the meter is user selectable. This will help in those applications where a quick response from the meter is of the utmost importance. The rate can be adjusted from eight selections with a minimum of 5 updates/second to a maximum of 105 updates/second.

The meters employ a bright 0.56" (14.2 mm) red sunlight readable LED display. The intensity of display can be adjusted from dark room applications up to sunlight readable, making it ideal for viewing in bright light applications.

The meters provide a MAX and MIN reading memory with programmable capture time. The capture time is used to prevent detection of false max or min readings which may occur during start-up or unusual process events.

The signal totalizer (integrator) can be used to compute a time-input product. This can be used to provide a readout of totalized flow, calculate service intervals of motors or pumps, etc. The totalizer can also accumulate batch operations.

The meter has four setpoint outputs, implemented on Plug-in option cards. The Plug-in cards provide dual FORM-C relays (5A), quad FORM-A (3A), or either quad sinking or quad sourcing open collector logic outputs. The setpoint alarms can be configured to suit a variety of control and alarm requirements.

Communication and Bus Capabilities are also available as option cards. The standard output is in Modbus Protocol. Any of the following option cards, RS232, RS485, DeviceNet, or Profibus can be used with the meter. Readout

values and setpoint alarm values can be controlled through the bus. Additionally, the meters have a feature that allows a remote computer to directly control the outputs of the meter.

A linear DC output signal is available as an optional Plug-in card. The card provides either 20 mA or 10 V signals. The output can be scaled independent of the input range and can track either the input, totalizer, max/min readings, or math calculation value.

Once the meters have been initially configured, the parameter list may be locked out from further modification in its entirety or only the setpoint values can be made accessible.

The meters have been specifically designed for harsh industrial environments. With NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

1. **DISPLAY:** 5 digit, 0.56" (14.2 mm) variable intensity red sunlight readable (-19999 to 99999)

2. **POWER:**

AC Versions:

AC Power: 85 to 250 VAC, 50/60 Hz, 21 VA

Isolation: 2300 Vrms for 1 min. to all inputs and outputs.

DC Versions: (Derate operating temperature to 40° C if three plug-in option cards or PAXCDC50 are installed.)

DC Power: 18 to 36 VDC, 13 W

AC Power: 24 VAC, ± 10%, 50/60 Hz, 16 VA

Isolation: 500 Vrms for 1 min. to all inputs and outputs (50 V working).

Must use a Class 2 or SELV rated power supply

3. **ANNUNCIATORS:**

A - Programmable Display

B - Programmable Display

C - Programmable Display

SP1 - Setpoint alarm 1 is active

SP2 - Setpoint alarm 2 is active

SP3 - Setpoint alarm 3 is active

SP4 - Setpoint alarm 4 is active

Units Label - Optional units label backlight

4. **KEYPAD:** 3 programmable function keys, 5 keys total

5. **A/D CONVERTER:** 16 bit resolution

6. **UPDATE RATES:**

A/D conversion rate: Adjustable 5.3 to 105 readings/sec.

Step response: (to within 99% of final readout value with digital filter disabled)

INPUT UPDATE RATE	MAX. TIME (msec)
5.3	770
7.5	560
16.7	260
19.8	220
20	220
30	150
105	60

Display update rate: adjustable 1 to 20 readings/sec.

Setpoint output on/off delay time: 0 to 3275 sec.

Analog output update rate: 0 to 10 sec

Max./Min. capture delay time: 0 to 3275 sec.

7. **DISPLAY MESSAGES:**

“OLOL” - Appears when measurement exceeds + signal range.

“ULUL” - Appears when measurement exceeds - signal range

“...” - Appears when display values exceed + display range.

“-...” - Appears when display values exceed - display range.

8. **SENSOR INPUTS:**

INPUT (RANGE)	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE/ COMPLIANCE	MAX CONTINUOUS OVERLOAD	DISPLAY RESOLUTION
±20 mA (-26 to 26 mA)	0.03% of reading +2 µA	0.12% of reading +3 µA	24.6 ohm	90 mA	1 µA
±10 VDC (-13 to 13 VDC)	0.03% of reading +2 mV	0.12% of reading +3 mV	500 Kohm	50 V	1 mV

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85% RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

9. **EXCITATION POWER:**

Transmitter Power: 18 VDC, ±20%, unregulated, 70 mA max. per input channel.

10. **LOW FREQUENCY NOISE REJECTION:**

Normal Mode: (digital filter off)

INPUT UPDATE RATE	50 Hz ±1 Hz	60 Hz ±1 Hz
5.3	>90 dB	>65 dB
7.5	>60 dB	>55 dB
16.7	>100 dB	>50 dB
19.8*	>60 dB	>95 dB
20	>55 dB	>100 dB
30	>20 dB	>20 dB
105	>20 dB	>13 dB

\*Note: 19.8 Hz Input Rate provides best rate performance and simultaneous 50/60 Hz rejection.

Common Mode: >100 dB @ 50/60 ±1 Hz (19.8 or 20 Input Rate)

11. **USER INPUTS:** Three programmable user inputs

Max. Continuous Input: 30 VDC

Isolation To Sensor Input A Common: 500 Vrms for 1 min;

Working Voltage: 50 V

Isolation To Sensor Input B Common: Not isolated.

INPUT STATE	SINKING INPUTS 22 KΩ pull-up to +5 V	SOURCING INPUTS 22 KΩ pull-down
Active	V <sub>IN</sub> < 0.9 VDC	V <sub>IN</sub> > 3.6 VDC
Inactive	V <sub>IN</sub> > 3.6 VDC	V <sub>IN</sub> < 0.9 VDC

Response Time: 20 msec. max.

Logic State: Jumper selectable for sink/source logic

12. **TOTALIZER:**

Function:

Time Base: second, minute, hour, or day

Batch: Can accumulate (gate) input display from a user input

Time Accuracy: 0.01% typical

Decimal Point: 0 to 0.0000

Scale Factor: 0.001 to 65,000

Low Signal Cut-out: -19,999 to 99,999

Total: 9 digits, display alternates between high order and low order readouts

13. **CUSTOM LINEARIZATION:**

Data Point Pairs: Selectable from 2 to 16

Display Range: -19,999 to 99,999

Decimal Point: 0 to 0.0000

14. **MEMORY:** Nonvolatile memory retains all programmable parameters and display values.

15. **CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**

UL Recognized Component, File #E179259, UL61010A-1, CSA C22.2 No. 61010-1

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #US/8843A/UL

CB Scheme Test Report #04ME11209-20041018

Issued by Underwriters Laboratories, Inc.

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

IP20 Enclosure rating (Rear of unit), IEC 529

## 15. CERTIFICATIONS AND COMPLIANCES (Cont'd):

### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

#### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms

#### Emissions:

AC powered	EN 55011	Class B
DC powered	EN 55011	Class A

#### Notes:

1. *Criterion A: Normal operation within specified limits.*
2. *Criterion B: Temporary loss of performance from which the unit self-recovers.*

Refer to EMC Installation Guidelines section of the bulletin for additional information.

## 16. ENVIRONMENTAL CONDITIONS:

Operating Temperature Range: 0 to 50°C (0 to 45°C with all three plug-in option cards installed)

Storage Temperature Range: -40 to 60°C

Operating and Storage Humidity: 0 to 85% max. RH non-condensing

Altitude: Up to 2000 meters

## 17. CONNECTIONS: High compression cage-clamp terminal block

Wire Strip Length: 0.3" (7.5 mm)

Wire Gage: 30-14 AWG copper wire

Torque: 4.5 inch-lbs (0.51 N-m) max.

## 18. CONSTRUCTION: This unit is rated for NEMA 4X/IP65 outdoor use.

IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

## 19. WEIGHT: 10.4 oz. (295 g)

# ACCESSORIES

E

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled in the programming.

## PROGRAMMING SOFTWARE

The Crimson<sup>®</sup> 2 (SFCRM2) software is a Windows<sup>®</sup> based program for configuring and updating the firmware of the PAXDP meter from a PC. Using the software makes programming the PAXDP meter easier and allows the user to save the PAXDP database in a PC file for future use. The software is available as a free download from Red Lion's website, or it can be purchased on CD.

The first time Crimson<sup>®</sup> 2 software is run from the File menu, select "New" to display a dialog and select the PAXDP. The screen will display icons that represent the various programming sections of the PAXDP. Double-click on an icon to configure the programming parameters pertaining to the selection. Tool Tip help is available for each of the program parameters. A PAX<sup>®</sup> serial plug-in card is required to program the meter using the software.

When communicating with Crimson<sup>®</sup> 2 software, the PAXDP must be set in default configuration type of:

Communications Type: MODBUS RTU

Baud Rate: 38400

Data Bit: 8

ParityBit: no

Meter Unit Address: 247

# OPTIONAL PLUG-IN OUTPUT CARDS

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

## Adding Option Cards

The PAX and MPAX series meters can be fitted with up to three optional plug-in cards. The details for each plug-in card can be reviewed in the specification section below. Only one card from each function type can be installed at one time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The plug-in cards can be installed initially or at a later date.

## COMMUNICATION CARDS (PAXCDC)

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. *Note: For Modbus communications use RS485 Communications Output Card and configure communication (E3PE) parameter for Modbus.*

- PAXCDC10 - RS485 Serial (Terminal Block)
- PAXCDC1C - RS485 Serial (Dual RJ11 Connector)
- PAXCDC20 - RS232 Serial (Terminal Block)
- PAXCDC2C - RS232 Serial (9 Pin D Connector)
- PAXCDC30 - DeviceNet
- PAXCDC50 - Profibus-DP

## SERIAL COMMUNICATIONS CARD

**Type:** RS485 or RS232

**Communication Type:** RLC Protocol (ASCII), Modbus RTU, and Modbus ASCII

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Baud:** 300 to 38,400

**Data:** 7/8 bits

**Parity:** no, odd or even

**Bus Address:** Selectable 0 to 99 (RLC Protocol), or 1 to 247 (Modbus Protocol), Max. 32 meters per line (RS485)

**Transmit Delay:** Selectable for 0 to 0.250 sec (+2 msec min)

## DEVICENET™ CARD

**Compatibility:** Group 2 Server Only, not UCMM capable

**Baud Rates:** 125 Kbaud, 250 Kbaud, and 500 Kbaud

**Bus Interface:** Phillips 82C250 or equivalent with MIS wiring protection per DeviceNet™ Volume I Section 10.2.2.

**Node Isolation:** Bus powered, isolated node

**Host Isolation:** 500 Vrms for 1 minute (50 V working) between DeviceNet™ and meter input common.

## PROFIBUS-DP CARD

**Fieldbus Type:** Profibus-DP as per EN 50170, implemented with Siemens SPC3 ASIC

**Conformance:** PNO Certified Profibus-DP Slave Device

**Baud Rates:** Automatic baud rate detection in the range 9.6 Kbaud to 12 Mbaud  
**Station Address:** 0 to 126, set by the master over the network. Address stored in non-volatile memory.

**Connection:** 9-pin Female D-Sub connector

**Network Isolation:** 500 Vrms for 1 minute (50 V working) between Profibus network and sensor and user input commons. Not isolated from all other commons.

## SETPOINT CARDS (PAXCDS)

The PAX and MPAX series has 4 available setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

- PAXCDS10 - Dual Relay, FORM-C, Normally open & closed
- PAXCDS20 - Quad Relay, FORM-A, Normally open only
- PAXCDS30 - Isolated quad sinking NPN open collector
- PAXCDS40 - Isolated quad sourcing PNP open collector

### DUAL RELAY CARD

**Type:** Two FORM-C relays

**Isolation To Sensor & User Input Commons:** 2000 Vrms for 1 min.

Working Voltage: 240 Vrms

**Contact Rating:**

One Relay Energized: 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC, inductive load

Total current with both relays energized not to exceed 5 amps

**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

### QUAD RELAY CARD

**Type:** Four FORM-A relays

**Isolation To Sensor & User Input Commons:** 2300 Vrms for 1 min.

Working Voltage: 250 Vrms

**Contact Rating:**

One Relay Energized: 3 amps @ 240 VAC or 30 VDC (resistive load), 1/10 HP @ 120 VAC, inductive load

Total current with all four relays energized not to exceed 4 amps

**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

### QUAD SINKING OPEN COLLECTOR CARD

**Type:** Four isolated sinking NPN transistors.

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Rating:** 100 mA max @  $V_{SAT} = 0.7 V$  max.  $V_{MAX} = 30 V$

### QUAD SOURCING OPEN COLLECTOR CARD

**Type:** Four isolated sourcing PNP transistors.

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Rating:** Internal supply: 24 VDC  $\pm$  10%, 30 mA max. total

External supply: 30 VDC max., 100 mA max. each output

### ALL FOUR SETPOINT CARDS

**Response Time:** See update rates step response specification; add 6 msec (typical) for relay card

## LINEAR DC OUTPUT (PAXCDL)

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on various display values. Reverse slope output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

### ANALOG OUTPUT CARD

**Types:** 0 to 20 mA, 4 to 20 mA or 0 to 10 VDC

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**Accuracy:** 0.17% of FS (18 to 28°C); 0.4% of FS (0 to 50°C)

**Resolution:** 1/3500

**Compliance:** 10 VDC: 10 K $\Omega$  load min., 20 mA: 500  $\Omega$  load max.

**Powered:** Self-powered

**Step Response:** See update rates step response specification

**Update time:** See ADC Conversion Rate and Update Time parameter

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPERS

The meter has three jumpers that must be checked and/or changed prior to applying power. The following Jumper Selection Figures show an enlargement of the jumper area.

To access the jumpers, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Input Jumpers

These jumpers are used to select the proper input types, Voltage (V) or Current (I). The input type selected in programming must match the jumper setting. See the Jumper Selection Figures for more details.

## User Input Logic Jumper

This jumper selects the logic state of all the user inputs. If the user inputs are not used, it is not necessary to check or move this jumper.

## PAXDP Jumper Selection

### JUMPER SELECTIONS

The  indicates factory setting.

INPUT A	INPUT B	USER INPUT
<input type="checkbox"/> VOLT/CURRENT	<input type="checkbox"/> VOLT/CURRENT	<input type="checkbox"/> SINK
<input type="checkbox"/> CURRENT (I)	<input type="checkbox"/> CURRENT (I)	<input type="checkbox"/> SOURCE (SRC)
<input type="checkbox"/> VOLTAGE (V)	<input type="checkbox"/> VOLTAGE (V)	

Note: In the figures above, the text shown in parenthesis is printed on the circuit board to help with proper jumper positioning.

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. With use of the lower input ranges or signal sources with high source impedance, the use of shielded cable may be necessary. This helps to guard against stray AC pick-up. Attach the shield to the input common of the meter.
3. To minimize potential noise problems, power the meter from the same power branch, or at least the same phase voltage as that of the signal source.
4. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and

heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

5. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
6. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

7. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
8. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC#SNUB0000.

## 3.1 POWER WIRING

### AC Power

Terminal 1: VAC  
Terminal 2: VAC

### DC Power

Terminal 1: +VDC  
Terminal 2: -VDC

Terminal 6: +ADC  
Terminal 8: -ADC

### Voltage/Current Signal (3 wire requiring excitation)

Terminal 6: +VOLT supply  
Terminal 7: -ADC (common)  
Terminal 8: +ADC (signal)

**CAUTION:** Sensor Input B common is NOT isolated from user input common. In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common; and the common of the isolated plug-in cards with respect to input common.

## 3.3 USER INPUT WIRING

Before connecting the wires, the User Input Logic Jumper should be verified for proper position. If not using User Inputs, then skip this section. Only the appropriate User Input terminal has to be wired.

### Sinking Logic

Terminal 9: } Connect external switching device between  
Terminal 10-11: } appropriate User Input terminal and User Comm.

In this logic, the user inputs of the meter are internally pulled up to +5 V with 22 K resistance. The input is active when it is pulled low (<0.9 V).

### Sourcing Logic

Terminal 9: -VDC thru external switching device  
Terminal 10-11: +VDC thru external switching device

In this logic, the user inputs of the meter are internally pulled down to 0 V with 22 K resistance. The input is active when a voltage greater than 3.6 VDC is applied.

## 3.4 SETPOINT (ALARMS) WIRING

### SETPOINT PLUG-IN CARD TERMINALS

#### DUAL RELAY PAXCDS10

#### QUAD RELAY PAXCDS20

#### QUAD SINKING PAXCDS30

#### QUAD SOURCING PAXCDS40

### SOURCING OUTPUT LOGIC CARD

### SINKING OUTPUT LOGIC CARD

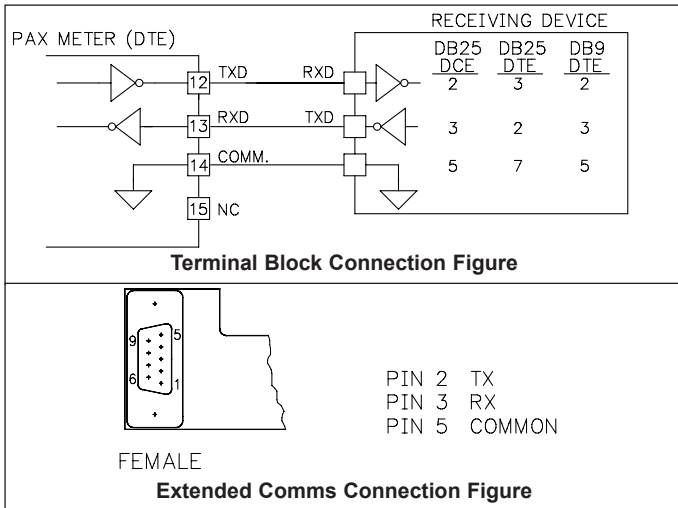

## 3.5 ANALOG OUTPUT WIRING

### ANALOG OPTION CARD FIELD TERMINALS

## 3.6 SERIAL COMMUNICATION WIRING

### RS232 Communications

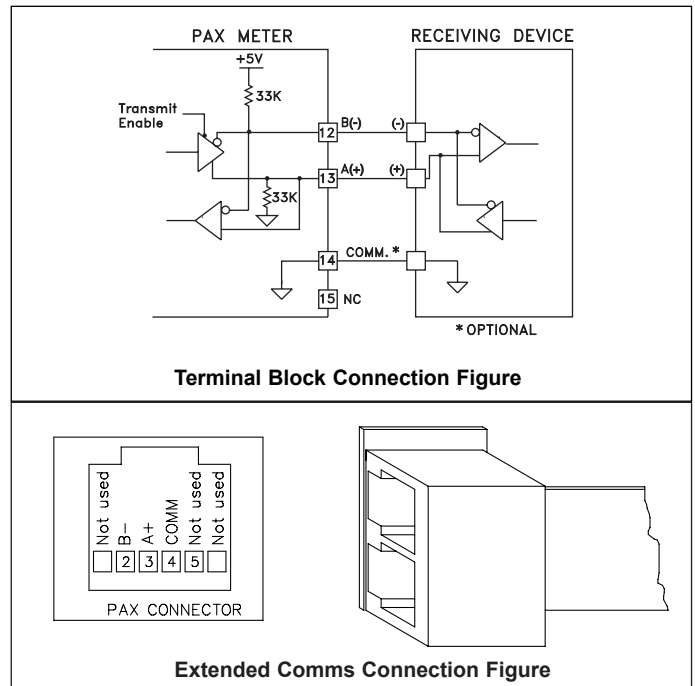

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The PAX emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

### RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the PAX is limited to 19.2k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

#### KEY DISPLAY MODE OPERATION

- DSP** Index display through main displays as programmed in **3-LBL**
- PAR** Access parameter list
- F1▲** Function key 1; hold for 3 seconds for Second Function 1\*\*
- F2▼** Function key 2; hold for 3 seconds for Second Function 2\*\*
- RST** Reset (Function key)\*\*

\* Display Readout Legends may be locked out in Factory Settings.

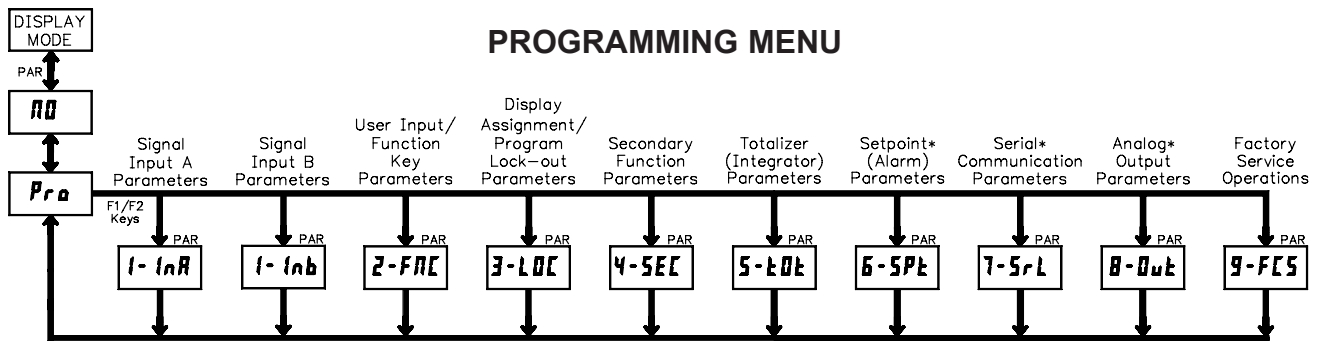

\*\* Factory setting for the F1, F2, and RST keys is NO mode.

#### PROGRAMMING MODE OPERATION

- Quit programming and return to display mode
- Store selected parameter and index to next parameter
- Increment selected parameter value
- Decrement selected parameter value
- Hold with **F1▲**, **F2▼** to scroll value by x1000

# 5.0 PROGRAMMING THE METER

## OVERVIEW

\* Only accessible with appropriate plug-in card.

### DISPLAY MODE

The meter normally operates in the Display Mode. In this mode, the meter displays can be viewed consecutively by pressing the **DSP** key. The annunciators to the left of the display indicate which display is currently shown; A, B, or C. Each of these displays are programmable and can be locked from view through programming. (See Module 3.)

### PROGRAMMING MODE

Two programming modes are available.

**Full Programming Mode** permits all parameters to be viewed and modified.

Upon entering this mode, the front panel keys change to Programming Mode operations. This mode should not be entered while a process is running, since the meter functions and User Input response may not operate properly while in Full Programming Mode.

**Quick Programming Mode** permits only certain parameters to be viewed and/or modified. When viewing parameters (SP1, etc), the front panel keys change to Programming Mode operations, and all meter functions continue to operate properly. Quick Programming Mode is configured in Module 3. The Display Intensity Level “*d-LEW*” parameter is available in the Quick Programming Mode only when the security code is non-zero. For a description, see Module 9—Factory Service Operations. Throughout this document, Programming Mode (without Quick in front) always refers to “Full” Programming Mode.

### PROGRAMMING TIPS

The Programming Menu is organized into ten modules (see above). These modules group together parameters that are related in function. It is recommended to begin programming with Module 1 and proceed through each module in sequence. Note that Modules 6 through 8 are only accessible when the appropriate plug-in option card is installed. If lost or confused while programming, press the **DSP** key to exit programming mode and start over. When programming is complete, it is recommended to record the meter settings on the Parameter Value Chart and lock-out parameter programming with a User Input or lock-out code. (See Modules 2 and 3 for lock-out details.)

### FACTORY SETTINGS

Factory Settings may be completely restored in Module 9. This is a good starting point if encountering programming problems. Throughout the module description sections which follow, the factory setting for each parameter is shown below the parameter display. In addition, all factory settings are listed on the Parameter Value Chart following the programming section.

### ALTERNATING SELECTION DISPLAY

In the module description sections which follow, the dual display with arrows appears for each programming parameter. This is used to illustrate the display alternating between the parameter (top display) and the parameter’s Factory Setting (bottom display). In most cases, selections or value ranges for the parameter will be listed on the right.

### STEP BY STEP PROGRAMMING INSTRUCTIONS:

#### PROGRAMMING MODE ENTRY (PAR KEY)

The Programming Mode is entered by pressing the **PAR** key. If this mode is not accessible, then meter programming is locked by either a security code or a hardware lock. (See Modules 2 and 3 for programming lock-out details.)

#### MODULE ENTRY (ARROW & PAR KEYS)

Upon entering the Programming Mode, the display alternates between *Pr0* and the present module (initially *Pr0*). The arrow keys (**F1▲** and **F2▼**) are used to select the desired module, which is then entered by pressing the **PAR** key.

#### PARAMETER (MODULE) MENU (PAR KEY)

Each module has a separate parameter menu. These menus are shown at the start of each module description section which follows. The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to *Pr0 Pr0*. From this point, programming may continue by selecting and entering additional modules. (See **MODULE ENTRY** above.)

#### PARAMETER SELECTION ENTRY (ARROW & PAR KEYS)

For each parameter, the display alternates between the parameter and the present selection or value for that parameter. For parameters which have a list of selections, the arrow keys (**F1▲** and **F2▼**) are used to sequence through the list until the desired selection is displayed. Pressing the **PAR** key stores and activates the displayed selection, and also advances the meter to the next parameter.

#### NUMERICAL VALUE ENTRY (ARROW, RST & PAR KEYS)

For parameters which require a numerical value entry, the arrow keys can be used to increment or decrement the display to the desired value. When an arrow key is pressed and held, the display automatically scrolls up or scrolls down. The longer the key is held, the faster the display scrolls.

The **RST** key can be used in combination with the arrow keys to enter large numerical values. When the **RST** key is pressed along with an arrow key, the display scrolls by 1000’s. Pressing the **PAR** key stores and activates the displayed value, and also advances the meter to the next parameter.

#### PROGRAMMING MODE EXIT (DSP KEY or PAR KEY at Pr0 Pr0)

The Programming Mode is exited by pressing the **DSP** key (from anywhere in the Programming Mode) or the **PAR** key (with *Pr0 Pr0* displayed). This will commit any stored parameter changes to memory and return the meter to the Display Mode. If a parameter was just changed, the **PAR** key should be pressed to store the change before pressing the **DSP** key. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS

## INPUT RANGE

SELECTION	RANGE	RESOLUTION
VOLT	10.000 V	
CURR	20.000 mA	
U-59r	±10.000 V - Square Root Extraction	
I-59r	±20.000 mA - Square Root Extraction	

Select the input range that corresponds to the external signal. Before applying signal configure input jumper to match setting desired.

## ADC CONVERSION RATE

5.3	7.5	16.7	19.8
20	30	105	

Select the ADC conversion rate (conversions per second). The selection does not affect the display update rate, however it does affect setpoint and analog output response time. The default factory setting of 19.8 is recommended for most applications. Selecting a fast update rate may cause the display to appear very unstable.

## DISPLAY DECIMAL POINT

0	00	000	0000	00000
---	----	-----	------	-------

Select the decimal point location for the Input display. (The TOT display decimal point is a separate parameter.) This selection also affects round, dSP1 and dSP2 parameters and setpoint values.

## DISPLAY ROUNDING\*

1	2	5	10
20	50	100	

Rounding selections other than one, cause the Input Display to 'round' to the nearest rounding increment selected (ie. rounding of '5' causes 121 to round to 120 and 124 to round to 125). Rounding starts at the least significant digit of the Input Display. Remaining parameter entries (scaling point values, setpoint values, etc.) are not automatically adjusted to this display rounding selection.

## FILTER SETTING

00 to 250 seconds

The input filter setting is a time constant expressed in tenths of a second. The filter settles to 99% of the final display value within approximately 3 time constants. This is an Adaptive Digital Filter which is designed to steady the Input Display reading. A value of '0' disables filtering.

## FILTER BAND\*

0 to 250 display units

The digital filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the digital filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the digital filter permanently engaged.

## SCALING POINTS

2 to 16

### Linear - Scaling Points (2)

For linear processes, only 2 scaling points are necessary. It is recommended that the 2 scaling points be at opposite ends of the input signal being applied. The points do not have to be the signal limits. Display scaling will be linear between and continue past the entered points up to the limits of the Input Signal Jumper position. Each scaling point has a coordinate-pair of Input Value (INP) and an associated desired Display Value (dSP).

### Square Root Extraction Input Range - Scaling Points (2)

The PAXDP can apply the square root function directly to the sensor signal by selecting the Square Root Extraction Input Range (U-59r or I-59r). When configured for Square Root Extraction, piecewise multipoint linearization is not required and only the first 2 scaling points are used. For proper operation the Display 1 (dSP1) value must be zero.

### Nonlinear - Scaling Points (Greater than 2)

For non-linear processes, up to 16 scaling points may be used to provide a piece-wise linear approximation. (The greater the number of scaling points used, the greater the conformity accuracy.) The Input Display will be linear between scaling points that are sequential in program order. Each scaling point has a coordinate-pair of Input Value (INP) and an associated desired Display Value (dSP). Data from tables or equations, or empirical data could be used to derive the required number of segments and data values for the coordinate pairs.

In the Crimson 2 (SFCRM2) software, several linearization equations are available. See the Accessories section for more information.

## SCALING STYLE

KEY key-in data  
APLY apply signal

If Input Values and corresponding Display Values are known, the Key-in (KEY) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (APLY) scaling style must be used.

\* The decimal point position is dependent on the selection made in the "Display Decimal Point" parameter.

### INPUT VALUE FOR SCALING POINT 1

For Key-in (**KEY**), enter the known first Input Value by using the arrow keys. (The Input Range selection sets up the decimal location for the Input Value.) For Apply (**APPLY**), apply the input signal to the meter, adjust the signal source externally until the desired Input Value appears. In either method, press the **PAR** key to enter the value being displayed. In the **APPLY** style, the **RST** key can be pressed to advance the display past the **INP 1** value or other input value without storing it. This is useful for application scaling of the second scaling point (i.e. when the tank is full), or some other point in multipoint applications.

### DISPLAY VALUE FOR SCALING POINT 1\*

Enter the first coordinating Display Value by using the arrow keys. This is the same for **KEY** and **APPLY** scaling styles. The decimal point follows the **DECP** selection. For Square Root Extraction Input Range, the Display 1 value must be zero.

### INPUT VALUE FOR SCALING POINT 2

For Key-in (**KEY**), enter the known second Input Value by using the arrow keys. For Apply (**APPLY**), adjust the signal source externally until the next desired Input Value appears. (Follow the same procedure if using more than 2 scaling points.)

\* The decimal point position is dependent on the selection made in the "Display Decimal Point" parameter.

### DISPLAY VALUE FOR SCALING POINT 2\*

Enter the second coordinating Display Value by using the arrow keys. This is the same for **KEY** and **APPLY** scaling styles. (Follow the same procedure if using more than 2 scaling points.)

### General Notes on Scaling

1. Input Values for scaling points should be confined to the limits of the Input Signal, i.e. 4-20 mA or 0-10 VDC.
2. The same Input Value should not correspond to more than one Display Value. (Example: 20 mA can not equal 0 and 10.) This is referred to as readout jumps (vertical scaled segments).
3. The same Display Value can correspond to more than one Input Value. (Example: 0 mA and 20 mA can equal 10.) This is referred to as readout dead zones (horizontal scaled segments).
4. The maximum scaled Display Value spread between range maximum and minimum is limited to 65,535. For example using +20 mA range the maximum +20 mA can be scaled to is 32,767 with 0 mA being 0 and Display Rounding of 1. (Decimal points are ignored.) The other half of 65,535 is for the lower half of the range 0 to -20 mA even if it is not used. With Display Rounding of 2, +20 mA can be scaled for 65,535 (32,767 x 2) but with even Input Display values shown.
5. For input levels beyond the first programmed Input Value, the meter extends the Display Value by calculating the slope from the first two coordinate pairs (**INP 1** / **dSP 1** & **INP 2** / **dSP 2**). If **INP 1** = 4 mA and **dSP 1** = 0, then 0 mA would be some negative Display Value. This could be prevented by making **INP 1** = 0 mA / **dSP 1** = 0, **INP 2** = 4 mA / **dSP 2** = 0, with **INP 3** = 20 mA / **dSP 3** = the desired high Display Value. The calculations stop at the limits of the Input Range Jumper position.
6. For input levels beyond the last programmed Input Value, the meter extends the Display Value by calculating the slope from the last two sequential coordinate pairs. If three coordinate pair scaling points were entered, then the Display Value calculation would be between **INP 2** / **dSP 2** & **INP 3** / **dSP 3**. The calculations stop at the limits of the Signal Input.

## 5.2 MODULE 2 - USER INPUT AND FRONT PANEL FUNCTION KEY PARAMETERS (2-FNC)

The two user inputs are individually programmable to perform specific meter control functions. While in the Display Mode or Program Mode, the function is executed the instant the user input transitions to the active state.

The front panel function keys are also individually programmable to perform specific meter control functions. While in the Display Mode or when viewing meter values in Quick Programming mode, the primary function is executed the instant the key is pressed. Holding the function key for three seconds executes a secondary function. It is possible to program a secondary function without a primary function.

In most cases, if more than one user input and/or function key is programmed for the same function, the maintained (level trigger) actions will be performed while at least one of those user inputs or function keys are activated. The momentary (edge trigger) actions will be performed every time any of those user inputs or function keys transition to the active state.

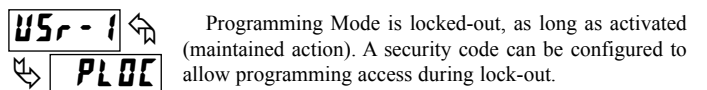

**Note:** In the following explanations, not all selections are available for both user inputs and front panel function keys. Alternating displays are shown with each selection. Those selections showing both displays are available for both. If a display is not shown, it is not available for that selection. **USr-1** will represent both user inputs. **F1** will represent all five function keys.

### NO FUNCTION

No function is performed if activated. This is the factory setting for all user inputs and function keys. No function can be selected without affecting basic start-up.

### PROGRAMMING MODE LOCK-OUT

Programming Mode is locked-out, as long as activated (maintained action). A security code can be configured to allow programming access during lock-out.

### INPUT A ZERO (TARE) DISPLAY

The Zero (Tare) Display provides a way to zero the Input A value at various input levels, causing future Display readings to be offset. This function is useful in weighing applications where the container or material on the scale should not be included in the next measurement value. When activated (momentary action), **rESEt** flashes and the Input A value is set to zero. At the same time, the Input A value (that was on the display before the Zero Display) is subtracted from the Input A Display Offset Value and is automatically stored as the new Display Offset Value (**BF5-A**). If another Zero (tare) Display is performed, the display will again change to zero and the Input A reading will shift accordingly.

### INPUT B ZERO (TARE) DISPLAY

The Zero (Tare) Display provides a way to zero the Input B value at various input levels, causing future Display readings to be offset. This function is useful in weighing applications where the container or material on the scale should not be included in the next measurement value. When activated (momentary action), **rESEt** flashes and the Input B value is set to zero. At the same time, the Input B value (that was on the display before the Zero Display) is subtracted from the Input B Display Offset Value and is automatically stored as the new Display Offset Value (**BF5-b**). If another Zero (tare) Display is performed, the display will again change to zero and the Input B reading will shift accordingly.

### INPUT A RELATIVE/ABSOLUTE DISPLAY

This function will switch the Input A Display between Relative and Absolute. The Relative is a net value that includes the Display Offset Value. The Input A Display will normally show the Relative unless switched by this function. The Absolute is a gross value (based on Module 1 **DSP** and **INP** entries) without the Display Offset Value. The Absolute display is selected as long as the user input is activated (maintained action) or at the transition of the function key (momentary action). When the user input is released, or the function key is pressed again, the input A display switches back to Relative display. **Ab5-A** (absolute) or **rEL-A** (relative) is momentarily displayed at transition to indicate which display is active.

### INPUT B RELATIVE/ABSOLUTE DISPLAY

This function will switch the Input B Display between Relative and Absolute. The Relative is a net value that includes the Display Offset Value. The Input B Display will normally show the Relative unless switched by this function. The Absolute is a gross value (based on Module 1 **DSP** and **INP** entries) without the Display Offset Value. The Absolute display is selected as long as the user input is activated (maintained action) or at the transition of the function key (momentary action). When the user input is released, or the function key is pressed again, the input B display switches back to Relative display. **Ab5-A** (absolute) or **rEL-A** (relative) is momentarily displayed at transition to indicate which display is active.

### HOLD DISPLAY

The shown display is held but all other meter functions continue as long as activated (maintained action).

### HOLD ALL FUNCTIONS

The meter disables processing the input, holds all display contents, and locks the state of all outputs as long as activated (maintained action). The serial port continues data transfer.

### SYNCHRONIZE METER READING

The meter suspends all functions as long as activated (maintained action). When the user input is released, the meter synchronizes the restart of the A/D's with other processes or timing events.

Input assignment for the totalizer is programmed in Module 5, Totalizer (Integrator) Parameters. Only the assigned input or calculation will be active for the following Totalizer User Functions.

### STORE BATCH READING IN TOTALIZER

The assigned value is one time added (batched) to the Totalizer at transition to activate (momentary action). The Totalizer retains a running sum of each batch operation until the Totalizer is reset. When this function is selected, the normal operation of the Totalizer is overridden.

### RESET TOTALIZER

When activated (momentary action), **rESEt** flashes and the Totalizer resets to zero. The Totalizer then continues to operate as it is configured. This selection functions independent of the selected display.

### RESET AND ENABLE TOTALIZER

When activated (momentary action), **rESEt** flashes and the Totalizer resets to zero. The Totalizer continues to operate while active (maintained action). When the user input is released, the Totalizer stops and holds its value. This selection functions independent of the selected display.

### ENABLE TOTALIZER

The Totalizer continues to operate as long as activated (maintained action). When the user input is released, the Totalizer stops and holds its value. This selection functions independent of the selected display.

### RESET MAXIMUM

When activated (momentary action), **rESEt** flashes and the Maximum resets to the present assigned value. The Maximum function then continues from that value. This selection functions independent of the selected display.

## RESET MINIMUM

When activated (momentary action), **rESEt** flashes and the Minimum reading is set to the present assigned value. The Minimum function then continues from that value. This selection functions independent of the selected display.

## CHANGE DISPLAY INTENSITY LEVEL

When activated (momentary action), the display intensity changes to the next intensity level (of 4). The four levels correspond to Display Intensity Level (**d-LEU**) settings of 0, 3, 8, and 15.

## RESET MAXIMUM AND MINIMUM

When activated (momentary action), **rESEt** flashes and the Maximum and Minimum readings are set to the present assigned values. The Maximum and Minimum function then continues from that value. This selection functions independent of the selected display.

Note: Following display functions are only available on User Input.

## SETPOINT SELECTIONS

The following selections are functional only with the Setpoint plug-in card installed. Refer to the Setpoint Card Bulletin shipped with the Setpoint plug-in card for an explanation of their operation.

Setpoint  
Card  
Only

- L 15t - Select main or alternate setpoints
- r-1 - Reset Setpoint 1 (Alarm 1)
- r-2 - Reset Setpoint 2 (Alarm 2)
- r-3 - Reset Setpoint 3 (Alarm 3)
- r-4 - Reset Setpoint 4 (Alarm 4)
- r-34 - Reset Setpoint 3 & 4 (Alarm 3 & 4)
- r-234 - Reset Setpoint 2, 3 & 4 (Alarm 2, 3 & 4)
- r-ALL - Reset Setpoint All (Alarm All)

## ADVANCE DISPLAY

When activated (momentary action), the display advances to the next display that is not locked out from the Display Mode.

## SELECT DISPLAY A

When activated (momentary action), the display advances to Display A, if enabled.

## SELECT DISPLAY B

When activated (momentary action), the display advances to Display B, if enabled.

## SELECT DISPLAY C

When activated (momentary action), the display advances to Display C, if enabled.

## SELECT DISPLAY \_

When activated (momentary action), the display advances to the Display \_ (no annunciator), if enabled.

## SELECT SETPOINT LIST

Two lists of values are available for **SP-1**, **SP-2**, **SP-3**, **SP-4**. The two lists are named **L5t-A** and **L5t-b**. If a user input is used to select the list then **L5t-A** is selected when the user input is not active and **L5t-b** is selected when the user input is active (maintained action). If a front panel key is used to select the list then the list will toggle for each key press (momentary action). The display will only indicate which list is active when the list is changed.

To program the values for **L5t-A** and **L5t-b**, first complete the programming of all the parameters. Exit programming and switch to the other list. Re-enter programming and enter the values for **SP-1**, **SP-2**, **SP-3**, **SP-4**. If any other parameters are changed then the other list values must be reprogrammed.

## PRINT REQUEST

The meter issues a block print through the serial port when activated, and the serial type is set to **rLE**. The data transmitted during a print request and the serial type is programmed in Module 7. If the user input is still active after the transmission is complete (about 100 msec), an additional transmission occurs. As long as the user input is held active, continuous transmissions occur.

# 5.3 MODULE 3 - DISPLAY ASSIGNMENT AND PROGRAM LOCK-OUT PARAMETERS (3-LOC)

Module 3 is the programming for the Display, Display assignments, Display lock-out and “Full” and “Quick” Program lock-out.

When in the main Display Mode, the available displays (A,B,C,\_) can be read consecutively by repeatedly pressing the **DSP** key. An annunciator indicates the display being shown (\_ = No annunciator). A meter display value can be programmed to one of the displays, to the quick programming mode or be locked from being visible. It is recommended that the meter display value be set to **LOC** when it is not being used in the application.

“Full” Programming Mode permits all parameters to be viewed and modified. This Programming Mode can be locked with a security code and/or user input. When locked and the PAR key is pressed, the meter enters a Quick Programming Mode. In this mode, the setpoint values can still be read and/or changed per the selections below. The display Intensity Level (**d-LEU**) parameter also appears whenever Quick Programming Mode is enabled and the security code greater than zero.

### SP-1 SP-2 SP-3 SP-4 SETPOINT ACCESS\*

The setpoint displays can be programmed for **LOC**, **rEd** or **EOL** (see the following table). Accessible only with the Setpoint plug-in card installed.

SELECTION	DESCRIPTION
<b>LOC</b>	Not visible in Quick Programming Mode Only
<b>rEd</b>	Visible in Quick Programming Mode Only
<b>EOL</b>	Visible and changeable in Quick Programming Mode Only

### DISPLAY ASSIGNMENT

There are six meter values that can be individually programmed for one of the main displays (A,B,C or \_), or programmed to be viewable in Quick Programming mode (**rEd**), or programmed to be locked out from display (**LOC**) (see the following table). If two or more values are assigned to the same display the last value assigned will be the one that is displayed.

<b>LOC</b>	Not visible in Display Mode or Quick Programming Mode
<b>rEd</b>	Visible in Quick Programming Mode only
<b>dSP- _</b>	Assign to Display _ (No annunciator)
<b>dSP-A</b>	Assign to Display A
<b>dSP-b</b>	Assign to Display B
<b>dSP-C</b>	Assign to Display C

### PROGRAM MODE SECURITY CODE\*

By entering any non-zero value, the prompt **CODE 0** will appear when trying to access the Program Mode. Access will only be allowed after entering a matching security code or universal code of **222**. With this lock-out, a user input would not have to be configured for Program Lock-out. However, this lock-out is overridden by an inactive user input configured for Program Lock-out.

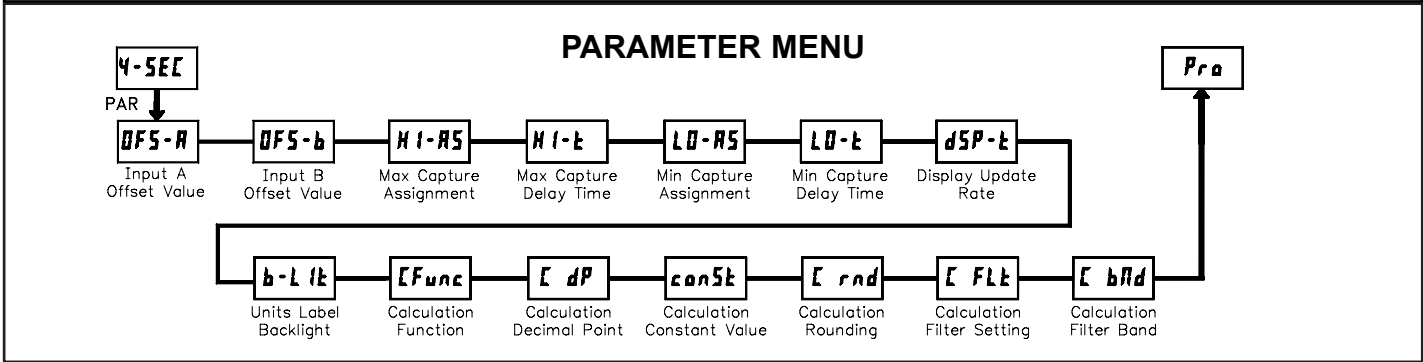

\* *Factory Setting can be used without affecting basic start-up.*

### PROGRAMMING MODE ACCESS

SECURITY CODE	USER INPUT CONFIGURED	USER INPUT STATE	WHEN PAR KEY IS PRESSED	“FULL” PROGRAMMING MODE ACCESS
0	not <b>PLOC</b>	_____	“Full” Programming	Immediate access.
>0	not <b>PLOC</b>	_____	Quick Programming w/Display Intensity	After Quick Programming with correct code # at <b>CODE</b> prompt.
>0	<b>PLOC</b>	Active	Quick Programming w/Display Intensity	After Quick Programming with correct code # at <b>CODE</b> prompt.
>0	<b>PLOC</b>	Not Active	“Full” Programming	Immediate access.
0	<b>PLOC</b>	Active	Quick Programming	No access
0	<b>PLOC</b>	Not Active	“Full” Programming	Immediate access.

Throughout this document, Programming Mode (without Quick in front) always refers to “Full” Programming (all meter parameters are accessible).

# 5.4 MODULE 4 - SECONDARY FUNCTION PARAMETERS (4-5EE)

## INPUT A OFFSET VALUE\*

**OFS-A** ↕  
 - 19999 to 19999  
 ↕ **0.000**

Unless a Zero Display was performed or an offset from Module 1 scaling is desired for Input A, this parameter can be skipped. The Display Offset Value is the difference between the Absolute (gross) Display value and the Relative (net) Display value for the same input level. The meter will automatically update this Display Offset Value after each Zero Display. The Display Offset Value can be directly keyed-in to intentionally add or remove display offset. See Relative / Absolute Display and Zero Display explanations in Module 2.

## INPUT B OFFSET VALUE\*

**OFS-b** ↕  
 - 19999 to 19999  
 ↕ **0.000**

Unless a Zero Display was performed or an offset from Module 1 scaling is desired for Input B, this parameter can be skipped. The Display Offset Value is the difference between the Absolute (gross) Display value and the Relative (net) Display value for the same input level. The meter will automatically update this Display Offset Value after each Zero Display. The Display Offset Value can be directly keyed-in to intentionally add or remove display offset. See Relative / Absolute Display and Zero Display explanations in Module 2.

## MAX CAPTURE ASSIGNMENT

**HI-AS** ↕  
 ↕ **A-rEL**    A-AbS    b-rEL    b-AbS    [RLC

Select the desired parameter that will be assigned to the Max Capture.

## MAX CAPTURE DELAY TIME

**HI-t** ↕  
 ↕ **10**    00 to 32750 sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

## MIN CAPTURE ASSIGNMENT

**LO-AS** ↕  
 ↕ **A-rEL**    A-AbS    b-rEL    b-AbS    [RLC

Select the desired parameter that will be assigned to the Min Capture.

## MIN CAPTURE DELAY TIME

**LO-t** ↕  
 ↕ **10**    00 to 32750 sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

## DISPLAY UPDATE RATE

**dSP-t** ↕  
 ↕ **1**    1    2    5    10    20 updates/sec.

This parameter determines the rate of display update.

## UNITS LABEL BACKLIGHT

**b-L t** ↕  
 ↕ **OFF**    ON    OFF

The Units Label Kit Accessory contains a sheet of custom unit overlays which can be installed in to the meter's bezel display assembly. The backlight for these custom units is activated by this parameter.

## CALCULATION FUNCTION

**[Func** ↕  
 ↕ **[A+B**    C-A-b    C+A-b    Ab/c    CAb/b    C(A/b-1)

This parameter determines the math calculation that will be performed on Input A and Input B and shown on the calculation display. The above formulas represent the available calculations; **A** = Input A relative value, **b** = Input B relative value, and **c** = Calculation Constant Value (**const**). For the average between A and B inputs, scale the display (Input A & Input B **dSP** x) values in half and then use **C A B**.

Note: **+** = add, **-** = subtract, **/** = division, **c(A/b-1)** is displayed in the PAX as **A/b-1** and the function performs with A divided b then 1 is subtracted and the result is multiply by c.

## CALCULATION DECIMAL POINT

**[ dP** ↕  
 ↕ **0.000**    0    00    000    0000    00000

This parameter determines the decimal point location for the Calculation Display. For the **[A+B**, **[A-b**, and **[A-b** calculation functions, Input A "Display Decimal Point", Input B "Display Decimal Point" and "Calculation Decimal Point" must all be in the same position.

\* The decimal point position is dependent on the selection made in the "Display Decimal Point" parameter.

### CALCULATION CONSTANT VALUE

The constant value is used in the Calculation Function formulas to provide offsetting or scaling capabilities. For the  $E-1A-b$ ,  $E-A-b$ , and  $E-1A-b$  calculation functions, the Constant decimal point matches that Calculation Decimal point position. For these functions, the "Constant Value" must be lowered to a value of 0 for no offset.

For the  $A/b/c$ ,  $cA/b$ , and  $c(A/b-1)$  calculation functions, there is no "Constant Value" decimal point shown. However, when Input A "Display Decimal Point", Input B "Display Decimal Point" and "Calculation Decimal Point" are in the same position, then the "Constant Value" decimal point will be assumed to be at the same location as the "Calculation Decimal Point". For the Calculation Display to have the same resolution as Inputs A & B, the "Constant Value" must be a value of 1 with trailing 0's for each assumed decimal point location. Example: With Input A, Input B and the Calculation decimal points entered as 0.00, then the "Constant Value" would be entered as 100 for no gain.

### CALCULATION ROUNDING\*

Rounding selections other than one, cause the Calculation Display to 'round' to the nearest rounding increment selected (ie. rounding of '0.005' causes 0.121 to round to 0.120 and 0.124 to round to 125). Rounding starts at the least significant digit of the Calculation Display. Remaining parameter entries (scaling point values, setpoint values, etc.) are not automatically adjusted to this display rounding selection. The displayed decimal point reflects that programmed in  $E-dP$ .

### CALCULATION FILTER SETTING

The calculation filter setting is a time constant expressed in tenths of a second. The filter settles to 99% of the final display value within approximately 3 time constants. This is an Adaptive Digital Filter which is designed to steady the Calculation Display reading. A value of '0' disables filtering.

### CALCULATION FILTER BAND\*

The digital filter will adapt to variations in the calculation filter. When the variation exceeds the calculation filter band value, the digital filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the digital filter permanently engaged.

\* The decimal point position is dependent on the selection made in the "Calculation Decimal Point" parameter.

## 5.5 MODULE 5 - TOTALIZER (INTEGRATOR) PARAMETERS (5-t0t)

The totalizer accumulates (integrates) the relative Input value using one of two modes. The first is using a time base. This can be used to provide an indication of total flow, usage or consumption over time. The second is through a user input or function key programmed for Batch (one time add on demand). This can be used for weighing applications where accumulation is based on a completed event. If the Totalizer is not needed, its display can be locked-out and this module can be skipped during programming.

### TOTALIZER TIME BASE

This is the time base used in Totalizer accumulations. If the Totalizer is being accumulated through a user input programmed for Batch, then this parameter does not apply.

### TOTALIZER ASSIGNMENT

This parameter determines which value is to be totalized.

### TOTALIZER SCALE FACTOR\*

For most applications, the Totalizer reflects the same decimal point location and engineering units as the assigned Input Display. In these cases, the Totalizer Scale Factor is 1.000. The Totalizer Scale Factor can be used to scale the Totalizer to a different value than the Input Display. Common possibilities are:

1. Changing decimal point location (example tenths to whole)
2. Average over a controlled time frame.

Details on calculating the scale factor are shown later.

If the Totalizer is being accumulated through a user input programmed for Batch, then this parameter does not apply.

### TOTALIZER DECIMAL POINT\*

For most applications, this should match the decimal point position of the meter value selected in the totalizer assignment. If a different location is desired, refer to Totalizer Scale Factor.

### TOTALIZER LOW CUT VALUE\*

- 19999 to 99999

A low cut value disables Totalizer when the Input Display value falls below the value programmed.

### TOTALIZER POWER UP RESET

NO Do not reset totalizer  
YES Reset totalizer

The Totalizer can be reset to zero on each meter power-up by setting this parameter to reset.

\* The decimal point position is dependent on the selection made in the "Totalizer Decimal Point" parameter.

### TOTALIZER HIGH ORDER DISPLAY

When the total exceeds 5 digits, the front panel annunciator flashes (if assigned to A, B, or C display). In this case, the meter continues to totalize up to a 9 digit value. The high order 4 digits and the low order 5 digits of the total are displayed alternately. The letter "h" denotes the high order display.

### TOTALIZER BATCHING

The Totalizer Time Base and scale factor are overridden when a user input or function key is programmed for store batch (bA/E). In this mode, when the user input or function key is activated, the Input Display reading is one time added to the Totalizer (batch). The Totalizer retains a running sum of each batch operation until the Totalizer is reset. This is useful in weighing operations, when the value to be added is not based on time but after a filling event.

### TOTALIZER USING TIME BASE

Totalizer accumulates as defined by:

$$\frac{\text{Input Display} \times \text{Totalizer Scale Factor}}{\text{Totalizer Time Base}}$$

Where:

- Input Display - the present input reading
- Totalizer Scale Factor - 0.001 to 65.000
- Totalizer Time Base - (the division factor of tBASE)

Example: The input reading is at a constant rate of 10.0 gallons per minute. The Totalizer is used to determine how many gallons in tenths has flowed. Because the Input Display and Totalizer are both in tenths of gallons, the Totalizer Scale Factor is 1. With gallons per minute, the Totalizer Time Base is minutes (60). By placing these values in the equation, the Totalizer will accumulate every second as follows:

$$\frac{10.0 \times 1.000}{60} = 0.1667 \text{ gallons accumulate each second}$$

This results in:

- 10.0 gallons accumulate each minute
- 600.0 gallons accumulate each hour

### TOTALIZER SCALE FACTOR CALCULATION EXAMPLES

1. When changing the Totalizer Decimal Point (dEEPt) location from the Input Display Decimal Point (dEEPt), the required Totalizer Scale Factor is multiplied by a power of ten.

Example: Input (dEEPt) = 0.0

Totalizer dEEPt	Scale Factor
0.00	10
0.0	1
0	.1
x10	.01
x100	.001

Input (dEEPt) = 0.00

Totalizer dEEPt	Scale Factor
0.000	10
0.00	1
0.0	.1
0	.01
x10	.001

(x = Totalizer display is round by tens or hundreds)

2. To obtain an average reading within a controlled time frame, the selected Totalizer Time Base is divided by the given time period expressed in the same timing units.

Example: Average flow rate per hour in a 4 hour period, the scale factor would be 0.250. To achieve a controlled time frame, connect an external timer to a user input programmed for rA/E. The timer will control the start (reset) and the stopping (hold) of the totalizer.

Modules 6, 7, and 8 are accessible only with the appropriate plug-in cards installed. A quick overview of Module 6 is listed below. Refer to the corresponding plug-in card bulletin for a more detailed explanation of each parameter selection.

## 5.6 MODULE 6 - SETPOINT (ALARM) PARAMETERS (6-SPt)

Repeat programming for each setpoint.

### SELECT SETPOINT

Select a setpoint (alarm output) to open the remaining module menu. (The “n” in the following parameters will reflect the chosen setpoint number.) After the chosen setpoint is programmed, the display will default to **SPSEL NO**. Select the next setpoint to be programmed and continue the sequence for each setpoint. Pressing **PAR** at **SPSEL NO** will exit Module 6.

The parameters listed below are different from those listed in the Setpoint Card Literature. Use the separate Setpoint Option Card Literature for all other setpoint parameters.

### SETPOINT ASSIGNMENT

Selects the meter value that is used to trigger the Setpoint Alarm. The **-rEL** settings cause the setpoint to trigger off of the relative (net) input value. The relative input value is the absolute input value that includes the Display Offset Value. The **-RbS** settings cause the setpoint to trigger off of the absolute (gross) input value. The absolute input value is based on Module 1 **dSP** and **INP** entries.

### SETPOINT ACTION

Enter the action for the selected setpoint (alarm output). See the Setpoint Alarm Figures in the Setpoint Card Bulletin for a visual detail of each action. The Inside Band action is shown here as it only applies to the PAXDP.

- NO** = No Setpoint Action
- Rb-HI** = Absolute high, with balanced hysteresis
- Rb-LO** = Absolute low, with balanced hysteresis
- RU-HI** = Absolute high, with unbalanced hysteresis
- RU-LO** = Absolute low, with unbalanced hysteresis
- dE-HI** = Deviation high, with unbalanced hysteresis \*
- dE-LO** = Deviation low, with unbalanced hysteresis \*
- bAND** = Outside band, with unbalanced hysteresis \*
- bAd In** = Inside band, with unbalanced hysteresis \*
- taktLo** = Lower Totalizer absolute high, unbalance hysteresis \*\*
- taktHi** = Upper Totalizer absolute high, unbalance hysteresis \*\*

\* Setpoint 2 or Setpoint 4 deviation and band action setpoints are relative to the value of setpoint 1 or Setpoint 3 respectively. It is not possible to configure setpoint 1 or 3 as deviation or band actions. It is possible to use setpoint 1 or 3 for an absolute action, while its value is being used for deviation or band.

\*\* These modes only appear, and are the only modes that appear, when the setpoint assignment **RSn-n** is set to **takt**. The lower Totalizer action, **taktLo**, allows setpoints to function off of the lower 5 digits of the Totalizer. The upper Totalizer action, **taktHi**, allows setpoints to function off of the upper 4 digits of the Totalizer. To obtain absolute low alarms for the Totalizer, program the **taktLo** or **taktHi** output logic as reverse.

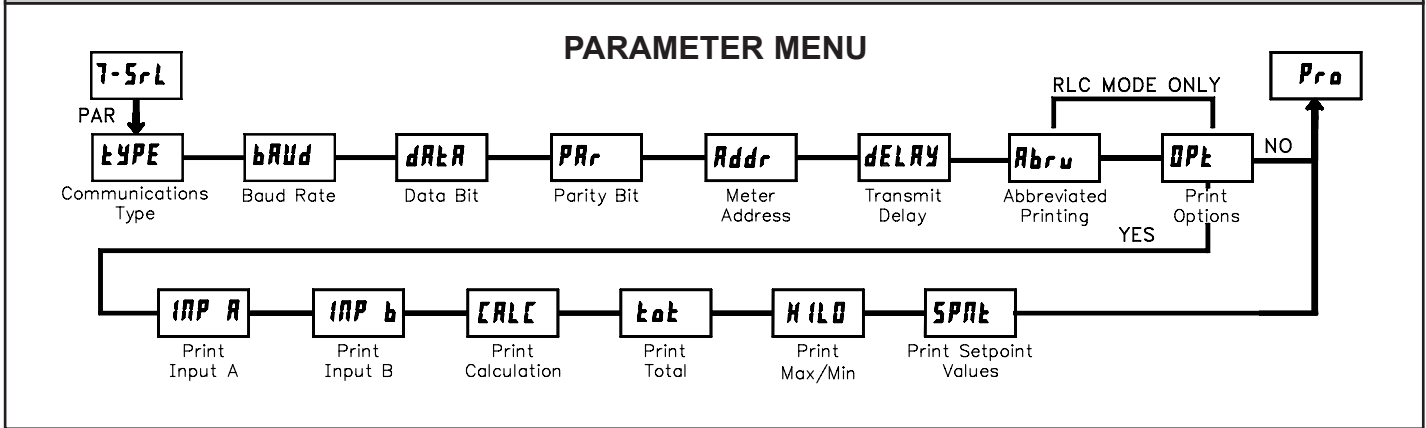

### Setpoint Alarm Figure

With reverse output logic **rEu**, the below alarm state is opposite.

<b>SP-n - SETPOINT VALUE</b>	- 19999 to 99999
<b>HYS-n - SETPOINT HYSTERESIS</b>	1 to 65000
<b>tOn-n - ON TIME DELAY</b>	00 to 32750 sec
<b>tOff-n - OFF TIME DELAY</b>	00 to 32750 sec
<b>out-n - OUTPUT LOGIC</b>	nor    rEu
<b>rSt-n - RESET ACTION</b>	RUtLo    LRLC2 LRLC1
<b>Stb-n - STANDBY OPERATION</b>	NO    YES
<b>LIt-n - SETPOINT ANNUNCIATORS</b>	OFF    rEu nor    FLASH

# 5.7 MODULE 7 - SERIAL COMMUNICATIONS PARAMETERS (7-5rL)

Module 7 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the PAXDP with those of the host computer or other serial device, such as a terminal or printer. This programming module can only be accessed if an RS232 or RS485 Serial Communications card is installed.

This section also includes an explanation of the commands and formatting required for communicating with the PAXDP. In order to establish serial communications, the user must have host software that can send and receive ASCII characters or utilizes Modbus protocol. For serial hardware and wiring details, refer to section 3.6 Serial Communication Wiring.

*This section replaces the bulletin shipped with the RS232 and RS485 serial communications plug-in cards. Discard the separate bulletin when using those serial plug-in cards with the PAXDP. Also, this section does NOT apply to the DeviceNet, or Profibus-DP communication cards. For details on the operation of the Fieldbus cards, refer to the bulletin shipped with each card.*

## COMMUNICATIONS TYPE

- rLc - RLC Protocol (ASCII)
- MoD† - Modbus RTU †
- MoD - Modbus ASCII

Select the desired communications protocol. Modbus is preferred as it provides access to all meter values and parameters. Since the Modbus protocol is included within the PAXDP, the PAX Modbus option card, PAXCDC4, should not be used. The PAXCDC1 (RS485), or PAXCDC2 (RS232) card should be used instead.

## BAUD RATE

300	600	1200	2400
4800	9600	19200	38400

Set the baud rate to match the other serial communications equipment on the serial link. Normally, the baud rate is set to the highest value that all the serial equipment are capable of transmitting and receiving.

## DATA BIT

7      8

Select either 7 or 8 bit data word lengths. Set the word length to match the other serial communications equipment on the serial link.

† The Communication Type factory settings must be changed from the Modbus RTU for Crimson 2 communications.

## PARITY BIT

NO      EVEN      ODD

Set the parity bit to match that of the other serial communications equipment on the serial link. The meter ignores the parity when receiving data and sets the parity bit for outgoing data. If no parity is selected with 7 bit word length, an additional stop bit is used to force the frame size to 10 bits.

## METER UNIT ADDRESS

00 to 99 (RLC Protocol)  
1 to 247 (Modbus)

Enter the serial meter (node) address. The address range is dependent on the TYPE parameter. With a single unit, configured for RLC protocol (TYPE = rLc), an address is not needed and a value of zero can be used. With multiple units (RS485 applications), a unique 2 digit address number must be assigned to each meter.

## TRANSMIT DELAY

0.010 to 0.250

Following a transmit value (\*\* terminator) or Modbus command, the PAXDP will wait this minimum amount of time in seconds before issuing a serial response.

## CRIMSON SOFTWARE

When communicating with Crimson 2 software, the PAXDP must be set in default configuration type of:

- Communications Type: MODBUS RTU †
- Baud Rate: 38400
- Data Bit: 8
- ParityBit: no
- Meter Unit Address: 247

Parameters below only appear when communications type (*TYPE*) parameter is set to *RLC*.

### ABBREVIATED PRINTING

YES NO

Select **NO** for full print or Command T transmissions (meter address, parameter data and mnemonics) or **YES** for abbreviated print transmissions (parameter data only). This will affect all the parameters selected in the print options. (If the meter address is 00, it will not be sent during a full transmission.)

### PRINT OPTIONS

**YES** - Enters the sub-menu to select the meter parameters to appear during a print request. For each parameter in the sub-menu, select **YES** for that parameter information to be sent during a print request or **NO** for that parameter information not to be sent. A print request is sometimes referred to as a block print because more than one parameter information (meter address, parameter data and mnemonics) can be sent to a printer or computer as a block.

PARAMETER	DESCRIPTION
<i>INP a</i>	Input A Value
<i>INP b</i>	Input B Value
<i>CLC</i>	Calculation
<i>tot</i>	Total Value
<i>HLB</i>	Max. & Min.
<i>SPNt</i>	Setpoint Values

## SERIAL MODBUS COMMUNICATIONS

Modbus Communications requires that the Serial Communication Type Parameter (*TYPE*) be set to *"RTU"* or *"ASCII"*.

### SUPPORTED FUNCTION CODES

#### FC03: Read Holding Registers

- Up to 32 registers can be requested at one time.
- HEX <8000> is returned for non-used registers.

#### FC04: Read Input Registers

- Up to 32 registers can be requested at one time.
- Block starting point can not exceed register boundaries.
- HEX <8000> is returned in registers beyond the boundaries.
- Input registers are a mirror of Holding registers.

#### FC06: Preset Single Register

- HEX <8001> is echoed back when attempting to write to a read only register.
- If the write value exceeds the register limit (see Register Table), then that register value changes to its high or low limit. It is also returned in the response.

#### FC16: Preset Multiple Registers

- No response is given with an attempt to write to more than 32 registers at a time.
- Block starting point cannot exceed the read and write boundaries (40001-41280).
- If a multiple write includes read only registers, then only the write registers will change.
- If the write value exceeds the register limit (see Register Table), then that register value changes to its high or low limit.

#### FC08: Diagnostics

The following is sent upon FC08 request:

Module Address, 08 (FC code), 04 (byte count), "Total Comms" 2 byte count, "Total Good Comms" 2 byte count, checksum of the string

"Total Comms" is the total number of messages received that were addressed to the PAXDP. "Total Good Comms" is the total messages received by the PAXDP with good address, parity and checksum. Both counters are reset to 0 upon response to FC08 and at power-up.

#### FC17: Report Slave ID

The following is sent upon FC17 request:

RLC-PAXDP ab<0100h><20h><20h><10h>

a = "0"(none), "2", "4" SP card installed

b = "0"(none) or "1" Linear Card installed),

### SUPPORTED EXCEPTION CODES

#### 01: Illegal Function

Issued whenever the requested function is not implemented in the meter.

#### 02: Illegal Data Address

Issued whenever an attempt is made to access a single register that does not exist (outside the implemented space) or to access a block of registers that falls completely outside the implemented space.

#### 03: Illegal Data Value

Issued when an attempt is made to read or write more registers than the meter can handle in one request.

#### 07: Negative Acknowledge

Issued when a write to a register is attempted with an invalid string length.

## PAXDP MODBUS REGISTER TABLE

The below limits are shown as Integers or HEX <> values. Read and write functions can be performed in either Integers or Hex as long as the conversion was done correctly. Negative numbers are represented by two's complement.

Note 1: The PAXDP should not be powered down while parameters are being changed. Doing so may corrupt the non-volatile memory resulting in checksum errors.

<sup>2</sup> An attempt to exceed a limit will set the register to its high or low limit value.

## SERIAL RLC PROTOCOL COMMUNICATIONS

RLC Communications requires the Serial Communications Type Parameter (**TYPE**) be set to **RL**.

### SENDING SERIAL COMMANDS AND DATA

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character \* or \$.

#### Command Chart

Command	Description	Notes
N	Node (Meter) Address Specifier	Address a specific meter. Must be followed by a one or two digit node address. Not required when address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by register ID character.
V	Value change (write)	Write to register of the meter. Must be followed by register ID character and numeric data.
R	Reset	Reset a register or output. Must be followed by register ID character
P	Block Print Request (read)	Initiates a block print output. Registers are defined in programming.

#### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to invalid commands. The following procedure details construction of a command string:

- The first characters consist of the Node Address Specifier (N) followed by a 1 or 2 character address number. The address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
- After the address specifier, the next character is the command character.
- The next character is the Register ID. This identifies the register that the command affects. The P command does not require a Register ID character. It prints according to the selections made in print options.
- If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See Timing Diagram figure for differences between terminating characters.

## Register Identification Chart

ID	VALUE DESCRIPTION	REGISTER NAME <sup>1</sup>	COMMAND SUPPORTED <sup>2</sup>
A	Input A Relative Value	INA	T, R (reset command zeros or tares input)
B	Input B Relative Value	INB	T, R (reset command zeros or tares input)
C	Calculation Value	CLC	T
D	Total	TOT	T, R (reset command zeros Total)
E	Min	MIN	T, R (reset command loads current reading)
F	Max	MAX	T, R (reset command loads current reading)
G	Input A Absolute (Gross) Value	ABA	T
H	Input B Absolute (Gross) Value	ABB	T
I	Input A Offset	OFA	T, V
J	Input B Offset	OFB	T, V
M	Setpoint 1	SP1	T, V, R (reset command resets setpoint output)
O	Setpoint 2	SP2	T, V, R (reset command resets setpoint output)
Q	Setpoint 3	SP3	T, V, R (reset command resets setpoint output)
S	Setpoint 4	SP4	T, V, R (reset command resets setpoint output)
U	Auto/Manual Register	MMR	T, V
W	Analog Output Register	AOR	T, V
X	Setpoint Register	SOR	T, V

1. Register Names are also used as Register Mnemonics during full transmission.
2. The registers associated with the P command are set up in Print Options (Module 7). Unless otherwise specified, the Transmit Details apply to both T and V Commands.

### Command String Examples:

1. Address = 17, Write 350 to Setpoint 1  
String: N17VM350\*
2. Address = 5, Read Input A value  
String: N5TA\*
3. Address = 0, Reset Setpoint 4 output  
String: RS\*

### Transmitting Data To the Meter

Numeric data sent to the meter must be limited to Transmit Details listed in the Register Identification Chart. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (ie. The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

*Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.*

### Transmitting Data From the Meter

Data is transmitted from the meter in response to either a transmit command (T), a print block command (P) or User Function print request. The response from the meter is either a full field transmission or an abbreviated transmission. See Abbreviated Printing (**Abr u**) parameter.

## Full Transmission

Byte	Description
1, 2	2 byte Node (Meter) Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte numeric data field: 10 bytes for number, one byte for sign, one byte for decimal point
19	<CR> (Carriage return)
20	<LF> (Line feed)
21	<SP> (Space)*
22	<CR> (Carriage return)*
23	<LF> (Line feed)*

\* These characters only appear in the last line of a block print.

The first two characters transmitted (bytes 1 and 2) are the unit address. If the address assigned is 00, two spaces are substituted. A space (byte 3) follows the unit address field. The next three characters (bytes 4 to 6) are the register mnemonic. The numeric data is transmitted next.

The numeric field (bytes 7 to 18) is 12 characters long. When the requested value exceeds eight digits for count values or five digits for rate values. Byte 8 is always a space. The remaining ten positions of this field (bytes 9 to 18) consist of a minus sign (for negative values), a floating decimal point (if applicable), and eight positions for the requested value. The data within bytes 9 to 18 is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with <CR> (byte 19), and <LF> (byte 20). When a block print is finished, an extra <SP> (byte 21), <CR> (byte 22), and <LF> (byte 23) are used to provide separation between the transmissions.

### Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 10 bytes for number, one byte for sign, one byte for decimal point
13	<CR> (Carriage return)
14	<LF> (Line feed)
15	<SP> (Space)*
16	<CR> (Carriage return)*
17	<LF> (Line feed)*

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the address and register mnemonics, leaving only the numeric part of the response.

### Meter Response Examples:

1. Address = 17, full field response, Input A = 875  
17 INA 875 <CR><LF>
2. Address = 0, full field response, Setpoint 2 = -250.5  
SP2 -250.5<CR><LF>
3. Address = 0, abbreviated response, Setpoint 2 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

### Auto/Manual Mode Register (MMR) ID: U

This register sets the controlling mode for the outputs. In Auto Mode (0) the meter controls the setpoint and analog output. In Manual Mode (1) the outputs are defined by the registers SOR and AOR. When transferring from auto mode to manual mode, the meter holds the last output value (until the register is changed by a write). Each output may be independently changed to auto or manual. In a write command string (VU), any character besides 0 or 1 in a field will not change the corresponding output mode.

**Example:** VU00011 places SP4 and Analog in manual.

### Analog Output Register (AOR) ID: W

This register stores the present signal value of the analog output. The range of values of this register is 0 to 4095, which corresponds to the analog output range per the following chart:

Register Value	Output Signal*		
	0-20 mA	4-20 mA	0-10V
0	0.000	4.000	0.000
1	0.005	4.004	0.0025
2047	10.000	12.000	5.000
4094	19.995	19.996	9.9975
4095	20.000	20.000	10.000

*\*Due to the absolute accuracy rating and resolution of the output card, the actual output signal may differ 0.15% FS from the table values. The output signal corresponds to the range selected (0-20 mA, 4-20 mA or 0-10 V).*

Writing to this register (VW) while the analog output is in the Manual Mode causes the output signal level to update immediately to the value sent. While in the Automatic Mode, this register may be written to, but it has no effect until the analog output is placed in the manual mode. When in the Automatic Mode, the meter controls the analog output signal level. Reading from this register (TW) will show the present value of the analog output signal.

**Example:** VW2047 will result in an output of 10.000 mA, 12.000 mA or 5.000V depending on the range selected.

### Setpoint Output Register (SOR) ID: X

This register stores the states of the setpoint outputs. Reading from this register (TX) will show the present state of all the setpoint outputs. A "0" in the setpoint location means the output is off and a "1" means the output is on.

In Automatic Mode, the meter controls the setpoint output state. In Manual Mode, writing to this register (VX) will change the output state. Sending any character besides 0 or 1 in a field or if the corresponding output was not first in manual mode, the corresponding output value will not change. (It is not necessary to send least significant 0s.)

**Example:** VX10 will result in output 1 on and output 2 off.

## COMMAND RESPONSE TIME

The meter can only receive data or transmit data at any one time (half-duplex operation). When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval t1, the computer program prints or writes the string to the com port, thus initiating a transmission. During t1, the command characters are under transmission and at the end of this period, the command terminating character (\*) is received by the meter. The time duration of t1 is dependent on the number of characters and baud rate of the channel.

$$t1 = (10 * \# \text{ of characters}) / \text{baud rate}$$

At the start of time interval t2, the meter starts the interpretation of the command and when complete, performs the command function. This time interval t2 varies from 2 msec to 15 msec. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval t2 is controlled by the use of the command terminating character and the Serial Transmit Delay parameter (**dELAY**). The standard command line terminating character is '\*'. This terminating character results in a response time window of the Serial Transmit Delay time (**dELAY**) plus 15msec. maximum. The **dELAY** parameter should be programmed to a value that allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time window (t2) of 2 msec minimum and 15 msec maximum. The response time of this terminating character requires that sending drivers release within 2 msec after the terminating character is received.

At the beginning of time interval t3, the meter responds with the first character of the reply. As with t1, the time duration of t3 is dependent on the number of characters and baud rate of the channel.

$$t3 = (10 * \# \text{ of characters}) / \text{baud rate.}$$

At the end of t3, the meter is ready to receive the next command. The maximum serial throughput of the meter is limited to the sum of the times t1, t2 and t3.

## Timing Diagrams

### NO REPLY FROM METER

### RESPONSE FROM METER

## COMMUNICATION FORMAT

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character.

The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

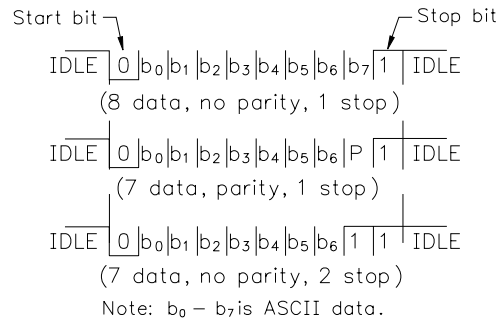

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start bit and Data bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

Character Frame Figure

### Parity bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The PAX meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the PAXDP.

## 5.8 MODULE 8 - ANALOG OUTPUT PARAMETERS (B-OUT)

Module 8 is the programming for the analog output parameter. To have an analog output signal, an analog output plug-in card needs to be installed (See Ordering Information). This section replaces the bulletin that comes with the analog plug-in card. Please discard the separate literature when using the plug-in card with the PAXDP.

### ANALOG TYPE

SELECTION	RANGE
0-20	0 to 20 mA
4-20	4 to 20 mA
0-10	0 to 10 V

Enter the analog output type. For 0-20 mA or 4-20 mA use terminals 18 and 19. For 0-10 V use terminals 16 and 17. Only one range can be used at a time.

### ANALOG ASSIGNMENT

NONE R-rEL R-Rb5 b-rEL  
b-Rb5 CRLC tot HI LO

Enter the source for the analog output to retransmit:  
rEL = Relative (net) Input Value. The Relative Input Value is the Absolute Input Value that includes the Display Offset Value.

Rb5 = Absolute (gross) Input Value. The Absolute Input Value is based on Module 1 dSP and INP entries.

CRLC = Calculation Value

tot = Totalizer Value

LO = Minimum Display Value

HI = Maximum Display Value

### ANALOG LOW SCALE VALUE

- 99999 to 99999

Enter the Display Value that corresponds to 0 mA (0-20 mA), 4 mA (4-20 mA) or 0 VDC (0-10 VDC).

### ANALOG HIGH SCALE VALUE

- 99999 to 99999

Enter the Display Value that corresponds to 20 mA (0-20 mA), 20 mA (4-20 mA) or 10 VDC (0-10 VDC).

### ANALOG UPDATE TIME

0.0 to 10.0

Enter the analog output update rate in seconds. A value of 0.0 allows the meter to update the analog output at the ADC Conversion Rate.

# 5.9 MODULE 9 - FACTORY SERVICE OPERATIONS (9-FCS)

## DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (0-15) by using the arrow keys. The display will actively dim or brighten as the levels are changed. This parameter also appears in Quick Programming Mode when enabled.

## RESTORE FACTORY DEFAULTS

Use the arrow keys to display **CODE 66** and press **PAR**. The meter will display **rESEt** and then return to **CODE 50**. Press **DSP** key to return to Display Mode. This will overwrite all user settings with the factory settings.

## CALIBRATION

The meter has been fully calibrated at the factory. Scaling to convert the input signal to a desired display value is performed in Module 1. If the meter appears to be indicating incorrectly or inaccurately, refer to Troubleshooting before attempting to calibrate the meter.

When recalibration is required (generally every 2 years), it should only be performed by qualified technicians using appropriate equipment. Calibration does not change any user programmed parameters. However, it may affect the accuracy of the input signal values previously stored using the Apply (**APLY**) Scaling Style.

Calibration may be aborted by disconnecting power to the meter before exiting Module 9. In this case, the existing calibration settings remain in effect.

## INPUT CALIBRATION

**WARNING:** Calibration of this meter requires a signal source with an accuracy of 0.01% or better and an external meter with an accuracy of 0.005% or better.

Before starting, verify that the Input Ranger Jumper is set for the range to be calibrated. Also verify that the precision signal source is connected and ready. Allow a 30 minute warm-up period before calibrating the meter. **##** and **PAR** can be chosen to exit the calibration mode without any changes taking place. Then perform the following procedure:

- Use the arrow keys to display (**CODE 48**) and press **PAR**.
- Choose the input channel/range to be calibrated by using the arrow keys and press **PAR**. (**##** and **PAR** can be chosen to exit the calibration mode without any changes taking place.)
- When the zero range limit appears on the display, apply the appropriate:
  - Voltage range: dead short applied
  - Current range: open circuit
- Press **PAR** and the top range limit will appear on the display after approximately 1 second.
- With the top range limit on the display, apply the appropriate:
  - Voltage range: 10 VDC
  - Current range: 20 mADC
- Press **PAR** and **ERL**. **##** will appear on the display after approximately 1 second.
- When **##** appears, press **PAR** twice.
- If the meter is not field scaled, then the input display should match the value of the input signal.
- Repeat the above procedure for each input range to be calibrated.

## ANALOG OUTPUT CARD CALIBRATION

Before starting, verify that the precision voltmeter (voltage output) or current meter (current output) is connected and ready. Perform the following procedure:

- Use the arrow keys to display **CODE 48** and press **PAR**.
- Use the arrow keys to choose **OUT** and press **PAR**.
- Using the chart below, step through the five selections to be calibrated. At each prompt, use the PAX arrow keys to adjust the external meter display to match the selection being calibrated. When the external reading matches, or if this range is not being calibrated, press **PAR**.

SELECTION	EXTERNAL METER	ACTION
00.A	0.00	Adjust if necessary, press <b>PAR</b>
40.A	4.00	Adjust if necessary, press <b>PAR</b>
200.A	20.00	Adjust if necessary, press <b>PAR</b>
00.u	0.00	Adjust if necessary, press <b>PAR</b>
100.u	10.00	Adjust if necessary, press <b>PAR</b>

- When **##** appears remove the external meters and press **PAR** twice.

# PAXDP PROGRAMMING QUICK OVERVIEW

# MODEL PAXLSG - PAX LITE STRAIN GAGE METER / MILLIVOLT METER

- 3 1/2-DIGIT, 0.56" (14.2 mm) HIGH LED READOUT
- HIGH SENSITIVITY, 10 mV FULL SCALE
- WIDE RANGE GAIN AND OFFSET ADJUSTMENTS
- BUILT-IN EXCITATION 5 OR 10 VDC
- APPLICABLE AS REGULAR MILLIVOLT INDICATOR (Single-ended or Differential Input)
- SELECTABLE DECIMAL POINTS
- OVER-RANGE INDICATION
- NEMA 4X/IP65 SEALED FRONT BEZEL
- OPTIONAL CUSTOM UNITS OVERLAY WITH BACKLIGHT

## GENERAL DESCRIPTION

The Model PAXLSG expands the PAX Lite capabilities into the indication of pressure, load, force, and other parameters measured with strain gages. The unit features broad range scaling and can be used with a wide variety of strain gage resistances and bridge configurations. A built-in excitation source is jumper selectable for 5 or 10 VDC @ 120 mA maximum, and can power up to four full 350 Ω bridges in load averaging applications. Although designed primarily for strain-gage indication, the PAXLSG is also ideal for single-ended or differential millivolt input applications, with full-scale input ranges from 0 to 10 mV thru 0 to 2 VDC. Adjustable scaling and offset allow direct readout in nearly any engineering unit.

The meter has a NEMA 4X/IP65 sealed bezel and extensive testing of noise effects to CE requirements, allowing the meter to provide a tough yet reliable application solution.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 3 1/2-digit, 0.56" (14.2 mm) high, 7-segment LED, (-) minus sign displayed when voltage is negative. Decimal points inserted before 1st, 2nd, or 3rd least significant digits by DIP switch selection.
- OVER-RANGE INDICATION:** Indicated by blanking 3 least significant digits.
- POWER:**  
**AC Power:** 85 to 250 VAC, 50/60 HZ, 6 VA  
**Isolation:** 2300 Vrms for 1 min. to all inputs.
- INPUT SIGNAL:** Single-ended or differential input,  $\pm 2.0$  V max. Gain (Sensitivity) is adjustable from 200 Units of Numerical Readout/millivolt input (gives full scale readout of 1999 at 10 mV input), to less than 1 Unit of Numerical Readout/mV (gives full scale readout of 1999 at 2.0 V input). Maximum common mode voltage swing with respect to signal ground, 0 to 7 V.  
*Note: Absolute maximum voltage that can be applied between the two input terminals or between input and signal common is 50 VDC.*
- INPUT IMPEDANCE:** 100 M $\Omega$
- LINEARITY:**  $\pm(0.05\% \pm 1 \text{ digit})$
- LOW FREQUENCY NOISE REJECTION:**  
**Normal Mode Rejection:** 84 dB @ 50/60 Hz  
**Common Mode Rejection:** 50 dB with respect to excitation common; 110 dB with respect to earth ground.
- RESPONSE TIME:** 2.0 seconds to settle from step input.
- READING RATE:** 2.5 updated readings/second, nominal.
- EXCITATION SUPPLY:**  
**Jumper Selectable:** 5 VDC @ 60 mA max.,  $\pm 2\%$   
10 VDC @ 120 mA max.,  $\pm 2\%$   
**Temperature coefficient (ratio metric):** 20 ppm/ $^{\circ}\text{C}$  max.
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0 $^{\circ}$  to 60 $^{\circ}\text{C}$   
**Storage Temperature:** -40 $^{\circ}$  to 80 $^{\circ}\text{C}$   
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing)  
**Span Temperature Coeff.:** 100 PPM/ $^{\circ}\text{C}$   
**Offset Temperature Coeff.:** 100 PPM/ $^{\circ}\text{C}$   
**Altitude:** Up to 2000 meters
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
UL Recognized Component, File # E179259, UL61010A-1, CSA C22.2 No. 61010-1 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

## ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion B 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion B 2 kV power 2 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

### Emissions:

Emissions EN 55011 Class B

### Notes:

1. *Criterion A: Normal operation within specified limits.*

2. *Criterion B: Temporary loss of performance from which the unit self-recovers.*

- CONNECTIONS:** High compression cage-clamp terminal block  
**Wire Strip Length:** 0.3" (7.5 mm)  
**Wire Gage:** 30-14 AWG copper wire  
**Torque:** 4.5 inch-lbs (0.51 N-m) max.
- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Panel gasket and mounting clip included.
- WEIGHT:** 0.65 lbs (0.24 kg)

# ACCESSORIES

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled by a DIP switch.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

PANEL CUT-OUT

# 2.0 SETTING THE SWITCHES AND JUMPERS

The meter has switches that must be checked and/or changed prior to applying power. To access the switches, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start the other side latch.

## Excitation Range Jumper

A jumper is used for selection of the 5 or 10 volt range. It is important that only one jumper position is used at a time.

## Set-Up DIP Switches

Two banks of DIP switches are located inside the meter. The 9 position bank of switches is used for calibrating the meter. The values of these switches is discussed in section 5.0 Calibrating the Meter.

The bank of 4 switches located near the front display are used for the selection of decimal points and backlight annunciator. Selecting "ON" position enables the function.

SWITCH	FUNCTION
1	Decimal Point 1 (000.0)
2	Decimal Point 2 (00.00)
3	Decimal Point 3 (0.000)
4	Backlight Annunciator for Units Label

## PAXLSG Jumper Selection

### JUMPER SELECTIONS

The  indicates factory setting.

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the meter (AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, its source or the method of coupling into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long

and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC#SNUB0000.

## 3.1 POWER WIRING

### AC Power

Terminal 1: VAC

Terminal 2: VAC

### Excitation Power

Terminal 3: Common

Terminal 4: Excitation +

5 VDC @ 60 mA max, ±2%

10 VDC @ 120 mA max, ±2%

## 3.2 INPUT SIGNAL WIRING

### 2-Wire Single Ended Input

### 4-Wire Bridge Input

### 6-Wire Bridge Input

## DEADLOAD COMPENSATION

In some cases, the combined deadload and liveload output may exceed the range of the input. To use this range, the output of the bridge can be offset a small amount by applying a fixed resistor across one arm of the bridge. This shifts the electrical output of the bridge downward to within the operating range of the meter. A 100 K ohm fixed resistor shifts the bridge output approximately -10 mV (350 ohm bridge, 10 V excitation).

Connect the resistor between +SIG and -SIG. Use a metal film resistor with a low temperature coefficient of resistance.

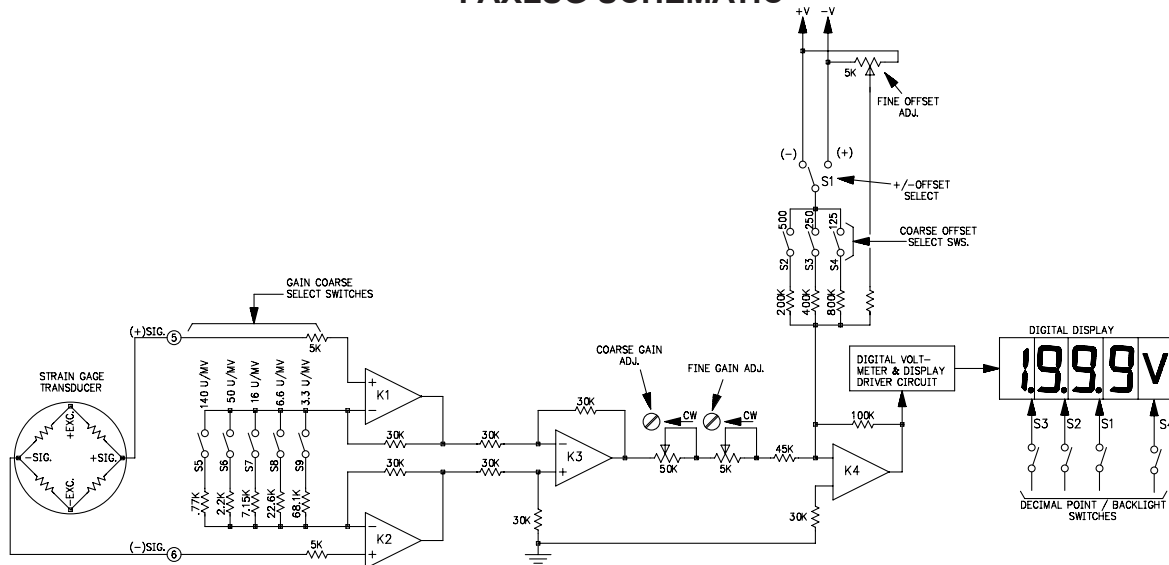

## BRIDGE COMPLETION RESISTORS

For single strain gage applications, bridge completion resistors must be employed externally to the meter. Only use metal film resistors with a low temperature coefficient of resistance.

Load cells and pressure transducers are normally implemented as full resistance bridges and do not require bridge completion resistors.

# 4.0 SCALING THE METER

## PAXLSG SCHEMATIC

### DESCRIPTION OF OPERATION

The Pax Lite Strain Gage Indicator (PAXLSG) consists of a digital voltmeter combined with a high-gain, differential input amplifier that has provision for wide range scaling adjustment (shown above). The unit also incorporates an excitation power supply (5 or 10 VDC) that delivers up to 120 mA. In the simplified schematic above, K1, K2, and K3 form a high-gain, high-stability, differential input preamplifier with a single ended output. The gain of this preamplifier is set up by coarse gain select switches S5 through S9. These switches can be turned on in combination to provide discrete steps of gain-range adjustment. The output of the preamplifier (K3 output) is applied to the summing amplifier (K4) through coarse and fine adjustable potentiometers. These adjustable potentiometers provide final vernier gain adjustment over a range of slightly more than 2:1. An adjustable offset voltage signal is also added in at the input of K4 for zero-balance or for applications where the transfer curve must be offset from zero.

### GAIN ADJUSTMENTS

Gain is defined as the Units of Numerical change seen on the display per mV (millivolt) of input signal change (disregarding display decimal points). In effect, gain determines the slope of the transfer curve and is expressed in Units/mV.

$$\text{GAIN} = \frac{(\text{Max. Num. Readout}) - (\text{Min. Num. Readout})}{(\text{Max. mV Input Sig.}) - (\text{Min. mV Input Sig.})}$$

*Note: Disregarded Decimal Points in Readout.*

For example, if an PAXLSG is to display 50.0 @ 2 mV (min.) and 169.0 @ 19 mV (max.), the required gain will be:

$$\text{GAIN} = \frac{1690 \text{ Units} - 500 \text{ Units}}{19 \text{ mV} - 2 \text{ mV}} = 70 \text{ Units/mV}$$

*Note: Remember, display decimal points are disregarded.*

To establish this gain, the settings of the coarse gain select switches must first be determined. These switches establish the maximum end of the 2:1 adjustment range of the coarse and fine vernier gain adjustments.

### COARSE GAIN SELECT SWITCHES

Each of the coarse gain select switches is marked with the amount of maximum gain it will contribute when turned on. They are turned on singly or in combination (adding up each of their gain contributions), to arrive at a maximum gain value that is just above the desired gain value. To achieve the desired gain of 70 Units/mV in the example just given, the following switches would be turned on:

$$S6 \text{ (Gain 50)} + S7 \text{ (Gain 16)} + S8 \text{ (Gain 6.6)} = 72.6 \text{ Units/mV}$$

With these switches ON, the coarse and fine vernier adjustments cover a gain range from about 36 Units/mV (½ of max.) to 72.6 Units/mV. The required gain of 70 Units/mV falls within this adjustable range.

### COARSE AND FINE GAIN ADJUSTMENTS

Once the gain select switches have been set, the final gain calibration is made with the Coarse and Fine Gain adjustments. Both of these adjustments are 15-Turn, screwdriver adjustable potentiometers that increase gain with clockwise rotation. The Coarse adjustment has a 2:1 range. The Fine adjustment has a range of 5-10% (depending on the setting of the Coarse adjustment). Both pots are located at the rear of the meter.

### OFFSET ADJUSTMENTS

Offset adjustments move the transfer curve up-and-down along the vertical axis without changing the slope (Gain). They are used to “balance” the output of transducers or to intentionally introduce an offset, such as tare-load compensation. The Fine Offset Adjustment is a 15-turn screwdriver adjustable potentiometer, located at the rear of the meter. It has a range of ±125 Numerical Units of offset which is sufficient for balancing the output of most transducers.

The Coarse Offset Switches (S2, 3, and 4) can be used to add additional steps of offset. Like the coarse gain select switches, the offset switches are marked with the approximate value of offset contributed by each switch, and they can be turned on in combinations with each switch, contributing its value to the total. Switch S1 selects the polarity of the offset signal and can be set to either add or subtract the offset contribution of the switches. The maximum offset that can be obtained with all switches ON and the Fine Offset at its maximum is ±1000, which is one half of the full scale readout.

# 5.0 CALIBRATING THE METER

There are three different methods that can be used to calibrate the PAXLSG, and the method chosen depends largely on the nature of the application. The three methods are:

## VOLTAGE CALIBRATION

In this method, the transducer signal is simply replaced with an accurately measured input voltage that can be varied through the range normally delivered by the transducer (See Voltage Calibration Circuit, below). The PAXLSG is then adjusted to provide the proper readout.

## SYSTEM CALIBRATION

In this method, the transducer is connected to the input of the PAXLSG in the final installation, or in a bench set-up simulating the actual installation. Accurately known inputs are then applied to the transducer (i.e. load, pressure, force, etc.), and the PAXLSG adjustments are made to provide the desired indication. This method is usually preferable to the Voltage Calibration method since it calibrates both the transducer and the PAXLSG as a combination, and reduces the inherent risk of inaccuracy or errors accumulated by separate calibration. However, it can only be used in applications where the parameter to be indicated can be easily varied and accurately measured or established. It is also very awkward to use if an offset or transducer unbalance must be dealt with because of Offset/Gain adjustment interaction.

## COMBINATION VOLTAGE/SYSTEM CALIBRATION

In applications where tare-load, offset, or substantial transducer unbalance exists and where high accuracy is required in the final indication, it may be desirable to voltage calibrate the unit first to get it very close to its final settings. Then, after final installation, the unit can be "tweaked" to its final settings while using accurately known inputs to the system. These various factors make it impossible to set up one calibration procedure to cover all applications. However, using the following information on Voltage Calibration together with the examples given should provide a good basis for handling virtually any calibration requirement.

## CALIBRATION EXAMPLE

"Voltage Calibration" can be easily performed for any application, using the calibration circuit shown below.

## VOLTAGE CALIBRATION CIRCUIT

(Using 350 Ohm Dummy Bridge)

This 350 Ohms "Dummy Bridge" circuit delivers calibration voltages in ranges of 0 to  $\pm 22$  mV, 0 to +44 mV, or 0 to -44 mV, depending on the setting of R2. The range can be increased or decreased by adjusting the value of R3 (shown as 40 K). An accurate reference millivoltmeter is used to set up the calibration voltage, and a "Zero Switch" facilitates balancing without readjusting the calibration voltage. High-stability metalized resistors (1% tol.) should be used. The use of a dummy bridge insures a common-mode voltage during calibration that is very similar to that of the actual transducer. **SET-UP:**

Before starting the procedure, the Input Swing Voltage (Vs), the Readout Span (Rs) and the required GAIN must be determined.

### WHERE:

Rs = (Max. Numerical Display) - (Min. Numerical Display) *Disregard Decimal Points*  
 Vs = (mV in @ Max. Display) - (mV in @ Min. Display)  
 GAIN = Rs = Units/mV  
 Vs

**EXAMPLE:** Readout is to be 5.00 Units @ 2 mV minimum, and 15.00 Units @ 18 mV maximum. The transducer is a 350  $\Omega$  strain-gage bridge requiring 10 VDC excitation.

Rs = 1500 - 500 = 1000 Units  
 Vs = 18 mV - 2 mV = 16 mV  
 GAIN = 1000 = 62.5 Units/mV  
 16

*Note: While most strain gage readout applications are zero-based (i.e. zero readout @ zero input) this example was intentionally chosen because it included an offset reading at zero input. It will be used in the Calibration Procedure below to illustrate the most convenient way to handle offset situations without excessive interaction of gain and offset adjustments. If a zero-based example had been given, the minimum readout and input voltage would have both been zero. Rs and Vs would then simply be the maximum values of readout and input voltage respectively; gain would just be the ratio of (Max. Readout/Max. Input mV), and Steps 7 and 8 of the procedure below could be eliminated.*

## CALIBRATION PROCEDURE

- Set the Coarse Gain Select Switches, S5 through S9 to establish a maximum range just exceeding the required gain. Referring to the example given, the required gain was calculated to be 62.5 Units/mV. Setting switches S6 and S7 ON gives  $50 + 16 = 66$  Units/mV, which is just above the required amount. The following chart gives an approximate gain adjustment value for each switch:

SWITCH NUMBER	SPAN VALUE
5	140
6	50
7	16
8	6.6
9	3.3

All offset switches, S2, 3, and 4, should be off.

- Connect the unit to the Calibration Circuit as shown. Set the excitation voltage range jumper to the 10 V position.
- Place unit in the case and turn power on to the unit. Allow 10 minutes of warm-up time for stabilization.
- Close the "Zero Switch" of the calibration circuit to obtain zero input voltage. Adjust the fine offset control to get a zero readout.
- Open the "Zero Switch" of the calibrating circuit and set the input voltage to the calculated swing voltage, Vs. (Vs is 16 mV in the example given.) Now, adjust the Gain Coarse and Fine Controls to get a readout equal to the Readout Span.  
(Rs = 1000 Units in the example given.)
- Repeat Step 4 and readjust zero if required. If zero readjustment was needed, repeat Step 5, then back to Step 4, etc., until Zero and Rs readings are acceptable.

- Set the calibration voltage to the minimum input level (2 mV in this example). Record the meter reading (125 in this example). Power the meter down and remove it from the case. Set the Coarse Offset Select Switches to get the corresponding minimum readout (add the switch offset value(s) to the recorded meter reading). In the example given, the minimum readout was 500 units @ 2 mV, therefore setting switches 3 and 4 gives us 125 (meter reading) + 125 (SW4) + 250 (SW3) = 500. The following chart gives an approximate offset adjustment value for each switch.

SWITCH NUMBER	OFFSET VALUE
2	500
3	250
4	125

- Place unit in the case and turn power on to the unit. Use the fine offset adjustment to fine tune the desired minimum reading (500 in this example). Vary the input from the minimum to maximum levels and check the corresponding readouts. Fine-tune if necessary by readjusting the fine gain adjustment at the maximum end and the fine offset adjustment at the minimum end. (In the example, readout is 500 @ 2 mV min. and 1500 @ 18 mV max.) Alternate between minimum and maximum inputs as required until readout is within desired tolerance at the extremes. 9. Set appropriate decimal point switch (S2 for the example given).

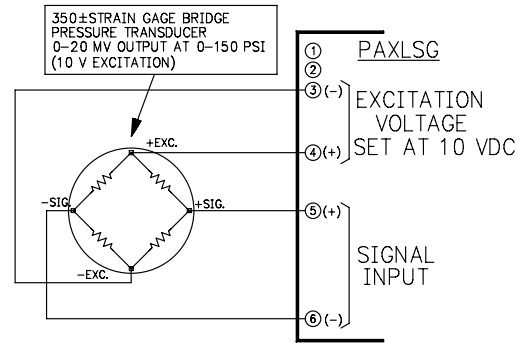

The unit is now ready for installation.

\* Steps 7 and 8 are not required in zero-based applications.

# 6.0 APPLICATIONS

## EXAMPLE #1 PRESSURE READOUT & SYSTEM CALIBRATION

This illustration depicts a common application using a PAXLSG with a strain gage pressure transducer for pressure indication. The gain required to display 150 Units @ 20 mV is 150/20, or 7.5 Units/mV. Setting the Coarse Gain Select Switches S8 and S9 ON, gives a gain range of 6.6 + 3.3, or 9.9 Units/mV maximum, which brackets the required gain. The transducer curve is zero-based (*i.e. zero readout at zero input*), and can be easily System Calibrated. A variable pressure input is applied to the transducer with a "Dead-Weight Tester" and the Fine Offset is adjusted to give a readout of zero with no pressure applied. Then 150 PSI is applied, the Coarse and Fine Gain controls are adjusted for a readout of 150. Pressure is removed, zero is checked and readjusted with the Fine Offset control if needed. Pressure is varied between zero and maximum, with the Fine Gain and Offset adjustments retrimmed as needed until the readout is within tolerance.

## EXAMPLE #2 THE MODEL PAXLSG AS A MILLIVOLT METER

The PAXLSG can be used as a scaleable millivolt meter and will accept either single-ended or differential inputs when connected as shown. Input signals are referenced to the negative (common) side of the excitation supply (Terminal 3). Maximum common-mode voltage (for differential input) is 0 to +7 VDC.

## EXAMPLE #3 MULTIPLE LOAD-CELL INPUT, AVERAGE READING

The 120 mA excitation output capability of the PAXLSG allows it to operate multiple strain gage bridges. In this example, it is used to indicate the quantity of granular material held in a hopper that is supported by three load cells in a tripod mounting arrangement. The tare-weight of the empty hopper is about 30% of the full weight, requiring a significant offset for a zero readout when empty. The PAXLSG is first Voltage-Calibrated (*using the known output of the load cells at the empty and full conditions*). Then the unit is installed and fine trimmed (System Calibration) using known loads.

# MODEL PAXS - STRAIN GAGE INPUT

This is a brief overview of the PAXS. For complete specifications and programming information, see the **PAX Analog Input Panel Meters Bulletin** starting on **page 378**.

- 5-DIGIT 0.56" RED SUNLIGHT READABLE OR STANDARD GREEN DISPLAY
- LOAD CELL, PRESSURE AND TORQUE BRIDGE INPUTS
- DUAL RANGE INPUT:  $\pm 24$  mV OR  $\pm 240$  mV
- SELECTABLE 5 VDC OR 10 VDC BRIDGE EXCITATION
- PROGRAMMABLE AUTO-ZERO TRACKING
- FOUR SETPOINT ALARM OUTPUTS (W/OPTION CARD)
- COMMUNICATION AND BUS CAPABILITIES (W/OPTION CARD)
- CRIMSON PROGRAMMING SOFTWARE

## PAXS SPECIFICATIONS

### SENSOR INPUTS:

INPUT RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
$\pm 24$ mVDC	0.02% of reading +3 $\mu$ V	0.07% of reading +4 $\mu$ V	100 Mohm	30 V	1 $\mu$ V
$\pm 240$ mVDC	0.02% of reading +30 $\mu$ V	0.07% of reading +40 $\mu$ V	100 Mohm	30 V	10 $\mu$ V

\* After 20 minute warm-up. Accuracy is specified in two ways: Accuracy over an 18 to 28°C and 10 to 75% RH environment; and accuracy over a 0 to 50°C and 0 to 85% RH (non-condensing environment). Accuracy over the 0 to 50°C range includes the temperature coefficient effect of the meter.

**CONNECTION TYPE:** 4-wire bridge (differential)  
2-wire (single-ended)

**COMMON MODE RANGE** (w.r.t. input common): 0 to +5 VDC  
Rejection: 80 dB (DC to 120 Hz)

### BRIDGE EXCITATION :

Jumper Selectable: 5 VDC @ 65 mA max.,  $\pm 2\%$   
10 VDC @ 125 mA max.,  $\pm 2\%$   
Temperature coefficient (ratio metric): 20 ppm/°C max.

# MODEL CUB5TC - MINIATURE ELECTRONIC 5-DIGIT THERMOCOUPLE METER

- THERMOCOUPLE INPUTS  
*Thermocouple types T, E, J, K, R, S, B, N, or mV*
- PROGRAMMABLE TEMPERATURE OFFSET
- SELECTABLE °F or °C WITH 1 or 0.1 DEGREE RESOLUTION
- °F OR °C DISPLAY ANNUNCIATORS

- CONFORMS TO ITS-90 TEMPERATURE STANDARD
- COLD JUNCTION COMPENSATION (Enable/Disable)
- MINIMUM AND MAXIMUM DISPLAY CAPTURE
- LCD, REFLECTIVE OR GREEN/RED LED BACKLIGHTING
- 0.48" (12.2 mm) HIGH DIGITS
- OPTIONAL SETPOINT OUTPUT MODULES
- OPTIONAL SERIAL COMMUNICATION MODULES (RS232 or RS485)
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- FRONT PANEL OR CRIMSON PROGRAMMABLE
- DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The CUB5 provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The CUB5TC accepts a thermocouple input and provides a temperature display in Celcius or Fahrenheit. The meter also features minimum and maximum display capture, display offset, °F or °C indicator, and programmable user input. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.48" (12.2 mm) high digits. The LCD is available in two versions, reflective and red/green backlight. The backlight version is user selectable for the desired color and also has variable display intensity.

The capability of the CUB5 can be easily expanded with the addition of option modules. Setpoint capability is field installable with the addition of the setpoint output modules. Serial communications capability for RS232 or RS485 is added with a serial option module.

The CUB5 can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5. The MLPS1 is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

# ORDERING INFORMATION

TYPE	MODEL NO.	DESCRIPTION	PART NUMBER

## GENERAL METER SPECIFICATIONS

- DISPLAY:** 5 digit LCD 0.48" (12.2 mm) high digits  
**CUB5TCR0:** Reflective LCD with full viewing angle  
**CUB5TCB0:** Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS1 or a NEC Class 2 or SELV rated power supply.

MODEL NO.	DISPLAY COLOR	INPUT CURRENT @ 9 VDC WITHOUT CUB5RLY0	INPUT CURRENT @ 9 VDC WITH CUB5RLY0
CUB5TCR0	---	10 mA	40 mA
CUB5TCB0	Red (max intensity)	85 mA	115 mA
CUB5TCB0	Green (max intensity)	95 mA	125 mA

- READOUT:**  
Resolution: 1 or 0.1 degrees  
Scale: °F or °C  
Offset Range: -999 to 9999 display units
- THERMOCOUPLE INPUTS:**  
**Isolation:** TC+ and TC- terminals are not electrically isolated from the power supply or optional comms cards.  
**Response Time:** 500 msec.  
**Open Sensor Display:** *BPE#*  
**Overrange/Underrange Input:** *OL DL/UL LL*  
**Overrange/Underrange Display:** "....."/"....."  
**Maximum Input Voltage:** 30 VDC, TC+ to TC-  
**Maximum Input Voltage TC-:** 3 VDC max. with respect to common

TC TYPE	RANGE	ACCURACY @ 23°C ±°C	ACCURACY @ -35 to 75°C ±°C	WIRE COLOR	
				ANSI	BS 1843
T	-200 to 400°C -328 to 752°F	2.3	5.8	(+) blue (-) red	(+) white (-) blue
E	-200 to 871°C -328 to 1600°F	2.7	4.9	(+) purple (-) red	(+) brown (-) blue
J	-200 to 760°C -328 to 1400°F	1.9	4.3	(+) white (-) red	(+) yellow (-) blue
K	-200 to 1372°C -328 to 2502°F	2.3	5.8	(+) yellow (-) red	(+) brown (-) blue
R	-50 to 1768°C -58 to 3214°F	4.5	15.0	no standard	(+) white (-) blue
S	-50 to 1768°C -58 to 3214°F	4.5	15.0	no standard	(+) white (-) blue
B	200 to 1820°C 392 to 3308°F	9.1<540°C 4.5>540°C	42.6<540°C 15.0>540°C	no standard	no standard
N	-200 to 1300°C -328 to 2372°F	2.8	8.1	(+) orange (-) red	(+) orange (-) blue
mV	-10.00 to 65.00	0.02 mV	0.08 mV	no standard	no standard

\*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy at 23°C and 15 to 75% RH environment; and Accuracy over a -35 to 75°C and 0 to 85% RH (non condensing) environment. Accuracy specified over the -35 to 75°C operating range includes meter tempo and cold junction tracking effects.

The specification includes the A/D conversion errors, linearization conformity, and thermocouple cold junction compensation. Total system accuracy is the sum of meter and probe errors. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

- USER INPUT (USR):** Programmable input. Connect terminal to common (USR COMM) to activate function. Internal 10KΩ pull-up resistor to +9 to 28 VDC.

**Threshold Levels:**  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)

- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 61010-1  
Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Indoor Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #US/9257A/UL

CB Scheme Test Report #E179259-V01-S02

Issued by Underwriters Laboratories, Inc. IEC 61010-1, EN 61010-1:

Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A 30 A/m

### Emissions:

Emissions EN 55011 Class A

Note:

1. *Criterion A: Normal operation within specified limits.*

Refer to EMC Installation Guidelines for additional information.

- MEMORY:** Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and max/min values when power is removed.

8. **CONNECTIONS:** Wire clamping screw terminals

**Wire Strip Length:** 0.3" (7.5 mm)

**Wire Gage:** 30-14 AWG copper wire

**Torque:** 5 inch-lbs (0.565 N-m) max.

9. **ENVIRONMENTAL CONDITIONS:**

**Operating Temperature Range for CUB5TCR0:** -35 to 75°C

**Operating Temperature Range for CUB5TCB0 depends on display color and intensity level as per below:**

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
Green Display	1 & 2	-35 to 75°C
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C

**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)

**Altitude:** Up to 2000 meters

10. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category I, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.

11. **WEIGHT:** 3.2 oz (100 g)

## OPTIONAL PLUG-IN CARDS

### ADDING OPTION CARDS

The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

**WARNING:** Disconnect all power to the unit before installing Plug-in card.

#### SINGLE RELAY CARD

**Type:** Single FORM-C relay

**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.

Working Voltage: 150 Vrms

**Contact Rating:** 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive

**Life Expectancy:** 100,000 minimum operations

**Response Time:**

Turn On Time: 4 msec max.

Turn Off Time: 4 msec max.

#### DUAL SINKING OUTPUT CARD

**Type:** Non-isolated switched DC, N Channel open drain MOSFET

**Current Rating:** 100 mA max.

**V<sub>DS ON</sub>:** 0.7 V @ 100 mA

**V<sub>DS MAX</sub>:** 30 VDC

**Offstate Leakage Current:** 0.5 mA max.

#### RS485 SERIAL COMMUNICATIONS CARD

**Type:** RS485 multi-point balanced interface (non-isolated)

*Note: Non-grounded (isolated) thermocouple probes must be used when multiple units are connected in an RS485 network, or measurement errors will occur.*

**Baud Rate:** 300 to 38.4k

**Data Format:** 7/8 bits; odd, even, or no parity

**Bus Address:** 0 to 99; max 32 meters per line

**Transmit Delay:** Selectable (refer to CUB5COM bulletin)

#### RS232 SERIAL COMMUNICATIONS CARD

**Type:** RS232 half duplex (non-isolated)

**Baud Rate:** 300 to 38.4k

**Data Format:** 7/8 bits; odd, even, or no parity

## 1.0 INSTALLING THE METER

### INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

### INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## 2.0 INSTALLING PLUG-IN CARDS

**WARNING:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

### REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter.

## 3.0 WIRING THE METER

### WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).

- b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

### 3.1 POWER WIRING

#### DC Power

+9 to +28 VDC: +VDC  
Power Common: -VDC

### 3.2 USER INPUT WIRING

#### Sinking Logic

USR COMM } Connect external switching device between the  
USR } User Input terminal and User Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<0.7 V).

### 3.3 INPUT WIRING

#### Thermocouple

**CAUTION:** Power input common and sensor input common are NOT isolated from user input common. In order to preserve the safety of the meter application, the power input common and the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common; and the common of the isolated plug-in cards with respect to input common.

### 3.4 SETPOINT (OUTPUT) WIRING

#### SINGLE SETPOINT RELAY PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

#### DUAL SETPOINT N-FET OPEN DRAIN PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

Output Common is not isolated from DC Power Common. Load must be wired between OSNK terminal and V+ of the load supply.

### 3.5 SERIAL COMMUNICATION WIRING

#### SERIAL COMMUNICATIONS PLUG-IN CARD

#### RJ11 CONNECTOR PIN OUTS

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION	ENTERING PROGRAM MODE	PROGRAMMING MODE OPERATION
SEL	Index display through enabled values	Press and hold for 2 seconds to activate	Store selected parameter and index to next parameter
RST	Resets values (MIN / MAX) or outputs		Advances through the program menu Increments selected parameter value or selection

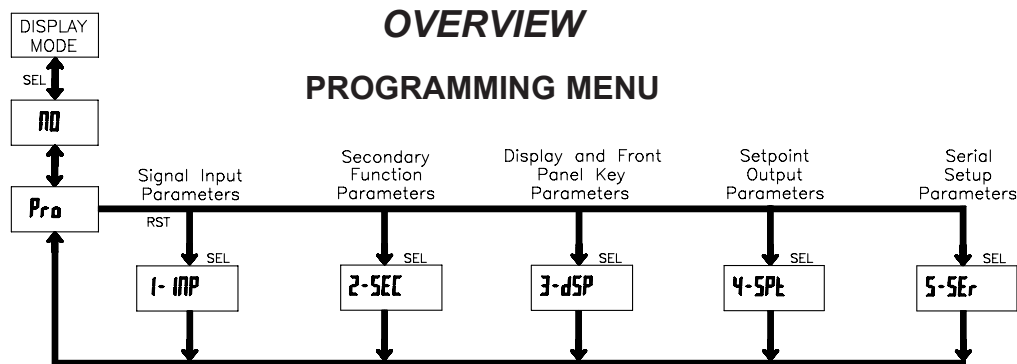

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
MIN - Minimum display capture value

"1" - To the right of the display indicates setpoint 1 output activated.  
"2" - To the right of the display indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL BUTTON)

It is recommended that all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** button. If it is not accessible then it is locked by either a security code, or a hardware lock.

## MODULE ENTRY (SEL & RST BUTTONS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between **Pr0** and the present module. The **RST** button is used to select the desired module. The displayed module is entered by pressing the **SEL** button.

## MODULE MENU (SEL BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr0**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** button is used to move through the selections/values for that parameter. Pressing the **SEL** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** button to access the value. The right hand most digit will begin to flash. Pressing the **RST** button again increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will advance to the next digit. Pressing and holding the **SEL** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL BUTTON)

The Programming Mode is exited by pressing the **SEL** button with **Pr0** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

Pressing both the **SEL** and the **RST** button on power-up will also load the factory settings and display **rESEt**. This allows operation in the event of a memory failure or corrupted data.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS (1-IMP)

## THERMOCOUPLE TYPE

SELECTION	TC TYPE	SELECTION	TC TYPE
tc-t	T	tc-S	S
tc-E	E	tc-b	B
tc-J	J	tc-n	N
tc-K	K	uolt	
tc-R	R		

Select the thermocouple type used for the application. The appropriate curve will be automatically loaded for the selected type. Selecting **uolt** displays the millivolt input signal with 10  $\mu$ V resolution.

## COLD JUNCTION COMPENSATION

SELECTION	YES	NO
CJC	YES	NO

This parameter enables or disables internal cold junction compensation. For most applications, cold junction compensation should be enabled (**YES**). This parameter does not appear if **TYPE = uolt**.

## TEMPERATURE SCALE

SELECTION	°F	°C
SCALE	°F	°C

Select the temperature scale. This selection applies for the Input, MAX and MIN displays. This parameter does not appear if **TYPE = uolt**.

## DISPLAY DECIMAL POINT

SELECTION	0	00
DECPt	0	00

Select the decimal point location for the desired display resolution. This selection applies for the Input, MAX and MIN displays. This parameter does not appear if **TYPE = uolt** or for types R, S or B thermocouples which have a fixed 1 degree resolution.

## DISPLAY OFFSET VALUE

SELECTION	-999 to 9999
OFSEt	0

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors, errors due to variances in probe placement or adjusting the readout to a reference thermometer.

## FILTER SETTING

SELECTION	0 1 2 3
FIltr	1

If the displayed temperature is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## FILTER BAND

SELECTION	00 to 199 display units
bANd	10

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

## USER INPUT FUNCTION

SELECTION	NO
USr IN	NO

DISPLAY MODE	DESCRIPTION
NO	No Function User Input disabled.
P-Loc	Program Mode Lock-out See Programming Mode Access chart (Module 3).
rESEt	Reset (Edge triggered) Resets the assigned value(s) to the current input value.
d-Hld	Display Hold Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
d-SEL	Display Select (Edge Triggered) Advance once for each activation.
d-LEV	Display Intensity Level (Edge Triggered) Increase intensity one level for each activation (backlight version only).
COLoR	Backlight Color (Edge Triggered) Change backlight color with each activation (backlight version only).
Pr int	Print Request Serial transmit of the active parameters selected in the Print Options menu (Module 5).
Pr-rSEt	Print and Reset Same as Print Request followed by a momentary reset of the assigned value(s).
rSEt-1	Setpoint 1 Reset Resets setpoint 1 output.
rSEt-2	Setpoint 2 Reset Resets setpoint 2 output.
rSEt-12	Setpoint 1 and 2 Reset Reset both setpoint 1 and 2 outputs.

## USER INPUT ASSIGNMENT

SELECTION	H1	H1-L0	L0	dSP
U-RSN				dSP

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, display hold, or print and reset is selected in the User Input Function menu.

## 5.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-SEC)

### MAX DISPLAY ENABLE

Enables the Maximum Display Capture capability.

### MAX CAPTURE DELAY TIME

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN DISPLAY ENABLE

Enables the Minimum Display Capture capability.

### MIN CAPTURE DELAY TIME

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

Select YES to perform either of the Factory Service Operations shown below.

### RESTORE FACTORY DEFAULT SETTINGS

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rESEt and then return to CodE 00. Press SEL button to exit the module.

Pressing both the SEL and the RST button on power-up will also load the factory settings and display rESEt. This allows operation in the event of a memory failure or corrupted data.

### CALIBRATION

The CUB5TC uses stored voltage calibration and cold junction temperature values to provide accurate temperature and voltage measurements. Over time, the electrical characteristics of the components inside the meter could slowly change. The result is that the stored calibration values may no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the CUB5TC involves a voltage calibration and a cold junction calibration. It is recommended that both calibrations be performed. The voltage calibration MUST precede the cold junction calibration. Allow 30 minute warm up before performing any calibration related procedure. The following procedures should be performed at an ambient temperature of 15 to 35 °C (59 to 95 °F).

Calibration should only be performed by individuals experienced in calibrating electronic equipment.

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the CUB5TC.

### Input Voltage Calibration

1. Connect a precision DC voltage source with an accuracy of 0.01% or better to the TC+ (positive) and the TC- (negative) terminals of the CUB5TC. Set the output of the voltage source to zero.
2. With the display at CodE 48, press and hold the SEL button for 2 seconds. Unit will display rRL 00.
3. Press the RST button to select mP.
4. Press the SEL button. Display reads 000.
5. With the voltage source set to zero, press SEL. Display reads rRL for about eight seconds.
6. When display reads 000, apply 60.000 mV input signal. Press SEL. Display reads rRL for about eight seconds.
7. When display reads rRL 00, press SEL twice to exit Module 2 and return to the normal display mode.
8. Proceed to Cold Junction Calibration.

### Cold Junction Calibration

1. **Install all option cards needed for your application and the rear cover, or invalid results will occur.**
2. The ambient temperature must be within 20°C to 30°C.
3. Connect a thermocouple (types T, E, J, K, or N only) with an accuracy of 1°C or better to the meter.
4. Enter programming mode and verify the following settings in Module 1:  
 tYPE = thermocouple type connected to the unit  
 CodE = YES; SERIE = °C; dEPE = 00; OFSEt = 0
5. Place the thermocouple in close thermal contact to a reference thermometer probe. (Use a reference thermometer with an accuracy of 0.25°C or better.) The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (A calibration bath of known temperature could be used in place of the thermometer.)
6. Compare the unit display with the reference temperature indicator (or calibration bath). If a difference of more than ±1.0 °C exists, note the difference (CJ error) and continue with cold junction calibration.  
 CJ Error = Reference Temperature - Unit Display.
7. Enter programming mode. Step through Module 2 to the Service Access Code parameter and select CodE 48. Press and hold the SEL button until the unit displays rRL 00. Press the RST button to select tJt.
8. Press SEL. Display reads tJt followed by the current cold junction value. Calculate a new cold junction value as follows:  
 New cold junction = Current cold junction + CJ Error (noted above)
9. Press RST and set the display to the new cold junction value. Press and hold SEL. Display reads rRL for about four seconds and then returns to rRL 00.
10. Press SEL twice to exit calibration and return to the normal display mode. Verify the input reading is correct. If not, repeat steps 6 through 10.

# 5.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

### DISPLAY UPDATE TIME

This parameter sets the display update time in seconds.

### DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

### FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The YES selection allows the SEL button to toggle through the enabled displays.

### FRONT PANEL RESET ENABLE (RST)

This selection allows the RST button to reset the selected value(s).

### DISPLAY SCROLL ENABLE

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds.

### DISPLAY COLOR (BACKLIGHT UNIT ONLY)

Enter the desired display color, red or green. This parameter is active for backlight units only.

### PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	_____	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at CodE prompt *
		100-999	CodE prompt	With correct code entry at CodE prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	CodE prompt	With correct code entry at CodE prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

# 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

The Setpoint Output Parameters are only active when an optional output module is installed in the meter.

## SETPOINT SELECT

Enter the setpoint (output) to be programmed. The *n* in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to SPSEL. Repeat steps for each setpoint to be programmed. Select **NO** to exit the module. The number of setpoints available is setpoint output card dependent.

## SETPOINT 2 ENABLE

Select **YES** to enable Setpoint 2 and access the setup parameters. If **NO** is selected, the unit returns to SPSEL and setpoint 2 is disabled.

## SETPOINT ACTION

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bL = High Acting, with balanced hysteresis
- LO-bL = Low Acting, with balanced hysteresis
- HI-Ub = High Acting, with unbalanced hysteresis
- LO-Ub = Low Acting, with unbalanced hysteresis

## SETPOINT VALUE

-9999 to 99999

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

## HYSTERESIS VALUE

1 to 99999

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

## ON TIME DELAY

0.0 to 9999 Sec

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

## OFF TIME DELAY

0.0 to 9999 Sec

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

## OUTPUT RESET ACTION

Auto LATCH L-dLY

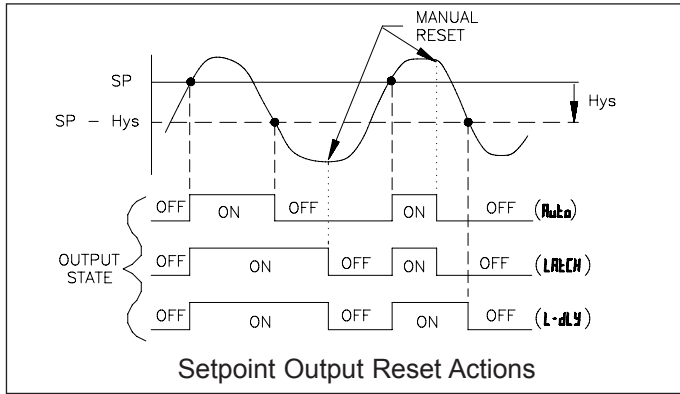

Enter the reset action of the output. See figure for details.

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle.

When the user input or **RST** button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dLY** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dLY** reset if it is not activated at power up.)

#### OUTPUT RESET WITH DISPLAY RESET

NO YES

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

#### STANDBY OPERATION

NO YES

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and OutputReset Action.

#### PROBE BURN-OUT ACTION

OFF ON

Enter the probe burn-out action. In the event of a temperature probe failure (open), the output can be programmed to be on or off.

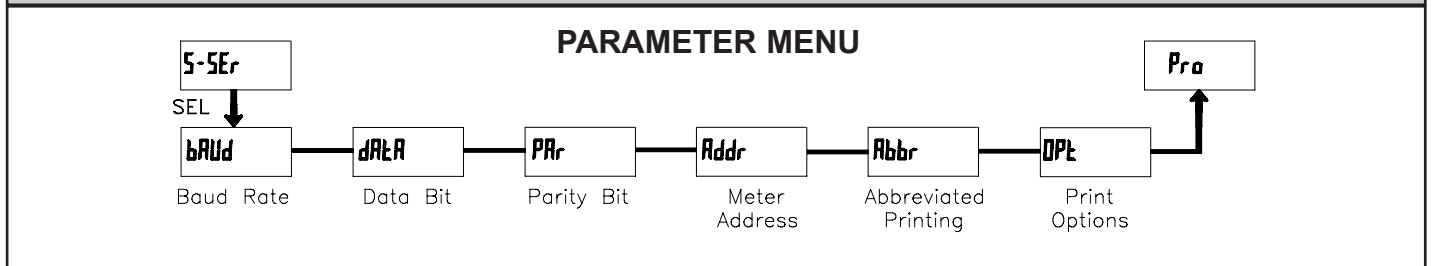

#### CHANGE DISPLAY COLOR w/OUTPUT STATE

NO YES

This parameter enables the backlight CUB5 to switch the backlight color when the output state changes. This parameter is only active for the backlight version.

## 5.5 MODULE 5 - SERIAL SETUP PARAMETERS (5-5Er)

The Serial Setup Parameters are only active when the optional RS232 or RS485 serial communications module is installed in the meter. Refer to the CUB5COM bulletin for complete details on CUB5 serial communications.

# CUB5TC PROGRAMMING QUICK OVERVIEW

Press and hold **SEL** button to enter Programming Mode.

# MODEL CUB5RT - MINIATURE ELECTRONIC 5-DIGIT RTD METER

- MINIMUM AND MAXIMUM DISPLAY CAPTURE
- LCD, REFLECTIVE OR GREEN/RED LED BACKLIGHTING
- 0.48" (12.2 mm) HIGH DIGITS
- OPTIONAL SETPOINT OUTPUT MODULES
- OPTIONAL SERIAL COMMUNICATION MODULES (RS232 or RS485)
- OPERATES FROM 9 TO 28 VDC POWER SOURCE
- FRONT PANEL OR CRIMSON PROGRAMMABLE
- DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
- NEMA 4X/IP65 SEALED FRONT BEZEL

- RTD INPUTS  
*RTD types Pt385, Pt392, Ni672, Cu427*
- PROGRAMMABLE TEMPERATURE OFFSET
- SELECTABLE °F or °C WITH 1 or 0.1 DEGREE RESOLUTION
- °F OR °C DISPLAY ANNUNCIATORS

## GENERAL DESCRIPTION

The CUB5 provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The CUB5RT accepts an RTD input and provides a temperature display in Celsius or Fahrenheit. The meter also features minimum and maximum display capture, display offset, °F or °C indicator, and programmable user input. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.48" (12.2 mm) high digits. The LCD is available in two versions, reflective and red/green backlight. The backlight version is user selectable for the desired color and also has variable display intensity.

The capability of the CUB5 can be easily expanded with the addition of option modules. Setpoint capability is field installable with the addition of the setpoint output modules. Serial communications capability for RS232 or RS485 is added with a serial option module.

The CUB5 can be powered from an optional Red Lion® Micro-Line/Sensor Power Supply (MLPS1000), which attaches directly to the back of a CUB5. The MLPS1 is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.

# ORDERING INFORMATION

TYPE	MODEL NO.	DESCRIPTION	PART NUMBER
CUB5	CUB5RT	RTD Meter with Reflective Display	CUB5RTR0
		RTD Meter with Backlight Display	CUB5RTB0

	CBPRO	Crimson 2 PC Configuration Software for Windows 98, ME, 2000, XP <sup>1</sup>	SFCRD200
	CBLUSB	USB Programming Cable	CBLUSB00

<sup>1</sup> Crimson 2 software is a free download from <http://www.redlion.net/>

## GENERAL METER SPECIFICATIONS

- DISPLAY:** 5 digit LCD 0.48" (12.2 mm) high digits  
**CUB5RTR0:** Reflective LCD with full viewing angle  
**CUB5RTB0:** Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.
- POWER:** Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS1 or a NEC Class 2 or SELV rated power supply.

MODEL NO.	DISPLAY COLOR	INPUT CURRENT @ 9 VDC WITHOUT CUB5RLY0	INPUT CURRENT @ 9 VDC WITH CUB5RLY0
CUB5RTR0	---	10 mA	40 mA
CUB5RTB0	Red (max intensity)	85 mA	115 mA
CUB5RTB0	Green (max intensity)	95 mA	125 mA

- READOUT:**  
Resolution: 1 or 0.1 degrees  
Scale: °F or °C  
Offset Range: -19999 to 19999 display units
- RTD INPUTS:**  
**Isolation:** Input and EXC terminals are not electrically isolated from the power supply or optional comms cards.  
**Response Time:** 500 msec.  
**Failed Sensor Display:** *OPEN* or *Short*  
**Overrange/Underrange Input:** *OL* *UL* / *UL* *UL*  
**Overrange/Underrange Display:** "....."/"....."  
**Maximum Input Voltage:** 30 VDC  
Type: 2, 3 or 4 wire  
Excitation current: 100 ohm range: 165 µA  
10 ohm range: 2.5 mA  
Lead resistance: 100 ohm range: 10 ohm/lead max.  
10 ohm range: 3 ohms/lead max.  
Balanced Lead Resistance: Automatically compensated up to max per lead.  
Unbalanced Lead Resistance: Uncompensated.

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	STANDARD
100 ohm Pt alpha = .00385	-200 to 850°C	0.4°C	1.6°C	IEC 751
100 ohm Pt alpha = .00392	-200 to 850°C	0.4°C	1.6°C	no official standard
120 ohm Nickel alpha = .00672	-80 to 260°C	0.2°C	0.5°C	no official standard
10 ohm Copper alpha = .00427	-100 to 260°C	0.4°C	0.9°C	no official standard

\*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy at 23°C and 15 to 75% RH environment; and Accuracy over a -35 to 75°C and 0 to 85% RH (non condensing) environment. Accuracy specified over the -35 to 75°C operating range includes meter tempco effects. The specification includes the A/D conversion errors and linearization conformity. Total system accuracy is the sum of meter and probe errors. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

- USER INPUT (USR):** Programmable input. Connect terminal to common (USR COMM) to activate function. Internal 10KΩ pull-up resistor to +9 to 28 VDC.

**Threshold Levels:**  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
**Response Time:** 5 msec typ.; 50 msec debounce (activation and release)

- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 61010-1  
Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
Type 4X Indoor Enclosure rating (Face only), UL50  
IECEE CB Scheme Test Certificate #US/9257C/UL  
CB Scheme Test Report #E179259-V01-S02  
Issued by Underwriters Laboratories, Inc.  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A	4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A	10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A	2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A	1 kV L-L, 2 kV L-N-E power
RF conducted interference	EN 61000-4-6	Criterion A	3 V/rms
Power frequency magnetic fields	EN 61000-4-8	Criterion A	30 A/m

### Emissions:

Emissions EN 55011 Class A

### Note:

1. *Criterion A: Normal operation within specified limits.*

*Refer to EMC Installation Guidelines for additional information.*

- MEMORY:** Nonvolatile E<sup>2</sup>PROM memory retains all programming parameters and max/min values when power is removed.
- CONNECTIONS:** Wire clamping screw terminals  
**Wire Strip Length:** 0.3" (7.5 mm)  
**Wire Gauge:** 30-14 AWG copper wire  
**Torque:** 5 inch-lbs (0.565 N-m) max.

**9. ENVIRONMENTAL CONDITIONS:**

**Operating Temperature Range for CUB5TCR0:** -35 to 75°C  
**Operating Temperature Range for CUB5TCB0 depends on display color and intensity level as per below:**

	INTENSITY LEVEL	TEMPERATURE
Red Display	1 & 2	-35 to 75°C
	3	-35 to 70°C
	4	-35 to 60°C
	5	-35 to 50°C
Green Display	1 & 2	-35 to 75°C
	3	-35 to 65°C
	4	-35 to 50°C
	5	-35 to 35°C

**Storage Temperature:** -35 to 85°C  
**Operating and Storage Humidity:** 0 to 85% max. relative humidity (non-condensing)  
**Vibration According to IEC 68-2-6:** Operational 5 to 500 Hz, in X, Y, Z direction for 1.5 hours, 5g's.  
**Shock According to IEC 68-2-27:** Operational 30 g, 11 msec in 3 directions.  
**Altitude:** Up to 2000 meters

**10. CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 requirements for indoor use. Installation Category 1, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.  
**11. WEIGHT:** 3.2 oz (100 g)

# OPTIONAL PLUG-IN CARDS

## ADDING OPTION CARDS

The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.

**WARNING: Disconnect all power to the unit before installing Plug-in card.**

### SINGLE RELAY CARD

**Type:** Single FORM-C relay  
**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.  
 Working Voltage: 150 Vrms  
**Contact Rating:** 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive  
**Life Expectancy:** 100,000 minimum operations  
**Response Time:**  
 Turn On Time: 4 msec max.  
 Turn Off Time: 4 msec max.

### DUAL SINKING OUTPUT CARD

**Type:** Non-isolated switched DC, N Channel open drain MOSFET  
**Current Rating:** 100 mA max.  
 $V_{DS\ ON}: 0.7\ V @ 100\ mA$   
 $V_{DS\ MAX}: 30\ VDC$   
**Offstate Leakage Current:** 0.5 mA max.

### RS485 SERIAL COMMUNICATIONS CARD

**Type:** RS485 multi-point balanced interface (non-isolated)  
*Note: Non-grounded (isolated) RTD probes must be used when multiple units are connected in an RS485 network, or measurement errors will occur.*  
**Baud Rate:** 300 to 38.4k  
**Data Format:** 7/8 bits; odd, even, or no parity  
**Bus Address:** 0 to 99; max 32 meters per line  
**Transmit Delay:** Selectable (refer to CUB5COM bulletin)

### RS232 SERIAL COMMUNICATIONS CARD

**Type:** RS232 half duplex (non-isolated)  
**Baud Rate:** 300 to 38.4k  
**Data Format:** 7/8 bits; odd, even, or no parity

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.  
 The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.  
 Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 SETTING THE JUMPERS

## INPUT RANGE JUMPER

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum input signal to avoid overloads. To access the jumper, remove the rear cover of the meter.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

# 2.0 INSTALLING PLUG-IN CARDS

**WARNING:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## REMOVING THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will

provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter.

# 3.0 WIRING THE METER

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).

- b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

### 3.1 POWER WIRING

#### DC Power

+9 to +28 VDC: +VDC  
Power Common: -VDC

### 3.2 USER INPUT WIRING

#### Sinking Logic

USR COMM } Connect external switching device between the  
USR } User Input terminal and User Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<0.7 V).

### 3.3 INPUT WIRING

#### 3-WIRE RTD

#### 2-WIRE RTD

**CAUTION:** Power input common and sensor input common are NOT isolated from user input common. In order to preserve the safety of the meter application, the power input common and the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common must be at protective earth ground potential. If not, hazardous live voltage may be present at the User Inputs and User Input Common terminals. Appropriate considerations must then be given to the potential of the user input common with respect to earth common; and the common of the isolated plug-in cards with respect to input common.

### 3.4 SETPOINT (OUTPUT) WIRING

#### SINGLE SETPOINT RELAY PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

#### DUAL SETPOINT N-FET OPEN DRAIN PLUG-IN CARD

#### ELECTRICAL CONNECTIONS

Output Common is not isolated from DC Power Common. Load must be wired between OSNK terminal and V+ of the load supply.

### 3.5 SERIAL COMMUNICATION WIRING

#### SERIAL COMMUNICATIONS PLUG-IN CARD

#### RJ11 CONNECTOR PIN OUTS

F

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION	ENTERING PROGRAM MODE	PROGRAMMING MODE OPERATION
<b>SEL</b>	Index display through enabled values	Press and hold for 2 seconds to activate	Store selected parameter and index to next parameter Advances through the program menu Increments selected parameter value or selection
<b>RST</b>	Resets values (MIN / MAX) or outputs		

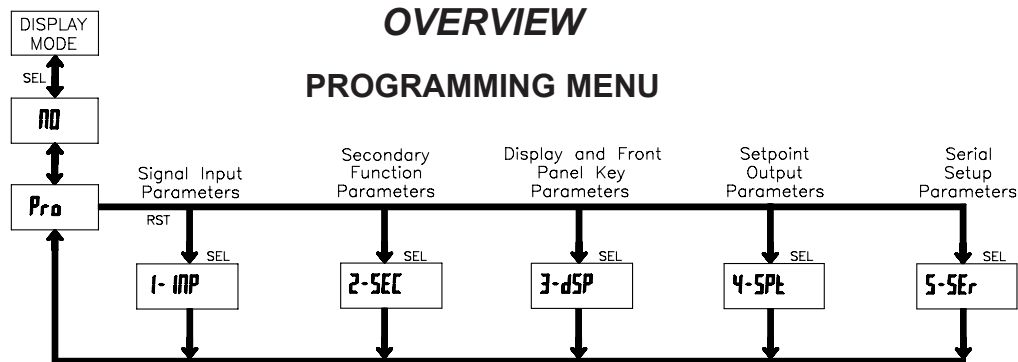

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
MIN - Minimum display capture value

"1" - To the right of the display indicates setpoint 1 output activated.  
"2" - To the right of the display indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (SEL BUTTON)

It is recommended that all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** button. If it is not accessible then it is locked by either a security code, or a hardware lock.

## MODULE ENTRY (SEL & RST BUTTONS)

The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between *Pr0* and the present module. The **RST** button is used to select the desired module. The displayed module is entered by pressing the **SEL** button.

## MODULE MENU (SEL BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to *Pr0*. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **RST** button is used to move through the selections/values for that parameter. Pressing the **SEL** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** button to access the value. The right hand most digit will begin to flash. Pressing the **RST** button again increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will advance to the next digit. Pressing and holding the **SEL** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (SEL BUTTON)

The Programming Mode is exited by pressing the **SEL** button with *Pr0* displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

Pressing both the **SEL** and the **RST** button on power-up will also load the factory settings and display *rESEt*. This allows operation in the event of a memory failure or corrupted data.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS (I-IMP)

## RTD TYPE

TYPE	SELECTION	TYPE	RANGE JUMPERS
PL385	PL385	RTD Platinum 385	100 ohm
	PL392	RTD Platinum 392	100 ohm
	Ni672	RTD Nickel 672	100 ohm
	CU427	RTD Copper 10 Ω	10 ohm

Select the RTD type used for the application. The appropriate curve will be automatically loaded for the selected type. The position of the Input Range Jumper must match the RTD type selected.

## FILTER BAND

bANd  00 to 199 display units

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected in the previous parameter.

## TEMPERATURE SCALE

SCALE  °F °C

Select the temperature scale. This selection applies for the Input, MAX and MIN displays.

## DISPLAY DECIMAL POINT

DECPt  0 00

Select the decimal point location for the desired display resolution. This selection applies for the Input, MAX and MIN displays.

## DISPLAY OFFSET VALUE

OFFSEt  - 19999 to 19999

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors, errors due to variances in probe placement or adjusting the readout to a reference thermometer.

## USER INPUT FUNCTION

USr IN

DISPLAY MODE	DESCRIPTION
NO No Function	User Input disabled.
P-Loc Program Mode Lock-out	See Programming Mode Access chart (Module 3).
rESEt Reset (Edge triggered)	Resets the assigned value(s) to the current input value.
d-Hld Display Hold	Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
d-SEL Display Select (Edge Triggered)	Advance once for each activation.
d-LEV Display Intensity Level (Edge Triggered)	Increase intensity one level for each activation (backlight version only).
COLOr Backlight Color (Edge Triggered)	Change backlight color with each activation (backlight version only).
Pr int Print Request	Serial transmit of the active parameters selected in the Print Options menu (Module 5).
Pr-rSEt Print and Reset	Same as Print Request followed by a momentary reset of the assigned value(s).
rSEt-1 Setpoint 1 Reset	Resets setpoint 1 output.
rSEt-2 Setpoint 2 Reset	Resets setpoint 2 output.
rSEt-12 Setpoint 1 and 2 Reset	Reset both setpoint 1 and 2 outputs.

## FILTER SETTING

FIlteR  0 1 2 3

If the displayed temperature is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## USER INPUT ASSIGNMENT

U-ASn  HI HI-LO  
LO dSP

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, display hold, or print and reset is selected in the User Input Function menu.

## 5.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-SEC)

### MAX DISPLAY ENABLE

HI-En    NO    YES  
 NO

Enables the Maximum Display Capture capability.

### MAX CAPTURE DELAY TIME

HI-t    00 to 9999 sec.  
 20

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN DISPLAY ENABLE

LO-En    NO    YES  
 NO

Enables the Minimum Display Capture capability.

### MIN CAPTURE DELAY TIME

LO-t    00 to 9999 sec.  
 20

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

FCS    NO    YES  
 NO

Select YES to perform any of the Factory Service Operations shown below.

### RESTORE FACTORY DEFAULT SETTINGS

Code    66  
 66

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rESEt and then return to Code 00. Press SEL button to exit the module.

Pressing both the SEL and the RST button on power-up will also load the factory settings and display rESEt. This allows operation in the event of a memory failure or corrupted data.

### CALIBRATION

Code    48  
 48

The CUB5RT uses stored resistance calibration values to provide accurate temperature measurements. Over time, the electrical characteristics of the components inside the meter could slowly change. The result is that the stored calibration values may no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the CUB5RT involves a resistance calibration. Allow 30 minute warm up before performing any calibration related procedure. The following procedures should be performed at an ambient temperature of 15 to 35 °C (59 to 95 °F).

Calibration should only be performed by individuals experienced in calibrating electronic equipment.

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the CUB5RT.

### 10 OHM RTD Range Calibration

1. Set the Input Range Jumper to 10 ohm.
2. With the display at Code 48, press and hold the SEL button for 2 seconds. Unit will display rRL NO.
3. Press the RST button. Display reads rRL r 00.
4. Press the SEL button. Display reads 00r.
5. Apply a direct short to terminals INP+, EXC, and COMM using a three wire link. Press SEL. Display reads rRLr for about 15 seconds.
6. When the display reads 150r, apply a precision resistance of 15 ohms (with an accuracy of 0.01% or better) to terminals INP+, EXC, and COMM using a three wire link. Press SEL. Display reads rRLr for about 15 seconds.
7. When display reads rRL NO, press the SEL button to exit calibration, or proceed to the 100 ohm RTD Range Calibration.

### 100 OHM RTD Range Calibration

1. Set the Input Range Jumper to 100 ohm.
2. With the display at Code 48, press and hold the SEL button for 2 seconds. Unit will display rRL NO.
3. Press the RST button until the display reads rRL r 000.
4. Press the SEL button. Display reads 00r.
5. Apply a direct short to terminals INP+, EXC, and COMM using a three wire link. Press SEL. Display reads rRLr for about 15 seconds.
6. When the display reads 3000r, apply a precision resistance of 300 ohms (with an accuracy of 0.01% or better) to terminals INP+, EXC, and COMM using a three wire link. Press SEL. Display reads rRLr for about 15 seconds.
7. When display reads rRL NO, press the SEL button to exit calibration.

### RESISTANCE DISPLAY MODE

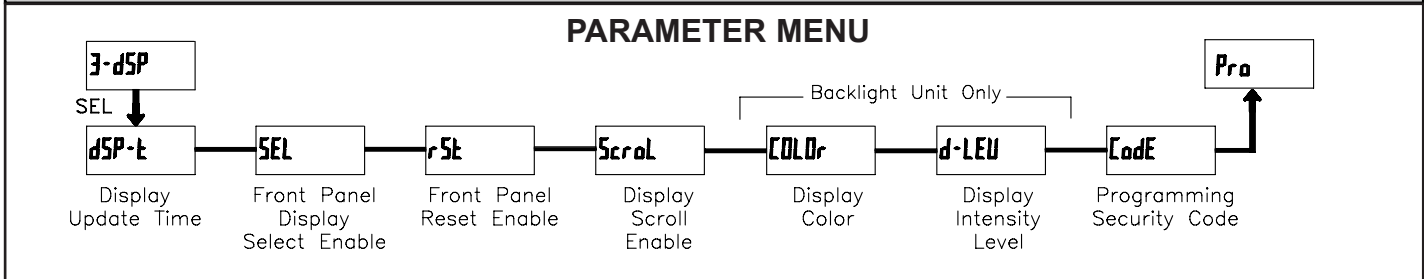

Code    85  
 85

Entering Code 85 will place the CUB5RT in a resistance display mode. This mode is useful for diagnostic purposes before and after calibration, or to display the measured resistance of a connected RTD probe. If the RTD type is set for r421 with the jumper set to the 10 ohm position, the display will read resistance in 0000 ohms resolution. For all other RTD types, with the jumper in the 100 ohm position, the display will read in 000 ohms resolution.

Re-entering code 85 toggles the display back to the temperature display mode without having to remove power from the meter. If power is removed, the display always returns to the temperature display mode when power is reapplied.

# 5.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

## DISPLAY UPDATE TIME

0.5 1 2 seconds

This parameter sets the display update time in seconds.

## DISPLAY INTENSITY LEVEL (BACKLIGHT UNIT ONLY)

1 to 5

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed. This parameter is active for backlight units only.

## FRONT PANEL DISPLAY SELECT ENABLE (SEL)

YES NO

The YES selection allows the SEL button to toggle through the enabled displays.

## PROGRAMMING SECURITY CODE

000 to 999

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

## FRONT PANEL RESET ENABLE (RST)

NO LO dSP  
HI HI-LO

This selection allows the RST button to reset the selected value(s).

## DISPLAY SCROLL ENABLE

YES NO

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds.

## DISPLAY COLOR (BACKLIGHT UNIT ONLY)

rEd grn

Enter the desired display color, red or green. This parameter is active for backlight units only.

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at CodE prompt *
		100-999	CodE prompt	With correct code entry at CodE prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	CodE prompt	With correct code entry at CodE prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

# 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

The Setpoint Output Parameters are only active when an optional output module is installed in the meter.

## SETPOINT SELECT

Enter the setpoint (output) to be programmed. The *n* in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to *SPSEL*. Repeat steps for each setpoint to be programmed. Select *NO* to exit the module. The number of setpoints available is setpoint output card dependent.

## SETPOINT 2 ENABLE

Select *YES* to enable Setpoint 2 and access the setup parameters. If *NO* is selected, the unit returns to *SPSEL* and setpoint 2 is disabled.

## SETPOINT ACTION

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bL = High Acting, with balanced hysteresis
- LO-bL = Low Acting, with balanced hysteresis
- HI-Ub = High Acting, with unbalanced hysteresis
- LO-Ub = Low Acting, with unbalanced hysteresis

## SETPOINT VALUE

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

## HYSTERESIS VALUE

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

## ON TIME DELAY

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

## OFF TIME DELAY

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

## OUTPUT RESET ACTION

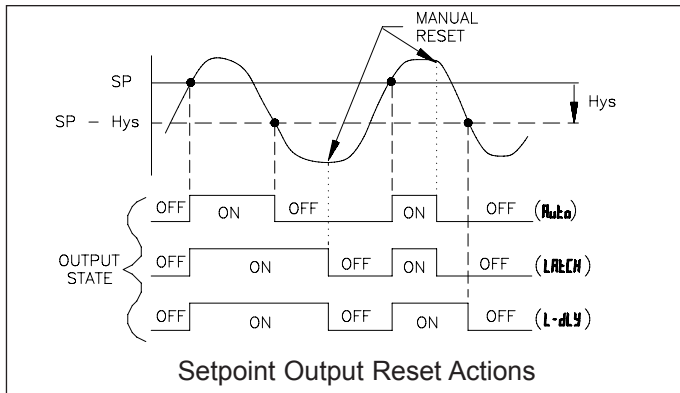

Enter the reset action of the output. See figure for details.

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle.

When the user input or **RST** button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dLY** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dLY** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

### STANDBY OPERATION

**NO YES**

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and OutputReset Action.

### PROBE BURN-OUT ACTION

**OFF ON**

Enter the probe burn-out action. In the event of a temperature probe failure (open or short), the output can be programmed to be on or off.

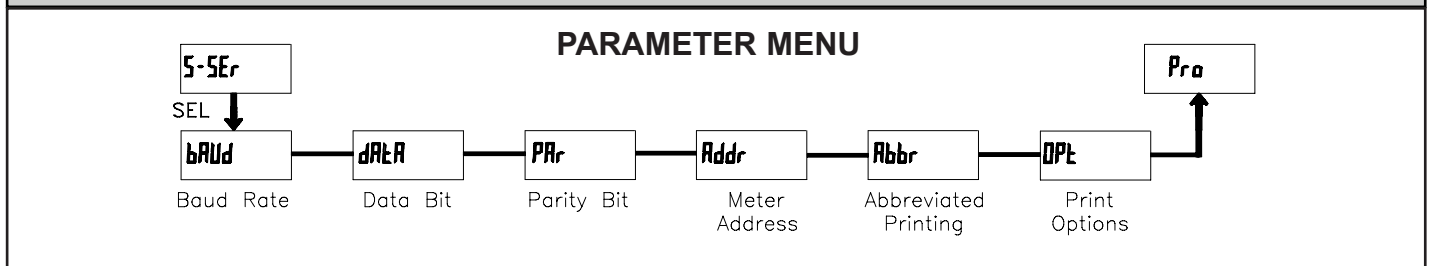

### CHANGE DISPLAY COLOR w/OUTPUT STATE

**NO YES**

This parameter enables the backlight CUB5 to switch the backlight color when the output state changes. This parameter is only active for the backlight version.

## 5.5 MODULE 5 - SERIAL SETUP PARAMETERS (5-5Er)

The Serial Setup Parameters are only active when the optional RS232 or RS485 serial communications module is installed in the meter. Refer to the CUB5COM bulletin for complete details on CUB5 serial communications.

# MODEL PAXLTC - PAX LITE THERMOCOUPLE METER

- PROGRAMMABLE TC TYPE (T, E, J, K, R, S, B, N or mV SCALE)
- CONFORMS TO ITS-90 STANDARDS
- SELECTABLE °F OR °C WITH 0.1 OR 1 DEGREE DISPLAY RESOLUTION
- STATE-OF-THE-ART DIGITAL ELECTRONICS FOR GREATER ACCURACY AND RELIABILITY
- FULL 4-DIGIT, HIGH VISIBILITY, 0.56" (14.2 mm) HIGH RED LED DISPLAY
- PROGRAMMABLE TEMPERATURE OFFSET
- PROGRAMMABLE DIGITAL FILTERING ENHANCES STABILITY
- PEAK/VALLEY (HI/LO READING) MEMORY
- NEMA 4X/IP65 SEALED FRONT BEZEL
- CUSTOM UNITS OVERLAY WITH BACKLIGHT

## GENERAL DESCRIPTION

The Pax Lite Thermocouple Meter accepts inputs from standard thermocouples and precisely linearizes them. A full 4-digit display accommodates a wide range of temperature inputs. The unit automatically compensates for cold junction, NBS linearity and the meter's zero and span.

The meter features a readout choice of either Fahrenheit or Celsius with 0.1 or 1 degree resolution. English Style display prompts and front panel buttons aid the operator through set-up and operation. With a few simple steps the unit can be used as a millivolt meter by selecting "mV" for thermocouple type. This mode is useful in monitoring and displaying the actual voltage produced at the thermocouple probe junction and as an aid in troubleshooting for a faulty thermocouple probe.

The meter provides a Peak (HI) and Valley (LO) reading memory with selectable capture delay time. The capture delay is used to prevent detection of false Peak or Valley readings that may occur during start-up or unusual process events. The Peak and Valley readings are stored at power-down to allow monitoring the process limits over any length of time (shifts, days, etc.).

Programmable digital filtering enhances the stability of the reading. All set-up data is stored in EEPROM, which will hold data for a minimum of 10 years without power. The meter has several built-in diagnostic functions to alert operators of any malfunction.

Extensive testing of noise interference mechanisms and full burn-in makes the indicator extremely reliable in industrial environments. The front bezel meets NEMA 4X/IP65 requirements for wash down applications.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired. Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Read complete instructions prior to installation and operation of the unit.**

**CAUTION: Risk of electric shock.**

## DEFINITION OF TERMS

### INSTALLATION CATEGORY (overvoltage category) I:

Signal level, special equipment or parts of equipment, telecommunication, electronic, etc. with smaller transient overvoltages than Installation Category (overvoltage category) II.

### INSTALLATION CATEGORY (overvoltage category) II:

Local level, appliances, portable equipment, etc. with smaller transient overvoltages than Installation Category (overvoltage category) III.

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 4-digit, 0.56" (14.2 mm) high LED, minus sign displayed for negative temperatures.  
**Overrange/Underrange Input:** Flashing "OL/L" or "UL/L"  
**Overrange/Underrange Display:** "... " or "-... "
- POWER:** 85 to 250 VAC, 50/60 Hz, 6 VA  
**Isolation:** 2300 Vrms for 1 min. between input and supply (300 V working voltage)
- CONTROLS:** Three front panel push buttons for meter set-up. Rear terminal input for disabling the front panel.
- THERMOCOUPLE TYPES:** T, E, J, K, R, S, B, N or mV scale
- RESOLUTION:** 1 degree for all types, or 0.1 degree for T, E, J, K and N only
- THERMOCOUPLE RANGE AND ACCURACY:** All errors include NBS conformity, cold junction effect and A/D conversion errors at 23°C after 60 minutes warm-up. Relative Humidity less than 85%.

TC TYPE	RANGE	ACCURACY	WIRE COLOR
T	-200 to +400°C -328 to +752°F	0.8°C 1.4°F	blue
E	-200 to +1000°C -328 to +1832°F	0.8°C 1.4°F	purple
J	-200 to +760°C -328 to +1400°F	0.8°C 1.4°F	white
K	-200 to +1250°C -328 to +2282°F	0.8°C 1.4°F	yellow
R	0 to +1768°C +32 to +3214°F	2.1°C 3.8°F	black
S	0 to +1768°C +32 to +3214°F	2.1°C 3.8°F	black
B	+150 to +1820°C +302 to +3308°F	2.3°C 4.1°F	grey
N	-200 to +1300°C -328 to +2372°F	0.8°C 1.4°F	orange
mV	-10.00 to +80.00 mV	0.01%	

- INPUT IMPEDANCE:** 20 MΩ, all types
- LEAD RESISTANCE EFFECT:** 20 μV/350 Ω  
**Max Input Voltage Protection:** 70 VDC continuous
- OPEN THERMOCOUPLE DETECTION:** Display Flashes: "OPEN"
- COLD JUNCTION COMPENSATION:** Automatic, 0.02 degree/degree.  
Disabled for linear mV scale.
- READING RATE:** 2.5 readings/second
- RESPONSE TIME:** 2 seconds to settle for step input (increases with programmable digital filtering)
- LOW FREQUENCY NOISE REJECTION:**  
**Normal Mode Rejection:** 45 dB @ 50/60 Hz (may be improved by programmable digital filtering)  
**Common Mode Rejection:** 120 dB, DC to 50/60 Hz
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** 0 to 50 °C  
**Storage Temperature Range:** -40 to 80 °C  
**Operating and Storage Humidity:** 85% max (non-condensing) from 0 to 50 °C  
**Span Drift:** 40 ppm/°C  
**Zero Drift:** 1 μV/°C  
**Altitude:** Up to 2000 meters.

## 15. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

UL Recognized Component, File # E179259, UL3101-1, CSA C22.2 No. 1010-1 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

#### Note:

1. *Criterion A: Normal operation within specified limits.*

- CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 indoor use. One piece bezel/case. Flame resistant. Panel gasket and mounting clip included.
- CONNECTIONS:** High compression cage-clamp terminal block  
Wire Strip Length: 0.3" (7.5 mm)  
Wire Gage: 30-14 AWG copper wire  
Torque: 4.5 inch-lbs (0.51 N-m) max.
- WEIGHT:** 0.65 lbs. (0.24 Kg)

# ACCESSORIES

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled in the programming.

Each meter is shipped with °F and °C overlay labels which can be installed into the meter's bezel display assembly.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 WIRING THE METER

## POWER WIRING

Primary AC power is connected to Terminals 1 and 2. To reduce the chance of noise spikes entering the AC line and affecting the indicator, the AC power should be relatively “clean” and within the specified limits. Drawing power from heavily loaded circuits or circuits which also power loads that cycle on and off, (contactors, relays, motors, machinery, etc.) should be avoided.

### AC Power

Terminal 1: VAC  
Terminal 2: VAC

## PROGRAM DISABLE INPUT WIRING

PGM.DIS. (Terminal 3) is a digital input that is active when connected to Comm (Terminal 4). Any form of mechanical switch or current sinking logic with less than 0.7 V saturation may be used. The use of shielded cable is recommended. Follow the EMC Installation Guidelines for shield connection.

## SIGNAL WIRING (TC SENSOR)

Remove power and connect the negative thermocouple lead (always red) to TC- (Terminal 6) and the positive lead to TC+ (Terminal 5). Be certain that connections are clean and tight. If the thermocouple probe is to be mounted away from the meter, thermocouple extension grade wire must be used (copper wire will not work). Use the correct type and observe the correct polarity. Always refer to the sensor manufacturer's instructions for probe wiring connections, if available. For multi-probe temperature averaging applications, two or more thermocouple probes may be connected at the meter. (Always use the same type.) In order to minimize the chances of coupling noise into the wires and subsequently causing bouncy and erroneous readings, proper guidelines for thermocouple wire routing must be followed.

### Thermocouple

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly

grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC# FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward # 28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC# LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## 3.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

KEY	DISPLAY MODE OPERATION	PROGRAMMING MODE OPERATION
PAR	Access Programming Mode or Display Input Reading	Store selected parameter and index to next parameter
▲	Display Peak (HI) Reading	Increment value or change selection
▼	Display Valley (LO) Reading	Decrement value or change selection

### PEAK/VALLEY DETECTION

The meter will automatically record the highest input reading (peak) and the lowest input reading (valley) for later recall. These values are stored at power-down to allow monitoring the process limits over any length of time (shifts, days, etc.). A selectable capture delay time is used to prevent detection of false peak or valley readings caused by sudden short spikes or unusual process events.

The peak and valley readings can be viewed and reset using the front panel keys as described below.

View Peak, Valley and Input readings:

- To view Peak, press ▲. Meter displays **H I** followed by the Peak reading.
- To view Valley, press ▼. Meter displays **L V** followed by the Valley reading.
- To view Input, press **PAR**. Meter displays **INPt** followed by the current Input reading.

*Note: The decimal point to the right of digit 1 flashes while the peak or valley reading is displayed.*

Reset Peak and/or Valley to the current Input reading:

To reset Peak and Valley, press ▲ and ▼ simultaneously.

To reset Peak only, press and hold ▲ then press **PAR**.

To reset Valley only, press and hold ▼ then press **PAR**.

In each case, the meter displays **rSEt** followed by the current Input reading.

# 4.0 PROGRAMMING THE METER

## PROGRAMMING SEQUENCE

The Thermocouple Meter has up to seven programmable parameters that are entered in the sequence shown above, using the front panel push buttons. Depending on the thermocouple type selected, some parameters are not applicable and are bypassed in the sequence.

The last programming step offers the choice of entering calibration mode. From this mode, the user can restore the meter to factory default settings, or recalibrate the signal input and cold junction temperature if necessary. To prevent inadvertent entries, an access code must be keyed-in to perform any operations in calibration mode.

*Note: Programming mode can be locked out using the Program Disable input terminal. With the PGM.DIS. terminal connected to COMM, the meter displays "L0C" when the PAR key is pressed, and will not enter programming mode.*

### PROGRAMMING MODE ENTRY

Press the **PAR** key to enter Programming Mode. The meter briefly displays **Prø** followed by the first programming parameter described below.

### PROGRAMMING MODE TIMEOUT

The Programming Mode has an automatic time out feature. If no keypad activity is detected for approximately 60 seconds, the meter automatically exits Programming Mode. The meter briefly displays **End** and returns to the normal display mode. When automatic timeout occurs, any changes that were made to the parameter currently being programmed will not be saved.

### PROGRAMMING PARAMETERS

In Programming Mode, the display alternates between the parameter and the current selection or value for that parameter. The dual display with arrows is used below to illustrate the alternating display. The selection choices or value range for each parameter is shown to the right of the alternating display.

#### THERMOCOUPLE TYPE

SELECTION	TC TYPE	SELECTION	TC TYPE
tc-t	T	tc-S	S
tc-E	E	tc-b	B
tc-d	J	tc-n	N
tc-K	K	U0L t	mV indicator
tc-r	R		

Select the thermocouple type by pressing the arrow keys (▲ or ▼) to sequence through the selection list. When the desired selection is displayed, press the **PAR** key to save the selection and advance to the next parameter. Refer to the thermocouple range and accuracy specification for additional TC information.

#### TEMPERATURE SCALE

Select the desired temperature scale by pressing the up or down arrow keys. This setting does not change the Custom Units Overlay display (if installed). Press the **PAR** key to save the selection and advance to the next parameter.

#### DECIMAL POINT POSITION

Select the decimal point position by pressing the up or down arrow keys. This sets the display resolution to 1 or 0.1 degree. This parameter is not available for thermocouple types R, S and B, where the display resolution is always 1 degree. When mV indicator mode is selected for thermocouple type, the display resolution is fixed at 0.01 mV (10 µV).

Press the **PAR** key to save the selection and advance to the next parameter.

#### TEMPERATURE DISPLAY OFFSET

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors or errors due to variances in probe placement, or to adjust the readout to a reference thermometer. Set the desired display offset value by pressing (and/or holding) the up or down arrow keys. When the desired offset value is displayed, press the **PAR** key to save the selection and advance to the next parameter. The display resolution for the offset value is the same as the decimal point position programmed above. The display offset is not available when mV indicator mode is selected for thermocouple type.

#### DIGITAL FILTERING

This parameter sets the amount of digital filtering applied to the input signal. If the temperature display is difficult to read due to small variations or noise, increased levels of filtering will help to stabilize the display. Although the digital filter features a "moving window" to help minimize response time, higher levels of filtering will result in slightly longer response times.

- 0 - no digital filtering
- 1 - normal filtering
- 2 - increased filtering
- 3 - maximum filtering

Set the desired level of input filtering by pressing the up or down arrow keys. Press the **PAR** key to save the selection and advance to the next parameter.

#### PEAK (HI)/ VALLEY (LO) CAPTURE DELAY TIME

When the Input display is above the present HI value or below the present LO value for the entered delay time, the meter will capture the Input display as the new HI or LO reading. A delay time helps to avoid false captures of sudden short spikes or Input display variations that may occur during start-up.

Set the desired capture delay time by pressing the up or down arrow keys. Press the **PAR** key to save the selection and advance to the next parameter.

## UNITS LABEL BACKLIGHT

The Units Label Kit Accessory contains a sheet of custom unit overlays, which can be installed in the meter bezel display assembly. The unit of measure for the meter display is then visible when the label backlight is illuminated. The two most commonly used temperature unit labels (°F and °C) are supplied with the meter. Press the up or down arrow keys to select whether the units label backlight is illuminated. Press the **PAR** key to save the selection and advance to the next parameter.

## PROGRAMMING MODE EXIT

Before exiting Programming Mode, the meter offers the choice of entering Calibration Mode. To exit Programming Mode without entering Calibration Mode, select **NO** and press the **PAR** key. The meter briefly displays **End** and returns to the normal display mode. All programmed selections are now transferred to non-volatile memory and are retained if power is removed from the meter.

(If power loss occurs during Programming Mode, verify parameter changes and reprogram, if necessary, when power is restored.)

# 5.0 CALIBRATING THE METER

## CALIBRATION MODE

To enter Calibration Mode, select **CAL <> YES** at the end of Programming Mode, and press the **PAR** key. In Calibration Mode, the user can restore the meter to factory default settings or recalibrate the signal input if necessary.

To prevent inadvertent entries, an access code must be entered to perform any operation in Calibration Mode. Upon entering Calibration Mode, the meter initially displays Code 50. Press the up or down arrow keys to select the access code for the desired operation. If an access code other than those shown below is entered, the meter exits Calibration Mode and returns to normal display mode.

## FACTORY SETTINGS

The factory settings for the programming parameters are shown in the previous section in the alternating display illustrations. All programming parameters can be restored to the factory default settings by entering the access Code 66 and pressing the **PAR** key. The meter briefly displays **r5E** and then returns to Code 50. This procedure resets only parameters that are accessed through Programming Mode. The Calibration Mode settings (input calibration levels) are not affected.

## METER INPUT CALIBRATION

The meter has been fully calibrated at the factory. If the meter appears to be indicating incorrectly or inaccurately, refer to the troubleshooting section before attempting this procedure. When re-calibration is required (*generally every 2 years*), the procedure should only be performed by qualified technicians using appropriate equipment. A precision thermometer (RTD, thermistor or similar type with an accuracy of ±0.3° C) and an accurate voltage source (0.01%) are required. The procedure consists of setting the cold junction temperature and applying accurate voltages to the meter input in a series of three steps. Allow a 60-minute warm-up before starting calibration.

## COLD JUNCTION TEMPERATURE CALIBRATION

1. Connect a calibrated thermocouple (types T, E, J, K or N only) to the panel meter. Select the thermocouple type used in programming.
2. Connect the reference thermometer to the measuring end of the thermocouple. The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (As an alternative, the PAXLTC thermocouple probe may be placed in a calibration bath of known temperature.)
3. From the normal indicator display mode, compare the display temperature to that of the reference thermometer. Allow 10 minutes for the temperature to equalize. The meter and the reference thermometer should agree to within 1° F (0.6° C).
4. If cold junction re-calibration is necessary (temperature out of tolerance), enter meter calibration mode and enter access Code 48. The meter display will alternate between **CdC** and the old cold junction reading. At this point, key-in the new cold junction temperature according to the formula:

### WHERE:

New Cold Junction Reading = Old Cold Junction Reading + Difference  
(Difference = Reference Thermometer Temperature - Meter Display Temperature)

5. Press **PAR**. The meter briefly displays **----** to acknowledge the new cold junction value.

## VOLTAGE CALIBRATION

Following cold junction calibration, the display **uCAL <> YES/NO** appears. Enter **YES** if input voltage calibration is desired. If **NO** is entered, the meter exits calibration and returns to normal display mode.

DISPLAY	PARAMETERS	DESCRIPTION/COMMENT
00u	0.000 mV	Apply 0.000 mV, wait 20 seconds, press <b>PAR</b> .
300u	30.000 mV	Apply 30.000 mV, wait 20 seconds, press <b>PAR</b> .
600u	60.000 mV	Apply 60.000 mV, wait 20 seconds, press <b>PAR</b> .

The meter briefly displays **End** and returns to the normal display mode. Calibration is now complete.

It is recommended to check calibration by selecting mV indication mode for thermocouple type (**TYPE <> uDL**) and verifying unit accuracy at various points over the range of the meter (-10 to +80 mV).

## TROUBLESHOOTING

The majority of all problems with the meter can be traced to improper connections or improper programming set-ups. Be sure all connections are clean and tight and check the programming set-ups for correct data.

For further technical assistance, contact technical support at the appropriate company numbers listed.

PROBLEM	POSSIBLE CAUSE	REMEDIES
NO DISPLAY	1. Power off, improperly connected, or brown-out.	1a. Check wiring. 1b. Verify power.
"EEEE" IN DISPLAY	1. Program data error.	1. Press <b>PAR</b> and check data set-ups.
"..." or "-..." IN DISPLAY	1. Input display out of range. 2. Loss of data set-ups.	1a. Change display resolution to "1" degree. 1b. Reduce offset value. 2a. Check data set-ups. 2b. Check for electrical disturbance. 2c. Disconnect and reconnect power.
DISPLAY WANDERS	1. Loss of data set-ups.	1a. Check data set-ups. 1b. Disconnect and reconnect power. 1c. Check for electrical disturbance.
JITTERY DISPLAY	1. Electrical "Noise" in process or sensor lines. 2. Process inherently unstable. 3. Corroded or dirty thermocouple wire connections.	1a. Increase digital filtering. 1b. Re-route sensor wires. 2. Dampen process to eliminate oscillations. 3. Clean and tighten connections.
"OPEN" IN DISPLAY	1. Probe unconnected. 2. Broken or burnout probe.	1. Connect probe. 2. Repair or obtain new probe.
"OL OL" IN DISPLAY	1. Excessive positive probe temperature.	1. Reduce temperature.
"UL UL" IN DISPLAY	1. Excessive negative probe temperature.	1. Increase temperature.

# MODEL PAXLRT - PAX LITE RTD METER

- ACCEPTS STANDARD 3-WIRE 100 Ω RTD SENSORS (ALPHA = 0.00385 or ALPHA = 0.00392)
- CONFORMS TO ITS-90 STANDARDS
- SELECTABLE °F OR °C WITH 0.1 OR 1 DEGREE DISPLAY RESOLUTION
- STATE-OF-THE-ART DIGITAL ELECTRONICS FOR GREATER ACCURACY AND RELIABILITY
- FULL 4-DIGIT, HIGH VISIBILITY, 0.56" (14.2 mm) HIGH RED LED DISPLAY
- PROGRAMMABLE TEMPERATURE OFFSET
- PROGRAMMABLE DIGITAL FILTERING
- PEAK/VALLEY (HI/LO READING) MEMORY
- NEMA 4X/IP65 SEALED FRONT BEZEL
- CUSTOM UNITS OVERLAY WITH BACKLIGHT

## GENERAL DESCRIPTION

The Pax Lite RTD Meter accepts standard RTD inputs and precisely linearizes them into temperature readings. A full 4-digit display accommodates a wide range of temperature inputs. State-of-the-art digital circuitry virtually eliminates errors due to drift.

The meter features a readout choice of either Fahrenheit or Celsius with 0.1 or 1 degree resolution. English Style display prompts and front panel buttons aid the operator through set-up and operation. Programmable digital filtering enhances the stability of the reading. All set-up data is stored in EEPROM, which will hold data for a minimum of 10 years without power.

The meter provides a Peak (HI) and Valley (LO) reading memory with selectable capture delay time. The capture delay is used to prevent detection of false Peak or Valley readings that may occur during start-up or unusual process events. The Peak and Valley readings are stored at power-down to allow monitoring the process limits over any length of time (shifts, days, etc.).

The meter has several built-in diagnostic functions to alert operators of any malfunction. Extensive testing of noise interference mechanisms and full burn-in makes the meter extremely reliable in industrial environments. The front bezel meets NEMA 4X/IP65 requirements for wash down applications.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired. Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Risk of Danger**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DEFINITION OF TERMS

### INSTALLATION CATEGORY (overvoltage category) I:

Signal level, special equipment or parts of equipment, telecommunication, electronic, etc. with smaller transient overvoltages than Installation Category (overvoltage category) II.

### INSTALLATION CATEGORY (overvoltage category) II:

Local level, appliances, portable equipment, etc. with smaller transient overvoltages than Installation Category (overvoltage category) III.

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5" (127) W.

# GENERAL METER SPECIFICATIONS

- DISPLAY:** 4-digit, 0.56" (14.2 mm) high LED, minus sign displayed for negative temperatures.  
**Overrange/Underrange Input:** Flashing "OL OL" or "UL UL"  
**Overrange/Underrange Display:** "... ." or "-. . ."
- POWER:** 85 to 250 VAC, 50/60 Hz, 6 VA  
**Isolation:** 2300 Vrms for 1 min. between input and supply (300 V working voltage)
- CONTROLS:** Three front panel push buttons for meter set-up. Rear terminal input for disabling the front panel.
- RESOLUTION:** 0.1 or 1 degree
- RANGE:** Decimal Point Dependent  
0.1° res: -199.9° to 850.0 °C (-199.9° to 999.9 °F);  
1° res: -200° to 850 °C (-328° to 1562 °F)
- OPEN/SHORTED RTD DETECTION:** Display flashes: "OPEN" or "SHORT"
- LEAD RESISTANCE EFFECT:** 20 Ω max., 2.5 °C/Ω error for V exc. and common lead unbalance
- ACCURACY:** 0.3 °C, @ 23 °C and 30 min. warm-up
- READING RATE:** 2.5 readings/second
- RESPONSE TIME:** 2 seconds to settle for step input (increases with programmable digital filtering)
- LOW FREQUENCY NOISE REJECTION:**  
**Normal Mode Rejection:** 40 dB @ 50/60 Hz (may be improved by programmable digital filtering)  
**Common Mode Rejection:** 120 dB, DC to 50/60 Hz
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
UL Recognized Component, File # E179259, UL61010-1, CSA C22.2 No. 61010-1 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

## 13. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 50 °C

**Storage Temperature Range:** -40 to 80 °C

**Operating and Storage Humidity:** 85% max (non-condensing) from 0 to 50 °C

**Span Drift:** 50 ppm/ °C

**Zero Drift:** 0.001 °C/°C

**Altitude:** Up to 2000 meters.

14. **CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 indoor use. One piece bezel/case. Flame resistant. Panel gasket and mounting clip included.

15. **CONNECTIONS:** High compression cage-clamp terminal block

Wire Strip Length: 0.3" (7.5 mm)

Wire Gage: 30-14 AWG copper wire

Torque: 4.5 inch-lbs (0.51 N-m) max.

16. **WEIGHT:** 0.65 lbs. (0.24 Kg)

# ACCESSORIES

## UNITS LABEL KIT (PAXLBK)

Each meter has a units indicator with backlighting that can be customized using the Units Label Kit. The backlight is controlled in the programming.

Each meter is shipped with °F and °C overlay labels which can be installed into the meter's bezel display assembly.

# 1.0 INSTALLING THE METER

## Installation

The PAX meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

# 2.0 WIRING THE METER

## POWER WIRING

Primary AC power is connected to Terminals 1 and 2. To reduce the chance of noise spikes entering the AC line and affecting the indicator, the AC power should be relatively "clean" and within the specified limits. Drawing power from heavily loaded circuits or circuits that also power loads that cycle on and off (contactors, relays, motors, machinery, etc.) should be avoided.

### AC Power

Terminal 1: VAC

Terminal 2: VAC

## PROGRAM DISABLE INPUT WIRING

PGM.DIS. (Terminal 3) is a digital input that is active when connected to RTD- (Terminal 6). Any form of mechanical switch or current sinking logic with less than 0.7 V saturation may be used. The use of shielded cable is recommended. Follow the EMC Installation Guidelines for shield connection.

## SIGNAL WIRING (RTD SENSOR)

RTD sensors are used in applications where a high degree of accuracy is required. Most RTD sensors available are the 3-wire type. The 3rd additional wire is a sense lead for canceling the effects of lead resistance at the probe. The sense lead connects to Terminal 5 (RTD+), the common lead to Terminal 6 (RTD-), and the excitation lead to Terminal 4 (+ Excitation). The excitation and sense leads are generally the same color because they are functionally the same and may be interchanged at the meter. Four wire sensors have an additional sense lead connected (at the probe) to the common lead. Leave the extra sense lead disconnected when using a four wire probe with the PAXLRT meter. Always refer to the sensor manufacturer's instructions for probe wiring connections, if available. Two wire RTD sensors may be used with the PAXLRT by shorting Terminal 4 to Terminal 5, if the distance between sensor and meter is less than 30 feet. The total lead resistance can be used to predict the temperature error for 2-wire sensors, according to 2.5°C/Ω of lead resistance.

Note: Extended cable runs can be made provided the lead resistance is less than 20 Ω/lead and the resistance is equal in each lead.

### 3-Wire RTD

### 2-Wire RTD

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder). Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be mounted in a metal enclosure, which is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## 3.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

KEY	DISPLAY MODE OPERATION	PROGRAMMING MODE OPERATION
PAR	Access Programming Mode or Display Input Reading	Store selected parameter and index to next parameter
▲	Display Peak (HI) Reading	Increment value or change selection
▼	Display Valley (LO) Reading	Decrement value or change selection

### PEAK/VALLEY DETECTION

The meter will automatically record the highest input reading (peak) and the lowest input reading (valley) for later recall. These values are stored at power-down to allow monitoring the process limits over any length of time (shifts, days, etc.). A selectable capture delay time is used to prevent detection of false peak or valley readings caused by sudden short spikes or unusual process events.

The peak and valley readings can be viewed and reset using the front panel keys as described below.

View Peak, Valley and Input readings:

To view Peak, press ▲. Meter displays **H** followed by the Peak reading.

To view Valley, press ▼. Meter displays **L** followed by the Valley reading.

To view Input, press **PAR**. Meter displays **I** followed by the current Input reading.

*Note: The decimal point to the right of digit 1 flashes while the peak or valley reading is displayed.*

Reset Peak and/or Valley to the current Input reading:

To reset Peak and Valley, press ▲ and ▼ simultaneously.

To reset Peak only, press and hold ▲ then press **PAR**.

To reset Valley only, press and hold ▼ then press **PAR**.

In each case, the meter displays **rSEt** followed by the current Input reading.

# 4.0 PROGRAMMING THE METER

## PROGRAMMING SEQUENCE

The RTD Meter has seven programmable parameters that are entered in the sequence shown above, using the front panel push buttons.

The last programming step offers the choice of entering calibration mode. From this mode, the user can restore the meter to factory default settings or recalibrate the signal input if necessary. To prevent inadvertent entries, an access code must be keyed-in to perform any operations in calibration mode.

*Note: Programming mode can be locked out using the Program Disable input terminal. With the PGM.DIS. terminal connected to RTD-, the meter displays "LBC" when the PAR key is pressed, and will not enter programming mode.*

### PROGRAMMING MODE ENTRY

Press the **PAR** key to enter Programming Mode. The meter briefly displays **Pra** followed by the first programming parameter described below.

### PROGRAMMING MODE TIMEOUT

The Programming Mode has an automatic timeout feature. If no keypad activity is detected for approximately 60 seconds, the meter automatically exits Programming Mode. The meter briefly displays **End** and returns to the normal display mode. When automatic timeout occurs, any changes that were made to the parameter currently being programmed will not be saved.

### PROGRAMMING PARAMETERS

In Programming Mode, the display alternates between the parameter and the current selection or value for that parameter. The dual display with arrows is used below to illustrate the alternating display. The selection choices or value range for each parameter is shown to the right of the alternating display.

#### RTD TYPE

Select the RTD type by pressing the up or down arrow keys (▲ or ▼). When the desired selection is displayed, press the **PAR** key to save the selection and advance to the next parameter.

#### TEMPERATURE SCALE

Select the desired temperature scale by pressing the up or down arrow keys. This setting does not change the Custom Units Overlay display (if installed). Press the **PAR** key to save the selection and advance to the next parameter.

#### DECIMAL POINT POSITION

Select the decimal point position by pressing the up or down arrow keys. This sets the display resolution to 1 or 0.1 degree. Press the **PAR** key to save the selection and advance to the next parameter.

#### TEMPERATURE DISPLAY OFFSET

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors or errors due to variances in probe placement, or to adjust the readout to a reference thermometer. Set the desired display offset value by pressing (and/or holding) the up or down arrow keys. When the desired offset value is displayed, press the **PAR** key to save the selection and advance to the next parameter. The display resolution for the offset value is the same as the decimal point position programmed above.

### DIGITAL FILTERING

This parameter sets the amount of digital filtering applied to the input signal. If the temperature display is difficult to read due to small variations or noise, increased levels of filtering will help to stabilize the display. Although the digital filter features a "moving window" to help minimize response time, higher levels of filtering will result in slightly longer response times.

- 0 - no digital filtering
- 1 - normal filtering
- 2 - increased filtering
- 3 - maximum filtering

Set the desired level of input filtering by pressing the up or down arrow keys. Press the **PAR** key to save the selection and advance to the next parameter.

### PEAK (HI)/ VALLEY (LO) CAPTURE DELAY TIME

When the Input display is above the present HI value or below the present LO value for the entered delay time, the meter will capture the Input display as the new HI or LO reading. A delay time helps to avoid false captures of sudden short spikes or Input display variations that may occur during start-up.

Set the desired capture delay time by pressing the up or down arrow keys. Press the **PAR** key to save the selection and advance to the next parameter.

### UNITS LABEL BACKLIGHT

The Units Label Kit Accessory contains a sheet of custom unit overlays, which can be installed in the meter bezel display assembly. The unit of measure for the meter display is then visible when the label backlight is illuminated. The two most commonly used temperature unit labels (°F and °C) are supplied with the meter. Press the up or down arrow keys to select whether the units label backlight is illuminated. Press the **PAR** key to save the selection and advance to the next parameter.

### PROGRAMMING MODE EXIT

Before exiting Programming Mode, The meter offers the choice of entering Calibration Mode. To exit Programming Mode without entering Calibration Mode, select **NO** and press the **PAR** key. The meter briefly displays **End** and returns to the normal display mode. All programmed selections are now transferred to non-volatile memory and are retained if power is removed from the meter.

(If power loss occurs during Programming Mode, verify parameter changes and reprogram, if necessary, when power is restored.)

# 5.0 CALIBRATING THE METER

## CALIBRATION MODE

0 to 99

To enter Calibration Mode, select **CAL** <> **YES** at the end of Programming Mode, and press the **PAR** key. In Calibration Mode, the user can restore the meter to factory default settings or recalibrate the signal input if necessary.

To prevent inadvertent entries, an access code must be entered to perform any operation in Calibration Mode. Upon entering Calibration Mode, the meter initially displays Code 50. Press the up or down arrow keys to select the access code for the desired operation. If an access code other than those shown below is entered, the meter exits Calibration Mode and returns to normal display mode.

## FACTORY SETTINGS

The factory settings for the programming parameters are shown in the previous section in the alternating display illustrations. All programming parameters can be restored to the factory default settings by entering the access Code 66 and pressing the **PAR** key. The meter briefly displays **rSEt** and then returns to Code 50. This procedure resets only parameters that are accessed through Programming Mode. The Calibration Mode settings (input calibration levels) are not affected.

## METER INPUT CALIBRATION

The meter has been fully calibrated at the factory. If the meter appears to be indicating incorrectly or inaccurately, refer to the troubleshooting section before attempting this procedure. When re-calibration is required (*generally every 2 years*), the procedure should only be performed by qualified technicians using appropriate equipment. Resistance source accuracies of 0.02% or better are required.

The procedure consists of applying accurate signal levels to the meter input in a series of two steps. Allow a 30-minute warm-up period before starting calibration. To begin the input calibration, enter access Code 48 and press the **PAR** key.

### ENTER ZERO REFERENCE

Meter displays **0r**. Apply 0 ohms to the meter input by shorting Terminals 4, 5, and 6. Allow the meter to stabilize at least 20 seconds after shorting the terminals, and then press **PAR**.

### APPLY PRECISION RESISTANCE

Meter displays **300r**. Connect a precision 300 ohm resistor across Terminals 5 and 6. Terminals 4 and 5 remain shorted. (*Note: Be certain to short Terminals 4 and 5 at the resistor as shown in the drawing below. Shorting terminals may lead to incorrect calibration.*)

Allow the meter to stabilize at least 20 seconds after making the connections, and then press **PAR**. The meter briefly displays **End** and returns to the normal display mode. Calibration is now complete. It is recommended to check calibration by comparing the displayed temperature with a precision thermometer.

## TROUBLESHOOTING

The majority of all problems with the meter can be traced to improper connections or improper programming set-ups. Be sure all connections are clean and tight and check the programming set-ups for correct data.

For further technical assistance, contact technical support at the appropriate company numbers listed.

PROBLEM	POSSIBLE CAUSE	REMEDIES
NO DISPLAY	1. Power off, improperly connected, or brown-out.	1a. Check wiring. 1b. Verify power.
"EEEE" IN DISPLAY	1. Program data error.	1. Press <b>PAR</b> and check data set-ups.
"..." or "-..." IN DISPLAY	1. Input display out of range. 2. Loss of data set-ups.	1a. Change display resolution to "1" degree. 1b. Reduce offset value. 2a. Check data set-ups. 2b. Check for electrical disturbance. 2c. Disconnect and reconnect power.
DISPLAY WANDERS	1. Loss of data set-ups.	1a. Check data set-ups. 1b. Disconnect and reconnect power. 1c. Check for electrical disturbance.
JITTERY DISPLAY	1. Electrical "Noise" in process or sensor lines. 2. Process inherently unstable.	1a. Increase digital filtering. 1b. Re-route signal wires. 2. Dampen process to eliminate oscillations.
"OPEN" IN DISPLAY	1. Probe unconnected. 2. Broken or burnout probe. 3. Excessive probe temperature. 4. Input overload.	1. Connect probe. 2. Repair or obtain new probe. 3. Reduce temperature. 4. Check input levels.
"SHORT" IN DISPLAY	1. Input shorted.	1. Check input connections.

# MODEL PAXLT - PAX LITE TEMPERATURE METER

- THERMOCOUPLE AND RTD INPUTS
- CONFORMS TO ITS-90 STANDARDS

- 5 DIGIT, 0.56" HIGH RED LED DISPLAY
- DISPLAYS °C OR °F WITH 1° OR 0.1° RESOLUTION
- BACKLIGHT OVERLAYS INCLUDED (°C AND °F)
- MAX AND MIN READING MEMORY
- TC COLD JUNCTION COMPENSATION (ON/OFF)
- PROGRAMMABLE TEMPERATURE OFFSET
- PROGRAMMABLE USER INPUT
- DUAL 5 AMP FORM C RELAYS
- UNIVERSALLY POWERED
- NEMA 4X/IP65 SEALED FRONT BEZEL

## GENERAL DESCRIPTION

The PAXLT is a versatile meter that accepts a variety of thermocouple and RTD inputs and provides a temperature display in Celsius or Fahrenheit. The readout conforms to ITS-90 standards, with 1° or 0.1° resolution. The 5-digit display has 0.56" high digits with adjustable intensity. Backlight overlay labels for °F and °C are included.

The meter features a Maximum and Minimum reading memory, with programmable capture time. The capture time is used to prevent detection of false max or min readings which may occur during start-up or unusual process events. Either value can be displayed if desired. The display can be toggled manually or automatically between the selected values.

Other features include thermocouple cold junction compensation, display offset and a programmable user input to perform a variety of meter control functions. Two setpoint outputs are provided, each with a Form C relay. Output modes and setup options are fully programmable to suit a variety of control requirements.

The PAXLT can be universally powered from a wide range of AC or DC voltage. The meter has been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter

## SPECIFICATIONS

- DISPLAY:** 5 digit, 0.56" (14.2 mm) intensity adjustable Red LED
- POWER REQUIREMENTS:**  
**AC POWER:** 50 to 250 VAC 50/60 Hz, 12 VA  
**Isolation:** 2300 Vrms for 1 min. to all inputs and outputs  
**DC POWER:** 21.6 to 250 VDC, 6 W  
**DC Out:** +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC  
+24 VDC @ 50 mA if input voltage is less than 50 VDC
- READOUT:**  
**Display Range:** -19999 to 99999  
**Scale:** °F or °C  
**Resolution:** 1° or 0.1°  
**Response Time:** 500 msec min.  
**Display Overrange/Underrange Indication:** "....." / "-....."  
**Input Overrange/Underrange Indication:** *DL DL / UL UL*
- THERMOCOUPLE INPUTS:**  
**Input Impedance:** 20 MΩ  
**Max. Continuous Overvoltage:** 30 VDC

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXLT	TC/RTD Temperature Meter with dual Relay Output	PAXLT000

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.1" (53.4) H x 5.0" (127) W.

**Failed Sensor Indication: *DPE#***

TC TYPE	RANGE	ACCURACY @ 23°C ±°C *	ACCURACY @ 0 to 50°C ±°C *	WIRE COLOR	
				ANSI	BS 1843
T	-200 to 400°C -328 to 752°F	2.3	5.8	(+) blue (-) red	(+) white (-) blue
E	-200 to 871°C -328 to 1600°F	2.7	4.9	(+) purple (-) red	(+) brown (-) blue
J	-200 to 760°C -328 to 1400°F	1.9	4.3	(+) white (-) red	(+) yellow (-) blue
K	-200 to 1372°C -328 to 2502°F	2.3	5.8	(+) yellow (-) red	(+) brown (-) blue
R	-50 to 1768°C -58 to 3214°F	4.5	15.0	no standard	(+) white (-) blue
S	-50 to 1768°C -58 to 3214°F	4.5	15.0	no standard	(+) white (-) blue
B	200 to 1820°C 392 to 3308°F	9.1<540°C 4.5>540°C	42.6<540°C 15.0>540°C	no standard	no standard
N	-200 to 1300°C -328 to 2372°F	2.8	8.1	(+) orange (-) red	(+) orange (-) blue
C (W5/W26)	0 to 2315°C 32 to 4199°F	1.9	6.1	no standard	no standard
mV	-10.00 to 65.00	0.02 mV	0.08 mV	no standard	no standard

\*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy at 23°C and 15 to 75% RH environment; and Accuracy over a 0 to 50°C and 0 to 85% RH (non condensing) environment. Accuracy specified over the 0 to 50°C operating range includes meter tempo and cold junction tracking effects.

The specification includes the A/D conversion errors, linearization conformity, and thermocouple cold junction compensation. Total system accuracy is the sum of meter and probe errors. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

**5. RTD INPUTS:**

**Type:** 2, 3 or 4 wire

**Excitation Current:**

100 ohm range: 165 µA; 10 ohm range: 2.5 mA

**Lead Resistance:**

100 ohm range: 10 Ω/lead max.; 10 ohm range: 3 Ω/lead max.

Balanced Lead Resistance: Automatically compensated up to max per lead

Unbalanced Lead Resistance: Uncompensated

**Max. Continuous Overvoltage:** 30 VDC

**Failed Sensor Indication:** *DPE#* or *Shark*

RTD TYPE	RANGE	ACCURACY* @ 23°C	ACCURACY* @ 0 to 50°C	STANDARD
100 ohm Pt alpha = .00385	-200 to 850°C	0.4°C	1.6°C	IEC 751
100 ohm Pt alpha = .00392	-200 to 850°C	0.4°C	1.6°C	no official standard
120 ohm Nickel alpha = .00672	-80 to 260°C	0.2°C	0.5°C	no official standard
10 ohm Copper alpha = .00427	-100 to 260°C	0.4°C	0.9°C	no official standard

\*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy at 23°C and 15 to 75% RH environment; and Accuracy over a 0 to 50°C and 0 to 85% RH (non condensing) environment. Accuracy specified over the 0 to 50°C operating range includes meter tempo effects.

The specification includes the A/D conversion errors and linearization conformity. Total system accuracy is the sum of meter and probe errors. Accuracy may be improved by field calibrating the meter readout at the temperature of interest.

**6. USER INPUT:** Programmable input

Software selectable for active logic state: active low, pull-up (24.7 KΩ to +5 VDC) or active high, pull-down resistor (20 KΩ).

**Trigger levels:** V<sub>IL</sub> = 1.0 V max; V<sub>IH</sub> = 2.4 V min; V<sub>MAX</sub> = 28 VDC

**Response Time:** 10 msec typ.; 50 msec debounce (activation and release)

**7. MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programming parameters and max/min values when power is removed.

**8. OUTPUTS:**

**Type:** Dual Form C contacts

**Isolation to Sensor & User Input Commons:** 1400 Vrms for 1 min. Working Voltage: 150 Vrms

**Contact Rating:** 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)

**Life Expectancy:** 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads.

**Response Time:** Turn On or Off: 4 msec max.

**9. ENVIRONMENTAL CONDITIONS:**

**Operating temperature:** 0 to 50 °C

**Storage temperature:** -40 to 70 °C

**Operating and storage humidity:** 0 to 85% max. RH (non-condensing)

**Altitude:** Up to 2,000 meters

**10. CONNECTIONS:** High compression cage-clamp terminal block

**Wire Strip Length:** 0.3" (7.5 mm)

**Wire Gauge:** 30-14 AWG copper wire

**Torque:** 4.5 inch-lbs (0.51 N-m) max.

**11. CONSTRUCTION:** This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

**12. CERTIFICATIONS AND COMPLIANCES:**

Consult Factory.

**13. WEIGHT:** 10.4 oz. (295 g)

# 1.0 INSTALLING THE METER

## Installation

The PAX Lite meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

## Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## 2.0 SETTING THE JUMPER

### INPUT RANGE JUMPER (RTD ONLY)

This jumper is used to select the proper input range for the RTD probe being used (10 ohm or 100 ohm). For thermocouple inputs, this jumper has no effect and can be left in either position.

To access the jumper, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start on the other side latch.

## 3.0 WIRING THE METER

### WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.

- c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
  5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
    - Ferrite Suppression Cores for signal and control cables:
      - Fair-Rite # 0443167251 (RLC# FCOR0000)
      - TDK # ZCAT3035-1330A
      - Steward # 28B2029-0A0
    - Line Filters for input power cables:
      - Schaffner # FN610-1/07 (RLC# LFIL0000)
      - Schaffner # FN670-1.8/07
      - Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.
  6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
  7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
    - Snubber: RLC# SNUB0000.

### 3.1 POWER WIRING

**Power**

Terminal 1: VAC/DC +  
Terminal 2: VAC/DC -

### 3.2 INPUT SIGNAL WIRING

**CAUTION:** Sensor input common (Terminal 7) is NOT isolated from user common (Terminal 9). In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common and user common must be at protective earth ground potential. If not, hazardous live voltage may be present at the user input and user common terminals. Appropriate considerations must then be given to the potential of the sensor input common and the user common with respect to earth ground.

#### THERMOCOUPLE

#### 2-WIRE RTD

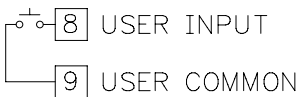

#### 3-WIRE RTD

### 3.3 USER INPUT WIRING

Terminal 8: User Input  
Terminal 9: User Common

**Current Sinking (Active Low Logic)**

**Current Sourcing (Active High Logic)**

### 3.4 SETPOINT (OUTPUT) WIRING

Terminal 10: NC 1  
Terminal 11: NO 1  
Terminal 12: Relay 1 Common  
Terminal 13: NC 2  
Terminal 14: NO 2  
Terminal 15: Relay 2 Common

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

BUTTON	DISPLAY MODE OPERATION
PAR	Access Programming Mode
SEL	Index display through enabled values
RST	Resets values (min/max) or outputs

PROGRAMMING MODE OPERATION
Store selected parameter and index to next parameter
Advance through selection list/select digit position in parameter value
Increment selected digit of parameter value

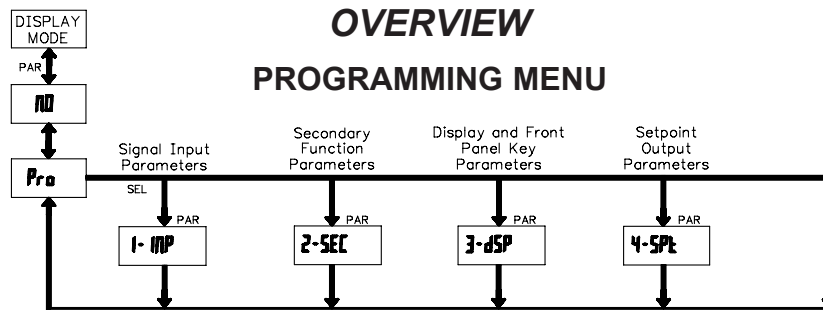

## OPERATING MODE DISPLAY DESIGNATORS

MAX - Maximum display capture value  
 MIN - Minimum display capture value

"SP1" - Indicates setpoint 1 output activated.  
 "SP2" - Indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (PAR BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** button. If it is not accessible, then it is locked by either a security code or a hardware lock.

## MODULE ENTRY (SEL & PAR BUTTONS)

The Programming Menu is organized into four modules. These modules group together parameters that are related in function. The display will alternate between **Pr a** and the present module. The **SEL** button is used to select the desired module. The displayed module is entered by pressing the **PAR** button.

## MODULE MENU (PAR BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr a**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL** and **RST** buttons are used to move through the selections/values for that parameter. Pressing the **PAR** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST** button increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will select the next digit to the left. Pressing the **PAR** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (PAR BUTTON)

The Programming Mode is exited by pressing the **PAR** button with **Pr a** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 5.1 MODULE 1 - INPUT SETUP PARAMETERS (1-1NP)

## INPUT TYPE

SELECTION	INPUT TYPE	SELECTION	INPUT TYPE
tc-t	T	tc-n	N
tc-E	E	tc-C	C
tc-J	J	u01t	mV
tc-K	K	Pt385	Platinum 385 100 Ω
tc-R	R	Pt392	Platinum 392 100 Ω
tc-S	S	N.672	Nickel 672 100 Ω
tc-b	B	Cu427	Copper 427 10 Ω

Select the thermocouple or RTD type used for the application. For RTDs, position the Input Range Jumper to match the RTD type (10Ω or 100Ω).

Selecting **u01t** displays a millivolt signal readout with 10 μV resolution.

## COLD JUNCTION COMPENSATION

SELECTION	DESCRIPTION
ON	ON
OFF	OFF

This parameter enables or disables internal cold junction compensation for thermocouples. For most applications, cold junction compensation should be enabled (**ON**). This parameter only appears for thermocouple input selections.

## TEMPERATURE SCALE

SELECTION	DESCRIPTION
OF	OF
OC	OC

Select the desired temperature scale. This selection applies for the Input, MAX and MIN displays. This parameter does not appear when mV or RTD resistance display is enabled.

## DISPLAY DECIMAL POINT

SELECTION	DESCRIPTION
0	0
00	00

Set the decimal point for the desired display resolution. This selection applies for the Input, MAX and MIN displays, and also affects the Setpoint and Display Offset values. For mV or RTD resistance displays, the decimal point location is fixed and this parameter does not appear.

## DISPLAY OFFSET VALUE

SELECTION	DESCRIPTION
- 99999 to 99999	0

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors, errors due to variances in probe placement or adjusting the readout to a reference thermometer.

## FILTER SETTING

SELECTION	DESCRIPTION
0 1 2 3	1

If the displayed temperature is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display.

Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

## FILTER BAND

SELECTION	DESCRIPTION
0 to 999	10

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

## USER INPUT FUNCTION

SELECTION	DESCRIPTION
NO	NO

DISPLAY MODE	DESCRIPTION
NO	No Function User Input disabled.
P-LOC	Program Mode Lock-out See Programming Mode Access chart (Module 3).
rESEt	Reset * Reset the assigned value(s) to the current input value.
d-HLD	Display Hold Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
d-SEL	Display Select * Advance once for each activation.
d-LEV	Display Intensity Level * Increase intensity one level for each activation.
rSE-1	Setpoint 1 Reset * Reset setpoint 1 output.
rSE-2	Setpoint 2 Reset * Reset setpoint 2 output.
rSE-12	Setpoint 1 and 2 Reset * Reset both setpoint 1 and 2 outputs.

\* Indicates Edge Triggered function. All others are Level Active functions.

## USER INPUT ASSIGNMENT

SELECTION	DESCRIPTION
HI HI-LO	LO dSP

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset or display hold is selected in the User Input Function menu.

## USER INPUT ACTIVE LEVEL

SELECTION	DESCRIPTION
HI LO	LO

Select whether the user input is configured as active low or active high.

## 5.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-5EE)

### MAX DISPLAY ENABLE

Enables the Maximum Display Capture capability.

### MAX CAPTURE DELAY TIME

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN DISPLAY ENABLE

Enables the Minimum Display Capture capability.

### MIN CAPTURE DELAY TIME

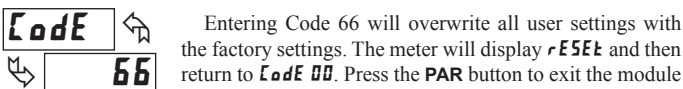

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

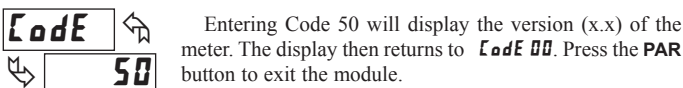

Select **YES** to perform any of the Factory Service Operations shown below.

#### RESTORE FACTORY DEFAULT SETTINGS

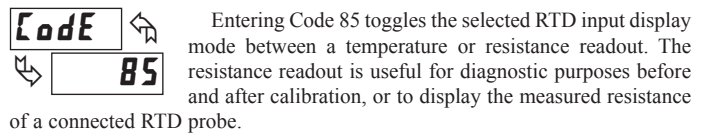

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display **rESEt** and then return to **CodE 00**. Press the **PAR** button to exit the module

#### VIEW MODEL AND VERSION DISPLAY

Entering Code 50 will display the version (x.x) of the meter. The display then returns to **CodE 00**. Press the **PAR** button to exit the module.

### TOGGLE RTD INPUT DISPLAY MODE

Entering Code 85 toggles the selected RTD input display mode between a temperature or resistance readout. The resistance readout is useful for diagnostic purposes before and after calibration, or to display the measured resistance of a connected RTD probe.

For RTD type **Lu427** (Input Range Jumper in 10Ω position), resistance is displayed in **0000** ohms resolution. For all other RTD types (100Ω position), resistance is displayed in **000** ohms resolution.

Upon entering Code 85, the meter displays either **dSP-t** or **dSP-r** to indicate temperature or resistance readout selected. The display then returns to **CodE 00**. Press the **PAR** button to exit the module.

### CALIBRATION

The PAXLT uses stored calibration values to provide accurate temperature measurements. Over time, the electrical characteristics of the components inside the meter could slowly change, with the result being that the stored calibration values may no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration for thermocouple inputs involves a voltage calibration and a cold junction calibration. It is recommended that both calibrations be performed. The voltage calibration must precede cold junction calibration.

Calibration of the meter should only be performed by persons experienced in calibrating electronic equipment. Allow a minimum 30 minute warm up before performing any calibration procedures. The following procedures should be performed at an ambient temperature of 15 to 35°C (59 to 95°F).

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the meter.

#### 10 OHM RTD Range Calibration

1. Set the Input Range Jumper to 10 ohm position.
2. With the display at **CodE 48**, press the **PAR** key. Unit displays **ERL 00**.
3. Press **SEL** to select 10 ohm range. Display reads **ERL r 10**.
4. Press **PAR**. Display reads **00r**.
5. Apply a direct short to terminals RTD (4), TC (6) and COMM (7) using a three wire link. Press **PAR**. Display reads **ERLE** for about 10 seconds.
6. When the display reads **150r**, apply a precision resistance of 15 ohms (with an accuracy of 0.01% or better) to terminals RTD, TC and COMM using a three wire link. Press **PAR**. Display reads **ERLE** for about 10 seconds.
7. When display reads **ERL 00**, press **PAR** twice to exit calibration and return to the normal display mode.

#### 100 OHM RTD Range Calibration

1. Set the Input Range Jumper to 100 ohm position.
2. With the display at **CodE 48**, press the **PAR** key. Unit displays **ERL 00**.
3. Press **SEL** twice to select 100 ohm range. Display reads **ERL r 100**.
4. Press **PAR**. Display reads **00r**.
5. Apply a direct short to terminals RTD (4), TC (6) and COMM (7) using a three wire link. Press **PAR**. Display reads **ERLE** for about 10 seconds.
6. When the display reads **3000r**, apply a precision resistance of 300 ohms (with an accuracy of 0.01% or better) to terminals RTD, TC and COMM using a three wire link. Press **PAR**. Display reads **ERLE** for about 10 seconds.
7. When display reads **ERL 00**, press **PAR** twice to exit calibration and return to the normal display mode.

### THERMOCOUPLE Voltage Calibration

1. Connect a precision DC voltage source with an accuracy of 0.01% or better to the TC and COMM terminals. Set the voltage source to zero.
2. With the display at **Code 48**, press the **PAR** key. Unit displays **RL 00**.
3. Press **SEL** until the display reads **RL 1c** to select thermocouple input.
4. Press **PAR**. Display reads **00u**.
5. With the voltage source set to zero, press **PAR**. Display reads **RLC** for about 6 seconds.
6. When the display reads **600u**, set the voltage source output to 60.000 mV. Press **PAR**. Display reads **RLC** for about 6 seconds.
7. When display reads **RL 00**, press **PAR** twice to exit calibration and return to the normal display mode. Proceed to Cold Junction Calibration.

### THERMOCOUPLE Cold Junction Calibration

1. The ambient temperature must be between 20°C and 30°C.
2. Connect a thermocouple (types T, E, J, K or N only) with an accuracy of 1°C or better to the meter.
3. Enter programming mode and verify the following settings in Module 1:

TYPE = thermocouple type connected to the meter  
 CJL = 00; SCALE = °C; dEPLt = 00; DFSEt = 00

4. Place the thermocouple in close thermal contact to a reference thermometer probe. (Use a reference thermometer with an accuracy of 0.25°C or better.) The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (A calibration bath of known temperature could be used in place of the thermometer.)
5. Compare the unit display with the reference temperature indicator (or calibration bath). If a difference of more than +/- 1.0°C exists, note the difference (CJ Error) and continue with cold junction calibration.  
 CJ Error = Reference Temperature - Unit Display
6. Enter programming mode and proceed through Module 2 to the Service Access Code. Select **Code 48** and press **PAR**. Unit displays **RL 00**. Press **RST** to select **CJL**.
7. Press **PAR**. Display reads **CJL** followed by the current cold junction value. Calculate a new cold junction value as follows:  
 New cold junction = Current cold junction + CJ Error (noted above)
8. Press **PAR** and set the display to the new cold junction value. Press **PAR** to enter the new value. Display reads **RLC** for 6 seconds and returns to **RL 00**.
9. Press **PAR** twice to exit calibration and return to the normal display mode. Verify the input reading is correct. If not, repeat steps 5 through 9.

## 5.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY PARAMETERS (3-dSP)

#### DISPLAY UPDATE TIME

This parameter sets the display update time in seconds.

#### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed.

#### FRONT PANEL DISPLAY SELECT ENABLE (SEL)

The **YES** selection allows the **SEL** key to toggle through the enabled displays.

#### FRONT PANEL RESET ENABLE (RST)

This selection allows the **RST** button to reset the selected value(s).

#### DISPLAY SCROLL ENABLE

The **YES** selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

#### UNITS LABEL BACKLIGHT

The PAXLT includes two units overlay labels (°C and °F) which can be installed into the meter's bezel display assembly. The backlight for the units label is activated by this parameter.

#### PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (**P-Lac**) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only user selected values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Entering a Security Code from 1-99 enables Quick Programming mode, and displays a sublist to select which values appear in the Quick Programming menu. Values set to **YES** in the sublist are accessible in Quick Programming. These values include the Setpoints (**SP-1**, **SP-2**) and Display Intensity (**d-LEU**).

Programming any Security Code other than 0, requires this code to be entered at the **Code** prompt in order to access Full Programming mode. Quick Programming mode, if enabled, is accessed before the **Code** prompt appears.

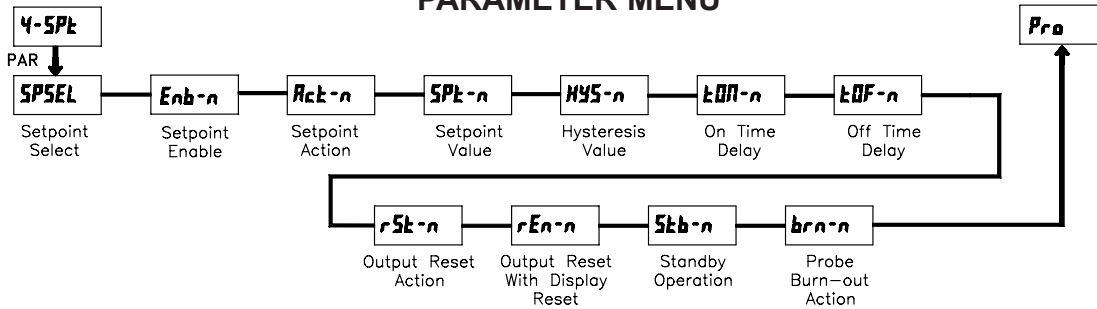

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "PAR" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not <b>P-Lac</b>	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at <b>Code</b> prompt *
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
<b>P-Lac</b>	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

# 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

## PARAMETER MENU

### SETPOINT SELECT

n0  
SP-1  
SP-2

Select the Setpoint Output to be programmed, starting with Setpoint 1. The “n” in the following parameters reflects the chosen Setpoint number. After the selected setpoint is completely programmed, the display returns to **SPSEL**. Repeat steps for Setpoint 2 if both Setpoints are being used. Select **n0** to exit the Setpoint programming module.

### SETPOINT ENABLE

n0 YES

Select **YES** to enable Setpoint n and access the setup parameters. If **n0** is selected, the unit returns to **SPSEL** and Setpoint n is disabled.

### SETPOINT ACTION

HI-bL LO-bL HI-Ub LO-Ub

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bL = High Acting, with balanced hysteresis
- LO-bL = Low Acting, with balanced hysteresis
- HI-Ub = High Acting, with unbalanced hysteresis
- LO-Ub = Low Acting, with unbalanced hysteresis

### SETPOINT VALUE

- 19999 to 99999

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

### HYSTERESIS VALUE

1 to 59999

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

### ON TIME DELAY

0.0 to 599.9 Sec

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OFF TIME DELAY

0.0 to 599.9 Sec

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OUTPUT RESET ACTION

Auto L-REN L-dLY

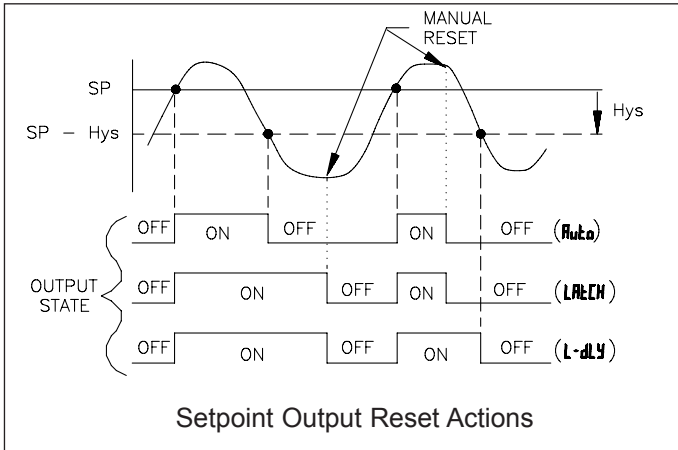

Enter the reset action of the output. See figure for details.

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The “on” output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**L-R-L-E-H** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, or meter power cycle. When the user input or **RST** button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-d-L-Y** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-d-L-Y** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

**ren-n**      **NO**      **YES**  
**YES**

This parameter enables the **RST** button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

### STANDBY OPERATION

**Stb-n**      **NO**      **YES**  
**NO**

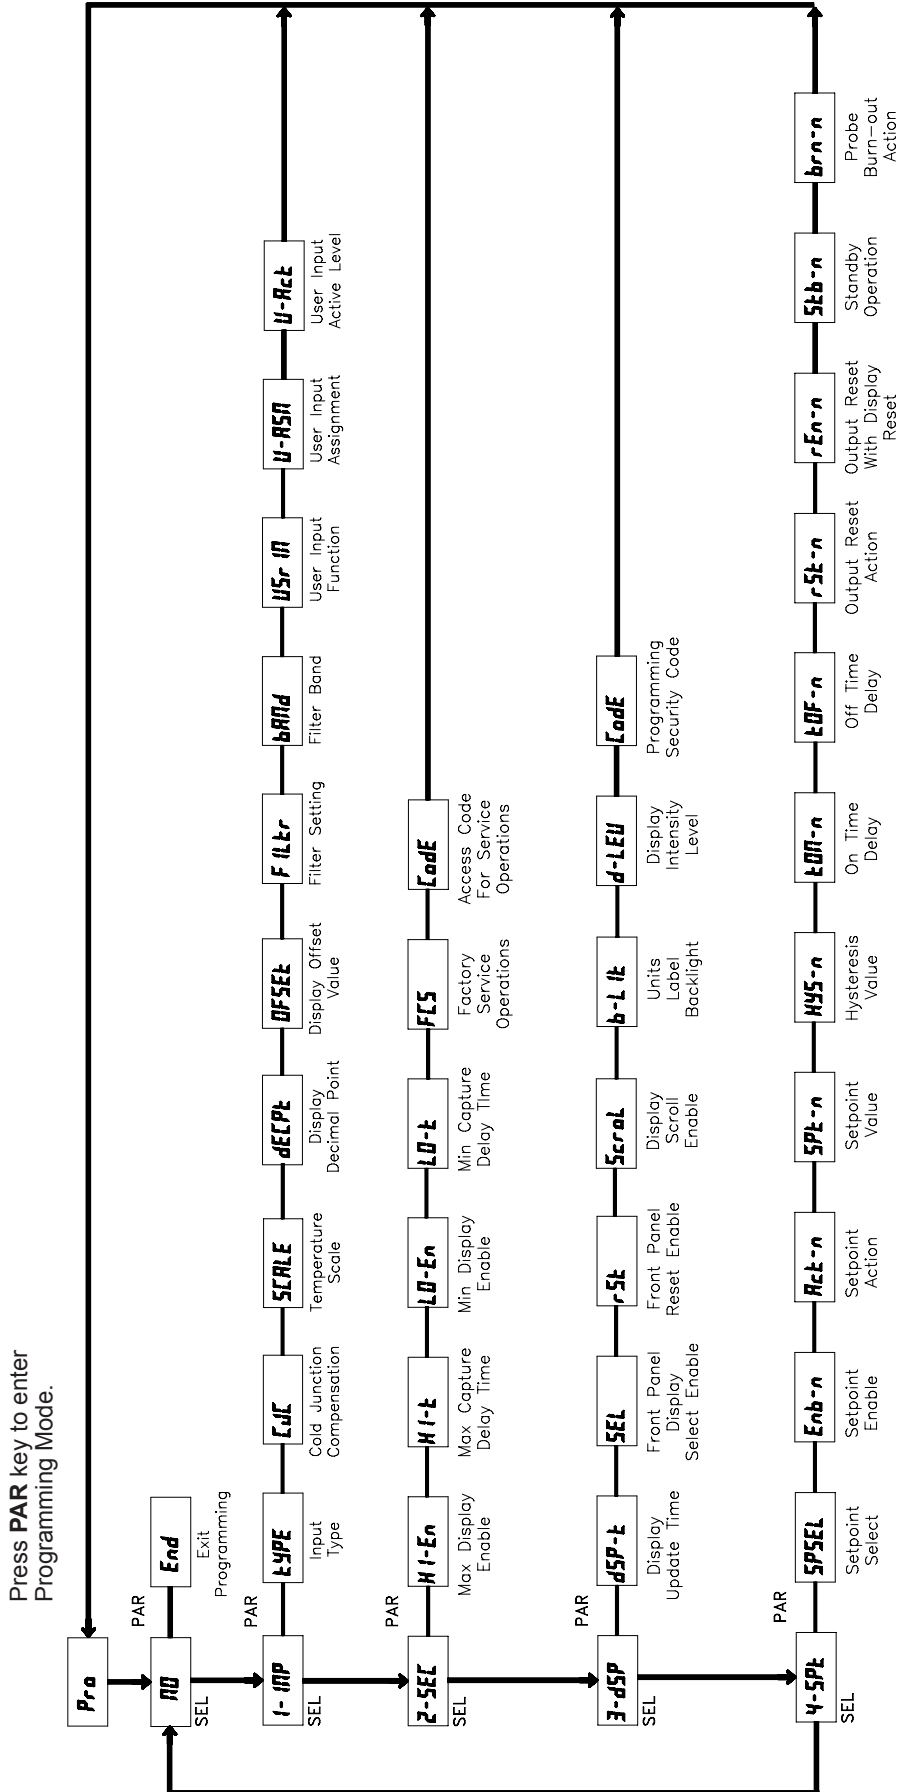

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset Action.

### PROBE BURN-OUT ACTION

**brn-n**      **ON**      **OFF**  
**OFF**

Enter the probe burn-out action. In the event of a temperature probe failure (TC open; RTD open or short), the output can be programmed to be on or off.

# PAXLT PROGRAMMING QUICK OVERVIEW

# MODEL DP5T - THERMOCOUPLE AND RTD INPUT

This is a brief overview of the DP5T. For complete specifications and programming information, see the [DP5 Analog Input Panel Meters Bulletin](#) starting on [page 358](#).

- THERMOCOUPLE AND RTD INPUTS
- CONFORMS TO ITS-90 STANDARDS
- TIME-TEMPERATURE INTEGRATOR
- 5-DIGIT 0.56" HIGH RED LED DISPLAY
- PROGRAMMABLE FUNCTION KEYS/USER INPUT
- 9 DIGIT TOTALIZER (INTEGRATOR) WITH BATCHING

## DP5T SPECIFICATIONS

### READOUT:

Resolution: Variable: 0.1, 0.2, 0.5, or 1, 2, or 5 degree  
 Scale: F or C  
 Offset Range: -19,999 to 99,999 display units

### THERMOCOUPLE INPUTS:

Input Impedance: 20 MΩ  
 Lead Resistance Effect: 0.03 μV/ohm  
 Max. Continuous Overvoltage: 30 V

INPUT TYPE	RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	STANDARD	WIRE COLOR	
					ANSI	BS 1843
T	-200 to 400°C -270 to -200°C	1.2°C **	2.1°C	ITS-90	(+) blue (-) red	(+) white (-) blue
E	-200 to 871°C -270 to -200°C	1.0°C **	2.4°C	ITS-90	(+) purple (-) red	(+) brown (-) blue
J	-200 to 760°C	1.1°C	2.3°C	ITS-90	(+) white (-) red	(+) yellow (-) blue
K	-200 to 1372°C -270 to -200°C	1.3°C **	3.4°C	ITS-90	(+) yellow (-) red	(+) brown (-) blue
R	-50 to 1768°C	1.9°C	4.0°C	ITS-90	no standard	(+) white (-) blue

# MODELS T16 & P16 - TEMPERATURE/PROCESS CONTROLLERS

- PID CONTROL WITH REDUCED OVERSHOOT
- T16 ACCEPTS TC AND RTD
- P16 ACCEPTS 0-10 V AND 0/4-20 mA SIGNALS
- ON DEMAND AUTO-TUNING OF PID SETTINGS
- DC ANALOG OUTPUT (OPTIONAL)
- USER PROGRAMMABLE FUNCTION BUTTON
- PC OR FRONT PANEL PROGRAMMING
- PC CONFIGURABLE WITH TP16KIT

UL Recognized Component,  
File #E156876

## GENERAL DESCRIPTION

The Model T16 Controller accepts signals from a variety of temperature sensors (thermocouple or RTD), while the Model P16 Controller accepts either a 0 to 10 VDC or 0/4 to 20 mA DC input signal. Both controllers can provide an accurate output control signal (time proportional or DC Analog Output) to maintain a process at a setpoint value. Dual 4-digit displays allow viewing of the process/temperature and setpoint simultaneously. Front panel indicators inform the operator of the controller and output status. The comprehensive programming allows these controllers to meet a wide variety of application requirements.

## MAIN CONTROL

The controller operates in the PID Control Mode for both heating and cooling, with on-demand auto-tune, that establishes the tuning constants. The PID tuning constants may be fine-tuned through the front panel and then locked out from further modification. The controller employs a unique overshoot suppression feature, that allows the quickest response without excessive overshoot. Switching to Manual Mode provides the operator direct control of the output. The controller may also be programmed to operate in On/Off mode with adjustable hysteresis.

## ALARMS

Optional alarm(s) can be configured independently for absolute high or low acting with balanced or unbalanced hysteresis. They can also be configured for deviation and band alarm. In these modes, the alarm trigger values track the setpoint value. Adjustable alarm hysteresis can be used for delaying output response. The alarms can be programmed for Automatic or Latching operation. A selectable standby feature suppresses the alarm during power-up until the temperature stabilizes outside the alarm region.

## ANALOG OUTPUT OPTION

The optional DC Analog Output (10 V or 20 mA) can be configured and scaled for control or re-transmission purposes. The programmable output update time reduces valve or actuator activity.

## PC PROGRAMMING KIT

The optional TP16KIT contains a programming module with a 9 pin RS232 connector, cable and Crimson, a Windows® based configuration software. The software allows downloading, uploading and storage of T16 and P16 program files. All controllers have a communications port that allows configuration by PC even without controller power connected. Controller calibration is also possible using the software when the proper calibration equipment and controller power is connected.

## CONSTRUCTION

The controller is constructed of a lightweight, high impact, black plastic textured case and bezel with a clear display window. The front panel meets NEMA 4X/IP65 specifications when properly installed. In applications that do not require protection to NEMA 4X, multiple controllers can be stacked horizontally or vertically. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the controller extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the controller to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the controller. An independent and redundant temperature limit indicator with alarm outputs is strongly recommended.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

## GENERAL SPECIFICATIONS

1. **DISPLAY:** 2 Line by 4-digit, LCD negative image transmissive with backlighting.

**Top (Process) Display:** 0.3" (7.6 mm) high digits with red backlighting.

**Bottom (Parameter) Display:** 0.2" (5.1 mm) high digits with green backlighting.

2. **ANNUNCIATORS:**

**Status Annunciators:**

O1 - Main control output is active.

O2 - Cooling output is active (when Alarm 2 is used for cooling).

A1 - Alarm 1 output is active.

A2 - Alarm 2 output is active.

°F, °C - Temperature units.

%PW - Output power percentage is shown in Bottom display.

MAN - Controller is in Manual Mode.

R - Ramping Setpoint indicator.

% - Percent indicator (P16 models only).

**Display Messages:**

**ULUL** - Measurement exceeds + sensor range

**ULUL** - Measurement exceeds - sensor range

**OPEN** - Open sensor is detected (T16 only)

**SHrt** - Shorted sensor is detected (RTD only)

**SE#5** - Measurement exceeds controller limits (P16 only)

**dddd** - Display value exceeds + display range

**-ddd** - Display value exceeds - display range

3. **POWER:**

**Line Voltage Models:**

85 to 250 VAC, 50/60 Hz, 8 VA

**Low Voltage Models:**

DC Power: 18 to 36 VDC, 4 W

AC Power: 24 VAC, ±10%, 50/60 Hz, 7 VA

4. **CONTROLS:** Three rubber push buttons for modification and setup of controller parameters. One additional button (F1) for user programmable function. One external user input (models with alarms) for parameter lockout or other user programmable functions.

5. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters.

6. **ISOLATION LEVEL:**

**AC power with respect to all other I/O:** 250 V working (2300 V for 1 min.)

**Sensor input to analog output:** 50 V working (500 V for 1 minute)

**Relay contacts to all other I/O:** 300 V working (2300 V for 1 minute)

**DC power with respect to sensor input and analog output:** 50 V working (500 V for 1 minute)

7. **CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**

UL Recognized Component, File #E156876, UL873, CSA 22.2 No. 24

Recognized to US and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

*Notes:*

1. *Self-recoverable loss of performance during EMI disturbance at 10 V/m: Measurement input signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*Install one ferrite core one turn, RLC #FCOR0000 or equivalent, to I/O cables at unit.*

2. *Self-recoverable loss of performance during EMI disturbance at 10 Vrms: Process and analog output signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*Install one ferrite core one turn, RLC #FCOR0000 or equivalent, to I/O cables and power cable at unit.*

*Refer to the EMC Installation Guidelines section of this bulletin for additional information.*

8. **ENVIRONMENTAL CONDITIONS:**

**Operating Temperature Range:** 0 to 50°C

**Storage Temperature Range:** -40 to 80°C

**Operating and Storage Humidity:** 85% max relative humidity (non-condensing) from 0°C to 50°C

**Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's.

**Shock According to IEC 68-2-27:** Operational 20 g's (10 g relay), 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

9. **CONNECTION:** Wire-clamping screw terminals

10. **CONSTRUCTION:** Black plastic alloy case and collar style panel latch. Panel latch can be installed for vertical or horizontal instrument stacking. Black plastic textured bezel with transparent display window. Controller meets NEMA 4X/IP65 requirements for indoor use when properly installed. Installation Category II, Pollution Degree 2.

11. **WEIGHT:** 6.3 oz (179 g)

## INPUT SPECIFICATIONS

1. **SENSOR INPUT:**

**Sample Period:** 100 msec (10 Hz rate)

**Step Response Time:** 300 msec typical, 400 msec max to within 99% of final value with step input.

**Failed Sensor Response:**

Main Control Output(s): Programmable preset output

Display: "OPEN"

Alarms: Upscale drive

Analog Output: Upscale drive when assigned to retransmitted input.

**Normal Mode Rejection:** >40 dB @ 50/60 Hz

**Common Mode Rejection:** >120 dB, DC to 60 Hz

**Overvoltage Protection:** 120 VAC @ 15 sec max

2. **RTD INPUTS:** (T16 only)

**Type:** 2 or 3 wire

**Excitation:** 150 µA typical

**Lead Resistance:** 15 Ω max per input lead

**Resolution:** 1° or 0.1° for all types

TYPE	INPUT TYPE	RANGE	STANDARD
385	100 Ω platinum, Alpha = .00385	-200 to +600°C -328 to +1112°F	IEC 751
392	100 Ω platinum, Alpha = .003919	-200 to +600°C -328 to +1112°F	No official standard
672	120 Ω nickel, Alpha = .00672	-80 to +215°C -112 to +419°F	No official standard
Ohms	Linear Resistance	0.0 to 320.0 Ω	N/A

3. **THERMOCOUPLE INPUTS:** (T16 only)

**Types:** T, E, J, K, R, S, B, N, C, and Linear mV

**Input Impedance:** 20 MΩ for all types

**Lead Resistance Effect:** 0.25 µV/Ω

**Cold Junction Compensation:** Less than ±1°C typical (1.5°C max) error over ambient temperature range.

**Resolution:** 1° for types R, S, B and 1° or 0.1° for all other types

## INPUT SPECIFICATIONS (Cont'd)

### 4. SIGNAL INPUT: (P16 only)

INPUT RANGE	ACCURACY *	IMPEDANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
10 VDC (-1 to 11)	0.30 % of reading +0.03V	1 MΩ	50 V	10 mV
20 mA DC (-2 to 22)	0.30 % of reading +0.04mA	10 Ω	100 mA	10 μA

\* Accuracies are expressed as ± percentages over 0 to 50 °C ambient range after 20 minute warm-up.

## OUTPUT SPECIFICATIONS

### 1. CONTROL AND ALARM OUTPUTS:

#### Relay Output:

**Type:** Form A

**Contact Rating:** 3 A @ 250 VAC or 30 VDC; 1/10 HP @ 120 VAC (inductive load)

**Life Expectancy:** 100,000 cycles at max. load rating

(Decreasing load and/or increasing cycle time, increases life expectancy)

#### Logic/SSR Output (main control output only):

Rating: 45 mA max @ 4 V min., 7 V nominal

### 2. MAIN CONTROL:

**Control:** PID or On/Off

**Output:** Time proportioning or DC Analog

**Cycle Time:** Programmable

**Auto-Tune:** When selected, sets proportional band, integral time, derivative time, and output dampening time. Also sets input filter and (if applicable) cooling gain.

**Probe Break Action:** Programmable

### 3. ALARMS: (optional) 2 relay alarm outputs.

#### Modes:

None

Absolute High Acting (Balanced or Unbalanced Hysteresis)

Absolute Low Acting (Balanced or Unbalanced Hysteresis)

Deviation High Acting

Deviation Low Acting

Inside Band Acting

Outside Band Acting

Heat (Alarm 1 on Analog Output models only)

Cool (Alarm 2)

### 5. TEMPERATURE INDICATION ACCURACY: (T16 only)

± (0.3% of span, +1°C) at 23 °C ambient after 20 minute warm up. Includes NIST conformity, cold junction effect, A/D conversion errors and linearization conformity.

**Span Drift (maximum):** 130 PPM/°C

### 6. USER INPUT: (Only controllers with alarms have a user input terminal.)

Internally pulled up to +7 VDC (100 KΩ),  $V_{IN\ MAX} = 35\ V$ ,  $V_{IL} = 0.6\ V$  max,  $V_{IH} = 1.5\ V$  min,  $I_{OFF} = 40\ \mu A$  max

**Response Time:** 120 msec max

**Functions:** Programmable

**Reset Action:** Programmable; automatic or latched

**Standby Mode:** Programmable; enable or disable

**Hysteresis:** Programmable

**Sensor Fail Response:** Upscale

**Annunciator:** "A1" and "A2" programmable for normal or reverse acting

### 4. COOLING: Software selectable (overrides Alarm 2).

**Control:** PID or On/Off

**Output:** Time proportioning

**Cycle Time:** Programmable

**Proportional Gain Adjust:** Programmable

**Heat/Cool Deadband Overlap:** Programmable

### 5. ANALOG DC OUTPUT: (optional)

**Action:** Control or retransmission

**Update Rate:** 0.1 to 250 sec

OUTPUT RANGE **	ACCURACY *	COMPLIANCE	RESOLUTION
0 to 10 V	0.3% of FS + ½ LSD	10 kΩ min	1/8000
0 to 20 mA	0.3% of FS + ½ LSD	500 Ω max	1/8000
4 to 20 mA	0.3% of FS + ½ LSD	500 Ω max	1/6400

\* Accuracies are expressed as ± percentages over 0 to 50 °C ambient range after 20 minute warm-up.

\*\* Outputs are independently jumper selectable for either 10 V or 20 mA. The output range may be field calibrated to yield approximately 5% overrange and a small underrange (negative) signal.

## ORDERING INFORMATION

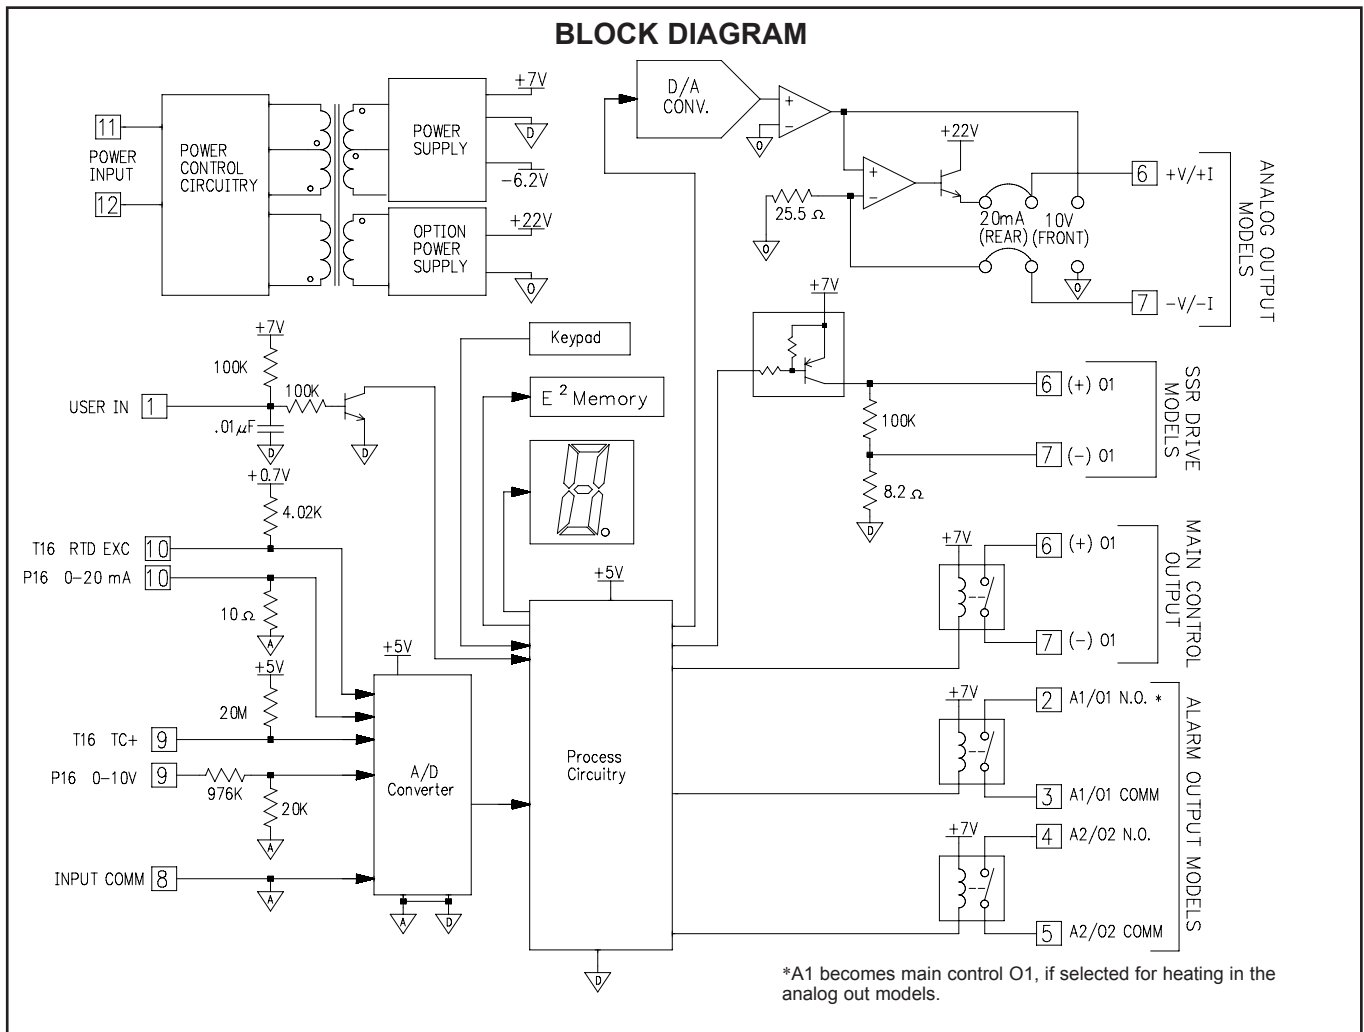

MODEL NO.	MAIN CONTROL	2 ALARMS & USER INPUT	PART NUMBERS	
			18-36 VDC/24 VAC	85 to 250 VAC
T16	Relay	—	T1610010	T1610000
	Relay	Yes	T1611110	T1611100
	Logic/SSR	—	T1620010	T1620000
	Logic/SSR	Yes	T1621110	T1621100
	Analog Out *	Yes	T1641110	T1641100
P16	Relay	—	P1610010	P1610000
	Relay	Yes	P1611110	P1611100
	Logic/SSR	—	P1620010	P1620000
	Logic/SSR	Yes	P1621110	P1621100
	Analog Out *	Yes	P1641110	P1641100

\* Analog out may be used for retransmitted signals. When using analog output for retransmitted signals, AL1 becomes main control O1, if selected for heating in the analog out models.

## ACCESSORIES

MODEL NO.	DESCRIPTION	PART NUMBERS
TP16	Programming Kit 1 : Includes Software, Comms Module w/ 9-pin connector and cable, and 115 VAC Power Adapter	TP16KIT1
	Programming Kit 2 : Includes Software, Comms Module w/ 9-pin connector and cable	TP16KIT2
RLY	External SSR Power Unit (for Logic/SSR models)	RLY50000
	25 A Single Phase Din Rail Mount Solid State Relay	RLY60000
	40 A Single Phase Din Rail Mount Solid State Relay	RLY6A000
	Three Phase Din Rail Mount Solid State Relay	RLY70000

## EMC INSTALLATION GUIDELINES

Although this controller is designed with a high degree of immunity to Electromagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure electromagnetic compatibility (EMC) in each application. The type of the electrical noise, source or coupling method into the controller may be different for various installations. The controller becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed are some EMC guidelines for successful installation in an industrial environment.

1. The controller should be mounted in a metal enclosure that is properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the controller is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is more than 1 MHz.
  - c. Connect the shield to common of the controller and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run through metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

4. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the controller as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the controller to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for Signal and Control cables:

Fair-Rite # 0443167251 (Red Lion Controls # FCOR0000)  
 TDK # ZCAT3035-1330A  
 Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (Red Lion Controls # LFIL0000)  
 Schaffner # FN670-1.8/07  
 Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.

6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.

Snubber: Red Lion Controls # SNUB0000.

# 1.0 SETTING THE JUMPERS (ANALOG OUTPUT MODELS ONLY)

To insure proper operation, the Analog Output jumpers must be set to the same range selected in programming Module 2-OP. **The default jumper setting is for 20 mA.** The default setting in Module 2-OP is 4-20 mA. To access the jumpers, insert a flat-blade screwdriver between the front panel and the side case slot. This should disengage the top and bottom front panel latches from the case grooves. Pull the front panel assembly with the controller boards out of the case. The jumpers are located inside the controller on the left board along the back top section.

# 2.0 INSTALLING THE CONTROLLER

The T16 and P16 controllers meet NEMA 4X/IP65 requirements for indoor use to provide a watertight seal in steel panels with a minimum thickness of 0.09", or aluminum panels with a minimum thickness of 0.12". The controllers are designed to be mounted into an enclosed panel. The bezel assembly must be in place during installation of the controller.

## Instructions:

1. Prepare the panel cutout to the proper dimensions.
2. Remove the panel latch from the controller. Discard the cardboard sleeve.
3. Carefully remove the center section of the panel gasket and discard. Slide the panel gasket over the rear of the controller, seating it against the lip at the front of the case.
4. Insert the controller into the panel cutout. While holding the controller in place, push the panel latch over the rear of the controller, engaging the tabs of the panel latch in the farthest forward slot possible.
5. To achieve a proper seal, tighten the panel latch screws evenly until the controller is snug in the panel, torquing the screws to approximately 7 in-lb (79 N-cm). Overtightening can result in distortion of the controller, and reduce the effectiveness of the seal.

*Note: The installation location of the controller is important. Be sure to keep it away from heat sources (ovens, furnaces, etc.) and away from direct contact with caustic vapors, oils, steam, or any other process by-products in which exposure may affect proper operation.*

## Multiple Controller Stacking

The controller is designed to allow for close spacing of multiple controllers in applications that do not require protection to NEMA 4X. Controllers can be stacked either horizontally or vertically. For vertical stacking, install the panel latch with the screws to the sides of the controller. For horizontal stacking, the panel latch screws should be at the top and bottom of the controller. The minimum spacing from centerline to centerline of controllers is 1.96" (49.8 mm). This spacing is the same for vertical or horizontal stacking.

*Note: When stacking controllers, provide adequate panel ventilation to ensure that the maximum operating temperature range is not exceeded.*

IF NEMA 4 IS NOT REQUIRED, THIS PANEL MATERIAL MAY BE REMOVED.

# 3.0 WIRING THE CONTROLLER

## WIRING CONNECTIONS

All wiring connections are made to the rear screw terminals. When wiring the controller, use the numbers on the label and those embossed on the back of the case, to identify the position number with the proper function.

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local

codes and regulations. It is recommended that power (AC or DC) supplied to the controller be protected by a fuse or circuit breaker. Strip the wire, leaving approximately 1/4" (6 mm) bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the clamping washer and tighten the screw until the wire is clamped tightly.

## CONTROLLER POWER CONNECTIONS

For best results, the power should be relatively "clean" and within the specified limits. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off should be avoided. It is recommended that power supplied to the controller be protected by a fuse or circuit breaker.

## INPUT CONNECTIONS

For two wire RTDs, install a copper sense lead of the same gauge and length as the RTD leads. Attach one end of the wire at the probe and the other end to input common terminal. Complete lead wire compensation is obtained. This is

the preferred method. If a sense wire is not used, then use a jumper. A temperature offset error will exist. The error may be compensated by programming a temperature offset.

F

# 4.0 REVIEWING THE FRONT KEYS AND DISPLAY

## FRONT PANEL KEYS

The F1 key is pressed to exit (or escape) directly to the start of the Display Loop. While in the Display Loop, the F1 key can be pressed to activate its programmed function.

The Arrow keys are used to scroll through parameter selections/values and in the Configuration Loop they are used to scroll to the appropriate Parameter Module.

The Loop key is pressed to advance to the next parameter, to activate a changed selection/value, and when held for three seconds, enter the Hidden Loop.

# 5.0 PROGRAMMING: DISPLAY LOOP

## DISPLAY LOOP

Note: Setpoint and Output Power are the only parameters visible in the Display Loop with Factory Settings. The remaining parameters can be selected for the Display Loop within Module 3. Parameter availability is model and programming dependent.

- ENDS AND RETURNS TO START OF DISPLAY LOOP. AT START PERFORMS F1 FUNCTION.
- ADVANCES TO NEXT PARAMETER.
- CHANGES SELECTION/VALUE.

## DISPLAY LOOP

At power up, all display segments light, and then the programmed input type and the controller's software version will flash. Then the Temperature/Process Value is shown in the top display, and the Setpoint Value is shown in the bottom display. This is the Display Loop. If the Setpoint is hidden or locked, the Display Loop will default to Output Power. If Output Power is also hidden or locked out, the bottom display is blank. During programming, the F1 key can be pressed to return the controller to this point. (Only in the Display Loop will the F1 key perform the user F1 function programmed in Input Module 1-11.)

When the is pressed the controller advances to the next parameter in the Display Loop. Except for Setpoint and % Output Power, the bottom display alternates between the parameter name and its selection/value. The arrow keys are pressed to change the selection/value for the shown parameter. The new selection/value is activated when the is pressed. Display Loop parameters may be locked out or hidden in Lockout Module 3-11. Some parameters are model and programming dependent.

The values shown for the displays are the factory settings.

**SETPOINT VALUE (SP1) \***

- 999 to 9999

**SETPOINT VALUE (SP2) \***

- 999 to 9999

Typically, the controller is operating with the Setpoint value in the bottom display. There is no annunciator nor parameter indication for Setpoint in the Display Loop. The parameter name alternates with the setpoint value in the Hidden Loop. The Setpoint value can be changed, activated and stored by pressing the arrow keys. This is the only parameter that can be configured as read only in the Display Loop, but read/write in the Hidden Loop. It is possible to store a second Setpoint value that can be selected in the Hidden Loop, by the F1 key or the user input. Both Setpoint values are limited by the Setpoint Low and High Limits in Input Module 1-11.

**% OUTPUT POWER \***

- 100 to 1000

The % Output Power is shown with the %PW annunciator. The parameter name alternates with the % Output Power value in the Hidden Loop. While the controller is in Automatic Mode, this value is read only. When the controller is placed in Manual Mode, the value can be changed, activated and stored by pressing the arrow keys. For more details on % Output Power, see Control Mode Explanations.

**OUTPUT POWER OFFSET**

- 100 to 1000

When the Integral Time is set to zero and the controller is in the Automatic Mode, this parameter will appear after % Output Power. It is also shown with the %PW annunciator illuminated. The power offset is used to shift the proportional band to compensate for errors in the steady state. If Integral Action is later invoked, the controller will re-calculate the internal integral value to provide "bumpless" transfer and Output Power Offset will not be necessary.

**PROPORTIONAL BAND**

00 to 9999  
(% of full input range)

The proportional band should be set to obtain the best response to a process disturbance while minimizing overshoot. A proportional band of 0.0% forces the controller into On/Off Control with its characteristic cycling at Setpoint. For more information, see Control Mode and PID Tuning Explanations.

**INTEGRAL TIME**

0 to 9999 seconds

Integral action shifts the center point position of the proportional band to eliminate error in the steady state. The higher the integral time, the slower the response. The optimal integral time is best determined during PID Tuning. If time is set to zero, the previous Integral output power value is maintained. Offset Power can be used to provide Manual Reset.

**DERIVATIVE TIME**

0 to 9999 seconds per repeat

Derivative time helps to stabilize the response, but too high of a derivative time, coupled with noisy signal processes, may cause the output to fluctuate too greatly, yielding poor control. Setting the time to zero disables derivative action.

**ALARM 1 VALUE**

- 999 to 9999

On models with alarms, the value for Alarm 1 can be entered here. The value is either absolute (absolute alarm types) or relative to the Setpoint value (deviation and band alarm types.) When Alarm 1 is programmed for *HEAL* or *HOAE*, this parameter is not available. For more details on alarms, see Alarm Module 4-RL.

**ALARM 2 VALUE**

- 999 to 9999

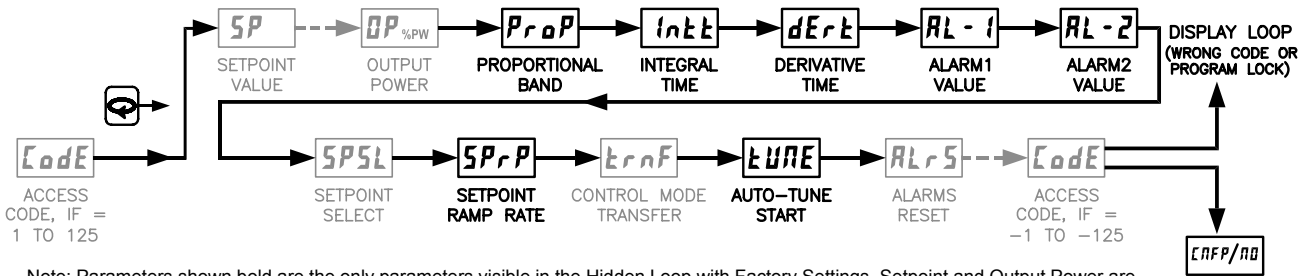

On models with alarms, the value for Alarm 2 can be entered here. The value is either absolute (absolute alarm types) or relative to the Setpoint value (deviation and band alarm types.) When Alarm 2 is programmed for *LOAL* or *HOAE*, this parameter is not available. For more details on alarms, see the Alarm Module 4-RL.

\* Alternating indication only used in the Hidden Loop.

# 6.0 PROGRAMMING: HIDDEN LOOP

To enter Hidden Loop, press  for 3 seconds.

## HIDDEN LOOP

Note: Parameters shown bold are the only parameters visible in the Hidden Loop with Factory Settings. Setpoint and Output Power are factory set for the Display Loop. The remaining parameters can be selected for the Hidden Loop within Module 3. Parameter availability is model and programming dependent.

-  ENDS AND RETURNS TO START OF DISPLAY LOOP.
-  ADVANCES TO NEXT PARAMETER.
-  CHANGES SELECTION/VALUE.

### HIDDEN LOOP

When  is pressed and held for three seconds, the controller advances to the Hidden Loop. The Temperature/Process Value is shown in the top display. The bottom display alternates between the parameter and its selection/value.  or  is pressed to change the selection/value for the shown parameter. The new selection/value is activated after  is pressed. When  is pressed, the controller returns to the Display Loop and stores changed selection/values to permanent memory. Hidden Loop parameters may be locked out in Lockout Module 3-11. Some parameters are model and programming dependent.

#### ACCESS CODE

If the Access Code is set from 1 to 125, in Lockout Module 3-11, Access Code will appear here. By entering the proper Code, access to the Hidden Loop is permitted. With the factory setting of 0, Access Code will not appear in the Hidden Loop. A universal code of 111 can be entered to gain access, independent of the programmed code number.

#### SETPOINT SELECT

The SPSL function allows the operator to switch from or to, setpoint 1 and setpoint 2. In the Display Loop, there is no annunciator indicating the selected Setpoint, however, the selected Setpoint value is displayed and activated.

#### SETPOINT RAMP RATE

The setpoint ramp rate can reduce sudden shock to the process and reduce overshoot on startup or after setpoint changes, by ramping the setpoint at a controlled rate. R annunciator flashes while ramping. With the T16, the ramp rate is always in tenths of degrees per minute, regardless of the resolution chosen for the process display. With the P16, the ramp rate is in least-significant (display units) digits per minute. A value of 0.0 or 0 disables setpoint ramping. Once the ramping setpoint reaches the target setpoint, the setpoint ramp rate disengages until the setpoint is changed again. If the ramp value is changed during ramping, the new ramp rate takes effect. If the setpoint is ramping prior to starting Auto-Tune, the ramping is suspended during Auto-Tune and then resumed afterward. Deviation and band alarms are relative to the target setpoint, not the ramping setpoint. A slow process may not track the programmed setpoint rate. At power up, the ramping setpoint is initialized at the ambient temperature/process value.

#### CONTROL MODE TRANSFER

In Automatic Mode, the percentage of Output Power is automatically determined by the controller. In Manual/User *USER* Mode, the percentage of Output Power is adjusted manually while in the Display Loop. The Control Mode can also be transferred through the F1 Key or User Input. For more information, see Control Mode Explanations.

### AUTO-TUNE START

The Auto-Tune procedure of the controller sets the Proportional Band, Integral Time, Derivative Time, Digital Filter, Control Output Dampening Time, and Relative Gain (Heat/Cool) values appropriate to the characteristics of the process. This parameter allows front panel starting **yE5** or stopping **n0** of Auto-Tune. For more information, see PID Tuning Explanations.

### ACCESS CODE

If the Access Code is set from -1 to -125, in Lockout Module **3-LC**, Access Code will appear here. By entering the proper Code, access to the Configuration Loop is permitted (with a negative Code value, the Hidden Loop can be accessed without the use of a code). With the factory setting of 0 or with an active User Input configured for Program Lock (**PLBC**), Access Code will not appear here. An active user input configured for Program Lock (**PLBC**) always locks out the Configuration Loop, regardless of Access Code.

### ALARMS RESET

With alarm models, the alarms can be manually reset. The up key resets Alarm 1 and the down key resets Alarm 2.

## 7.0 PROGRAMMING: CONFIGURATION LOOP

- ENDS AND RETURNS TO START OF DISPLAY LOOP.
- ENTERS MODULE OR AT **CNFP/n0** RETURNS TO DISPLAY LOOP.
- ADVANCES TO NEXT MODULE.

- ENDS AND RETURNS TO START OF DISPLAY LOOP.
- ADVANCES TO NEXT PARAMETER OR AT **CNFP/n0** RETURNS TO DISPLAY LOOP.
- ADVANCES SELECTION/VALUE.

To access the Configuration Loop, press the up key when **CNFP/n0** is displayed in the Hidden Loop. The arrow keys are used to select the parameter module (1-9). To enter a specific module press while the module number is displayed. In the Configuration Loop, **CNFP** will alternate with the parameter number in the bottom display. The Temperature/Process Value is shown in the top display.

After entering a parameter module, press to advance through the parameter names in the module. To change a parameter's selection/value, press the arrow keys while the parameter is displayed. In the modules, the top display shows the parameter name, and the bottom display shows the selection/value. Use to enter any selection/values that have been changed. The change is not committed to permanent memory until the controller is returned to the Display Loop. If a power loss occurs before returning to the Display Loop, the new values must be entered again.

At the end of each module, the controller returns to **CNFP/n0**. At this location, pressing again returns the display to the Display Loop. Pressing the Up key allows re-entrance to the Configuration Loop. Whenever is pressed, **End** momentarily appears as the parameters are stored to permanent memory and the controller returns to the Display Loop.

F

# 7.1 MODULE 1 - INPUT PARAMETERS (1-11) T16 ONLY

## INPUT TYPE

SELECTION	TYPE	SELECTION	TYPE
TYPE			
tc-t	T TC	tc-n	N TC
tc-e	E TC	tc-c	C TC
tc-d	J TC	L 11	Linear mV
tc-y	K TC	r385	RTD 385
tc-r	R TC	r392	RTD 392
tc-s	S TC	r672	RTD 672
tc-b	B TC	rL 11	Linear Ohms

Select the input type that corresponds to the input sensor.

## TEMPERATURE SCALE

SCAL	°F Fahrenheit
°C	°C Celsius

Select either degrees Fahrenheit or Celsius. For linear mV and ohms input types, this has no effect. If changed, adjust related parameter values, as the controller does not automatically convert them.

## DECIMAL RESOLUTION

dCPE	0 to 00 for temperature and resistance inputs
0	000 for mV inputs

Select whole degrees, or tenths of degrees for Temperature display, Setpoint values, and related parameters. For Linear Resistance inputs rL 11, the same parameter selections apply in ohms or tenths of an ohm. For mV inputs L 11, only hundredths of a mV resolution is available.

## DIGITAL FILTERING

FLtr	0 = least to 4 = most
1	

The filter is an adaptive digital filter that discriminates between measurement noise and actual process changes. If the signal is varying too greatly due to measurement noise, increase the filter value. If the fastest controller response is needed, decrease the filter value.

## SHIFT/OFFSET

SHFE	-999 to 9999 degrees
0	

This value offsets the controller's temperature display value by the entered amount. This is useful in applications in which the sensor cannot provide the actual temperature signal due to mounting constraints, inaccuracy, etc.

## SETPOINT LOW LIMIT

SPLD	-999 to 9999
0	

The controller has a programmable low setpoint limit value to restrict the setting range of the setpoint. Set the limit so that the setpoint value cannot be set below the safe operating area of the process.

## SETPOINT HIGH LIMIT

SPH1	-999 to 9999
9999	

The controller has a programmable high setpoint limit value to restrict the setting range of the setpoint. Set the limit so that the setpoint value cannot be set above the safe operating area of the process.

## USER INPUT FUNCTION (OPTIONAL)

SELECTION	FUNCTION	SELECTION	FUNCTION
none	No Function	SPt	Setpoint 1 or 2 Select
PLDC	Program Lock	SPrP	Setpoint Ramp Disable
ILDC	Integral Action Lock	RLrS	Reset Both Alarms
trnF	Auto/Manual Select		

The controller performs the selected User Input function (User Input available only on models with alarms), when the User terminal 1 is connected (pulled low) to Common terminal 8.

**No Function:** No function is performed.

**Program Lock:** The Configuration Loop is locked, as long as activated (maintained action).

**Integral Action Lock:** The integral action of the PID computation is disabled (frozen), as long as activated (maintained action).

**Auto/Manual Select:** This function selects (maintained action) Automatic (open) or Manual Control (activated).

**Setpoint 1 or 2 Select:** This function selects (maintained action) Setpoint 1 (open) or Setpoint 2 (activated) as the active setpoint.

**Setpoint Ramp Disable:** The setpoint ramping feature is disabled, as long as activated (maintained action). Any time the user input is activated with a ramp in process, ramping is aborted.

**Reset Alarms:** Active alarms are reset, as long as activated (maintained action). Active alarms are reset until the alarm condition is cleared and triggered again (momentary action).

**F1 KEY FUNCTION**

**F1 In**  
**None**

SELECTION	FUNCTION	SELECTION	FUNCTION
<b>None</b>	No Function	<b>Alr5</b>	Reset Alarm 1
<b>Auto/Man</b>	Auto/Manual Select	<b>Alr5</b>	Reset Alarm 2
<b>SPt</b>	Setpoint 1 or 2 Select	<b>Alr5</b>	Reset Both Alarms

The controller performs the selected F1 Key Function, when **[F1]** is pressed while in the Display Loop. In any other loop or module location, pressing **[F1]** will perform an escape to the Display Loop.

**No Function:** No function is performed.

**Auto/Manual Select:** This function toggles (momentary action) the controller between Automatic and Manual Control.

**Setpoint 1 or 2 Select:** This function toggles (momentary action) the controller between Setpoint 1 and Setpoint 2.

**Reset Alarms:** This function can be used to reset one or both of the alarms when activated (momentary action) The alarm will remain reset until the alarm condition is cleared and triggered again.

**7.1 MODULE 1 - INPUT PARAMETERS (1-16) P16 ONLY**

**INPUT TYPE**

**TYPE**  
**Curr**

SELECTION	TYPE
<b>Curr</b>	Current
<b>Volt</b>	Voltage

Select the input type that corresponds to the input signal.

**PERCENT ANNUNCIATOR**

**Pct**  
**NO**

<b>YES</b>	On
<b>NO</b>	Off

This only illuminates the % annunciator. It does not perform any type of percent function, but is useful in applications that have been scaled in percent.

**DECIMAL RESOLUTION**

**dCpt**  
**0.0**

0 0.0 0.00 0.000

This selection affects the decimal point placement for the Process value, and related parameters.

**ROUNDING INCREMENT**

**rnd**  
**0.1**

1 to 100

In steps of 1 least significant digit, regardless of decimal point.

Rounding selections other than 1 cause the process value display to round to the nearest rounding increment selected. (For example, rounding of 5 causes 122 to round to 120 and 123 to round to 125.) Rounding starts at the least significant digit of the process value. Setpoint values, Setpoint limits, Alarm values, Input Scaling values, and Analog Scaling values are not affected by rounding.

**DIGITAL FILTERING**

**FLtr**  
**1**

0 = least to 4 = most

The filter is an adaptive digital filter that discriminates between measurement noise and actual process changes. If the signal is varying too greatly due to measurement noise, increase the filter value. If the fastest controller response is needed, decrease the filter value.

**SCALING**

To scale the controller, two scaling points are necessary. Each scaling point has a coordinate pair of Display Values and Input Values. It is recommended that the two scaling points be at the low and high ends of the input signal being measured. Process value scaling will be linear between and continue past the entered points to the limits of the input range. (Factory settings example will display 0.0 at 4.00 mA input and display 100.0 at 20.00 mA input.) Reverse acting indication can be accomplished by reversing the two signal points or the Display value points, but not both. If both are reversed, forward (normal) acting indication will occur. In either case, do not reverse the input wires to change the action.

**DISPLAY VALUE SCALING POINT 1**

**dSP1**  
**0.0**

-999 to 9999

Enter the first coordinate Display Value by using the arrow keys.

**INPUT VALUE SCALING POINT 1**

**INP1**  
**4.00**

0.00 to 20.00 mA  
0.00 to 10.00 V

For Key-in Method, enter the first coordinate Input Value by using the arrow keys. To allow the P16 to "learn" the signal, use the Applied Method. For Applied Method, press **[AP]**. The ° annunciator is turned on to indicate the applied method. Adjust the applied signal level externally until the appropriate value appears under **INP1**. Using either method, press **[OK]** to store the value for **INP1**. (The controller can be toggled back to the Key-in Method by pressing **[F1]** before **[OK]**.)

**DISPLAY VALUE SCALING POINT 2**

**dSP2**  
**100.0**

-999 to 9999

Enter the second coordinate Display Value by using the arrow keys.

## INPUT VALUE SCALING POINT 2

**INP2** 0.00 to 20.00 mA  
**20.00** 0.00 to 10.00 V

For Key-in Method, enter the second coordinate Input Value by using the arrow keys. To allow the P16 to “learn” the signal, use the Applied Method. For Applied Method, press **AP**. The ° annunciator is turned on to indicate the applied method. Adjust the applied signal level externally until the appropriate value appears under **INP2**. Using either method, press **ENT** to store the value for **INP2**. (The controller can be toggled back to the Key-in Method by pressing **AP** before **ENT**.)

## SETPOINT LOW LIMIT

**SPLD** -999 to 9999  
**0.0**

The controller has a programmable low setpoint limit value to restrict the setting range of the setpoint. Set the limit so that the setpoint value cannot be set below the safe operating area of the process.

## SETPOINT HIGH LIMIT

**SPH1** -999 to 9999  
**9999**

The controller has a programmable high setpoint limit value to restrict the setting range of the setpoint. Set the limit so that the setpoint value cannot be set above the safe operating area of the process.

## USER INPUT FUNCTION (OPTIONAL)

**INP1**  
**PLDC**

SELECTION	FUNCTION	SELECTION	FUNCTION
<b>NONE</b>	No Function	<b>SP1</b>	Setpoint 1 or 2 Select
<b>PLDC</b>	Program Lock	<b>SPR</b>	Setpoint Ramp Disable
<b>ILDC</b>	Integral Action Lock	<b>ALRS</b>	Reset Both Alarms
<b>AMNF</b>	Auto/Manual Select		

The controller performs the selected User Input function (User Input available only on models with alarms), when the User terminal 1 is connected (pulled low) to Common terminal 8.

**No Function:** No function is performed.

**Program Lock:** The Configuration Loop is locked, as long as activated (maintained action).

**Integral Action Lock:** The integral action of the PID computation is disabled (frozen), as long as activated (maintained action).

**Auto/Manual Select:** This function selects (maintained action) Automatic (open) or Manual Control (activated).

**Setpoint 1 or 2 Select:** This function selects (maintained action) Setpoint 1 (open) or Setpoint 2 (activated) as the active setpoint.

**Setpoint Ramp Disable:** The setpoint ramping feature is disabled, as long as activated (maintained action). Any time the user input is activated with a ramp in process, ramping is aborted.

**Reset Alarms:** Active alarms are reset, as long as activated (maintained action). Active alarms are reset until the alarm condition is cleared and triggered again (momentary action).

## F1 KEY FUNCTION

**F1**  
**NONE**

SELECTION	FUNCTION	SELECTION	FUNCTION
<b>NONE</b>	No Function	<b>AR1</b>	Reset Alarm 1
<b>AMNF</b>	Auto/Manual Select	<b>AR2</b>	Reset Alarm 2
<b>SP1</b>	Setpoint 1 or 2 Select	<b>ALRS</b>	Reset Both Alarms

The controller performs the selected F1 key function, when **F1** is pressed while in the Display Loop. In any other loop or module location, pressing **F1** will perform an escape to the Display Loop.

**No Function:** No function is performed.

**Auto/Manual Select:** This function toggles (momentary action) the controller between Automatic and Manual Control.

**Setpoint 1 or 2 Select:** This function toggles (momentary action) the controller between Setpoint 1 and Setpoint 2.

**Reset Alarms:** This function can be used to reset one or both of the alarms when activated (momentary action). The alarm will remain reset until the alarm condition is cleared and triggered again.

# 7.2 MODULE 2 - OUTPUT PARAMETERS (2-OP)

### CYCLE TIME

**CYCLE**  
20

00 to 2500 seconds

The Cycle Time is entered in seconds with one tenth of a second resolution. It is the total time for one on and one off period of the time proportioning control output O1. With time proportional control, the percentage of power is converted into an output on-time relative to the cycle time value set. (If the controller calculates that 65% power is required and a cycle time of 10.0 seconds is set, the output will be on for 6.5 seconds and off for 3.5 seconds.) For best control, a cycle time equal to one-tenth or less, of the natural period of oscillation of the process is recommended. When using the Analog Output signal for control, the Cycle Time setting has no effect. If the O1 output is not being used, a cycle time of 0 can be entered to prevent the output and indicator from cycling.

### CONTROL ACTION

**OPAC**  
rEu

*drct* Direct (cooling)  
*rEu* Reverse (heating)

This determines the control action for the PID loop. Programmed for direct action (cooling), the output power will increase if the Process value is above the Setpoint value. Programmed for reverse action (heating), the output power decreases when the Process Value is above the Setpoint Value. For heat and cool applications, this is typically set to reverse. This allows O1 or A1 (models with Analog Output) to be used for heating, and A2/O2 to be used for cooling.

### OUTPUT POWER LOWER LIMIT

**OPLO**  
0

0 to 100 percent O1  
- 100 to 100 percent O1/O2

This parameter may be used to limit controller power at the lower end due to process disturbances or setpoint changes. Enter the safe output power limits for the process. If Alarm 2 is selected for cooling, the range is from -100 to +100%. At 0%, both O1 and O2 are off; at 100%, O1 is on; and at -100%, O2 is on. When the controller is in Manual Control Mode, this limit does not apply.

### OUTPUT POWER UPPER LIMIT

**OPHI**  
100

0 to 100 percent O1  
- 100 to 100 percent O1/O2

This parameter may be used to limit controller power at the upper end due to process disturbances or setpoint changes. Enter the safe output power limits for the process. If Alarm 2 is selected for cooling, the range is from -100 to +100%. At 0%, both O1 and O2 are off; at 100%, O1 is on; and at -100%, O2 is on. When the controller is in Manual Control Mode, this limit does not apply.

### SENSOR FAIL POWER LEVEL

**OPFL**  
0

0 to 100 percent O1  
- 100 to 100 percent O1/O2

This parameter sets the power level for the control outputs in the event of a sensor failure. If Alarm 2 is not selected for cooling, the range is from 0% (O1 output full off) to 100% (O1 output full on). If A2 is selected for cooling, the range is from -100 to +100%. At 0%, both O1 and O2 are off; at 100%, O1 is on; and at -100%, O2 is on. The alarm outputs are upscale drive with an open sensor, and downscale drive with a shorted sensor (RTD only), independent of this setting. Manual Control overrides the sensor fail preset.

### OUTPUT POWER DAMPENING

**OPDP**  
3  
1

0 to 250 seconds

The Dampening Time, entered as a time constant in seconds, dampens (filters) the calculated output power. Increasing the value increases the dampening effect. Generally, dampening times in the range of one-twentieth to one-fiftieth of the controller's integral time (or process time constant) are effective. Dampening times longer than these may cause controller instability due to the added lag effect.

### ON/OFF CONTROL HYSTERESIS

**CHYS**  
2  
0.2

1 to 250

The controller can be placed in the On/Off Control Mode by setting the Proportional Band to 0.0%. The On/Off Control Hysteresis (balanced around the setpoint) eliminates output chatter. In heat/cool applications, the control hysteresis value affects both Output O1 and Output O2 control. It is suggested to set the hysteresis band to Factory Setting prior to starting Auto-Tune. After Auto-Tune, the hysteresis band has no effect on PID Control. On/Off Control Hysteresis is illustrated in the On/Off Control Mode section.

### AUTO-TUNE CODE

**tcod**  
0

0 fastest to 2 slowest

Prior to starting Auto-Tune, this code should be set to achieve the necessary dampening level under PID Control. This value allows customization of the PID values that Auto-Tune will calculate. For the process to be controlled aggressively (fastest process response with possible overshoot), set the Auto-Tune Code to 0. For the process to be controlled conservatively (slowest response with the least amount of overshoot), set this value to 2. If the Auto-Tune Code is changed, Auto-Tune needs to be reinitiated for the changes to affect the PID settings. For more information, see PID Tuning Explanations Section.

**ANALOG OUTPUT RANGE (OPTIONAL)**

**ANL P** 0-10 V 0-20 mA  
**4-20** 4-20 mA

Select the type of output and range. The Analog output jumpers are factory set to current. They must be changed if voltage output is desired. The Analog output can be calibrated to provide up to approximately 5% over range operation (0 mA current can only go slightly negative).

**ANALOG OUTPUT ASSIGNMENT (OPTIONAL)**

**ANAS** OP Main Control % Output Power  
**OP** InP Input Signal Retransmission  
 SP Active Setpoint

This setting selects the parameter that the Analog Output will retransmit or track.

**ANALOG UPDATE TIME (OPTIONAL)**

**ANUL** 0 to 250 seconds  
**0** 0 = update rate of 0.1 second

The update time of the Analog Output can be used to reduce excess valve actuator or pen recorder activity.

**ANALOG LOW SCALING (OPTIONAL)**

**ANL 0** -999 to 9999  
**00**

The Analog Output assignment value that corresponds to 0 V, 0 mA or 4 mA output as selected.

**ANALOG HIGH SCALING (OPTIONAL)**

**ANH 1** -999 to 9999  
**1000**

The Analog Output assignment value that corresponds to 10 V or 20 mA output as selected. An inverse acting output can be achieved by reversing the low and high scaling points.

## 7.3 MODULE 3 - LOCKOUT PARAMETERS (3-LL)

SELECTION	DESCRIPTION
dISP	Display: accessible in Display Loop.
Hide	Hide: accessible in Hidden Loop.
LOC	Locked: not accessible in either loop.
dSPr (SP only)	Display/read: read only in Display Loop, but read/write in Hidden Loop.

The following parameters can be configured for LOC, Hide, and dISP.

SETPOINT ACCESS <b>SP</b> dISP	OUTPUT POWER ACCESS <b>OP</b> dISP	PID VALUES ACCESS <b>P Id</b> Hide	ALARM VALUES ACCESS <b>AL</b> Hide
--------------------------------------	--	--	--

**ACCESS CODE**

**Code** -125 to 125  
**0**

0	Full access to Display, Hidden, and Configuration Loops
- i to - 125	Code necessary to access Configuration Loop only.
i to 125	Code necessary to access Hidden and Configuration Loops.

The following parameters can be configured for LOC or Hide only.

SETPOINT SELECT ACCESS <b>SPSL</b> LOC	SETPOINT RAMP ACCESS <b>SPrP</b> Hide	CONTROL TRANSFER ACCESS <b>trnP</b> LOC
AUTO-TUNE START ACCESS <b>tUNE</b> Hide	RESET ALARMS ACCESS <b>ALrS</b> LOC	

# 7.4 MODULE 4 - ALARM PARAMETERS (4-AL) (OPTIONAL)

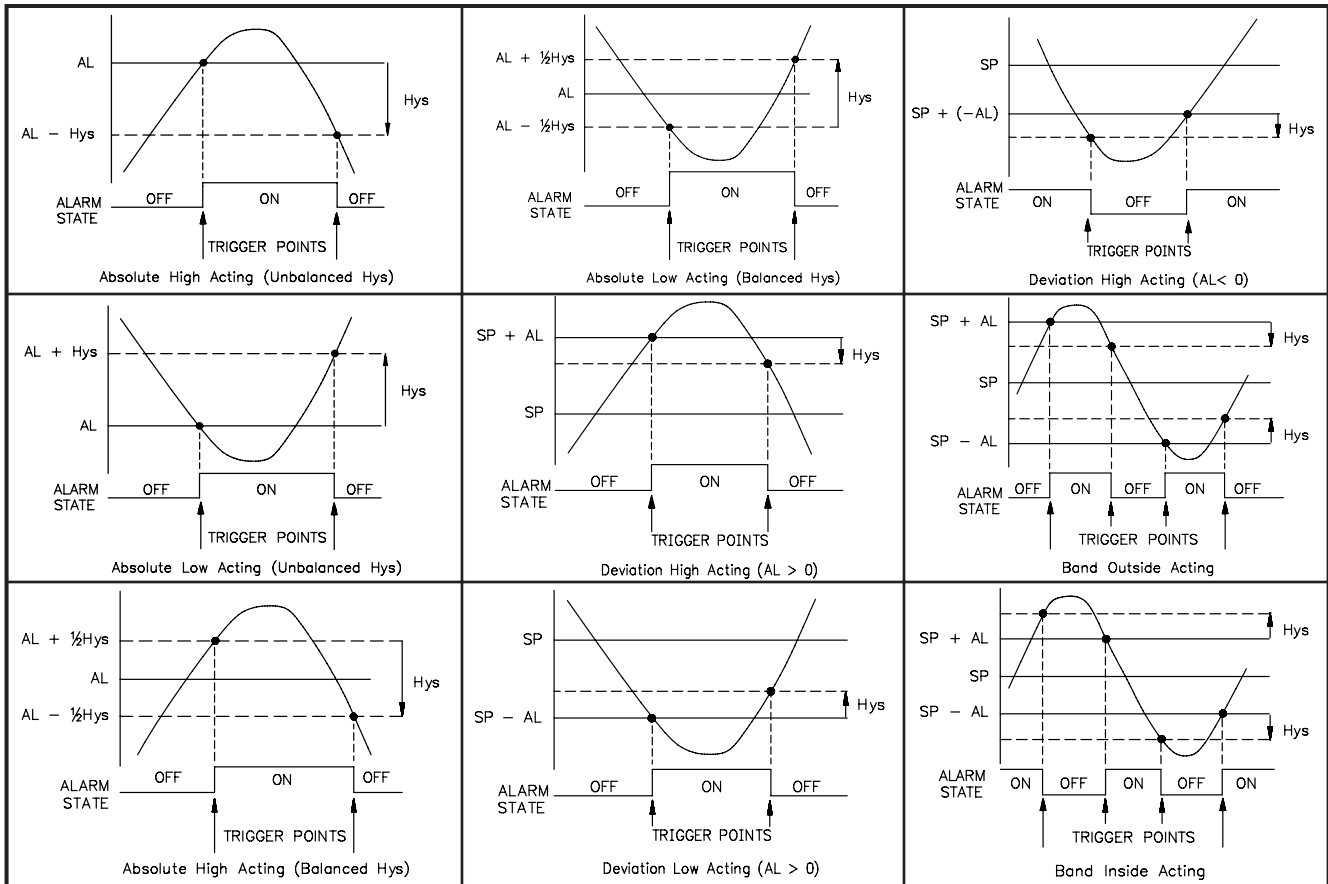

## AVAILABLE ALARM ACTIONS

<b>NONE</b>	None	No action, the remaining Alarm parameters are not available.
<b>RbH1</b>	Absolute High (balanced hysteresis)	The alarm energizes when the Process Value exceeds the alarm value + 1/2 the hysteresis value.
<b>RbL0</b>	Absolute Low (balanced hysteresis)	The alarm energizes when the Process Value falls below the alarm value -1/2 the hysteresis value.
<b>RuH1</b>	Absolute High (unbalanced hysteresis)	The alarm energizes when the Process Value exceeds the alarm value.
<b>RuL0</b>	Absolute Low (unbalanced hysteresis)	The alarm energizes when the Process Value falls below the alarm value.

<b>d-H1</b>	Deviation High	Alarm 1 and 2 value tracks the Setpoint value
<b>d-L0</b>	Deviation Low	Alarm 1 and 2 value tracks the Setpoint value
<b>b-IN</b>	Band Acting (inside)	Alarm 1 and 2 value tracks the Setpoint value
<b>b-OUT</b>	Band Acting (outside)	Alarm 1 and 2 value tracks the Setpoint value
<b>HEAT</b>	Heat (A1 Analog models only)	If heating is selected, the remaining Alarm 1 parameters are not available.
<b>COOL</b>	Cool (A2 only)	If cooling is selected, the remaining Alarm 2 parameters are not available.

## ALARM ACTION FIGURES

Note: Hys in the above figures refers to the Alarm Hysteresis.

### ALARM ACTION ALARM 1

ALC1	NONE ABHI ABLO ABHI ABLO
ABHI	d-HI d-LO b-IN b-OK HERR

Select the action for the alarms. See Alarm Action Figures for a visual explanation.

### ALARM ANNUNCIATOR ALARM 1

LC1	nor Normal
ror	rev Reverse

With normal selection, the alarm annunciator indicates “on” alarm output 1. With reverse selection, the alarm annunciator indicates “off” alarm output.

### ALARM RESET MODE ALARM 1

RS1	Aut Automatic
Aut	Lch Latched

In Automatic mode, an energized alarm turns off automatically after the Temperature/Process value leaves the alarm region. In Latched mode, an energized alarm requires an F1 key or user input alarm reset to turn off. After an alarm reset, the alarm remains reset off until the trigger point is crossed again.

### ALARM STANDBY ALARM 1

SB1	YES Standby on
NO	NO Standby off

Standby prevents nuisance (typically low level) alarms after a power up or setpoint change. After powering up the controller or changing the setpoint, the process must leave the alarm region (enter normal non-alarm area of operation). After this has occurred, the standby is disabled and the alarm responds normally until the next controller power up or setpoint change.

### ALARM VALUE ALARM 1

AL-1	-999 to 9999
0	T16
0.0	P16

The alarm values are entered as process units or degrees. They can also be entered in the Display or Hidden Loops. When the alarm is configured as deviation or band acting, the associated output tracks the Setpoint as it is changed. The value entered is the offset or difference from the Setpoint.

### ALARM ACTION ALARM 2

ALC2	NONE ABHI ABLO ABHI ABLO
ABHI	d-HI d-LO b-IN b-OK Cool

Select the action for the alarms. See Alarm Action Figures for a visual explanation.

### ALARM ANNUNCIATOR ALARM 2

LC2	nor Normal
ror	rev Reverse

With normal selection, the alarm annunciator indicates “on” alarm output 2. With reverse selection, the alarm annunciator indicates “off” alarm output.

### ALARM RESET MODE ALARM 2

RS2	Aut Automatic
Aut	Lch Latched

In Automatic mode, an energized alarm turns off automatically after the Temperature/Process value leaves the alarm region. In Latched mode, an energized alarm requires an F1 key or user input alarm reset to turn off. After an alarm reset, the alarm remains reset off until the trigger point is crossed again.

### ALARM STANDBY ALARM 2

SB2	YES Standby on
NO	NO Standby off

Standby prevents nuisance (typically low level) alarms after a power up or setpoint change. After powering up the controller or changing the setpoint, the process must leave the alarm region (enter normal non-alarm area of operation). After this has occurred, the standby is disabled and the alarm responds normally until the next controller power up or setpoint change.

### ALARM VALUE ALARM 2

AL-2	-999 to 9999
20	T16
2.0	P16

The alarm values are entered as process units or degrees. They can also be entered in the Display or Hidden Loops. When the alarm is configured as deviation or band acting, the associated output tracks the Setpoint as it is changed. The value entered is the offset or difference from the Setpoint.

### ALARM HYSTERESIS

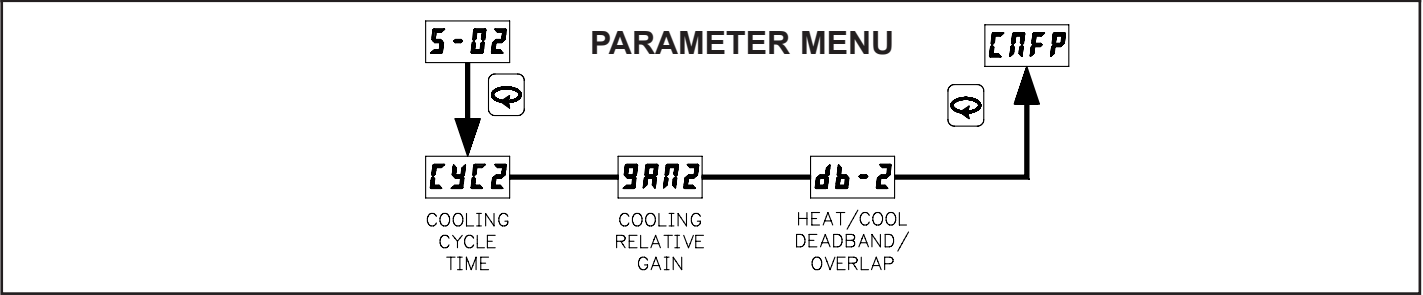

AHYS	0 to 250
1	T16
0.1	P16

The Hysteresis Value is either added to or subtracted from the alarm value, depending on the alarm action selected. The same value applies to both alarms. See the Alarm Action Figures for a visual explanation of how alarm actions are affected by the hysteresis.

# 7.5 MODULE 5 - COOLING (SECONDARY) PARAMETERS (5-02)

To enable Cooling in Heat/Cool applications, the Alarm 2 Action must first be set for Cooling. (For P16 Controllers, the cooling output is sometimes referred to as secondary output.) When set to cooling, the output no longer operates as an alarm but operates as a cooling output. The O2 terminals are the same as A2, however a separate O2 annunciator indicates Cooling Operation. Cooling output power ranges from -100% (full cooling) to 0% (no cooling, unless a heat/cool overlap is used). The Power Limits in Output Module 2-0P also limit the cooling power. In applications requiring only a Cooling output, the main O1 output should be used.

## CYCLE TIME

CYC2  
20

00 to 2500 seconds

This cycle time functions like the O1 Output Cycle Time but allows independent cycle time for cooling. A setting of zero will keep output O2 off.

## RELATIVE GAIN

9992  
10

00 to 100

This defines the gain of the cooling relative to the heating. It is generally set to balance the effects of cooling to that of heating. This is illustrated in the Heat/Cool Relative Gain Figures. A value of 0.0 places the cooling output into On/Off Control.

## DEADBAND/OVERLAP

db-2  
0

-999 to 9999

This defines the overlap area in which both heating and cooling are active (negative value) or the deadband area between the bands (positive value). If a heat/cool overlap is specified, the percent output power is the sum of the heat power (O1) and the cool power (O2). If Relative Gain is zero, the cooling output operates in the On/Off Control Mode, with the On/Off Control Hysteresis CN95 in Output Module 2-0P becoming the cooling output hysteresis. The function of Deadband is illustrated in the Control Mode Explanations. For most applications, set this parameter to 0.0 prior to starting Auto-Tune. After the completion of Auto-Tune, this parameter may be changed.

## HEAT/COOL RELATIVE GAIN FIGURES

# 7.5 MODULE 9 FACTORY SERVICE OPERATIONS (9-F5)

## PARAMETER MENU

### CALIBRATION

The controller is fully calibrated from the factory. Recalibration is recommended every two years by qualified technicians using appropriate equipment. Calibration may be performed by using the front panel or with the TP16KIT. The front panel method is explained below. (Refer to the TP16KIT bulletin for calibration instructions using TP16KIT cable and software.)

Calibration may be aborted by disconnecting power to the controller before exiting Factory Service Module 9-F5. In this case, the existing calibration settings remain in effect.

*Note: Allow the controller to warm up for 30 minutes minimum and follow the manufacturer's warm-up recommendations for the calibration source or measuring device.*

#### Millivolt Calibration (T16)

Millivolt calibration requires a precision voltage source with an accuracy of 0.03% (or better) connected to terminals 8 (comm.) and 9 (+). When calibrating the input, the millivolt calibration must be performed first, then the Cold Junction or RTD Resistance.

PROMPT	APPLY	FRONT PANEL ACTION
CODE		Press $\downarrow$ until 48, press $\odot$ .
RL		Press $\uparrow$ for 4E5, press $\odot$ .
5tP1	0.0 mV	After 5 seconds (minimum), press $\odot$ .
5tP2	14.0 mV	After 5 seconds (minimum), press $\odot$ .
5tP3	28.0 mV	After 5 seconds (minimum), press $\odot$ .
5tP4	42.0 mV	After 5 seconds (minimum), press $\odot$ .
5tP5	56.0 mV	After 5 seconds (minimum), press $\odot$ .

#### Cold Junction (T16)

Cold Junction calibration requires a thermocouple of known accuracy of types T, E, J, K, C or N (connected to terminals 8 and 9) and a calibrated external reference thermocouple probe measuring in °C with resolution to tenths. The two probes should be brought in contact with each other or in some way held at the same temperature. They should be shielded from air movement and allowed sufficient time to equalize in temperature. (As an alternative, the T16 thermocouple may be placed in a calibration bath of known temperature.) If performing the millivolt calibration prior, verify that the correct input type is configured in Input Module 1-# before performing the following procedure. (After the millivolt calibration the controller will default to type J.) If using RTD only, the cold junction calibration need not be performed.

PROMPT	COMPARE	FRONT PANEL ACTION
CODE		Press $\downarrow$ until 48, press $\odot$ .
RL		Press $\odot$ .
LC		Press $\uparrow$ for 4E5, press $\odot$ .
	Top display to external reference	Press $\uparrow$ or $\downarrow$ to adjust the bottom display until the top process display matches the external reference then press $\odot$ .

#### RTD Resistance (T16)

RTD calibration requires a precision 277.0 ohm resistor with an accuracy of 0.1  $\Omega$  (or better). Connect a jumper between terminals 9 and 10 with a 0 ohm jumper between 9 and 8 at 5tP1 and the 277.0 ohm resistor between 9 and 8 at 5tP2. If using thermocouple only, the RTD calibration need not be performed.

PROMPT	APPLY	FRONT PANEL ACTION
CODE		Press $\downarrow$ until 48, press $\odot$ .
RL		Press $\odot$ .
LC		Press $\odot$ .
rtD		Press $\uparrow$ for 4E5, press $\odot$ .
5tP1	0.0 ohm	After 5 seconds (minimum), press $\odot$ .
5tP2	277.0 ohm	After 5 seconds (minimum), press $\odot$ .

#### Input Calibration (P16)

Process calibration requires a precision signal source with an accuracy of 0.03% (or better) that is capable of generating 10.0 V connected to terminals 8 (COMM) and 9 (+10V) and 20.00 mA connected to terminals 8 (COMM) and 10 (20mA). The current calibration can be skipped by pressing  $\odot$  at the not applicable prompts if using the controller for process voltage only.

PROMPT	APPLY	FRONT PANEL ACTION
CODE		Press $\downarrow$ until 48, press $\odot$ .
RL		Press $\uparrow$ for 4E5, press $\odot$ .
5tP1	0.0 V	After 5 seconds (minimum), press $\odot$ .
5tP2	2.5 V	After 5 seconds (minimum), press $\odot$ .
5tP3	5.0 V	After 5 seconds (minimum), press $\odot$ .
5tP4	7.5 V	After 5 seconds (minimum), press $\odot$ .
5tP5	10.0 V	After 5 seconds (minimum), press $\odot$ .
5tPA	0.0 mA	After 5 seconds (minimum), press $\odot$ .
5tPb	20.0 mA	After 5 seconds (minimum), press $\odot$ .

## Analog Output Calibration (T16 and P16)

Set the controller Analog jumpers to the output type being calibrated. Connect an external meter with an accuracy of 0.05% (or better) that is capable of measuring 10.00 V or 20.00 mA to terminals 6 (+V/I) and 7 (-V/I). The voltage or current calibration that is not being used must be skipped by pressing until End appears.

PROMPT	EXTERNAL METER	FRONT PANEL ACTION
<b>Code</b>		Press  until <b>40</b> , press .
<b>AL</b>		Press .
<b>JE</b>		Press . (T16 only)
<b>rd</b>		Press . (T16 only)
<b>AREL</b>		Press  for <b>YES</b> , press .
<b>0.00 V</b>	0.00 V	Press  or  until external meter matches listing, press .
<b>10.00 V</b>	10.00 V	Press  or  until external meter matches listing, press .
<b>0.00 mA</b>	0.00 mA	Press  or  until external meter matches listing, press .
<b>20.00 mA</b>	20.00 mA	Press  or  until external meter matches listing, press .

## RESTORE FACTORY SETTINGS

**Code**  
**66**

Press and hold to display **Code 66**. Press . The controller will display **SEt** and then return to **ALFP**. Press to return to the Display Loop. This will overwrite all user settings with Factory Settings.

## NOMINAL CALIBRATION SETTINGS

**Code**  
**77**

Press and hold to display **Code 77**. Press . Press and hold to display **Code 77** again. Press . The controller will then return to **ALFP**. Press to return to the Display Loop. This will not overwrite any user settings but will erase the controller calibration values. This procedure does not require any calibration signals nor external meters. This can be used to clear calibration error flag **E-EL**.

**CAUTION:** This procedure will result in up to  $\pm 10\%$  reading error and the controller will no longer be within factory specifications. For this reason, this procedure should only be performed if meter error is outside of this range to temporarily restore operation until the unit can be accurately calibrated.

# CONTROL MODE EXPLANATIONS

## ON/OFF CONTROL

The controller operates in On/Off Control when the Proportional Band is set to 0.0%. In this control mode, the process will constantly oscillate around the setpoint value. The On/Off Control Hysteresis (balanced around the setpoint) can be used to eliminate output chatter. Output O1 Control Action can be set to reverse for heating (output on when below the setpoint) or direct for cooling (output on when above the setpoint) applications.

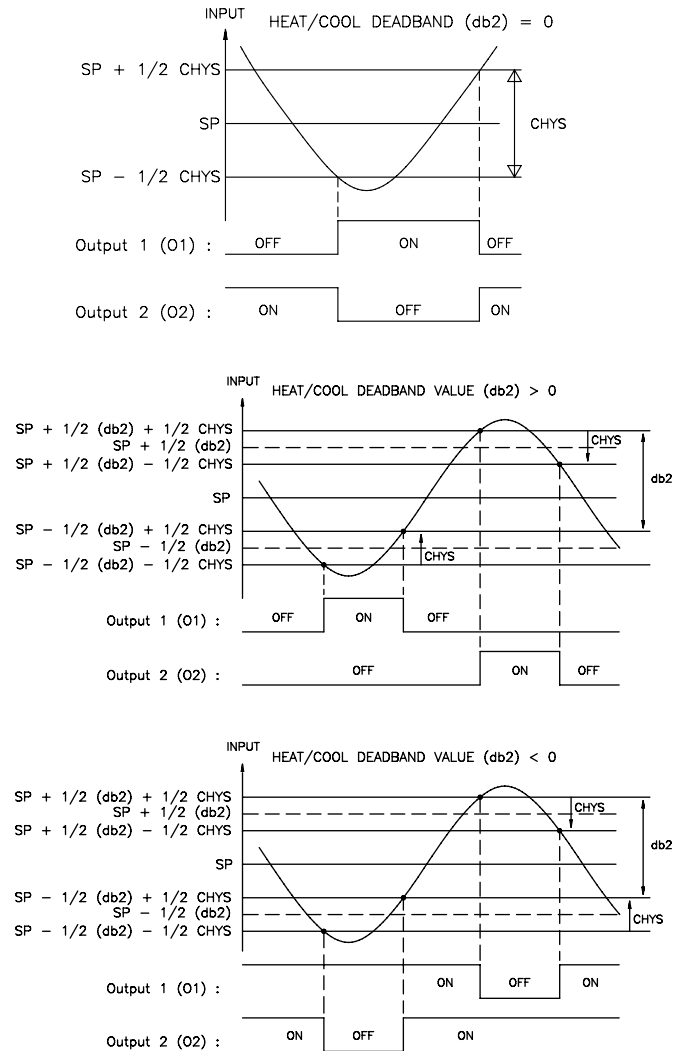

### ON/OFF CONTROL - REVERSE OR DIRECT ACTING FIGURES

Note: CHYS in the On/Off Control Figures refers to the On/Off Control Hysteresis (LHYS) in parameter Module 2.

For heat and cool systems, O1 Control Action is set to reverse (heat) and the Alarm 2 Action is set to cooling (O2). The Proportional Band is set to 0.0 and the Relative Gain in Cooling to 0.0. The Deadband in Cooling sets the amount of operational deadband or overlap between the outputs. The setpoint and the On/Off Control Hysteresis applies to both O1 and O2 outputs. The hysteresis is balanced in relationship to the setpoint and deadband value.

## ON/OFF CONTROL - HEAT/COOL OUTPUT FIGURES

## PID CONTROL

In PID Control, the controller processes the input and then calculates a control output power value by use of a modified Proportional Band, Integral Time, and Derivative Time control algorithm. The system is controlled with the new output power value to keep the process at the setpoint. The Control Action for PID Control can be set to reverse for heating (output on when below the setpoint) or direct for cooling (output on when above the setpoint) applications. For heat and cool systems, the heat (O1) and cool (O2) outputs are both used. The PID parameters can be established by using Auto-Tune, or they can be Manually tuned to the process.

### TYPICAL PID RESPONSE CURVE

## TIME PROPORTIONAL PID CONTROL

In Time Proportional applications, the output power is converted into output On time using the Cycle Time. For example, with a four second cycle time and 75% power, the output will be on for three seconds ( $4 \times 0.75$ ) and off for one second.

The cycle time should be no greater than 1/10 of the natural period of oscillation for the process. The natural period is the time it takes for one complete oscillation when the process is in a continuously oscillating state.

## LINEAR PID CONTROL

In Linear PID Control applications, the Analog Output Assignment **AAAS** is set to % Output Power, **OP**. The Analog Low Scaling, **ALLD**, is set to 0.0 and the Analog High Scaling, **AAHI**, is set to 100.0. The Analog Output will then be proportional to the PID calculated % output power for Heat or Cooling per the Control Action **OPAC**. For example, with 0 VDC to 10 VDC (scaled 0 to 100%) and 75% power, the analog output will be 7.5 VDC.

## MANUAL CONTROL MODE

In Manual Control Mode, the controller operates as an open loop system (does not use the setpoint and process feedback). The user adjusts the percentage of power through the % Power display to control the power for Output O1. When Alarm 2 is configured for Cooling (O2), Manual operation provides 0 to 100% power to O1 (heating) and -100 to 0% power to O2 (Cooling). The Low and High Output Power limits are ignored when the controller is in Manual.

## MODE TRANSFER

When transferring the controller mode between Automatic and Manual, the controlling outputs remain constant, exercising true "bumpless" transfer. When transferring from Manual to Automatic, the power initially remains steady, but Integral Action corrects (if necessary) the closed loop power demand at a rate proportional to the Integral Time.

## AUTOMATIC CONTROL MODE

In Automatic Control Mode, the percentage of output power is automatically determined by PID or On/Off calculations based on the setpoint and process feedback. For this reason, PID Control and On/Off Control always imply Automatic Control Mode.

# PID TUNING EXPLANATIONS

## AUTO-TUNE

Auto-Tune is a user-initiated function that allows the controller to automatically determine the Proportional Band, Integral Time, Derivative Time, Digital Filter, Control Output Dampening Time, and Relative Gain (Heat/Cool) values based upon the process characteristics. The Auto-Tune operation cycles the controlling output(s) at a control point three-quarters of the distance between the present process value and the setpoint. The nature of these oscillations determines the settings for the controller's parameters.

Prior to initiating Auto-Tune, it is important that the controller and system be first tested. (This can be accomplished in On/Off Control or Manual Control Mode.) If there is a wiring, system or controller problem, Auto-Tune may give incorrect tuning or may never finish. Auto-Tune may be initiated at start-up, from setpoint or at any other process point. However, ensure normal process conditions (example: minimize unusual external load disturbances) as they will have an effect on the PID calculations.

## Start Auto-Tune

Below are the parameters and factory settings that affect Auto-Tune. If these settings are acceptable then Auto-Tune can be started just by performing two steps. If changes are needed, then they must be made before starting Auto-Tune.

DISPLAY	PARAMETER	FACTORY SETTING	MODULE
<b>TYPE</b>	Input Type	<b>TC-D</b> T16 <b>Curr</b> P16	<b>1-1A</b>
<b>FLtr</b>	Digital Filtering	<b>1</b>	<b>1-1A</b>
<b>CHYS</b>	On/Off Control Hysteresis	<b>2</b> T16 <b>0.2</b> P16	<b>2-0P</b>
<b>tcod</b>	Auto-Tune Code	<b>0</b>	<b>2-0P</b>
<b>db-2</b>	Deadband	<b>0</b>	<b>5-02</b>
<b>tUNE</b>	Auto-Tune Access	<b>Hi dE</b>	<b>3-LL</b>

1. Enter the Setpoint value in the Display Loop.
2. Initiate Auto-Tune by changing Auto-Tune Start **tUNE** to **YES** in the Hidden Loop.

## Auto-Tune Progress

The controller will oscillate the controlling output(s) for four cycles. The bottom display will flash the cycle phase number. Parameter viewing is permitted during Auto-Tune. The time to complete the Auto-Tune cycles is process dependent. The controller should automatically stop Auto-Tune and store the calculated values when the four cycles are complete. If the controller remains in Auto-Tune unusually long, there may be a process problem. Auto-Tune may be stopped by entering **NO** in Auto-Tune Start **tUNE**.

\* - On/Off Control Hysteresis

## PID Adjustments

In some applications, it may be necessary to fine tune the Auto-Tune calculated PID parameters. To do this, a chart recorder or data logging device is needed to provide a visual means of analyzing the process. Compare the actual process response to the PID response figures with a step change to the process. Make changes to the PID parameters in no more than 20% increments from the starting value and allow the process sufficient time to stabilize before evaluating the effects of the new parameter settings.

In some unusual cases, the Auto-Tune function may not yield acceptable control results or induced oscillations may cause system problems. In these applications, Manual Tuning is an alternative.

## PROCESS RESPONSE EXTREMES

TO DAMPEN RESPONSE:

- INCREASE PROPORTIONAL BAND.
- INCREASE INTEGRAL TIME.
- USE SETPOINT RAMPING.
- USE OUTPUT POWER LIMITS.
- RE-INVOKE AUTO-TUNE WITH A HIGHER AUTO-TUNE CODE.
- INCREASE DERIVATIVE TIME.
- CHECK CYCLE TIME.

TO QUICKEN RESPONSE:

- DECREASE PROPORTIONAL BAND.
- DECREASE INTEGRAL TIME.
- INCREASE OR DEFEAT SETPOINT RAMPING.
- EXTEND OUTPUT POWER LIMITS.
- RE-INVOKE AUTO-TUNE WITH A LOWER AUTO-TUNE CODE.
- DECREASE DERIVATIVE TIME.

## MANUAL TUNING

A chart recorder or data logging device is necessary to measure the time between process cycles. This procedure is an alternative to the controller's Auto-Tune function. It will not provide acceptable results if system problems exist.

1. Set the Proportional Band (*PrdB*) to 10.0% for temperature models (T16) and 100.0% for process models (P16).
2. Set both the Integral Time (*IntT*) and Derivative Time (*DerT*) to 0 seconds.
3. Set the Output Dampening Time (*OPdP*) in Output Module 2-*OP* to 0 seconds.
4. Set the Output Cycle Time [*CYCT*] in Output Module 2-*OP* to no higher than one-tenth of the process time constant (when applicable).
5. Place the controller in Manual *USER* Control Mode *krnF* in the Hidden Loop and adjust the % Power to drive the process value to the Setpoint value. Allow the process to stabilize after setting the % Power. Note: *krnF* must be set to *ModE* in Parameter Lockouts Module 3-*LE*.
6. Place the controller in Automatic (*Auto*) Control Mode *krnF* in the Hidden Loop. If the process will not stabilize and starts to oscillate, set the Proportional Band two times higher and go back to Step 5.
7. If the process is stable, decrease Proportional Band setting by two times and change the Setpoint value a small amount to excite the process. Continue with this step until the process oscillates in a continuous nature.
8. Fix the Proportional Band to three times the setting that caused the oscillation in Step 7.
9. Set the Integral Time to two times the period of the oscillation.
10. Set the Derivative Time to 1/8 (0.125) of the Integral Time.
11. Set the Output Dampening Time to 1/40 (0.025) the period of the oscillation.

# MODEL T48 - 1/16 DIN TEMPERATURE CONTROLLER

- PID CONTROL WITH REDUCED OVERSHOOT
- ON DEMAND AUTO-TUNING OF PID CONTROL SETTINGS
- NEMA 4X/IP65 BEZEL
- DUAL LED DISPLAYS FOR SIMULTANEOUS INDICATION OF TEMPERATURE AND SETPOINT
- STATUS INDICATORS FOR OUTPUTS AND CONTROL MODES
- ACCEPTS 10 TYPES OF SENSOR INPUTS (Thermocouple or RTD)
- OPTIONAL HEATER CURRENT MONITOR AND HEATER BREAK ALARM
- OPTIONAL DUAL ALARM OUTPUTS
- OPTIONAL TWO LINEAR DC OUTPUTS (0 to 10 V, 0/4 to 20 mA)
- MANUAL/AUTOMATIC CONTROL MODES
- SETPOINT RAMPING FOR PROCESS STARTUP
- PROGRAMMABLE USER INPUT (Digital) FOR ADDED FLEXIBILITY
- SENSOR ERROR COMPENSATION (Offset) AND BREAK DETECTION
- HEATING AND OPTIONAL COOLING OUTPUTS
- PARAMETER SECURITY VIA PROGRAMMABLE LOCKOUTS
- FIELD REPLACEABLE OUTPUT BOARD (Relay or Logic/SSR Drive)

- OPTIONAL TRIAC OUTPUT
- SECOND SETPOINT SETTING
- OPTIONAL REMOTE SETPOINT INPUT (0/4 to 20 mA)
- OPTIONAL RS485 SERIAL COMMUNICATIONS
- PC SOFTWARE AVAILABLE FOR CONTROLLER CONFIGURATION

UL Recognized Component,  
File # E156876

## DESCRIPTION

The T48 Controller accepts signals from a variety of temperature sensors (thermocouple or RTD elements), precisely displays the process temperature, and provides an accurate output control signal (time proportional or linear DC) to maintain the process at the desired temperature. The controller's comprehensive yet simple programming allows it to meet a wide variety of application requirements.

The controller operates in the PID control mode for both heating and cooling, with on-demand auto-tune, which will establish the tuning constants. The PID tuning constants may be fine-tuned by the operator at any time and then locked out from further modification. The controller employs a unique overshoot suppression feature, which allows the quickest response without excessive overshoot. The unit can be transferred to operate in the manual mode, providing the operator with direct control of the output. The controller may also be programmed to operate in the ON/OFF control mode with adjustable hysteresis. A second setpoint is available on select models to allow quick selection of a different setpoint setting.

Dual 4-digit displays allow viewing of the process temperature and setpoint simultaneously. Front panel indicators inform the operator of the controller and output status. On many models the main control output and the alarm outputs are field replaceable.

Optional alarm(s) can be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, Band IN or OUT, and Heater Current Break) with adjustable hysteresis. A standby feature suppresses the alarm during power-up until the temperature stabilizes outside the alarm region. The second alarm can be configured as a secondary PID output (heat/cool applications).

Optional Main Linear DC output (10 V or 20 mA) can be used for control or temperature re-transmission purposes. Programmable output update time reduces valve or actuator activity. The output range can be scaled independent of the input range.

Optional Second Linear DC output (10 V or 20 mA) provides an independent temperature re-transmission, while the main Linear DC output is being used for control. The output range can be scaled independent of the input range.

Optional Heater Current Monitor provides a direct readout of process heater current. An alarm can be programmed to signal when the heater has failed. This provides early warning of system failure before product quality is affected.

Optional Remote Setpoint input (0/4 to 20 mA) allows for cascade control loops, where tighter control is required; and allows for remotely driven setpoint

**CAUTION: Risk of Danger.**

Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

signal from computers or other similar equipment. Straightforward end point scaling with independent filtering and local/remote transfer option expand the controller's flexibility.

The optional RS485 serial communication interface provides two-way communication between a T48 and other compatible equipment such as a printer, PLC, HMI, or a host computer. In multipoint applications (up to thirty-two), the address number of each T48 on the line can be programmed from 0 to 99. Data from the T48 can be interrogated or changed, and alarm output(s) may be reset by sending the proper command code via serial communications. PC software, SFCRM, allows for easy configuration of controller parameters. These settings can be saved to disk for later use or used for multi-controller down loading. On-line help is provided within the software.

The unit is constructed of a lightweight, high impact plastic case with a tinted front panel. The front panel meets NEMA 4X/IP65 specifications when properly installed. Multiple units can be stacked horizontally or vertically. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the controller extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the T48 to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the controller. An independent and redundant temperature limit indicator with alarm outputs is strongly recommended.

## SPECIFICATIONS

### 1. DISPLAY: Dual 4-digit

**Upper Temperature Display:** 0.4" (10.2 mm) high red LED

**Lower Auxiliary Display:** 0.3" (7.6 mm) high green LED

#### Display Messages:

- "OLOL" - Appears when measurement exceeds + sensor range.
- "ULUL" - Appears when measurement exceeds - sensor range.
- "OPEN" - Appears when open sensor is detected.
- "SHrt" - Appears when shorted sensor is detected (*RTD only*)
- "..." - Appears when display values exceed + display range.
- "-.." - Appears when display values exceed - display range.

#### LED Status Annunciators:

- %P - Lower auxiliary display shows power output in (%).
- MN - Flashing: Controller is in manual mode.
  - On: Local Setpoint (Remote Setpoint option)
  - Off: Remote Setpoint
- DV - Lower auxiliary display shows deviation (*error*) from temperature setpoint or shows heater current.
- O1 - Main control output is active.
- A1 - Alarm #1 is active (*for A1 option.*).
- A2 - Alarm #2 is active OR
  - Cooling output (O2) is active

### 2. POWER:

**AC Versions:** 85 VAC min. to 250 VAC max., 50 to 60 Hz, 8 VA max.

#### DC Versions:

**DC Power:** 18 to 36 VDC; 7 W

**AC Power:** 24 VAC  $\pm$  10%; 50 to 60 Hz, 9 VA

### 3. CONTROLS:

Four front panel push buttons for modification and setup of controller functions and one external input user for parameter lockout or other functions.

### 4. MEMORY:

Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and values.

### 5. MAIN SENSOR INPUT:

**Sample Period:** 100 msec

**Response Time:** Less than 300 msec typ., 400 msec max. (*to within 99% of final value w/step input; typically, response is limited to response time of probe*)

#### Failed Sensor Response:

**Main Control Output(s):** Programmable preset output

**Display:** "OPEN"

**Alarms:** Upscale drive

**Normal Mode Rejection:** 40 dB @ 50/60 Hz (improves with increased digital filtering.)

**Common Mode Rejection:** Greater than 120 dB, DC to 60 Hz

**Protection:** Input overload 120 VAC max. for 15 seconds max.

### 6. THERMOCOUPLE INPUT:

**Types:** T, E, J, K, R, S, B, N, Linear mV, software selectable

**Input Impedance:** 20 M $\Omega$  all types

**Lead resistance effect:** 0.25  $\mu$ V/ $\Omega$

**Cold junction compensation:** Less than  $\pm 1^\circ\text{C}$  ( $\pm 1.5^\circ\text{C}$  max), error over 0 to 50°C max. ambient temperature range. Defeated for Linear mV indication mode.

**Resolution:** 1° for all types, or 0.1° for T, E, J, K, and N only.

TC TYPE	RANGE	WIRE COLOR	
		ANSI	BS 1843
T	-200 to +400°C -328 to +752°F	blue (+) red (-)	white (+) blue (-)
E	-200 to +750°C -328 to +1382°F	violet (+) red (-)	brown (+) blue (-)
J	-200 to +760°C -328 to 1400°F	white (+) red (-)	yellow (+) blue (-)
K	-200 to +1250°C -328 to +2282°F	yellow (+) red (-)	brown (+) blue (-)
R	0 to 1768°C +32 to +3214°F	black (+) red (-)	white (+) blue (-)
S	0 to 1768°C +32 to 3214°F	black (+) red (-)	white (+) blue (-)
B	+149 to +1820°C +300 to +3308°F	grey (+) red (-)	no standard
N	-200 to +1300°C -328 to +2372°F	orange (+) red (-)	orange (+) blue (-)
mV	-5.00 to +56.00	no standard	no standard

### 7. RTD INPUT: 2 or 3 wire, 100 $\Omega$ platinum, alpha = 0.00385 (DIN 43760), alpha = 0.0039162

**Excitation:** 150  $\mu$ A typical

**Resolution:** 1 or 0.1 degree

**Lead Resistance:** 15  $\Omega$  max. per input lead

RTD TYPE	RANGE
385	-200 to +600°C -328 to +1100°F
392	-200 to +600°C -328 to +1100°F
OHMS	1.0 to 320.0

### 8. INDICATION ACCURACY: $\pm(0.3\%$ of Span $+1^\circ\text{C}.)$ includes NIST conformity, cold junction effect and A/D conversion errors at 23°C after 20 min. warm-up.

### 9. USER INPUT: Internally pulled up to +5 VDC (1 M $\Omega$ ).

$V_{IN\ MAX} = 5.25\ \text{VDC}$ ,  $V_{IL} = 0.85\ \text{V max.}$ ,  $V_{IH} = 3.65\ \text{V min.}$ ,  $I_{OFF} = 1\ \mu\text{A max.}$

**Response Time:** 120 msec max.

**Functions:**

Program Lock	Integral Action Lock
Auto/Manual Mode Select	Setpoint Ramp Enable
Reset Alarms	Setpoint 1/Setpoint 2 Select
Local/Remote Setpoint Select	Serial block print

### 10. CONTROL AND ALARM OUTPUTS: (Heating, Cooling or Alarm)

#### Relay outputs with Form A contacts:

**Contact Rating:** 3 A @ 250 VAC or 30 VDC (resistive load)

1/10 HP @ 120 VAC (inductive load)

**Life Expectancy:** 100,000 cycles at max. load rating.

*(Decreasing load and/or increasing cycle time, increases life expectancy.)*

#### Logic/SSR Drive Outputs:

**Rating:** 45 mA @ 4 V min., 7 V nominal

#### Triac Outputs:

**Type:** Isolated, Zero Crossing Detection

#### Rating:

**Voltage:** 120/240 VAC

**Max. Load Current:** 1 Amp @ 35°C

0.75 Amp @ 50°C

**Min Load Current:** 10 mA

**Offstate Leakage Current:** 7 mA max. @ 60 Hz

**Operating Frequency:** 20 to 400 Hz

**Protection:** Internal transient snubber

### 11. MAIN CONTROL:

**Control:** PID or ON/OFF

**Output:** Time proportioning or Linear DC

**Cycle time:** Programmable

**Auto-tune:** When selected, sets proportional band, integral time, and derivative time values.

**Probe Break Action:** Programmable

### 12. ALARMS: 1 or 2 alarms (optional)

**Modes:** Absolute high acting

Absolute low acting

Deviation high acting

Deviation low acting

Inside band acting  
 Outside band acting  
 Heater break alarm

**Reset Action:** Programmable; automatic or latched  
**Standby Mode:** Programmable; enable or disable  
**Hysteresis:** Programmable  
**Probe Break Action:** Upscale  
**Annunciator:** LED backlight for "A1", "A2"

13. **COOLING:** Software selectable (overrides alarm 2)

**Control:** PID or ON/OFF  
**Output:** Time Proportioning  
**Cycle time:** Programmable  
**Proportional Gain Adjust:** Programmable  
**Heat/Cool Deadband Overlap:** Programmable

14. **MAIN AND SECOND LINEAR DC OUTPUT:** (optional)

**Main:** Control or Re-transmission, programmable update rate from 0.1 sec to 250 sec  
**Second:** Re-transmission only, fixed update rate of 0.1 sec

OUTPUT ** RANGE	ACCURACY * (18 to 28°C)	ACCURACY * (0 to 50°C)	COMPLIANCE	RESOLUTION
0 to 10 V	0.10% of FS + 1/2 LSD	0.30% of FS + 1/2 LSD	10k ohm min.	1/3500
0 to 20 mA	0.10% of FS + 1/2 LSD	0.30% of FS + 1/2 LSD	500 ohm max.	1/3500
4 to 20 mA	0.10% of FS + 1/2 LSD	0.30% of FS + 1/2 LSD	500 ohm max.	1/2800

\* Accuracies are expressed as ± percentages after 20 minutes warm-up. Output accuracy is specified in two ways: Accuracy over an 18 to 28°C range at 10 to 75% RH environment; and accuracy over a 0 to 50°C range at 0 to 85% RH (non-condensing) environment. Accuracy over the wide temperature range reflects the temperature coefficient of the internal circuitry.

\*\* Outputs are independently jumper selectable for either 10 V or 20 mA. The output range may be field calibrated to yield approximately 10% overrange and a small underrange (negative) signal.

15. **REMOTE SETPOINT INPUT:** (optional)

**Input type:**  
 0/4 to 20 mA  
**Input Resistance:** 10 Ω  
**Overrange:** -5% to 105%  
**Overload:** 100 mA (continuous)  
**Scale Range:** -999 to 9999 degrees or -99.9 to 999.9 degrees.  
**Resolution:** 1 part in 10,000.  
**Accuracy:**  
 At 25°C: ±(0.1 % of full scale + 1/2 LSD)  
 Over 0 to 50°C range: ±(0.2% of full scale + 1/2 LSD)

**Reading Rate:** 10/sec.  
**Setpoint Filtering:** Programmable Digital  
**Setpoint Ramping:** Programmable, 0.1 to 999.9 degrees/minute.

16. **HEATER CURRENT MONITOR INPUT:** (optional)

**Type:** Single phase, full wave monitoring of load currents controlled by main output (01).  
**Input:** 100 mA AC output from current transformer (RLC #CT004001) or any CT with 100 mA AC output.  
**Display Scale Range:** 1.0 to 999.9 Amps or 0.0 to 100.0%  
**Input Resistance:** 5 Ω  
**Accuracy:**  
 At 25°C: ±(0.5 % of full scale + 1/2 LSD), (5 to 100% of Range)  
 Over 0 to 50°C range: ±(1.0% of full scale + 1/2 LSD), (5 to 100% of Range)  
**Frequency:** 50 to 400 Hz.  
**Alarm Mode:** Dual acting; heater element fail detect and control device fail detect.  
**Overrange:** 105% Capacity  
**Overload:** 200 mA (continuous).

17. **SERIAL COMMUNICATIONS:** (optional)

**Type:** RS485 multipoint, balanced interface  
**Baud Rate:** 300 to 9600  
**Data Format:** 7O1, 7E1, 7N2, 8N1  
**Node Address:** 0-99, max of 32 units per line  
**Transmit Delay:** 2-100 msec or 100-200 msec  
**Data Encoding:** ASCII  
**Isolation w.r.t Main Input Common:** 500 Vrms for 1 min. (50 V working)  
 Not isolated w.r.t. Remote Setpoint or Heater Current inputs, or Analog Output common

*Note: RS485 and the Analog Output commons are not internally isolated within the controller. The terminating equipment of these outputs must not share the same common (ie. earth ground).*

18. **ENVIRONMENTAL CONDITIONS:**

**Operating Range:** 0 to 50°C  
**Storage Range:** -40 to 80°C  
**Span Drift (max.):** 130 ppm/°C, main input  
**Zero Drift (max.):** 1µV/°C, main input  
**Operating and Storage Humidity:**  
 85% max. relative humidity (non-condensing) from 0°C to 50°C.  
**Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2g's.  
**Shock According to IEC 68-2-27:** Operational 20 g, 11 msec in 3 directions.  
**Altitude:** Up to 2000 meters

19. **ISOLATION BREAKDOWN RATINGS:**

**AC line with respect to all Inputs and outputs:** 250 V working (2300 V for 1 minute).  
**Main input with respect to Analog Outputs, Remote Setpoint Input, Heater Current Input:** 50 V working (2300 V for 1 minute).  
**All other inputs and outputs with respect to relay contacts:** 2000 VAC  
 Not isolated between Analog Outputs, Remote Setpoint and Heater Current commons.

20. **CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**  
 UL Recognized Component, File #E156876, UL873, CSA 22.2 No. 24  
 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
 Type 4X Enclosure rating (Face only), UL50  
 IEC EE CB Scheme Test Certificate # UL1369-156876/USA,  
 CB Scheme Test Report # 96ME50224-040396  
 Issued by Underwriters Laboratories, Inc.  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
 IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY**

<b>Immunity to EN 50082-2</b>		
Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>1</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power

*Notes:*

- No loss of performance during EMI disturbance at 10 V/m.  
 Unit is panel mounted in a metal enclosure (Buckeye SM7013-0 or equivalent) that provides at least 20 dB shielding effectiveness. Metal panel is connected to earth ground.  
 Power Line and I/O cables routed in metal conduit connected to earth ground.*
- Self-recoverable loss of performance during EMI disturbance at 10 Vrms:  
 Analog output may deviate during EMI disturbance.  
 For operation without loss of performance:  
 Install power line filter, RLC#LFIL0000 or equivalent.  
 OR  
 Install 2 ferrite cores, RLC#FCOR0000 or equivalent, to AC lines at unit for frequencies above 5 MHz.  
 I/O cables routed in metal conduit connected to earth ground.  
 Refer to the EMC Installation Guidelines section of the manual for additional information.*

21. **CONNECTION:** Wire clamping screw terminals

22. **CONSTRUCTION:** Black plastic alloy case and collar style panel latch. Panel latch can be installed for vertical or horizontal instrument stacking. One piece tinted plastic bezel. Bezel assembly with circuit boards can be removed from the case to change the output board without removing the case from the panel or disconnecting wiring. Unit meets NEMA 4X/IP65 requirements for indoor use, when properly installed. Installation Category II, Pollution Degree 2.

23. **WEIGHT:** 0.38 lbs (0.17 kgs)

## BASIC OPERATION

The T48 controls a process temperature by measuring the temperature via an input probe, then calculating a control output power value by use of a modified PID control algorithm. The unit controls the system with the new output power value to keep the process temperature at setpoint. The PID control algorithm incorporates features which provide for high control accuracy and low temperature overshoot from process disturbances.

## FRONT PANEL FEATURES

In the normal operating mode, the unit displays the process temperature in the upper display. One of the following parameters can be viewed in the lower display:

- Setpoint
- % Power Output
- Temperature Deviation
- Heater Current
- Temperature symbol (F or C)
- Blank Display

The user scrolls through these parameters by pressing the D button. If enabled, the control setpoint or power output (manual mode only) can be directly modified in this mode.

In the normal operating mode, parameters are selected by use of the P button and modified by use of the UP and DOWN buttons. Parameters are then entered by the P button, which advances the user to the next parameter. Pressing the D button immediately returns the controller to the normal operating mode without changing the currently selected parameter.

## HARDWARE FEATURES

A fast 100 msec input sampling rate provides quick controller response to a process disturbance, thus providing excellent temperature control. Measurement accuracy of 0.3% of span  $\pm 1^\circ\text{C}$  or better, provides close process control conforming to the desired control setpoint value. The T48 accepts a variety of both thermocouple and RTD temperature probes. An output board contains the Main Control output, Alarm 1 output, Alarm 2/Cooling output, and/or Linear DC output. Since the controller is serviceable from the front of the panel, the output board (on some models) may be easily changed or replaced without disturbing the wiring behind the panel. No re-programming is required when changing or replacing the output board for units without the Linear DC output option. Units with the linear output option require calibration procedure for the new linear output.

Low-drift, highly stable circuitry ensures years of reliable and accurate temperature control. The recommended two year re-calibration interval is easily accomplished via the programming menu.

## REMOTE SETPOINT INPUT

The remote setpoint input facilitates the use of a remote signal to drive the controller's setpoint. The remote signal can be scaled independent to that of the controller's range. The controller's response to local/remote setpoint transfers can be programmed. Also, the remote signal is filtered by use of an adaptive filter. With this filter, relatively large filtering time constants can be used without suffering from long settling times. The time constant and filter disable band are programmable. Additionally, the remote signal can also be velocity limited (or ramped) to slow the controller's response to changes in setpoint. This results in a steady control response with no overshoot.

## HEATER CURRENT MONITOR

The T48 provides a direct readout of process heater current. This provides valuable information regarding single phase heater system integrity. It is especially useful on extruder and large oven applications where adjacent controllers mask the effect of a failed heater. The heater break alarm senses two types of heater system faults:

- 1) Main control output is "on" and heater current is below alarm value. This indicates failed heater or failed parts of heater, breaker trip, failed power control device, etc.
- 2) Main control output is "off" and heater current is above 10% of alarm value. This indicates a failed power control device, wiring fault, etc.

## LINEAR DC ANALOG OUTPUTS

The Main Linear DC output has independent scaling, programmable output update time and filter (damping) time. These parameters permit flexibility in process configuration. The output can be set for 0 to 10 V, 0 to 20 mA or 4 to 20 mA ranges, and can be configured for control or for transmission of temperature or setpoint values.

A Second Linear DC output is dedicated for retransmission of input temperature. The output can be scaled and converted independent of the input and Main Linear DC output. This output is isolated from the input.

## SETPOINT FEATURES

The controller setpoint can be protected from out of range values by programming the setpoint range limit values. Additionally, safeguards from inadvertent data entry can be programmed.

A second setpoint value can be programmed which can be made active by a user input and/or through the front panel on selected models.

The setpoint ramp feature ramps the setpoint value at start-up or any time a setpoint change is made, at a user programmable rate. This feature reduces thermal shock to the process and helps to minimize temperature overshoot.

## INPUT FEATURES

A programmable input filter can be used to stabilize readings from a process with varying or oscillating temperature characteristics, helping to provide better temperature control. A programmable temperature shift function can be used to compensate for probe errors or to have multiple T48 units indicate the same nominal temperature.

The programmable User Input can be used to control a variety of functions, such as auto/manual transfer of the controller, reset alarm output(s), transfer to second setpoint, etc.

## OUTPUT FEATURES

Programmable output power limits provide protection for processes where excessive power can cause damage. Automatic sensor probe break detection, for fail-safe operation, causes the controller to default to a programmed output power (upscale or downscale burnout). Programmable output cycle time, output hysteresis and dampening can reduce output activity without degrading control accuracy. The main outputs can operate in PID, ON/OFF, or manual control modes.

## CONTROL AND ALARM OUTPUTS

In addition to the Linear DC outputs, there are up to three types of ON/OFF outputs. These outputs can be relay, logic, or triac for control or alarm purposes. Relay outputs can switch user applied AC or DC voltages. Logic/SSR drive outputs supply power to external SSR power units. One Logic/SSR Drive output can control up to four SSR power units at one time. The Triac output supplies one Amp of AC current for control of an external AC relay or triac device.

## AUTO-TUNE

The T48 has an auto-tune feature which, on demand, automatically determines the PID control parameters for a particular thermal process. After completion of auto-tune, the PID parameters are automatically optimized for that process and loaded into non-volatile memory. The operator may view and modify the parameters as desired.

Auto-tune may be invoked either at start-up or at setpoint, depending on the process requirements. An auto-tune programmable dampening factor produces various levels of process control and response characteristics.

## RS485 Communications

The RS485 communications option allows the connection of up to 32 devices on a single pair of wires with a distance of up to 4,000 feet and a maximum baud rate of 9600. Since the same pair of wires are used for both transmit and receive, only one way communication is possible at any given time. The controller has a programmable response time to allow the host device adequate time to release the communication line for a transmission.

Selected parameters from the T48 can be interrogated or changed, and alarm output(s) may be reset by sending the proper command code via serial communications. It is also possible to invoke Auto-tune through the serial port. Serial communications used with SFCRM software allows for easy controller parameter configuration by computer.

## HEATING AND COOLING SYSTEMS

The T48 is available with dual outputs to provide heating and cooling to those processes that require them. For example, many extruder applications require both heating and cooling to maintain accurate extruder barrel and die temperatures. The T48 is easily configured for these types of applications.

## CONTROLLER PROGRAMMING

Front Panel Program Disable allows all of the controller's set-ups to be locked-out from further operator intervention after the initial set-up.

The following four programming modes allow the controller to adapt to any required user-interface level:

- Unprotected Parameter Mode
- Protected Parameter Mode
- Hidden Function Mode
- Configuration Parameter Mode

### UNPROTECTED PARAMETERS MODE \*

The Unprotected Parameters Mode is accessible from the Normal Display Mode when program disable is inactive or when the proper access code number from the Protected Parameter Mode is entered. The Configuration Parameter Modes can be accessed only from this mode.

- "SP" - Enter setpoint
- "OP" - Enter output power
- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErT" - Enter derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CNFP" - Select configuration access point
- "End" - Return to normal display mode

### PROTECTED PARAMETERS MODE \*

The Protected Parameters Mode is enabled when program disable is active. This mode prevents access to the Configuration Parameter Modes without the proper access code number. Only the parameters that are enabled in the Configuration 3 parameter (lock-out section) can be accessed.

- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErT" - Enter derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CodE" - Enter value to access unprotected parameters and configuration parameters

### HIDDEN FUNCTION MODE \*

The Hidden Function Mode is accessible from the Normal Display Mode. The functions in this mode may be locked-out individually in Configuration 3 parameter (lock-out section).

- "SPSL" - Select local (SP1 or SP2) or remote setpoint
- "trnF" - Transfer between automatic (PID) control and manual control
- "tUNE" - Invoke/cancel PID Auto-tune
- "ALrS" - Reset latched alarms

### CONFIGURATION PARAMETER MODE

The Configuration Parameter Mode allows the operator to set-up the basic requirements of the controller. It is divided into sections which group together related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each section, the program returns to the Configuration Access Point, allowing the user to return to the Normal Display Mode.

#### Configuration 1, Inputs (1-IN)

- "tYPE" - Select input probe type
- "SCAL" - Select temperature scale
- "dCPT" - Select temperature resolution
- "FLtr" - Select level of input filtering
- "SHFt" - Enter input correction shift (offset)
- "SPLO" - Enter setpoint lower limit
- "SPHI" - Enter setpoint higher limit
- "SPrP" - Enter setpoint ramp rate
- "InPt" - Select user input function

#### Configuration 2, Outputs (2-OP) \*

- "CYCt" - Enter time proportioning cycle time
- "OPAC" - Select output control action
- "OPLO" - Enter output power low limit
- "OPHI" - Enter output power high limit
- "OPFL" - Enter probe fail power preset
- "OPdP" - Enter output control dampening
- "CHYS" - Enter ON/OFF control hysteresis
- "tCOd" - Select auto-tuning dampening
- "ANtP" - Main Linear DC analog output range
- "ANAS" - Main Linear DC analog output source
- "ANut" - Main Linear DC analog output update time
- "ANLO" - Main Linear DC analog output scaling low
- "ANHI" - Main Linear DC analog output scaling high

#### Configuration 3, Parameter Lock-Outs (3-LC) \*

- "SP" - Select setpoint access level
- "OP" - Select power access level
- "dEv" - Enable deviation display
- "Hcur" - Enable heater current display
- "UdSP" - Enable temperature scale display
- "CodE" - Enter parameter access code
- "Pid" - Select PID access level
- "AL" - Select alarm access level
- "ALrS" - Enable alarm reset access
- "SPSL" - Enable local/remote selection
- "trnF" - Enable auto/manual mode selection
- "tUNE" - Enable auto-tune invocation

#### Configuration 4, Alarms (4-AL) \*

- "ACT1" - Select operation mode of alarm #1, or select heat output
- "rSt1" - Select reset mode of alarm #1
- "Stb1" - Enable activation delay of alarm #1
- "AL-1" - Enter value for alarm #1
- "ACT2" - Select operation mode of alarm #2, or select cooling output
- "rSt2" - Select reset mode of alarm #2
- "Stb2" - Enable activation delay of alarm #2
- "AL-2" - Enter value for alarm #2
- "AHYS" - Enter hysteresis value for both alarms

#### Configuration 5, Cooling (5-O2) \*

- "CYC2" - Enter cooling time proportioning cycle time
- "GAN2" - Enter cooling relative gain
- "db-2" - Enter heat/cool deadband or overlap

#### Configuration 6, Serial Communications (6-SC) \*

- "bAUd" - Select baud rate
- "ConF" - Select character frame format
- "Addr" - Enter address
- "Abrv" - Select abbreviated or full transmission
- "PoPt" - Select print options

#### Configuration 7, Remote Setpoint Input (7-N2) \*

- "dSP1" - Enter remote setpoint display scaling value #1
- "INP1" - Enter remote setpoint process scaling value #1
- "dSP2" - Enter remote setpoint display scaling value #2
- "INP2" - Enter remote setpoint process scaling value #2
- "FLtr" - Enter remote setpoint filter time constant
- "bAnd" - Enter remote setpoint filter disable band
- "trnF" - Select Local/Remote setpoint transfer response

#### Configuration 7 - Heater Current Parameters (7-N2) \*

- "Hcur" - Enter full scale rating of CT

#### Configuration 8, Second Linear DC Analog Output (8-A2) \*

- "A2tP" - Second linear DC analog range
- "A2LO" - Second linear DC analog scaling low
- "A2HI" - Second linear DC analog scaling high

#### Configuration 9, Factory Service Operations (9-FS)

- "Code 48" - Calibrate Instrument
- "Code 66" - Reset parameters to factory setting

\* These parameters may not appear due to option configuration or other programming.

## MULTIPLE UNIT STACKING

The T48 is designed for close spacing of multiple units. Units can be stacked either horizontally or vertically. For vertical stacking, install the panel latch with the screws to the sides of the unit. For horizontal stacking, the panel latch screws should be at the top and bottom of the unit. The minimum spacing from center line to center line of units is 1.96" (49.8 mm). This spacing is the same for vertical or horizontal stacking.

*Note: When stacking units, provide adequate panel ventilation to ensure that the maximum operating temperature range is not exceeded.*

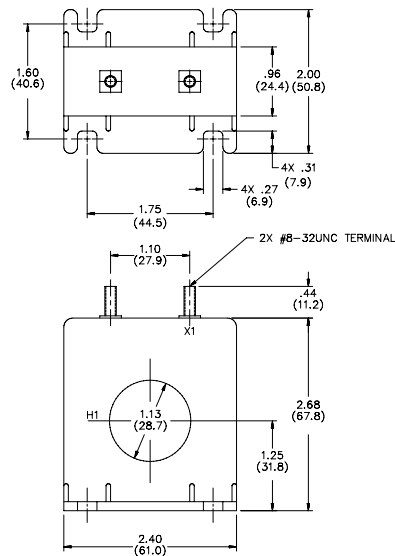

PANEL CUT-OUT SPACING FOR MULTIPLE UNIT STACKING. HORIZONTAL ARRANGEMENT SHOWN.

## ACCESSORY - CURRENT TRANSFORMER-50 A

The external Current Transformer is used when specifying the T48s equipped with the Heater Current Monitor.

- Part Number:** CT005001
- Current Ratio:** 50 : 0.1 (Amperes)
- Operation Frequency:** 50 to 400 Hz
- Insulation Class:** 0.6 KV BIL, 10 KV full wave.
- Terminals:** Brass studs No. 8-32 UNC with flat washer and hex nuts.
- Window Diameter:** 1.13" (28.7 mm)
- Weight:** 8 oz (226.0 g)

## ACCESSORY - EXTERNAL SSR POWER UNIT

The external SSR Power Unit is used with T48s equipped with Logic/SSR Drive outputs to switch loads up to 240 VAC @ 45 Amps, 25°C ambient. The unit is operated by applying a low level DC control signal to the isolated input. The unit features zero cross detection circuits which reduces radiated RFI when switching load currents. With no contacts to wear out, the SSR Power Unit provides virtually limitless operational life. The unit is supplied with an integral heat sink for immediate installation.

### External SSR Power Unit:

- Part Number:** RLY50000
- Switched Voltage Range:** 50 to 280 VAC
- Load Current:** 45 Amps max. @ 25°C ambient temperature  
35 Amps max. @ 50°C ambient temperature
- On State Input:** 3 to 32 VDC @ 1500 Ω impedance. (isolated)  
(Use Logic/SSR drive output.)
- Off State Input:** 0.0 to 1.0 VDC
- Size:** 5.5" (14 cm) L x 4.75" (12 cm) W x 2.62" (6.6 cm) H

## ACCESSORY - CURRENT TRANSFORMER-40 A

The external Current Transformer is used when specifying the T48s equipped with the Heater Current Monitor.

### Current Transformers:

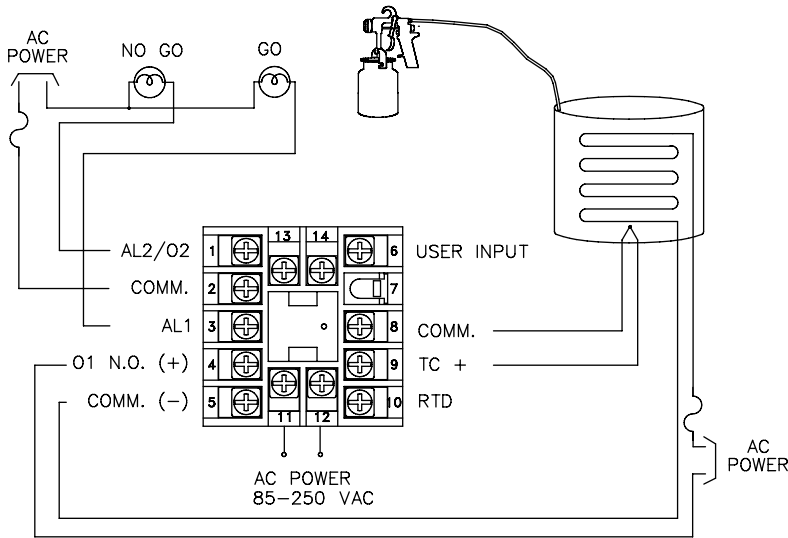

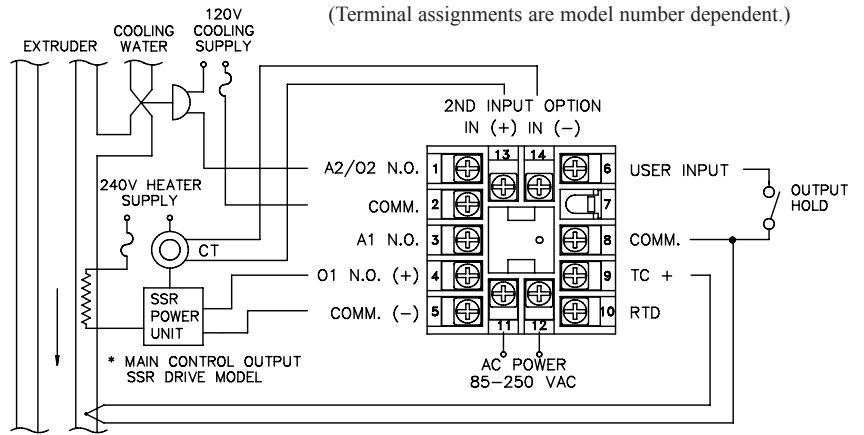

- Part Number:** CT004001
- Current Ratio:** 40 : 0.1 (Amperes)
- Max Heater Current:** 50 A
- Dielectric Strength:** 1000 VAC (For 1 minute)
- Vibration Resistance:** 50 Hz (Approx 10 G)
- Terminals:** Solder Type
- Window Diameter:** 0.228" (5.8 mm)
- Weight:** 0.406 oz (11.5 g)

# APPLICATION

## PLASTICS EXTRUDER APPLICATION

Several T48 controllers are employed to control the temperature of a plastics extruder. Each T48 controls a heating element and a cooling water solenoid to maintain each extruder zone at the desired temperature. The Heater Current Monitor option is used to provide a readout of the heater current. The multi-function User Input can be programmed to allow selection of manual operation when connected to common. This allows the user to hold the control output of the controller during abnormal process conditions.

## OEM PAINT SPRAYER APPLICATION

An OEM manufacturing spray painting equipment utilizes the T48 to maintain optimum paint temperature. In addition to the low cost, the 1/16 DIN package size permits the OEM to design temperature control into various sized painting equipment, from small hand sprayers to large paint booths. The heating element used to heat the paint, is connected to the Main Control Output (OP1) programmed for On/Off control. Alarm 1 is programmed as Band Inside Acting, so that as long as the paint temperature is within manufacturer's specifications for temperature, the "GO" light is on. Alarm 2 is programmed as Band Outside acting so that the "NO GO" light is lit when the paint temperature is more than 12° outside the manufacturer's specifications of 140 to 150°F.

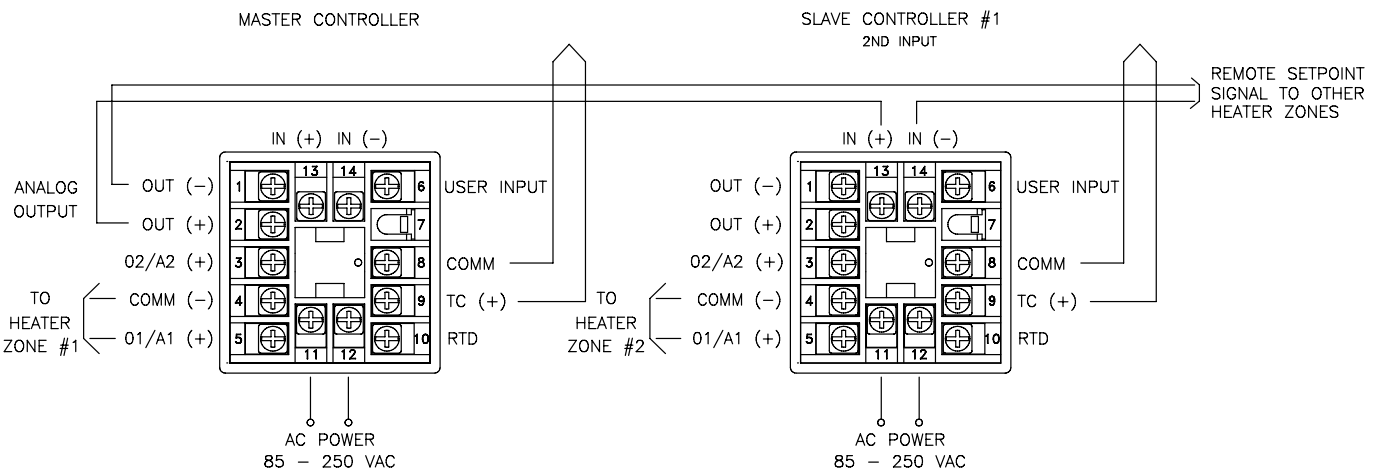

(Terminal assignments are model number dependent.)

## MULTIPLE UNIT/REMOTE SETPOINT APPLICATION

Eight T48 controllers are used in a drying oven. Each T48 controls a zone within the oven. Depending upon the material to be dried, and its initial moisture content, the drying setpoint temperature varies. A master T48 controller transmits setpoint via linear DC output. This signal is received as a remote setpoint signal by the other slave controllers.

Whenever the master controller's setpoint is changed, the slave controller's setpoint changes automatically.

The remote setpoint input at each slave controller can be scaled independently.

(Terminal assignments are model number dependent.)

## ORDERING INFORMATION

Options and Output Boards are factory configured per the part number specified. Part numbers without replacement output boards listed must be returned to the factory for output board replacement.

# MODEL TCU - TEMPERATURE CONTROL UNIT

- 100 msec SAMPLING PERIOD WITH 0.15% ACCURACY
- ON DEMAND AUTO-TUNING OF PID CONTROL SETTINGS
- DUAL LED DISPLAYS FOR SIMULTANEOUS INDICATION OF TEMPERATURE AND SETPOINT, SECOND ANALOG INPUT OR HEATER CURRENT
- ACCEPTS 10 DIFFERENT TYPES OF SENSOR INPUTS (Thermocouple or RTD)

- SELF-DIAGNOSTICS
- FULL PID CONTROL WITH REDUCED OVERSHOOT
- OPTIONAL RS485 SERIAL COMMUNICATIONS INTERFACE
- OPTIONAL DUAL ALARM OUTPUTS (USES OUTPUT MODULES)
- OPTIONAL COOLING OUTPUT (USES OUTPUT MODULE)
- OPTIONAL LINEAR 4 to 20 mA or 0 to 10 VDC OUTPUT FOR CONTROL OR TEMPERATURE RE-TRANSMISSION
- OPTIONAL HEATER CURRENT MONITOR AND BREAK ALARM
- OPTIONAL MOTORIZED VALVE POSITION CONTROL AND VALVE FAIL ALARM
- OPTIONAL SECOND ANALOG INPUT FOR REMOTE SETPOINT AND CASCADE CONTROL
- OPTIONAL NEMA 4X/IP65 SEALED FRONT BEZEL
- STATUS INDICATORS FOR OUTPUTS AND CONTROL MODES
- PROGRAMMABLE USER INPUT (DIGITAL) FOR ADDED FLEXIBILITY
- SENSOR ERROR COMPENSATION (Slope and Offset) AND BREAK DETECTION
- MANUAL/AUTOMATIC AND LOCAL/REMOTE SETPOINT CONTROL MODES
- SETPOINT RAMPING FOR PROCESS STARTUP
- PARAMETER SECURITY VIA PROGRAMMABLE LOCKOUTS
- FIELD REPLACEABLE AND INTERCHANGEABLE OUTPUT MODULES (Relay, Logic/SSR Drive and Triac)

## DESCRIPTION

The TCU Controller accepts signals from a variety of temperature sensors (*thermocouple or RTD elements*), precisely displays the process temperature, and provides an accurate output control signal (*time proportional or linear*) to maintain a process at the desired control point. A comprehensive set of easy to use steps allows the controller to solve various application requirements.

The controller can operate in the PID control mode for both heating and cooling, with on-demand auto-tune, which will establish the tuning constants. The PID tuning constants may be fine-tuned by the operator at any time and then locked out from further modification. The controller employs a unique overshoot suppression feature, which allows the quickest response without excessive overshoot. The unit can be transferred to operate in the manual mode, providing the operator with direct control of the output. The controller may also be programmed to operate in the ON/OFF control mode with adjustable hysteresis.

Dual 4-digit displays allow viewing of the process temperature and setpoint simultaneously. Front panel indicators inform the operator of the controller and output status. Replaceable and interchangeable output modules (*relay, SSR drive, or triac*) can be installed for the main control output, alarm output(s) and cooling output.

Optional dual alarms can be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, Band IN or OUT, Heater Break and Valve Fail Detect) with adjustable hysteresis. A standby feature suppresses the output during power-up until the temperature stabilizes outside the alarm region. An optional secondary output is available (*for processes that require cooling*) which provides increased control accuracy and response.

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 5.5" (140) H x 2.1" (53.4) W.

## DESCRIPTION (Cont'd)

### OPTIONS

A linear 4 to 20 mA or 0 to 10 VDC output signal is available to interface with actuators, chart recorders, indicators, or other controllers. The output signal can be digitally scaled and selected to transmit one of the following: % output power, process temperature value, process temperature value deviation or setpoint value. For Linear DC control applications, the adjustable output demand dampening, output deadband and output update time parameters expand the versatility of the TCU with final control devices.

The optional Heater Current Monitor serves as a digital ammeter for heater current monitoring. Current transformer accessory (CT005001), is required. An alarm event output can be programmed to signal when the heater or heater control devices have failed, before damage to process material occurs. The Heater Break alarm triggers under two conditions:

- 1) The main output (OP1) is "on" and the heater current is below the heater current alarm value, indicating an aged or failed heater.
- 2) Output (OP1) is "off" and the heater current is more than 10% of the alarm value, indicating a shorted heater control device or other problem.

The optional Motorized Valve Positioner directly controls the position of a valve by the use of twin outputs (*open and close*) to control the direction of motor rotation. The motor position defines the opening position of the valve. Two control modes are possible: position control, which makes use of the slidewire feedback signal supplied with the positioner and velocity control, in which no slidewire feedback signal is used. Parameters are provided to adjust the operation of the valve. These include:

- Valve activity hysteresis
- Valve update time
- Variable control dampening
- Slidewire signal fail action
- Adjustable valve position limits.

The valve positioner TCU achieves tight process control, yet minimizes unnecessary valve activity. An alarm event output or display alarm can be programmed under loss of slidewire feedback or under valve fail detection.

The optional Second Analog Input (0-20 mA DC) can be configured as a remote setpoint signal or as a secondary process signal. Configuration of the second analog input as a remote setpoint signal allows ratio control, master setpoint/multiple slave operation, and the ability to cascade the TCU with another controller (external cascade). Configuration of the second input as a secondary process signal allows operation as a two-process cascade controller within a single unit (internal cascade). In either control mode, parameters are provided to scale, configure, communicate and monitor the activity of both analog inputs. A square law linearizer function can be used to linearize signals derived from flow transmitters.

The optional RS485 multidrop serial communication interface provides two-way communication between a TCU unit and other compatible equipment such as a printer, a programmable controller, or a host computer. In multipoint applications the address number of each unit on the line can be programmed from 0-99. Up to thirty-two units can be installed on a single pair of wires. The Setpoint value, % Output Power, Setpoint Ramp Rate, etc. can be interrogated or changed by sending the proper command code via serial communications. Alarm output(s) may also be reset via the serial communications interface option.

An optional NEMA 4X/IP65 rated bezel is available for wash down and/or dirty environments, when properly installed. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the controller extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the TCU to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit. An independent and redundant temperature limit indicator with alarm outputs is strongly recommended. Red Lion Controls model IMT (thermocouple) or model IMR (RTD) units may be used for this purpose. The indicators should have input sensors and AC power feeds independent from other equipment.

## SPECIFICATIONS

### 1. DISPLAY: Dual 4-digit

**Upper Temperature Display:** 0.4" (10.2 mm) high red LED

**Lower Auxiliary Display:** 0.3" (7.6 mm) high green LED

#### Display Messages (Model dependent):

- "OLOL" - Appears when measurement exceeds + sensor range.
- "ULUL" - Appears when measurement exceeds - sensor range.
- "OPEN" - Appears when open sensor is detected.
- "SHrt" - Appears when shorted sensor is detected (*RTD only*)

- "...." - Appears when display values exceed + display range.
- "...." - Appears when display values exceed - display range.
- "SLid" - Appears when loss of slidewire signal is detected.
- "VALV" - Appears when valve actuator error is detected.

2. **POWER:** 115/230 VAC (+10%, -15%) no observable line variation effect, 48 to 62 Hz, 10 VA, switch selectable

### 3. ANNUNCIATORS:

#### LED Backlight Status Indicators (Model dependent):

- %PW - Lower auxiliary display shows power output in (%).
- DEV - Lower auxiliary display shows deviation (*error*) from temperature setpoint.
- OP1 - Main control output is active.
- AL1 - Alarm #1 is active.
- AL2 - Alarm #2 is active (*for Dual Alarm Option*).
- OP2 - Cooling output is active (*for Cooling Option*).
- OPN - Valve positioner OPEN output is active (*for Valve Positioner option*).
- CLS - Valve positioner CLOSE output is active (*for Valve Positioner option*).
- CUR - Lower auxiliary display shows heater current (*for Heater Current Monitor option*).
- SEC - Lower auxiliary display shows second analog input (*For Second Analog Input option*).
- MAN - Flashing: Controller is in manual mode.
- REM - ON: controller is in remote setpoint mode (*Second Analog Input option*).
- OFF: controller is in local setpoint mode (*Second Analog Input option*).
- Flashing: controller is in Manual control mode (*Second Analog Input optional*).

4. **CONTROLS:** Four front panel push buttons for modifying and setup of controller functions and one external input for parameter lockout or other functions.

### 5. MAIN SENSOR INPUT:

**Sample Period:** 100 msec

**Response Time:** 300 msec (*to within 99% of final value w/step input; typically, response is limited to response time of probe*)

#### Failed Sensor Response:

**Main Control Output(s):** Programmable preset output

**Display:** "OPEN"

**Alarms:** Upscale drive

**DC Linear:** Programmable preset output

**Normal Mode Rejection:** 40 dB @ 50/60 Hz (*improves with increased digital filtering*).

**Common Mode Rejection:** 100 dB, DC to 60 Hz

**Protection:** Input overload 120 VAC for 30 seconds.

### 6. THERMOCOUPLE:

**Types:** T, E, J, K, R, S, B, N, Linear mV

**Input Impedance:** 20 M  $\Omega$  all types

**Lead resistance effect:** 20  $\mu$ V/350  $\Omega$

**Cold junction compensation:** Less than  $\pm 1^\circ$ C error over 0 - 50°C ambient temperature range. Disabled for Linear mV type.

**Resolution:** 1°C/F all types, or 0.1°C/F for T, E, J, K, and N only.

7. **RTD:** 2, 3 or 4 wire, 100  $\Omega$  platinum,  $\alpha = 0.00385$  (DIN 43760),  $\alpha = 0.003916$

**Excitation:** 0.175 mA

**Resolution:** 1 or 0.1 degree

**Lead Resistance:** 7  $\Omega$  maximum

TC TYPE	RANGE	ACCURACY	WIRE COLOR (ANSI)
T	-200 to +400°C -328 to +752°F	0.20% + 1.5°C 0.20% + 2.7°F	blue
E	-200 to 750°C -328 to +1382°F	0.20% + 1.5°C 0.20% + 2.7°F	violet
J	-200 to +760°C -328 to +1400°F	0.15% + 1.5°C 0.15% + 2.7°F	white
K	-200 to +1250°C -328 to +2282°F	0.20% + 1.5°C 0.20% + 2.7°F	yellow
R	0 to +1768°C +32 to +3214°F	0.15% + 2.5°C 0.15% + 4.5°F	black
S	0 to +1768°C +32 to +3214°F	0.15% + 2.5°C 0.15% + 4.5°F	black
B	+200 to +1820°C +300 to +3308°F	0.15% + 2.5°C 0.15% + 4.5°F	grey
N	-200 to +1300°C -328 to +2372°F	0.20% + 1.5°C 0.20% + 2.5°F	orange
mV	-5.00 to 56.00	0.15% + 1 LSD	-
RTD (385)	-200 to +600°C -328 to +1100°F	0.10% + 0.5°C 0.10% + 0.9°F	-
RTD (392)	-200 to +600°C -328 to +1100°F	0.10% + 0.5°C 0.10% + 0.9°F	-
OHMS	1.0 to 320.0	0.15% + 1 LSD	-

## 8. RANGE AND ACCURACY:

Errors include NIST conformity and A/D conversion errors at 23°C after 20 min. warm-up. Thermocouple errors include cold junction effect. Errors are expressed as  $\pm$ percent of reading and  $\pm \frac{3}{4}$  LSD unless otherwise noted.

## 9. OUTPUT MODULES [Optional] (For All Output Channels):

### Relay:

**Type:** Form-C (*Form-A with some models. See Ordering Information.*)

**Rating:** 5 Amps @ 120/240 VAC or 28 VDC (*resistive load*), 1/8 HP @ 120 VAC (*inductive load*)

**Life Expectancy:** 100,000 cycles at max. load rating. (*Decreasing load and/or increasing cycle time, increases life expectancy.*)

**Logic/SSR Drive:** Can drive multiple SSR Power Units.

**Type:** Non-isolated switched DC, 12 VDC typical

**Drive:** 45 mA max.

### Triac:

**Type:** Isolated, Zero Crossing Detection

### Rating:

**Voltage:** 120/240 VAC

**Max. Load Current:** 1 Amp @ 35°C

0.75 Amp @ 50°C

**Min. Load Current:** 10 mA max.

**Offstate Leakage Current:** 7mA max. @ 60 Hz

**Operating Frequency:** 20 to 400 Hz

**Protection:** Internal Transient Snubber, Fused

## 10. MAIN CONTROL OUTPUT (Heating or Cooling):

**Control:** PID or ON/OFF

**Output:** Time proportioning or linear DC

**Hardware:** Plug-in, replaceable output modules

**Cycle time:** Programmable

**Auto-tune:** When selected, sets proportional band, integral time, and derivative time values.

**Probe Break Action:** Programmable

## 11. COOLING OUTPUT (Optional):

**Control:** PID or ON/OFF

**Output:** Time proportioning or linear DC

**Hardware:** Plug-in, replaceable output modules

**Cycle time:** Programmable

**Proportional Gain Adjust:** Programmable

**Heat/Cool Deadband Overlap:** Programmable

## 12. LINEAR DC OUTPUT (Optional):

With digital scale and offset, programmable deadband and update time.

### 4 to 20 mA:

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\%$  of reading + 25  $\mu$ A)

**Compliance:** 10 V (500  $\Omega$  max. loop impedance)

### 0 to 10 VDC:

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\%$  of reading + 35 mV)

**Min. Load Resistance:** 10 K $\Omega$  (1 mA max.)

**Source:** % output power, setpoint, deviation, or temperature (*Available for heat or cool, but not both.*)

## 13. HEATER CURRENT MONITOR (Optional):

**Type:** Single phase, full wave monitoring of load currents controlled by main output (OP1)

**Input:** 100 mA AC output from current transformer RLC part number CT005001 or any current transformer with 100 mA AC output

**Display Scale Range:** 1.0 to 999.9 amperes or 100.0%

**Input resistance:** 5  $\Omega$

**Accuracy:** 1% of full scale  $\pm$ 1 LSD (10 to 100% of range)

**Frequency:** 50 to 400 Hz

**Alarm mode:** Dual acting; heater element fail detect and control device fail detect

**Overload:** 200 mA (*steady state*)

**Min. output "on" time for Heater break alarm detect:** 400 msec

## 14. MOTORIZED VALVE POSITIONER (Optional):

**Two Outputs:** Valve open and valve close or Linear DC (*optional*)

**Hardware:** Plug-in, replaceable output modules

**Three Inputs:** Slidewire feedback, signal fail detect (*Isolated from main input*)

**Slidewire Resistance:** 100 to 100 K $\Omega$

**Slidewire Exciting Voltage:** 0.9 VDC

**Slidewire Fail Action:** programmable

**Control Mode:** Position mode (*with slidewire*) and velocity mode (*w/o slidewire*).

**Control Deadband:** 1% to 25.0% (*position mode*)  
0.1 to 25.0 seconds (*velocity mode*)

**Update Time:** 1 to 250 seconds

**Motor Time (open, close):** 1 to 9999 seconds

**Position Limits:** Adjustable 0.0 to 100.0% of valve stroke

**Valve Fail Time:** Off to 9999 seconds

**Alarm mode:** Dual acting; loss of slidewire feedback signal and valve fail detection

## 15. SECOND ANALOG INPUT:

**Range:** 0 to 20 mA (Isolated from main input)

**Overload:** 100 mA (steady state)

**Input Resistance:** 10  $\Omega$

**Voltage Drop (@ 20 mA):** 0.2 V

**Accuracy:** 0.15% of reading  $\pm$ 10  $\mu$ A  $\pm$ 1 LSD

**Scale Range:** -999 to 9999

## 16. SERIAL COMMUNICATION:

**Type:** RS485 Multi-point, Balanced Interface

### Communication Format:

**Baud Rate:** Programmable from 300 to 9600

**Parity:** Programmable for odd, even, or no parity

**Frame:** 1 start bit, 7 data bits, 1 or no parity bit, 1 stop bit

**Unit Address:** Programmable from 0 to 99, max. of 32 units per line

**Transmit Delay:** 100 msec min., 200 msec max.

**RS485 Common:** Isolated from signal input common

**Auto Print Time:** Off to 9999 seconds between print-outs

## 17. USER INPUT (Optional):

Internally pulled up to +5 VDC.

$V_{IN\ MAX} = 5.25\ VDC$ ,  $V_{IL} = 0.85\ V_{MAX}$ ;  $V_{IH} = 3.0\ V_{MIN}$ , Available on all second input (HCM, MVP & ANA) models, and on models with RS485.

**Response Time:** 100 msec max.

**Functions:** Program Lock

Integral Action Lock

Auto/Manual Mode Select

Setpoint Ramp Select

Reset Alarms

Print Request

Local/Remote Setpoint Select

## 18. ALARMS (Optional):

**Hardware:** Plug-in, replaceable output module

**Modes:** Absolute high acting

Absolute low acting

Deviation high acting

Deviation low acting

Inside band acting

Heater break

Valve fail

Second Analog Input monitoring

**Reset Action:** Programmable; automatic or latched

**Standby Mode:** Programmable; enable or disable

**Hysteresis:** Programmable

**Probe Break Action:** Upscale

**Annunciator:** LED backlight for "AL1", "AL2", (*Alarm #2 not available with cooling output or motorized valve position option.*)

## 19. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 50°C

**Storage Temperature Range:** -40 to 80°C

**Span Drift (maximum):** 100 ppm/°C, main input; 150 ppm/°C, second input

**Operating and Storage Humidity:**

85% max. (non-condensing) from 0 to 50°C

**Zero Drift (maximum):** 1  $\mu$ V/°C, main input; 2  $\mu$ A/°C, second input

**Altitude:** Up to 2000 meters

## 20. ISOLATION BREAKDOWN RATINGS:

**All inputs and outputs with respect to AC line:** 2300 V

**Analog Outputs, Second Analog Input, Heater Current Input or**

**Slidewire Input with respect to main input:** 500 V

## 21. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

UL Recognized Component, File #E156876, UL873, CSA 22.2 No. 24

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

Type 2 or 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate # UL1239-156876/USA,

CB Scheme Test Report # 96ME50279-070794

Issued by Underwriters Laboratories, Inc.

IEC 1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

## ELECTROMAGNETIC COMPATIBILITY

### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>1</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	150 KHz - 80 MHz

### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

#### Notes:

1. *Self-recoverable loss of performance during EMI disturbance at 10 V/m:*  
*Analog output signal, Heater Current Monitor input and Motorized Valve Positioner input signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*Install power line filter, RLC #LFIL0000 or equivalent.*

2. *Self-recoverable loss of performance during EMI disturbance at 10 Vrms:*  
*Analog output signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*a. Install power line filter, RLC #LFIL0000 or equivalent.*

*b. Install 1 ferrite core 1 turn, RLC #FCOR0000 or equivalent, to cable at unit.*

*Refer to the EMC Installation Guidelines section of the manual for additional information.*

22. **CONNECTION:** Jaw-type terminal block

**Wire Range:** 12-30 AWG copper wire

**Torque:** 5-7 inch-lbs (56-79 N-cm)

23. **CONSTRUCTION:** NEMA 2 For Standard Models.

**Front Panel:** Flame and scratch resistant tinted plastic

**Case:** High impact black plastic. (Mounting collar included)

**NEMA 4X/IP65 model only:** Sealed bezel utilizing two captive mounting screws (panel gasket included). This unit is rated for NEMA 4X/IP65 indoor use. Installation Category II, Pollution Degree 2

24. **WEIGHT:** 1.3 lbs (0.6 kgs)

## ACCESSORIES:

### External SSR Power Unit:

**Switched Voltage Range:** 50 to 280 VAC (*Nominal: 240 VAC*)

**Load Current:** 45 Amps @ 25°C ambient temperature

35 Amps @ 50°C ambient temperature

**On State Input:** 3 to 32 VDC @ 1500 Ω impedance. (*isolated*)

(*Use Logic/SSR drive output module.*)

**Off State Input:** 0.0 to 1.0 VDC

**Size:** 5.5" (14 cm) L x 4.75" (12 cm) W x 2.62" (6.6 cm) H

### Current Transformer:

**Current Ratio:** 50:0.1 (Amperes)

**Accuracy:** ±5.0%

**Operating Frequency:** 50 to 400 Hz

**Insulation Class:** 0.6 Kv BIL 10 Kv full wave

**Terminals:** Brass studs No. 8-36, (flat washer, washer, nut)

**Weight:** 8.0 oz (226 g)

**Approvals:** UL recognized component

## BASIC OPERATION

The TCU controls a process temperature by measuring the temperature via an input probe, then calculating a control output power value by use of a modified PID control algorithm. The unit controls the system with the new output power value to keep the process temperature at setpoint. The PID control algorithm incorporates features which provide for high control accuracy and low temperature overshoot from process disturbances.

## FRONT PANEL FEATURES

In the normal operating mode, the unit will display the process temperature in the upper display. One of six other parameters can be viewed in the lower display:

- Setpoint
- % Power Output
- Temperature Deviation
- Heater Current
- Second Input Process Value
- Temperature Symbol (F or C)

The six parameters can be scrolled through by pressing the DSP button. If enabled, the control setpoint or power output (manual mode only) can be directly modified in this mode.

In the normal operating mode, parameters are selected by use of the PAR button and modified by use of the UP and DOWN buttons. Parameters are then

entered by the PAR button, which advances the user to the next parameter. Pressing the DSP button immediately returns the controller to the normal operating mode when making a parameter change. The controller's configuration and parameter settings are stored in an internal E<sup>2</sup>PROM device.

## HARDWARE FEATURES

The fast 100 msec input sampling rate provides quick controller response to a process disturbance, thus providing excellent temperature control. Measurement accuracy of 0.15% or better, provides closer process control conforming to the desired control setpoint value. One model accepts a variety of both thermocouple or RTD temperature probes. The AC input power is switch selectable, allowing the unit to operate from either 115 VAC or 230 VAC. Since the controller is serviceable from the front of the panel, the output modules may be easily changed or replaced without disturbing the wiring behind the panel. No re-programming is required when changing or replacing modules.

The optional NEMA 4X/IP65 rated model utilizes two bezel securing screws and a neoprene gasket to guarantee a water tight seal, when properly installed. The standard model simply requires pressing a latch to remove the unit.

Low-drift, highly stable circuitry ensures years of reliable and accurate temperature control. The recommended two-year re-calibration interval is easily accomplished via the programming menu.

## SETPOINT FEATURES

The controller setpoint can be protected from out of range values by programming the setpoint range limit values. Additionally, safeguards from inadvertent data entry can be programmed.

The setpoint ramp feature ramps the setpoint value at start-up or any time a setpoint change is made, at a user programmable rate. This feature reduces thermal shock to the process and helps to minimize temperature overshoot. The setpoint may also be transmitted by the optional linear DC output for slave control loops.

The second analog input may be configured as a remote setpoint. As such, the controller is easily switched from local/remote setpoint operation via the front panel or user input. Ratio and bias parameters provide on-line scaling of the remote setpoint. Absolute limit values and maximum rate of change of the remote setpoint further enhance controller flexibility.

## INPUT FEATURES

A programmable input filter can be used to stabilize readings from a process with varying or oscillating temperature characteristics, helping to provide better temperature control. A programmable temperature shift and slope function can be used to compensate for probe errors or to have multiple TCU units indicate the same nominal temperature.

The programmable User Input can be used to control a variety of functions, such as auto/manual transfer of the controller, reset alarm output(s), etc.

The second analog input has independent scaling parameters to match the units of other processes or transmitters, or to match the controller's range.

## OUTPUT FEATURES

Programmable output power limits provide protection for processes where excessive power can cause damage. Automatic sensor probe break detection, for fail-safe operation, causes the controller to default to a programmed output power (upscale or downscale burnout). With adjustable time proportioning-cycle time, and programmable DC linear output, the controller can satisfy a wide variety of output requirements.

Programmable dampening output hysteresis and output update time parameters can dramatically reduce actuator activity without degrading control accuracy.

The RS485 Communication option allows the user to access various controller parameters such as the setpoint, % output power, % proportional band, etc. The controller may be setup to transmit various parameters at a programmable automatic print rate.

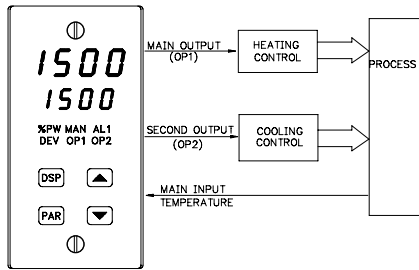

## AUTO-TUNE

The TCU has an auto-tune feature which, on demand, automatically determines the PID control parameters for a particular thermal process. After completion of auto-tune, the PID parameters are automatically optimized for that process and loaded into nonvolatile memory. The operator may view and modify the parameters as desired.

Auto-tune may be invoked either at start-up or at setpoint, depending on the process requirements. An auto-tune programmable dampening factor produces various levels of process control and response characteristics.

## OPTIONS

### HEATING AND COOLING CONTROL

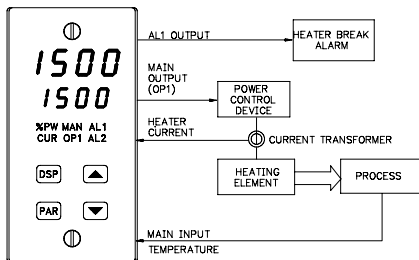

The TCU has dual outputs for providing heating and cooling to those processes that require them. Many extruder applications require both heating and cooling to maintain accurate extruder barrel and die temperatures. The TCU is easily configured for these applications.

#### Cooling Configuration Parameters

- "CYC2" - Enter cooling time proportioning cycle time
- "GAN2" - Enter cooling relative gain
- "db-2" - Enter heat/cool deadband or overlap

### HEATER CURRENT MONITOR

The Heater Current Monitor serves as a heater element fail sentry, so operators can take corrective action before significant process errors occur in the event of a failure. The actual heater current can be viewed in the secondary display and/or a heater break alarm output can be programmed.

#### Heater Current Monitor Configuration Parameters

- "HCur" - Enter full scale current of current transformer
- ACT1", "ACT2" - Program alarm(s) as heater break alarm

### MOTORIZED VALVE POSITIONER

The motorized valve positioner controls the position of a valve directly, by use of "open" and "close" control outputs. The slidewire feedback signals of the valve may optionally be connected to the controller. Alternatively, the controller may be configured for linear input valve control using the 4 to 20 mA DC output.

#### Motorized Valve Positioner Configuration Parameters

- Position mode:
  - "VPS1" - Enter or measure valve closed position
  - "VPS2" - Enter or measure valve open position
  - "VUdt" - Enter Valve update time
  - "VPdb" - Enter valve control deadband
  - "VFAL" - Enter valve fail detect time
  - "Act1" - Program alarm as valve fail output
- Velocity mode:
  - "VUdt" - Enter Valve update time
  - "VOpt" - Enter valve open time
  - "VCLt" - Enter valve close time
  - "VONt" - Enter valve control deadband (minimum on time)

### INTERNAL CASCADE

Cascade control allows the process to be divided into two control loops: the primary control loop and the secondary control loop. The secondary loop receives its setpoint from the primary loop to control an intermediate variable (steam pressure). The control level of the intermediate variable is the input to the primary process. The primary loop (temperature) controller maintains loop regulation by manipulating the setpoint of the secondary controller. The setpoint of the secondary controller, in turn, changes the intermediate variable. The secondary loop can react faster to disturbances of the intermediate variable, thereby minimizing the effects to the primary control loop. Control loops cascaded in such a manner provide greater control quality than would be possible with single loop control. A single TCU can accomplish two-process cascade control.

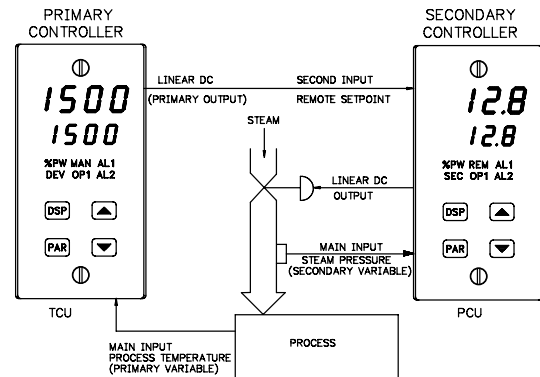

#### Internal Cascade Configuration Parameters

- "OPer" - Select cascade mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1" - Enter scaling units of second input
- "INP1" - Enter scaling units of second input
- "dSP2" - Enter scaling units of second input
- "INP2" - Enter scaling units of second input
- "OPd2" - Output dampening of secondary

#### Internal Cascade Operational Parameters

- "SP-2" - View secondary setpoint value
- "Pb-2" - Enter secondary proportional band
- "It-2" - Enter secondary integral time
- "dt-2" - Enter secondary derivative time

### EXTERNAL CASCADE

Similar to internal cascade control, external cascade control differs by the employment of two controllers, one of which is equipped with a second analog input configured as a remote setpoint. A PCU controls the secondary loop, while a TCU controls the primary loop.

#### External Cascade Configuration Parameters

- "OPEr" - Select ratio mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1" - Enter scaling units of second input
- "INP1" - Enter scaling units of second input
- "dSP2" - Enter scaling units of second input
- "INP2" - Enter scaling units of second input
- "SPtr" - Local/Remote select options

#### External Cascade Operational Parameters

- "rtio" - Remote setpoint ratio
- "bIAS" - Remote setpoint bias

## SETPOINT MASTER CONTROL

Setpoint Master Control allows automatic setpoint changes to slave controller units (up to 50 units total) from a master TCU controller. The linear DC output of the master is looped with the second analog input of the slave TCU controllers. Each slave unit can have unique remote setpoint ratio and bias values.

### Setpoint Slave Configuration Parameters

- "OPeR" - Select remote setpoint mode
- "root" - Select second input square root Linearization
- "dPI2" - Select second input decimal point
- "dSP1" - Enter scaling units of second input
- "INP1" - Enter scaling units of second input
- "dSP2" - Enter scaling units of second input
- "INP2" - Enter scaling units of second input
- "SPLO" - Limit range of remote setpoint
- "SPHI" - Limit rate of change of remote setpoint
- "SPrP" - Limit rate of change of remote setpoint

### Setpoint Slave Operational Parameters

- "rtio" - Second input ratio
- "bIAS" - Second input bias

## CONTROLLER PROGRAMMING

The TCU has been designed to reduce the operator interaction with the controller while still maintaining a high degree of control accuracy and user flexibility. Front Panel Program Disable allows all of the controller's set-ups to be locked-out from further operator intervention after the initial parameter set-up.

The programming of the controller is divided into four sections:

- Unprotected Parameter Mode
- Configuration Parameter Mode
- Protected Parameter Mode
- Hidden Function Mode

These four programming modes allow the controller to adapt to any required user-interface level.

### UNPROTECTED PARAMETER MODE \*

The unprotected parameter mode is accessible when program disable is inactive or when the proper access code number from the protected mode is entered. The configuration parameter modes can be accessed only from this mode.

- "SP" - Enter Setpoint
- "OP" - Enter output power
- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErT" - Enter derivative time
- "rtio" - Enter Remote Setpoint ratio value
- "bIAS" - Enter Remote Setpoint bias value
- "SP-2" - View internal cascade secondary setpoint demand
- "Pb-2" - Enter internal cascade, secondary proportional band
- "It-2" - Enter internal cascade, secondary integral time
- "dt-2" - Enter internal cascade, secondary derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CNFP" - Select basic configuration mode
- "End" - Return to normal display mode

\* These parameters may not appear due to option configuration or other programming.

### CONFIGURATION PARAMETER MODE

The configuration parameter mode allows the operator to set-up the basic requirements of the controller. It is divided into sections which group together related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each section, the program returns to the configuration selection stage allowing the user to return to the normal display mode.

### Configuration 1, Inputs

- "tYPE" - Select input probe type
- "SCAL" - Select temperature scale
- "dCPT" - Select temperature resolution
- "FLtr" - Select level of input filtering
- "SPAN" - Enter input correction span (slope)
- "SHFT" - Enter input correction shift (offset)
- "SPLO" - Enter setpoint lower limit
- "SPHI" - Enter setpoint higher limit
- "SPrP" - Enter setpoint ramp rate
- "InPt" - Select user input function \*
- "HCur" - Enter full scale heater current \*

### Configuration 2, Outputs

- "CYCL" - Enter time proportioning cycle time
- "OPAC" - Select control action
- "OPLO" - Enter output power low limit
- "OPHI" - Enter output power high limit
- "OPFL" - Enter probe fail power preset
- "OPdP" - Enter output control dampening
- "CHYS" - Enter ON/OFF control hysteresis
- "tcod" - Select auto-tuning dampening
- "ANAS" - Select linear DC output assignment \*
- "ANLO" - Enter linear DC output low scaling value \*
- "ANHI" - Enter linear DC output high scaling value \*
- "ANdb" - Enter linear DC output control deadband \*
- "ANUt" - Enter linear DC output update time \*

### Configuration 3, Parameter lock-outs

- "SP" - Select degree of setpoint access
- "OP" - Select degree of power access
- "dEv" - Enable deviation display \*
- "IN-2" - Enable second input display \*
- "HCur" - Enable heater current display
- "UdSP" - Enable temperature scale display
- "CodE" - Enter parameter access code
- "PId" - Select degree of PID access
- "PId2" - Select degree of secondary PID access \*
- "rtbS" - Select degree of ratio/bias access \*
- "AL" - Select degree of alarm access \*
- "ALrS" - Enable alarm reset access \*
- "SPSL" - Enable local/remote setpoint selection \*
- "trnF" - Enable auto/manual mode selection
- "tUNE" - Enable auto-tune invocation

### Configuration 4, Alarms \*

- "Act1" - Select operation mode of alarm #1
- "rSt1" - Select reset mode of alarm #1
- "Stb1" - Enable activation delay of alarm #1
- "AL-1" - Enter value for alarm #1
- "Act2" - Select operation mode of alarm #2
- "rSt2" - Select reset mode of alarm #2
- "Stb2" - Enable activation delay of alarm #2
- "AL-2" - Enter value for alarm #2
- "AHYS" - Enter hysteresis value for both alarms

### Configuration 5, Cooling \*

- "CYC2" - Enter cooling time proportioning cycle time
- "GAN2" - Enter cooling relative gain
- "db-2" - Enter heat/cool deadband or overlap

**Configuration 6, Serial Communications \***

- "bAUd" - Select baud rate
- "PARb" - Select parity bit
- "Addr" - Enter unit address number
- "Abrv" - Select abbreviated or full mnemonic transmissions
- "PrAt" - Enter automatic print rate
- "PoPt" - Select parameters to be included in print-out

**Configuration 7, Second Input \***

- "OPER" - Select remote setpoint or internal cascade mode
- "root" - Select second input square root linearization
- "dPI2" - Select second input decimal point
- "dSP1" - Enter scaling parameters of second input
- "INP1" - Enter scaling parameters of second input
- "dSP2" - Enter scaling parameters of second input
- "INP2" - Enter scaling parameters of second input
- "SPtr" - Enter local/remote select options
- "OPd2" - Enter Secondary output control dampening

**Configuration 8, Motorized Valve Positioner \***

- Position mode:
- "VPS1" - Enter or measure valve closed position
  - "VPS2" - Enter or measure valve open position
  - "VUdt" - Enter valve update time
  - "VPdb" - Enter valve control deadband
  - "VFAL" - Enter valve fail detect time
- Velocity mode:
- "VUdt" - Enter valve update time
  - "VOPt" - Enter valve open time
  - "VCLT" - Enter valve close time
  - "VONt" - Enter valve control deadband (minimum on time)

**HIDDEN FUNCTION MODE \***

The hidden function mode is accessible from the normal operating mode. The four functions in this mode may be locked-out individually in configuration 3 parameter lock-out section.

- "SPSL" - Select Local/Remote Setpoint
- "trnF" - Transfer between automatic (PID) control and manual control
- "tUNE" - Invoke/cancel PID Auto-tune
- "ALrS" - Reset latched alarms

**PROTECTED PARAMETERS MODE \***

The protected parameters mode is enabled when program disable is active. This mode prevents access to the configuration modes without the proper access code number. Only the parameters that are selected in the configuration 3 parameter lock-out section can be accessed.

- "ProP" - Enter Proportional band
- "Intt" - Enter integral time
- "dErt" - Enter derivative time
- "rtio" - Enter remote setpoint ratio value
- "bIAS" - Enter remote setpoint bias value
- "SP-2" - Enter internal cascade, secondary setpoint
- "Pb-2" - Enter internal cascade, secondary proportional band
- "It-2" - Enter internal cascade, secondary integral time
- "dt-2" - Enter internal cascade, secondary derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CodE" - Enter access value to unprotected parameters & configuration parameters

\* These parameters may not appear due to option configuration or other programming.

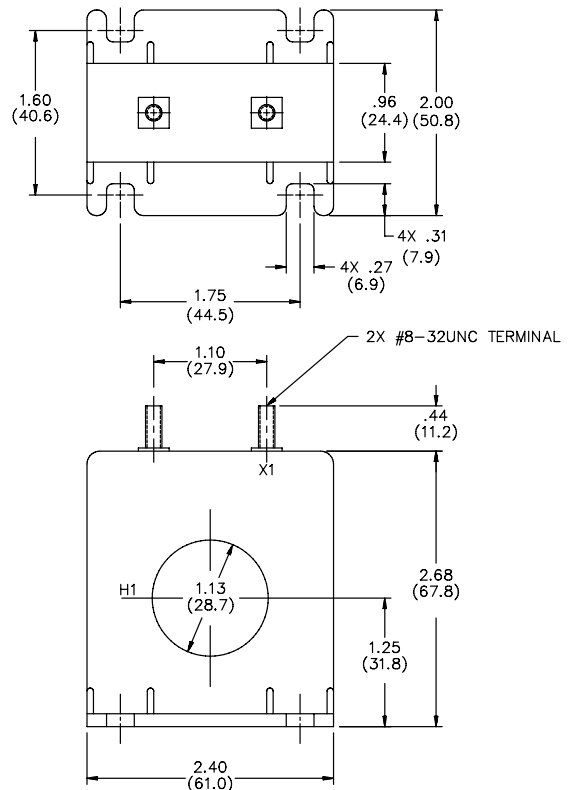

**ACCESSORY - EXTERNAL SSR POWER UNIT**

The external SSR Power Unit is used with the Logic/SSR Drive Module (OMD00003) to switch loads up to 240 VAC @ 45 amps, 25°C ambient. The unit is operated by applying a low level DC control signal to the isolated input. The unit features zero cross detection circuits which reduces radiated RFI when switching load currents. With no contacts to wear out, the SSR Power Unit provides virtually limitless operational life. The unit is supplied with an integral heat sink for immediate installation.

**ACCESSORY - CURRENT TRANSFORMER**

The external Current Transformer is used when specifying TCUs equipped with the Heater Current Monitor. The primary current rating is 50 amperes.

# OUTPUT MODULES

## TYPICAL CONNECTIONS

**Relay:**

**Type:** Form-C (Form-A with some models. See ordering information.)  
**Rating:** 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC (inductive).  
**Life Expectancy:** 100,000 cycles at maximum load rating.  
 (Decreasing load and/or increasing cycle time, increases life expectancy).

**LOGIC/SSR DRIVE MODULE**

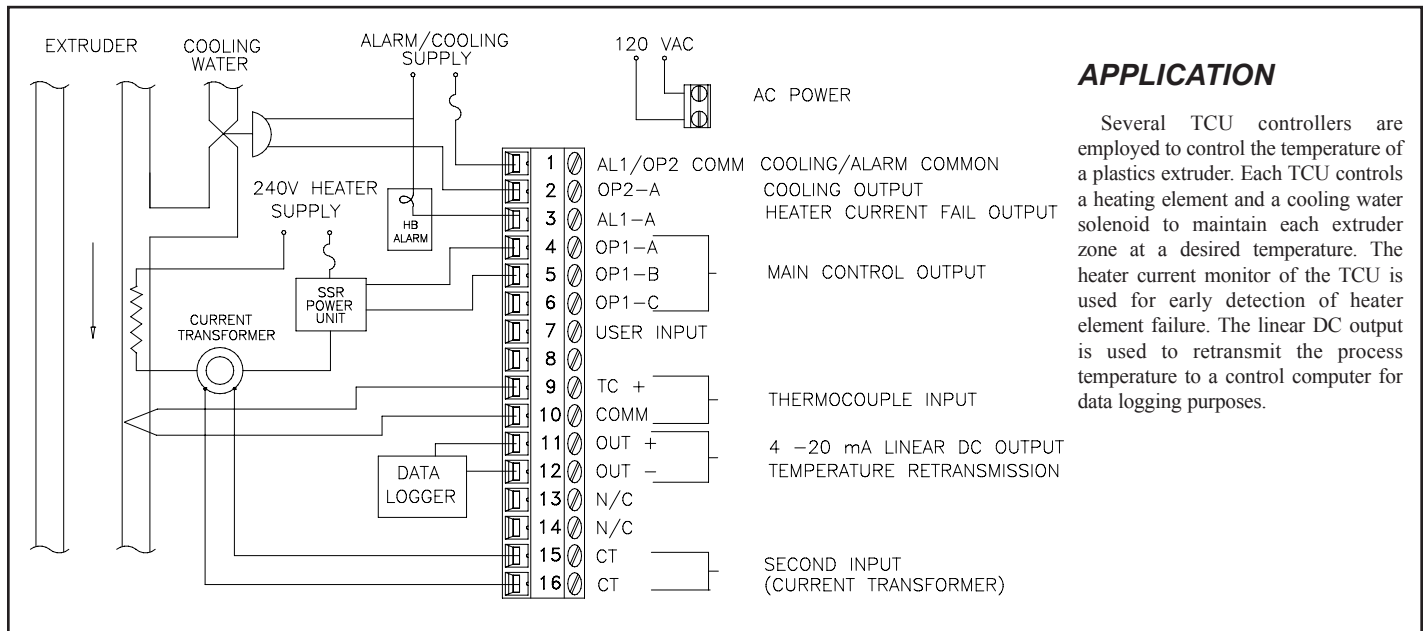

**Logic/SSR Drive:** Can drive multiple SSR Power Units.

**Type:** Non-isolated switched DC, 12 VDC typical  
**Drive:** 45 mA maximum.

**Triac:**

**Type:** Isolated, Zero Crossing Detection  
**Rating:**  
**Voltage:** 120/240 VAC  
**Max. Load Current:** 1 ampere @ 35°C  
 0.75 ampere @ 50°C  
**Min. Load Current:** 10 mA  
**Off State Leakage Current:** 7 mA max. @ 60 Hz  
**Operating Frequency:** 20 to 400 Hz  
**Protection:** Internal Transient Snubber, Fused

## APPLICATION

Several TCU controllers are employed to control the temperature of a plastics extruder. Each TCU controls a heating element and a cooling water solenoid to maintain each extruder zone at a desired temperature. The heater current monitor of the TCU is used for early detection of heater element failure. The linear DC output is used to retransmit the process temperature to a control computer for data logging purposes.

## ORDERING INFORMATION

### MODELS WITHOUT SECOND INPUT OPTIONS

40:0.1 Ampere Current Transformer	CT004001

Note: Output Modules are NOT supplied with the controller. When specifying the controller, be sure to purchase the appropriate output module for the Main Control Output and if necessary, the alarm output(s), the cooling output, and valve positioner outputs. The controller can be fitted with any combination of output modules.

The Logic/SSR Drive Module is a switched DC source, intended to drive the DC input of an SSR power unit. It should never be connected to line voltage.

All output modules are packaged separately and must be installed by the user.

# MODEL TSC - TEMPERATURE SETPOINT CONTROLLER

- AUTOMATIC PROGRAM DELAY FOR PROFILE CONFORMITY, PLUS PROGRAM LINKING, REPEATING AND AUTO POWER-ON FUNCTIONS FOR ENHANCED CAPABILITY
- DUAL EVENT OUTPUTS FOR TIMED ACTIVATION OF PROCESS EQUIPMENT SUCH AS STIRRERS, FANS, HEATERS, ETC. (Uses Alarm Output Channels)
- FOUR SETPOINT & PID PARAMETER SETS FOR QUICK RECALL OF SETPOINTS AND/OR GAIN VALUES DURING BATCH OR PROCESS CHANGEOVER
- PROGRAMMABLE USER INPUT FOR CONTROLLER AND SETPOINT PROGRAM CONTROL
- 100 MSEC SAMPLING PERIOD WITH 0.15% ACCURACY
- ON DEMAND AUTO-TUNING OF PID CONTROL SETTINGS
- DUAL LED DISPLAYS FOR SIMULTANEOUS INDICATION OF TEMPERATURE AND SETPOINT OR TEMPERATURE AND PROFILE STATUS
- ACCEPTS ANY ONE OF 10 DIFFERENT TYPES OF SENSOR INPUTS (Thermocouple or RTD)
- FIELD REPLACEABLE AND INTERCHANGEABLE OUTPUT MODULES (Relay, Logic/SSR drive, and Triac)
- OPTIONAL DUAL ALARM OUTPUTS (Uses Output Modules)
- OPTIONAL COOLING OUTPUT (Uses Output Module)
- OPTIONAL LINEAR 4 to 20 mA or 0 to 10 VDC OUTPUT FOR CONTROL OR TEMPERATURE RE-TRANSMISSION
- OPTIONAL RS485 SERIAL COMMUNICATIONS INTERFACE
- OPTIONAL NEMA 4X/IP65 SEALED FRONT BEZEL

- SETPOINT PROGRAM CONTROLLER FOR TIME VS. TEMPERATURE (RAMP/SOAK) AND SPECIAL BATCH/RECIPE APPLICATIONS
- ADVANCED PROGRAM PROFILING IN A 1/8 DIN PACKAGE
- ON-LINE MONITORING AND CONTROL OF PROGRAM STATUS, TIME, AND SETPOINT VALUE (Program Run, Pause, Stop, Advance, Modify Time, & Setpoint Value)

## DESCRIPTION

The TSC is a setpoint controller suitable for time vs. temperature, process control applications. The TSC accepts signals from a variety of temperature sensors (thermocouple and RTD elements), precisely displays the process temperature, and provides an accurate output control signal (time proportional or linear) to maintain a process at the desired control point. A comprehensive set of easy to use steps allows the controller to satisfy various applications. The user input can be programmed to perform a variety of controller functions.

Dual 4-digit displays allow viewing of the measured temperature value and setpoint or temperature and profile status simultaneously. Front panel indicators inform the operator of controller status and output states. Replaceable output modules (Relay, logic/SSR drive or Triac) can be fitted to the main control output, alarm output(s) or timed event output(s), and cooling output.

The TSC has been designed to simplify the set-up and operation of a controlled setpoint profile program. The setpoint program is easily entered and controlled through the front panel. Full display capabilities keep the operator informed of the process temperature, profile status, output states, and setpoint value.

The controller can operate in the standard PID control mode for both heating or cooling with on-demand auto-tune which establishes the PID gain set. The PID gain set can be fine tuned by the operator at any time or may be locked from further modification. The unit can be transferred to the manual control mode providing the operator with direct control of the output.

The TSC features four programs or profile recipes, each with up to eight ramp/soak segments, which can be easily stored and executed at any time. Longer profiles can be achieved by linking one or more profiles together, creating a single profile of up to 32 ramp/soak segments. Temperature profile conformity is assured during either soak (hold) phases or both ramp and hold phases by an adjustable error band parameter. The program repeat function cycles the profile either continuously or a set number of times. Power-on options automatically re-start, stop, or resume a running profile. The profile can be controlled via the front panel buttons, the user input, or the optional serial communications port.

Four control points, each having a setpoint and PID parameter set, are available for instant front panel implementation during batch changeover, or

## DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 5.5" (140) H x 2.1" (53.4) W.

## DESCRIPTION (Cont'd)

other process conditions. A control point may have its PID gain set values disabled when implementing the control point.

The optional RS485 multidrop serial communications interface provides the capability of two-way communication between a TSC unit and other compatible equipment such as a printer, a programmable controller, or a host computer. In multipoint applications the address number of each unit on the line can be programmed from 0-99. Up to thirty-two units can be installed on a single pair of wires. The Setpoint value, % Output Power, Setpoint Ramp Rate, etc. can be interrogated or changed by sending the proper command code via serial communications. Alarm output(s) may also be reset via the serial communications interface option.

Optional alarm output(s) may be configured to operate as a timed event output or as a standard alarm output. As an alarm output it may be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, or Band IN or OUT) with adjustable hysteresis. Also, a standby feature suppresses the output(s) on power-up until the temperature stabilizes outside the alarm region. Timed event output(s) allow the controller to activate other equipment while a programmed profile is running. Each profile can define up to 16 event states (phases), for each output(s).

An optional secondary output is available for processes that require cooling which provides increased control accuracy and response.

The optional linear 4 to 20 mA or 0 to 10 VDC output signal is available to interface with final actuators, chart recorders, indicators, or other controllers. The output signal can be digitally scaled and selected to transmit one of the following:

- % Output Power
- Measurement Value
- Measurement Value Deviation
- Setpoint Value

An optional NEMA 4X/IP65 rated bezel is available for washdown and/or dirty environments, when properly installed. Modern surface-mount technology, extensive testing, plus high immunity to noise interference, makes the controller extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the TSC to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit. An independent and redundant temperature limit indicator with alarm outputs is strongly recommended. Red Lion Controls model IMT (thermocouple) or model IMR (RTD) units may be used for this purpose. The indicators should have input sensors and AC power feeds independent from other equipment.

## SPECIFICATIONS

### 1. DISPLAY: Dual 4-digit

**Upper Temperature Display:** 0.4" (10.2 mm) Red LED

**Lower Auxiliary Display:** 0.3" (7.6 mm) Green LED

#### Display Messages:

- "OLOL" - Appears when measurement exceeds + sensor range.
- "ULUL" - Appears when measurement exceeds - sensor range.
- "OPEN" - Appears when open sensor is detected.
- "SHrt" - Appears when shorted sensor is detected (RTD only).
- "...." - Appears when display value exceeds + display range.
- "...." - Appears when display value exceeds - display range.

### 2. POWER: 115/230 VAC (+10%, -15%) no observable line variation effect, 48-62 Hz, 10 VA, switch selectable.

### 3. ANNUNCIATORS:

#### 6 LED Backlight Status Indicators:

- %PW - Lower auxiliary display shows power output in (%).
- PGM - Lower auxiliary display shows profile status or profile time remaining.
- MAN - Controller is in manual mode.
- OP1 - Main control output is active.
- AL1 - Alarm #1 is active.
- AL2 - Alarm #2 is active (for Dual Alarm Option)
- OP2 - Cooling output is active (for Cooling Option).

### 4. CONTROLS: Four front panel push buttons for setup and modification of controller functions and one external input.

### 5. SETPOINT PROFILE:

#### Profiles: 4

**Segments Per Profile:** 8 ramp/hold segments (linkable to 32 segments).

**Ramp Rate:** 0.1 to 999.9 degrees/minute or no ramp.

**Hold Time:** Off or from 0.1 to 999.9 minutes, can be extended to 500 hours by linking.

**Error Band Conformity:** Off or from 1 to 9999 degrees deviation, + value for hold phases, - value for both ramp and hold phases.

**Power-On Modes:** Stop, auto-start, or profile resume.

**Start Mode:** Ramps from process temperature.

**Program Auto Cycle:** 1 to 249, or continuous.

**Event Outputs:** 2, time activated with profile [uses Alarm output(s)].

**Control:** Front panel buttons, user input, or RS485 communications.

### 6. CONTROL POINTS:

**Setpoints:** 4

**PID gain sets:** 4

**Control:** Front panel buttons or user input.

### 7. SENSOR INPUT:

**Sample Period:** 100 msec

**Response Time:** 300 msec (to within 99% of final value w/step input; typically, response is limited to response time of probe).

**Failed Sensor Response:**

**Main Control Output(s):** Programmable preset output.

**Display:** "OPEN".

**Alarms:** Upscale drive.

**DC Linear:** Programmable preset output.

**Normal Mode Rejection:** 40 db @ 50/60 Hz (improves with increased digital filtering).

**Common Mode Rejection:** 100 db, DC to 50/60 Hz.

**Protection:** Input overload voltage; 240 VAC @ 30 sec max.

### 8. THERMOCOUPLE:

**Types:** T, E, J, K, R, S, B, N or Linear mV.

**Input Impedance:** 20 MΩ, all types.

**Lead Resistance Effect:** 20 μV/350 Ω.

**Cold Junction Compensation:** Less than ±1°C error over 0-50°C ambient temperature range. Disabled for linear mV type.

**Resolution:** 1°C/F all types, or 0.1°C/F for T, E, J, K, and N only.

### 9. RTD: 2, 3 or 4 wire, 100 Ω platinum, alpha = 0.00385 (DIN 43760), alpha = 0.003916

**Excitation:** 0.175 mA

**Resolution:** 1 or 0.1 degree

**Lead Resistance:** 7 Ω max.

### 10. RANGE AND ACCURACY:

Errors include NIST conformity and A/D conversion errors at 23°C after 20 minutes warm-up. Thermocouple errors include cold junction effect. Errors are expressed as ±(% of reading) and ±3/4 LSD unless otherwise noted.

TC TYPE	RANGE	ACCURACY	WIRE COLOR (ANSI)
T	-200 to +400°C -328 to +752°F	0.20% + 1.5°C 0.20% + 2.7°F	blue
E	-200 to 750°C -328 to +1382°F	0.20% + 1.5°C 0.20% + 2.7°F	violet
J	-200 to +760°C -328 to +1400°F	0.15% + 1.5°C 0.15% + 2.7°F	white
K	-200 to +1250°C -328 to +2282°F	0.20% + 1.5°C 0.20% + 2.7°F	yellow
R	0 to +1768°C +32 to +3214°F	0.15% + 2.5°C 0.15% + 4.5°F	black
S	0 to +1768°C +32 to +3214°F	0.15% + 2.5°C 0.15% + 4.5°F	black
B	+200 to +1820°C +300 to +3300°F	0.15% + 2.5°C 0.15% + 4.5°F	grey
N	-200 to +1300°C -328 to +2372°F	0.20% + 1.5°C 0.20% + 2.5°F	orange
mV	-5.00 to 56.00	0.15% + 1 LSD	-
RTD (385)	-200 to +600°C -328 to +1100°F	0.10% + 0.5°C 0.10% + 0.9°F	-
RTD (392)	-200 to +600°C -328 to +1100°F	0.10% + 0.5°C 0.10% + 0.9°F	-
OHMS	1.0 to 320.0	0.15% + 1 LSD	-

### 11. OUTPUT MODULES [Optional] (For All Output Channels):

#### Relay:

**Type:** Form-C (Form-A with RS485 option)

**Rating:** 5 Amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC (inductive load).

**Life Expectancy:** 100,000 cycles at max. rating. (Decreasing load and/or increasing cycle time, increases life expectancy).

**Logic/SSR Drive:** Can drive multiple SSR Power Units.

**Type:** Non-isolated switched DC, 12 VDC typical.

**Drive:** 45 mA max.

#### Triac:

**Type:** Isolated, Zero Crossing Detection.

**Ratings:**

**Voltage:** 120/240 VAC

**Max Load Current:** 1 AMP @ 35°C

0.75 AMP @ 50°C

**Min Load Current:** 10 mA

**Off State Leakage Current:** 7 mA max. @ 60 Hz

**Operating Frequency:** 20 to 500 Hz

**Protection:** Internal Transient Snubber, Fused.

## SPECIFICATIONS (Cont'd)

### 12. MAIN CONTROL OUTPUT (Heating or Cooling):

**Control:** PID or ON/OFF.

**Output:** Time proportioning or linear DC.

**Hardware:** Plug-in, replaceable output modules.

**Cycle time:** Programmable.

**Auto-tune:** When performed, sets proportional band, integral time, and derivative time values.

**Probe Break Action:** Programmable.

### 13. COOLING OUTPUT (Optional):

**Control:** PID or ON/OFF.

**Output:** Time proportioning or linear DC

**Hardware:** Plug-in, replaceable output modules.

**Cycle time:** Programmable.

**Proportional Gain Adjust:** Programmable.

**Heat/Cool DeadBand:** Programmable.

### 14. LINEAR DC DRIVE (Optional):

With digital scale and offset, programmable deadband and update time.

**4 to 20 mA:**

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\%$  of reading + 25  $\mu A$ ).

**Compliance:** 10 V (500  $\Omega$  max. loop impedance).

**0 to 10 VDC:**

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\%$  of reading + 35 mV).

**Min. Load Resistance:** 10 K $\Omega$  (1 mA max.)

**Source:** % output power, setpoint, deviation, or temperature.  
(Available for heat or cool, but not both.)

### 15. ALARMS (Optional):

**Hardware:** Plug-in, replaceable output module.

**Modes:** Absolute high acting

Absolute low acting

Deviation high acting

Deviation low acting

Inside band acting

Outside band acting

Timed event output(s)

**Reset Action:** Programmable; automatic or latched.

**Delay:** Programmable; enable or disable.

**Hysteresis:** Programmable.

**Probe Break Action:** Upscale.

**Annunciator:** LED backlight for "AL1", "AL2", (Alarm #2 not available with cooling output).

### 16. SERIAL COMMUNICATIONS (Optional):

**Type:** RS485 Multi-point, Balanced Interface.

**Communication Format:**

**Baud Rate:** Programmable from 300-9600.

**Parity:** Programmable for odd, even, or no parity.

**Frame:** 1 start bit, 7 data bits, 1 or no parity bit, 1 stop bit.

**Unit Address:** Programmable from 0-99, max. of 32 units per line.

**Transmit Delay:** 100 msec min., 200 msec max.

**RS485 Common:** Isolated from signal input common.

**Auto Print Time:** Off to 9999 seconds between print-outs.

### 17. USER INPUT:

$V_{IN}$  max = 5.25 VDC,  $V_{IL}$  = 0.85  $V_{MAX}$ ;  $V_{IH}$  = 2.0  $V_{MIN}$ ,  
Response time 100 msec max.

**Functions:**

Program Lock

Print Request

Integral Action Lock

Load Control Point

Auto/Manual Transfer

Run/Hold Profile 1

Setpoint Ramp Select

Run/Stop Profile 1

Reset Alarms

### 18. ENVIRONMENTAL CONDITIONS:

**Operating Temperature:** 0 to 50°C

**Storage Temperature:** -40 to 80°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Span Drift:**  $\leq 100$  ppm/°C

**Zero Drift:**  $\leq 1 \mu V/°C$

**Altitude:** Up to 2000 meters

### 19. CERTIFICATIONS AND COMPLIANCES:

**SAFETY**

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

UL Recognized Component, File # E156876, UL873, CSA C22.2 No. 24

Recognized to U.S. and Canadian requirements under the Component

Recognition Program of Underwriters Laboratories, Inc.

Type 2 or 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate # UL1239-156876/USA,

CB Scheme Test Report # 96ME50279-070794

Issued by Underwriters Laboratories, Inc.

IEC 1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>1</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power

#### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

*Notes:*

1. *Self-recoverable loss of performance during EMI disturbance at 10 V/m: Analog output signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*Install 1 ferrite core 1 turn, RLC #FCOR0000 or equivalent, to power lines at unit.*

*or*

*Install power line filter, RLC #LFIL0000 or equivalent.*

2. *Self-recoverable loss of performance during EMI disturbance at 10 Vrms: Analog output signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*a. Install 1 ferrite core 1 turn, RLC #FCOR0000 or equivalent, to power lines at unit.*

*or*

*Install power line filter, RLC #LFIL0000 or equivalent.*

*b. Install 1 ferrite core 1 turn, RLC #FCOR0000 or equivalent, to analog output cable at unit.*

*Refer to the EMC Installation Guidelines section of the manual for additional information.*

### 20. CONNECTION:

Jaw-type terminal block.

### 21. CONSTRUCTION:

**Front Panel:** Flame and scratch resistant tinted plastic.

**Case:** High impact black plastic. (Mounting collar included).

**NEMA 4X/IP65 model only:** Sealed bezel utilizing 2 captive mounting screws (panel gasket included). This unit is rated for NEMA 4X/IP65 indoor use. Installation Category II, Pollution Degree 2.

### 22. WEIGHT:

1.3 lbs. (0.6 kgs)

## BASIC OPERATION

The TSC controls the temperature profile of a system by measuring the temperature via an input probe, compares the actual temperature to the setpoint profile in progress, and calculates the new output power value by use of a modified PID control algorithm. The unit controls the system with the new output power value so the process temperature conforms to the programmed profile. The PID control algorithm incorporates features which provide minimum overshoot and excellent temperature control accuracy for a process.

## FRONT PANEL FEATURES

In the normal display mode, the unit will display the process temperature in the upper display. One of five other parameters may be selected for viewing in the lower display:

Target Setpoint	Profile Phase	Time Remaining
% Output Power	Temperature	Symbol (F/C)
Profile Status		

The program profile status display indicates the active profile number with the current ramp or hold phase of the profile. The profile can be started, stopped, advanced, etc. from the front panel when the profile status display is viewed, if not locked from access.

The phase time remaining display, shows the time remaining in a ramp or hold phase and, if not locked from access, may be changed on-line to effect temporary changes to the program. Additionally, the target setpoint and % output power (manual mode only) may also be changed on-line or locked from operator access.

From the normal operating mode, parameters are selected by use of the PAR button and modified by use of the UP and DOWN buttons. Parameters are then entered by the PAR button, which advances the user to the next parameter. Pressing the DSP button immediately returns the controller to the normal operating mode from any parameter module. The controller configuration and parameter settings are stored in an internal E<sup>2</sup>PROM device.

## CONFIGURATION MODE

The configuration modules serve to provide the basic set-ups required by the controller. It is divided into sections which group together related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each section, the program returns to the configuration selection stage, which allows the user to return to the normal display mode, or advance to a later configuration stage.

### Configuration 1, Inputs

- "TYPE" - Select input probe type
- "SCAL" - Select temperature scale
- "dCpT" - Select temperature resolution
- "FLtr" - Select degree of input filtering
- "SPAN" - Enter input correction span (slope)
- "SHFt" - Enter input correction shift (offset)
- "SPLO" - Enter setpoint lower limit
- "SPHI" - Enter setpoint higher limit
- "SPrP" - Enter setpoint ramp rate
- "InPt" - Select user input function

### Configuration 2, Outputs

- "CYCt" - Enter time proportioning cycle time
- "OPAC" - Select control action
- "OPLO" - Enter output power low limit
- "OPHI" - Enter output power high limit
- "OPFL" - Enter probe fail power preset
- "CHYS" - Enter ON/OFF control hysteresis
- "tcod" - Select auto-tuning damping
- "ANAS" - Select linear DC output assignment \*
- "ANLO" - Enter linear DC low scaling value \*
- "ANHI" - Enter linear DC high scaling value \*

### Configuration 3, Parameter lock-outs

- "SP" - Select degree of setpoint access
- "OP" - Select degree of power access
- "P-CS" - Select degree of profile status access
- "P-tr" - Select degree of phase time remaining access
- "UdSP" - Enable temperature units display
- "CodE" - Enter parameter access code
- "PId" - Select degree of PID access
- "AL" - Select degree of alarm access \*
- "ALrS" - Enable manual reset of alarms \*
- "CPAC" - Enable control point access
- "PrAC" - Enable ramp/hold program access
- "trnF" - Enable automatic/manual transfer
- "tUNE" - Enable auto-tune invocation

### Configuration 4, Alarms \*

- "Act 1" - Select operation mode of alarm #1
- "rSt1" - Select reset mode of alarm #1
- "Stb1" - Enable activation delay of alarm #1
- "AL-1" - Enter value for alarm #1
- "Act2" - Select operation mode of alarm #2
- "rSt2" - Select reset mode of alarm #2
- "Stb2" - Enable activation delay of alarm #2
- "AL-2" - Enter value for alarm #2
- "AHYS" - Enter hysteresis value for both alarms

### Configuration 5, Cooling \*

- "CYC2" - Enter cooling time proportioning cycle time
- "GAN2" - Enter cooling relative gain
- "db-2" - Enter heat/cool deadband or overlap

### Configuration 6, Serial Communications \*

- "bAUd" - Select baud rate
- "PARb" - Select parity bit
- "Addr" - Enter unit address number
- "Abrv" - Select abbreviated or full mnemonic transmissions
- "PrAt" - Enter automatic print rate
- "PoPt" - Select parameters to be included in print-out

### Configuration 7, Control Points

- "CSEt" - Select control point number for set-up 1, 2, 3, & 4
- "SP-x" - Enter setpoint value for selected control point
- "PId" - Select if PID gain set to be loaded with setpoint
- "PB-x" - Enter proportional band for selected control point \*
- "It-x" - Enter integral time for selected control point \*
- "dt-x" - Enter derivative time for selected control point \*

### Configuration 8, Profiles

- "PSEt" - Select profile or event output for set-up 1, 2, 3, or 4
- "PnCC" - Enter program-repeat cycle count for selected profile
- "PnLn" - Select link option for selected profile
- "PnEb" - Enter error band for temperature conformity for selected profile
- "PnPC" - Enter power-down resume status for selected profile
- "Pnr1" - Enter ramp rate 1 for selected profile \*
- "PnL1" - Enter setpoint level 1 for selected profile \*
- "PnH1" - Enter hold time 1 for selected profile \*
- .....
- "Pnr8" - Enter ramp rate 8 for selected profile \*
- "PnL8" - Enter setpoint level 8 for selected profile \*
- "PnH8" - Enter hold time 8 for selected profile \*
- "Pn 1" - Select event outputs at phase 1 for selected profile \*
- .....
- "Pn16" - Select event outputs at phase 16 for selected profile \*

### Configuration 9, Factory Service Operations

(Detailed in the operator's manual)

\* These parameters may not appear due to option configuration or other programming

## HARDWARE FEATURES

The fast 100 msec input sampling rate provides quick controller response to a process disturbance for excellent temperature control. Measurement accuracy of 0.15% provides closer process control conforming to the desired control setpoint value.

The unit accepts a variety of both thermocouple or RTD temperature probes. The A.C. input power is switch selectable, allowing the unit to operate from either 115 VAC or 230 VAC. Since the controller is serviceable from the front of the panel, the output modules may be easily changed or replaced without disturbing the wiring behind the panel and NO re-programming is required. The standard model simply requires pressing a latch to remove the unit. The NEMA 4X/IP65 rated model utilizes two panel securing screws and a neoprene gasket to guarantee a water tight seal, when properly installed.

Low-drift, highly stable circuit design ensures years of reliable and accurate temperature control. The recommended two year re-calibration interval is easily accomplished via the programming menu.

### NEMA 4X/IP65 BEZEL

## SETPOINT FEATURES

The controller's setpoint can be protected from out of range values, by programming the setpoint range limit values. Additionally, safeguards from inadvertent data entry can also be programmed.

The setpoint ramp feature ramps the setpoint value at start-up or any time a setpoint change is made, at a user programmable rate, independent of a programmed profile. This feature reduces thermal shock to the process and also helps to minimize temperature overshoot.

The active setpoint, which can be a running profile, may also be transmitted by the linear DC output for slave control loops.

Four control points are available which can be implemented at any time. Each control point is programmed independently, with each having a setpoint and a PID gain set value. With gain value changes, the output power control signal will not "bump" resulting in a smooth control transition.

## INPUT FEATURES

A programmable input filter can be used to stabilize readings from a process with varying or oscillating temperature characteristics, helping to provide better temperature control.

A programmable temperature shift and slope function can be used to compensate for probe errors or to have multiple TSC units indicate the same nominal temperature.

A programmable User Input is available to control a variety of controller functions, such as profile control, auto/manual transfer, serial communication print requests, etc.

## OUTPUT FEATURES

Programmable output power limits provide protection for processes where too much power can cause damage. Automatic sensor probe break detection, for fail-safe operation, causes the controller to default to a programmed output power (*upscale or downscale burnout*). With adjustable time proportioning-cycle time and programmable D.C. Linear output, the controller can satisfy a wide variety of output requirements.

During execution of a profile, two independent, timed event outputs are available to control or signal other equipment. The event outputs use the alarm channels.

The RS485 Communication option allows the user to access various controller parameters such as the setpoint, % output power, % proportional band, etc. The controller may be setup to transmit various parameters at a programmable automatic print rate.

## AUTO-TUNE

The model TSC has an auto-tune feature which, on demand, automatically determines the PID control parameters for a particular thermal process. After completion of auto-tune, the PID parameters are automatically optimized for that process and loaded into nonvolatile memory. The operator may view and modify the parameters as desired.

Auto-tune may be invoked at start-up, while ramping, or at setpoint, depending on the process requirements. A programmable auto-tune damping factor produces various levels of process control and response characteristics.

## PROFILE PROGRAMMING

Profiles are programmed independently of each other and are separate from the configuration of other controller parameters. Each profile has parameters for error band (profile conformity), linking, auto-start and program repeat cycles. Profiles may be altered during execution, so changes take effect as the programmed profile advances.

## CONTROLLER PROGRAMMING

The model TSC has been designed to reduce the operator interaction with the controller while still maintaining a high degree of control accuracy and user flexibility. Front panel program disable allows all of the controller's set-ups to be locked-out from further operator intervention after the initial parameter set-up.

The programming of the controller is divided into four sections:

- Hidden Mode
- Protected Mode
- Unprotected Mode
- Configuration Mode

These four programming modes allow the controller to adapt to any required user-interface level.

## UNPROTECTED PARAMETER MODE

The unprotected mode is accessible when program disable is inactive or when the proper access code number from the protected mode is entered. Only from this mode can the configuration modes be accessed.

- "SP" - Enter setpoint \*
- "OPOF" - Enter %output power offset \*
- "OP" - Enter output power \*
- "ProP" - Enter proportional band
- "Intt" - Enter integral time \*
- "dErT" - Enter derivative time \*
- "AL-1" - Enter value for alarm #1 \*
- "AL-2" - Enter value for alarm #2 \*
- "CNFP" - Select basic configuration module
- "End" - Return to normal display mode

## PROTECTED PARAMETER MODE \*

The protected mode is accessible when program disable is active, also this mode prevents access to the configuration modes without the proper access code number. Only the parameters that are selected in the configuration 3 parameter lock-outs section can be accessed.

- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErT" - Enter derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CodE" - Enter access value to unprotected mode
- "End" - Return to normal display mode

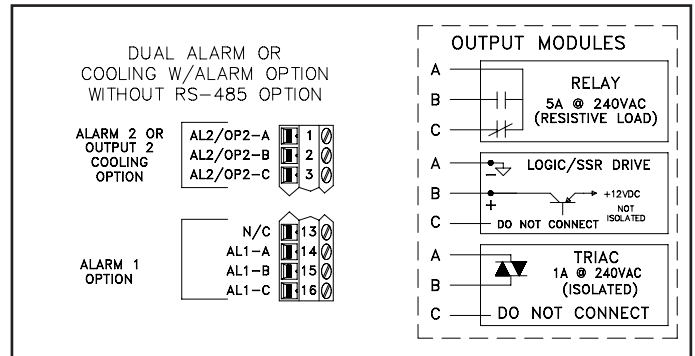

## HIDDEN FUNCTIONS MODE \*

The hidden mode is accessible from the normal operating mode by holding the PAR button for 3 seconds. The five functions in this mode may be locked-out individually in configuration 3 parameter lock-outs section.

- "CP" - Load control point x
- "Prun" - Control ramp/hold profile state
- "trnF" - Transfer between automatic (PID) control and Manual control
- "tUNE" - Invoke/Cancel PID auto-tune
- "ALrS" - Reset latched alarms

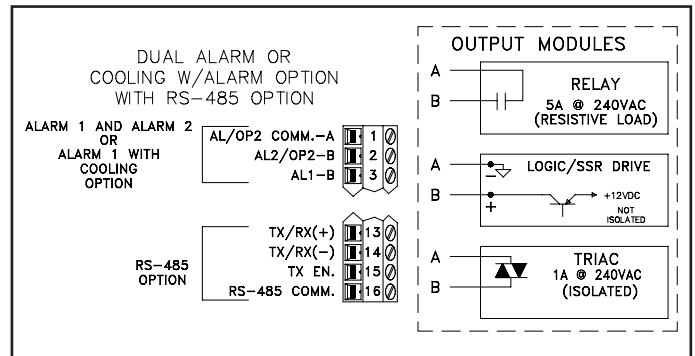

## OUTPUT VARIATIONS WITHOUT RS485 OPTION

The Dual Alarm or the Cooling with Alarm output, without the RS485 option, has independent outputs. Therefore, the cooling output and/or alarm output(s) can be installed with any combination of output modules.

## OUTPUT VARIATIONS WITH RS485 OPTION

The Dual Alarm or the Cooling with Alarm output, with RS485 option, does not have independent outputs. In this case, the cooling output and/or alarm output(s) must have the same type of output modules installed since they share the common terminal.

\* These parameters may not appear due to option configuration or other programming

## OUTPUT MODULES

Units equipped with RS485 option must have the Dual Alarm or Cooling w/alarm options fitted with the same type of output modules. The controller's main output (OP1) can be fitted with any output module. Output modules are shipped separately and must be installed by the user.

### TYPICAL CONNECTIONS

#### Relay:

- Type:** Form -C (Form-A with RS485 option only)
- Rating:** 5 Amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC (inductive).
- Life Expectancy:** 100,000 cycles at maximum load rating. (Decreasing load and/or increasing cycle time, increases life expectancy).

### LOGIC/SSR DRIVE MODULE

- Logic/SSR Drive:** can drive multiple SSR Power Units.
- Type:** Non-isolated switched DC, 12 VDC typical.
- Drive:** 45 mA max.

### TRIAC MODULE

- Triac:**
- Type:** Isolated, Zero Crossing Detection.
- Rating:**
- Voltage:** 120/240 VAC.
- Max. Load Current:** 1 Amp @ 35°C  
0.75 Amp @ 50°C
- Min. Load Current:** 10 mA
- Off State Leakage Current:** 7 mA max. @ 60 Hz
- Operating Frequency:** 20 to 500 Hz.
- Protection:** Internal Transient Snubber, Fused.

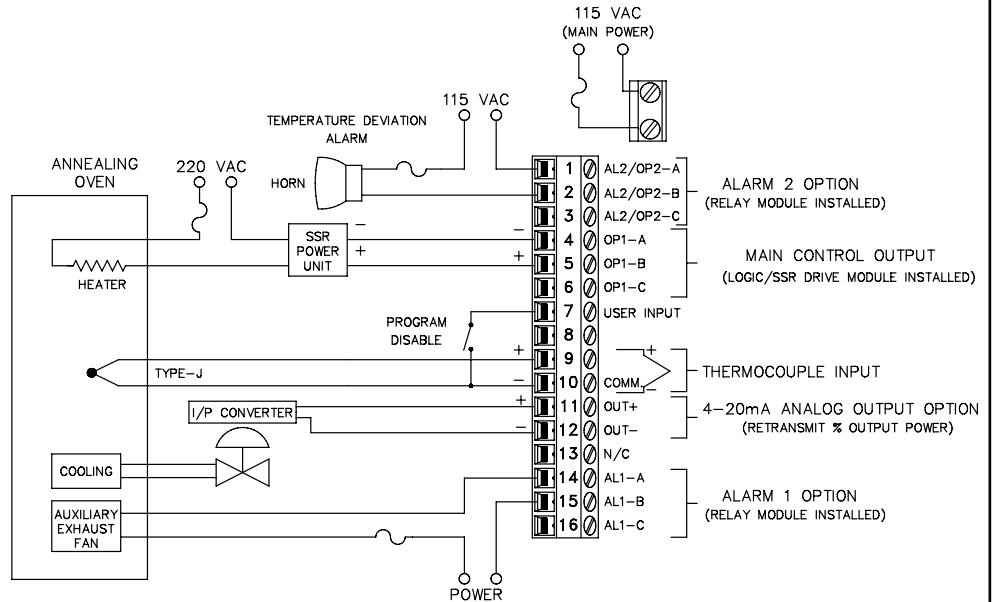

## APPLICATION

### TSC GLASS TEMPERING APPLICATION

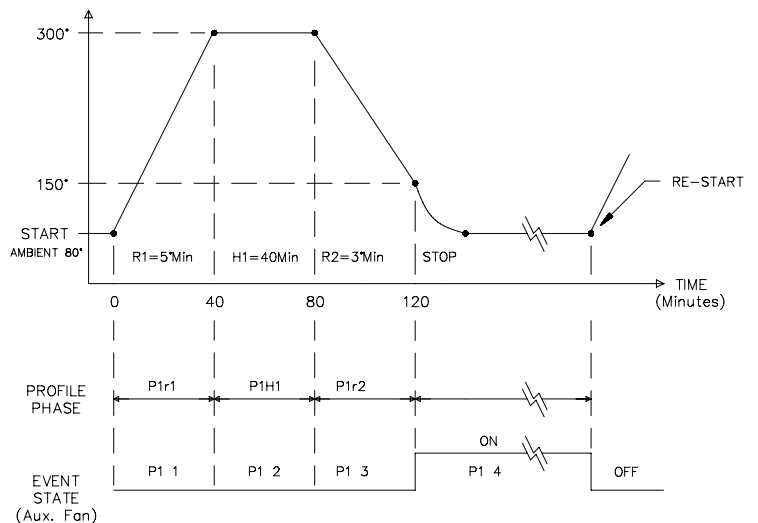

A manufacturer of glass items needs to anneal (*temper*) their products to reduce the brittleness of the glass structure. The tempering process requires the glass to be heated and subsequently cooled at a controlled rate to change the structure of the glass. Different tempering profiles are required for different types of glass products.

A TSC is employed to control the temperature profile of the annealing oven. Four different temperature profiles are stored in the controller. The 4 to 20 mA analog output option is utilized to cool the annealing oven during the cool down ramp phases. An event output is used to quickly cool the oven at the end of the batch run (*alarm 1*). Alarm 2 is used to signal the operator whenever the temperature is outside the prescribed program profile.

*Note: Units equipped with the RS485 option have different terminal designators. See "Output Variations with or without the RS485 Option".*

### TEMPERATURE

The programming for this profile is as follows:

Parameter	Value	Description
"P1r1"	5.0	Ramp from ambient temp. during heat phase at 5.0°/min.
"P1L1"	300	Target setpoint level 300°
"P1H1"	40.0	Heat at 300° for 40.0 minutes
"P1r2"	3.0	Ramp down 3.0°/min. during cooling phase
"P1L2"	150	Target Setpoint is 150°
"P1H2"	0.0	Do not hold at 150° (used as "phantom" hold time for triggering event output for auxiliary cooling)
"P1r3"	-0.1	End Program
"P1 1"	1F2F	Turn off output 1 (output 2 is alarm)
"P1 2"	1F2F	Keep off output 1
"P1 3"	1F2F	Keep off output 1
"P1 4"	1N2F	Turn on output 1 for Auxiliary Exhaust Fan

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	NEMA 4X/IP65 BEZEL	4 to 20 mA ANALOG OUTPUT	0 to 10 VDC ANALOG OUTPUT	ALARM OUTPUTS	COOLING OUTPUT	RS485 COM	PART NUMBER

	Logic/SSR Drive Module							OMD00003
PMK5	Panel Mount Adapter Kit (1/4 DIN to 1/8 DIN)							PMK50000
RLY	SSR Power Unit							RLY50000
	Single Phase 25 A DIN Rail Mount Solid State Relay							RLY60000
	Single Phase 40 A DIN Rail Mount Solid State Relay							RLY6A000
	Three Phase DIN Rail Mount Solid State Relay							RLY70000
These models have dual alarm outputs, or single alarm with cooling outputs, with shared common terminals (Form A Type). As a result, these outputs should be fitted with the same type of output module. The main output (OP1) may be fitted with any type of output module.								

*Note: Output Modules are NOT supplied with the controller. When specifying the controller, be sure to purchase the appropriate output module for the Main Control Output and if necessary, the alarm output(s) and cooling output. The controller can be fitted with any combination of output modules that do not have the RS485 option.*

*The Logic/SSR Drive Module is a switched DC source, intended to drive the DC input of an SSR power unit. It should never be connected to a line voltage.*

*All modules are shipped separately and must be installed by the user.*

# MODEL P16 - 1/16 DIN PROCESS CONTROLLER

This is a brief overview of the P16. For complete specifications and programming information, see the **T16/P16 Temperature/Process Controller Bulletin** starting on **page 541**.

- PID CONTROL WITH REDUCED OVERSHOOT
- ACCEPTS 0-10 V AND 0/4-20 mA SIGNALS
- ON DEMAND AUTO-TUNING OF PID SETTINGS
- DC ANALOG OUTPUT (OPTIONAL)
- USER PROGRAMMABLE FUNCTION BUTTON
- PC OR FRONT PANEL PROGRAMMING
- PC CONFIGURABLE WITH TP16KIT

UL Recognized Component,  
File #E156876

## INPUT SPECIFICATIONS

### 1. SENSOR INPUT:

**Sample Period:** 100 msec (10 Hz rate)

**Step Response Time:** 300 msec typical, 400 msec max to within 99% of final value with step input.

#### Failed Sensor Response:

Main Control Output(s): Programmable preset output

Display: "OPEN"

Alarms: Upscale drive

**Analog Output:** Upscale drive when assigned to retransmitted input.

**Normal Mode Rejection:** >40 dB @ 50/60 Hz

**Common Mode Rejection:** >120 dB, DC to 60 Hz

**Overvoltage Protection:** 120 VAC @ 15 sec max

### 4. SIGNAL INPUT: (P16 only)

\* Accuracies are expressed as  $\pm$  percentages over 0 to 50 °C ambient range after 20 minute warm-up.

INPUT RANGE	ACCURACY *	IMPEDANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
10 VDC (-1 to 11)	0.30 % of reading +0.03V	1 M $\Omega$	50 V	10 mV
20 mA DC (-2 to 22)	0.30 % of reading +0.04mA	10 $\Omega$	100 mA	10 $\mu$ A

F

# MODEL P48 - 1/16 DIN PROCESS CONTROLLER

- PID CONTROL WITH REDUCED OVERSHOOT
- ACCEPTS 0 to 10 VDC or 0/4 to 20 mA DC INPUTS
- OPTIONAL TWO LINEAR DC OUTPUTS (0 to 10 V, 0/4 to 20 mA)
- OPTIONAL DUAL ALARM OUTPUTS
- OPTIONAL REMOTE SETPOINT INPUT (0/4 to 20 mA)
- OPTIONAL RS485 SERIAL COMMUNICATIONS
- SECOND SETPOINT SETTING
- SETPOINT RAMPING FOR PROCESS STARTUP
- PROGRAMMABLE USER INPUT (Digital) FOR ADDED FLEXIBILITY
- PARAMETER SECURITY VIA PROGRAMMABLE LOCKOUTS
- MANUAL/AUTOMATIC CONTROL MODES
- ON DEMAND AUTO-TUNING OF PID CONTROL SETTINGS
- DUAL LED DISPLAYS FOR SIMULTANEOUS INDICATION OF PROCESS AND SETPOINT

- STATUS INDICATORS FOR OUTPUTS AND CONTROL MODES
- PC SOFTWARE AVAILABLE FOR CONTROLLER CONFIGURATION
- NEMA 4X/IP65 BEZEL

UL Recognized Component,  
File # E156876

## DESCRIPTION

The P48 Controller accepts either a 0 to 10 VDC or a 0/4 to 20 mA DC signal, precisely displays the input process signal according to the programmable scaling points, and provides an accurate output control signal (*time proportional or linear DC*) to maintain the process at the desired control point. The controller's comprehensive yet simple programming allows it to meet a wide variety of application requirements.

In the PID control mode the controller operates with on-demand auto-tune, which will establish the tuning constants. The PID tuning constants may be fine-tuned by the operator at any time and then locked out from further modification. The controller employs a unique overshoot suppression feature, which allows the quickest response without excessive overshoot. The unit can be transferred to operate in the manual mode, providing the operator with direct control of the output. The controller may also operate in the ON/OFF control mode with adjustable hysteresis. A second setpoint is available to allow quick selection of a different setpoint setting.

Dual 4-digit displays allow viewing of the process and setpoint simultaneously. Front panel indicators inform the operator of the controller and output status. On some models, the main control output and the alarm outputs are field replaceable.

Optional alarm(s) can be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, and Band IN or OUT) with

adjustable hysteresis. A standby feature suppresses the alarm during power-up until the process stabilizes outside the alarm region. The second alarm can be configured as a secondary PID output (heat/cool applications).

Optional Main Linear DC output (10 V or 20 mA) can be used for control or process re-transmission purposes. Programmable output update time reduces input range.

Optional Second Linear DC output (10 V or 20 mA) provides an independent process re-transmission, while the main Linear DC output is being used for control. The output range can be scaled independent of the input range.

Optional Remote Setpoint input (0/4 to 20 mA) allows for cascade control loops; and allows for remotely driven setpoint signal from computers or other similar equipment. Straightforward end point scaling with independent filtering and local/remote transfer option expand the controller's flexibility.

The optional RS485 serial communication interface provides two-way communication between a P48 and other compatible equipment such as a printer, PLC, HMI, or a host computer. In multipoint applications (up to thirty-two), the address number of each P48 on the line can be programmed separately from 0 to 99. Data from the P48 can be interrogated or changed, and alarm output(s) may be reset by sending the proper command code via serial communications. PC software, SFCRM, allows for easy configuration of controller parameters. These settings can be saved to disk for later use or used for multi-controller down loading. On-line help is provided within the software.

The unit is constructed of a lightweight, high impact plastic case with a tinted front panel. The front panel meets NEMA 4X/IP65 specifications when properly installed. Multiple units can be stacked horizontally or vertically. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the controller extremely reliable in industrial environments.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the P48 to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the controller. An independent and redundant process limit indicator with alarm outputs is strongly recommended.

## SPECIFICATIONS

### 1. DISPLAY: Dual 4-digit

**Upper Process Display:** 0.4" (10.2 mm) high red LED

**Lower Auxiliary Display:** 0.3" (7.6 mm) high green LED

#### Display Messages:

- "LOL" - Appears when measurement exceeds + input range.
- "ULUL" - Appears when measurement exceeds - input range.
- "SENS" - Appears when measurement exceeds controller limits.
- "..." - Appears when display values exceed + display range.
- "..." - Appears when display values exceed - display range.

#### LED Status Annunciators:

- %P - Lower auxiliary display shows power output in (%).
- MN - Flashing: Controller is in manual mode.
  - On: Local Setpoint (Remote Setpoint option)
  - Off: Remote Setpoint
- DV - Lower auxiliary display shows deviation (*error*) from setpoint.
- O1 - Main control output is active.
- A1 - Alarm #1 is active (*for A1 option*).
- A2 - Alarm #2 is active OR
  - Secondary output (O2) is active.

### 2. POWER:

**AC Versions:** 85 VAC min. to 250 VAC max., 50 to 60 Hz, 8 VA max.

#### DC Versions:

**DC Power:** 18 to 36 VDC; 7 W

**AC Power:** 24 VAC  $\pm 10\%$ ; 50 to 60 Hz, 9 VA

### 3. CONTROLS:

Four front panel push buttons for modification and setup of controller functions and one external user input for parameter lockout or other functions.

### 4. MEMORY:

Nonvolatile E<sup>2</sup> PROM retains all programmable parameters and values.

### 5. RANGE AND ACCURACY:

INPUT RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	IMPEDANCE	MAX CONTINUOUS OVERLOAD	RESOLUTION
10 VDC (-1 to 11)	0.10% of reading +0.02 V	0.30% of reading +0.03 V	1 M ohm	300 V	10 mV
20 mA DC (-2 to 22)	0.10% of reading +0.03 mA	0.30% of reading +0.04 mA	10 ohm	100 mA	10 $\mu$ A

\* Accuracies are expressed as  $\pm$  percentages after 20 minutes warm-up. The controller's accuracy is specified in two ways: accuracy over an 18 to 28°C range at 10 to 75% RH environment; and accuracy over a 0 to 50°C range at 0 to 85% RH (non-condensing) environment. Accuracy over the wide sensor range reflects the coefficient of the internal circuitry.

### 6. MAIN SIGNAL INPUT:

**Sample Period:** 100 msec

**Response Time:** Less than 300 msec typ., 400 msec max. (*to within 99% of final value w/step input; typically, response is limited to response time of sensor*)

**Normal Mode Rejection:** 40 dB @ 50/60 Hz (improves with increased digital filtering.)

**Common Mode Rejection:** Greater than 120 dB, DC to 60 Hz

**Protection:** Input overload 120 VAC max. for 15 sec. max.

### 7. USER INPUT:

Internally pulled up to +5 VDC (1 M $\Omega$ ).

V<sub>IN MAX</sub> = 5.25 VDC; V<sub>IL</sub> = 0.85 V max.; V<sub>IH</sub> = 3.65 V min.;

I<sub>OFF</sub> = 1  $\mu$ A max.

**Response Time:** 120 msec max.

**Functions:**

Program Lock	Integral Action Lock
Auto/Manual Mode Select	Setpoint Ramp Enable
Reset Alarms	Setpoint 1/Setpoint 2 Select
Local/Remote Setpoint Select	Serial block print

### 8. CONTROL AND ALARM OUTPUTS:

**Relay outputs with Form A contacts:**

**Contact Rating:** 3 A @ 250 VAC or 30 VDC (resistive load)

1/10 HP @ 120 VAC (inductive load)

**Life Expectancy:** 100,000 cycles at max. load rating.

(Decreasing load and/or increasing cycle time, increases life expectancy.)

### 9. MAIN CONTROL:

**Control:** PID or ON/OFF

**Output:** Time proportioning or Linear DC

**Cycle time:** Programmable

**Auto-tune:** When selected, sets proportional band, integral time, and derivative time values.

### 10. ALARMS: 1 or 2 alarms (optional)

**Modes:**

Absolute high acting	Absolute low acting
Deviation high acting	Deviation low acting
Inside band acting	Outside band acting

**Reset Action:** Programmable; automatic or latched

**Standby Mode:** Programmable; enable or disable

**Hysteresis:** Programmable

**Annunciator:** LED backlight for "A1", "A2"

### 11. SECONDARY OUTPUT: Software selectable (overrides alarm 2)

**Control:** PID or ON/OFF

**Output:** Time Proportioning

**Cycle time:** Programmable

**Proportional Gain Adjust:** Programmable

**Deadband /Overlap:** Programmable

### 12. MAIN AND SECOND LINEAR DC OUTPUT: (optional)

**Main:** Control or re-transmission, programmable update rate from 0.1 sec to 250 sec

**Second:** Re-transmission only, fixed update rate of 0.1 sec

OUTPUT ** RANGE	ACCURACY* (18 to 28°C)	ACCURACY* (0 to 50°C)	COMPLIANCE	RESOLUTION
0 to 10 V	0.10% of FS + 1/2 LSD	0.30% of FS + 1/2 LSD	10k ohm min.	1/3500
0 to 20 mA	0.10% of FS + 1/2 LSD	0.30% of FS + 1/2 LSD	500 ohm max.	1/3500
4 to 20 mA	0.10% of FS + 1/2 LSD	0.30% of FS + 1/2 LSD	500 ohm max.	1/2800

\* Accuracies are expressed as  $\pm$  percentages after 20 minutes warm-up. Output accuracy is specified in two ways: Accuracy over an 18 to 28°C range at 10 to 75% RH environment; and accuracy over a 0 to 50°C range at 0 to 85% RH (non-condensing) environment. Accuracy over the wide sensor range reflects the coefficient of the internal circuitry.

\*\* Outputs are independently jumper selectable for either 10 V or 20 mA. The output range may be field calibrated to yield approximately 10% overrange and a small underrange (negative) signal.

### 13. REMOTE SETPOINT INPUT: (optional)

**Input type:** 0/4 to 20 mA

**Input Resistance:** 10 $\Omega$

**Overrange:** -5% to 105%

**Overload:** 100 mA (continuous)

**Scale Range:** -999 to 9999

**Resolution:** 1 part in 10,000.

**Accuracy:**

At 25°C:  $\pm(0.1\%$  of full scale + 1/2 LSD)

Over 0 to 50°C range:  $\pm(0.2\%$  of full scale + 1/2 LSD)

**Reading Rate:** 10/sec.

**Setpoint Filtering:** Programmable Digital

**Setpoint Ramping:** Programmable, 1 to 9999 units/minute.

### 14. SERIAL COMMUNICATIONS: (optional)

**Type:** RS485 multipoint, balanced interface

**Baud Rate:** 300 to 9600

**Data Format:** 7O1, 7E1, 7N2, 8N1

**Node Address:** 0 to 99, max of 32 units per line

**Transmit Delay:** 2 to 100 msec or 100 to 200 msec

**Data Encoding:** ASCII

**Isolation w.r.t Main Input Common:** 500 Vrms for 1 min. (50 V working)

Not isolated w.r.t. Remote Setpoint or Analog Output common

*Note: RS485 and the Analog Output commons are not internally isolated within the controller. The terminating equipment of these outputs must not share the same common (ie. earth ground).*

### 15. ENVIRONMENTAL CONDITIONS:

**Operating Range:** 0 to 50°C

**Storage Range:** -40 to 80°C

**Operating and Storage Humidity:**

85% max. relative humidity (non-condensing) from 0°C to 50°C.

**Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z

direction for 1.5 hours, 2g's.

**Shock According to IEC 68-2-27:** Operational 20 g, 11 msec in 3 directions.

**Altitude:** Up to 2000 meters

### 16. ISOLATION BREAKDOWN RATINGS:

**AC line with respect to all Inputs and outputs:** 250 V working (2300 V for 1 minute).

**Main input with respect to Analog Outputs and Remote Setpoint Input:** 50 V working (2300 V for 1 minute).

All other inputs and outputs with respect to relay contacts: 2000 VAC  
Not isolated between Analog Output and Remote Setpoint commons.

## 17. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

UL Recognized Component, File #E156876, UL873, CSA 22.2 No. 24  
Recognized to U.S. and Canadian requirements under the Component  
Recognition Program of Underwriters Laboratories, Inc.  
Type 4X Enclosure rating (Face only), UL50  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment  
for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>1</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms <sup>2</sup> 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m
Simulation of cordless telephones	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

#### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

#### Notes:

- No loss of performance during EMI disturbance at 10 V/m.  
Unit is panel mounted in a metal enclosure (Buckeye SM7013-0 or equivalent) that provides at least 20 dB shielding effectiveness. Metal panel is connected to earth ground.  
Power Line and I/O cables routed in metal conduit connected to earth ground.
- Self-recoverable loss of performance during EMI disturbance at 10 Vrms:  
Analog output may deviate during EMI disturbance.  
For operation without loss of performance:  
Install power line filter, RLC#LFIL0000 or equivalent.  
OR  
Install 2 ferrite cores, RLC#FCOR0000 or equivalent, to AC lines at unit for frequencies above 5 MHz.  
I/O cables routed in metal conduit connected to earth ground.  
Refer to the EMC Installation Guidelines section of the manual for additional information.

18. **CONNECTION:** Wire clamping screw terminals

19. **CONSTRUCTION:** Black plastic alloy case and collar style panel latch. Panel latch can be installed for vertical or horizontal instrument stacking. One piece tinted plastic bezel. Bezel assembly with circuit boards can be removed from the case to change the output board without removing the case from the panel or disconnecting wiring. Unit meets NEMA 4X/IP65 requirements for indoor use, when properly installed. Installation Category II, Pollution Degree 2.

20. **WEIGHT:** 0.38 lbs (0.17 kgs)

## BASIC OPERATION

The P48 controls a process by receiving a linear DC signal representing the process value, then calculating a control output power value by use of a modified PID control algorithm. The unit controls the system with the new output power value to keep the process at setpoint. The PID control algorithm incorporates features which provide for high control accuracy and low overshoot from process disturbances.

## FRONT PANEL FEATURES

In the normal operating mode, the unit displays the process value in the upper display. One of the following parameters can be viewed in the lower display:

- Setpoint
- % Power Output
- Process Deviation
- Blank Display

The user scrolls through these parameters by pressing the D button. If enabled, the control setpoint or power output (manual mode only) can be directly modified in this mode.

In the normal operating mode, parameters are selected by use of the P button and modified by use of the UP and DOWN buttons. Parameters are then entered by the P button, which advances the user to the next parameter. Pressing the D button immediately returns the controller to the normal operating mode without changing the currently selected parameter.

## HARDWARE FEATURES

A fast 100 msec input sampling rate provides quick controller response to a process disturbance, thus providing excellent process control. Measurement accuracy of 0.1% or better, provides close process control conforming to the desired control setpoint value.

Low-drift, highly stable circuitry ensures years of reliable and accurate process control. The recommended two year re-calibration interval is easily accomplished via the programming menu.

## REMOTE SETPOINT INPUT

The remote setpoint input facilitates the use of a remote signal to drive the controller's setpoint. The remote signal can be scaled independent to that of the controller's range. The controller's response to local/remote setpoint transfers can be programmed. Also, the remote signal is filtered by use of an adaptive filter. With this filter, relatively large filtering time constants can be used without suffering from long settling times. The time constant and filter disable band are programmable. Additionally, the remote signal can also be velocity limited (or ramped) to slow the controller's response to changes in setpoint. This results in a steady control response with no overshoot.

## LINEAR DC ANALOG OUTPUTS

The Main Linear DC output has independent scaling, programmable output update time and filter (damping) time. These parameters permit flexibility in process configuration. The output can be set for 0 to 10 V, 0 to 20 mA or 4 to 20 mA ranges and can be configured for control or for re-transmission of input or setpoint values.

A Second Linear DC output is dedicated for the re-transmission of the process input signal. The output can be scaled and converted independent of the input signal and Main Linear DC output. This output is isolated from the input.

## SETPOINT FEATURES

The controller setpoint can be protected from out of range values by programming the setpoint range limit values. Additionally, safeguards from inadvertent data entry can be programmed.

A second setpoint can be selected by the user input and/or through the front panel.

The setpoint ramp feature can be used to control the setpoint value at start-up or any time a setpoint change is made, at a user programmable rate. This feature reduces shock to the process and helps to minimize overshoot.

## INPUT FEATURES

A programmable input filter can be used to stabilize readings from a process with varying or oscillating process characteristics, helping to provide better control.

The programmable user input can be used to control a variety of functions, such as auto/manual transfer of the controller, reset alarm output(s), etc.

## OUTPUT FEATURES

Programmable output power limits provide protection for processes where excessive power can cause damage. Programmable output cycle time, output hysteresis, and dampening can reduce output activity without degrading control accuracy. The main outputs can operate in PID, ON/OFF, or manual control modes.

## CONTROL AND ALARM OUTPUTS

In addition to the Linear DC output, there are up to three relay outputs available. Relay outputs can switch user applied AC or DC voltages for control or alarm purposes.

## AUTO-TUNE

The P48 has an auto-tune feature which, on demand, automatically determines the PID control parameters for a particular process. After completion of auto-tune, the PID parameters are automatically optimized for that process and loaded into non-volatile memory. The operator may view and modify the parameters as desired.

Auto-tune may be invoked either at start-up or at setpoint, depending on the process requirements. An auto-tune programmable dampening factor produces various levels of process control and response characteristics.

## RS485 SERIAL COMMUNICATIONS

The RS485 communications option allows the connection of up to 32 devices on a single pair of wires with a distance of up to 4,000 feet and a maximum baud rate of 9600. Since the same pair of wires are used for both transmit and receive, only one way communication is possible at any given time. The controller has a programmable response time to allow the host device adequate time to release the communication line for a transmission.

Selected parameters from the P48 can be interrogated or changed, and alarm output(s) may be reset by sending the proper command code via serial communications. It is also possible to invoke Auto-tune through the serial port. Serial communications used with SFCRM software allows for easy controller parameter configuration by computer.

## DUAL TIME PROPORTIONAL SYSTEMS

The P48 is available with dual time proportional outputs. The dual outputs can be used for level or heat/cool applications. The A2 output can be configured for Secondary (cool) control. This allows for dual PID control or ON/OFF control with unbalanced hysteresis.

## CONTROLLER PROGRAMMING

Front Panel Program Disable allows all of the controller's set-ups to be locked-out from further operator intervention after the initial set-up.

The following four programming modes allow the controller to adapt to any required user-interface level:

- Unprotected Parameter Mode
- Protected Parameter Mode
- Hidden Function Mode
- Configuration Parameter Mode

### UNPROTECTED PARAMETER MODE \*

The Unprotected Parameter Mode is accessible from the Normal Display mode when program disable is inactive or when the proper access code number from the Protected Parameter Mode is entered. The Configuration Parameter Modes can be accessed only from this mode.

- "SP" - Enter setpoint
- "OP" - Enter output power
- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErt" - Enter derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CNFP" - Select configuration access point
- "End" - Return to normal display mode

### PROTECTED PARAMETERS MODE \*

The Protected Parameters Mode is enabled when program disable is active. This mode prevents access to the configuration modes without the proper access code number. Only the parameters that are enabled in the Configuration 3 parameter (lock-out section) can be accessed.

- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErt" - Enter derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CodE" - Enter value to access unprotected parameters and configuration parameters

### HIDDEN FUNCTION MODE \*

The Hidden Function Mode is accessible from the Normal Display Mode. The functions in this mode may be locked-out individually in Configuration 3 parameter (lock-out section).

- "SPSL" - Select local (SP1 or SP2) or remote setpoint
- "trnF" - Transfer between automatic (PID) control and manual control
- "tUNE" - Invoke/cancel PID Auto-tune
- "ALrS" - Reset latched alarms

## CONFIGURATION PARAMETER MODE

The Configuration Parameter Mode allows the operator to set-up the basic requirements of the controller. It is divided into sections which group together related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each section, the program returns to the Configuration Access Point allowing the user to return to the Normal Display Mode.

### Configuration 1, Inputs (1-IN)

- "tYPE" - Select input signal type
- "dCPT" - Select scaled display decimal point position
- "rnd" - Enter rounding increment and trailing zeros for scaled display
- "FLtr" - Select level of input filtering
- "dSP1"
- "InP1" } - Scale main input
- "dSP2"
- "InP2" }
- "SPLO" - Enter setpoint lower limit
- "SPHI" - Enter setpoint higher limit
- "SPrP" - Enter setpoint ramp rate
- "InPt" - Select user input function

### Configuration 2, Outputs (2-OP) \*

- "CYCt" - Enter time proportioning cycle time
- "OPAC" - Select output control action
- "PLO" - Enter output power low limit
- "OPHI" - Enter output power high limit
- "OPdP" - Enter output control dampening
- "CHYS" - Enter ON/OFF control hysteresis
- "tcOd" - Select auto-tuning dampening
- "ANtP" - Main Linear DC analog output range
- "ANAS" - Main Linear DC analog output source
- "ANut" - Main Linear DC analog output update time
- "ANLO" - Main Linear DC analog output scaling low
- "ANHI" - Main Linear DC analog output scaling high

### Configuration 3, Parameter Lock-Outs (3-LC) \*

- "SP" - Select setpoint access level
- "OP" - Select power access level
- "dEv" - Enable deviation display
- "bdSP" - Enable blank display
- "CodE" - Enter parameter access code
- "PId" - Select PID access level
- "AL" - Select alarm access level
- "ALrS" - Enable alarm reset access
- "SPSL" - Enable local/remote selection
- "trnF" - Enable auto/manual mode selection
- "tUNE" - Enable auto-tune invocation

### Configuration 4, Alarms (4-AL) \*

- "ACT1" - Select operation mode of alarm #1, or select main output
- "rSt1" - Select reset mode of alarm #1
- "Stb1" - Enable activation delay of alarm #1
- "AL-1" - Enter value for alarm #1
- "ACT2" - Select operation mode of alarm #2, or select second output
- "rSt2" - Select reset mode of alarm #2
- "Stb2" - Enable activation delay of alarm #2
- "AL-2" - Enter value for alarm #2
- "AHYS" - Enter hysteresis value for both alarms

### Configuration 5, Second Output (5-O2) \*

- "CYC2" - Enter time proportioning cycle time
- "GAN2" - Enter relative gain
- "db-2" - Enter deadband or overlap

### Configuration 6, Serial Communications (6-SC) \*

- "bAUd" - Select baud rate
- "ConF" - Select character frame format
- "Addr" - Enter address
- "Abrv" - Select abbreviated or full transmission
- "PoPt" - Select print options

### Configuration 7, Remote Setpoint Input (7-N2) \*

- "dSP1" - Enter remote setpoint display scaling value #1
- "INP1" - Enter remote setpoint process scaling value #1
- "dSP2" - Enter remote setpoint display scaling value #2
- "INP2" - Enter remote setpoint process scaling value #2
- "FLtr" - Enter remote setpoint filter time constant
- "bAnd" - Enter remote setpoint filter disable band
- "trnF" - Select Local/Remote setpoint transfer response

### Configuration 8, Second Linear DC Analog Output (8-A2) \*

- "A2tP" - Second linear DC analog range
- "A2LO" - Second linear DC analog scaling low
- "A2HI" - Second linear DC analog scaling high

### Configuration 9, Factory Service Operations (9-FS)

- "Code 48" - Calibrate Instrument
- "Code 66" - Reset parameters to factory setting

\* These parameters may not appear due to option configuration or other programming.

## MULTIPLE UNIT STACKING

The P48 is designed for close spacing of multiple units. Units can be stacked either horizontally or vertically. For vertical stacking, install the panel latch with the screws to the sides of the unit. For horizontal stacking, the panel latch screws should be at the top and bottom of the unit. The minimum spacing from center line to center line of units is 1.96" (49.8 mm). This spacing is the same for vertical or horizontal stacking.

*Note: When stacking units, provide adequate panel ventilation to ensure that the maximum operating temperature range is not exceeded.*

PANEL LATCH INSTALLED FOR VERTICAL UNIT STACKING

PANEL LATCH INSTALLED FOR HORIZONTAL UNIT STACKING

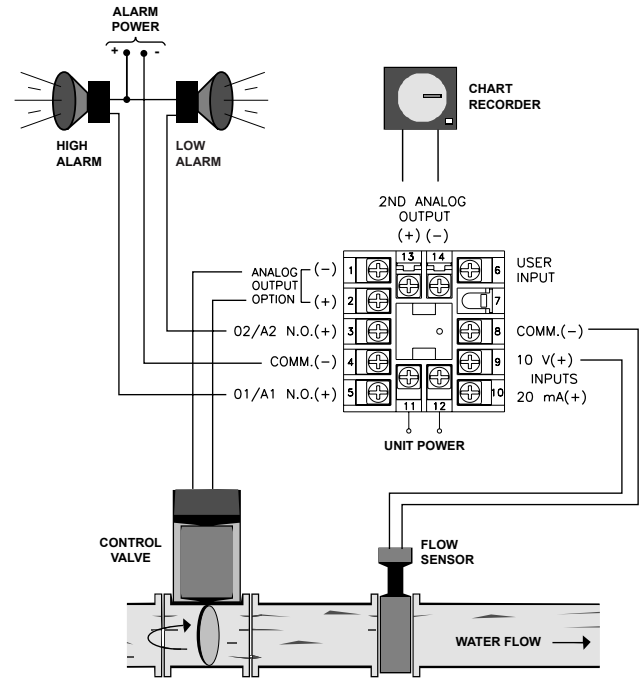

PANEL CUT-OUT SPACING FOR MULTIPLE UNIT STACKING. HORIZONTAL ARRANGEMENT SHOWN.

## APPLICATION

### WATER PROCESSING APPLICATION

A city water company needs to maintain a steady flow of water for their customer needs. They have an existing 0 to 10 VDC flow transmitter to measure the water flow. They need to control the water flow, have a high and low alarm, and keep a recorded chart of the flow for later reference. The Main Linear DC output of the P48 can be used to control the position of water output valves per the desired flow setpoint value. The P48 relay outputs can be programmed to give a high flow alarm and a low flow alarm. With the Second Linear DC output model, the flow measurement to the P48 can be converted from 0-10 V to 4-20 mA and retransmitted to a 4-20 mA chart recorder.

(Terminal assignments are model number dependent.)

## ORDERING INFORMATION

Options and Output Boards are factory configured per the part number specified. Part numbers without replacement output boards listed must be returned to the factory for output board replacement.

DEDICATED MAIN CONTROL O1 OUTPUT	MAIN CONTROL O1 or A1(ALARM 1)*	DEDICATED ALARM 1 A1 OUTPUT	A2 (ALARM 2) OR O2 (SECONDARY)*	REMOTE SETPOINT INPUT @	RS485 @	MAIN ANALOG OUTPUT** @	SECOND ANALOG OUTPUT** @	REPLACEMENT OUTPUT BOARD	PART NUMBERS	
									18-36 VDC/24 VAC	85 to 250 VAC
						YES		NA	P4800011	P4800001
Relay								RBD48100	P4810010	P4810000
	Relay		Relay			YES		NA	P4810111	P4810101
	Relay		Relay	YES		YES		NA	P4810115	P4810105
	Relay		Relay		YES	YES		NA	P4810117	P4810107

Relay		Relay	Relay		YES			RBD48111	P4811112	P4811102

\* This output is programmable as either Control (PID) or as an Alarm.

\*\* This output is jumper and program selectable for either a current or a voltage Linear DC output.

@ These part numbers are equipped with a second setpoint.

Option Boards are installed at the factory for the appropriate models. These boards are only needed for field replacement.

## ACCESSORIES

MODEL NO.	DESCRIPTION	PART NUMBERS
SFCRM	Crimson 2 PC Configuration Software for Windows 98, ME, 2000 and XP (for RS485 models)	SFCRM
ICM4	RS232/RS485 Serial Converter Module	ICM40030
ICM5	Three Way Isolated RS232/RS485 Serial Converter Module	ICM50000

\*Crimson Software is available for download from <http://www.redlion.net>

## MODEL PCU - PROCESS CONTROL UNIT

- 100 MSEC SAMPLING PERIOD WITH 0.15% ACCURACY
- ON DEMAND AUTO-TUNING OF PID CONTROL SETTINGS
- DUAL LED DISPLAYS FOR SIMULTANEOUS INDICATION OF PROCESS VALUE AND SETPOINT OR SECOND ANALOG INPUT
- ACCEPTS EITHER 0 to 10 VDC OR 0 to 20 mA DC INPUTS

- SELF-DIAGNOSTICS
- FULL PID CONTROL WITH REDUCED OVERSHOOT
- OPTIONAL RS485 SERIAL COMMUNICATIONS INTERFACE
- OPTIONAL DUAL ALARM OUTPUTS (USES OUTPUT MODULES)
- OPTIONAL SECONDARY OUTPUT (USES OUTPUT MODULE)
- OPTIONAL LINEAR 4 to 20 mA OR 0 to 10 VDC OUTPUT FOR CONTROL OR PROCESS VALUE RE-TRANSMISSION
- OPTIONAL MOTORIZED VALVE POSITION CONTROL AND VALVE FAIL ALARM
- OPTIONAL SECOND ANALOG INPUT FOR REMOTE SETPOINT AND CASCADE CONTROL
- OPTIONAL NEMA 4X/IP65 SEALED FRONT BEZEL
- STATUS INDICATORS FOR OUTPUTS AND CONTROL MODES
- PROGRAMMABLE USER INPUT (DIGITAL) FOR ADDED FLEXIBILITY
- MANUAL/AUTOMATIC AND LOCAL/REMOTE SETPOINT CONTROL MODES
- SETPOINT RAMPING FOR PROCESS STARTUP
- PARAMETER SECURITY VIA PROGRAMMABLE LOCKOUTS
- FIELD REPLACEABLE AND INTERCHANGEABLE OUTPUT MODULES (Relay, Logic/SSR Drive and Triac)

### DESCRIPTION

The PCU Controller accepts either 0 to 10 VDC or a 0 to 20 mA DC input signal, precisely scales the process signal according to programmable scaling points, and provides an accurate output control signal (*time proportional, linear, or valve position*) to maintain a process at the desired control point. A comprehensive set of easy to use program instructions allows the controller to solve various applications.

The controller can operate in the PID control mode for both the main output and optional secondary output, with on-demand auto-tune, that establishes the tuning constants. The PID tuning constants may be fine-tuned by the operator at any time and then locked-out from further modification. The controller employs a unique overshoot suppression feature, which allows the quickest response without excessive overshoot. The unit can be transferred to operate in the manual mode, providing the operator with direct control of the output. The controller may also be programmed to operate in the ON/OFF control mode with adjustable hysteresis.

Dual 4-digit displays allow viewing of the process value and setpoint simultaneously. Front panel indicators inform the operator of the controller and output status. Replaceable and interchangeable output modules (*Relay, Logic/SSR Drive, or Triac*) can be installed for the main control output, alarm output(s) and secondary output.

F

### DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 5.5" (140) H x 2.1" (53.4) W.

## OPTIONS

Optional dual alarms can be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, Band IN or OUT and Valve Fail Detect) with adjustable hysteresis. A standby feature suppresses the output during power-up until the process stabilizes outside the alarm region. An optional secondary output is available (*for processes that require cooling*) that provides increased control accuracy and response.

A linear 4 to 20 mA or 0 to 10 VDC output signal is available to interface with actuators, chart recorders, indicators, or other controllers. The output signal can be digitally scaled and selected to transmit one of the following: % output power, measurement value, process measurement value deviation or setpoint value. Valve Positioner and Second Analog Input Models have the adjustable output demand dampening, output deadband and output update time parameters to expand the versatility of the PCU to control devices.

The optional Motorized Valve Positioner directly controls the position of a valve by the use of twin outputs (open and close) to control the direction of motor rotation. The motor position defines the opening position of the valve. Two control modes are possible: position control, that makes use of the slidewire feedback signal supplied with the positioner and velocity control, in which no slidewire feedback signal is used. Parameters are provided to adjust the operation of the valve. These include:

- Valve activity hysteresis
- Valve update time
- Variable control dampening
- Slidewire signal fail action
- Adjustable valve position limits

The Valve Positioner PCU achieves tight process control, yet minimizes unnecessary valve activity. An alarm event output or display alarm can be programmed under loss of slidewire feedback or under valve fail detection.

The optional Second Analog Input (0 to 20 mA DC) can be configured as a remote setpoint signal or as a secondary process signal. Configuration of the second analog input as a remote setpoint signal allows ratio control, master setpoint/multiple slave operation, and the ability to cascade the PCU with another controller (external cascade). Configuration of the second input as a secondary process signal allows operation as a two-process cascade controller within a single unit (internal cascade). In either control mode, parameters are provided to scale, configure, communicate and monitor the activity of both analog inputs. A square law linearizer function can be used to linearize signals derived from flow transmitters.

The optional RS485 multidrop serial communication interface provides two-way communication between a PCU unit and other compatible equipment such as a printer, a programmable controller, or a host computer. In multipoint applications the address number of each unit on the line can be programmed from zero to ninety-nine. Up to thirty-two units can be installed on a single pair of wires. The Setpoint value, % Output Power, Setpoint Ramp Rate, etc. can be interrogated or changed by sending the proper command code via serial communications. Alarm output(s) may also be reset via the serial communications interface option.

An optional NEMA 4X/IP65 rated bezel is available for wash down and/or dirty environments, when properly installed. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the controller extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the PCU to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit. An independent and redundant limit indicator with alarm outputs is strongly recommended. Red Lion Controls offers various units (such as an IMP, IMD1 or IMD2) that may be used for this purpose. The indicators should have input sensors and AC power feeds independent from other equipment.

## SPECIFICATIONS

### 1. DISPLAY: Dual 4-digit

**Upper Process Display:** 0.4" (10.2 mm) high red LED

**Lower Auxiliary Display:** 0.3" (7.6 mm) high green LED

**Display Messages (Model dependent):**

- "OLOL" - Appears when measurement exceeds +105% input range.
- "ULUL" - Appears when measurement exceeds -5% input range.
- "SENS" - Appears when measurement exceeds "OLOL" & "ULUL" range.

- "...." - Appears when display values exceed + display range.
- "...." - Appears when display values exceed - display range.
- "SLid" - Appears when loss of slidewire signal is detected.
- "VALV" - Appears when valve actuator error is detected.

2. **POWER:** Switch selectable 115/230 VAC (+10%, -15%) no observable line variation effect, 48 to 62 Hz, 10 VA.

### 3. ANNUNCIATORS:

#### LED Backlight Status Indicators (Model dependent):

- %PW - Lower auxiliary display shows power output in (%).
- DEV - Lower auxiliary display shows deviation (*error*) from process setpoint.
- OP1 - Main control output is active.
- AL1 - Alarm #1 is active.
- AL2 - Alarm #2 is active (*for Dual Alarm Option*).
- OP2 - Secondary output is active (*for Secondary Output Option*).
- OPN - Valve positioner OPEN output is active (*for Valve Positioner Option*).
- CLS - Valve positioner CLOSE output is active (*for Valve Positioner Option*).
- SEC - Lower auxiliary display shows second analog input (*for Second Analog Input Option*).
- MAN - Flashing: Controller is in Manual control mode.
- REM - ON: controller is in remote setpoint mode (*Second Analog Input Option*).
- OFF: controller is in local setpoint mode (*Second Analog Input Option*).
- Flashing: controller is in Manual control mode (*Second Analog Input Optional*).

4. **CONTROLS:** Four front panel push buttons for modifying and setup of controller functions and one external input for parameter lockout or other functions.

### 5. SIGNAL INPUT:

**Sample Period:** 100 msec typ.

**Response Time:** 300 msec typ. (*to within 99% of final value w/step input*)

**Signal Overdrive Threshold:**

**10 V Range:** 13 V typ.

**20 mA Range:** 26 mA typ.

**Signal Overdrive Response:**

**Main Control Output:** Programmable preset output

**Display:** "SENS"

**Alarms:** Upscale drive

**DC Linear:** Programmable preset output

**Normal Mode Rejection:** 40 dB typ. @ 50/60 Hz (*improves with increased digital filtering*).

**Common Mode Rejection:** 100 dB typ., DC to 60 Hz

**Protection:** Input overload 120 VAC for 30 seconds.

**Range And Accuracy:**

SIGNAL RANGE	ACCURACY (% OF UNSCALED READING)	MAXIMUM INPUT	INPUT IMPEDANCE	RESOLUTION
0 to 10 VDC	±(0.15% + 3 mV)	300 VDC	1 MΩ	10 mV
0 to 20 mA DC	±(0.15% + 6 μA)	200 mA DC	10 Ω	10 μA

### OUTPUT MODULES [Optional] (For All Output Channels):

**Relay:**

**Type:** Form-C (*Form-A with some models. See Ordering Information.*)

**Rating:** 5 Amps @ 120/240 VAC or 28 VDC (*resistive load*), 1/8 HP @ 120 VAC (*inductive load*) max.

**Life Expectancy:** 100,000 cycles at max. load rating. (*Decreasing load and/or increasing cycle time, increases life expectancy.*)

**Logic/SSR Drive:** Can drive multiple SSR Power Units.

**Type:** Non-isolated switched DC, 12 VDC typ.

**Drive:** 45 mA max.

**Triac:**

**Type:** Isolated, Zero Crossing Detection

**Rating:**

**Voltage:** 120/240 VAC

**Max. Load Current:** 1 Amp @ 35°C  
0.75 Amp @ 50°C

**Min. Load Current:** 10 mA

**Off State Leakage Current:** 7 mA max. @ 60 Hz

**Operating Frequency:** 20 to 400 Hz

**Protection:** Internal Transient Snubber, Fused

### 7. MAIN CONTROL OUTPUT:

**Control:** PID or ON/OFF

**Output:** Time proportioning or linear DC

**Hardware:** Plug-in, replaceable output modules

**Cycle time:** Programmable

**Auto-tune:** When selected, sets proportional band, integral time, and derivative time values.

**Signal Overdrive Action:** Programmable

## SPECIFICATIONS (Cont'd)

### 8. SECONDARY OUTPUT (Optional):

**Control:** PID or ON/OFF

**Output:** Time proportioning or linear DC

**Hardware:** Plug-in, replaceable output modules

**Cycle time:** Programmable

**Proportional Gain Adjust:** Programmable

**Deadband Overlap:** Programmable

### 9. LINEAR DC OUTPUT (Optional):

With digital scale and offset, programmable deadband and update time.

**4 to 20 mA:**

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\% \text{ of reading} + 25 \mu\text{A})$

**Compliance:** 10 V (500  $\Omega$  max. loop impedance)

**0 to 10 VDC:**

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\% \text{ of reading} + 35 \text{ mV})$

**Min. Load Resistance:** 10 K $\Omega$  (1 mA max.)

**Source:** % output power, setpoint, deviation, or process value  
(Available for OP1 or OP2, but not both.)

### 10. MOTORIZED VALVE POSITIONER (Optional):

**Two Outputs:** Valve open and valve close or Linear DC (optional)

**Hardware:** Plug-in, replaceable output modules

**Three Inputs:** Slidewire feedback, signal fail detect (Isolated from main input)

**Slidewire Resistance:** 100  $\Omega$  to 100 K $\Omega$

**Slidewire Exciting Voltage:** 0.9 VDC typ.

**Slidewire Fail Action:** programmable

**Control Mode:** Position mode (with slidewire) and velocity mode (w/o slidewire).

**Control Deadband:** 1% to 25.0% (position mode)  
0.1 to 25.0 seconds (velocity mode)

**Update Time:** 1 to 250 seconds

**Motor Time (open, close):** 1 to 9999 seconds

**Position Limits:** Adjustable 0.0 to 100.0% of valve stroke

**Valve Fail Time:** Off to 9999 seconds

**Alarm mode:** Dual acting; loss of slidewire feedback signal and valve fail detection

### 11. SECOND ANALOG INPUT:

**Range:** 0 to 20 mA (Isolated from main input)

**Overload:** 100 mA<sub>MIN</sub> (steady state)

**Input Resistance:** 10  $\Omega$  typ.

**Voltage Drop (@ 20 mA):** 0.2 V typ.

**Accuracy:** 0.15% of reading  $\pm 10 \mu\text{A} \pm 1 \text{ LSD}$

**Scale Range:** -999 to 9999

### 12. SERIAL COMMUNICATION:

**Type:** RS485 Multi-point, Balanced Interface

**Communication Format:**

**Baud Rate:** Programmable from 300 to 9600

**Parity:** Programmable for odd, even, or no parity

**Frame:** 1 start bit, 7 data bits, 1 or no parity bit, 1 stop bit

**Unit Address:** Programmable from 0 to 99, max. of 32 units per line

**Transmit Delay:** 100 msec min., 200 msec max.

**RS485 Common:** Isolated from signal input common

**Auto Print Time:** Off to 9999 seconds between print-outs

### 13. USER INPUT (Optional):

Internally pulled up to +5 VDC.

$V_{IN} = 5.25 \text{ VDC}_{MAX}$ ,  $V_{IL} = 0.85 \text{ V}_{MAX}$ ;  $V_{IH} = 3.0 \text{ V}_{MIN}$ .

Available on all second input (MVP & ANA) models, and on models with RS485.

**Response Time:** 100 msec max.

**Functions:** Program Lock

Integral Action Lock

Auto/Manual Mode Select

Setpoint Ramp Select

Reset Alarms

Print Request

Local/Remote Setpoint Select

### 14. ALARMS (Optional):

**Hardware:** Plug-in, replaceable output module

**Modes:** Absolute high acting

Absolute low acting

Deviation high acting

Deviation low acting

Inside band acting

Outside band acting

Valve fail

Second Analog Input monitoring

**Reset Action:** Programmable; automatic or latched

**Standby Mode:** Programmable; enable or disable

**Hysteresis:** Programmable

**Signal Overdrive Action:** Upscale

**Annunciator:** LED backlight for "AL1", "AL2", (Alarm #2 not available with secondary output or motorized valve position option.)

### 15. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 50°C

**Storage Temperature Range:** -40 to 80°C

**Span Drift (maximum):** 100 ppm/°C, main input; 150 ppm/°C, second input

**Zero Drift (maximum):**

**4 to 20 mA DC Range:** 0.5  $\mu\text{A}/^\circ\text{C}$

**0 to 10 VDC Range:** 0.2 mV/°C

**Second Input:** 2  $\mu\text{A}/^\circ\text{C}$

**Relative Humidity:** Less than 85% RH (non-condensing)

**Altitude:** Up to 2000 meters

### 16. ISOLATION BREAKDOWN RATINGS:

**All inputs and outputs with respect to AC line:** 2300 V<sub>MIN</sub>

**Analog Outputs, Second Analog Input or Slidewire Input with respect to main input:** 500 V<sub>MIN</sub>

### 17. CERTIFICATIONS AND COMPLIANCES:

#### SAFETY

UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

UL Recognized Component, File # E156876, UL873, CSA C22.2 No. 24

Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.

Type 2 or 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #UL1239-156876/USA,

CB Scheme Test Report #96ME50279-070794

Issued by Underwriters Laboratories, Inc.

#### Notes:

1. Self-recoverable loss of performance during EMI disturbance at 10 V/m.  
Process and/or analog output signals may deviate during EMI disturbance.

For operation without loss of performance:

Install power line filter, RLC #LFIL0000 or equivalent.

2. Self-recoverable loss of performance during EMI disturbance at 10 Vrms.  
Process and/or analog output signals may deviate during EMI disturbance.

For operation without loss of performance:

Install power line filter, RLC #LFIL0000 or equivalent and 1 ferrite core 1 turn, RLC #FCOR0000 or equivalent, to cable at unit.

Refer to the EMC Installation Guidelines section of the manual for additional information.

### 18. CONNECTION:

Jaw-type terminal block

**Wire Range:** 12-30 AWG copper wire

**Torque:** 5-7 inch-lbs (56-79 N-cm)

### 19. CONSTRUCTION:

NEMA 2 For Standard Models.

**Front Panel:** Flame and scratch resistant tinted plastic

**Case:** High impact black plastic. (Mounting collar included)

**NEMA 4X/IP65 model only:** Sealed bezel utilizing two captive mounting screws (panel gasket included) This unit is rated for NEMA 4X/IP65 indoor use. Installation Category II, Pollution Degree 2

### 20. WEIGHT:

1.3 lbs (0.6 kgs)

## BASIC OPERATION

The PCU controls a process by measuring the input signal and then calculating a control output power value by use of a modified PID control algorithm. The unit controls the system with the new output power value to keep the process at setpoint. The PID control algorithm incorporates features that provide for high control accuracy and low overshoot from process disturbances.

## FRONT PANEL FEATURES

In the normal operating mode, the unit displays the scaled process value in the upper display. One of four other parameters can be viewed in the lower display:

- Setpoint
- % Power Output
- Deviation
- Second Input Process Value

The parameters can be scrolled through by pressing the DSP button. If enabled, the control setpoint or power output (manual mode only) can be directly modified in this mode.

In the normal operating mode, parameters are selected by use of the PAR button and modified by use of the UP and DOWN buttons. Parameters are then entered by the PAR button, which advances the user to the next parameter. Pressing the DSP button immediately returns the controller to the normal operating mode when making a parameter change. The controller's configuration and parameter settings are stored in an internal E<sup>2</sup>PROM device.

## HARDWARE FEATURES

The fast 100 msec input sampling rate provides quick controller response to a process disturbance, thus providing excellent process control. Measurement accuracy of 0.15% or better, provides closer process control conforming to the desired control setpoint value. The unit accepts either a 0 to 10 VDC or a 0 to 20 mA DC input signal. The AC input power is switch selectable, allowing the unit to operate from either 115 VAC or 230 VAC. Since the controller is serviceable from the front of the panel, the output modules may be easily changed or replaced without disturbing the wiring behind the panel. No re-programming is required when changing or replacing modules.

The optional NEMA 4X/IP65 rated model utilizes two bezel securing screws and a neoprene gasket to guarantee a water tight seal, when properly installed. The standard model simply requires pressing a latch to remove the unit.

Low-drift, highly stable circuitry ensures years of reliable and accurate process control. The recommended two-year re-calibration interval is easily accomplished via the programming menu.

## SETPOINT FEATURES

The controller setpoint can be protected from out of range values by programming the setpoint range limit values. Additionally, safeguards from inadvertent data entry can be programmed.

The setpoint ramp feature ramps the setpoint value at start-up or any time a setpoint change is made, at a user programmable rate. This feature reduces shock to the process and helps to minimize overshoot. The setpoint may also be transmitted by the optional linear DC output for slave control loops.

The second analog input may be configured as a remote setpoint. As such, the controller is easily switched from local/remote setpoint operation via the front panel or user input. Ratio and bias parameters provide on-line scaling of the remote setpoint. Absolute limit values and maximum rate of change of the remote setpoint further enhance controller flexibility.

## INPUT FEATURES

A programmable input filter can be used to stabilize readings from a process with varying or oscillating characteristics, helping to provide better process control. Programmable scaling points allow the controller to display in any engineering unit; flow, level, pressure, etc. Scaling points are used in conjunction with the programmable rounding increment to stabilize a jittery or otherwise hard to read process signal for better indication.

The programmable User Input can be used to control a variety of functions, such as auto/manual transfer of the controller, reset alarm output(s), etc.

The second analog input has independent scaling parameters to match the units of other processes or transmitters, or to match the controller's range.

## OUTPUT FEATURES

Programmable output power limits provide protection for processes where excessive power can cause damage. Automatic signal overdrive detection, for fail-safe operation, causes the controller to default to a programmed output power (upscale or downscale burnout). With adjustable time proportioning cycle time, and programmable DC linear output, the controller can satisfy a wide variety of output requirements.

Programmable dampening output hysteresis and output update time parameters can dramatically reduce actuator activity without degrading control accuracy.

The RS485 Communication option allows the user to access various controller parameters such as the setpoint, % output power, % proportional band, etc. The controller may be set up to transmit various parameters at a programmable automatic print rate.

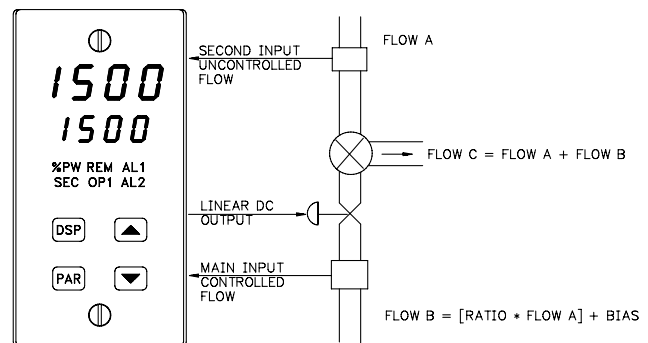

## AUTO-TUNE

The PCU has an auto-tune feature that, on demand, automatically determines the PID control parameters for a particular process. After completion of auto-tune, the PID parameters are automatically optimized for that process and loaded into nonvolatile memory. The operator may view and modify the parameters as desired.

Auto-tune may be invoked either at start-up or at setpoint, depending on the process requirements. An auto-tune programmable dampening factor produces various levels of process control and response characteristics.

## OPTIONS

### RATIO CONTROL

The PCU configured for ratio operation controls a process as a ratio of another process or to another variable. Ratio control is commonly used for flow applications, however, any two process variables can be controlled in a ratio mode.

#### Ratio Control Configuration Parameters

- "OPER" - Select ratio mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1"
- "INP1" } - Enter scaling units of second input
- "dSP2"
- "INP2"
- "SPtr" - Local/Remote Select options
- "InPt" - Program User Input for Local/Remote Setpoint selection

#### Ratio Control Operational Parameters

- "rtio" - Remote setpoint ratio
- "bias" - Remote setpoint bias

### MOTORIZED VALVE POSITIONER

The motorized valve positioner controls the position of a valve directly, by use of "open" and "close" control outputs. The slidewire feedback signals of the valve may optionally be connected to the controller. Alternatively, the controller may be configured for linear input valve control using the 4 to 20 mA DC output.

**Motorized Valve Positioner Configuration Parameters**

- Position mode: "VPS1" - Enter or measure valve closed position
- "VPS2" - Enter or measure valve open position
- "VUdt" - Enter Valve update time
- "VPdb" - Enter valve control deadband
- "VFAL" - Enter valve fail detect time
- "Act1" - Program alarm as valve fail output
- Velocity mode: "VUdt" - Enter Valve update time
- "VOPT" - Enter valve open time
- "VCLT" - Enter valve close time
- "VOnT" - Enter valve control deadband (minimum on time)

**Internal Cascade Operational Parameters**

- "SP-2" - View secondary setpoint value
- "Pb-2" - Enter secondary proportional band
- "It-2" - Enter secondary integral time
- "dt-2" - Enter secondary derivative time

**INTERNAL CASCADE**

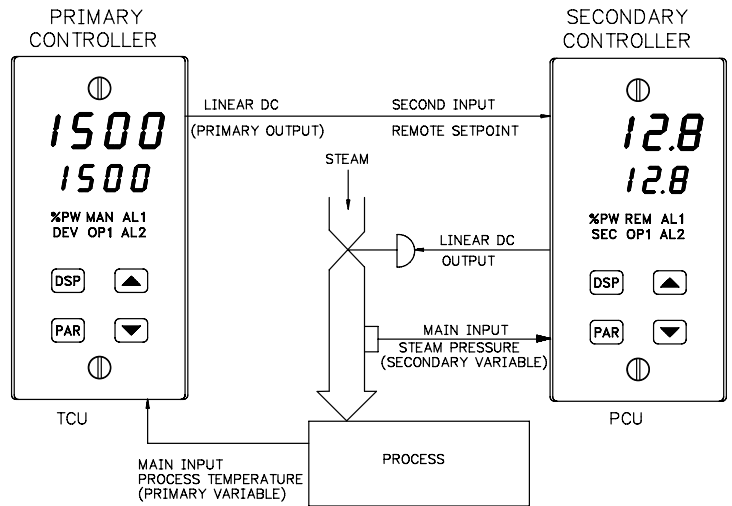

Cascade control allows the process to be divided into two control loops: the primary control loop and the secondary control loop. The secondary loop receives its setpoint from the primary loop to control an intermediate variable (steam pressure). The control level of the intermediate variable is the input to the primary process. The primary loop (main input) controller maintains loop regulation by manipulating the setpoint of the secondary controller. The setpoint of the secondary controller, in turn, changes the intermediate variable. The secondary loop can react faster to disturbances of the intermediate variable, thereby minimizing the effects to the primary control loop. Control loops cascaded in such a manner provide greater control quality than would be possible with single loop control. A single PCU can accomplish two-process cascade control.

**Internal Cascade Configuration Parameters**

- "OPER" - Select cascade mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1" - Enter scaling units of second input
- "INP1" - Enter scaling units of second input
- "dSP2" - Enter scaling units of second input
- "INP2" - Enter scaling units of second input
- "OPd2" - Output dampening of secondary

**EXTERNAL CASCADE**

Similar to internal cascade control, external cascade control differs by the employment of two controllers, one of which is equipped with a second analog input configured as a remote setpoint. A PCU controls the secondary loop, while a TCU controls the primary loop.

**External Cascade Configuration Parameters**

- "OPER" - Select ratio mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1" - Enter scaling units of second input
- "INP1" - Enter scaling units of second input
- "dSP2" - Enter scaling units of second input
- "INP2" - Enter scaling units of second input
- "SPtr" - Local/Remote select options

**External Cascade Operational Parameters**

- "rtio" - Remote setpoint ratio
- "bIAS" - Remote setpoint bias

F

**SETPOINT MASTER CONTROL**

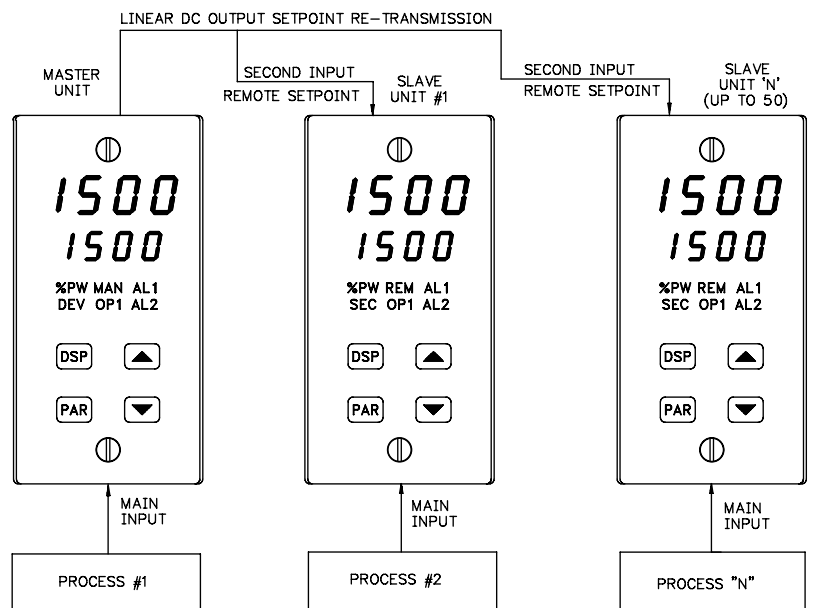

Setpoint Master Control allows automatic setpoint changes to slave controller units (up to 50 units total) from a master PCU controller. The linear DC output of the master is looped with the second analog input of the slave PCU controllers. Each slave unit can have unique remote setpoint ratio and bias values.

**Setpoint Slave Configuration Parameters**

- "OPER" - Select remote setpoint mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1" - Enter scaling units of second input
- "INP1" - Enter scaling units of second input
- "dSP2" - Enter scaling units of second input
- "INP2" - Enter scaling units of second input
- "SPLO" - Limit range of remote setpoint
- "SPHI" - Limit range of remote setpoint
- "SPrP" - Limit rate of change of remote setpoint

**Setpoint Slave Operational Parameters**

- "rtio" - Second input ratio
- "bIAS" - Second input bias

## CONTROLLER PROGRAMMING

The PCU has been designed to reduce the operator interaction with the controller while still maintaining a high degree of control accuracy and user flexibility. Front Panel Program Disable allows all of the controller's set-ups to be locked-out from further operator intervention after the initial parameter set-up.

The programming of the controller is divided into four sections:

- Unprotected Parameter Mode
- Configuration Parameter Mode
- Protected Parameter Mode
- Hidden Function Mode

These four programming modes allow the controller to adapt to any required user-interface level.

### UNPROTECTED PARAMETER MODE \*

The unprotected parameter mode is accessible when program disable is inactive or when the proper access code number from the protected mode is entered. The configuration parameter modes can be accessed only from this mode.

- "SP" - Enter Setpoint
- "OP" - Enter output power
- "Prop" - Enter proportional band
- "Intt" - Enter integral time
- "dErt" - Enter derivative time
- "rtio" - Enter Remote Setpoint ratio value
- "bIAS" - Enter Remote Setpoint bias value
- "SP-2" - View internal cascade secondary setpoint demand
- "Pb-2" - Enter internal cascade, secondary proportional band
- "It-2" - Enter internal cascade, secondary integral time
- "dt-2" - Enter internal cascade, secondary derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CNFP" - Select basic configuration mode
- "End" - Return to normal display mode

### CONFIGURATION PARAMETER MODE

The configuration parameter mode allows the operator to set up the basic requirements of the controller. It is divided into sections which group together related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each section, the program returns to the configuration selection stage allowing the user to return to the normal display mode.

#### Configuration 1, Inputs

- "TYPE" - Select input signal type
- "root" - Select square root linearization of main input \*
- "dCpt" - Select scaled display decimal point position
- "rnd" - Enter rounding increment and trailing zeroes for scaled display
- "FLtr" - Select level of input filtering
- "dSP1" - Scale main input
- "INP1" - Scale main input
- "dSP2" - Scale main input
- "INP2" - Scale main input
- "SPLO" - Enter setpoint lower limit
- "SPHI" - Enter setpoint higher limit
- "SPrP" - Enter setpoint ramp rate
- "InPt" - Select user input function \*

#### Configuration 2, Outputs

- "CYCt" - Enter time proportioning cycle time
- "OPAC" - Select control action
- "OPLo" - Enter output power low limit
- "OPHI" - Enter output power high limit
- "OPFL" - Enter signal overdrive power preset
- "OPdP" - Enter output control dampening
- "CHYS" - Enter ON/OFF control hysteresis
- "tcod" - Select auto-tuning dampening
- "ANAS" - Select linear DC output assignment \*
- "ANLo" - Enter linear DC output low scaling value \*
- "ANHI" - Enter linear DC output high scaling value \*
- "ANdb" - Enter linear DC output control deadband \*
- "ANUt" - Enter linear DC output update time \*

### Configuration 3, Parameter lock-outs

- "SP" - Select degree of setpoint access
- "OP" - Select degree of power access
- "dEv" - Enable deviation display \*
- "IN-2" - Enable second input display \*
- "bdSP" - Enable blank display
- "CodE" - Enter parameter access code
- "Pid" - Select degree of PID access
- "Pid2" - Select degree of secondary PID access \*
- "rtbS" - Select degree of ratio/bias access \*
- "AL" - Select degree of alarm access \*
- "ALrS" - Enable alarm reset access \*
- "SPSL" - Enable local/remote setpoint selection \*
- "trnF" - Enable auto/manual mode selection
- "tUNE" - Enable auto-tune invocation

### Configuration 4, Alarms \*

- "Act1" - Select operation mode of alarm #1
- "rSt1" - Select reset mode of alarm #1
- "Stb1" - Enable activation delay of alarm #1
- "AL-1" - Enter value for alarm #1
- "Act2" - Select operation mode of alarm #2
- "rSt2" - Select reset mode of alarm #2
- "Stb2" - Enable activation delay of alarm #2
- "AL-2" - Enter value for alarm #2
- "AHYS" - Enter hysteresis value for both alarms

### Configuration 5, Secondary Output \*

- "CYC2" - Enter time proportioning cycle time
- "GAN2" - Enter relative gain
- "db-2" - Enter deadband or overlap

### Configuration 6, Serial Communications \*

- "bAUd" - Select baud rate
- "PARb" - Select parity bit
- "Addr" - Enter unit address number
- "Abv" - Select abbreviated or full mnemonic transmissions
- "PrAt" - Enter automatic print rate
- "PoPt" - Select parameters to be included in print-out

### Configuration 7, Second Input \*

- "OPEr" - Select remote setpoint or internal cascade mode
- "root" - Select second input square root linearization
- "dPt2" - Select second input decimal point
- "dSP1" - Entering scaling parameters of second input
- "INP1" - Entering scaling parameters of second input
- "dSP2" - Entering scaling parameters of second input
- "INP2" - Entering scaling parameters of second input
- "SPtr" - Enter local/remote select options
- "OPd2" - Enter Secondary output control dampening

### Configuration 8, Motorized Valve Positioner \*

- Position mode:
  - "VPS1" - Enter or measure valve closed position
  - "VPS2" - Enter or measure valve open position
  - "VUdt" - Enter valve update time
  - "VPdb" - Enter valve control deadband
  - "VFAL" - Enter valve fail detect time
- Velocity mode:
  - "VUdt" - Enter valve update time
  - "VOPt" - Enter valve open time
  - "VCLt" - Enter valve close time
  - "VOnt" - Enter valve control deadband (minimum on time)

### HIDDEN FUNCTION MODE \*

The hidden function mode is accessible from the normal operating mode. The four functions in this mode may be locked-out individually in configuration 3 parameter lock-out section.

- "SPSL" - Select Local/Remote Setpoint
- "trnF" - Transfer between automatic (PID) control and manual control
- "tUNE" - Invoke/cancel PID Auto-tune
- "ALrS" - Reset latched alarms

\* These parameters may not appear due to option configuration or other programming.

**PROTECTED PARAMETERS MODE \***

The protected parameters mode is enabled when program disable is active. This mode prevents access to the configuration modes without the proper access code number. Only the parameters that are selected in the configuration 3 parameter lock-out section can be accessed.

- "ProP" - Enter Proportional band
- "Intt" - Enter integral time
- "dErt" - Enter derivative time
- "rtio" - Enter remote setpoint ratio value
- "bIAS" - Enter remote setpoint bias value
- "SP-2" - Enter internal cascade, secondary setpoint
- "Pb-2" - Enter internal cascade, secondary proportional band
- "It-2" - Enter internal cascade, secondary integral time
- "dt-2" - Enter internal cascade, secondary derivative time

- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CodE" - Enter access value to unprotected parameters & configuration parameters

\* These parameters may not appear due to option configuration or other programming.

**OUTPUT MODULES**

**TYPICAL CONNECTIONS**

**Relay:**

- Type:** Form-C (Form-A with some models. See ordering information.)
- Rating:** 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC (inductive) maximum.
- Life Expectancy:** 100,000 cycles at maximum load rating. (Decreasing load and/or increasing cycle time, increases life expectancy).

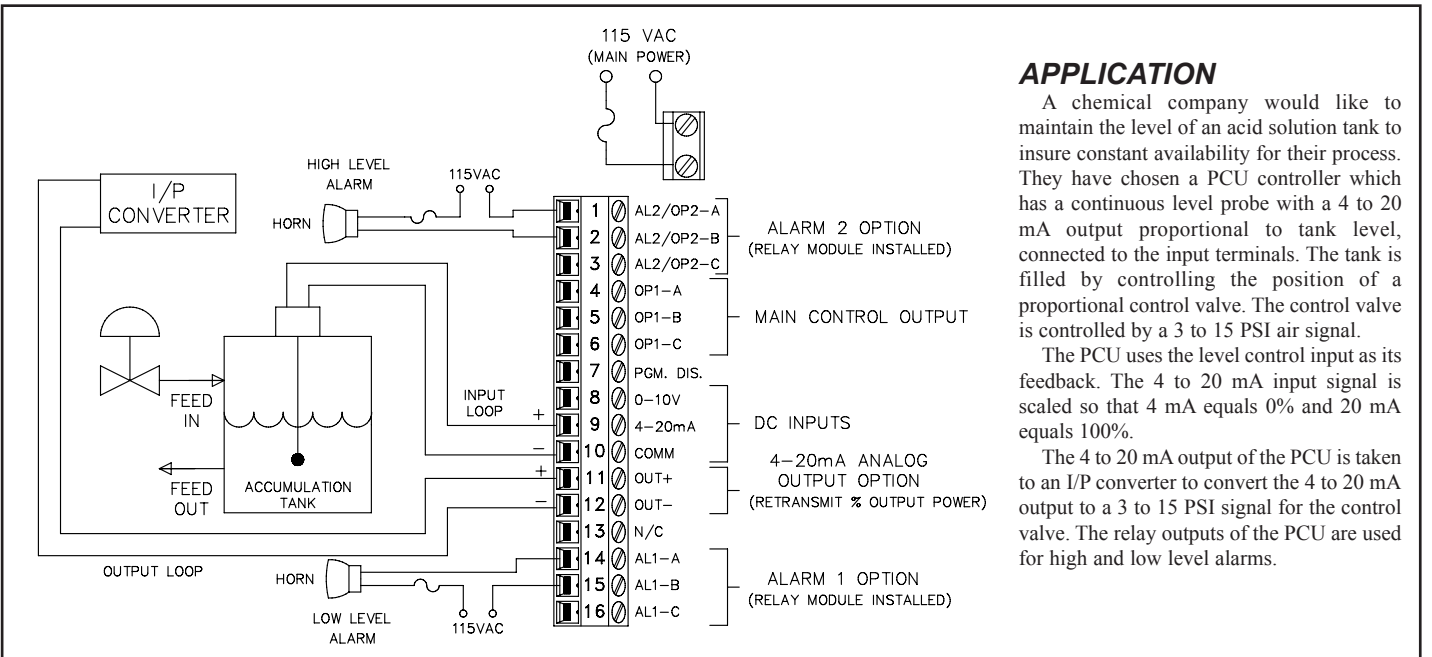

**Triac:**

- Type:** Isolated, Zero Crossing Detection
- Rating:**
  - Voltage:** 120/240 VAC
  - Max. Load Current:** 1 ampere @ 35°C
  - 0.75 ampere @ 50°C
  - Min. Load Current:** 10 mA
  - Off State Leakage Current:** 7 mA max. @ 60 Hz
  - Operating Frequency:** 20 to 400 Hz
  - Protection:** Internal Transient Snubber, Fused

**Logic/SSR Drive:** Can drive multiple SSR Power Units.

- Type:** Non-isolated switched DC, 12 VDC typical
- Drive:** 45 mA maximum.

**APPLICATION**

A chemical company would like to maintain the level of an acid solution tank to insure constant availability for their process. They have chosen a PCU controller which has a continuous level probe with a 4 to 20 mA output proportional to tank level, connected to the input terminals. The tank is filled by controlling the position of a proportional control valve. The control valve is controlled by a 3 to 15 PSI air signal.

The PCU uses the level control input as its feedback. The 4 to 20 mA input signal is scaled so that 4 mA equals 0% and 20 mA equals 100%.

The 4 to 20 mA output of the PCU is taken to an I/P converter to convert the 4 to 20 mA output to a 3 to 15 PSI signal for the control valve. The relay outputs of the PCU are used for high and low level alarms.

## ORDERING INFORMATION

### MODELS WITHOUT SECOND INPUT OPTIONS

NEMA 4X/IP65 BEZEL	4 to 20 mA ANALOG OUTPUT	0 to 10 VDC ANALOG OUTPUT	ALARM OUTPUTS	COOLING OUTPUT	RS485 COM	PART NUMBER
NO	YES	NO	NO	NO	NO	PCU01000
NO	YES	NO	2	NO	NO	PCU01001
YES	NO	NO	NO	NO	NO	PCU10000

YES	NO	NO	1	NO	YES	PCU10307
YES	YES	NO	1	NO	NO	PCU11306
YES	NO	YES	1	NO	NO	PCU12306

### ACCESSORIES

DESCRIPTION	PART NUMBER
Relay Module	OMD00000
Triac Module	OMD00001
Logic/SSR Drive Module	OMD00003
SSR Power Unit	RLY50000
Single Phase 25 A DIN Rail Mount Solid State Relay	RLY60000
Single Phase 40 A DIN Rail Mount Solid State Relay	RLY6A000
Three Phase DIN Rail Mount Solid State Relay	RLY70000

Note: Output Modules are NOT supplied with the controller. When specifying the controller, be sure to purchase the appropriate output module for the Main Control Output and if necessary, the alarm output(s), the secondary output, and valve positioner outputs.

The Logic/SSR Drive Module is a switched DC source, intended to drive the DC input of an SSR power unit. It should never be connected to line voltage.

All modules are packaged separately and must be installed by the user.

# MODEL PSC - PROCESS SETPOINT CONTROLLER

- SETPOINT PROGRAM CONTROLLER FOR TIME VS. PROCESS (RAMP/SOAK) AND SPECIAL BATCH/RECIPE APPLICATIONS
- ADVANCED PROGRAM PROFILING IN A 1/8 DIN PACKAGE
- ON-LINE MONITORING AND CONTROL OF PROGRAM STATUS, TIME, AND SETPOINT VALUE (Profile Run, Pause, Stop, Advance, Modify Time, & Setpoint Value)

- AUTOMATIC PROGRAM DELAY FOR PROFILE CONFORMITY, PLUS PROGRAM LINKING, REPEATING AND AUTO POWER-ON FUNCTIONS FOR ENHANCED CAPABILITY
- DUAL EVENT OUTPUTS FOR TIMED ACTIVATION OF PROCESS EQUIPMENT SUCH AS STIRRERS, FANS, HEATERS, ETC. (Uses Alarm Output Channels)
- FOUR SETPOINT & PID PARAMETER SETS FOR QUICK RECALL OF SETPOINTS AND/OR GAIN VALUES DURING BATCH OR PROCESS CHANGEOVER
- PROGRAMMABLE USER INPUT FOR CONTROLLER AND SETPOINT PROGRAM CONTROL
- 100 MSEC SAMPLING PERIOD WITH 0.15% ACCURACY
- ON DEMAND AUTO-TUNING OF PID CONTROL SETTINGS
- DUAL LED DISPLAYS FOR SIMULTANEOUS INDICATION OF PROCESS AND SETPOINT OR PROCESS AND PROFILE STATUS
- ACCEPTS EITHER 0 to 10 VDC OR 4 to 20 mA DC INPUT SIGNAL
- FIELD REPLACEABLE AND INTERCHANGEABLE OUTPUT MODULES (Relay, Logic/SSR drive, and Triac)
- OPTIONAL DUAL ALARM OUTPUTS (Uses Output Modules)
- OPTIONAL SECONDARY OUTPUT (Uses Output Module)
- OPTIONAL LINEAR 4 to 20 mA OR 0 to 10 VDC OUTPUT FOR CONTROL OR PROCESS RE-TRANSMISSION
- OPTIONAL RS485 SERIAL COMMUNICATIONS INTERFACE
- OPTIONAL NEMA 4X/IP65 SEALED FRONT BEZEL

## DESCRIPTION

The PSC is a setpoint controller suitable for time vs. process control applications. The PSC Controller accepts either a 0 to 10 VDC or a 4 to 20 mA DC input signal, precisely scales the process signal, according to programmable scaling points, and provides an accurate output control signal (time proportional or linear) to maintain a process at the desired control point. A comprehensive set of easy to use steps allows the controller to satisfy various applications. The user input can be programmed to perform a variety of controller functions.

Dual 4-digit displays allow viewing of the measured process value and setpoint or the process and profile status simultaneously. Front panel indicators inform the operator of controller status and output states. Replaceable output modules (Relay, logic/SSR drive or Triac) can be fitted to the main control output, alarm output(s) or timed event output(s), and secondary output.

The PSC has been designed to simplify the set-up and operation of a controlled setpoint profile program. The setpoint program is easily entered and controlled through the front panel. Full display capabilities keep the operator informed of the process value, profile status, output states, and setpoint value.

The controller can operate in the standard PID control mode for both Output 1 and Output 2 with on-demand auto-tune which establishes the PID gain set. The PID gain set can be fine tuned by the operator at any time or may be locked from further modification. The unit can be transferred to the manual control mode providing the operator with direct control of the output.

The PSC features four programs or profile recipes, each with up to eight ramp/soak segments, which can be easily stored and executed at any time. Longer profiles can be achieved by linking one or more profiles together, creating a single profile of up to 32 ramp/soak segments. Process profile conformity is assured during either soak (hold) phases or both ramp and hold phases by an adjustable error band parameter. The program repeat function cycles the profile either continuously or a set number of times. Power-on options automatically re-start, stop, or resume a running profile. The profile can be controlled via the front panel buttons, the user input, or the optional serial communications port.

## DIMENSIONS In inches (mm)

## DESCRIPTION (Cont'd)

Four control points, each having a setpoint and PID parameter set, are available for instant front panel implementation during batch changeover, or other process conditions. A control point may have its PID gain set values disabled when implementing the control point.

The optional RS485 multidrop serial communications interface provides the capability of two-way communication between a PSC unit and other compatible equipment such as a printer, a programmable controller, or a host computer. In multipoint applications the address number of each unit on the line can be programmed from 0 to 99. Up to thirty-two units can be installed on a single pair of wires. The Setpoint value, % Output Power, Setpoint Ramp Rate, etc. can be interrogated or changed by sending the proper command code via serial communications. Alarm output(s) may also be reset via the serial communications interface option.

Optional alarm output(s) may be configured to operate as a timed event output or as a standard alarm output. As an alarm output it may be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, or Band IN or OUT) with adjustable hysteresis. Also, a standby feature suppresses the output(s) on power-up until the process stabilizes outside the alarm region. Timed event output(s) allow the controller to activate other equipment while a programmed profile is running. Each profile can define up to 16 event states (phases), for each output(s).

An optional secondary output is available for processes that require cooling which provides increased control accuracy and response.

The optional linear 4 to 20 mA or 0 to 10 VDC output signal is available to interface with final actuators, chart recorders, indicators, or other controllers. The output signal can be digitally scaled and selected to transmit one of the following:

- % Output Power
- Measurement Value
- Measurement Value Deviation
- Setpoint Value

An optional NEMA 4X/IP65 rated bezel is available for washdown and/or dirty environments, when properly installed. Modern surface-mount technology, extensive testing, plus high immunity to noise interference, makes the controller extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the PSC to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit. An independent and redundant temperature limit indicator with alarm outputs is strongly recommended. Red Lion Controls offers various units (such as an IMP, IMD1 or IMD2) that may be used for this purpose. The indicators should have input sensors and AC power feeds independent from other equipment.

## SPECIFICATIONS

### 1. DISPLAY: Dual 4-digit

**Upper Process Display:** 0.4" (10.2 mm) Red LED

**Lower Auxiliary Display:** 0.3" (7.6 mm) Green LED

#### Display Messages:

- "OLOL" - Appears when measurement exceeds +105% of input range.
- "ULUL" - Appears when measurement exceeds -5% of input range.
- "SENS" - Appears when measurement exceeds "OLOL" & "ULUL" range.
- "..." - Appears when display value exceeds + display range.
- "-..." - Appears when display value exceeds - display range.

### 2. POWER: 115/230 VAC (+10%, -15%) no observable line variation effect, 48-62 Hz, 10 VA, switch selectable.

### 3. ANNUNCIATORS:

#### 6 LED Backlight Status Indicators:

- %PW - Lower auxiliary display shows power output in (%).
- PGM - Lower auxiliary display shows profile status or profile time remaining.
- MAN - Controller is in manual mode.
- OP1 - Main control output is active.
- AL1 - Alarm #1 is active.
- AL2 - Alarm #2 is active (for Dual Alarm Option).
- OP2 - Secondary output is active (for Secondary Option).

### 4. CONTROLS: Four front panel push buttons for modifying and setup of controller functions and one external input.

### 5. SETPOINT PROFILE:

**Profiles:** 4

**Segments Per Profile:** 8 ramp/hold segments (linkable to 32 segments).

**Ramp Rate:** 0.1 to 999.9 units/minute or no ramp.

**Hold Time:** Off or from 0.1 to 999.9 minutes, can be extended to 500 hours by linking.

**Error Band Conformity:** Off or from 1 to 9999 units deviation, + value for hold phases, - value for both ramp and hold phases.

**Power-On Modes:** Stop, auto-start, or profile resume.

**Start Mode:** Ramps from process value.

**Program Auto Cycle:** 1 to 249, or continuous.

**Event Outputs:** 2, time activated with profile [uses Alarm output(s)].

**Control:** Front panel buttons, user input, or RS485 communications.

### 6. CONTROL POINTS:

**Setpoints:** 4

**PID gain sets:** 4

**Control:** Front panel buttons or user input.

### 7. SIGNAL INPUT:

**Sample Period:** 100 msec

**Response Time:** 300 msec (to within 99% of final value w/step input).

**Signal Overdrive Threshold:**

**10 V Range:** 13 V

**20 mA Range:** 26 mA

**Signal Overdrive Response:**

**Main Control Output:** Programmable preset output.

**Display:** "SENS"

**DC Linear:** Programmable preset output.

**Normal Mode Rejection:** 40 db @ 50/60 Hz (improves with increased digital filtering).

**Common Mode Rejection:** 100 db, DC to 50/60 Hz.

### 8. RANGE AND ACCURACY:

Signal Range	Accuracy (% of Unscaled Reading)	Max. Input	Input Impedance	Resolution
0 to 10 VDC	$\pm(0.15\% + 3 \text{ mV})$	300 VDC	1M $\Omega$	10 mV
0 to 20 mADC	$\pm(0.15\% + 6 \mu\text{A})$	200 mADC	10 $\Omega$	10 $\mu\text{A}$

### 9. OUTPUT MODULES (For All Output Channels):

(Optional - Must be ordered separately)

#### Relay:

**Type:** Form-C (Form-A with RS485 option)

**Rating:** 5 Amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC (inductive load).

**Life Expectancy:** 100,000 cycles at max. rating. (Decreasing load and/or increasing cycle time, increases life expectancy).

**Logic/SSR Drive:** Can drive multiple SSR Power Units.

**Type:** Non-isolated switched DC, 12 VDC typical

**Drive:** 45 mA max.

#### Triac:

**Type:** Isolated, Zero Crossing Detection.

**Ratings:** Voltage: 120/240 VAC

**Max Load Current:** 1 AMP @ 35°C  
0.75 AMP @ 50°C

**Min Load Current:** 10 mA

**Off State Leakage Current:** 7 mA max. @ 60 Hz

**Operating Frequency:** 20 to 500 Hz

**Protection:** Internal Transient Snubber, Fused.

### 10. MAIN CONTROL OUTPUT:

**Control:** PID or ON/OFF.

**Output:** Time proportioning or linear DC.

**Hardware:** Plug-in, replaceable output modules.

**Cycle time:** Programmable.

**Auto-tune:** When performed, sets proportional band, integral time, and derivative time values.

**Probe Break Action:** Programmable.

### 11. SECONDARY OUTPUT (Optional):

**Control:** PID or ON/OFF.

**Output:** Time proportioning or linear DC

**Hardware:** Plug-in, replaceable output modules.

**Cycle time:** Programmable.

**Proportional Gain Adjust:** Programmable.

**DeadBand Overlap:** Programmable.

### 12. LINEAR DC DRIVE (Optional): With digital scale and offset, programmable deadband and update time.

**4 to 20 mA:**

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\% \text{ of reading} + 25 \mu\text{A})$ .

**Compliance:** 10 V (500  $\Omega$  max. loop impedance).

**0 to 10 VDC:**

**Resolution:** 1 part in 3500 typ.

**Accuracy:**  $\pm(0.1\% \text{ of reading} + 35 \text{ mV})$ .

**Min. Load Resistance:** 10 K  $\Omega$  (1 mA max.)

**Source:** % output power, setpoint, deviation, or process value.  
(Available for OP1 or OP2, but not both.)

## SPECIFICATIONS (Cont'd)

### 13. ALARMS (Optional):

**Hardware:** Plug-in, replaceable output module.

**Modes:** Absolute high acting  
Absolute low acting  
Deviation high acting  
Deviation low acting  
Inside band acting  
Outside band acting  
Timed event output(s)

**Reset Action:** Programmable; automatic or latched.

**Delay:** Programmable; enable or disable.

**Hysteresis:** Programmable.

**Annunciator:** LED backlight for "AL1", "AL2", (*Alarm #2 not available with secondary output*).

### 14. SERIAL COMMUNICATIONS (Optional):

**Type:** RS485 Multi-point, Balanced Interface.

**Communication Format:**

**Baud Rate:** Programmable from 300 to 9600.

**Parity:** Programmable for odd, even, or no parity.

**Frame:** 1 start bit, 7 data bits, 1 or no parity bit, 1 stop bit.

**Unit Address:** Programmable from 0-99, max. of 32 units per line.

**Transmit Delay:** 100 msec min., 200 msec max.

**RS485 Common:** Isolated from signal input common.

**Auto Print Time:** Off to 9999 seconds between print-outs.

### 15. USER INPUT: $V_{IN\ MAX} = 5.25\ VDC$ , $V_{IL} = 0.85\ V_{MAX}$ ; $V_{IH} = 2.0\ V_{MIN}$

**Response time:** 100 msec max.

**Functions:**

Program Lock	Print Request
Integral Action Lock	Load Control Point
Auto/Manual Transfer	Run/Hold Profile 1
Setpoint Ramp Select	Run/Stop Profile 1
Reset Alarms	

### 16. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0° to 50°C

**Storage Temperature Range:** -40° to 80°C

**Span Drift:** 90 ppm/°C

**Zero Drift:** 0 to 10 VDC Range - 0.2 mV/°C  
4 to 20 mA DC Range - 0.5 µA/°C

**Relative Humidity:** Less than 85% RH (non-condensing)

**Altitude:** Up to 2000 meters

### 17. CERTIFICATIONS AND COMPLIANCES:

**SAFETY**

UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

UL Recognized Component, File # E156876, UL873, CSA C22.2 No. 24

Recognized to U.S. and Canadian requirements under the Component

Recognition Program of Underwriters Laboratories, Inc.

Type 2 or 4X Enclosure rating (Face only), UL50

IECEE CB Scheme Test Certificate #UL1239-156876/USA,

CB Scheme Test Report #96ME50279-070794

Issued by Underwriters Laboratories, Inc.

IEC 1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY:**

**Immunity to EN 50082-2**

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>1</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms <sup>2</sup> 150 KHz - 80 MHz

**Emissions to EN 50081-2**

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

**Notes:**

1. Self-recoverable loss of performance during EMI disturbance at 10 V/m:  
*Measurement input and/or analog output signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*Install power line filter; RLC #LFIL0000 or equivalent.*

2. Self-recoverable loss of performance during EMI disturbance at 10 V<sub>rms</sub>:  
*Measurement input and/or analog output signal may deviate during EMI disturbance.*

*For operation without loss of performance:*

*Install power line filter; RLC #LFIL0000 or equivalent.*

*Refer to the EMC Installation Guidelines section of the manual for additional information.*

18. **CONNECTION:** Jaw-type terminal block.

19. **CONSTRUCTION:**

**Front Panel:** Flame and scratch resistant tinted plastic.

**Case:** High impact black plastic. (Mounting collar included).

**NEMA 4X/IP65 model only:** Sealed bezel utilizing 2 captive mounting screws (panel gasket included). This unit is rated for NEMA 4X/IP65 indoor use. Installation Category II, Pollution Degree 2.

20. **WEIGHT:** 1.3 lbs. (0.6 kgs)

## BASIC OPERATION

The PSC controls the process profile of a system by measuring the input signal, comparing it to the setpoint value of the profile in progress, and calculates the new output power value by use of a modified PID control algorithm. The unit controls the system with the new output power value so the process value conforms to the profile. The PID control algorithm incorporates features which provide high control accuracy and low disturbance overshoot.

## FRONT PANEL FEATURES

In the normal display mode, the unit will display the scaled process value in the upper display. One of five other parameters may be selected for viewing in the lower display:

- Target setpoint
- % Output Power
- Profile Status
- Profile phase time remaining
- Blank the lower display.

The profile status display indicates the active program number with the current ramp or hold phase of the program. The profile can be started, stopped, advanced, etc., from the front panel when the profile status display is viewed, if not locked from access.

The phase time remaining display, shows the time remaining in a ramp or hold phase and, if not locked from access, may be changed on-line to effect temporary changes to the profile. Additionally, the target setpoint and % output power (manual mode only) may also be changed on-line or locked from operator access.

From the normal operating mode, parameters are selected by use of the PAR button and modified by use of the UP and DOWN buttons. Parameters are then entered by the PAR button, which advances the user to the next parameter. Pressing the DSP button immediately returns the controller to the normal operating mode from any parameter module. The controller configuration and parameter settings are stored in an internal E<sup>2</sup>PROM device.

## HARDWARE FEATURES

The fast 100 msec input sampling rate provides quick controller response to a process disturbance for excellent process control. Measurement accuracy of 0.15% provides closer process control conforming to the desired control setpoint value.

The unit will accept either a 0 to 10 VDC or a 4 to 20 mADC input signal. The A.C. input power is switch selectable, allowing the unit to operate from either 115 VAC or 230 VAC. Since the controller is serviceable from the front of the panel, the output modules may be easily changed or replaced without disturbing the wiring behind the panel and NO re-programming is required. The standard model simply requires pressing a latch to remove the unit. The NEMA 4X/IP65 rated model utilizes two panel securing screws and a neoprene gasket to guarantee a water tight seal, when properly installed.

Low-drift, highly stable circuit design ensures years of reliable and accurate process control. The recommended two year re-calibration interval is easily accomplished via the programming menu.

**NEMA 4X/IP65 BEZEL**

## CONFIGURATION MODE

The configuration modules serve to provide the basic set-ups required by the controller. It is divided into sections which group together related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each section, the program returns to the configuration selection stage, which allows the user to return to the normal display mode, or advance to a later configuration stage.

### Configuration 1, Inputs

- "TYPE" - Select current or voltage
- "dCPT" - Select scaled display decimal point position
- "rnd" - Enter rounding increment and trailing zeros for scaled display
- "FLtr" - Select degree of input filtering
- "dSP1" - Enter display reading for scaling point #1
- "INP1" - Key-in or apply signal level for scaling point #1
- "dSP2" - Enter display reading for scaling point #2
- "INP2" - Key-in or apply signal level for scaling point #2
- "SPLO" - Enter setpoint lower limit
- "SPHI" - Enter setpoint higher limit
- "SPrP" - Enter setpoint ramp rate
- "InPt" - Select user input function

### Configuration 2, Outputs

- "CYCt" - Enter time proportioning cycle time
- "OPAC" - Select control action
- "OPLO" - Enter output power low limit
- "OPHI" - Enter output power high limit
- "OPFL" - Enter signal overdrive power preset
- "CHYS" - Enter ON/OFF control hysteresis
- "tcod" - Select auto-tuning damping
- "ANAS" - Select linear DC output assignment \*
- "ANLO" - Enter linear DC low scaling value \*
- "ANHI" - Enter linear DC high scaling value \*

### Configuration 3, Parameter lock-outs

- "SP" - Select degree of setpoint access
- "OP" - Select degree of power access
- "P-CS" - Select degree of profile status access
- "P-tr" - Select degree of phase time remaining access
- "bdSP" - Enable blank display
- "CodE" - Enter parameter access code
- "PId" - Select degree of PID access
- "AL" - Select degree of alarm access \*
- "ALrS" - Enable manual reset of alarms \*
- "CPAC" - Enable control point access
- "PrAC" - Enable ramp/hold program access
- "trnF" - Enable automatic/manual transfer
- "tUNE" - Enable auto-tune invocation

\* These parameters may not appear due to option configuration or other programming.

### Configuration 4, Alarms \*

- "Act 1" - Select operation mode of alarm #1
- "rSt1" - Select reset mode of alarm #1
- "Stb1" - Enable activation delay of alarm #1
- "AL-1" - Enter value for alarm #1
- "Act2" - Select operation mode of alarm #2
- "rSt2" - Select reset mode of alarm #2
- "Stb2" - Enable activation delay of alarm #2
- "AL-2" - Enter value for alarm #2
- "AHYS" - Enter hysteresis value for both alarms

### Configuration 5, Secondary Output \*

- "CYC2" - Enter time proportioning cycle time
- "GAN2" - Enter relative gain
- "db-2" - Enter deadband or overlap

### Configuration 6, Serial Communications \*

- "bAUd" - Select baud rate
- "PARb" - Select parity bit
- "Addr" - Enter unit address number
- "Abrv" - Select abbreviated or full mnemonic transmissions
- "PrAt" - Enter automatic print rate
- "PoPt" - Select parameters to be included in print-out

### Configuration 7, Control Points

- "CSEt" - Select control point number for set-up 1, 2, 3, & 4
- "SP-x" - Enter setpoint value for selected control point
- "PID" - Select if PID gain set to be loaded with setpoint
- "PB-x" - Enter proportional band for selected control point \*
- "It-x" - Enter integral time for selected control point \*
- "dt-x" - Enter derivative time for selected control point \*

### Configuration 8, Profiles

- "PSEt" - Select profile or event output for set-up 1, 2, 3, or 4
- "PnCC" - Enter program-repeat cycle count for selected profile
- "PnLN" - Select link option for selected profile
- "PnSt" - Enter power-down resume status for selected profile
- "PnEb" - Enter error band for process conformity for selected profile
- "Pnr1" - Enter ramp rate 1 for selected profile \*
- "PnL1" - Enter setpoint level 1 for selected profile \*
- "PnH1" - Enter hold time 1 for selected profile \*
- .
- .
- "Pnr8" - Enter ramp rate 8 for selected profile \*
- "PnL8" - Enter setpoint level 8 for selected profile \*
- "PnH8" - Enter hold time 8 for selected profile \*
- "Pn 1" - Select event outputs at phase 1 for selected profile \*
- .
- .
- "Pn16" - Select event outputs at phase 16 for selected profile \*

### Configuration 9, Factory Service Operations

(Detailed in the operator's manual)

## SETPOINT FEATURES

The controller's setpoint can be protected from out of range values, by programming the setpoint range limit values. Additionally, safeguards from inadvertent data entry can also be programmed.

The setpoint ramp feature ramps the setpoint value at start-up or any time a setpoint change is made, at a user programmable rate, independent of a programmed profile. This feature reduces shock to the process and also helps to minimize overshoot.

The active setpoint, which can be a running profile, may also be transmitted by the linear DC output for slave control loops.

Four control points are available which can be implemented at any time. Each control point is programmed independently, with each having a setpoint and a PID gain set value. With gain value changes, the output power control signal will not "bump" resulting in a smooth control transition.

## INPUT FEATURES

A programmable input filter can be used to stabilize readings from a process with varying or oscillating characteristics, helping to provide better process control.

Scaling points allow the controller to display in any engineering unit; flow, level, pressure temperature, etc. Scaling points are used in conjunction with the programmable rounding increment to stabilize a jittery or otherwise hard to read process signal for better indication.

A programmable User Input is available to control a variety of controller functions, such as profile control, auto/manual transfer, serial communication print requests, etc.

## OUTPUT FEATURES

Programmable output power limits provide protection for processes where too much power can cause damage. Automatic signal overdrive detection can be used to define the state of the output channels, when this situation occurs. With adjustable time proportioning-cycle time and programmable D.C. Linear output, the controller can satisfy a wide variety of output requirements.

During execution of a profile, two independent timed event outputs are available to control or signal other equipment. The event outputs use the alarm channels.

The RS485 Communication option allows the user to access various controller parameters such as the setpoint, % output power, % proportional band, etc. The controller may be setup to transmit various parameters at a programmable automatic print rate.

## AUTO-TUNE

The model PSC has an auto-tune feature which, on demand, automatically determines the PID control parameters for a particular process. After completion of auto-tune, the PID parameters are automatically optimized for that process and loaded into nonvolatile memory. The operator may view and modify the parameters as desired.

Auto-tune may be invoked at start-up, while ramping, or at setpoint, depending on the process requirements. A programmable auto-tune damping factor produces various levels of process control and response characteristics.

## PROFILE PROGRAMMING

Profiles are programmed independently of each other and are separate from the configuration of other controller parameters. Each profile has parameters for error band (profile conformity), linking, auto-start and program repeat cycles. Profiles may be altered during execution, so changes take effect as the profile advances.

## CONTROLLER PROGRAMMING

The model PSC has been designed to reduce the operator interaction with the controller while still maintaining a high degree of control accuracy and user flexibility. Front panel program disable allows all of the controller's set-ups to be locked-out from further operator intervention after the initial parameter set-up.

The programming of the controller is divided into four sections:

- Hidden Mode
- Protected Mode
- Unprotected Mode
- Configuration Mode

These four programming modes allow the controller to adapt to any required user-interface level.

## UNPROTECTED PARAMETER MODE

The unprotected mode is accessible when program disable is inactive or when the proper access code number from the protected mode is entered. Only from this mode can the configuration modes be accessed.

- "SP" - Enter setpoint \*
- "OPOF" - Enter %output power offset \*
- "OP" - Enter output power \*
- "ProP" - Enter proportional band
- "Intt" - Enter integral time \*
- "dErT" - Enter derivative time \*
- "AL-1" - Enter value for alarm #1 \*
- "AL-2" - Enter value for alarm #2 \*
- "CNFP" - Select basic configuration module
- "End" - Return to normal display mode

## PROTECTED PARAMETER MODE \*

The protected mode is accessible when program disable is active, also this mode prevents access to the configuration modes without the proper access code number. Only the parameters that are selected in the configuration 3 parameter lock-outs section can be accessed.

- "ProP" - Enter proportional band
- "Intt" - Enter integral time
- "dErT" - Enter derivative time
- "AL-1" - Enter value for alarm #1
- "AL-2" - Enter value for alarm #2
- "CodE" - Enter access value to unprotected mode

\* These parameters may not appear due to option configuration or other programming.

## HIDDEN FUNCTIONS MODE \*

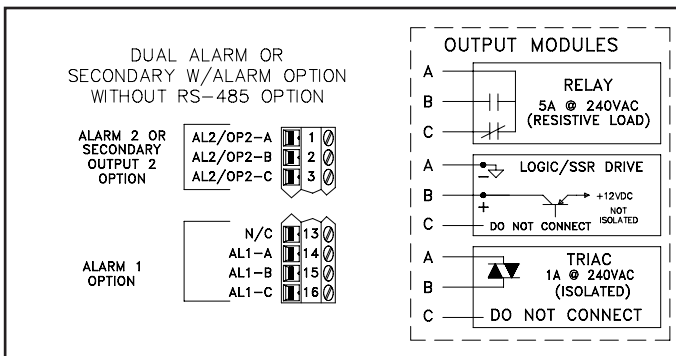

The hidden mode is accessible from the normal operating mode by holding the PAR button for 3 seconds. The five functions in this mode may be locked-out individually in configuration 3 parameter lock-outs section.

- "CP" - Invoke control point x
- "Prun" - Control ramp/hold profile state
- "trnF" - Transfer between automatic (PID) control and Manual control
- "tUNE" - Invoke/Cancel PID auto-tune
- "ALrS" - Reset latched alarms

\* These parameters may not appear due to option configuration or other programming.

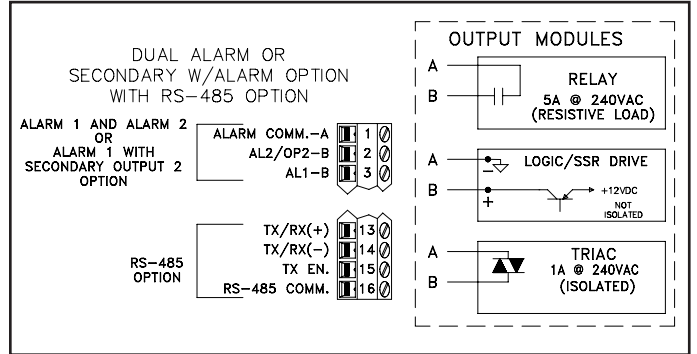

## OUTPUT VARIATIONS WITHOUT RS485 OPTION

The Dual Alarm or the Secondary with Alarm output, without the RS485 option, has independent outputs. Therefore, the secondary output and/or alarm output(s) can be installed with any combination of output modules.

## OUTPUT VARIATIONS WITH RS485 OPTION

The Dual Alarm or the Secondary with Alarm output, with RS485 option, does not have independent outputs. In this case, the secondary output and/or alarm output(s) must have the same type of output modules installed since they share the common terminal.

## OUTPUT MODULES

Units equipped with RS485 option must have the Dual Alarm or Secondary w/alarm options fitted with the same type of output modules. The controller's main output (OP1) can be fitted with any output module. Output modules are shipped separately and must be installed by the user.

### TYPICAL CONNECTIONS

### Relay:

**Type:** Form -C (Form-A with RS485 option only)

**Rating:** 5 Amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @ 120 VAC (inductive).

**Life Expectancy:** 100,000 cycles at maximum load rating. (Decreasing load and/or increasing cycle time, increases life expectancy).

**Logic/SSR Drive:** can drive multiple SSR Power Units.

**Type:** Non-isolated switched DC, 12 VDC typical.

**Drive:** 45 mA max.

### Triac:

**Type:** Isolated, Zero Crossing Detection.

**Rating:**

**Voltage:** 120/240 VAC.

**Max. Load Current:** 1 Amp @ 35°C  
0.75 Amp @ 50°C

**Min. Load Current:** 10 mA

**Off State Leakage Current:** 7 mA max @ 60 Hz.

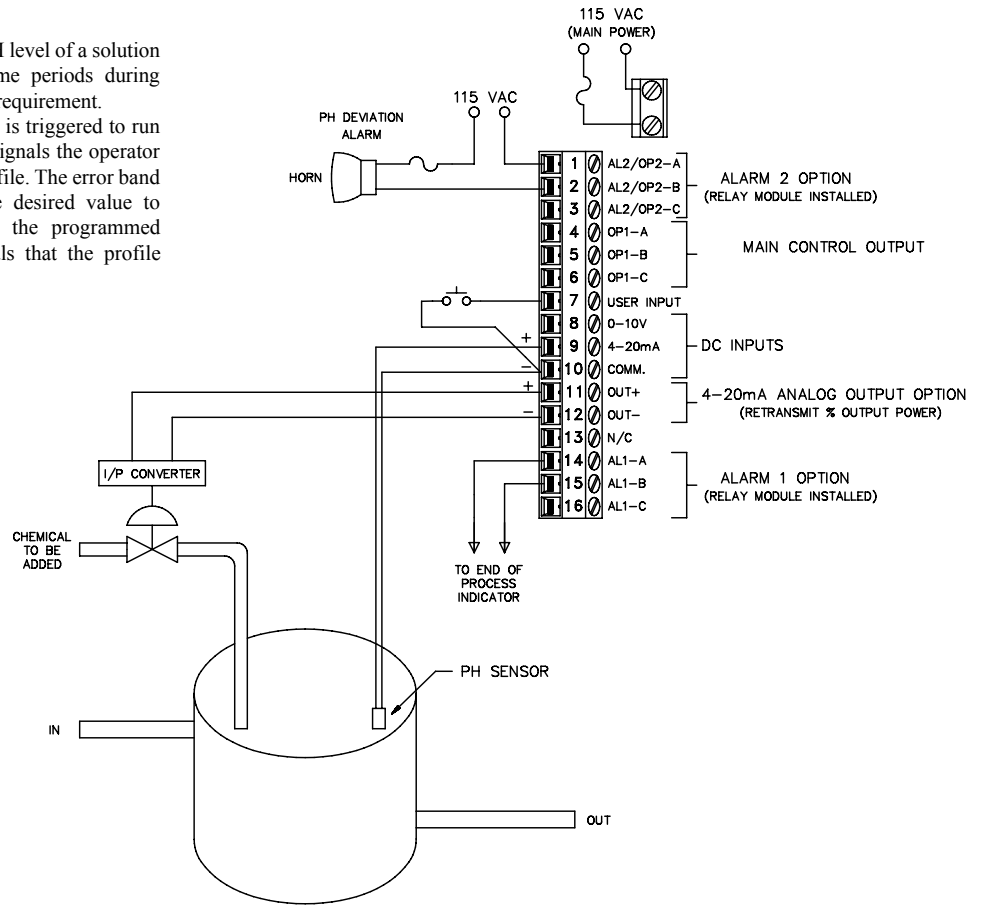

**Operating Frequency:** 20 to 500 Hz.

**Protection:** Internal Transient Snubber, Fused.

## APPLICATION

A chemical treatment process requires the PH level of a solution be ramped at staged levels over specific time periods during start-up. The PSC unit is installed to meet this requirement.

After the tank is filled, the PSC's user input is triggered to run profile 1 to start the process. Alarm output 2 signals the operator if the PH level deviates outside the running profile. The error band (profile conformance) is programmed to the desired value to prevent the PH level from deviating from the programmed setpoint profile. Timed event output 1 signals that the profile process is complete.

F

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	NEMA 4X/IP65 BEZEL	4 to 20 mA ANALOG OUTPUT	0 to 10 VDC ANALOG OUTPUT	ALARM OUTPUTS	SECONDARY OUTPUT	RS485 COM	PART NUMBER
PSC	Process Setpoint Controller	YES	YES	NO	2	NO	NO	PSC11001
		YES	YES	NO	2	NO	YES	PSC11004
		YES	YES	NO	1	YES	YES	PSC11005
		YES	NO	YES	2	NO	YES	PSC12004
		YES	NO	YES	1	YES	YES	PSC12005
	Relay Module							OMD00000
	Triac Module							OMD00001
	Logic/SSR Drive Module							OMD00003
PMK5	Panel Mount Adapter Kit (1/4 DIN to 1/8 DIN)							PMK50000
RLY	SSR Power Unit							RLY50000
	Single Phase 25 A DIN Rail Mount Solid State Relay							RLY60000
	Single Phase 40 A DIN Rail Mount Solid State Relay							RLY6A000
	Three Phase DIN Rail Mount Solid State Relay							RLY70000
These models have dual alarm outputs, or single alarm with secondary outputs, with shared common terminals (Form A Type). As a result, these outputs should be fitted with the same type of output module. The main output (OP1) may be fitted with any type of output module.								

*Note: Output Modules are NOT supplied with the controller. When specifying the controller, be sure to purchase the appropriate output module for the Main Control Output and if necessary, the alarm output(s) and secondary output. The controller can be fitted with any combination of output modules that do not have the RS485 option.*

*The Logic/SSR Drive Module is a switched DC source, intended to drive the DC input of an SSR power unit. It should never be connected to a line voltage.*

*All modules are shipped separately and must be installed by the user.*

# MODEL TLA - TEMPERATURE LIMIT ALARM

- FM APPROVED, UL RECOGNIZED
- 2-LINE BY 4-DIGIT DISPLAY
- EXCEED, OUTPUT, AND ALARM ANNUNCIATORS
- FOUR BUTTON SILICONE RUBBER KEYPAD
- THERMOCOUPLE OR RTD SENSOR INPUT
- REMOTE RESET INPUT
- MAIN LIMIT OUTPUT: 5A RELAY. SELECTABLE FOR HIGH OR LOW TRIP ACTIVATION
- OPTIONAL ALARMS: 5A RELAY(S)
- OPTIONAL NEMA 4X/IP65 SEALED FRONT BEZEL
- PARAMETER SECURITY VIA PROGRAMMABLE LOCKOUTS

UL Recognized Component,  
File # E179259

## GENERAL DESCRIPTION

The TLA is a Factory Mutual approved temperature limit alarm, intended to provide an independent shutdown for thermal processes. The TLA accepts signals from a variety of temperature sensors (thermocouple or RTD elements), and its comprehensive programming allows it to meet a wide variety of application requirements.

Dual 4-digit displays allow viewing of the process temperature and limit setpoint simultaneously. Front panel indicators inform the operator of the process and output status. The main limit output and alarm outputs are field replaceable.

The limit output is selectable for high or low trip activation. If the process temperature goes above the limit setpoint for a high trip, or below the limit setpoint for a low trip, the limit relay will de-energize to initiate a process shutdown. The limit output cannot be reset until the process temperature returns to the proper operating range; manual reset is required (local or remote). Sensor failure will initiate a process shutdown.

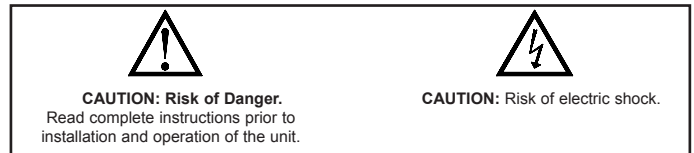

Relay alarm(s) can be configured to activate according to a variety of actions (Absolute HI or LO, Deviation HI or LO, and Band IN or OUT) with adjustable hysteresis. A standby feature suppresses the alarm during power-up until the process stabilizes outside the alarm region.

The unit is constructed of a lightweight, high impact plastic case with a tinted front panel. The front panel meets NEMA 4X/IP65 specifications when properly installed. Multiple units can be stacked horizontally or vertically. Modern surface-mount technology, extensive testing, plus high immunity to noise interference makes the TLA extremely reliable in industrial environments.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the TLA to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the unit.

## DIMENSIONS In inches (mm)

## GENERAL SPECIFICATIONS

- DISPLAY:** 2 line by 4-digit LED  
**Upper (Main) Display:** 0.4" (10.2 mm) high red LED  
**Lower (Secondary) Display:** 0.3" (7.6 mm) high green LED  
**Display Messages:**  
 "LOL" - Appears when measurement exceeds + sensor range.  
 "ULUL" - Appears when measurement exceeds - sensor range.  
 "OPEN" - Appears when open sensor is detected.  
 "SHrt" - Appears when shorted sensor is detected (RTD only)  
 "... " - Appears when display values exceed + display range.  
 "... " - Appears when display values exceed - display range.  
**LED Status Annunciators:**  
 EX - Temperature exceeds limit setpoint  
 OUT - Limit output is de-energized  
 A1 - Alarm #1 is active  
 A2 - Alarm #2 is active
- POWER:**  
**Line Voltage Models:** 85 to 250 VAC, 50/60 Hz, 8 VA.  
**Low Voltage Models:**  
**DC Power:** 18 to 36 VDC, 7 W.  
**AC Power:** 24 VAC +/-10%, 50/60 Hz, 9 VA
- CONTROLS:** Four rubber push buttons: R, P, Up, Down
- MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programmable parameters and values.
- ENVIRONMENTAL CONDITIONS:**  
**Operating Range:** FM rated @ 0 to 65°C, UL rated @ 0 to 55°C  
**Storage Range:** -40 to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 65°C.  
**Altitude:** Up to 2000 meters
- ISOLATION BREAKDOWN RATINGS:**  
**AC line with respect to all inputs and outputs:** 2300 V for 1 minute (250 V working)  
**Relay contacts to all other inputs and outputs:** 2300 VAC  
**DC Power with respect to sensor input:** 50 V working (500 V for 1 minute)
- CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
 Factory Mutual Approved, Report #3014646, FM 3545, FM 3810  
 UL Recognized Component, File #E156876, UL 873, CSA C22.2 No. 24  
 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
 Type 4X Enclosure rating (Face only), UL 50  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
 IP65 Enclosure rating (Face only), IEC 529

## INPUT SPECIFICATIONS

- SENSOR INPUT:**  
**Sample Period:** 100 msec  
**Step Response Time:** Less than 300 msec typ., 400 msec max. (to within 99% of final value)  
**Normal Mode Rejection:** Greater than 40 dB @ 50/60 Hz  
**Common Mode Rejection:** Greater than 120 dB, DC to 60 Hz  
**Overvoltage Protection:** Input overload 120 VAC for 15 seconds max.
- Failed Sensor Response:**  
**Main Output:** Sensor failure will initiate a process shutdown  
**Display:** "OPEN"  
**Alarms:** Upscale
- INDICATION ACCURACY:** ±(0.3% of Span +1°C) at 23°C ambient after 20 minute warm-up. (Includes NIST conformity, cold junction effect, A/D conversion errors and linearization conformity).  
**Span Drift (maximum):** 130 PPM/°C
- RTD INPUT:** 2 or 3 wire, 100 Ω platinum, alpha = 0.00385 (DIN 43760), alpha = 0.0039162  
**Excitation:** 150 μA typical  
**Resolution:** 1 or 0.1 degree  
**Lead Resistance:** 15 Ω max. per input lead

RTD TYPE	RANGE
385	-200 to +600°C -328 to +1100°F
392	-200 to +600°C -328 to +1100°F
OHMS	2.0 to 320.0

## ELECTROMAGNETIC COMPATIBILITY

### Emissions and Immunity to EN 61326

#### Immunity:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

#### Emissions:

Emissions	EN 55011	Class A
-----------	----------	---------

#### Notes:

- 1. Criterion A: Normal operation within specified limits.*
- CONNECTION:** Wire clamping screw terminals  
**Wire Gage Capacity:** Two 14 AWG (2.55 mm), four 18 AWG (1.02 mm), or four 20 AWG (0.61 mm).  
**Terminal Torque:** 1.0Nm (8.9 in-lbs.), 1.4Nm (12.4 in-lbs.) max.
- CONSTRUCTION:** Black plastic alloy case and collar style panel latch. Panel latch can be installed for vertical or horizontal instrument stacking. One piece tinted plastic bezel. Bezel assembly with circuit boards can be removed from the case to change the output board without removing the case from the panel or disconnecting wiring. Unit meets NEMA 4X/IP65 requirements for indoor use, when properly installed. Flame resistant. Installation Category II, Pollution Degree 2.
- WEIGHT:** 0.38 lbs (0.17 kgs)

## 5. THERMOCOUPLE INPUT:

- Types:** T, E, J, K, R, S, B, N, Linear mV, software selectable  
**Input Impedance:** 20 MΩ all types  
**Lead resistance effect:** 0.25 μV/Ω  
**Cold junction compensation:** Less than ±1°C typ., (±1.5°C max), error over 0 to 65°C max. ambient temperature range. Defeated for Linear mV indication mode.  
**Resolution:** 1° for all types, or 0.1° for T, E, J, K, and N only.

TC TYPE	RANGE	WIRE COLOR	
		ANSI	BS 1843
T	-200 to +400°C -328 to +752°F	blue (+) red (-)	white (+) blue (-)
E	-200 to +750°C -328 to +1382°F	violet (+) red (-)	brown (+) blue (-)
J	-200 to +760°C -328 to 1400°F	white (+) red (-)	yellow (+) blue (-)
K	-200 to +1250°C -328 to +2282°F	yellow (+) red (-)	brown (+) blue (-)
R	0 to 1768°C +32 to +3214°F	black (+) red (-)	white (+) blue (-)
S	0 to 1768°C +32 to 3214°F	black (+) red (-)	white (+) blue (-)
B	+149 to +1820°C +300 to +3308°F	grey (+) red (-)	no standard
N	-200 to +1300°C -328 to +2372°F	orange (+) red (-)	orange (+) blue (-)
mV	-5.00 to +56.00	no standard	no standard

- REMOTE RESET INPUT:** Internally pulled up to +5 VDC (1MΩ).  
 V<sub>IL</sub>: 0.85 V max., V<sub>IH</sub>: 3.65 V min., V<sub>IN</sub> MAX: 5.25 VDC, I<sub>OFF</sub>: 1μA max.

## OUTPUT SPECIFICATIONS

### 1. LIMIT AND ALARM OUTPUT RELAYS:

**Contact Rating:** 5 A @ 250 VAC or 30 VDC (resistive load) 1/10 HP @ 120 VAC (inductive load)

**Life Expectancy:** 100,000 cycles at max. load rating. (Decreasing load increases life expectancy.)

2. **LIMIT OUTPUT:** TLA21000: Form-C relay; TLA11100: Form-A relay. Selectable for high or low trip activation. If the process temperature goes above the limit setpoint for a high trip, or below the limit setpoint for a low trip, the limit relay will de-energize to initiate a process shutdown. The limit output cannot be reset until the process temperature returns to the proper operating range; manual reset is required (local or remote).

**Annunciators:**

“EX” - Lit when the process temperature exceeds the limit setpoint.

“OUT” - Lit when the limit output is de-energized.

3. **ALARM OUTPUTS (Optional):** One or two Form-A relays.

**Modes:**

Absolute High Acting	Absolute Low Acting
Deviation High Acting	Deviation Low Acting
Inside Band Acting	Outside Band Acting

**Reset Action:** Programmable; automatic or latched. Latched alarms can be reset regardless of limit exceed condition.

**Standby Mode:** Programmable; enable or disable.

**Hysteresis:** Programmable.

**Annunciator:** “A1” and “A2” programmable for normal or reverse acting.

## ORDERING INFORMATION

### 85 to 250 VAC

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to Electro Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The unit should be mounted in a metal enclosure, which is properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

- In very electrically noisy environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure.

The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

Note: Reference manufacturer’s instructions when installing a line filter.

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
  - Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
- Snubbers:  
RLC #SNUB0000

F

# 1.0 INSTALLING THE TLA

The TLA meets NEMA 4X/IP65 requirements for indoor use to provide a watertight seal in steel panels with a minimum thickness of 0.09 inch, or aluminum panels with a minimum thickness of 0.12 inch. The units are intended to be mounted into an enclosed panel. It is designed so that the units can be stacked horizontally or vertically. The bezel assembly **MUST** be in place during installation of the unit.

## Instructions:

1. Prepare the panel cutout to the dimensions.
2. Remove the panel latch from the unit. Discard the cardboard sleeve.
3. Carefully remove the center section of the panel gasket and discard. Slide the panel gasket over the unit from the rear, seating it against the lip at the front of the case.
4. Insert the unit into the panel cutout. While holding the unit in place, push the panel latch over the rear of the unit, engaging the tabs of the panel latch in the farthest forward slot possible.

5. To achieve a proper seal, tighten the panel latch screws evenly until the unit is snug in the panel, torquing the screws to approximately 7 in-lbs (79 N-cm). Over tightening can result in distortion of the panel, and reduce the effectiveness of the seal.

*Note: The installation location of the TLA is important. Be sure to keep it away from heat sources (ovens, furnaces, etc.), and away from direct contact with caustic vapors, oils, steam, or any other process byproducts in which exposure may affect proper operation.*

## Multiple Unit Stacking

The TLA is designed for close spacing of multiple units. Units can be stacked either horizontally or vertically. For vertical stacking, install the panel latch with the screws to the sides of the unit. For horizontal stacking, the panel latch screws should be at the top and bottom of the unit. The minimum spacing from center line to center line of units is 1.96" (49.8 mm). This spacing is the same for vertical or horizontal stacking.

*Note: When stacking units, provide adequate panel ventilation to ensure that the maximum operating temperature range is not exceeded.*

**Caution:** Disconnect power to the unit and to the output control circuits to eliminate the potential shock hazard when removing the bezel assembly.

## Unit Removal Procedure

To remove a unit from the panel, first loosen the panel latch screws. Insert flat blade screwdrivers between the latch and the case on either side of the unit, so that the latches disengage from the grooves in the case. Push the unit through the panel from the rear.

## Removing Bezel Assembly

The bezel assembly must be removed from the case to replace the output board. To remove the bezel assembly, insert a flat blade screwdriver into the pry slot on either side of the unit. Twist the screwdriver handle until the unit is ejected enough to allow removal.

**Caution:** The bezel assembly contains electronic circuits that can be damaged by static electricity. Before removing the assembly, discharge static charge on your body by touching an earth ground point. It is also important that the bezel assembly be handled only by the bezel itself. Additionally, if it is necessary to handle a circuit board, be certain that hands are free from dirt, oil, etc., to avoid circuit contamination that may lead to malfunction. If it becomes necessary to ship the unit for repairs, place the unit in its case before shipping.

## Installing Bezel Assembly

To install the bezel assembly, insert the assembly into the case until the bezel is fully seated against the lip of the case. Properly installing the bezel assembly is necessary for watertight sealing.

## 2.0 WIRING THE TLA

After the unit has been mechanically mounted, it is ready to be wired. All wiring connections are made to the rear screw terminals. When wiring the unit, use the numbers on the label and those embossed on the back of the case, to identify the position number with the proper function.

All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker. Strip the wire, leaving approximately 1/4" (6 mm) bare wire exposed (stranded wires should be tinned with solder). Insert the wire under the clamping washer and tighten the screw until the wire is clamped tightly.

**Caution:** Unused terminals are NOT to be used as tie points. Damage to the TLA may result if these terminals are used.

### POWER WIRING

#### AC Power

Primary AC power is connected to terminals #11 and #12, labeled AC. To reduce the chance of noise spikes entering the AC line and affecting the TLA, an AC feed separate from that of the load should be used to power the TLA. Be certain that the AC power to the TLA is relatively "clean" and within the variation limit. Connecting power from heavily loaded circuits or circuits that also power loads that cycle on and off (contacts, relays, motors, etc.), should be avoided.

#### DC Power

DC Power (18 to 36 VDC) is connected to terminals #11 and #12 labeled DC+ and DC- respectively.

**CAUTION:** Observe proper polarity when connecting DC voltages. Damage to the unit may occur if polarity is reversed.

### SIGNAL WIRING

#### Thermocouple

When connecting the thermocouple, be certain that the connections are clean and tight. If the thermocouple probe cannot be connected directly to the TLA, thermocouple wire or thermocouple extension-grade wire must be used to extend the connection points (copper wire does not work). Always refer to the thermocouple manufacturer's recommendations for mounting, temperature range, shielding, etc. For multi-probe temperature averaging applications, two or more thermocouple probes may be connected to the TLA (always use the same type). Paralleling a single thermocouple to more than one TLA is not recommended. Generally, the red wire from the thermocouple is negative and connected to the TLA's common.

Thermocouple Connection

#### RTD

When connecting the RTD, be certain that the connections are clean and tight. RTD sensors have a higher degree of accuracy and stability than thermocouple sensors. Most RTD sensors available are the three wire type. The third wire is a sense lead for canceling the effects of lead resistance of the probe. Four wire RTD elements may be used by leaving one of the sense leads disconnected. Two wire RTD sensors may be used in either of two ways:

- Attach the RTD to terminals #8 and #10. Install a copper sense wire of the same wire gauge as the RTD leads. Attach one end of the wire at the probe and the other end to terminal #9. Complete lead wire compensation is obtained. This is the preferred method.
- Attach the RTD to terminals #8 and #10. Install a shorting wire between terminals #9 and #10. A temperature offset error of 2.5°C/ohm of lead resistance exists. The error may be compensated by programming a temperature offset.

**Note:** With extended cable runs, be sure the lead resistance is less than 15 ohms/lead.

RTD Connection

#### RELAY CONNECTIONS

To prolong contact life and suppress electrical noise interference due to the switching of inductive loads, it is good installation practice to install a snubber across the contactor. Follow the manufacturer's instructions for installation.

**Note:** Snubber leakage current can cause some electromechanical devices to be held ON.

\*Terminal numbers are model dependent. See Terminal Configurations for description.

#### REMOTE RESET WIRING

The use of shielded cable is recommended. Follow the EMC installation guidelines for shield connection.

Terminal #6 is the Remote Reset. Any form of mechanical switch may be connected to terminal #6 (REMOTE RESET) and terminal #8 (COMM.). Sinking open collector logic with less than 0.7 V saturation and off-state leakage current of less than 1 µA may also be used.

# 3.0 FRONT PANEL DESCRIPTION

The front panel bezel material is flame and scratch resistant, tinted plastic that meets NEMA 4X/IP65 requirements, when properly installed. Continuous exposure to direct sunlight may accelerate the aging process of the bezel. The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. There are two 4-digit LED displays, a red upper Main Display and a lower green Secondary Display.

There are up to four panel annunciators, with red backlighting, that illuminate to inform the operator of the TLA and output status. See the front panel diagram for a description of the annunciators. Four front panel buttons are used to access different modes and parameters. The following is a description of each button.

Do NOT use tools of any kind (screwdrivers, pens, pencils, etc) to operate the keypad of this unit.

## Button Functions

**R** - The Reset (R) button is used to reset the limit and alarm relays. The limit output cannot be reset until the process temperature returns to the proper operating range. Latched alarms can be reset regardless of limit exceed condition.

**P** - The Parameter (P) button is used to access programming, enter the change, and scroll through the available parameters in any mode.

**UP, DN** - The Up/Down buttons are used to modify parameters.

## TLA POWER-UP

Upon applying power, the TLA delays input indication and control action for five seconds to perform several self-diagnostic tests and to display basic TLA information. Initially, the TLA illuminates both displays and all annunciators to verify that all display elements are functioning. The TLA then displays the programmed input sensor type in the main (top) display and the revision number of the TLA's operating system in the secondary (bottom) display. The TLA

checks for correct internal operation and displays an error message (E-xx) if an internal fault is detected. (See the Troubleshooting section for further information.)

Upon completion of this sequence, the TLA begins displaying the input value and setpoint, and updates the outputs based upon this condition.

## TLA CONFIGURATION OVERVIEW

The TLA is programmed with certain parameter settings from the factory. Factory settings are listed in parentheses in the various Configuration of Parameters tables. In many cases, these settings must be changed to the particulars of the application before proper operation can be started.

The TLA is typically in the Normal Display Mode. In this mode, the process temperature is displayed in the main (top) display, and the limit setpoint is displayed in the secondary (bottom) display. When changes to the parameter configurations are needed, the P button is pressed, and the TLA will enter into the Parameter Mode.

## PARAMETER CONFIGURATION BASIC STARTUP

For basic start-up, it is important to verify or change Input Parameter Module (1-IN) parameters tYPE and SCAL, and Output Parameter Module (2-OP) parameter LiAC (Limit Trip Action). For alarm set-up, it is important to verify or change Alarms Parameter Module (4-AL) parameters Act1, AL-1, Act2, and AL-2.

If the above Input parameters or the input wiring connections are not correct, then the main (top) display may display an error message or incorrect value. Verify the input programming and wiring. (If incorrect display continues, refer to the Troubleshooting section.) All other parameter configurations are important but will not prevent the TLA from showing a correct display.

# 4.0 PARAMETER MODE

The Parameter Mode is accessed by pressing the P Button from the Normal Display Mode. While in the Parameter Mode, the temperature is displayed in the main (top) display, and the parameter is displayed in the secondary (bottom) display. The correct password must be entered before any parameters can be accessed. To modify values, use the UP or DOWN button while the parameter is displayed. Use the P button to accept the new value, and to scroll through the parameters. The TLA will automatically return to the normal display mode if no action is taken. The TLA responds to the new values immediately, but the change

is not committed to non-volatile memory until the TLA is returned to the Normal Display Mode. If power loss occurs before returning to the normal display mode, the new values must be re-entered.

To gain access to the Configuration Parameter Modules continue to CNFP and press the UP button. These modules allow access to the fundamental set-up parameters of the TLA. If the setpoint or alarm values are modified, the CNFP step will be skipped.

## Parameter Mode Reference Table

DISPLAY	PARAMETER	RANGE	DESCRIPTION
PASS	Password to access parameters	0 to 250	If an incorrect value is entered, the TLA will display "End" momentarily, and then return to the normal display mode. The default password is 10. The wildcard password is 222 (in case the password is forgotten).
SP	Limit setpoint	-999 to 9999	Range limited by SPLO & SPHI.
AL-1 *	Alarm #1	-999 to 9999	The Alarm parameters can be independently locked out from appearing. See Configuration Module 3, Parameter Lock-outs.
AL-2 *	Alarm #2	-999 to 9999	
CNFP	Configuration parameter modules	"Up" button: enter configuration modules.	These modules allow access to the fundamental set-up parameters of the TLA. The modules are grouped into related programming steps, such as inputs, outputs, alarms, etc. Upon completion of each module, the program returns to "CNFP".
End	End of Parameter Mode		When the parameter list has been scrolled through, the TLA will display "End" momentarily, and then return to the normal display mode.

\* Model Number Dependent.

## CONFIGURATION PARAMETER MODULES

The Configuration Parameter modules are accessed by pressing the UP button from CNFP in the Parameter Mode. The UP or DOWN buttons can be pressed to move to the desired Parameter Module. The P button is then pressed to enter into that module. The main (top) display will be the parameter, and the secondary (bottom) display will be the parameter value. The UP or DOWN buttons are used to modify the desired parameter value, and the P button enters the new value, and moves to the next parameter. The TLA responds to the new values after the P

button is pressed, however, the change is not committed to permanent memory until the TLA is returned to the Normal Display Mode. If power loss occurs before returning to the Normal Display Mode, the new values must be entered again. At the end of each module, the TLA will go back to CNFP. Other Parameter Modules can be accessed by pressing the UP or DOWN buttons, or pressing P will return to the Normal Display Mode.

Parameters that are model number, or program dependent will only be displayed when the appropriate options are installed or programmed.

## CONFIGURE MODULE 1 - INPUT PARAMETERS (1-IN)

DISPLAY	PARAMETER	RANGE (FACTORY SETTING)	DESCRIPTION/ COMMENTS
tYPE	Input Type	tc-t - Type T TC tc-E - Type E TC tc-J - Type J TC tc-K - Type K TC tc-r - Type R TC tc-S - Type S TC tc-b - Type B TC tc-N - Type N TC LIN - Linear mV r385 - 385 curve RTD r392 - 392 curve RTD rLIN - Linear ohms (tc-J)	Select from the list of various thermocouple and RTD sensors.
SCAL	Temperature Scale	°F or °C (°F)	Select either degrees Fahrenheit (F) or degrees Celsius (C). <b>If changed, be sure to check all parameters.</b>
dCPt	Temperature Resolution	0 or 0.0 (0)	Select either 1 or 0.1 degree resolution. <b>If changed, be sure to check all parameters.</b>
FLtr	Digital Input Filtering and Display Update	0 to 4 0 - least input filtering 3 - most input filtering 4 - most input filtering and slower 500 msec display update rate (outputs still update at 100 msec rate) (1)	Select the relative degree of input signal filtering and display update rate. The filter is an adaptive digital filter that discriminates between measurement noise and actual process changes. Therefore, the influence on step response time is minimal. If the signal is varying too greatly due to measurement noise, increase the filter value. Conversely, if the fastest TLA response is desired, decrease the filter value.
SHFt	Input Signal Shift (correction offset)	-999 to 9999 1 or 0.1 degree (0)	If the TLA temperature disagrees with a reference temperature instrument or if the temperature sensor has a known calibration, the TLA temperature can be compensated by a correction offset. The following equation expresses the relationship: Desired Display Temp = (TLA Temp) + SHFt. Normally set to 0.
SPLO	Limit Setpoint Lower Limit	-999 to 9999 1 or 0.1 degree (0)	The TLA has programmable high and low setpoint limit values to restrict the setting range of the limit setpoint. Set the limit values so that the temperature setpoint value cannot be set outside the safe operating area of the process. SPHI must be above SPLO.
SPHI	Limit Setpoint Upper Limit	-999 to 9999 1 or 0.1 degree (9999)	

## CONFIGURE MODULE 2 - OUTPUT PARAMETERS (2-OP)

DISPLAY	PARAMETER	RANGE (FACTORY SETTING)	DESCRIPTION/ COMMENTS
LiAc	Limit Output Trip Action	LO - Low Acting HI - High Acting (HI)	The limit output is selectable for high or low trip activation. If the process temperature goes above the limit setpoint for a high trip, or below the limit setpoint for a low trip, the limit relay will de-energize to initiate a process shutdown. See the Limit Output Action section for details.

F

## CONFIGURE MODULE 3 - LOCKOUT PARAMETERS (3-LC)

DISPLAY	PARAMETER	RANGE (FACTORY SETTING)	DESCRIPTION/ COMMENTS
PASS	Password	0 to 250 (10)	The password is required to access all parameters. The password can be set to any value between 0 and 250. A wildcard password, 222, can be used as an alternative to the programmed password.
AL *	Alarms #1 and #2 access level	LOC - lockout, prevents the alarms from appearing rEd - read only, alarms appear, but cannot be modified Ent - enter, alarms appear, and can be modified (Ent)	The alarm(s) parameter in the Parameter Mode can be configured to be completely locked out, read only, or fully accessible.
FPrS	Front panel reset	NO - disabled YES - active (YES)	The front panel R button can be enabled or disabled. The Remote Reset input is not affected by this setting.

\* Model Number Dependent.

## CONFIGURE MODULE 4 - ALARMS PARAMETERS (4-AL)

DISPLAY	PARAMETER	RANGE (FACTORY SETTING)	DESCRIPTION/ COMMENTS
Act1	Alarm 1 action mode	A-HI - absolute high A-LO - absolute low d-HI - deviation high d-LO - deviation low b-IN - band inside b-Ot - band outside (A-HI)	When deviation low-acting with positive alarm value (d-LO), deviation high-acting with negative value (d-HI), or band inside-acting (b-IN) is selected for the alarm action, the indicator is OFF when the alarm output is ON. See the Alarms section for complete details of each action. <b>If changed, check alarm values.</b>
rSt1	Alarm 1 reset mode	Auto - automatic LATC - manual reset (Auto)	Automatic reset alarms are reset by the TLA when the alarm condition clears. Latched alarms require operator action to reset the alarm condition. The front panel R button, if enabled, can be used to reset a latched alarm (see FPrS in Configure Module 3). A latched alarm condition may also be reset via the Remote Reset input. See the Reset Action diagram in the Alarms section.
Stb1	Alarm 1 standby function (delay)	NO or YES (NO)	The alarm(s) may be independently configured to exhibit a power-on, standby delay which suppresses the alarm output from turning ON until the temperature first stabilizes outside the alarm region. After this condition is satisfied, the alarm standby delay is canceled and the alarm triggers normally, until the next TLA power-on. This feature also works for deviation and band alarms when the setpoint is changed via keypad. This action suppresses "nuisance" alarms. See the Alarm Standby diagram in the Alarms section.
AL-1	Alarm 1 value	-999 to 9999 (0)	The alarm values are either absolute values, or relative to the limit setpoint value (deviation and band alarms). An absolute alarm value is the value that is entered for the alarm. A relative alarm value is the mathematical sum of the temperature limit setpoint value and the alarm value (positive or negative), thus a relative alarm tracks the limit setpoint value as it is changed. If the alarm action is set as Band Alarm, then only a positive alarm value can be entered.
Act2 *	Alarm 2 action mode	A-HI - absolute high A-LO - absolute low d-HI - deviation high d-LO - deviation low b-IN - band inside b-Ot - band outside (A-HI)	The Alarm 2 parameters are programmed independently of alarm 1. See the corresponding Alarm 1 parameter for description.
rSt2 *	Alarm 2 reset mode	Auto - automatic LATC - manual reset (Auto)	
Stb2 *	Alarm 2 standby function (delay)	NO or YES (NO)	
AL-2 *	Alarm 2 value	-999 to 9999 (0)	
AHYS	Alarm hysteresis value	1 to 250 (1)	
			The alarm value(s) have a programmable hysteresis band to prevent alarm output chatter near the alarm trigger point. The hysteresis value should be set to eliminate this effect. A value of 2 to 5 is usually sufficient for most applications. A single alarm hysteresis value applies to both alarms. See the Alarm Action Figures, in the Alarms section, for the effect of hysteresis on the various alarm types.

\* Model Number Dependent.

# CONFIGURE MODULE 9 - FACTORY SERVICE OPERATIONS (9-FS)

DISPLAY	PARAMETER	RANGE	DESCRIPTION/ COMMENTS
CodE	Factory service function code	48 - Calibrate instrument	TLA calibration. Refer to the Calibration section for details.
		66 - Reset parameters to factory settings	Entering code 66 restores all parameters to factory settings. The unit indicates the operation after the P button is pressed, by displaying "rSEt" in the lower display momentarily.
		77 (twice in succession) - Reset TLA calibration to nominal values	Caution: this operation erases the TLA calibration values and defaults the values to nominal settings. Reading errors of ±10% may result. Do not perform this operation unless the TLA has lost calibration. Loss of calibration is signaled by an "E-CL" error flag at power-up. To clear this flag, perform calibration procedure as noted in the Calibration section. Alternatively, "stepping" through one of the calibration procedures clears the error flag, but does NOT validate the calibration accuracy in any manner.

## LIMIT OUTPUT ACTION

The limit output is selectable for high or low trip activation. If the process temperature goes above the limit setpoint for a high trip, or below the limit setpoint for a low trip, the limit relay will de-energize to initiate a process shutdown. The limit output cannot be reset until the process temperature returns to the proper operating range; manual reset is required. The following action figures describe the status of the limit output and the front panel indicators for various over/under setpoint, and reset conditions. Reset is either by the front panel R button, if enabled, or by the Remote Reset input, terminal #6. Refer to Configure Module 2 - Output Parameters for details of configuring the limit output. Refer to Configure Module 3 - Lockout Parameters for details of configuring the front panel Reset button.

## High Trip Action

## Low Trip Action

# 5.0 ALARMS (OPTIONAL)

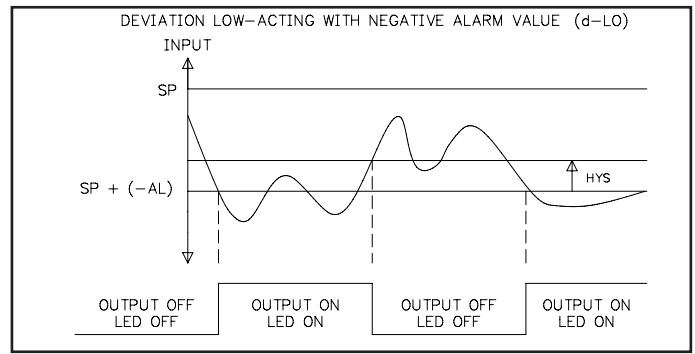

The alarm action figures describe the status of the alarm output and the front panel indicator for various over/under temperature conditions. The alarm output wave form is shown with the output in the automatic reset mode. Select the

alarm action with care -- in some configurations, the front panel indicator (LED) might be OFF while the output is ON. Refer to Configure Module 4 - Alarm Parameters for details of configuring the alarms.

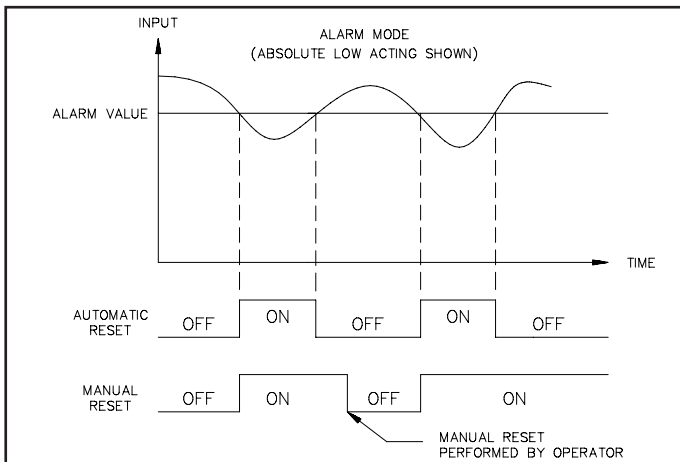

F

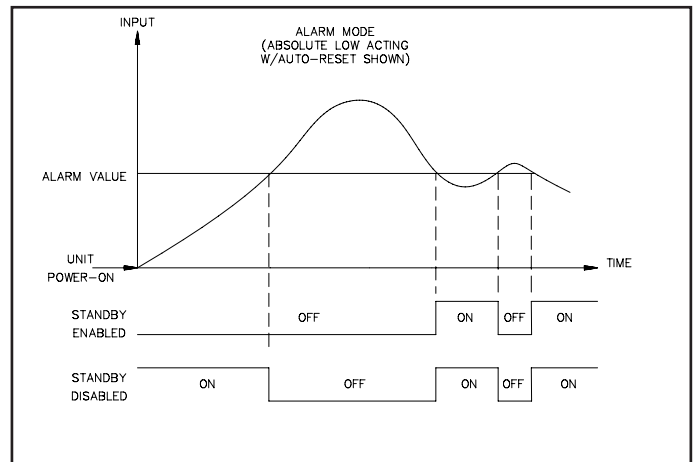

### Alarm Reset Sequence

### Alarm Standby Delay Sequence

### CALIBRATION CHECKS

The instrument has been fully calibrated at the factory for all input types. If the unit appears to be indicating or controlling incorrectly, see the Troubleshooting section before attempting this procedure.

If the TLA is suspected of reading incorrectly, the instrument may be checked for indication accuracy without disturbing the factory calibration. The following procedures may be used for this purpose.

*Note: Allow 1/2 hour warm-up before checking these parameters.*

#### mV Reading Check

1. Connect a DC mV source with an accuracy of 0.03% or better to terminal #8 (-) & #9 (+).
2. Configure Input Parameters Module 1 for linear mV (Lin) input, under tYPE.
3. Compare the TLA read-out to the standard at various points over the range (-5.00 mV to 56.00 mV). The tolerance is  $\pm(0.15\% \text{ of reading} + 1 \text{ LSD})$ .
4. Calibrate the TLA if the readings are out of tolerance.

#### Thermocouple Cold Junction Temperature Check

1. Connect a thermocouple probe of known accuracy (Types T, E, J, K, N only) to TLA. Select the probe used in Configure Module 1.
2. Connect a reference temperature probe to measuring end of thermocouple to monitor temperature. Allow sufficient time for temperatures to equalize.
3. Compare TLA display with reference temperature probe. The TLA display should equal the calibrated probe temperature. (Tolerance is  $\pm 1^\circ\text{C}$ .)
4. Calibrate the cold junction temperature if out of tolerance.

#### RTD Ohms Reading Check

1. Connect RTD simulator (with an accuracy of 0.1 ohm or better) capable of operating with less than 150  $\mu\text{A}$  to terminals #8, #9, & #10.
2. Configure Input Parameters Module 1 for linear ohms (rLin) input, under tYPE.
3. Compare the TLA read-out with the RTD simulator at various points over the range 2.0 to 300.0 ohms. The tolerance is  $\pm(0.3\% \text{ of span} + 1 \text{ LSD})$ .
4. Calibrate the TLA RTD ohms if out of tolerance.

#### Error Flag E-CL

If error flag "E-CL" appears at power-up, a loss of calibration parameters due to noise spikes has occurred. Entering code 77 twice in Factory Service Operations Module (9-FS) erases the TLA calibration values and defaults the values to nominal settings. Reading errors of  $\pm 10\%$  may result. It is recommended that the TLA be fully recalibrated. If using thermocouple only, the RTD calibration need not be performed.

*Note: the "E-CL" flag may be cleared by "stepping" through cold junction calibration procedure without the need to change any calibration values. A  $\pm 10\%$  reading error will still exist.*

## 6.0 CALIBRATION

When re-calibration is required (generally every two years), this procedure should be performed by qualified technicians using appropriate equipment. Equipment source accuracy of 0.03% or better is required.

The procedure consists of: applying accurate mV signals, setting the thermocouple cold junction temperature, and applying precision resistance, among others. Allow a 30 minute warm-up period before starting this procedure. Do not use thermocouple wire for the millivolt or RTD ohms calibration.

This procedure may be aborted by disconnecting power to the TLA before exiting the configuration mode. The existing calibration settings remain in affect.

*Note: After completing any of the calibration sequences, the TLA defaults the input sensor type to thermocouple type "J" (tc-J). Be sure to set input sensor for proper type.*

*Note: The TLA must be restored to normal display mode before any data is stored.*

### Factory Service Operations - Calibration (9-FS)

DISPLAY	PARAMETER	RANGE	DESCRIPTION/ COMMENTS
CodE	Enter function code	48	Calibrate instrument.
CAL	Millivolt calibration	yes/no	Calibration required for both RTD and TC input. If this procedure is performed, the cold junction temp or RTD ohms calibration procedures in turn must be completed.
CJC	Thermocouple cold junction temperature calibration	yes/no	Not required if only using RTD input. This procedure can only be performed AFTER an accurate mV calibration.
rtd	RTD resistance calibration	yes/no	Not required if only using TC input. This procedure can only be performed AFTER an accurate mV calibration.

### Millivolt Calibration (CAL)

Connect precision millivolt source with an accuracy of 0.03% to terminals #8 (-) & #9 (+). Cold Junction or RTD ohms calibration MUST be performed after millivolt calibration.

DISPLAY	ACTION	DESCRIPTION/ COMMENTS
STP1	Apply 0.0 mV	Wait 10 seconds, press P.
STP2	Apply 14.0 mV	Wait 10 seconds, press P.
STP3	Apply 28.0 mV	Wait 10 seconds, press P.
STP4	Apply 42.0 mV	Wait 10 seconds, press P.
STP5	Apply 56.0 mV	Wait 10 seconds, press P.

### RTD Ohms Calibration (RTD)

This procedure must be performed AFTER an accurate mV calibration. Connect one leg of precision resistance (accuracy of 0.1 ohm) to terminals #9 and #10 together, and the other leg to #8.

DISPLAY	ACTION	DESCRIPTION/ COMMENTS
Rtd1	Connect 0.0 ohm (jumper wire)	Wait 10 seconds, press P.
Rtd2	Connect 277.0 ohm	Wait 10 seconds, press P.

### Thermocouple Cold Junction Calibration (CJC)

This procedure must be performed AFTER an accurate mV calibration.

- Exit Factory Service Operations (continually press P until "End"), and return to Normal Display Mode.
- Connect a thermocouple probe of known accuracy to the TLA (Types T, E, J, K, and N only). Select the probe type used in Configure Module 1.
- Connect a reference temperature probe to the measuring end of the TLA thermocouple probe. The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (As an alternative, the TLA thermocouple probe may be placed in a calibration bath of known temperature.)
- Compare TLA display with reference temperature probe (or calibration bath). If the displayed TLA temperature does not equal the reference probe temperature, calculate the CJ error as follows:  
CJ Error = reference probe temperature - displayed TLA temperature
- Enter Factory Service Operations Module (9-FS).

DISPLAY	PARAMETER	DESCRIPTION/ COMMENTS
CJC	Cold Junction Temperature	Observe the indicated cold junction temperature. Add the calculated CJ Error to the displayed value. Enter the sum as the new value for CJC. Exit 9-FS and repeat step 4.  Note: If the initial value for CJC is not within the range of 15°C to 40°C, enter 25.0° for CJC and repeat the Cold Junction Calibration procedure.

# 7.0 TROUBLESHOOTING

The majority of problems can be traced to improper connections or incorrect set-up parameters. Be sure all connections are clean and tight, that the correct output board is fitted, and that the set-up parameters are correct.

For further technical assistance, contact technical support at the appropriate company numbers listed.

PROBLEMS	POSSIBLE CAUSE	REMEDIES

# 8.0 INSTALLING AN OUTPUT BOARD

The TLA is supplied with an output board installed.

## Replacing Output Board

1. Remove the bezel assembly.
2. Lift up on the top bezel board latch while gently pulling out on the bezel/display board assembly. Do NOT remove the display board from the bezel.
3. Remove the output board by pulling it away from the other boards. Replace the output board by aligning the board to board connector. Be certain the connector is fully mated.
4. Connect the bezel/display board assembly by guiding the board ends into the bezel latches. Slide the assembly on evenly until the display board connector is completely engaged and bezel latches are fully seated onto the boards.

# MODEL LD - LARGE DISPLAY

- 2.25" & 4" HIGH RED LED DIGITS
- AVAILABLE IN 4 OR 6 DIGIT VERSIONS
- SINGLE OR DUAL COUNTER with RATE INDICATOR \*
- PROGRAMMABLE SCALING AND DECIMAL POINTS \*
- BUILT-IN BATCH COUNTING CAPABILITY \*
- PROGRAMMABLE USER INPUT \*
- UNIVERSALLY POWERED
- DUAL 5 AMP FORM C RELAY \*
- ALUMINUM NEMA 4X CASE CONSTRUCTION

\* Programmable models only

## GENERAL DESCRIPTION

The Large Display is a versatile display that can be configured as a single or dual counter with rate indication, scaling, serial communications and a dual relay output. There are also basic models that have a single counter with direction control only (no scaling or relay output).

The 4 & 6 digit displays are available in either 2.25" or 4" high red LED digits with adjustable display intensities. The 2.25" high models are readable up to 130 feet. The 4" high models are readable up to 180 feet. All versions are constructed of a NEMA 4X enclosure in light weight aluminum.

The 6-digit programmable models have two signal inputs and a choice of eight different count modes. These include bi-directional, quadrature and anti-coincidence counting, as well as a dual counter mode. When programmed as a dual counter, each counter has separate scaling and decimal point selection.

Rate indication is available on the programmable models only. The rate indicator has separate scaling and decimal point selection, along with programmable display update times. The meter display can be toggled either manually or automatically between the count and rate values.

The programmable models also come with a dual Form C relay output and RS232 or RS485 serial communications. The outputs can activate based on either counter or rate setpoint values. An internal batch counter can be used to count setpoint output activations.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

## SPECIFICATIONS

- DISPLAY:** 2.25" (57 mm) or 4" (101 mm) intensity adjustable Red LED
  - POWER REQUIREMENTS:**
    - AC POWER: 50 to 250 VAC 50/60 Hz, 26 VA
    - DC POWER: 21.6 to 250 VDC, 11 W
    - DC Out: +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC
    - +24 VDC @ 50 mA if input voltage is less than 50 VDC
    - Isolation: 2300 VRMS for 1 min. to all inputs and outputs
  - COUNT INPUT(S):**
    - Counter(s) have DIP switch selectable pull-up (7.8 KΩ) or pull-down resistors (3.9 KΩ) that determine active high or active low input logic. Counters are DIP switch selectable for high or low frequency (Damping capacitor provided for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec min.)
    - Input A Trigger levels:  $V_{IL} = 1.25 \text{ V max}$ ;  $V_{IH} = 2.75 \text{ V min}$ ;  $V_{MAX} = 28 \text{ VDC}$
    - Input B Trigger levels:  $V_{IL} = 1.0 \text{ V max}$ ;  $V_{IH} = 2.4 \text{ V min}$ ;  $V_{MAX} = 28 \text{ VDC}$
    - Overflow Indication: Display "!!!" alternates with overflowed count value
- LD200400, LD200600, LD400400, & LD400600:**  
Count Speed: 25 KHz max. @ 50% duty cycle (no scaling)
- LD2006P0 & LD4006P0:**  
Counter A & B Frequency:  
**Maximum Count Rates:** 50% duty cycle, count mode dependent.  
With setpoints disabled: 25 KHz, all modes except Quadrature x4 (23 KHz).  
With setpoint(s) enabled: 20 KHz, all modes except Dual Counter (14 KHz), Quadrature x2 (13 KHz) and Quadrature x4 (12 KHz).

## DIMENSIONS In inches (mm)

PART NUMBER	X (Length)	Y (Height)	Z (Center)
LD2004xx	12 (304.8)	4 (101.6)	8 (203.2)
LD2006xx	16 (406.4)	4 (101.6)	12 (304.3)
LD4004xx	20 (508)	7.875 (200)	16 (406.4)
LD4006xx	26 (660.4)	7.875 (200)	22 (558.8)

4. **RATE INPUT: Models LD2006P0 & LD4006P0 only**  
 Display Range: 0 to 99999  
 Min Freq.: 0.01 Hz  
 Max Freq.: See Count Input specification  
 Accuracy:  $\pm 0.01\%$   
 Rate Overflow Indication: Display "r **OL**"
5. **RESET/USER INPUT:** Function programmable for LD2006P0 & LD4006P0  
 Reset/User Input: DIP switch selectable pull-up (7.8 K $\Omega$ ) or pull-down resistor (3.9 K $\Omega$ ) that determines active high or active low input logic.  
 Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
 Response Time: 10 msec typ.; 50 msec debounce (activation and release)
6. **COMMUNICATIONS (LD2006P0 & LD4006P0 only):**  
**RS485 SERIAL COMMUNICATIONS**  
 Type: RS485 multi-point balanced interface (isolated)  
 Baud Rate: 300 to 38.4 k  
 Data Format: 7/8 bits; odd, even, or no parity  
 Bus Address: 0 to 99; max 32 meters per line  
**RS232 SERIAL COMMUNICATIONS**  
 Type: RS232 half duplex (isolated)  
 Baud Rate: 300 to 38.4 k  
 Data Format: 7/8 bits; odd, even, or no parity
7. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programming parameters and count values when power is removed.
8. **OUTPUT (LD2006P0 & LD4006P0 only):**  
 Relays: Form C contacts rated at 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)
9. **ENVIRONMENTAL CONDITIONS:**  
 Operating temperature: -30 to 65 °C  
 Storage temperature: -40 to 70 °C  
 Operating and storage humidity: 0 to 85% max. RH (non-condensing)  
 Vibration According to IEC 68-2-6: Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's (1g relay).  
 Shock According to IEC 68-2-27: Operational 30 g's (10g relay), 11 msec in 3 directions.  
 Altitude: Up to 2,000 meters
10. **CONNECTIONS:**  
 Internal removable terminal blocks are used for power and signal wiring. Remove end plates with 1/4" nut driver. For LD4 versions, all wiring is on right side of unit. For LD2 versions, power and signal wiring connections are on the right side and the relays and serial options are on the left side.  
 Wire Strip Length: 0.4" (10 mm)  
 Wire Gauge: 24-12 AWG copper wire  
 Torque: 5.3 inch-lbs (0.6 N-m) max.

## 11. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

Type 4X Enclosure rating (Face only), UL50

### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

#### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A LD200400 Criterion B LD2006P0 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle

#### Emissions:

Emissions LD200400	EN 55011	Class B
Emissions LD2006P0	EN 55011	Class A

#### Notes:

1. *Criterion A: Normal operation within specified limits.*

2. *Criterion B: Temporary loss of performance from which the unit self-recovers.*

12. **CONSTRUCTION:** Aluminum enclosure, and steel side panels with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4X/IP65 specifications. Installation Category II, Pollution Degree 2.

#### 13. WEIGHT:

LD2004XX - 3.5 lbs (1.59 kg)
LD2006XX - 4.5 lbs (2.04 kg)
LD4004XX - 8 lbs (3.63 kg)
LD4006XX - 10.5 lbs (4.76 kg)

## ORDERING INFORMATION

TYPE	MODEL NO.	DESCRIPTION	PART NUMBER
Basic (No front panel keys)	LD	2.25" High 4-Digit Red LED Counter	LD200400
		2.25" High 6-Digit Red LED Counter	LD200600
		4" High 4-Digit Red LED Counter	LD400400
		4" High 6-Digit Red LED Counter	LD400600
Programmable (With front panel keys)	LD	2.25" High 6-Digit Red LED Count/Rate Indicator w/ dual Relay Output & RS232/RS485 Serial Communications	LD2006P0
		4" High 6-Digit Red LED Count/Rate Indicator w/ dual Relay Output & RS232/RS485 Serial Communications	LD4006P0

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature. Placing the unit near devices that generate excessive heat should be avoided. The unit should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the front overlay. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## MOUNTING INSTRUCTIONS

This display is designed to be wall mounted or suspended from a ceiling truss or other suitable structure capable of supporting the LD. Caution should be exercised when hanging the display to provide for the safety of personnel. If hanging the LD, run the suspension cables (or chains) through the mounting bracket holes. For wall mounting use #10-32 size bolts.

# 2.0 SETTING THE DIP SWITCHES

## SETTING THE 8 DIP SWITCHES

To access the switches, remove the right side plate of the meter. A bank of eight switches is located inside the unit.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

### SWITCH 1 (Input A)

**LOGIC:** Input A trigger levels  $V_{IL} = 1.25 \text{ V max.}$ ;  $V_{IH} = 2.75 \text{ V min.}$ ;  $V_{MAX} = 28 \text{ VDC}$

**MAG:** 200 mV peak input sensitivity; 100 mV hysteresis; maximum voltage: 40 V peak (28 Vrms); Must also have SRC switch ON. (Not recommended with counting applications.)

### SWITCH 2 (Input A) {See Note 1}

**SNK.:** Adds internal 7.8 K $\Omega$  pull-up resistor to +12 VDC,  $I_{MAX} = 2.1 \text{ mA}$ .  
**SRC.:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

### SWITCH 3 (Input A)

**HI Frequency:** Removes damping capacitor and allows max. frequency.  
**LO Frequency:** Adds a damping capacitor for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec.

### SWITCH 4 (Input B) {See Note 1}

**SNK.:** Adds internal 7.8 K $\Omega$  pull-up resistor to +12 VDC,  $I_{MAX} = 2.1 \text{ mA}$ .  
**SRC.:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

### SWITCH 5 (Input B)

**HI Frequency:** Removes damping capacitor and allows max. frequency.  
**LO Frequency:** Adds a damping capacitor for switch contact bounce. Limits input frequency to 50 Hz and input pulse widths to 10 msec.

### SWITCH 6 (RESET/USER INPUT) {See Note 1}

**SNK.:** Adds internal 7.8 K $\Omega$  pull-up resistor to +12VDC,  $I_{MAX} = 2.1 \text{ mA}$ .  
**SRC.:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

### SWITCH 7 (POWER UP RESET)

**ENABLE:** In this position, the counter resets to zero at power up.  
**DISABLE:** In this position, the counter does not reset at power up.

*Note: This switch has no function for programmable models. Power-up reset is selected through a programming parameter.*

### SWITCH 8 (Input B)

**DIRECTION CONTROL:** In this position Input B is used to control the count direction of Input A when Input A is set to Count with Direction mode (default mode).

**INTENSITY ADJUST:** In this position Input B is used to adjust the LED intensity. There are five distinct LED levels that can be changed by pulsing Input B. After setting the desired intensity, move switch to OFF position for Direction Control. Units with keypads can program the LED intensity level using Programming Menu 3.

*Note 1: When the DIP switch is in the SNK position (OFF), the input is configured as active low. When the switch is in the SRC position (ON), the input is configured as active high.*

# 3.0 WIRING THE METER

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

- Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)  
 TDK # ZCAT3035-1330A  
 Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)  
 Schaffner # FN670-1.8/07  
 Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
- Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
 Snubber: RLC# SNUB0000.

## WIRING OVERVIEW

Electrical connections are made via pluggable terminal blocks located inside the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker. When wiring the meter, compare the numbers on the label on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.4" (10 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## WIRING CONNECTIONS

Internal removable terminal blocks are used for power and signal wiring. Access to terminal blocks is through conduit fittings. Remove end plates with 1/4" nut driver. For LD4 versions, all wiring is on right side of unit. For LD2 versions, power and input wiring connections are on the right side and the relay and serial options are on the left side.

Connect drain wire from shielded cable(s) to screw on side plate for proper grounding.

## 3.1 POWER WIRING

The power wiring is made via the 3 position terminal block (TBA) located inside the unit (right side). The DC out power is located on TBB (right side).

### Power

Terminal 1: VAC/DC +  
Terminal 2: VAC/DC -  
Terminal 3: Protective Conductor Terminal

### DC Out Power

Terminal 4: + 24 VDC OUT  
Terminal 6: User Common

## 3.2 RESET/USER INPUT WIRING

The Reset/User Input is located on the right side.

Terminal 5: Reset/User  
Terminal 6: User Comm

### Sinking Logic

### Sourcing Logic

## 3.3 SETPOINT (OUTPUT) WIRING

The setpoint relays use a six position terminal block (TBC) located inside the unit: LD4 (right side) and LD2 (left side).

Terminal 1: NC 1  
Terminal 2: NO 1  
Terminal 3: Relay 1 Common  
Terminal 4: NC 2  
Terminal 5: NO 2  
Terminal 6: Relay 2 Common

## 3.4 INPUT WIRING

The Large Display has two signal inputs, A and B. These inputs are wired to terminal block TBB located inside the unit on the right side.

- Terminal 1: Input A
- Terminal 3: Input B
- Terminal 2: Input Common

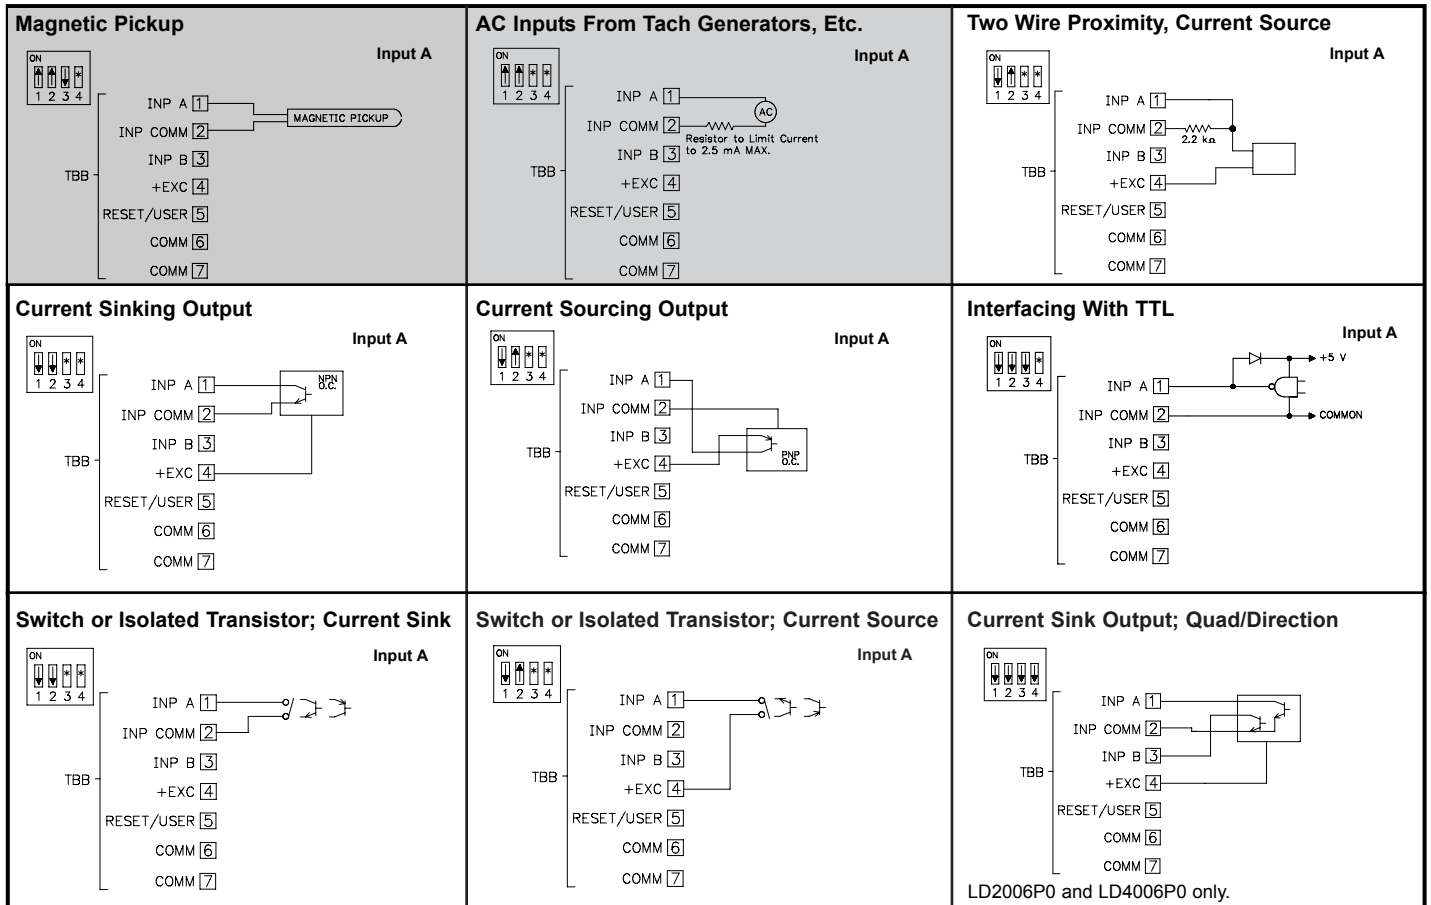

Programmable models LD2006P0 and LD4006P0 provide a choice of eight different Count Modes. The Count Mode selected determines the action of Inputs A and B. Section 5.1, Input Setup Parameters, provides details on count mode selection and input action.

All other models are non-programmable and provide Count with Direction Mode only. Input A accepts the count signal, while Input B controls the count direction (up/down).

Input B can also be used to adjust the LED display intensity by setting DIP Switch 8 to the ON position (See Section 2.0, Setting the DIP Switches). For programmable models, this only applies in Count with Direction mode.

**CAUTION:** User common is NOT isolated from input common. In order to preserve the safety of the meter application, the DC common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Input and Input Common terminals. Appropriate considerations must then be given to the potential of the input common with respect to earth ground.

\* Switch position is application dependent.

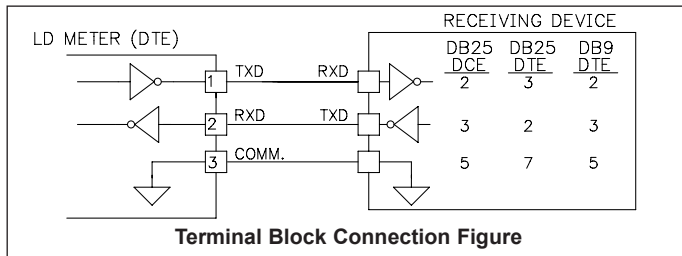

Shaded areas not recommended for counting applications.

## 3.5 SERIAL WIRING

The serial connections are made via terminal block TBD located inside the unit on the left side for the LD2 and on the right side for the LD4.

## RS232 Communications

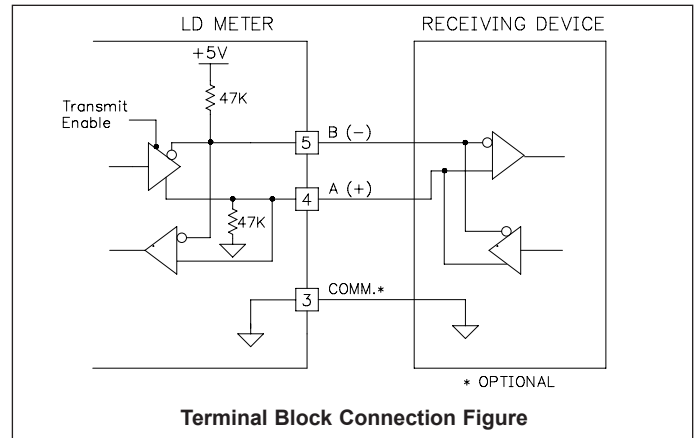

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The LD emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

## RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the LD is limited to 38.4k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## Sections 4 and 5 apply to Programmable Models Only

# 4.0 REVIEWING THE FRONT PANEL KEYS AND DISPLAY

KEY	DISPLAY MODE OPERATION
PAR	Access Programming Mode
SEL▲	Index display through selected displays
RST▼	Resets count display(s) and/or outputs

PROGRAMMING MODE OPERATION
Store selected parameter and index to next parameter
Advance through selection list/select digit position in parameter value
Increment selected digit position of parameter value

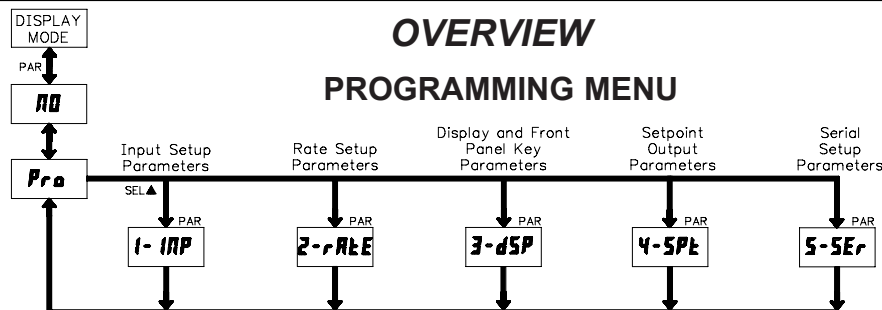

### OPERATING MODE DISPLAY DESIGNATORS

- "r" - To the left of the display is the rate value.
  - Counter A has no designator.
- "b" - To the left of the display is the Counter B value (dual count or batch).

- "1" - To the right of digit 6 indicates setpoint 1 output status.
- "2" - To the right of digit 1 indicates setpoint 2 output status.

Pressing the SEL▲ key toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the rate and count values.

# 5.0 PROGRAMMING THE METER

### PROGRAMMING MODE ENTRY (PAR KEY)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the PAR key. If it is not accessible, then it is locked by either a security code or a hardware lock.

### MODULE ENTRY (SEL▲ & PAR KEYS)

The Programming Menu is organized into five modules. These modules group together parameters that are related in function. The display will alternate between Pr and the present module. The SEL▲ key is used to select the desired module. The displayed module is entered by pressing the PAR key.

## MODULE MENU (PAR KEY)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **PrO**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL** and **RST** keys are used to move through the selections/values for that parameter. Pressing the **PAR** key, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST** key increments the digit by one or the user can hold the **RST** key and the digit will automatically scroll. The **SEL** key will select the next digit to the left. Pressing the **PAR** key will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (PAR KEY)

The Programming Mode is exited by pressing the **PAR** key with **PrO** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

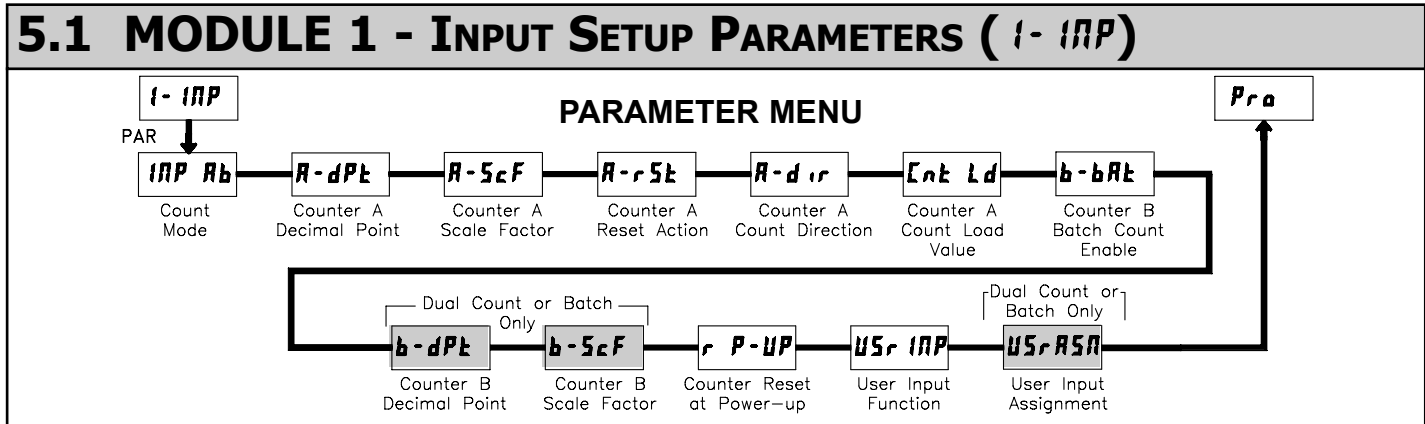

It is recommended to start with Module 1 for counting or Module 2 for rate. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 3. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

Shaded area selections only apply when Counter B is enabled (Dual Count mode or batch counter).

### COUNT MODE

Select the count mode that corresponds with your application. The input actions are shown in the boxes below. For simple counting applications, it is recommended to use Count with Direction for the count mode. Simply leave the direction input unconnected.

DISPLAY	MODE	INPUT A ACTION	INPUT B ACTION
Ent ud	Count with Direction	Counter A	Counter A Direction
rE-Ent	Rate/Counter	Rate only	Counter A Add
dUAL	Dual Counter	Counter A Add	Counter B Add
QUAd 1	Quadrature x1	Count A	Quad A
QUAd 2	Quadrature x2	Count A	Quad A
QUAd 4	Quadrature x4	Count A	Quad A
AddAdd	2 Input Add/Add	Counter A Add	Counter A Add
AddSub	2 Input Add/Subtract	Counter A Add	Counter A Subtract

Note: The Rate indicator signal is derived from Input A in all count modes.

### COUNTER A DECIMAL POINT

This selects the decimal point position for Counter A and the setpoint value, if assigned to Counter A. The selection will also affect Counter A scale factor calculations.

### COUNTER A SCALE FACTOR

The number of input counts is multiplied by the scale factor to obtain the desired process value. A scale factor of 1.0000 will result in the display of the actual number of input counts. (Details on scaling calculations are explained at the end of this section.)\*

### COUNTER A RESET ACTION

When Counter A is reset, it returns to Zero or Counter A Count Load value. This reset action applies to all Counter A resets, except a Setpoint generated Counter Auto Reset programmed in Module 4.

### COUNTER A COUNT DIRECTION

Reverse (rEU) switches the normal Counter A count direction shown in the Count Mode parameter chart.

### COUNTER A COUNT LOAD VALUE

-99999 to 999999

Counter A resets to this value if Reset to Count Load action is selected. To enter a negative Count Load value, increment digit 6 to display a “-” sign.\*

### COUNTER B BATCH COUNT ENABLE

NO SP-2  
NO SP-1 SP 1-2

The Counter B Batch Count function internally counts the number of output activations of the selected setpoint(s). The count source for the batch counter can be SP1, SP2 or both. Batch counting is available in all count modes except Dual Counter, which uses an external input signal for Counter B.

### COUNTER B DECIMAL POINT

0 0.00 0.0000  
0.0 0.000

This selects the decimal point position for Counter B. The selection will also affect Counter B scale factor calculations.

### COUNTER B SCALE FACTOR

00.0000 1 to 99.9999

The number of input or batch counts is multiplied by the scale factor to obtain the desired process value. A scale factor of 1.0000 will result in the display of the actual number of input or batch counts. (Details on scaling calculations are explained at the end of this section.)\*

### COUNTER RESET AT POWER-UP

NO NO Cnt b  
YES Cnt A both

The selected counter(s) will reset at each meter power-up.

### SCALING FOR COUNT INDICATION

The counter's scale factor is factory set to 1, to provide one count on the display for each pulse that is input to the unit. In many applications, there will not be a one-to-one correspondence between input pulses and display units. Therefore, it is necessary for the meter to scale or multiply the input pulses by a scale factor to achieve the desired display units (feet, meters, gallons, etc.)

The Count Scale Factor Value can range from 00.00001 to 99.9999. It is important to note that the precision of a counter application cannot be improved by using a scale factor greater than one. To accomplish greater precision, more pulse information must be generated per measuring unit. The following formula is used to calculate the scale factor.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

#### WHERE:

**Desired Display Units:** Count display units acquired after pulses that occurred.

**Number of Pulses:** Number of pulses required to achieve the desired display units.

#### Decimal Point Position:

0	=	1
0.0	=	10
0.00	=	100
0.000	=	1000
0.0000	=	10000

**EXAMPLE:** The counter display is used to indicate the total number of feet used in a process. It is necessary to know the number of pulses for the desired units to be displayed. The decimal point is selected to show the resolution in hundredths.

$$\text{Scale Factor} = \frac{\text{Desired Display Units}}{\text{Number of Pulses}} \times \text{Decimal Point Position}$$

Given that 128 pulses are equal to 1 foot, display total feet with a one-hundredth resolution.

$$\text{Scale Factor} = \frac{1.00}{128} \times 100$$

$$\text{Scale Factor} = 0.007812 \times 100$$

$$\text{Scale Factor} = 0.7812$$

### USER INPUT FUNCTION

DISPLAY	MODE	DESCRIPTION
NO	No Function	User Input disabled.
Pr oL ock	Program Mode Lock-out	See Programming Mode Access chart (Module 3).
inh ibt	Inhibit	Inhibit counting for the selected counter(s).
rESEt	Maintained Reset	Level active reset of the selected counter(s).
St oRE	Store	Freeze display for the selected counter(s) while allowing counts to accumulate internally.
St - rSt	Store and Reset	Edge triggered reset of the selected counter(s) after storing the count.
d-SEL	Display Select *	Advance once for each activation.
d-LEU	Display Intensity Level *	Increase intensity one level for each activation.
rSt - 1	Setpoint 1 Reset *	Reset setpoint 1 output.
rSt - 2	Setpoint 2 Reset *	Reset setpoint 2 output.
rSt - 12	Setpoint 1 and 2 Reset *	Reset both setpoint 1 and 2 outputs.
Pr int	Print Request	Serial transmit of the active parameters selected in the Print Options menu (Module 5).
Pr - rSt	Print and Reset *	Same as Print Request followed by a momentary reset of the selected counter(s).

\* Indicates Edge Triggered function. All others are Level Active functions.

### USER INPUT ASSIGNMENT

Cnt A  
Cnt b  
both

The User Input Assignment is only active when Counter B is enabled and the user input selection performs a Reset, Inhibit or Store function on one or both of the counters.

\*For value entry instructions, refer to selection/value entry in the Programming The Meter section.

Shaded area selections only apply when Counter B is enabled (Dual Count mode or batch counter).

# 5.2 MODULE 2 - RATE SETUP PARAMETERS (2-rAtE)

## RATE ENABLE

NO YES

This parameter enables the rate display. For maximum input frequency, Rate Enable should be set to **NO** when not in use. When set to **NO**, the remaining rate parameters are not accessible.

## RATE LOW UPDATE TIME (DISPLAY UPDATE)

0.1 to 999 seconds

The Low Update Time is the minimum amount of time between display updates for the Rate display. Values of 0.1 and 0.2 seconds will update the display correctly but may cause the display to appear unsteady.

## RATE DECIMAL POINT

0 000 00000  
0.0 0000

This selects the decimal point position for rate displays and any setpoint value assigned to these displays. This parameter does not affect rate scaling calculations.

## RATE HIGH UPDATE TIME (DISPLAY ZERO)

0.2 to 999 seconds

The High Update Time is the maximum amount of time before the Rate display is forced to zero. (For more explanation, refer to Rate Value Calculation.) The High Update Time **must** be higher than the Low Update Time and higher than the desired slowest readable speed (one divided by pulses per second). The factory setting of 2.0, will force the display to zero for speeds below 0.5 Hz or a pulse every 2 seconds.

## RATE INPUT SCALING STYLE

KEY APPLY

If a Rate Input value (in Hz) and the corresponding Rate Display value are known, the Key-in (**KEY**) Scaling Style can be used. This allows rate scaling without the presence of a rate input signal.

If the Rate Input value has to be derived from the actual rate input signal, the Apply (**APPLY**) Scaling Style should be used.

## SCALING FOR RATE INDICATION

To scale the Rate, enter a Scaling Display value with a corresponding Scaling Input value. These values are internally plotted to a Display value of 0 and Input value of 0.0 Hz. A linear relationship is formed between these points to yield a rate display value that corresponds to the incoming input signal rate. The meter is capable of showing a rate display value for any positive slope linear process.

## RATE SCALING DISPLAY VALUE

0 to 999999

Enter the desired Rate Display value for the Scaling Point. This value is entered using the front panel buttons for either Scaling Style.\*

## SCALING CALCULATION FOR KEY-IN STYLE

If a display value versus input signal (in pulses per second) is known, then those values can be entered into Scaling Display (**rE-dSP**) and Scaling Input (**rE-INP**). No further calculations are needed.

If only the number of pulses per 'single' unit (i.e. # of pulses per foot) is known, then it can be entered as the Scaling Input value and the Scaling Display value will be entered as the following:

RATE PER	DISPLAY (rE-dSP)	INPUT (rE-INP)
Second	1	# of pulses per unit
Minute	60	# of pulses per unit
Hour	3600	# of pulses per unit

## RATE SCALING INPUT VALUE

0.1 to 999999

Enter the corresponding Rate Input value using the Scaling Style selected.\*

## NOTES:

1. If # of pulse per unit is less than 1, then multiply both Input and Display values by 10 or 100 as needed for greater accuracy.
2. If the Display value is raised or lowered, then Input value must be raised or lowered by the same proportion (i.e. Display value for per hour is entered by a third less (1200) then Input value is a third less of # of pulses per unit). The same is true if the Input value is raised or lowered, then Display value must be raised or lowered by the same proportion.
3. Both values must be greater than 0.

## EXAMPLE:

1. With 15.1 pulses per foot, show feet per minute in tenths. Scaling Display = 60.0 Scaling Input = 15.1.
2. With 0.25 pulses per gallon, show whole gallons per hour. (To have greater accuracy, multiply both Input and Display values by 10.) Scaling Display = 36000 Scaling Input = 2.5.

## Key-in Style:

Enter the Rate Input value using the front panel buttons. This value is always in pulses per second (Hz).\*

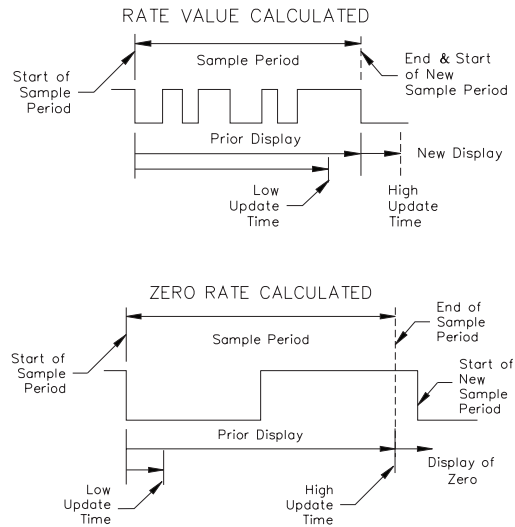

## Apply Style:

The meter initially shows the stored Rate Input value. To retain this value, press **PAR** to advance to the next parameter. To enter a new value, apply the rate input signal to Input A. Press **RST** and the applied input frequency (in Hz) will appear on the display. To insure the correct reading, wait several rate sample periods (see Rate Low Update Time) or until a consistent reading is displayed. Press **PAR** to store the displayed value as the new Rate Input value.

\*For value entry instructions, refer to selection/value entry in the Programming The Meter section.

## INPUT FREQUENCY CALCULATION

The meter determines the input frequency by summing the number of falling edges received during a sample period of time. The sample period begins on the first falling edge. At this falling edge, the meter starts accumulating time towards Low Update and High Update values. Also, the meter starts accumulating the number of falling edges. When the time reaches the Low Update Time value, the meter looks for one more falling edge to end the sample period. If a falling edge occurs (before the High Update Time value is reached), the Rate display will update to the new value and the next sample period will start on the same edge. If the High Update Time value is reached (without receiving a falling edge after reaching Low Update Time), then the sample period will end but the Rate display will be forced to zero. The High Update Time value must be greater than the Low Update Time value. Both values must be greater than 0.0. The input frequency calculated during the sample period, is then shown as a Rate value determined by the scaling calculation.

## 5.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY PARAMETERS (3-dSP)

### FRONT PANEL DISPLAY SELECT ENABLE (SEL▲)

The **YES** selection allows the **SEL▲** key to toggle through the enabled displays.

### FRONT PANEL COUNTER RESET ENABLE (RST▼)

The **YES** selection allows the **RST▼** key to reset the selected counter(s). The shaded selections are only active when Counter B is enabled (Dual Count Mode or batch counter).

### DISPLAY SCROLL ENABLE

The **YES** selection allows the display to automatically scroll through the enabled displays. The scroll rate is about every 4 seconds.

### DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed.

### PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (**ProLoc**) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all unit parameters to be viewed and modified. Quick Programming mode permits only user selected values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Entering a Security Code from 1-99 enables Quick Programming mode, and displays a sublist to select which values appear in the Quick Programming menu. All of the values set to **YES** in the sublist are accessible in Quick Programming. The values include Setpoints (**SP-1**, **SP-2**), Output Time-outs (**OUT-1**, **OUT-2**), Count Load value (**Cnt Ld**) and Display Intensity (**d-LEU**).

Programming any Security Code other than 0, requires this code to be entered at the **Code** prompt in order to access Full Programming mode. Quick Programming mode, if enabled, is accessed before the **Code** prompt appears.

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "PAR" KEY IS PRESSED	FULL PROGRAMMING MODE ACCESS
not <b>ProLoc</b>	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at <b>Code</b> prompt *
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
<b>ProLoc</b>	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

### FACTORY SERVICE OPERATIONS

Select **YES** to perform either of the Factory Service Operations shown below.

### RESTORE FACTORY DEFAULT SETTINGS

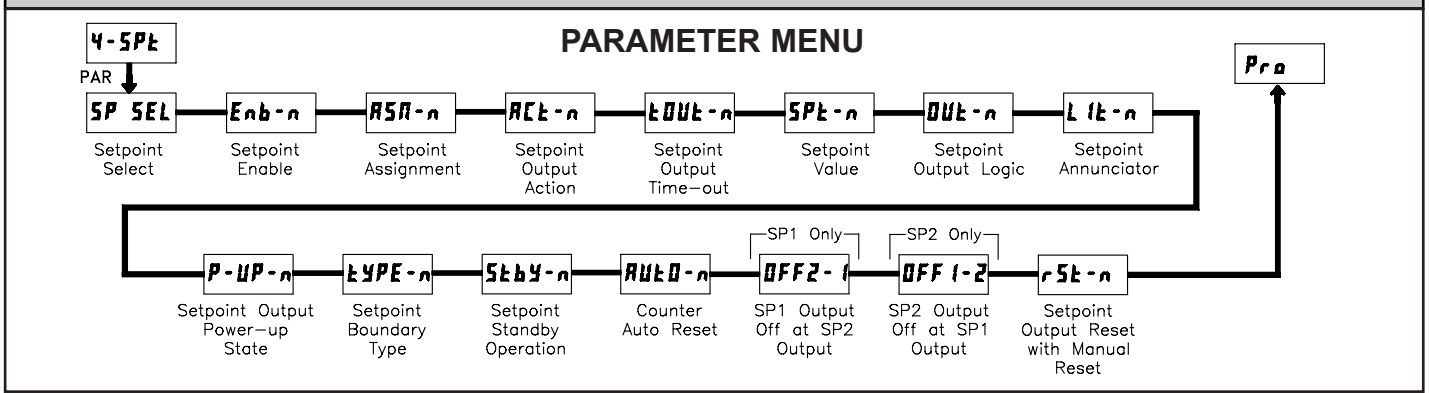

Entering Code 66 will overwrite all user settings with the factory default settings. The meter will display **rESEt** and then return to **Code 00**. Press the **PAR** key to exit the module.

### VIEW MODEL AND VERSION DISPLAY

Entering Code 50 will display the model and version (x.x) of the meter. The display then returns to **Code 00**. Press the **PAR** key to exit the module.

## 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

Some Setpoint parameters will not appear depending on the Setpoint Assignment and Setpoint Output Action selected. The Setpoint Parameter Availability chart below illustrates this.

PARAMETER	DESCRIPTION	COUNTER ASSIGNMENT (A or B)*			RATE ASSIGNMENT		
		TIMED OUT t-OUT	BOUNDARY bOUND	LATCH LATCH	TIMED OUT t-OUT	BOUNDARY bOUND	LATCH LATCH
tOUT-n	Setpoint Output Time-out Value	Yes	No	No	Yes	No	No
SPt-n	Setpoint Value	Yes	Yes	Yes	Yes	Yes	Yes
OUT-n	Setpoint Output Logic	Yes	Yes	Yes	Yes	Yes	Yes
Ltk-n	Setpoint Annunciator	Yes	Yes	Yes	Yes	Yes	Yes
P-UP-n	Setpoint Output Power-up State	No	No	Yes	No	No	Yes
tYPE-n	Setpoint Boundary Type	No	Yes	No	Yes	Yes	Yes
Stby-n	Standby Operation (Low Acting Only)	No	Yes	No	Yes	Yes	Yes
RUL0-n	Counter Auto Reset	Yes	No	Yes	No	No	No
OFF2-1	SP1 Output Off at SP2 (SP1 only)	Yes	No	Yes	No	No	No
OFF1-2	SP2 Output Off at SP1 (SP2 only)	Yes	No	Yes	No	No	No
rSt-n	Output Reset with Manual Reset	Yes	No	Yes	Yes	No	Yes

\* BOUNDARY Setpoint Action not applicable for Counter B assignment.

### SETPOINT SELECT

Select the Setpoint Output to be programmed, starting with Setpoint 1. The “n” in the following parameters reflects the chosen Setpoint number. After the selected setpoint is completely programmed, the display returns to **SP SEL**. Repeat steps for Setpoint 2 if both Setpoints are being used. Select **NO** to exit the Setpoint programming module.

### SETPOINT ENABLE

Select **YES** to enable the chosen setpoint and access the setup parameters. If **NO** is selected, the unit returns to **SP SEL** and the setpoint is disabled.

## SETPOINT ASSIGNMENT

Select the display the Setpoint is to be assigned.

## SETPOINT OUTPUT ACTION

This parameter selects the action of the Setpoint output as described in the chart below. Boundary mode is not applicable for Counter B assignment.

SPT ACTION	DESCRIPTION	OUTPUT ACTIVATES	OUTPUT DEACTIVATES
LATCH	Latched Output Mode	When Count = Setpoint	At Manual Reset (if rSE-n=YES)
t-OUT	Timed Output Mode	When Count = Setpoint	After Setpoint Output Time-Out
BOUND	Boundary Mode (High Acting)	When Count ≥ Setpoint	When Count < Setpoint
	Boundary Mode (Low Acting)	When Count ≤ Setpoint	When Count > Setpoint

## SETPOINT OUTPUT TIME-OUT

This parameter is only active if the Setpoint Action is set to timed output mode (t-OUT). Enter the value in seconds that the output will be active, once the Setpoint Value is reached.

## SETPOINT VALUE

Enter the desired Setpoint value. To enter a negative setpoint value, increment digit 6 to display a “-” sign (Counter A only).

## SETPOINT OUTPUT LOGIC

Normal (NOr) turns the output “on” when activated and “off” when deactivated. Reverse (rEU) turns the output “off” when activated and “on” when deactivated.

## SETPOINT ANNUNCIATOR

Normal (NOr) displays the setpoint annunciator when the corresponding output is “on”. Reverse (rEU) displays the setpoint annunciator when the output is “off”.

## SETPOINT OUTPUT POWER-UP STATE

SAVE will restore the output to the same state it was at before the meter was powered down. ON will activate the output at power up. OFF will deactivate the output at power up.

## SETPOINT BOUNDARY TYPE

High Acting Boundary Type activates the output when the assigned display value (RSP-n) equals or exceeds the Setpoint value. Low Acting activates the output when the assigned display value is less than or equal to the Setpoint.

## SETPOINT STANDBY OPERATION

This parameter only applies to Low Acting Boundary Type setpoints. Select YES to disable a Low Acting Setpoint at power-up, until the assigned display value crosses into the output “off” area. Once in the output “off” area, the Setpoint will then function per the description for Low Acting Boundary Type.

## COUNTER AUTO RESET

This parameter automatically resets the Setpoint Assigned Counter (A or B) each time the Setpoint value is reached. The automatic reset can occur at output start, or output end if the Setpoint Output Action is programmed for timed output mode. The Reset-to-Count Load selections (“CLd-”) only apply to Counter A assignment. This reset may be different from the Counter A Reset Action selected in Module 1.

### SELECTION ACTION

- NO No Auto Reset
- 2Er-5t Reset to Zero at the Start of output activation
- CLd-5t Reset to Count Load value at the Start of output activation
- 2Er-En Reset to Zero at the End of output activation (timed out only)
- CLd-En Reset to Count Load at the End of output activation (timed out only)

## SETPOINT 1 OUTPUT OFF AT SETPOINT 2 (SP1 Only)

This parameter will deactivate Setpoint 1 output at the Start or End of Setpoint 2 output (O1 off at O2). The “-End” setting only applies if Setpoint 2 Output Action is programmed for timed output.

## SETPOINT 2 OUTPUT OFF AT SETPOINT 1 (SP2 Only)

This parameter will deactivate Setpoint 2 output at the Start or End of Setpoint 1 output (O2 off at O1). The “-End” setting only applies if Setpoint 1 Output Action is programmed for timed output.

## SETPOINT OUTPUT RESET WITH MANUAL RESET

Selecting YES causes the Setpoint output to deactivate (reset) when the Setpoint Assigned Counter is reset. The counter reset can occur by the RST▼ key, User Input or Counter Reset at Power-up.

This output reset will not occur when the Assigned Counter is reset by a Setpoint generated Counter Auto Reset.

# 5.5 MODULE 5 - SERIAL COMMUNICATIONS PARAMETERS (5-5Er)

Module 5 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the meter with those of the host computer or other serial device.

## BAUD RATE

bAUd

300	1200	4800	19200
600	2400	9600	38400

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

## DATA BIT

dAEr

7-bit 8-bit

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

## PARITY BIT

PAR itY

NO Odd EVEN

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to NO, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

Addr

0 to 99

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING

Abbr

NO YES

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select NO for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select YES for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS

Pr-OPt

NO YES

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting YES displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as YES in the sublist will be transmitted during a block print. Parameters entered as NO will not be sent.

The "Print All" (Pr-ALL) option selects all meter values for transmitting (YES), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. For example, Counter B or Scale Factor B will only be sent if Counter B is enabled (Dual Counter mode or batch count). Likewise, the Rate value will not be sent unless the Rate Display is enabled.

DISPLAY	DESCRIPTION	FACTORY SETTING	MNEMONIC
Ent A	Counter A	YES	CTA
Ent B	Counter B	NO	CTB
rAE	Rate Value	NO	RTE
ScF A	Scale Factor A	NO	SFA
ScF B	Scale Factor B	NO	SFB
SP-1	Setpoint 1	NO	SP1
SP-2	Setpoint 2	NO	SP2
Ent Ld	Counter A Count Load	NO	CLD

## AUTOMATIC DATA TRANSMIT

AUtO

NO YES

Selecting YES causes the meter to automatically transmit serial data per the Print Options selection list. This occurs without using the User Input terminal Print Request function (Module 1), and without requiring any serial data request commands. This makes the User Input available to perform other functions, while still allowing the meter to output serial data.

The selected data is transmitted repeatedly every 1.5 seconds during normal operating mode, and pauses during programming mode.

## COPY PROGRAM SETTINGS

COPY

NO YES

This parameter is used to copy all the program settings from one LD meter directly to another LD meter(s), through the serial terminal block connections (RS232 or RS485). No PC connection or additional software is required. Copying program settings eliminates or greatly reduces programming time when multiple meters use identical, or very similar, settings for an application.

### Copy Requirements:

- To copy program settings from one meter to another requires the following:
1. Each meter must have the same software version. The version is displayed during the meter power-up sequence, or by entering Code 50 in the Factory Service Operations. (See Module 3 for details)

- Each meter receiving the program settings (receiver) must have the baud rate set to 9600 baud. This is the factory default setting, so a new meter should arrive ready for copying. The meter sending the program settings (master) should be set to the desired baud rate for the application (if different than 9600). This baud rate setting will then be copied to the receiver(s).

#### Copy Connections:

To connect the LD meters for copying, refer to section 3.5 Serial Wiring for details. The meter shown in the figures as LD METER will be the master.

- RS232 - Allows copying from the master meter to a single receiver only.
- RS485 - Allows copying from the master meter to one or more receivers simultaneously. Up to 31 receiving meters can be connected during copying.

## Sending Serial Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character, \* or \$.

#### Command Chart

Command	Description	Notes
N	Node (meter) Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by a register ID character.
V	Value Change (write)	Write to register of the meter. Must be followed by a register ID character and numeric data.
R	Reset	Reset a count value or setpoint output. Must be followed by a register ID character
P	Block Print Request (read)	Initiates a block print output. Registers in the print block are selected in Print Options.

#### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

- The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
- After the optional address specifier, the next character is the command character.
- The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints all the active selections chosen in the Print Options menu parameter.
- If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See timing diagram figure for differences in meter response time when using the \* and \$ terminating characters.

## Receiving Data From The Meter

Data is transmitted from the meter in response to either a transmit command (T), a block print request command (P) or a User Input print request. The response from the meter is either a full field transmission or an abbreviated transmission, depending on the selection chosen in Module 5.

#### Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte data field; 10 for number, one for sign, one for decimal point
19	<CR> (carriage return)
20	<LF> (line feed)
21	<SP>* (Space)
22	<CR>* (carriage return)
23	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

#### Copy Procedure:

- Connect the master and receiver(s) using RS232 or RS485 terminals.
- Apply power to the meters. The receiving meter(s) must be operating in the normal display mode (not programming mode).
- On the master meter, proceed to the Copy Program Settings parameter and select **YES** to begin copying.
- During the copy process (~2 sec.), the master meter displays an upload message (**UP-Ld**) while the receiver(s) displays a download message (**dn-Ld**). This indicates successful communication between the master and receiver(s).
- When copying is completed, all receivers display the power-up sequence and return to normal operating mode, programmed with all the same settings as the master meter. The master remains at the **COPY** prompt, ready for another receiver(s) to be connected for copying.

#### Register Identification Chart

ID	Value Description	MNEMONIC	Applicable Commands	Transmit Details (T and V)
A	Counter A	CTA	T, V, R	6 digit positive/5 digit negative (with minus sign)
B	Counter B	CTB	T, V, R	5 digit, positive only
C	Rate	RTE	T	5 digit, positive only
D	Scale Factor A	SFA	T, V	6 digit, positive only
E	Scale Factor B	SFB	T, V	6 digit, positive only
F	Setpoint 1 (Reset Output 1)	SP1	T, V, R	per setpoint Assignment, same as Counter or Rate
G	Setpoint 2 (Reset Output 2)	SP2	T, V, R	per setpoint Assignment, same as Counter or Rate
H	Counter A Count Load Value	CLD	T, V, R	6 digit positive/5 digit negative (with minus sign)

#### Command String Examples:

- Node address = 17, Write 350 to the Setpoint 1 value  
String: N17VF350\*
- Node address = 5, Read Counter A, response time of 50 msec min  
String: N5TA\*
- Node address = 0, Reset Setpoint 1 output  
String: RF\*
- Node address = 31, Request a Block Print Output, response time of 2 msec min  
String: N31P\$

#### Transmitting Data to the Meter

Numeric data sent to the meter must be limited to transmit details listed in the Register Identification Chart. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (For example: The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

*Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.*

The first two characters transmitted are the meter address. If the address assigned is 0, two spaces are substituted. A space follows the meter address field. The next three characters are the register mnemonic, as shown in the Register Identification Chart.

The numeric data is transmitted next. The numeric field (bytes 7 to 18) is 12 characters long. When a requested counter or rate value exceeds the meter's display limits, an \* (used as an overflow character) replaces a space in byte 7. Byte 8 is always a space.

The remaining ten positions of this field consist of a minus sign (for negative values), a floating decimal point (if applicable), and eight positions for the requested value. The data within bytes 9 to 18 is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with a <CR> and <LF>. After the last line of a block print, an extra <SP>, <CR> and <LF> are added to provide separation between the print blocks.

## Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 10 bytes for number, one byte for sign, one byte for decimal point
13	<CR> (carriage return)
14	<LF> (line feed)
15	<SP>* (Space)
16	<CR>* (carriage return)
17	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and register ID, leaving only the numeric part of the response.

## Meter Response Examples:

- Node address = 17, full field response, Counter A = 875  
17 CTA 875 <CR><LF>
- Node address = 0, full field response, Setpoint 1 = -250.5  
SP1 -250.5<CR><LF>
- Node address = 0, abbreviated response, Setpoint 1 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Command Response Time

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\* or \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

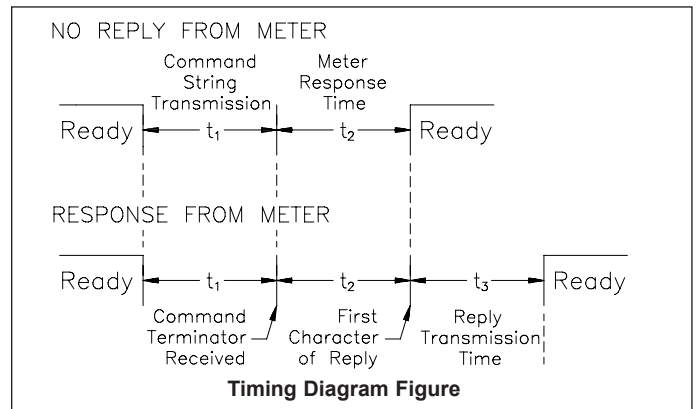

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time of 50 msec. minimum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time ( $t_2$ ) of 2 msec. minimum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

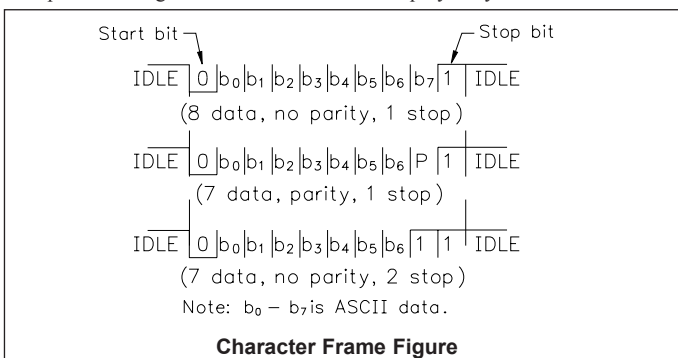

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character. The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

## Start Bit and Data Bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

## Parity Bit

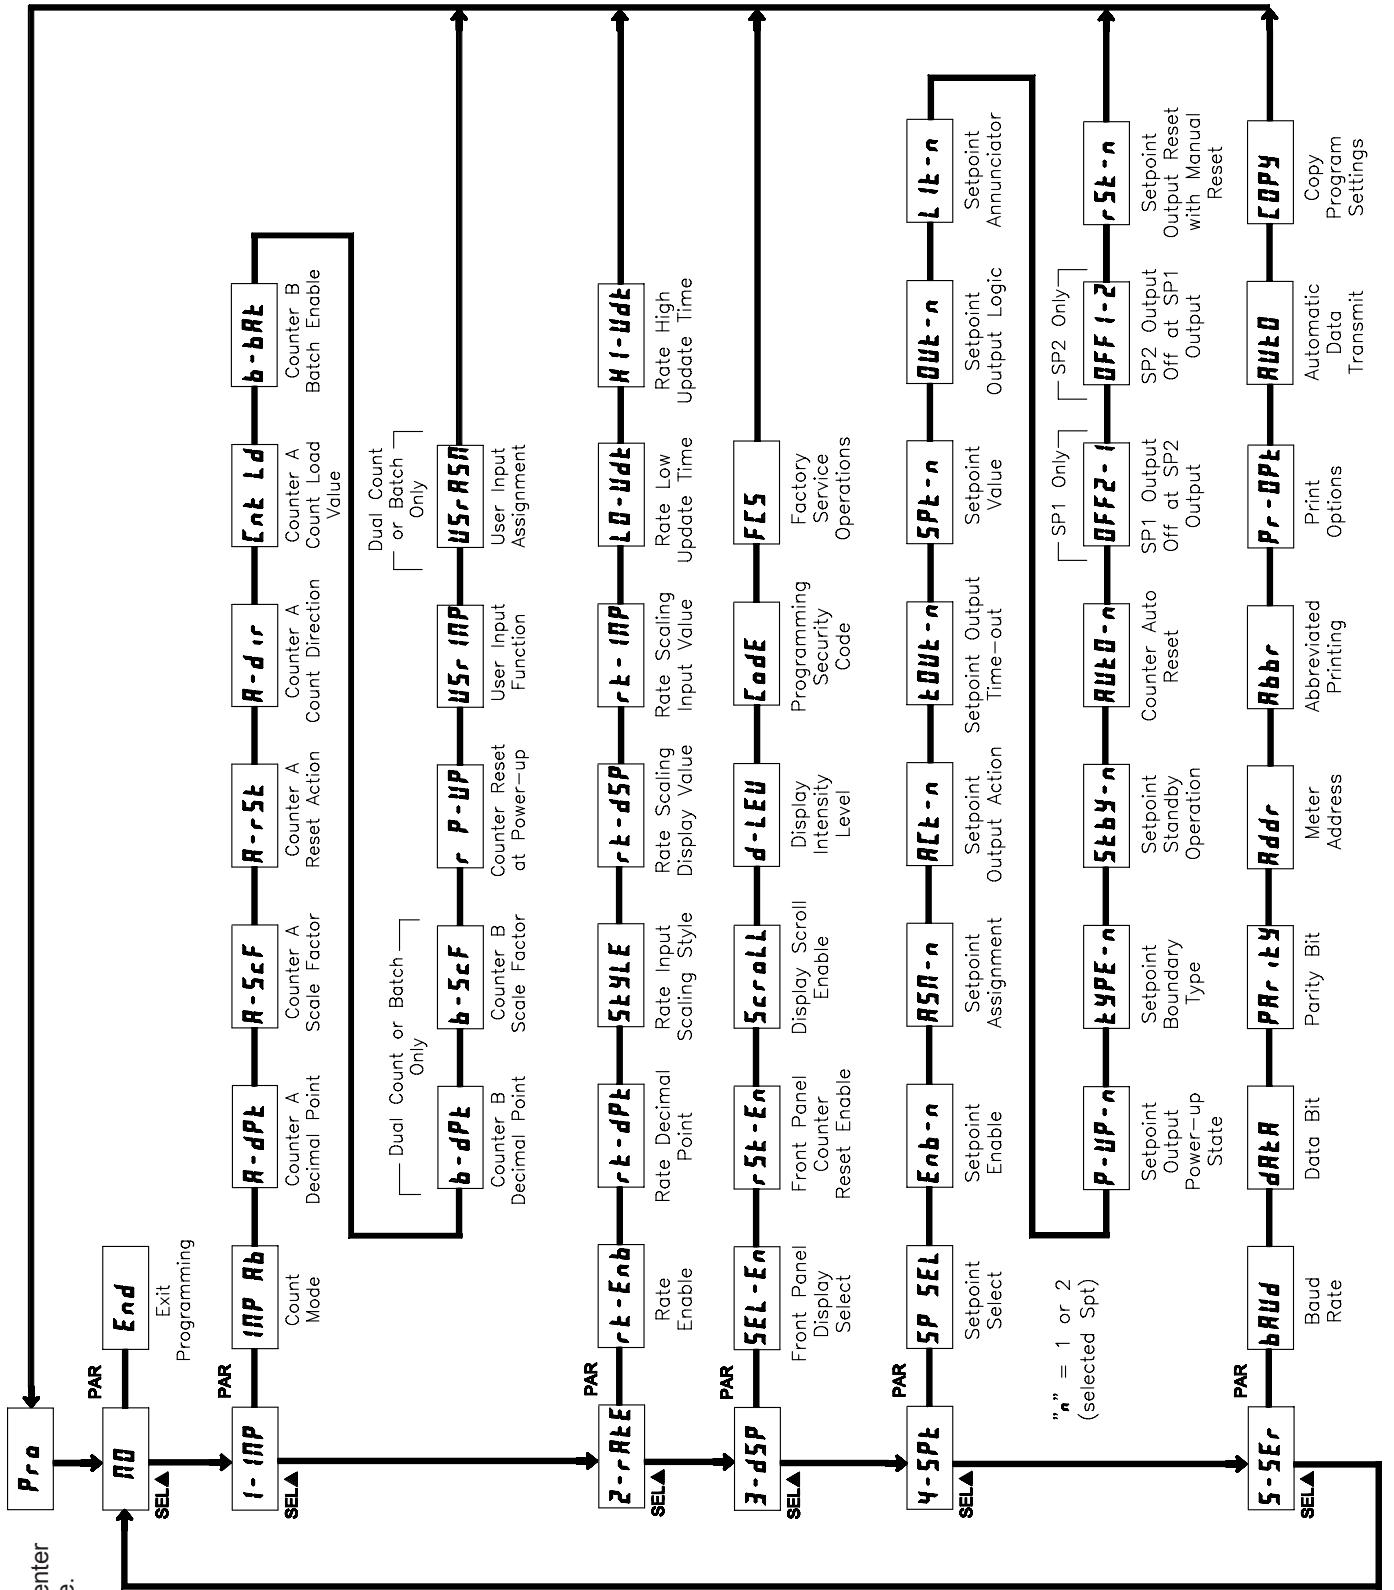

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

## Stop Bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the meter.

# PROGRAMMING QUICK OVERVIEW

Press **PAR** key to enter Programming Mode.

# MODEL LD - LARGE DISPLAY TIMER AND CYCLE COUNTER

- 2.25" or 4" HIGH RED LED DIGITS
- 6-DIGIT BI-DIRECTIONAL TIMING CAPABILITY
- 5-DIGIT CYCLE COUNTING CAPABILITY
- SELECTABLE TIMER RANGES AND OPERATING MODES
- ELAPSED TIMER AND PRESET TIMER FUNCTIONALITY
- SERIAL COMMUNICATIONS (RS232 or RS485)
- PROGRAMMABLE USER INPUT
- UNIVERSALLY POWERED
- 5 AMP FORM C RELAY OUTPUT
- ALUMINUM NEMA 4X CASE CONSTRUCTION

## GENERAL DESCRIPTION

The Large Display Timer and Cycle Counter is a versatile display that functions as an Elapsed Timer or Preset Timer, with full-featured user programmability. The meter includes a built-in Cycle Counter, relay output and serial communications capability. The 6 digit displays are available in either 2.25" or 4" high red LED digits with adjustable display intensity. The 2.25" high models are readable up to 130 feet. The 4" high models are readable up to 180 feet. Both versions are constructed of a NEMA 4 enclosure in light weight aluminum.

The Timer has two signal inputs and eight input operating modes. These modes provide level active or edge triggered start/stop operation. The Timer features 18 selectable timer ranges to cover a wide variety of timing applications. The built-in Cycle Counter can be linked to timer operation to count timing cycles, or function as a totally independent counter, accepting count speeds up to 500 Hz. The display can be toggled either manually or automatically between the Timer and Counter values.

In addition to the Timer/Counter inputs, a programmable User Input is provided to perform a variety of meter functions. DIP switches are used to configure the inputs for current sinking (active low) or current sourcing (active high) operation.

The Setpoint Output can be assigned to the Timer or Counter value, and configured to suit a variety of control and alarm requirements. The meter also includes RS232 or RS485 serial communications.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

## SPECIFICATIONS

1. **DISPLAY:** 2.25" (57 mm) or 4" (101 mm) intensity adjustable Red LED
2. **POWER REQUIREMENTS:**  
 AC POWER: 50 to 250 VAC 50/60 Hz, 26 VA  
 DC POWER: 21.6 to 250 VDC, 11 W  
 DC Out: +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC  
 +24 VDC @ 50 mA if input voltage is less than 50 VDC  
 Isolation: 2300 V<sub>RMS</sub> for 1 min. to all inputs and outputs
3. **TIMER DISPLAY:** 6-digits  
 Display Range: 0 to 999999  
 Overflow/Underflow Indication: Display flashes "E OVEr"  
 Minimum Digit Resolution: 0.001 Sec.  
 Maximum Single Digit Resolution: 1 Hr.  
 Timing Accuracy: ±0.01%
4. **CYCLE COUNTER DISPLAY:** 5-digits, may be disabled if not used  
 Display Designator: "C" to the left side of the display  
 Display Range: 0 to 99999  
 Overflow/Underflow Indication: Display flashes "E OVEr"

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

PART NUMBER	X (Length)	Y (Height)	Z (Center)
LD2T06P0	16 (406.4)	4 (101.6)	12 (304.8)
LD4T06P0	26 (660.4)	7.875 (200)	22 (558.8)

G

Maximum Count Rate:

All Count Sources except Input B: 10 Hz

Input B Count Source:

With Timer Input Filter ON: 10 Hz

With Timer Input Filter OFF: 500 Hz

#### 5. TIMER SIGNAL INPUTS (INP A and INP B)

DIP switch selectable pull-up (7.8 K $\Omega$ ) or pull-down (3.9 K $\Omega$ ) resistors determine active high or active low input logic.

Input A:

Trigger levels:  $V_{IL} = 1.25$  V max;  $V_{IH} = 2.75$  V min;  $V_{MAX} = 28$  VDC

Input B:

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

Inputs A and B:

Timer Input Pulse Width: 1 msec min.

Timer Start/Stop Response Time: 1 msec max.

Filter: Software filtering provided for relay or switch contact debounce.

Filter enabled or disabled through programming. If enabled, results in 50 msec start/stop response time for successive pulses applied to the same input terminal.

#### 6. RESET/USER INPUT Programmable Function Input:

DIP switch selectable pull-up (7.8 K $\Omega$ ) or pull-down (3.9 K $\Omega$ ) resistor that determines active high or active low input logic.

Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC

Response Time: 10 msec typ.; 50 msec debounce (activation and release)

#### 7. COMMUNICATIONS:

RS485 SERIAL COMMUNICATIONS

Type: RS485 multi-point balanced interface (isolated)

Baud Rate: 300 to 38400

Data Format: 7/8 bits; odd, even, or no parity

Bus Address: 0 to 99; max 32 meters per line

RS232 SERIAL COMMUNICATIONS

Type: RS232 half duplex (isolated)

Baud Rate: 300 to 38400

Data Format: 7/8 bits; odd, even, or no parity

#### 8. MEMORY: Nonvolatile E<sup>2</sup>PROM retains all programming parameters and timer/count values when power is removed.

#### 9. OUTPUT:

Relay: Form C contacts rated at 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)

#### 10. CONNECTIONS:

Internal removable terminal blocks are used for power and signal wiring. Remove end plates with 1/4" nut driver. For LD4 versions, all wiring is on right side of unit. For LD2 versions, power and signal wiring connections are on the right side and the relay and serial output options are on left side.

Wire Strip Length: 0.4" (10 mm)

Wire Gauge: 24-12 AWG copper wire

Torque: 5.3 inch-lbs (0.6 N-m) max

#### 11. ENVIRONMENTAL CONDITIONS:

Operating temperature: 0 to 50 °C

Storage temperature: -40 to 70 °C

Operating and storage humidity: 0 to 85% max. RH (non-condensing)

Vibration According to IEC 68-2-6: 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's (1g relay).

Shock According to IEC 68-2-27: Operational 30 g's (10g relay), 11 msec in 3 directions.

Altitude: Up to 2,000 meters

#### 12. CERTIFICATIONS AND COMPLIANCES:

##### SAFETY

UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Type 4X Enclosure rating (Face only), UL50

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

IP65 Enclosure rating (Face only), IEC 529

##### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

##### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A LD200400 Criterion B LD2006P0 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN61000-4-11	Criterion A 0.5 cycle

##### Emissions:

Emissions LD200400	EN 55011	Class B
Emissions LD2006P0	EN 55011	Class A

Notes:

1. Criterion A: Normal operation within specified limits.

2. Criterion B: Temporary loss of performance from which the unit self-recovers.

#### 13. CONSTRUCTION: Aluminum enclosure, and steel side panels with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4X/IP65 specifications. Installation Category II, Pollution Degree 2.

#### 14. WEIGHT:

LD2T06P0 - 4.5 lbs (2.04 kg)

LD4T06P0 - 10.5 lbs (4.76 kg)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
LD	2.25" High 6-Digit Red LED Timer/Cycle Counter w/ Relay Output & RS232/RS485 Serial Communications	LD2T06P0
	4" High 6-Digit Red LED Timer/Cycle Counter w/ Relay Output & RS232/RS485 Serial Communications	LD4T06P0

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed.

## G INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature. Placing the unit near devices that generate excessive heat should be avoided. The unit should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the front overlay. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## MOUNTING INSTRUCTIONS

This display is designed to be wall mounted or suspended from a ceiling truss or other suitable structure capable of supporting the LDA. Caution should be exercised when hanging the display to provide for the safety of personnel. If hanging the LDA, run the suspension cables (or chains) through the mounting bracket holes. For wall mounting use #10-32 size bolts.

## 2.0 SETTING THE DIP SWITCHES

To access the switches, remove the right side plate of the meter. A bank of eight switches is located inside the unit. *Note: Some switches are not used and should remain in the factory set position.*

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

### SWITCH 1 (Unused)

This switch is not used and should remain in the factory set position.

### SWITCH 2 (Input A) {See Note 1}

**SNK:** Adds internal 7.8 K $\Omega$  pull-up resistor to +12 VDC,  $I_{MAX} = 2.1$  mA.  
**SRC:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

### SWITCH 3 (Input A)

**FILTER ON:** Provides hardware debounce for Input A to allow relay or switch contacts to be used as a signal source. Software debounce for Inputs A and B is provided in the programming menu (Module 1).

### SWITCH 4 (Input B) {See Note 1}

**SNK:** Adds internal 7.8 K $\Omega$  pull-up resistor to +12 VDC,  $I_{MAX} = 2.1$  mA.  
**SRC:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

### SWITCH 5 (Input B)

**FILTER ON:** Provides hardware debounce for Input B to allow relay or switch contacts to be used as a signal source. Software debounce for Inputs A and B is provided in the programming menu (Module 1).

### SWITCH 6 (USER INPUT) {See Note 1}

**SNK:** Adds internal 7.8 K $\Omega$  pull-up resistor to +12VDC,  $I_{MAX} = 2.1$  mA.  
**SRC:** Adds internal 3.9 K $\Omega$  pull-down resistor, 7.2 mA max. @ 28 VDC max.

### SWITCH 7 (Unused)

This switch is not used and should remain in the factory set position.

### SWITCH 8 (Input B)

**NORMAL:** Input B performs the normal functions described in the Timer Input Operation parameter of the programming menu (Module 1).

**INTENSITY ADJUST:** In this position, Input B is used to adjust the LED display intensity. Five distinct LED levels can be set by pulsing Input B. The display intensity level can also be set in the programming menu (Module 3).

*Note 1: When the DIP switch is in the SNK position (OFF), the input is configured as active low. When the switch is in the SRC position (ON), the input is configured as active high.*

## 3.0 WIRING THE METER

### EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The meter should be properly connected to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

- Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A

Steward # 28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC# LFIL0000)

Schaffner # FN670-1.8/07

Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.

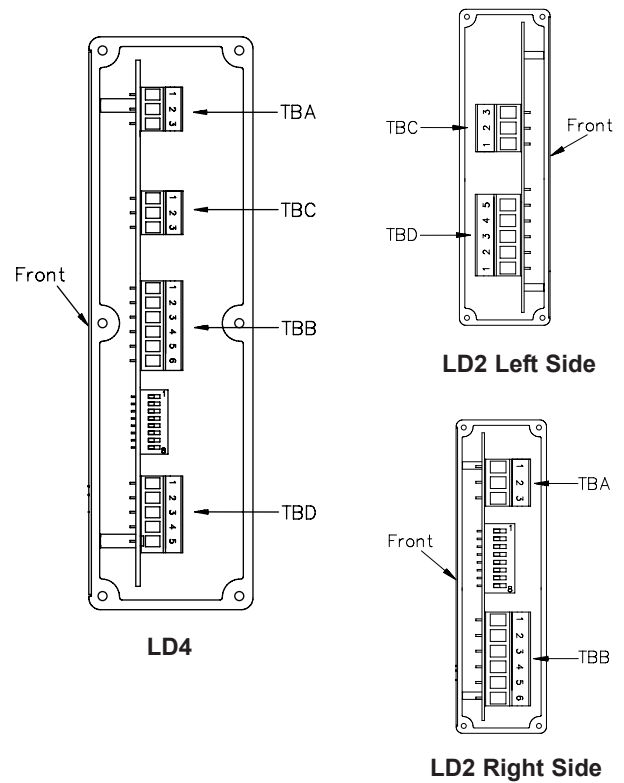

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
- Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
 Snubber: RLC# SNUB0000.

## WIRING OVERVIEW

Electrical connections are made via pluggable terminal blocks located inside the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker. When wiring the meter, compare the numbers on the label on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.4" (10 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## WIRING CONNECTIONS

Internal removable terminal blocks are used for power and signal wiring. Access to terminal blocks is through conduit fittings. Remove end plates with 1/4" nut driver. For LD4 versions, all wiring is on right side of unit. For LD2 versions, power and input wiring connections are on the right side and the relay and serial connections are on the left side.

## 3.1 POWER WIRING

The power wiring is made via the 3 position terminal block (TBA) located inside the unit (right side). The DC out power is located on TBB (right side).

### Power

Terminal 1: VAC/DC +  
Terminal 2: VAC/DC -  
Terminal 3: Protective Conductor  
Terminal

### DC Out Power

Terminal 4: + 24 VDC OUT  
Terminal 6: User Common

## 3.2 RESET/USER INPUT WIRING

The Reset/User Input is located on the right side

Terminal 5: Reset/User  
Terminal 6: Comm

### Sinking Logic

DIP switch 6 OFF

### Sourcing Logic

DIP switch 6 ON

## 3.3 SETPOINT (OUTPUT) WIRING

The setpoint relay uses a three position terminal block (TBC) located on the left side of the LD2 model, and on the right side for the LD4 model.

Terminal 1: NC  
Terminal 2: NO  
Terminal 3: Relay Common

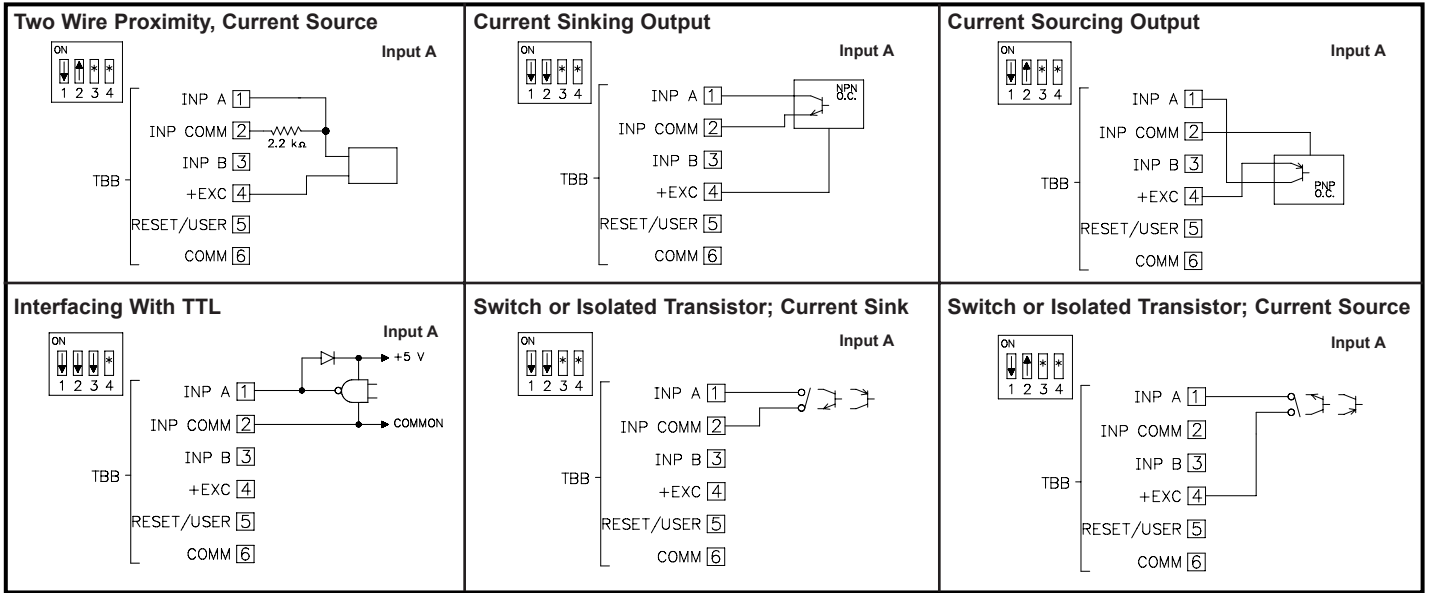

### 3.4 INPUT WIRING

The Large Display Timer is equipped with two signal inputs, A and B. These inputs are wired using the six position terminal block (TBB) located inside the unit on the right side.

- Terminal 1: Input A
- Terminal 3: Input B
- Terminal 2: Input Common

**CAUTION:** DC common is NOT isolated from input common. In order to preserve the safety of the meter application, the DC common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Input and Input Common terminals. Appropriate considerations must then be given to the potential of the input common with respect to earth ground.

\* Switch position is application dependent.

### 3.5 SERIAL WIRING

The serial connections are made via terminal block TBD located inside the unit on the left side for the LD2 and on the right side for the LD4.

communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

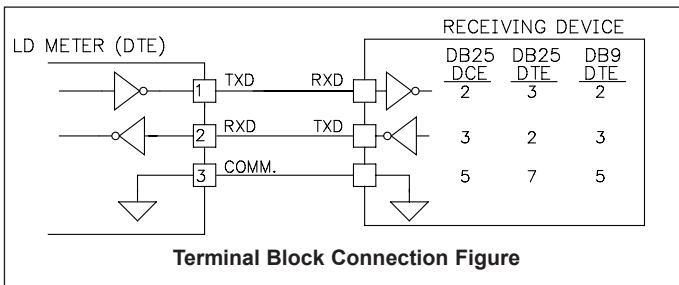

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

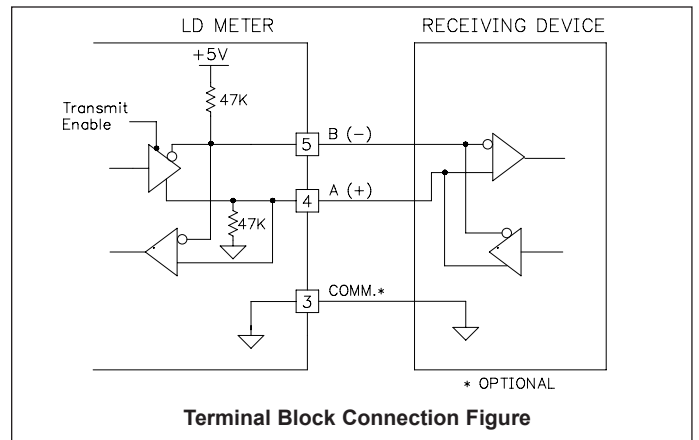

#### RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the LD is limited to 38.4k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

#### RS232 Communications

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The LD emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for

# 4.0 REVIEWING THE FRONT PANEL KEYS AND DISPLAY

KEY	DISPLAY MODE OPERATION
PAR	Access Programming Mode
SEL▲	Select display (Timer or Cycle Counter)
RST▼	Reset value(s) per front panel reset setting

PROGRAMMING MODE OPERATION
Store selected parameter and index to next parameter
Advance through selection list/select digit position in parameter value
Increment selected digit position of parameter value

## OPERATING MODE DISPLAY DESIGNATORS

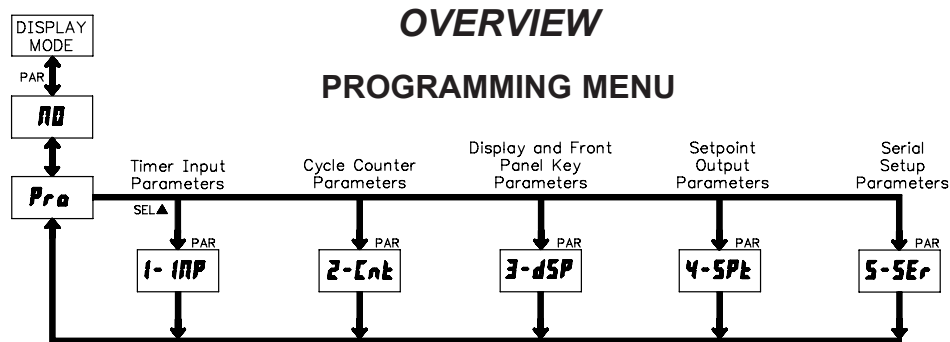

"C" - To the left of the display is the Cycle Counter value.

"f" - Between digits 5 and 6 indicates the setpoint status.

"." - Decimal point to the far right of the display can be programmed to flash when the timer is running, to provide a "Timer Run" indicator.

If display scroll is enabled, the display will toggle automatically every four seconds between the Timer and Cycle Counter values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (PAR KEY)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** key. If it is not accessible, then it is locked by either a security code or a hardware lock (See Module 3).

## MODULE ENTRY (SEL▲ & PAR KEYS)

The Programming Menu is organized into five modules. These modules group together parameters that are related in function. The display will alternate between **Pr a** and the present module. The **SEL▲** key is used to select the desired module. The displayed module is entered by pressing the **PAR** key.

## MODULE MENU (PAR KEY)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr a**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL▲** and **RST▼** keys are used to move through the selections/values for that parameter. Pressing the **PAR** key, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST▼** key increments the digit by one or the user can hold the **RST▼** key and the digit will automatically scroll. The **SEL▲** key will select the next digit to the left. Pressing the **PAR** key will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (PAR KEY)

The Programming Mode is exited by pressing the **PAR** key with **Pr a** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 3. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

# 5.1 MODULE 1 - TIMER INPUT PARAMETERS (1-1NP)

## TIMER RANGE

**18 TIMER RANGE SELECTIONS**  
(5 = SEC;  $\Pi$  = MIN; H = HR; d = DAY)

RANGE SELECTION	MAXIMUM DISPLAY	DISPLAY RESOLUTION
<b>SECONDS</b>		
555555	999999	1 SEC
555555	999999	0.1 SEC
555555	999999	0.01 SEC
555555	999999	0.001 SEC
<b>MINUTES</b>		
$\Pi\Pi\Pi\Pi\Pi$	999999	1 MIN
$\Pi\Pi\Pi\Pi\Pi$	999999	0.1 MIN
$\Pi\Pi\Pi\Pi\Pi$	999999	0.01 MIN
<b>HOURS</b>		
H H H H H H	999999	1 HR
H H H H H H	999999	0.1 HR
H H H H H H	999999	0.01 HR
<b>MINUTES/SECONDS</b>

<b>HOURS/MINUTES/SECONDS</b>		
H H $\Pi\Pi55$	995959	1 SEC
<b>DAYS/HOURS/MINUTES</b>		
d d H H $\Pi\Pi$	992359	1 MIN

## TIMER INPUT FILTER

**ON OFF**

Provides a 50 msec software debounce for the Timer Inputs (A and B). Select **ON** when using relays or switch contacts as a signal source.

## TIMING DIRECTION

**UP dn**

Bi-directional timing capability. Select the timing direction desired for the application.

## TIMER START VALUE

**000000 to 999999**

The Timer returns to this value whenever a Timer Reset occurs. The value is entered in the same display format as the Timer Range selected. Non-zero values are normally used for "timing down" applications, but they can also provide an offset value when timing up.

## TIMER INPUT OPERATION

**LEVEL**    **EDGE-1**    **EDGE-2**    **HOLD-2**  
**LEUr5t**    **Er5t-1**    **Er5t-2**    **Hr5t-2**

This parameter determines how the Timer Input Signals affect the Run/Stop status of the Timer. Timing diagrams are shown below for level active and edge triggered (1-input or 2-input) operation. For single input modes (Input A only), Input B provides a level active Timer Inhibit function. In the Display Hold mode, the timer display value remains held and only updates when a Timer Start (Input A) or Timer Stop (Input B) edge occurs.

The timer reset (**r5t**) operating modes are identical to the other modes in the diagrams, except the timer display value is reset at the Time Start edges.

The Timer can also be stopped at a Timer Stop Value or at Setpoint output activation or deactivation. This type of Stop condition is cleared when a Timer Reset occurs, or another start edge is applied on the timer input.

For Reset Modes (**r5t**), the timer is reset at Time Start edge.

## TIMER STOP VALUE

**NO YES**

The Timer stops when this value is reached regardless of the signal levels on the timer inputs. Selecting **YES** displays a sub-menu where the Stop Value is entered in the same display format as the Timer Range selected. This stop condition is cleared when a Timer Reset occurs or another start edge is applied on the timer input. Select **NO** if a Stop Value is not desired.

**000000 to 999999**

### LEVEL, LEUr5t

### EDGE-1, Er5t-1

### EDGE-2, Er5t-2

### HOLD-2, Hr5t-2

## FLASH TIMER RUN INDICATOR

**NO YES**

Select **YES** to have the Timer Run indicator flash when the timer is running.

## TIMER RUN STATE AT POWER-UP

**STOP SAUE**

Determines the Run/Stop state of the Timer at Power-up. This parameter does not apply to **LEVEL** Input Operation.

**STOP** - Timer Stopped at power-up, regardless of prior Run/Stop state  
**SAUE** - Timer assumes the Run/Stop state it was in prior to power-down

## TIMER RESET AT POWER-UP

The Timer can be programmed to Reset at each meter power-up.

## USER INPUT FUNCTION (Cont'd)

DISPLAY	MODE	DESCRIPTION
<i>inh ibt</i>	Inhibit	Inhibit timing or counting for the selected value(s).
<i>d-LEV</i>	Display Intensity Level (Edge Triggered)	Increase intensity one level for each activation.
<i>Pr int</i>	Print Request	Serial transmit of the active parameters selected in the Print Options menu (Module 5).
<i>Pr-rSt</i>	Print and Reset	Same as Print Request followed by a momentary reset of the selected value(s).
<i>0-rSt</i>	Reset Output	Edge triggered deactivation of the Setpoint Output.

## USER INPUT FUNCTION

DISPLAY	MODE	DESCRIPTION
<i>NO</i>	No Function	User Input disabled.
<i>Pr oLoc</i>	Program Mode Lock-out	See Programming Mode Access chart (Module 3).
<i>d-SEL</i>	Display Select (Edge triggered)	Toggle display with each activation.
<i>rESEt</i>	Maintained Reset	Level active reset of the selected value(s).
<i>d-HOLD</i>	Display Hold	Freeze display for the selected value(s) while allowing time or counts to accumulate internally.
<i>Hd-rSt</i>	Hold and Reset	Edge triggered reset of the selected value(s) after storing the time or count.

## USER INPUT ASSIGNMENT

*t-URL*  
*t-URL*  
*both*

The User Input Assignment only applies if the cycle counter is enabled and a selection of reset, display hold, hold and reset, inhibit, or print and reset is selected in the User Input Function menu.

# 5.2 MODULE 2 - CYCLE COUNTER PARAMETERS (2-Cnt)

### CYCLE COUNTER ENABLE

When set to *NO*, the remaining Cycle Counter parameters are not accessible.

### CYCLE COUNTER COUNTING DIRECTION

Bi-directional counting capability. Select the counting direction desired for the application.

### CYCLE COUNTER COUNT SOURCE

This parameter selects the source from which the Cycle Counter derives counts. The Timer Reset (*t-rSt*) selection generates a count when either a manual or automatic timer reset occurs (See Module 4 for programming Automatic Reset). The Input B (*INP b*) selection generates a count each time Input B is activated. This selection overrides the timer inhibit function of Input B, when the timer is programmed for Level or Edge-1 operating mode (See Module 1 for Timer Input Operating Modes).

The User Input (*USR INP*) selection generates a count each time the User Input is activated. When selected as the count source, the User Input can still be set to perform a User Function described in Module 1. In this case, the Cycle Counter will count the number of times the selected User Function occurred.

The Output ON/OFF selections generate a count when the Setpoint output either activates or deactivates.

### CYCLE COUNTER START VALUE

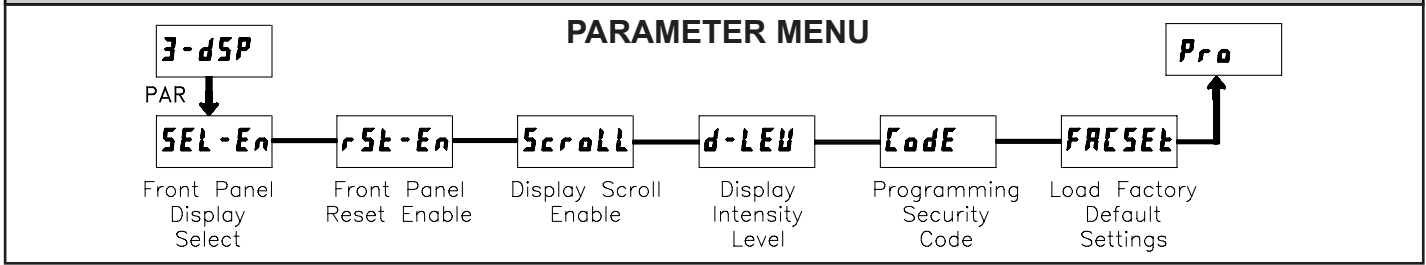

The Cycle Counter returns to this value whenever a Counter Reset occurs. Non-zero values are normally used for "down counting" applications, but can also provide an offset value when counting up.

### CYCLE COUNTER RESET AT POWER-UP

The Cycle Counter can be programmed to Reset at each meter power-up.

# 5.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY PARAMETERS (3-dSP)

## FRONT PANEL DISPLAY SELECT ENABLE (SEL▲)

The **YES** selection allows the **SEL▲** key to toggle between the timer and cycle counter displays.

## FRONT PANEL RESET ENABLE (RST▼)

The **YES** selection allows the **RST▼** key to reset the selected value(s). The shaded selections only appear if the cycle counter is enabled.

## DISPLAY SCROLL ENABLE

The **YES** selection allows the display to automatically scroll between the timer and cycle counter values. The scroll rate is about every 4 seconds.

## DISPLAY INTENSITY LEVEL

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed.

## PROGRAMMING SECURITY CODE

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (**ProLoc**) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only

the Setpoint values and Timer Stop value to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the **Code** prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the **Code** prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "PAR" KEY IS PRESSED	FULL PROGRAMMING MODE ACCESS
not <b>ProLoc</b>	---	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at <b>Code</b> prompt *
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
<b>ProLoc</b>	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	<b>Code</b> prompt	With correct code entry at <b>Code</b> prompt *
	Not Active	0-999	Full Programming	Immediate Access

\* Entering Code 222 allows access regardless of security code.

## LOAD FACTORY DEFAULT SETTINGS

The **YES** selection will return the meter to the factory default settings. The meter will display **rESEt** and then return to **Pro**, at which time all settings have been changed.

# 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

Module 4 is the programming module for the Setpoint Output parameters. Some parameters will not appear depending on the Setpoint Assignment and Setpoint Output Action selected.

## SETPOINT ASSIGNMENT

SP-ASN ↩  
 ↪ t-UAL    c-UAL

Select the display for Setpoint assignment.

## SETPOINT OUTPUT ACTION

SP-ACL ↩  
 ↪ LALCH    LALCH  
           t-OUT    t-OUT  
           ON-OFF    ON-OFF

This parameter selects the action of the Setpoint output as shown below.

SPT ACTION	DESCRIPTION	OUTPUT ACTIVATES	OUTPUT DEACTIVATES
LALCH	Latched Output Mode	When Time or Count = Setpoint On value	At Manual Reset (if ORSR = YES)
t-OUT	Timed Output Mode	When Time or Count = Setpoint On value	After Setpoint Output Time-Out
ON-OFF	On-Off Output Mode	When Time or Count = Setpoint On value	When Time or Count = Setpoint Off value

## SETPOINT ON

SP-ON ↩  
 ↪ UALUE    UALUE  
           t-5trt    t-5trt  
           t-5tOP    t-5tOP

This parameter determines when the Setpoint output will activate. The output can activate at a programmed Setpoint Value or can be set to activate when the Timer starts (t-5trt) or stops (t-5tOP).

Selecting UALUE displays a sub-menu where the Setpoint Value is entered. If the Setpoint is assigned to the Timer, the value is entered in the same display format as the selected Timer Range.

ON-UAL ↩  
 ↪ 000100    000000 to 999999

## SETPOINT OFF

SP-OFF ↩  
 ↪ UALUE    UALUE  
           t-5trt    t-5trt  
           t-5tOP    t-5tOP

The Setpoint Off parameter only appears if the Setpoint Action is set to On-Off Output mode (ON-OFF). In this mode, the Setpoint OFF parameter determines when the Setpoint Output will deactivate. The output can be programmed to deactivate at a Setpoint Off Value or can be set to deactivate when the Timer starts (t-5trt) or stops (t-5tOP).

Selecting UALUE displays a sub-menu where the Setpoint Off Value is entered. If the Setpoint is assigned to the Timer, the value is entered in the same display format as the selected Timer Range.

OF-UAL ↩  
 ↪ 000200    000000 to 999999

## SETPOINT OUTPUT TIME-OUT

O-TOUT ↩    00.0001 to 99.999  
 ↪ 00.0100

This parameter is only active if the Setpoint Action is set to Timed Output mode (t-OUT). Enter the time duration the Setpoint Output will remain ON once it is activated. This value is always entered in minutes, seconds, and hundredths of seconds format. The maximum value is 99 minutes 59.99 seconds.

## STOP TIMER

STOP-t ↩    NO  
 ↪ NO    t-ON  
           t-OFF

Stops the Timer when the Setpoint output activates (t-ON) or deactivates (t-OFF). Select NO if the output should not affect the Timer Run/Stop status.

The Timer Stop condition is cleared when a Timer Reset occurs, or a Time Start edge is applied on the Timer input.

## TIMER/COUNTER AUTO RESET

RUTOR ↩    NO  
 ↪ NO    t-ON  
           t-OFF

Automatically resets the Setpoint Assigned display value when the Setpoint Output activates (t-ON) or deactivates (t-OFF). Select NO if the output should not cause a display reset.

## SETPOINT OUTPUT RESET WITH DISPLAY RESET

ORSR ↩    YES    NO  
 ↪ YES

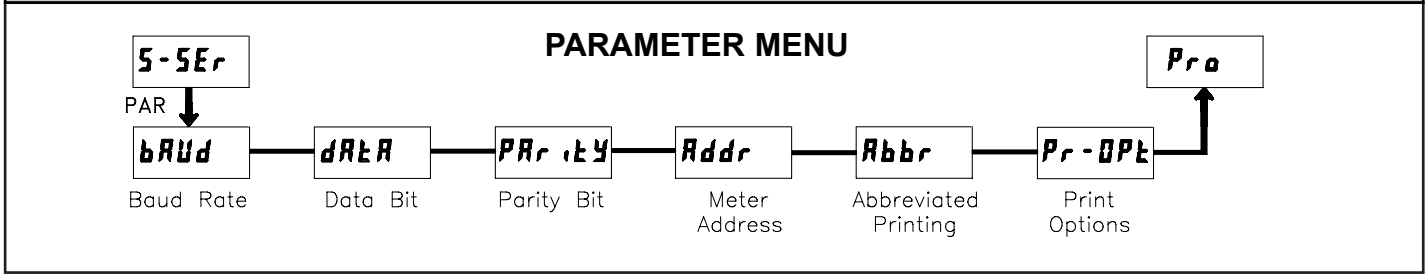

Select YES to have the Setpoint Output deactivate (reset) when the Setpoint Assigned display resets. Reset can occur by the RST key or the User Input, if programmed for that function. Select NO if the Setpoint output should not reset when the display resets.

## SETPOINT OUTPUT POWER-UP STATE

OPUP ↩    OFF  
 ↪ OFF    ON  
           SAVE

SAVE will restore the output to the same state it was at before the meter was powered down. ON will activate the output at power up. OFF will deactivate the output at power up. This parameter is not active when the Setpoint Action is selected for timed output mode.

# 5.5 MODULE 5 - SERIAL COMMUNICATIONS PARAMETERS (5-5Er)

Module 5 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the meter with those of the host computer or other serial device.

**BAUD RATE**

bAUd

300	1200	4800	19200
600	2400	9600	38400

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

**DATA BIT**

dAtA

7-bit 8-bit

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

**PARITY BIT**

PARity

NO Odd EVEN

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to **NO**, an additional stop bit is used to force the frame size to 10 bits.

**METER ADDRESS**

Addr

0 to 99

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING

Abbr

NO YES

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select **NO** for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select **YES** for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the **PRINT OPTIONS**. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS

Pr-OPt

NO YES

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting **YES** displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as **YES** in the sublist will be transmitted during a block print. Parameters entered as **NO** will not be sent.

The "Print All" (**Pr-ALL**) option selects all meter values for transmitting (**YES**), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. For example, the Cycle Counter and Cycle Counter Start values will only be sent when the Cycle Counter is enabled. If disabled, these parameters are inactive and will not be transmitted. Likewise, only the Setpoint parameters that apply to the programmed Setpoint Output Action will be transmitted.

DISPLAY	DESCRIPTION	FACTORY SETTING	MNEMONIC
t-URL	Timer	YES	TMR
C-URL	Cycle Counter	NO	CNT
t-Start	Timer Start	NO	TST
t-Stop	Timer Stop	NO	TSP
C-Start	Counter Start	NO	CST
SP-ON	Setpoint ON	NO	SPT
SP-OFF	Setpoint OFF	NO	SOF
t-TOU	Setpoint Time-out	NO	STO

## Sending Serial Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character, \* or \$.

### Command Chart

Command	Description	Notes
N	Node (meter) Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by a register ID character.
V	Value Change (write)	Write to register of the meter. Must be followed by a register ID character and numeric data.
R	Reset	Reset a value or the output. Must be followed by a register ID character
P	Block Print Request (read)	Initiates a block print output. Registers in the print block are selected in Print Options.

### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

1. The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
2. After the optional address specifier, the next character is the command character.
3. The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints all the active selections chosen in the Print Options menu parameter.
4. If constructing a value change command (writing data), the numeric data is sent next.
5. All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See timing diagram figure for differences in meter response time when using the \* and \$ terminating characters.

## Receiving Data From The Meter

Data is transmitted from the meter in response to either a transmit command (T), a block print request command (P) or a User Input print request. The response from the meter is either a full field transmission or an abbreviated transmission, depending on the selection chosen in Module 5.

### Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte data field; 9 bytes for number and three bytes for decimal points
19	<CR> (carriage return)
20	<LF> (line feed)
21	<SP>* (Space)
22	<CR>* (carriage return)
23	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The first two characters transmitted are the meter address. If the address assigned is 0, two spaces are substituted. A space follows the meter address field. The next three characters are the register mnemonic, as shown in the Register Identification Chart.

The numeric data is transmitted next. The numeric field (bytes 7 to 18) is 12 characters long. When a display overflow exists for a requested timer or cycle counter value, an \* (used as an overflow character) replaces a space in byte 7. Byte 8 is always a space.

The remaining ten positions of this field consist of seven positions for the requested value with decimal points positioned for the selected timer range. The

### Register Identification Chart

ID	Value Description	MNEMONIC	Applicable Commands	Transmit Details (T and V)
A	Timer	TMR	T, V, R	6 digit, per Timer Range
B	Cycle Counter	CNT	T, V, R	5 digit
C	Timer Start	TST	T, V	6 digit, per Timer Range
D	Timer Stop	TSP	T, V	6 digit, per Timer Range
E	Counter Start	CST	T, V	5 digit
F	Setpoint ON (Reset Output)	SPT	T, V, R	per Setpoint Assignment, same as Timer or Counter
G	Setpoint OFF	SOF	T, V	per Setpoint Assignment, same as Timer or Counter
H	Setpoint Time-out	STO	T, V	6 digit, mm.ss.ss format

### Command String Examples:

1. Node address = 17, Write 350 to the Setpoint On value  
String: N17VF350\$
2. Node address = 5, Read Timer value, response time of 50 msec min  
String: N5TA\*
3. Node address = 0, Reset Setpoint output  
String: RF\*
4. Node address = 31, Request a Block Print Output, response time of 2 msec min  
String: N31P\$

### Transmitting Data to the Meter

Numeric data sent to the meter must be limited to Transmit Details listed in the Register Identification Chart. Leading zeros are ignored. The meter ignores any decimal point and conforms the number to the appropriate display format. (For example: The Timer range is set for tenths of a second and 25 is written to the Timer Start register. The value of the register is now 2.5 seconds. In this case, write a value of 250 to equal 25.0 seconds).

Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.

data within bytes 9 to 18 is right-aligned with leading spaces for any unfilled positions.

The end of the response string is terminated with a <CR> and <LF>. After the last line of a block print, an extra <SP>, <CR> and <LF> are added to provide separation between the print blocks.

### Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 9 bytes for number and three bytes for decimal points
13	<CR> (carriage return)
14	<LF> (line feed)
15	<SP>* (Space)
16	<CR>* (carriage return)
17	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and register mnemonic, leaving only the numeric part of the response.

### Meter Response Examples:

1. Node address = 17, full field response, Cycle Counter = 875  
17 CNT 875 <CR><LF>
2. Node address = 0, full field response, Setpoint On value = 250.5  
SPT 250.5<CR><LF>
3. Node address = 0, abbreviated response, Setpoint On value= 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Command Response Time

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\* or \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

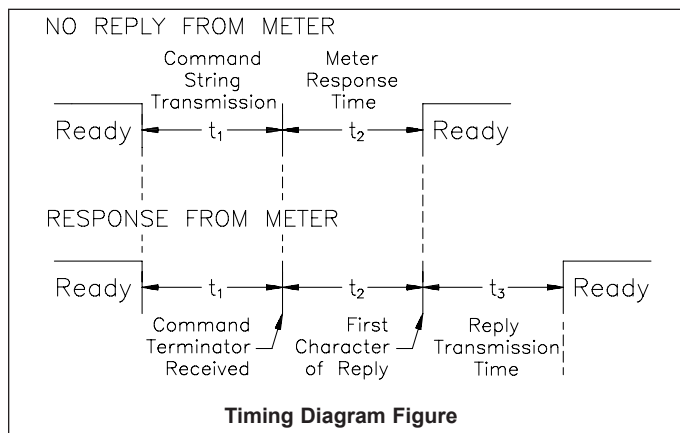

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time of 50 msec. minimum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time ( $t_2$ ) of 2 msec. minimum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

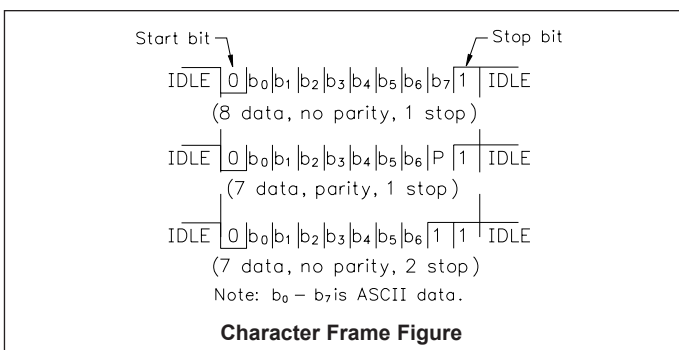

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character. The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start Bit and Data Bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

### Parity Bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The LD Timer ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop Bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the meter.

# LD TIMER PROGRAMMING QUICK OVERVIEW

Press **PAR** key to enter Programming Mode.

# MODEL LD - LARGE DC VOLT/CURRENT/PROCESS DISPLAY

- 2.25" & 4" HIGH RED LED DIGITS
- PROGRAMMABLE SCALING AND DECIMAL POINTS
- PROGRAMMABLE USER INPUT
- DUAL 5 AMP FORM C RELAY
- ALUMINUM NEMA 4X CASE CONSTRUCTION
- RS232/RS485 SERIAL COMMUNICATIONS
- UNIVERSALLY POWERED

## GENERAL DESCRIPTION

The Large Display is a versatile display available as a DC volt, current, or process meter with scaling, serial communications and dual relay outputs. The 5 digit displays are available in either 2.25" or 4" high red LED digits with adjustable display intensities. The 2.25" high models are readable up to 130 feet. The 4" high models are readable up to 180 feet. Both versions are constructed of a NEMA 4X enclosure in light weight aluminum.

All models also come with dual Form C relay outputs and RS232 / RS485 serial communications.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
LD2A	2.25" High 5 Digit Red LED Volt/Current Meter w/ Relay Output and RS232/RS485 Serial Comms	LD2A05P0
LD4A	4" High 5 Digit Red LED Volt/Current Meter w/ Relay Output and RS232/RS485 Serial Comms	LD4A05P0

## DIMENSIONS In inches (mm)

PART NUMBER	X (Length)	Y (Height)	Z (Center)
LD2A05P0	16 (406.4)	4 (101.6)	12 (304.3)
LD4A05P0	26 (660.4)	7.875 (200)	22 (558.8)

## SPECIFICATIONS

- DISPLAY:** 5 digit, 2.25" (57 mm) or 4" (101 mm) intensity adjustable Red LED (-99999 to 99999)
- POWER REQUIREMENTS:**  
AC POWER: 50 to 250 VAC 50/60 Hz, 26 VA  
DC POWER: 21.6 to 250 VDC, 11 W  
DC Out: +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC  
+24 VDC @ 50 mA if input voltage is less than 50 VDC  
Isolation: 2300 Vrms for 1 min. to all inputs and outputs
- INPUT RANGES:** Jumper Selectable  
**D.C. Voltages:** 200 mV, 2 V, 20 V, 200 V, 10 V

INPUT RANGE	ACCURACY @ 23 °C LESS THAN 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
200 mV	0.1% of span	1.027 MΩ	75 VDC	10 μV	70 ppm /°C
2 V	0.1% of span	1.027 MΩ	75 VDC	0.1 mV	70 ppm /°C
20 V	0.1% of span	1.027 MΩ	250 VDC	1 mV	70 ppm /°C
200 V	0.1% of span	1.027 MΩ	250 VDC	10 mV	70 ppm /°C
10 V	0.1% of span	538 KΩ	30 V	1 mV	70 ppm /°C

**D.C. Currents:** 200 μA, 2 mA, 20 mA, 200 mA

INPUT RANGE	ACCURACY @ 23 °C LESS THAN 85% RH	INPUT IMPEDANCE	MAX INPUT SIGNAL	RESOLUTION	TEMP. COEFFICIENT
200 μA	0.1% of span	1.111 KΩ	15 mA	10 nA	70 ppm /°C
2 mA	0.1% of span	111 Ω	50 mA	0.1 μA	70 ppm /°C
20 mA	0.1% of span	11 Ω	150 mA	1 μA	70 ppm /°C
200 mA	0.1% of span	1 Ω	500 mA	10 μA	70 ppm /°C

**D.C. Process:** 4 to 20 mA, 1 to 5 VDC, 0/1 to 10 VDC

INPUT RANGE	SELECT RANGE
4 - 20 mA	Use the 20 mA range
1 - 5 VDC	Use the 10V range
1 - 10 VDC	Use the 10V range

- OVERRANGE/UNDERRANGE INDICATION:**  
**Input Overrange Indication:** "BLBL"  
**Input Underrange Indication:** "ULUL"  
**Display Overrange/Underrange Indication:** "....."/"....."
- A/D CONVERTER:** 16 bit resolution  
A/D Conversion Rate: 6 readings/sec.

6. **DISPLAY RESPONSE TIME:** 500 msec min.
7. **USER INPUT:**  
 Software selectable pull-up (8.6 K $\Omega$ ) or pull-down resistor (3.9 K $\Omega$ ) that determines active high or active low input logic.  
 Trigger levels:  $V_{IL} = 1.0$  V max;  $V_{IH} = 2.4$  V min;  $V_{MAX} = 28$  VDC  
 Response Time: 5 msec typ.; 50 msec debounce (activation and release)
8. **COMMUNICATIONS:**  
**Type:** RS485 or RS232  
**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.  
 Working Voltage: 50 V. Not Isolated from all other commons.  
**Data:** 7/8 bits  
**Parity:** no, odd or even  
**Baud Rate:** 300 to 38.4 K  
**Bus Address:** Selectable 0 to 99, Max. 32 meters per line (RS485)
9. **MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programming parameters and max/min values when power is removed.
10. **OUTPUT:**  
**Type:** Single FORM-C relay  
**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.  
 Working Voltage: 150 Vrms  
**Contact Rating:** 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)  
**Life Expectancy:** 100,000 minimum operations  
**Response Time:**  
 Turn On Time: 4 msec max.  
 Turn Off Time: 4 msec max.
11. **ENVIRONMENTAL CONDITIONS:**  
 Operating temperature: 0 to 50 °C  
 Storage temperature: -40 to 70 °C  
 Operating and storage humidity: 0 to 85% max. RH (non-condensing)  
 Vibration According to IEC 68-2-6: Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's (1 g relay).  
 Shock According to IEC 68-2-27: Operational 30 g's (10 g relay), 11 msec in 3 directions.  
 Altitude: Up to 2,000 meters
12. **CONNECTIONS:** Internal removable terminal blocks  
 Wire Strip Length: 0.4" (10 mm)  
 Wire Gauge: 24-12 AWG copper wire  
 Torque: 5.3 inch-lbs (0.6 N-m) max.  
 Cable Diameter: Outside diameter must be 0.181" (4.6 mm) to 0.312" (7.9 mm) to maintain NEMA 4 rating of cord grips.

13. **CONSTRUCTION:** Aluminum enclosure, and steel side panels with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4X/IP65 specifications. Installation Category II, Pollution Degree 2.
14. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**  
 UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
 File # E179259, UL61010A-1, CSA C22.2 No. 61010-1  
 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

# 1.0 INSTALLING THE METER

## INSTALLATION

The meter meets NEMA 4X/IP65 requirements when properly installed.

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the operating temperature. Placing the unit near devices that generate excessive heat should be avoided. The unit should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the front overlay. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## MOUNTING INSTRUCTIONS

This display is designed to be wall mounted or suspended from a ceiling truss or other suitable structure capable of supporting the LDA. Caution should be exercised when hanging the display to provide for the safety of personnel. If hanging the LDA, run the suspension cables (or chains) through the mounting bracket holes. For wall mounting use #10-32 size bolts.

# 2.0 SETTING THE JUMPERS

## INPUT RANGE JUMPER

This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum signal input to avoid overloads. To access the jumper, remove the side cover of the meter.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

# 3.0 WIRING THE METER

## EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.
3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.
5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC# FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward # 28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC# LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom # 1 VR3

Note: Reference manufacturer's instructions when installing a line filter.
6. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
7. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
  - Snubber: RLC# SNUB0000.

## WIRING OVERVIEW

Electrical connections are made via pluggable terminal blocks located inside the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker. When wiring the meter, compare the numbers on the label on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.4" (10 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## WIRING CONNECTIONS

Internal removable terminal blocks are used for power and signal wiring. Access to terminal blocks is through conduit fittings. Remove end plates with 1/4" nut driver. For LD4 versions, all wiring is on right side of unit. For LD2 versions, power and relay wiring is on the right side and the input, serial, DC out and user input is on the left side.

Connect drain wire from shielded cable(s) to screw on side plate for proper grounding.

## 3.1 POWER WIRING

The power wiring is made via the 3 position terminal block (TBA) located inside the unit (right side). The DC out power is located: LD2 - left side, LD4 - right side

### DC Out Power

Terminal 4: + 24 VDC OUT  
Terminal 6: User Common

### 3.2 USER INPUT WIRING

The User Input is located: LD2 - left side, LD4 - right side

Terminal 5: User Input  
Terminal 6: User Comm

#### Sinking Logic

#### Sourcing Logic

### 3.3 SETPOINT (OUTPUT) WIRING

The setpoint relays use a six position terminal block (TBB) located inside the (right side).

Terminal 1: NC 1  
Terminal 2: NO 2  
Terminal 3: Relay 1 Common  
Terminal 4: NC 2  
Terminal 5: NO 2  
Terminal 6: Relay 2 Common

### 3.4 INPUT WIRING

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

**CAUTION:** Analog common is NOT isolated from user input common. In order to preserve the safety of the meter application, the DC common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the User Input and Input Common terminals. Appropriate considerations must then be given to the potential of the input common with respect to earth ground. Always connect the analog signal common to terminal 2.

### 3.5 INPUT SIGNAL WIRING

#### Voltage Signal (self powered)

Terminal 1: +VDC  
Terminal 2: -VDC

#### Current Signal (self powered)

Terminal 3: +ADC  
Terminal 2: -ADC

#### Current Signal (2 wire requiring excitation)

Terminal 4: +EXC  
Terminal 3: +ADC

#### Current Signal (3 wire requiring excitation)

Terminal 3: +ADC (signal)  
Terminal 2: -ADC (common)  
Terminal 4: +EXC

#### Voltage Signal (3 wire requiring excitation)

Terminal 1: +VDC (signal)  
Terminal 2: -VDC (common)  
Terminal 4: +EXC

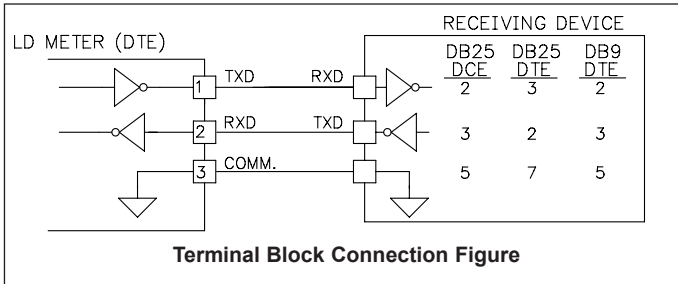

### 3.6 SERIAL WIRING

The serial connections are made via terminal block TBD located inside the unit on the left side for the LD2 and on the right side for the LD4.

#### RS232 Communications

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The LD emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for

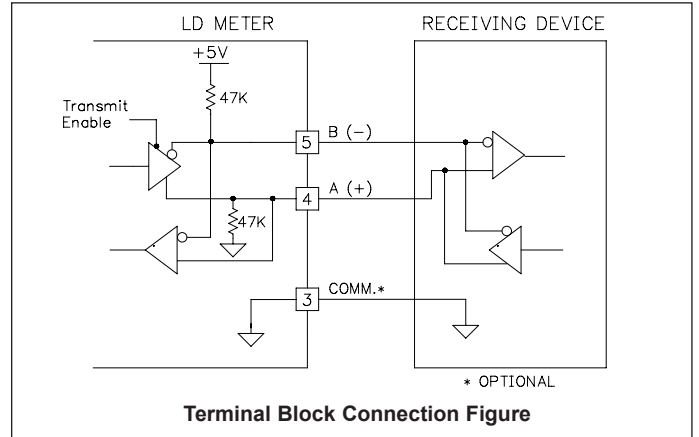

communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

#### RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the LDA is limited to 38.4k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

#### BUTTON DISPLAY MODE OPERATION

- PAR** Access Programming Mode
- SEL▲** Index display through selected displays
- RST▼** Resets display

#### PROGRAMMING MODE OPERATION

- Store selected parameter and index to next parameter
- Advance through selection list/select digit position in parameter value
- Increment selected digit of parameter value

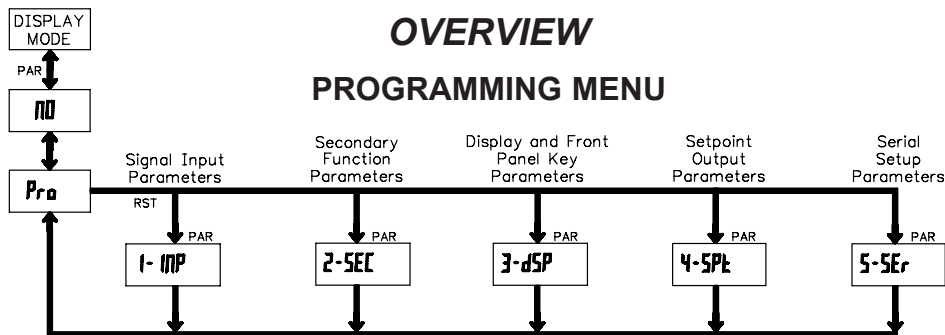

#### OPERATING MODE DISPLAY DESIGNATORS

- MAX - Maximum display capture value
- MIN - Minimum display capture value

- "1" - To the left of the display indicates setpoint 1 output activated.
- "2" - To the left of the display indicates setpoint 2 output activated.

Pressing the **SEL▲** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

# 5.0 PROGRAMMING THE METER

## PROGRAMMING MODE ENTRY (PAR BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** button. If it is not accessible, then it is locked by either a security code or a hardware lock.

## MODULE ENTRY (SEL▲ & PAR BUTTONS)

The Programming Menu is organized into five modules. These modules group together parameters that are related in function. The display will alternate between **PrO** and the present module. The **SEL▲** button is used to select the desired module. The displayed module is entered by pressing the **PAR** button.

## MODULE MENU (PAR BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **PrO**. Programming may continue by accessing additional modules.

## SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL▲** and **RST▼** buttons are used to move through the selections/values for that parameter. Pressing the **PAR** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST▲** button increments the digit by one or the user can hold the **RST▲** button and the digit will automatically scroll. The **SEL▼** button will select the next digit to the left. Pressing the **PAR** button will enter the value and move to the next parameter.

## PROGRAMMING MODE EXIT (PAR BUTTON)

The Programming Mode is exited by pressing the **PAR** button with **PrO** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

## PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

## FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

## ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

## 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS (1-IMP)

### INPUT RANGE

SELECTION	RANGE RESOLUTION	SELECTION	RANGE RESOLUTION
200uA	200.00 $\mu$ A	0.02A	20.000 mA
0.002A	2.0000 mA	0.2A	200.00 mA
0.2v	200.00 mV	20v	20.000 V
2v	2.0000 V	200v	200.00 V
10v	10.000 V		

Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

### DISPLAY DECIMAL POINT

Select the decimal point location for the Input, MIN and MAX displays. This selection also affects the **dSP 1** and **dSP 2** parameters and setpoint values and offset value.

### DISPLAY OFFSET VALUE

The display can be corrected with an offset value. This can be used to compensate for signal variations or sensor errors. This value is automatically

updated after a Zero Display to show how far the display is offset. A value of zero removes the effects of offset. The decimal point follows the **dECPt** selection.

### FILTER SETTING

If the displayed value is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

### FILTER BAND

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

### SCALING STYLE

If Input Values and corresponding Display Values are known, the Key-in (**KEY**) scaling style can be used. This allows scaling without the presence or changing of the input signal. If Input Values have to be derived from the actual input signal source or simulator, the Apply (**APPLY**) scaling style must be used.

### INPUT VALUE FOR SCALING POINT 1

For Key-in (**KEY**) style, enter the first Input Value using the front panel buttons. (The Input Range selection sets the decimal location for the Input Value).

For Apply (**APPLY**) style, the meter shows the previously stored Input Value. To retain this value, press the **SEL▲** button to advance to the next parameter. To change the Input Value, press the **RST▼** button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the **SEL▲** button to enter the value being displayed.

### DISPLAY VALUE FOR SCALING POINT 1

Enter the first Display Value by using the front panel buttons. This is the same for **KEY** and **APPLY** scaling styles. The decimal point follows the **dECPt** selection.

### INPUT VALUE FOR SCALING POINT 2

For Key-in (**KEY**) style, enter the known second Input Value using the front panel buttons.

For Apply (**APPLY**) style, the meter shows the previously stored Input Value for Scaling Point 2. To retain this value, press the **SEL▲** button to advance to the next parameter. To change the Input Value, press the **RST▼** button and apply the input signal to the meter. Adjust the signal source externally until the desired Input Value appears. Press the **SEL▲** button to enter the value being displayed.

### DISPLAY VALUE FOR SCALING POINT 2

Enter the second Display Value by using the front panel buttons. This is the same for **KEY** and **APPLY** scaling styles. The decimal point follows the **dECPt** selection.

### General Notes on Scaling

1. When using the Apply (**APPLY**) scaling style, input values for scaling points must be confined to the range limits shown.
2. The same Input Value should not correspond to more than one Display Value. (Example: 20 mA can not equal 0 and 20.)
3. For input levels beyond the programmed Input Values, the meter extends the Display Value by calculating the slope from the two coordinate pairs ( $IMP1 / dSP1$  &  $IMP2 / dSP2$ ).

### USER INPUT FUNCTION

DISPLAY MODE	DESCRIPTION
<b>NO</b> No Function	User Input disabled.
<b>P-LOC</b> Program Mode Lock-out	See Programming Mode Access chart (Module 3).
<b>ZERO</b> Zero Input (Edge triggered)	Zero the Input Display value causing Display Reading to be Offset.
<b>RESET</b> Reset (Edge triggered)	Resets the assigned value(s) to the current input value.
<b>d-HLD</b> Display Hold	Holds the assigned display, but all other meter functions continue as long as activated (maintained action).
<b>d-SEL</b> Display Select (Edge Triggered)	Advance once for each activation.
<b>d-LEV</b> Display Intensity Level (Edge Triggered)	Increase intensity one level for each activation.
<b>Pr int</b> Print Request	Serial transmit of the active parameters selected in the Print Options menu (Module 5).
<b>Pr-rst</b> Print and Reset	Same as Print Request followed by a momentary reset of the assigned value(s).
<b>r-st-1</b> Setpoint 1 Reset	Resets setpoint 1 output.
<b>r-st-2</b> Setpoint 2 Reset	Resets setpoint 2 output.
<b>r-st-12</b> Setpoint 1 and 2 Reset	Reset both setpoint 1 and 2 outputs.

### USER INPUT ASSIGNMENT

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset, display hold, or print and reset is selected in the User Input Function menu.

### USER INPUT ACTIVE LEVEL

Select whether the user input is configured as active low or active high.

## 5.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-SEC)

### MAX DISPLAY ENABLE

NO YES

Enables the Maximum Display Capture capability.

### MAX CAPTURE DELAY TIME

00 to 9999 sec.

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

### MIN DISPLAY ENABLE

NO YES

Enables the Minimum Display Capture capability.

### MIN CAPTURE DELAY TIME

00 to 9999 sec.

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

### FACTORY SERVICE OPERATIONS

NO YES

Select YES to perform either of the Factory Service Operations shown below.

### RESTORE FACTORY DEFAULT SETTINGS

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rESEt and then return to CodE 00. Press the PAR button to exit the module.

### VIEW MODEL AND VERSION DISPLAY

Entering Code 50 will display the model (LDA) and version (x.x) of the meter. The display then returns to CodE 00. Press the PAR button to exit the module.

### CALIBRATION

The LD uses stored calibration values to provide accurate measurements. Over time, the electrical characteristics of the components inside the LD will slowly change with the result that the stored calibration values no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the LD involves a calibration which should only be performed by individuals experienced in calibrating electronic equipment. Allow 30 minute warm up before performing any calibration related procedure. The following procedures should be performed at an ambient temperature of 15 to 35 °C (59 to 95 °F).

*CAUTION: The accuracy of the calibration equipment will directly affect the accuracy of the LD.*

### Current Calibration

1. Connect the negative lead of a precision DC current source with an accuracy of 0.01% or better to the COMM terminal. Leave the positive lead of the DC current source unconnected.
2. With the display at CodE 48, press the PAR button. Unit will display [RL 00
3. Press the RST button to select the range to be calibrated.
4. Press the PAR button. Display reads 000
5. With the positive lead of the DC current source unconnected, press PAR. Display reads [RL for about 8 seconds.
6. When the display reads the selected range, connect the positive lead of the DC current source to the current input and apply full-scale input signal for the range. (Note: For 200 mA range, apply 100 mA as indicated on the display.) Press PAR. Display reads [RL for about 8 seconds.
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads [RL 00, press the PAR button to exit calibration.

### Voltage Calibration

1. Connect a precision DC voltage source with an accuracy of 0.01% or better to the volt input and COMM terminals of the LD. Set the output of the voltage source to zero.
2. With the display at CodE 48, press the PAR button. Unit will display [RL 00.
3. Press the RST button to select the range to be calibrated.
4. Press the PAR button. Display reads 000.
5. With the voltage source set to zero (or a dead short applied to the input), press PAR. Display reads [RL for about 8 seconds.
6. When the display reads the selected range, apply full-scale input signal for the range. (Note: For 200V range, apply 100V as indicated on the display.) Press PAR. Display reads [RL for about 8 seconds.
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads [RL 00, press the PAR button to exit calibration.

# 5.3 MODULE 3 - DISPLAY AND FRONT PANEL BUTTON PARAMETERS (3-dSP)

## DISPLAY UPDATE TIME

**dSP-t**    0.5    1    2    seconds

← [ ] →

This parameter sets the display update time in seconds.

## FRONT PANEL DISPLAY SELECT ENABLE (SEL)

**SEL**    YES    NO

← [ YES ] →

The YES selection allows the SEL button to toggle through the enabled displays.

## FRONT PANEL RESET ENABLE (RST)

**rSt**    NO    LO    dSP

← [ dSP ] →

          HI    HI-LO

This selection allows the RST button to reset the selected value(s).

## ZERO DISPLAY WITH DISPLAY RESET

**zEr0**    YES    NO

← [ NO ] →

This parameter enables the RST button or user input to zero the input display value, causing the display reading to be offset.

Note: For this parameter to operate, the RST button or User Input being used must be set to dSP and the Input value must be displayed. If these conditions are not met, the display will not zero.

## DISPLAY SCROLL ENABLE

**Scrol**    YES    NO

← [ NO ] →

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

## DISPLAY INTENSITY LEVEL

**d-LEU**    1 to 5

← [ 5 ] →

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed.

## PROGRAMMING SECURITY CODE

**CodE**    000 to 999

← [ 000 ] →

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	MODE WHEN "SEL" BUTTON IS PRESSED	FULL PROGRAMMING MODE ACCESS
not P-Loc	_____	0	Full Programming	Immediate Access
		1-99	Quick Programming	After Quick Programming with correct code entry at CodE prompt *
		100-999	CodE prompt	With correct code entry at CodE prompt *
P-Loc	Active	0	Programming Lock	No Access
		1-99	Quick Programming	No Access
		100-999	CodE prompt	With correct code entry at CodE prompt *
	Not Active	0-999	Full Programming	Immediate Access

# 5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

## PARAMETER MENU

### SETPOINT SELECT

Enter the setpoint (output) to be programmed. The *n* in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to SPSEL. Repeat steps for each setpoint to be programmed. Select **NO** to exit the module.

### SETPOINT ENABLE

Select **YES** to enable Setpoint *n* and access the setup parameters. If **NO** is selected, the unit returns to SPSEL and Setpoint *n* is disabled.

### SETPOINT ACTION

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- HI-bl = High Acting, with balanced hysteresis
- LO-bl = Low Acting, with balanced hysteresis
- HI-ub = High Acting, with unbalanced hysteresis
- LO-ub = Low Acting, with unbalanced hysteresis

### SETPOINT VALUE

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

### HYSTERESIS VALUE

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

### ON TIME DELAY

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OFF TIME DELAY

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

### OUTPUT RESET ACTION

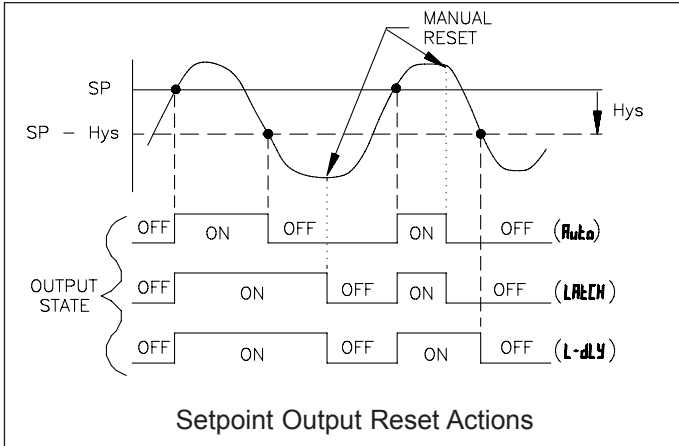

**Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel **RST** button or user input. The output remains off until the trigger point is crossed again.

**LATCH** = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the

corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**L-dly** = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output panel. Latch means that the output can only be turned off by the front panel **RST** button or user input manual reset, serial reset command or meter power cycle. When the user input or **RST** button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous **L-dly** reset if it is not activated at power up.)

### OUTPUT RESET WITH DISPLAY RESET

This parameter enables the **RST** button or user input to reset the output when the display is reset.

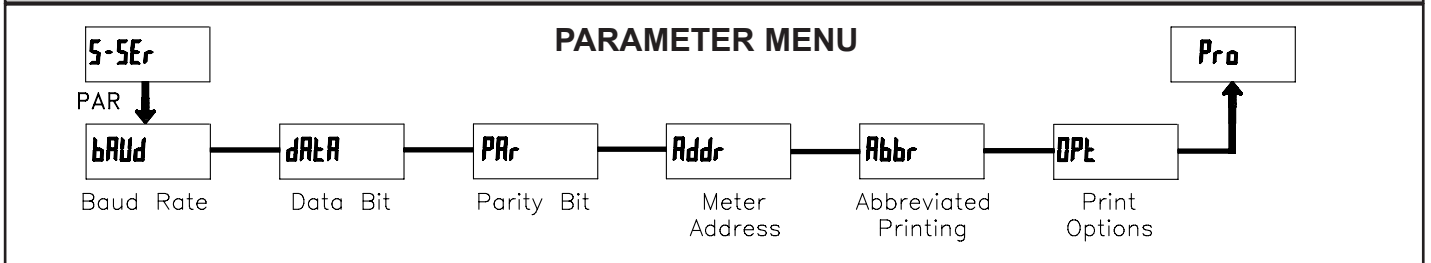

Note: For this parameter to operate, the **RST** button or User Input being used must be set to **dSP** and the Input value must be displayed. If these conditions are not met, the output will not reset.

### STANDBY OPERATION

When **YES**, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset Action.

## 5.5 MODULE 5 - SERIAL SETUP PARAMETERS (5-5Er)

Module 5 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the LD with those of the host computer or other serial device.

### BAUD RATE

bAUD	300	1200	4800	19200
	500	2400	9600	38400

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

### DATA BIT

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

### PARITY BIT

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to **NO**, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select **NO** for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select **YES** for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting **YES** displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as **YES** in the sublist will be transmitted during a block print. Parameters entered as **NO** will not be sent.

The "Print All" (**P ALL**) option selects all meter values for transmitting (**YES**), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. The Setpoint value will not be sent unless the setpoint is enabled

DISPLAY	DESCRIPTION	FACTORY SETTING	MNEMONIC
INP	Input	YES	INP
HI	Maximum	NO	MAX
LO	Minimum	NO	MIN
SP1-1	Setpoint 1	NO	SP1
SP1-2	Setpoint 2	NO	SP2

## Sending Serial Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character, \* or \$.

### Command Chart

Command	Description	Notes
N	Node (meter) Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by a register ID character.
V	Value Change (write)	Write to register of the meter. Must be followed by a register ID character and numeric data.
R	Reset	Reset a min or max value or the output. Must be followed by a register ID character
P	Block Print Request (read)	Initiates a block print output. Registers in the print block are selected in Print Options.

### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

- The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
- After the optional address specifier, the next character is the command character.
- The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints all the active selections chosen in the Print Options menu parameter.
- If constructing a value change command (writing data), the numeric data is sent next.
- All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See timing diagram figure

### Register Identification Chart

ID	Value Description	MNEMONIC	Applicable Commands	Transmit Details (T and V)
A	Input	INP	T, R	5 digit
B	Maximum	MAX	T, R	5 digit
C	Minimum	MIN	T, R	5 digit
D	Setpoint 1	SP1	T, R, V	5 digit positive/4 digit negative
E	Setpoint 2	SP2	T, R, V	5 digit positive/4 digit negative

### Command String Examples:

- Node address = 17, Write 350 to the Setpoint 1 value  
String: N17VD350\$
- Node address = 5, Read Input, response time of 50 msec min  
String: N5TA\*
- Node address = 31, Request a Block Print Output, response time of 2 msec min  
String: N31PS

### Transmitting Data to the Meter

Numeric data sent to the meter must be limited to transmit details listed in the Register Identification Chart. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (For example: The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.

## Receiving Data From The Meter

Data is transmitted from the meter in response to either a transmit command (T), a block print request command (P) or a User Input print request. The response from the meter is either a full field transmission or an abbreviated transmission, depending on the selection chosen in Module 5.

### Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-15	9 byte data field; 7 bytes for number, one byte for sign, one byte for decimal point
16	<CR> (carriage return)
17	<LF> (line feed)
18	<SP>* (Space)
19	<CR>* (carriage return)
20	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The first two characters transmitted are the meter address. If the address assigned is 0, two spaces are substituted. A space follows the meter address field. The next three characters are the register mnemonic, as shown in the Register Identification Chart.

The numeric data is transmitted next. The numeric field (bytes 7 to 15) is 9 characters long. This field consists of a minus sign (for negative values), a floating decimal point (if applicable), and five positions for the requested value. The data within bytes 9 to 15 is right-aligned with leading spaces for any unfilled positions. When a requested value exceeds the meter's display limits, decimal points are transmitted instead of a numeric value.

The end of the response string is terminated with a <CR> and <LF>. After the last line of a block print, an extra <SP>, <CR> and <LF> are added to provide separation between the print blocks.

### Abbreviated Transmission

Byte	Description
1-9	9 byte data field, 7 bytes for number, one byte for sign, one byte for decimal point
10	<CR> (carriage return)
11	<LF> (line feed)
12	<SP>* (Space)
13	<CR>* (carriage return)
14	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and register ID, leaving only the numeric part of the response.

### Meter Response Examples:

- Node address = 17, full field response, Input = 875  
17 INP 875 <CR><LF>
- Node address = 0, full field response, Setpoint 1 = -250.5  
SP1 -250.5<CR><LF>
- Node address = 0, abbreviated response, Setpoint 2 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Command Response Time

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\* or \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

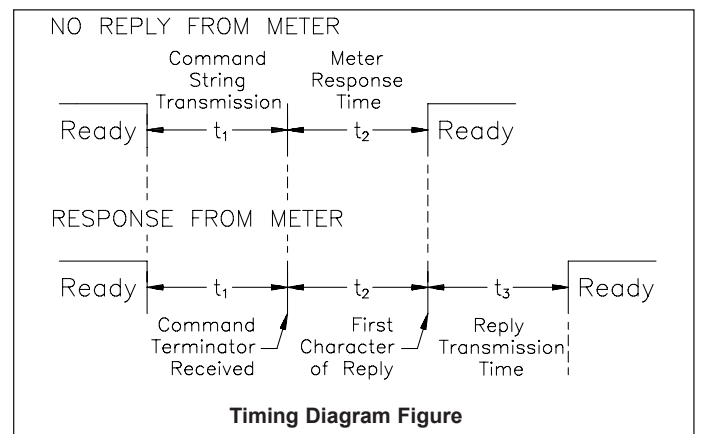

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time of 50 msec. minimum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time ( $t_2$ ) of 2 msec. minimum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

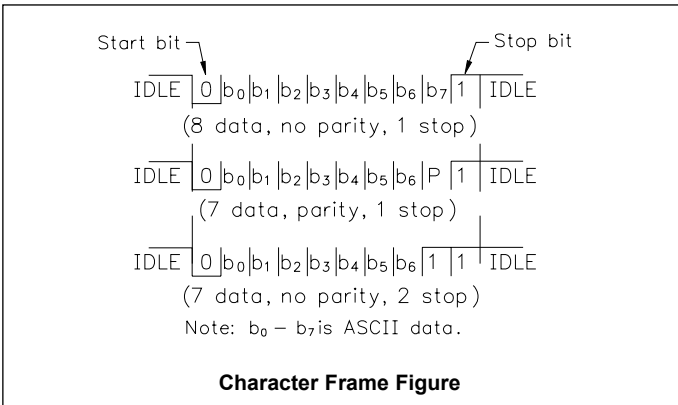

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character. The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is “framed” with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start Bit and Data Bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

### Parity Bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop Bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the meter.

# MODEL LD - LARGE SERIAL SLAVE DISPLAY

- 2.25" or 4" HIGH RED LED DIGITS
- DISPLAYS UP TO 6 DIGITS OF SERIAL ASCII DATA
- DUAL DISPLAY BUFFER ALLOWS ALTERNATING DISPLAYS
- RS232 OR RS485 SERIAL INTERFACE
- CONNECTS DIRECTLY TO RED LION PRODUCTS WITH SERIAL
- PROGRAMMABLE USER INPUT
- UNIVERSALLY POWERED
- ALUMINUM NEMA 4X/IP65 CASE CONSTRUCTION

## GENERAL DESCRIPTION

The Large Serial Slave Display is a versatile display that accepts serial ASCII data from a host device and displays the received characters. The displayable data includes numeric, 7-segment alphabetic and certain punctuation characters.

The 6-digit displays are available in either 2.25" or 4" high red LED digits with adjustable display intensity. The 2.25" high models are readable up to 130 feet. The 4" high models are readable up to 180 feet. Both versions are constructed of a NEMA 4X/IP65 enclosure in light weight aluminum.

The Serial Slave has two internal display buffers, allowing two separate display values or messages to be viewed. The main (primary) display typically shows dynamic data (count, rate, process, etc.), usually received directly from another meter. The secondary display typically shows a fixed message or value, such as a system or machine identifier, or a target production value. The main and secondary displays can be toggled either manually or automatically at a user selected toggle speed. Both displays are retained in memory when power is removed from the unit.

For single meter remote display applications, the Serial Slave can be connected directly to a Red Lion (or compatible) meter with RS232 or RS485 serial communications. The slave can display the meter value on its main display without requiring a PC or other serial interface.

Multiple slaves are connected using an RS485 serial bus. If unique meter addresses are assigned, specific data can be displayed by a single slave on the bus. When multiple slaves are assigned the same address, common data can be displayed by multiple units in different locations.

Serial communications parameters are fully programmable, with baud rates up to 38.4Kbps. Special command characters allow display selection and display intensity adjustment through the serial input. In addition to the serial input, a programmable User Input is provided to perform a variety of meter functions.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

## SPECIFICATIONS

- DISPLAY:** 6-digit 2.25" (57 mm) or 4" (101 mm) adjustable intensity Red LED
- POWER REQUIREMENTS:**  
AC POWER: 50 to 250 VAC 50/60 Hz, 26 VA  
DC POWER: 21.6 to 250 VDC, 11 W  
Isolation: 2300 V<sub>RMS</sub> for 1 min. to all inputs and outputs
- SERIAL INPUT:**  
**RS485 SERIAL COMMUNICATIONS**  
Type: Multi-point balanced interface (isolated)  
Baud Rate: 300 to 38400  
Data Format: 7/8 bits; odd, even, or no parity  
Bus Address: 0 to 99; max 32 meters per line  
**RS232 SERIAL COMMUNICATIONS**  
Type: Half duplex (isolated)  
Baud Rate: 300 to 38400  
Data Format: 7/8 bits; odd, even, or no parity
- USER INPUT (Programmable Function Input):**  
Active low logic, internal 7.8 KΩ pull-up resistor to +12V.  
Trigger levels: V<sub>IL</sub> = 1.0 V max; V<sub>IH</sub> = 2.4 V min; V<sub>MAX</sub> = 28 VDC  
Response time: 10 msec typ; 50 msec debounce (activation & release)
- MEMORY:** Nonvolatile E<sup>2</sup>PROM retains all programming parameters, main and secondary displays when power is removed.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## DIMENSIONS In inches (mm)

PART NUMBER	X (Length)	Y (Height)	Z (Center)
LD2SS6P0	16 (406.4)	4 (101.6)	12 (304.8)

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A LD200400 Criterion B LD2006P0 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1 kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-6	Criterion A 0.5 cycle

**Emissions:**

Emissions LD200400	EN 55011	Class B
Emissions LD2006P0	EN 55011	Class A

**Notes:**

1. Criterion A: Normal operation within specified limits.
2. Criterion B: Temporary loss of performance from which the unit self-recovers.

**7. CONNECTIONS:**

Internal removable terminal blocks used for power and signal wiring.

Remove end plates with ¼" nut driver.

For LD2 versions power is on the right side and serial wiring is on the left side. For LD4 versions, all wiring is on the right side of the unit.

Wire Strip Length: 0.4" (10 mm)

Wire Gauge: 24-12 AWG copper wire

Torque: 5.3 inch-lbs (0.6 N-m) max

**8. ENVIRONMENTAL CONDITIONS:**

Operating temperature: 0 to 50 °C

Storage temperature: -40 to 70 °C

Operating and storage humidity: 0 to 85% max. RH (non-condensing)

Vibration According to IEC 68-2-6: Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's (1g relay).

Shock According to IEC 68-2-27: Operational 30 g's (10g relay), 11 msec in 3 directions.

Altitude: Up to 2,000 meters

**9. CONSTRUCTION:** Aluminum enclosure, and steel side panels with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4X/IP65 specifications. Installation Category II, Pollution Degree 2.

**10. WEIGHT:**

LD2SS6P0 - 4.5 lbs (2.04 kg)

LD4SS6P0 - 10.5 lbs (4.76 kg)

**ORDERING INFORMATION**

MODEL NO.	DESCRIPTION	PART NUMBER
LD	2.25" High 6-Digit Red LED Serial Slave Display, RS232/RS485 Serial Communications	LD2SS6P0
	4" High 6-Digit Red LED Serial Slave Display, RS232/RS485 Serial Communications	LD4SS6P0

**1.0 INSTALLING THE METER**

**INSTALLATION**

The meter meets NEMA 4X/IP65 requirements when properly installed.

**INSTALLATION ENVIRONMENT**

The unit should be installed in a location that does not exceed the operating temperature. Placing the unit near devices that generate excessive heat should be avoided. The unit should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents.

Continuous exposure to direct sunlight may accelerate the aging process of the front overlay. Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

**MOUNTING INSTRUCTIONS**

This display is designed to be wall mounted or suspended from a ceiling truss or other suitable structure capable of supporting the LDSS. Caution should be exercised when hanging the display to provide for the safety of personnel. If hanging the LDSS, run the suspension cables (or chains) through the mounting bracket holes. For wall mounting use #10-32 size bolts.

**2.0 WIRING THE METER**

**EMC INSTALLATION GUIDELINES**

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the meter and leave the other end of the shield unconnected and insulated from earth ground.

3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be ran in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

4. Signal or Control cables within an enclosure should be routed as far as possible from contactors, control relays, transformers, and other noisy components.

5. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:  
Fair-Rite # 0443167251 (RLC# FCOR0000)

TDK # ZCAT3035-1330A  
Steward # 28B2029-0A0  
Line Filters for input power cables:  
Schaffner # FN610-1/07 (RLC# LFIL0000)  
Schaffner # FN670-1.8/07  
Corcom # 1 VR3

- Note: Reference manufacturer's instructions when installing a line filter.
- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
  - Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.  
Snubber: RLC# SNUB0000.

## WIRING OVERVIEW

Electrical connections are made via pluggable terminal blocks located inside the meter. All conductors should conform to the meter's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker. When wiring the meter, compare the numbers on the label on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.4" (10 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

## 2.1 POWER WIRING

The power wiring is made via the 3 position terminal block (TBA) located inside unit (right side).

### AC Power

Terminal 1: VAC/DC +  
Terminal 2: VAC/DC -  
Terminal 3: Earth Ground

## 2.2 USER INPUT WIRING

The User Input is wired to Terminals 1 and 2 of TBB as shown.

Terminal 5: User Input  
Terminal 6: Common

### Sinking Logic

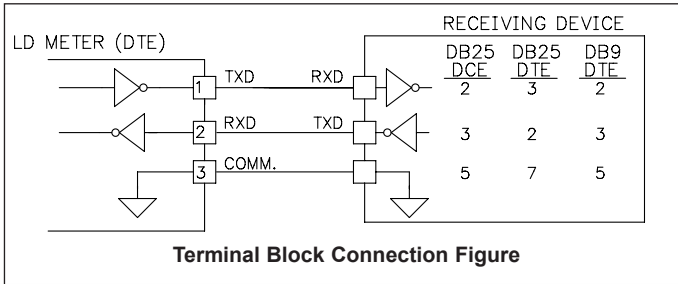

## 2.3 SERIAL WIRING

The serial connections are made via terminal block TBD located inside the unit on the left side for the LD2 and on the right side for the LD4.

### RS232 Communications

RS232 is intended to allow two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The LD emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for

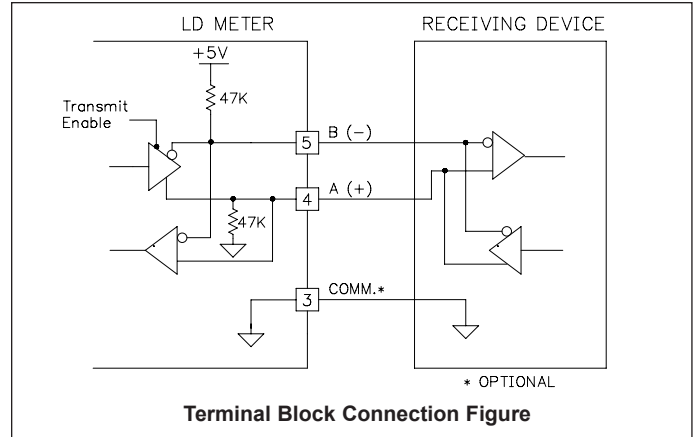

communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line to a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

### RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the LDSS is limited to 38.4k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## 3.0 REVIEWING THE FRONT PANEL KEYS AND DISPLAY

#### KEY DISPLAY MODE OPERATION

- PAR** Access Programming Mode
- SEL▲** Select display (main or secondary)
- RST▼** Reset display(s) per front panel reset setting

#### PROGRAMMING MODE OPERATION

- Store selected parameter and index to next parameter
- Advance through selection list/select digit position in parameter value
- Increment selected digit of parameter value

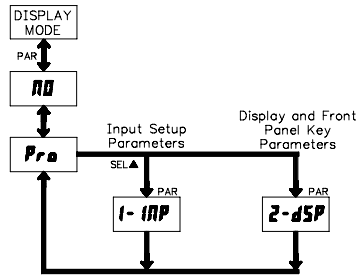

#### DISPLAY DESIGNATOR

"2" - To the far right of the display indicates the secondary display is shown.

If display scroll is enabled, the display will toggle automatically between the main and secondary display at the selected scroll interval.

# 4.0 PROGRAMMING THE METER

## PROGRAMMING MENU

### PROGRAMMING MODE ENTRY (PAR KEY)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** key. If it is not accessible, then it is locked by either a security code or a hardware lock (See Module 2).

### MODULE ENTRY (SEL▲ & PAR KEYS)

The Programming Menu is organized into two modules. These modules group together parameters that are related in function. The display will alternate between **PrO** and the present module. The **SEL▲** key is used to select the desired module. The displayed module is entered by pressing the **PAR** key.

### MODULE MENU (PAR KEY)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** key is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **PrO**. Programming may continue by accessing additional modules.

### SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL▲** and **RST▼** keys are used to move through the selections/values for that parameter. Pressing the **PAR** key, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST▼** key increments the digit by one or the user can hold the **RST▼** key and the digit will automatically scroll. The **SEL▲** key will select the next digit to the left. Pressing the **PAR** key will enter the value and move to the next parameter.

### PROGRAMMING MODE EXIT (PAR KEY)

The Programming Mode is exited by pressing the **PAR** key with **PrO** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

### PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

### FACTORY SETTINGS

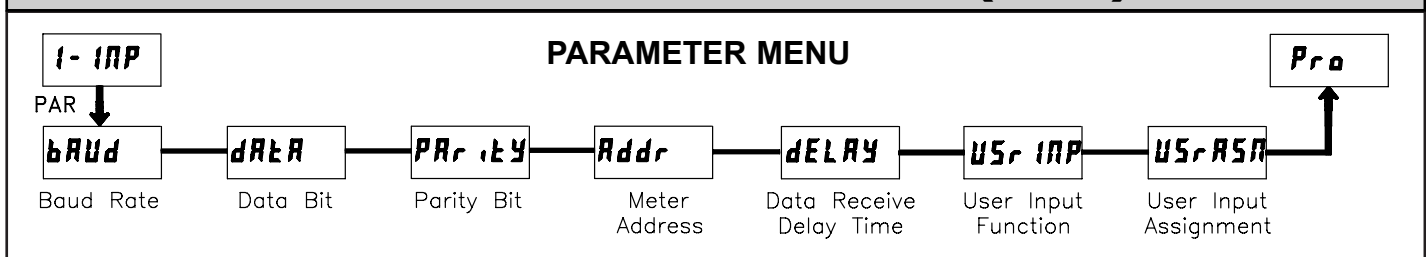

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems or in the event of corrupted program data.

### ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter's Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

## 4.1 MODULE 1 - INPUT SETUP PARAMETERS (1-INP)

Module 1 is the programming module for the Input Setup Parameters. This includes the Serial Input setup parameters and the User Input function. Set the Serial Input parameters to match the settings of the host device.

### DATA BIT

Select either 7- or 8-bit data word length to match that of the host device.

### BAUD RATE

Set the baud rate to match that of the host device. Normally, the baud rate is set to the highest value that all the serial communications equipment is capable of transmitting and receiving.

### DISPLAY RESET AT POWER-UP

This parameter allows the Main and/or Secondary display (if enabled) to automatically reset when power is applied to the unit.

### DISPLAY INTENSITY LEVEL

Enter the desired display intensity level. The display will actively brighten or dim as the level is changed.

### LEADING ZERO DISPLAY ENABLE

Select **NO** to insert blanks in place of any leading zeros received in a serial data string. This is typical when sending numeric values to the slave. Select **YES** to enable display of any leading zeros in the string. This parameter setting only applies to the Main display.

### PROGRAMMING SECURITY CODE

The Security Code determines the user access to Programming mode. This code can be used independently or along with the Program Mode Lock-out (**PrLoac**) selection in the User Input Function parameter (Module 1).

Programming a Security Code other than 0, requires this code to be entered at the **Code** prompt in order to access Programming mode.

USER INPUT FUNCTION	USER INPUT STATE	SECURITY CODE	PROGRAMMING ACCESS WHEN "PAR" PRESSED
not <b>PrLoac</b>	---	0	Immediate Access
		1-999	With correct code entry at <b>Code</b> prompt *
<b>PrLoac</b>	Active	0	Programming Locked No Access
		1-999	With correct code entry at <b>Code</b> prompt *
	Not Active	0-999	Immediate Access

\* Entering Code 222 allows access regardless of security code.

### LOAD FACTORY DEFAULT SETTINGS

The **YES** selection returns the slave to the factory default settings. The unit will display **rESEe** and returns to **Pr**, with the factory settings loaded.

## Serial Slave Communications

### Displayable Characters

The ASCII characters that the Serial Slave can display are as follows:

**Numeric:** 0 to 9

**Alphabetic (7-segment):** A, b, C, c, d, E, e, F, G, g, H, h, I, i, J, K, L, l, N, n, O, o, P, q, r, S, t, U, u, V, v, Y, Z

Non-displayable alphabetic characters will be replaced with a blank if received. These include M, W and X.

*Note: Both uppercase and lowercase ASCII characters are accepted. If a displayable difference exists, characters will be shown in the case received.*

**Punctuation:** period, comma, and colon (all displayed as decimal point); minus (dash), blank

### Display and Serial Buffer Capacity

The Serial Slave display is right aligned and has the capacity of displaying six characters. When less than six characters are received, blank spaces are placed in front of the characters. If more than six characters are received, only the last six are displayed.

The unit has two internal display buffers, allowing two separate values or messages to be viewed. The main display is always enabled and viewable. The secondary display may be enabled or disabled through programming. When enabled, this display is indicated by a "2" on the far right of the display. The main and secondary displays can be toggled either manually or automatically at a user selectable toggle speed. A serial command can also be sent to select which display is shown. Both displays are retained in memory when power is removed from the unit.

The Serial Slave has an internal 64 character buffer for received data. If more than 64 characters are sent, the additional characters are discarded until a string terminator <CR> is received. At that point, the last six characters at the end of the buffer are displayed.

A carriage return <CR> is the only valid string terminator for the Serial Slave. However, if an <\*> or <\$> is received, the slave will empty and reset its internal character buffer without processing the string. These characters are used as valid command terminators for serial commands sent to other Red Lion meters. Since these commands are not applicable to the Serial Slave, the slave discards the command and prepares its character buffer for a new data string.

### Data and Command String Formatting

Data sent to the Serial Slave must be formatted as either main display data, secondary display data or command strings sent to perform specific display functions. The format for sending data is shown below:

N xx I d6 d5 d4 d3 d2 d1 <CR>

- N** - Required to address a specific slave unit in a multiple unit loop.
- xx** - Two-digit meter address. Single digit address requires leading zero.
- I** - Format identifier character (see below). Omit for main display data.
- d6-d1** - The last 6 characters before the <CR> will be shown, if displayable.
- <CR>** - Carriage Return (0DH) used as string terminator character.

The format identifier character <I> dictates how the Serial Slave interprets a data string as follows:

- (omit) - No character indicates main display data
- # - Indicates secondary display data
- @ - Display select command, followed by display identifier character main <1> or secondary <2> (ex: @1<CR> select main display)
- % - Display intensity command, followed by intensity level character <1> to <5> (ex: %3<CR> set display intensity level to 3)

### Downloading Data from a G3 to an LDSS

#### Communications:

**Port:** RS232 Comms Raw Serial Port

**Port Driver:** <system> Raw Serial Port

#### Programming:

```
PortPrint(2, "N01" + IntToText(Var1, 10, 6) + "\r");
```

This program is called from the Global On Tick. It sends "N01" (the address of the LDSS), followed by the ASCII equivalent of Var1, then a carriage return.

## Data Receive Delay Timing

Upon receiving a string terminator character <CR>, the Serial Slave requires a delay time to process the received data and prepare for the next string. During this delay, the meter disables serial data reception.

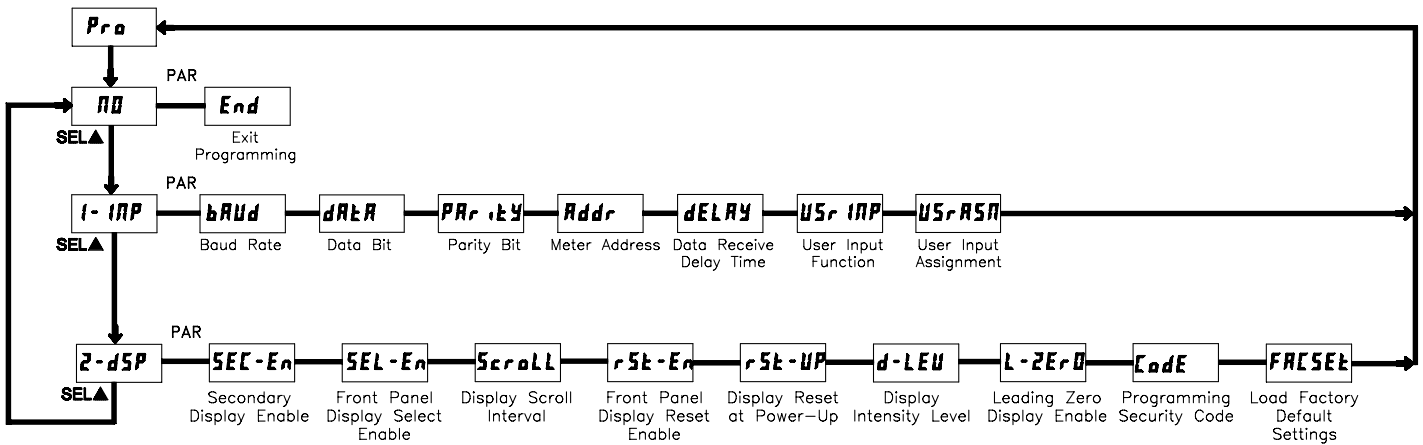

The Data Receive Delay Time is programmable in Module 1, with a minimum delay of 10 mSec. By extending this delay, the Serial Slave can ignore data sent by the host which is not intended for display. This data includes additional characters such as a <LF> or redundant <CR>, which might follow a serial data string. This could also include additional data strings sent as part of a data block, where only the first string is intended for the Serial Slave display. In this case, the delay time should be programmed to exceed the total transmission time for the entire data block. This results in the Serial Slave displaying the first string of the data block and disabling data reception during transmission of the additional strings.

The Receive Delay Time must be set to expire at a point where no data is being sent to the Serial Slave. This prevents the unit from enabling data reception in the middle of a character or data string, which could result in an incorrect display when the string is processed.

## Timing Diagram for Data Reception

# LD SERIAL SLAVE PROGRAMMING QUICK OVERVIEW

# MODEL LPAX- 5 DIGIT LARGE PAX DISPLAY FOR ANALOG INPUTS

- LARGE LED DISPLAY READABLE TO 70 FEET
- VARIOUS ANALOG INPUT MODULES;  
DC VOLTAGE AND CURRENT  
PROCESS SIGNALS  
TRUE RMS VOLTAGE AND CURRENT  
THERMOCOUPLE OR RTD  
STRAIN GAGE/BRIDGE
- ALARMS, ANALOG OUTPUT, AND COMMUNICATION
- CUSTOM UNITS LABEL WITH BACKLIGHT
- PROGRAMMABLE USER INPUTS
- PROGRAMMABLE FUNCTION KEYS
- UNIVERSAL AC/DC POWERED MODELS
- CRIMSON PROGRAMMING SOFTWARE
- NEMA 4/IP65

## GENERAL DESCRIPTION

The LPAX Display is a versatile display that can increase productivity by offering the plant floor or production area a large visual display of their current status. Whether your measurement is temperature, weight, or flow, the LPAX can satisfy your requirement. With the use of a units label and backlighting, the display can be tailored to show the actual engineering unit, which further enhances the display. This LPAX display accepts various analog inputs through the use of input modules (MPAX) which allow the unit to adapt to most any application. The MPAX Modules offer the same features as our highly successful PAX Series Panel Meters. Additional plug-in option cards can add alarms, analog output, and communication/bus capabilities, making the LPAX a truly Intelligent Panel Meter.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

  The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS

*Additional specifications, wiring, programming, and information for the individual MPAX models are contained in the corresponding standard PAX literature. This PAX literature is shipped with the ordered MPAX model.*

- DISPLAY:** 1.5" (38 mm) Red LED  
5-Digit: (-19999 to 99999)
  - POWER REQUIREMENTS:**  
AC Modules: 85 to 250 VAC, 50/60 Hz, 18 VA  
DC Modules: 11 to 36 VDC or 24 VAC ±10%, 50/60 Hz, 14 W
  - INPUT:** Accepts analog input modules, see "Selecting your display components."
  - ANNUNCIATORS:**  
LPAX0500: MAX, MIN, TOT, SP1, SP2, SP3, and SP4  
Optional units label with backlight
  - KEYPAD:** Five tactile membrane switches integrated into the front panel
  - CERTIFICATIONS AND COMPLIANCES:**  
UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 1010-1  
Recognized to US and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
Type 4 Enclosure rating (Face only), UL50  
IECEE CB Scheme Test Certificate #US/8843/UL  
CB Scheme Test Report #04ME11209-20041018  
Issued by Underwriters Laboratories, Inc.  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529
- ELECTROMAGNETIC COMPATIBILITY**  
EMC specifications determined by the MPAX module.

## 7. ENVIRONMENTAL CONDITIONS:

Operating Temperature Range: Determined by the MPAX module  
 Storage Temperature Range: -40 to 60°C  
 Operating and Storage Humidity: 0 to 85% max. RH (non-condensing)  
 Altitude: Up to 2000 meters

## 8. MOUNTING REQUIREMENTS:

Max. panel thickness is 0.375" (9.5 mm)  
 Min. panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm)

## 9. MODULE INSTALLATION:

24-pin shrouded connector on LPAX engages connector on MPAX module upon installation. Shroud ensures proper alignment by providing a lead-in for the module connector.

10. **CONNECTIONS:** All wiring connections are made to the MPAX module via high compression cage-clamp terminal blocks. Wiring instructions are provided with the MPAX module.

**CAUTION: DISCONNECT ALL POWER BEFORE INSTALLING OR REMOVING MODULE**

11. **CONSTRUCTION:** Steel front panel, enclosure, and rear cover with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4/IP65 specifications for indoor use when properly installed. Installation Category II, Pollution Degree 2. Panel gasket and keps nuts included.

12. **WEIGHT:** 2.7 lbs (1.2 kg) (*less module*)

## About the MPAX Input Modules

The MPAX Module serves as the input to the LPAX Display. There are several different modules to cover a variety of inputs. The MPAX module provides input scaling which allows the LPAX to display most any engineering unit. Once the MPAX is inserted into the LPAX, the unit has the same functions and capabilities of our PAX Series Intelligent Panel Meters. A full set of PAX programming instructions will be included with the MPAX Module.

*Note: The MPAX provides the operating power for the LPAX, therefore you must select either the AC or DC MPAX corresponding with your application and available power.*

## Selecting Your Display Components

To build a complete display unit, you will need an LPAX and an MPAX Input Module. The LPAX is only a display and will not operate without an MPAX Module. Please use the following chart to identify the appropriate MPAX Module (including supply power) and LPAX Display that will satisfy your application.

SIGNAL TYPE	INPUT RANGES	MPAX MODULES *		LPAX DISPLAYS
		85-250 VAC	11 to 36 VDC/ 24 VAC	
Universal DC Inputs	DC Voltage 200 mV, 2 V, 20 V, 300 V DC Current 200 µA, 2 mA, 20 mA, 200 mA, 2 Amp Resistance 100 ohm, 1000 ohm, 10 K ohm	MPAXD000	MPAXD010	LPAX0500
Process Inputs	0-20 mA or 0-10 VDC	MPAXP000	MPAXP010	LPAX0500
Temperature Inputs	Thermocouples-T, E, J, K, R, S, B, N, C, or Custom Scaling RTD's-100 ohm Pt (platinum) 385/392, 120 ohm Nickel 672, or 10 ohm Copper 427	MPAXT000	MPAXT010	LPAX0500
Strain Gage/ Load Cell	24 mV or 240 mV	MPAXS000	MPAXS010	LPAX0500
True RMS AC Voltage/Current	AC Voltage 200 mV, 2 V, 20 V, 300 V AC Current 200 µA, 2 mA, 20 mA, 200 mA, 5 Amp	MPAXH000	N/A	LPAX0500

\*For detailed Module specifications, see corresponding PAX literature. (i.e. For MPAXD specifications, see the PAXD literature)

## OPTIONAL PLUG-IN CARDS AND ACCESSORIES

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

### Adding Option Cards

The MPAX series meters can be fitted with up to three optional plug-in cards. However, only one card from each function type can be installed at a time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The cards can be installed initially or at a later date. Each optional plug-in card is shipped with installation and programming instructions.

### COMMUNICATION CARDS (PAXCDC)

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via Crimson, a Windows® based program, the RS232 or RS485 Cards must be used.

PAXCDC1\* - RS485 Serial      PAXCDC4\* - Modbus  
 PAXCDC2\* - RS232 Serial      PAXCDC50 - Profibus-DP  
 PAXCDC30 - DeviceNet

\*Units available in various connector configurations.

### SETPOINT CARDS (PAXCDS)

The MPAX series has four setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

PAXCDS10 - Dual Relay, FORM-C, Normally open & closed  
 PAXCDS20 - Quad Relay, FORM-A, Normally open only  
 PAXCDS30 - Isolated quad sinking NPN open collector  
 PAXCDS40 - Isolated quad sourcing PNP open collector

### LINEAR DC OUTPUT (PAXCDL)

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on the input, max, min, or total display value. Reverse slope output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

### UNITS LABEL (LX)

The LPAX Display has an area on the front panel designed for a custom units label. The units label is applied directly to the panel in the embossed area. The units backlight is then turned on via programming.

Available on 5-digit version only. Refer to the LPAX Accessories Bulletin for a list of available units labels.

### PROGRAMMING SOFTWARE (CRIMSON)

Crimson is a Windows® based program that allows configuration of the LPAX meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the LPAX meter. The LPAX program can then be saved in a PC file for future use. A PAX serial plug-in card is required to program the meter using the software.

# 1.0 ASSEMBLING THE DISPLAY

**CAUTION:** The MPAX main circuit board and the option cards contain static sensitive components. Before handling the module or the cards, discharge static charges from your body by touching a grounded bare metal object. Handle the module by the rear plastic cover only, and the option cards by the board edges. Dirt, oil or other contaminants that contact the circuit boards or components can adversely affect circuit operation.

**WARNING:** Exposed line voltage exists on the MPAX main circuit board and the option cards. **DO NOT** apply power to the module OR load circuits until the module is properly installed in the LPAX case.

**NOTE:** All module and option card labels must be installed as shown for safety purposes.

Prior to installing the LPAX Display, it is recommended that the MPAX and any option cards be assembled first. This will allow you the opportunity to insure all the boards are fitted properly into their connectors.

## Installing the Option Cards

If your application requires option cards, they should be installed into the MPAX before it is installed into the LPAX Display. Refer to the literature enclosed with the option cards for installation instruction.

## Installing the MPAX

To install the MPAX Module, align the module with the opening in the LPAX case, as illustrated. The module must be oriented as shown, with terminal #1 toward the top of the LPAX case. Carefully slide the module into the LPAX case.

The LPAX and MPAX connectors will begin to engage about 1/4" from the bottom. At this point, apply a small amount of pressure to the rear of the MPAX module to fully engage the connection. Be sure the module fully snaps into the slots at the rear of the LPAX case. The display is ready for installation.

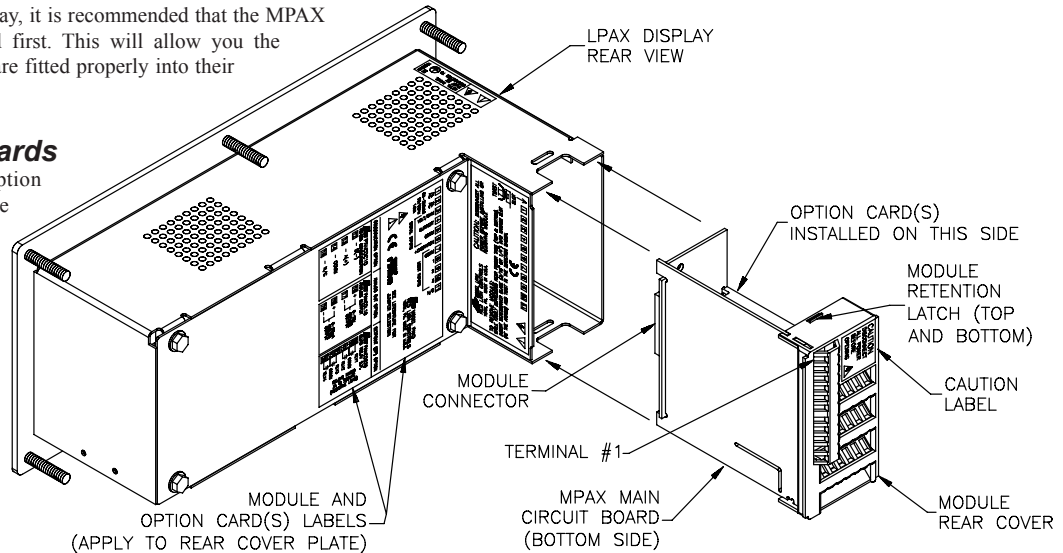

Figure 1, Installing an MPAX Module and Option Cards

## Installing the Labels

Each option card and the MPAX are shipped with a connection label. These labels must be applied to the rear of the LPAX in the positions shown in the drawing.

## Removing The MPAX Module

To remove the MPAX Module from the LPAX Display, first remove all power and load circuits. Then insert a flat screwdriver blade (3/16" or 1/4") into the narrow slot between the LPAX rear cover plate and the module's plastic cover as illustrated in Figure 2. Twist the screwdriver in the direction shown to disengage the internal connectors while firmly squeezing and pulling back on the rear finger tabs (top and bottom). Carefully slide the module out of the LPAX case, keeping it properly aligned with the case opening.

Figure 2, Removing an MPAX Module

## 2.0 INSTALLING THE DISPLAY

### LPAX DISPLAY INSTALLATION

The LPAX display is intended to be mounted into a panel or enclosure. The display is provided with a gasket to provide a water-tight seal. The recommended minimum panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm).

For panel mounting, prepare the panel cut-out to the dimensions shown. The supplied template may be used to mark the cut-out and hole locations on the panel. After the panel cut-out has been deburred, slide the panel gasket over the rear of the display and onto the mounting studs. Insert the display into the panel cut-out as illustrated in Figure 3. Install six # 10-32 keps nuts (supplied) and tighten evenly for uniform gasket compression. Do not over-tighten the nuts.

By using additional mounting accessories, the LPAX can be surface-wall mounted, suspended, or bottom mounted. Separate installation instructions are provided with the mounting accessories.

### Environment And Cleaning

The display should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the system near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Figure 3, Installing The LPAX Into A Panel

## 3.0 WIRING AND PROGRAMMING THE DISPLAY

Once assembled, the LPAX and MPAX have all the same functions and capabilities of our PAX Series Intelligent Panel Meters. Therefore, you will find the appropriate PAX information packed with the MPAX Module. Simply follow the instructions to wire and program the display for your application.

### TROUBLESHOOTING

For technical assistance, contact technical support.

# MODEL LPAX- 6 DIGIT LARGE PAX DISPLAY FOR DIGITAL INPUTS

- LARGE LED DISPLAY READABLE TO 70 FEET
- VARIOUS DIGITAL INPUT MODULES:  
COUNT AND RATE INPUT  
CLOCK/TIMER  
SERIAL SLAVE
- ALARMS, ANALOG OUTPUT, AND COMMUNICATION
- PROGRAMMABLE USER INPUTS
- PROGRAMMABLE FUNCTION KEYS
- UNIVERSAL AC/DC POWERED MODELS
- PC SOFTWARE FOR METER CONFIGURATION
- NEMA 4/IP65

## GENERAL DESCRIPTION

The LPAX Display is a versatile display that can increase productivity by offering the plant floor or production area a large visual display of their current status. Whether your measurement is rate, count, or time, the LPAX can satisfy your requirement. These LPAX displays accept various digital inputs through the use of input modules (MPAX) which allow the unit to adapt to most any application. The MPAX Modules offer the same features as our highly successful PAX Series Panel Meters. Additional plug-in option cards can add alarms, analog output, and communication/bus capabilities, making the LPAX a truly Intelligent Panel Meter.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

  The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS

*Additional specifications, wiring, programming, and information for the individual MPAX models are contained in the corresponding standard PAX literature. This PAX literature is shipped with the ordered MPAX model.*

- DISPLAY:** 1.5" (38 mm) Red LED  
6-Digit (LPAX0600): (-99999 to 999999)  
6-Digit (LPAXCK00): (0 to 999999)
- POWER REQUIREMENTS:**  
AC Modules: 85 to 250 VAC, 50/60 Hz, 18 VA  
DC Modules: 11 to 36 VDC or 24 VAC ±10%, 50/60 Hz, 14 W
- INPUT:** Accepts digital input modules, see "Selecting Your Display Components and Option Cards."
- ANNUNCIATORS:**  
LPAX0600: A, B, C, SP1, SP2, SP3, and SP4  
LPAXCK00: TMR, CNT, DAT, SP1, SP2, SP3, and SP4
- KEYPAD:** Five tactile membrane switches integrated into the front panel
- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

UL Recognized Component, File #E179259, UL61010A-1, CSA 22.2 No. 1010-1  
Recognized to US and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95  
LISTED by Und. Lab. Inc. to U.S and Canadian safety standards  
Type 4 Enclosure rating (Face Only), UL50  
IECEE CB Scheme Test Certificate # US/8843/UL  
CB Scheme Test Report # 04ME11209-20041018  
Issued by Underwriters Laboratories, Inc.  
IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
IP65 Enclosure rating (Face only), IEC 529

### ELECTROMAGNETIC COMPATIBILITY

EMC specifications determined by the MPAX module.

## DIMENSIONS In inches (mm)

### PANEL CUT-OUT

**7. ENVIRONMENTAL CONDITIONS:**

Operating Temperature Range: Determined by the MPAX module  
 Storage Temperature Range: -40 to 60°C  
 Operating and Storage Humidity: 0 to 85% max. RH (non-condensing)  
 Altitude: Up to 2000 meters

**8. MOUNTING REQUIREMENTS:**

Max. panel thickness is 0.375" (9.5 mm)  
 Min. panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm)

**9. MODULE INSTALLATION:**

24-pin shrouded connector on LPAX engages connector on MPAX module upon installation. Shroud ensures proper alignment by providing a lead-in for the module connector.

**10. CONNECTIONS:** All wiring connections are made to the MPAX module via high compression cage-clamp terminal blocks. Wiring instructions are provided with the MPAX module.

**CAUTION: DISCONNECT ALL POWER BEFORE INSTALLING OR REMOVING MODULE**

**11. CONSTRUCTION:** Steel front panel, enclosure, and rear cover with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4/IP65 specifications for indoor use when properly installed. Installation Category II, Pollution Degree 2. Panel gasket and keps nuts included.

**12. WEIGHT:** 2.7 lbs (1.2 kg) (*less module*)

**About the MPAX Input Modules**

The MPAX Module serves as the input to the LPAX Display. There are several different modules to cover a variety of inputs. The MPAX module provides input scaling which allows the LPAX to display most any engineering unit. Once the MPAX is inserted into the LPAX, the unit has the same functions and capabilities of our PAX Series Intelligent Panel Meters. A full set of PAX programming instructions will be included with the MPAX module.

*Note: The MPAX provides the operating power for the LPAX, therefore you must select either the AC or DC MPAX corresponding with your application and available power.*

**Selecting Your Display Components and Option Cards**

To build a complete display unit, you will need an LPAX and an MPAX Input Module. The LPAX is only a display and will not operate without an MPAX module. Please use the following chart to identify the appropriate MPAX module (including supply power) and LPAX Display that will satisfy your application.

SIGNAL TYPE	MPAX MODULES*		LPAX DISPLAYS	OPTIONAL PLUG-IN CARD COMPATABILITY			
	85-250 VAC	11 to 36 VDC / 24 VAC		SETPOINT	COMMS	ANALOG	REAL-TIME CLOCK
Count/Rate/Serial Slave	MPAXI000	MPAXI010	LPAX0600	YES	YES	YES	-
Count	MPAXC000	MPAXC010	LPAX0600	YES	-	-	-
Rate	MPAXR000	MPAXR010	LPAX0600	YES	-	-	-
Clock/Timer	MPAXCK00	MPAXCK10	LPAXCK00**	YES	YES	-	YES
Timer	MPAXTM00	MPAXTM10	LPAXCK00**	YES	YES	-	-

\*For detailed module and plug-in card specifications, see corresponding PAX literature. (i.e. For MPAXI specifications, see the PAXI literature)

\*\*The LPAXCK will only operate with the Clock/Timer MPAX input module.

**OPTIONAL PLUG-IN CARDS AND ACCESSORIES**

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

**Adding Option Cards**

The MPAX series meters can be fitted with up to three optional plug-in cards. However, only one card from each function type can be installed at a time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The cards can be installed initially or at a later date. Each optional plug-in card is shipped with installation and programming instructions.

**COMMUNICATION CARDS (PAXCDC)**

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via Crimson (for MPAXI) or SFPAX (for MPAXCK or MPAXTM), the RS232 or RS485 Cards must be used.

- PAXCDC10 - RS485 Serial (Terminal)    PAXCDC30 - DeviceNet
- PAXCDC1C - RS485 Serial (Connector)    PAXCDC40 - Modbus (Terminal)
- PAXCDC20 - RS232 Serial (Terminal)    PAXCDC4C - Modbus (Connector)
- PAXCDC2C - RS232 Serial (Connector)    PAXCDC50 - Profibus-DP

**SETPOINT CARDS (PAXCDS)**

The MPAX series has four setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

- Dual relay, FORM-C, Normally open & closed
- Quad relay, FORM-A, Normally open only
- Isolated quad sinking NPN open collector
- Isolated quad sourcing PNP open collector

**LINEAR DC OUTPUT (PAXCDL)**

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on the input, max, min, or total display value. Reverse slope output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

**PROGRAMMING SOFTWARE**

**CRIMSON - MPAXI Only**

Crimson is a Windows® based program that allows configuration of the LPAX meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the LPAX meter. The LPAX program can then be saved in a PC file for future use. A PAX serial plug-in card is required to program the meter using the software.

**SFPAX - MPAXCK and MPAXTM Only**

The SFPAX is a Windows® based program that allows configuration of the LPAX meter from a PC. Using the SFPAX makes it easier to program the LPAX meter and allows saving the PAX program in a PC file for future use. On-line help is available within the software. A PAX serial plug-in card is required to program the meter using the software.

**G**

# 1.0 ASSEMBLING THE DISPLAY

**CAUTION:** The MPAX main circuit board and the option cards contain static sensitive components. Before handling the module or the cards, discharge static charges from your body by touching a grounded bare metal object. Handle the module by the rear plastic cover only, and the option cards by the board edges. Dirt, oil or other contaminants that contact the circuit boards or components can adversely affect circuit operation.

**WARNING:** Exposed line voltage exists on the MPAX main circuit board and the option cards. **DO NOT** apply power to the module OR load circuits until the module is properly installed in the LPAX case.

**NOTE:** All module and option card labels must be installed as shown for safety purposes.

Prior to installing the LPAX Display, it is recommended that the MPAX and any option cards be assembled first. This will allow you the opportunity to insure all the boards are fitted properly into their connectors.

## Installing the Option Cards

If your application requires option cards, they should be installed into the MPAX before it is installed into the LPAX Display. Refer to the literature enclosed with the option cards for installation instruction.

## Installing the MPAX

To install the MPAX Module, align the module with the opening in the LPAX case, as illustrated. The module must be oriented as shown, with terminal #1 toward the top of the LPAX case. Carefully slide the module into the LPAX case. The LPAX and MPAX connectors will begin to engage about 1/4" from the bottom. At this point, apply a small amount of pressure to the rear of the MPAX module to fully engage the connection. Be sure the module fully snaps into the slots at the rear of the LPAX case. The display is ready for installation.

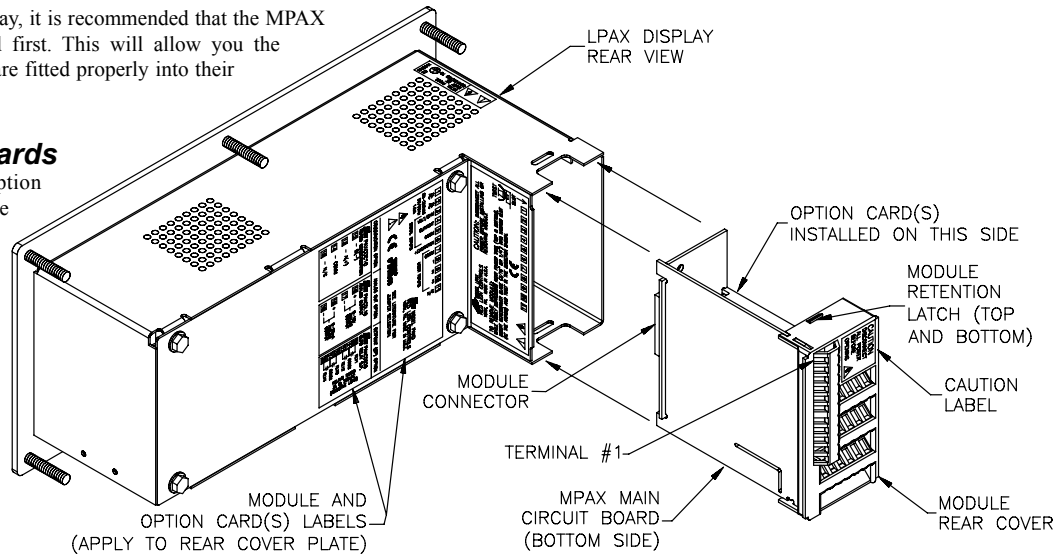

Figure 1, Installing an MPAX Module and Option Cards

## Installing the Labels

Each option card and the MPAX are shipped with a connection label. These labels must be applied to the rear of the LPAX in the positions shown in the drawing.

## Removing The MPAX Module

To remove the MPAX Module from the LPAX Display, first remove all power and load circuits. Then insert a flat screwdriver blade (3/16" or 1/4") into the narrow slot between the LPAX rear cover plate and the module's plastic cover as illustrated in Figure 2. Twist the screwdriver in the direction shown to disengage the internal connectors while firmly squeezing and pulling back on the rear finger tabs (top and bottom). Carefully slide the module out of the LPAX case, keeping it properly aligned with the case opening.

Figure 2, Removing an MPAX Module

## 2.0 INSTALLING THE DISPLAY

### LPAX DISPLAY INSTALLATION

The LPAX display is intended to be mounted into a panel or enclosure. The display is provided with a gasket to provide a water-tight seal. The recommended minimum panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm).

For panel mounting, prepare the panel cut-out to the dimensions shown. The supplied template may be used to mark the cut-out and hole locations on the panel. After the panel cut-out has been deburred, slide the panel gasket over the rear of the display and onto the mounting studs. Insert the display into the panel cut-out as illustrated in Figure 3. Install six # 10-32 keps nuts (supplied) and tighten evenly for uniform gasket compression. Do not over-tighten the nuts.

By using additional mounting accessories, the LPAX can be surface-wall mounted, suspended, or bottom mounted. Separate installation instructions are provided with the mounting accessories.

### Environment And Cleaning

The display should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the system near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

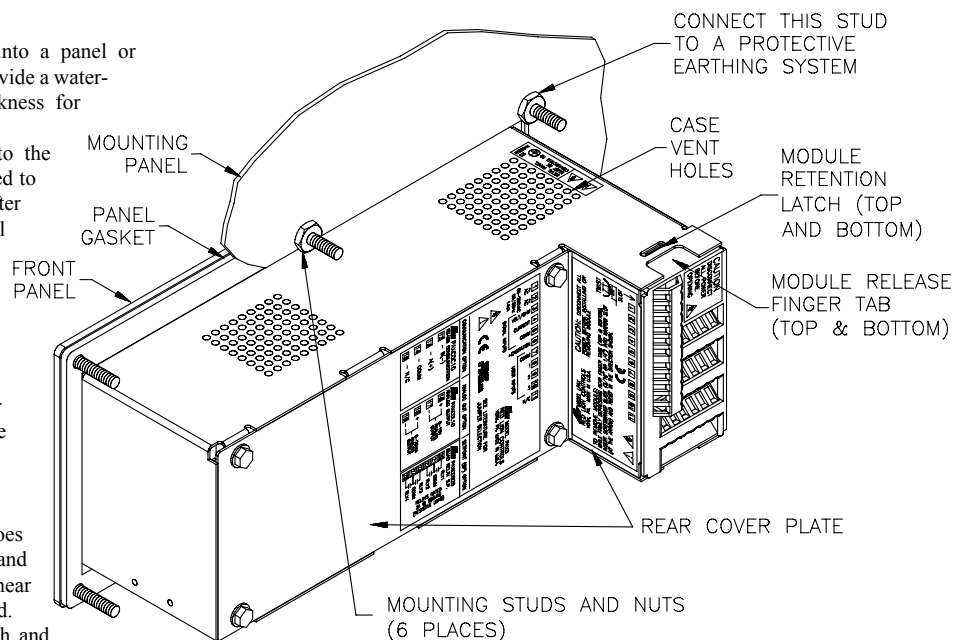

Figure 3, Installing The LPAX Into A Panel

## 3.0 WIRING AND PROGRAMMING THE DISPLAY

Once assembled, the LPAX and MPAX have all the same functions and capabilities of our PAX Series Intelligent Panel Meters. Therefore, you will find the appropriate PAX information packed with the MPAX Module. Simply follow the instructions to wire and program the display for your application.

# MODEL LPAXDA- 5 DIGIT LARGE PAX DISPLAY FOR DUAL ANALOG INPUTS

- LARGE LED DISPLAY READABLE TO 70 FEET
- DUAL PROCESS SIGNAL INPUT MODULE
- ALARMS, ANALOG OUTPUT, AND COMMUNICATION
- CUSTOM UNITS LABEL WITH BACKLIGHT
- PROGRAMMABLE USER INPUTS
- PROGRAMMABLE FUNCTION KEYS
- UNIVERSAL AC/DC POWERED MODELS
- CRIMSON SOFTWARE FOR METER CONFIGURATION
- NEMA 4/IP65

## GENERAL DESCRIPTION

The LPAXDA Display is a versatile display that can increase productivity by offering the plant floor or production area a large visual display of their current status. With the use of a units label and backlighting, the display can be tailored to show the actual engineering unit, which further enhances the display. This LPAXDA display accepts various analog inputs through the use of input modules (MPAXDP) which allow the unit to adapt to most any application. The MPAXDP Modules offer the same features as our highly successful PAXDP Series Panel Meters. Additional plug-in option cards can add alarms, analog output, and communication/bus capabilities, making the LPAXDA a truly Intelligent Panel Meter.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

**CAUTION:** Read complete instructions prior to installation and operation of the unit.

**CAUTION:** Risk of electric shock.

## SPECIFICATIONS

*Additional specifications, wiring, programming, and information for the individual MPAX models are contained in the corresponding standard PAX literature. This PAX literature is shipped with the ordered MPAX model.*

 Operating and Storage Humidity: 0 to 85% max. RH (non-condensing)  
 Altitude: Up to 2000 meters

## 8. MOUNTING REQUIREMENTS:

Max. panel thickness is 0.375" (9.5 mm)  
 Min. panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm)

## 9. MODULE INSTALLATION:

24-pin shrouded connector on LPAX engages connector on MPAX module upon installation. Shroud ensures proper alignment by providing a lead-in for the module connector.

10. **CONNECTIONS:** All wiring connections are made to the MPAX module via high compression cage-clamp terminal blocks. Wiring instructions are provided with the MPAX module.

**CAUTION: DISCONNECT ALL POWER BEFORE INSTALLING OR REMOVING MODULE**

11. **CONSTRUCTION:** Steel front panel, enclosure, and rear cover with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4/IP65 specifications for indoor use when properly installed. Installation Category II, Pollution Degree 2. Panel gasket and keps nuts included.

12. **WEIGHT:** 2.7 lbs (1.2 kg) (*less module*)

## About the MPAX Input Modules

The MPAX Module serves as the input to the LPAX Display. The MPAX module provides input scaling which allows the LPAX to display most any engineering unit. Once the MPAX is inserted into the LPAX, the unit has the same functions and capabilities of our PAX Series Intelligent Panel Meters. A full set of PAX programming instructions will be included with the MPAX Module.

*Note: The MPAX provides the operating power for the LPAX, therefore you must select either the AC or DC MPAX corresponding with your application and available power.*

## Selecting Your Display Components

To build a complete display unit, you will need an LPAXDP and an MPAXDP Input Module. The LPAX is only a display and will not operate without an MPAX Module. Please use the following chart to identify the appropriate MPAX Module (including supply power) and LPAX Display that will satisfy your application.

SIGNAL TYPE	INPUT RANGES	MPAX MODULES *		LPAX DISPLAY
		85-250 VAC	11 to 36 VDC/ 24 VAC	
Dual Process Inputs	0-20 mA or 0-10 VDC	MPAXDP00	MPAXDP10	LPAXDA00

\*For detailed Module specifications, see corresponding PAX literature. (i.e. For MPAXDP specifications, see the PAXDP literature)

## OPTIONAL PLUG-IN CARDS AND ACCESSORIES

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

### Adding Option Cards

The MPAX series meters can be fitted with up to three optional plug-in cards. However, only one card from each function type can be installed at a time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The cards can be installed initially or at a later date. Each optional plug-in card is shipped with installation and programming instructions.

### COMMUNICATION CARDS (PAXCDC)

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via Crimson, a Windows® based program, the RS232 or RS485 Cards must be used.

PAXCDC1\* - RS485 Serial      PAXCDC4\* - Modbus  
 PAXCDC2\* - RS232 Serial      PAXCDC50 - Profibus-DP  
 PAXCDC30 - DeviceNet

\*Units available in various connector configurations.

### SETPOINT CARDS (PAXCDS)

The MPAX series has four setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

PAXCDS10 - Dual Relay, FORM-C, Normally open & closed  
 PAXCDS20 - Quad Relay, FORM-A, Normally open only  
 PAXCDS30 - Isolated quad sinking NPN open collector  
 PAXCDS40 - Isolated quad sourcing PNP open collector

### LINEAR DC OUTPUT (PAXCDL)

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on the input, max, min, or total display value. Reverse slope output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

### UNITS LABEL (LX)

The LPAX Display has an area on the front panel designed for a custom units label. The units label is applied directly to the panel in the embossed area. The units backlight is then turned on via programming.

Refer to the LPAX Accessories Bulletin for a list of available units labels.

### PROGRAMMING SOFTWARE

Crimson 2 (SFCRD2) is a Windows® based program for configuring and updating the firmware of the MPAXDP meter from a PC. Using Crimson 2 makes programming the MPAXDP meter easier and allows the user to save the MPAXDP database in a PC file for future use. Crimson is available as a free download from Red Lion's website, or it can be purchased on CD.

The first time Crimson 2 is run from the File menu, select "New" to display a dialog and select the MPAXDP. The screen will display icons that represent the various programming sections of the MPAXDP. Double-click on an icon to configure the programming parameters pertaining to the selection. Tool Tip help is available for each of the program parameters. A PAX serial plug-in card is required to program the meter using the software.

# 1.0 ASSEMBLING THE DISPLAY

**CAUTION:** The MPAX main circuit board and the option cards contain static sensitive components. Before handling the module or the cards, discharge static charges from your body by touching a grounded bare metal object. Handle the module by the rear plastic cover only, and the option cards by the board edges. Dirt, oil or other contaminants that contact the circuit boards or components can adversely affect circuit operation.

**WARNING:** Exposed line voltage exists on the MPAX main circuit board and the option cards. **DO NOT** apply power to the module OR load circuits until the module is properly installed in the LPAX case.

**NOTE:** All module and option card labels must be installed as shown for safety purposes.

Prior to installing the LPAX Display, it is recommended that the MPAX and any option cards be assembled first. This will allow you the opportunity to insure all the boards are fitted properly into their connectors.

## Installing the Option Cards

If your application requires option cards, they should be installed into the MPAX before it is installed into the LPAX Display. Refer to the literature enclosed with the option cards for installation instruction.

## Installing the MPAX

To install the MPAX Module, align the module with the opening in the LPAX case, as illustrated. The module must be oriented as shown, with terminal #1 toward the top of the LPAX case. Carefully slide the module into the LPAX case.

The LPAX and MPAX connectors will begin to engage about 1/4" from the bottom. At this point, apply a small amount of pressure to the rear of the MPAX module to fully engage the connection. Be sure the module fully snaps into the slots at the rear of the LPAX case. The display is ready for installation.

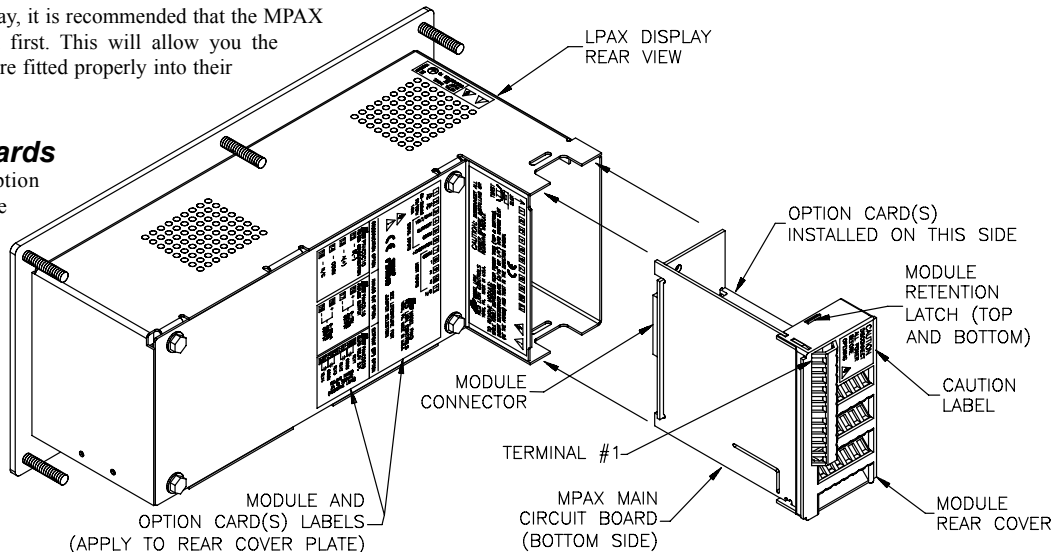

Figure 1, Installing an MPAX Module and Option Cards

## Installing the Labels

Each option card and the MPAX are shipped with a connection label. These labels must be applied to the rear of the LPAX in the positions shown in the drawing.

## Removing The MPAX Module

To remove the MPAX Module from the LPAX Display, first remove all power and load circuits. Then insert a flat screwdriver blade (3/16" or 1/4") into the narrow slot between the LPAX rear cover plate and the module's plastic cover as illustrated in Figure 2. Twist the screwdriver in the direction shown to disengage the internal connectors while firmly squeezing and pulling back on the rear finger tabs (top and bottom). Carefully slide the module out of the LPAX case, keeping it properly aligned with the case opening.

Figure 2, Removing an MPAX Module

## 2.0 INSTALLING THE DISPLAY

### LPAX DISPLAY INSTALLATION

The LPAX display is intended to be mounted into a panel or enclosure. The display is provided with a gasket to provide a water-tight seal. The recommended minimum panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm).

For panel mounting, prepare the panel cut-out to the dimensions shown. The supplied template may be used to mark the cut-out and hole locations on the panel. After the panel cut-out has been deburred, slide the panel gasket over the rear of the display and onto the mounting studs. Insert the display into the panel cut-out as illustrated in Figure 3. Install six # 10-32 keps nuts (supplied) and tighten evenly for uniform gasket compression. Do not over-tighten the nuts.

By using additional mounting accessories, the LPAX can be surface-wall mounted, suspended, or bottom mounted. Separate installation instructions are provided with the mounting accessories.

### Environment And Cleaning

The display should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the system near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Figure 3, Installing The LPAX Into A Panel

## 3.0 WIRING AND PROGRAMMING THE DISPLAY

Once assembled, the LPAX and MPAX have all the same functions and capabilities of our PAX Series Intelligent Panel Meters. Therefore, you will find the appropriate PAX information packed with the MPAX Module. Simply follow the instructions to wire and program the display for your application.

### TROUBLESHOOTING

For technical assistance, contact technical support.

# MODEL EPAX- 5 DIGIT EXTRA LARGE PAX DISPLAY FOR ANALOG INPUTS

- LARGE LED DISPLAY READABLE TO 180 FEET
- VARIOUS ANALOG INPUT MODULES;  
DC VOLTAGE AND CURRENT  
PROCESS SIGNALS  
TRUE RMS VOLTAGE AND CURRENT  
THERMOCOUPLE OR RTD  
STRAIN GAGE/BRIDGE
- ALARMS, ANALOG OUTPUT, AND COMMUNICATION
- PROGRAMMABLE USER INPUTS
- UNIVERSAL AC POWERED (85 to 250 VAC)
- CRIMSON PROGRAMMING SOFTWARE
- NEMA 4X/IP65

## GENERAL DESCRIPTION

The EPAX is a versatile display that can increase productivity by offering the plant floor or production area a large visual display of their current status. Whether your measurement is voltage, current, process, temperature, or strain gage, the EPAX can satisfy your requirement. The EPAX accepts various analog inputs through the use of input modules (MPAX) which allow the unit to adapt to most any application. The MPAX Modules offer the same features as our highly successful PAX Series Panel Meters. Additional plug-in option cards can add alarms, analog output, and communication/bus capabilities, making the EPAX a truly Intelligent Panel Meter.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

**CAUTION: Risk of Danger**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS

*Additional specifications, wiring, programming, and information for the individual MPAX models are contained in the corresponding standard PAX literature. This PAX literature is shipped with the ordered MPAX model.*

1. **DISPLAY:** 4" (101 mm) Red LED  
5-Digit (EPAX0500): -19999 to 99999
2. **POWER REQUIREMENTS:**  
AC MPAX Modules: 85 to 250 VAC, 50/60 Hz, 18 VA  
EPAX Display: 85 to 250 VAC, 50/60 Hz, 10 VA
3. **INPUT:** Accepts analog input modules, see "Selecting Your Display Components and Option Cards."
4. **ANNUNCIATORS:**

**Display Indication:** Three vertical dots on the left side of the unit identify the displays for the following modes:

TOP	Maximum
MIDDLE	Minimum
BOTTOM	Total

**Setpoint Indication:** Four vertical dots on the right side of the unit identify the setpoint "ON" condition, with SP 1 being the top position through SP 4 at the bottom.

5. **EPAX Programming:** The unit is a large display, designed to be remotely mounted. Therefore, the unit does not have a programming keypad. Unit programming should be accomplished by one of the following methods:

**Rear Terminal Block:** External switches can be wired via the terminal block to allow unit programming. A minimum of 3 switches would be required.

**Optional Programming Remote (EPAXPGM0):** This option provides a 10 foot interconnecting cable and programming box. The Programming Remote contains buttons similar to the PAX, allowing easy programming of the EPAX display.

**Optional Serial Programming:** Like all PAX units, you can purchase an RS232 or RS485 Comms Card and program the unit via Crimson, a Windows® based software program.

## DIMENSIONS In inches (mm)

**6. CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**

UL Recognized Component, File #E179259, UL61010A-1, CSA C22.2 No. 1010-1  
 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
 UL Listed, File #E137808, UL508, CSA C22.2 No. 14-M95 LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards  
 Type 4X Indoor Enclosure rating (Face only), UL50  
 IECCE CB Scheme Test Certificate #US/8843A/UL  
 CB Scheme Test Report #04ME11209-20041018  
 Issued by Underwriters Laboratories, Inc.  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.  
 IP65 Enclosure rating (Face only), IEC 529

**ELECTROMAGNETIC COMPATIBILITY**

EMC specifications determined by the MPAX module.

**7. ENVIRONMENTAL CONDITIONS:**

Operating Temperature Range: Determined by the MPAX module  
 Storage Temperature Range: -40 to 60°C  
 Operating and Storage Humidity: 0 to 85% max. RH (non-condensing)  
 Altitude: Up to 2000 meters

**8. MOUNTING REQUIREMENTS:**

Max. panel thickness is 0.375" (9.5 mm)  
 Min. panel thickness for NEMA 4/IP65 sealing is 0.060" (1.52 mm)

**9. MODULE INSTALLATION:**

24-pin shrouded connector on EPAX engages connector on MPAX module upon installation. Shroud ensures proper alignment by providing a lead-in for the module connector.

**10. CONNECTIONS:** Wiring connections are made to the EPAX terminal block and MPAX module via high compression cage-clamp terminal blocks.

**MPAX Module Wiring:** Instructions are provided in the corresponding PAX Bulletin.

**EPAX Terminal Block Wiring:**

Wire Strip Length: 0.3" (7.5 mm)  
 Wire Gage: 30-12 AWG copper wire  
 Maximum Torque: 5-7 inch-lbs (0.58-0.81 N-m)

**CAUTION: DISCONNECT ALL POWER BEFORE INSTALLING OR REMOVING MODULE**

**11. CONSTRUCTION:** Aluminum front panel, enclosure, and rear cover with textured black polyurethane paint for scratch and corrosion resistance protection. Sealed front panel meets NEMA 4X/IP65 specifications for indoor use when properly installed. Installation Category II, Pollution Degree 2. Panel gasket and keps nuts included.

**12. WEIGHT:** 5 lbs (2.25 kg) (*less module*)

**About the MPAX Input Modules**

The MPAX Module serves as the input to the EPAX Display. There are several different modules to cover a variety of inputs. The MPAX module provides input scaling which allows the EPAX to display most any engineering unit. Once the MPAX is inserted into the EPAX, the unit has the same functions and capabilities of our PAX Series Intelligent Panel Meters. A full set of PAX programming instructions will be included with the MPAX module.

**Selecting Your Display Components and Option Cards**

To build a complete display unit, you will need an EPAX and an MPAX Input Module. The EPAX is only a display and will not operate without an MPAX module. Please use the following chart to identify the appropriate MPAX module and EPAX Display that will satisfy your application.

SIGNAL TYPE	MPAX MODULES*	EPAX DISPLAYS	OPTIONAL PLUG-IN CARD COMPATABILITY		
			SETPOINT	COMMS	ANALOG
Universal DC Inputs	MPAXD000	EPAX0500	YES	YES	YES
Process Inputs	MPAXP000	EPAX0500	YES	YES	YES
Temperature Inputs	MPAXT000	EPAX0500	YES	YES	YES
Strain Gage/Loadcell	MPAXS000	EPAX0500	YES	YES	YES
True RMS AC Voltage/Current	MPAXH000	EPAX0500	YES	YES	YES
Dual Process Inputs	MPAXDP00	EPAX0500	YES	YES	YES

\* For detailed module and plug-in card specifications, see corresponding PAX literature. (i.e. For MPAXD specifications, see the PAXD literature)

**OPTIONAL PLUG-IN CARDS AND ACCESSORIES**

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

**Adding Option Cards**

The PAX and MPAX series meters can be fitted with up to three optional plug-in cards. The details for each plug-in card can be reviewed in the specification section of the PAX Bulletin. Only one card from each function type can be installed at one time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The plug-in cards can be installed initially or at a later date.

**SETPOINT ALARMS PLUG-IN CARDS (PAXCDS)**

The PAX and MPAX series has 4 available setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

- PAXCDS10 - Dual Relay, FORM-C, Normally open & closed
- PAXCDS20 - Quad Relay, FORM-A, Normally open only
- PAXCDS30 - Isolated quad sinking NPN open collector
- PAXCDS40 - Isolated quad sourcing PNP open collector

**ANALOG OUTPUT PLUG-IN CARD (PAXCDL)**

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on various display values. Reverse slopes output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

**COMMUNICATION PLUG-IN CARDS (PAXCDC)**

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via Crimson, the RS232 or RS485 Cards must be used.

- PAXCDC10 - RS485 Serial (Terminal) PAXCDC1C - RS485 Serial (Connector)
- PAXCDC20 - RS232 Serial (Terminal) PAXCDC2C - RS232 Serial (Connector)
- PAXCDC30 - DeviceNet
- PAXCDC40 - Modbus (Terminal) PAXCDC4C - Modbus (Connector)
- PAXCDC50 - Profibus-DP

**PROGRAMMING SOFTWARE**

Crimson is a Windows® based program that allows configuration of the EPAX meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the EPAX meter. The EPAX program can then be saved in a PC file for future use. A PAX serial plug-in card is required to program the meter using the software.

## 2.0 INSTALLING THE DISPLAY

### EPAX DISPLAY INSTALLATION

The EPAX display is intended to be mounted into a panel or enclosure. The display is provided with a gasket to provide a water-tight seal. The recommended minimum panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm).

For panel mounting, prepare the panel cut-out to the dimensions shown in Figure 3. The supplied template may be used to mark the cut-out and hole locations on the panel. After the panel cut-out has been deburred, slide the panel gasket over the rear of the display and onto the mounting studs. Insert the display into the panel cut-out as illustrated in Figure 4. Install 14 # 10-32 keps nuts (supplied) and tighten evenly for uniform gasket compression. Do not over-tighten the nuts.

By using additional mounting accessories, the EPAX can be surface-wall mounted, suspended, or bottom mounted. Separate installation instructions are provided with the mounting accessories.

#### DIMENSIONS In inches (mm)

Figure 3, Panel Cut-out for the EPAX

### Environment And Cleaning

The display should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the system near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

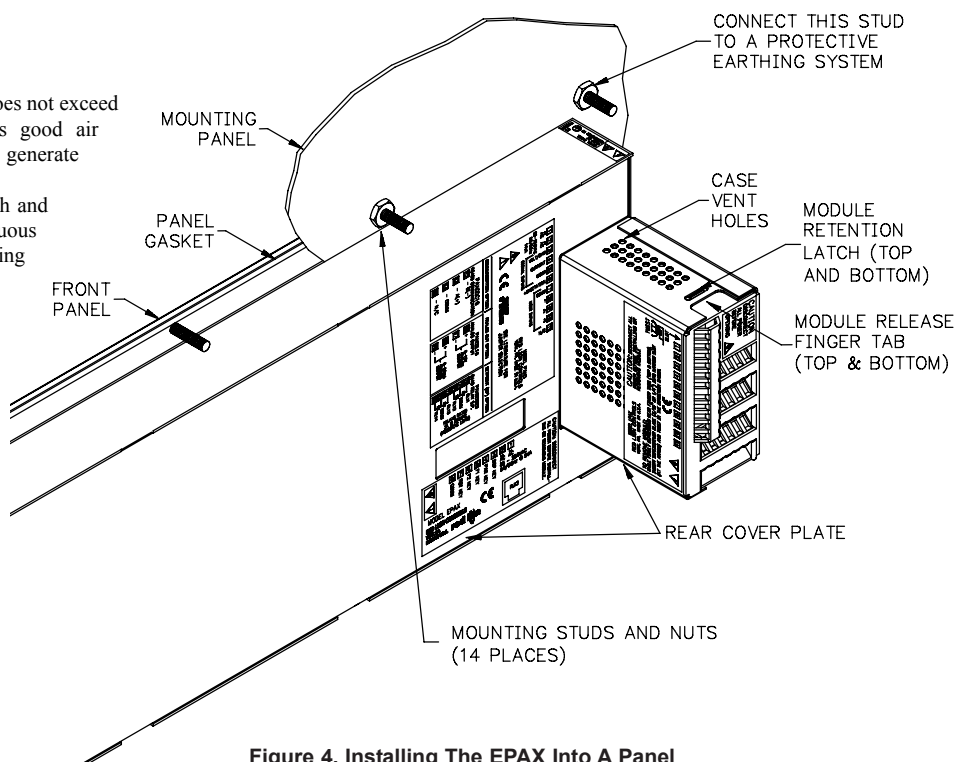

Figure 4, Installing The EPAX Into A Panel

# 3.0 WIRING AND PROGRAMMING THE DISPLAY

Once assembled, the EPAX and MPAX have all the same functions and capabilities of our PAX Series Intelligent Panel Meters. Therefore, you will find the appropriate PAX information packed with the MPAX Module. Simply follow the instructions to wire and program the display for your application.

*Note: Both the EPAX and the MPAX module require power. It is recommended to connect the primary AC power to the EPAX terminal block, then jumper to the MPAX module.*

## EPAX PROGRAMMING

The unit is a large display, designed to be remotely mounted. Therefore, the unit does not have a programming keypad. Unit programming must be accomplished by one of the following three methods:

### Optional Programming Remote (EPAXPGM0)

This optional programming remote plugs into the EPAX through an RJ12 connector and a 10 foot cable. The buttons on the programming box function the same as the PAX unit. Simply program the EPAX exactly as the PAX instructions indicate. The programming box can be left connected to the EPAX for future programming changes or can be disconnected and used to program additional EPAX units.

### Rear Terminal Block

External normally open switches can be wired via the terminal block to allow unit programming. A minimum of 3 switches would be required. Each external switch must be wired between the key and the common terminal.

### EPAX TERMINAL BLOCK

### RJ12 CONNECTOR ON BOTTOM OF UNIT

RJ12 FEMALE	
PIN	NAME
1	DSP KEY
2	PAR KEY
3	F1 KEY
4	F2 KEY
5	RST KEY
6	COMM

### Optional Serial Programming

Like all PAX units, you can purchase an RS232 or RS485 Communications Card and program the unit via Crimson, a Windows® based software program.

# MODEL EPAX- 6 DIGIT EXTRA LARGE PAX DISPLAY FOR DIGITAL INPUTS

- LARGE LED DISPLAY READABLE TO 180 FEET
- VARIOUS DIGITAL INPUT MODULES;  
COUNT AND RATE INPUT  
CLOCK/TIMER  
SERIAL SLAVE
- ALARMS, ANALOG OUTPUT, AND COMMUNICATION
- PROGRAMMABLE USER INPUTS
- UNIVERSAL AC POWERED (85 to 250 VAC)
- PC SOFTWARE FOR METER CONFIGURATION
- NEMA 4X/IP65

## GENERAL DESCRIPTION

The EPAX Display is a versatile display that can increase productivity by offering the plant floor or production area a large visual display of their current status. Whether your measurement is rate, count, or time, the EPAX can satisfy your requirement. The EPAX displays accept various digital inputs through the use of input modules (MPAX) which allow the unit to adapt to most any application. The MPAX Modules offer the same features as our highly successful PAX Series Panel Meters. Additional plug-in option cards can add alarms, analog output, and communication/bus capabilities, making the EPAX a truly Intelligent Panel Meter.

## SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

  The protective conductor terminal is bonded to conductive parts of the equipment for safety purposes and must be connected to an external protective earthing system.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS

Additional specifications, wiring, programming, and information for the individual MPAX models are contained in the corresponding standard PAX literature. This PAX literature is shipped with the ordered MPAX model.

Timer	MPAXTM00	EPAX0600	YES	YES	-	-

\* For detailed module and plug-in card specifications, see corresponding PAX literature. (i.e. For MPAXI specifications, see the PAXI literature)

**OPTIONAL PLUG-IN CARDS AND ACCESSORIES**

**WARNING: Disconnect all power to the unit before installing Plug-in cards.**

**Adding Option Cards**

The PAX and MPAX series meters can be fitted with up to three optional plug-in cards. The details for each plug-in card can be reviewed in the specification section of the PAX Bulletin. Only one card from each function type can be installed at one time. The function types include Setpoint Alarms (PAXCDS), Communications (PAXCDC), and Analog Output (PAXCDL). The plug-in cards can be installed initially or at a later date.

**SETPOINT ALARMS PLUG-IN CARDS (PAXCDS)**

The PAX and MPAX series has 4 available setpoint alarm output plug-in cards. Only one of these cards can be installed at a time. (Logic state of the outputs can be reversed in the programming.) These plug-in cards include:

- PAXCDS10 - Dual Relay, FORM-C, Normally open & closed
- PAXCDS20 - Quad Relay, FORM-A, Normally open only
- PAXCDS30 - Isolated quad sinking NPN open collector
- PAXCDS40 - Isolated quad sourcing PNP open collector

**ANALOG OUTPUT PLUG-IN CARD (PAXCDL)**

Either a 0(4)-20 mA or 0-10 V retransmitted linear DC output is available from the analog output plug-in card. The programmable output low and high scaling can be based on various display values. Reverse slopes output is possible by reversing the scaling point positions.

PAXCDL10 - Retransmitted Analog Output Card

**COMMUNICATION PLUG-IN CARDS (PAXCDC)**

A variety of communication protocols are available for the PAX and MPAX series. Only one of these cards can be installed at a time. When programming the unit via Crimson (for MPAXI000) or SFPAX (for MPAXCK00 or MPAXTM00), the RS232 or RS485 Cards must be used.

- PAXCDC10 - RS485 Serial (Terminal) PAXCDC1C - RS485 Serial (Connector)
- PAXCDC20 - RS232 Serial (Terminal) PAXCDC2C - RS232 Serial (Connector)
- PAXCDC30 - DeviceNet
- PAXCDC40 - Modbus (Terminal) PAXCDC4C - Modbus (Connector)
- PAXCDC50 - Profibus-DP

**PROGRAMMING SOFTWARE**

**CRIMSON - MPAXI000 Only**

Crimson is a Windows® based program that allows configuration of the EPAX meter from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the EPAX meter. The EPAX program can then be saved in a PC file for future use. A PAX serial plug-in card is required to program the meter using the software.

**SFPAX - MPAXCK00 and MPAXTM00 Only**

The SFPAX is a Windows® based program that allows configuration of the EPAX meter from a PC. Using the SFPAX makes it easier to program the EPAX meter and allows saving the PAX program in a PC file for future use. On-line help is available within the software. A PAX serial plug-in card is required to program the meter using the software.

# 1.0 ASSEMBLING THE DISPLAY

**CAUTION:** The MPAX main circuit board and the option cards contain static sensitive components. Before handling the module or the cards, discharge static charges from your body by touching a grounded bare metal object. Handle the module by the rear plastic cover only, and the option cards by the board edges. Dirt, oil or other contaminants that contact the circuit boards or components can adversely affect circuit operation.

**WARNING:** Exposed line voltage exists on the MPAX main circuit board and the option cards. **DO NOT** apply power to the module OR load circuits until the module is properly installed in the EPAX case.

**NOTE:** All module and option card labels must be installed as shown for safety purposes.

Prior to installing the EPAX Display, it is recommended that the MPAX and any option cards be assembled first. This will allow you the opportunity to insure all the boards are fitted properly into their connectors.

## Installing the Option Cards

If your application requires option cards, they should be installed into the MPAX before it is installed into the EPAX Display. Refer to the literature enclosed with the option cards for installation instruction.

## Installing the MPAX

Remove the MPAX case (plastic) from the rear of the EPAX by removing the two screws and pulling off the metal holding bracket. Install the MPAX into plastic case by aligning the front connector of the MPAX with the hole in the front of the plastic case. The module must be oriented as shown with terminal #1 toward the top of the EPAX case. Next, insert the MPAX case into the EPAX by lightly pushing the connector of the MPAX into the connector of the EPAX PC board. Place holding bracket over the plastic case and install the two screws.

## Installing the Labels

Each option card and the MPAX are shipped with a connection label. These labels must be applied to the rear of the EPAX in the positions shown in the drawing.

Figure 1, Installing an MPAX Module and Option Cards

## Removing The MPAX Module

To remove the MPAX Module from the EPAX Display, first remove all power and load circuits. Then insert a flat screwdriver blade ( $3/16$ " or  $1/4$ "") into the narrow slot between the EPAX rear cover plate and the module's plastic cover as illustrated in Figure 2. Twist the screwdriver in the direction shown to disengage the internal connectors while firmly squeezing and pulling back on the rear finger tabs (top and bottom). Carefully slide the module out of the EPAX case, keeping it properly aligned with the case opening.

Figure 2, Removing an MPAX Module

G

## 2.0 INSTALLING THE DISPLAY

### EPAX DISPLAY INSTALLATION

The EPAX display is intended to be mounted into a panel or enclosure. The display is provided with a gasket to provide a water-tight seal. The recommended minimum panel thickness for NEMA 4/IP65 sealing is 0.060" (1.57 mm).

For panel mounting, prepare the panel cut-out to the dimensions shown in Figure 3. The supplied template may be used to mark the cut-out and hole locations on the panel. After the panel cut-out has been deburred, slide the panel gasket over the rear of the display and onto the mounting studs. Insert the display into the panel cut-out as illustrated in Figure 4. Install 14 # 10-32 keps nuts (supplied) and tighten evenly for uniform gasket compression. Do not over-tighten the nuts.

By using additional mounting accessories, the EPAX can be surface-wall mounted, suspended, or bottom mounted. Separate installation instructions are provided with the mounting accessories.

#### DIMENSIONS In inches (mm)

Figure 3, Panel Cut-out for the EPAX

### Environment And Cleaning

The display should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the system near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

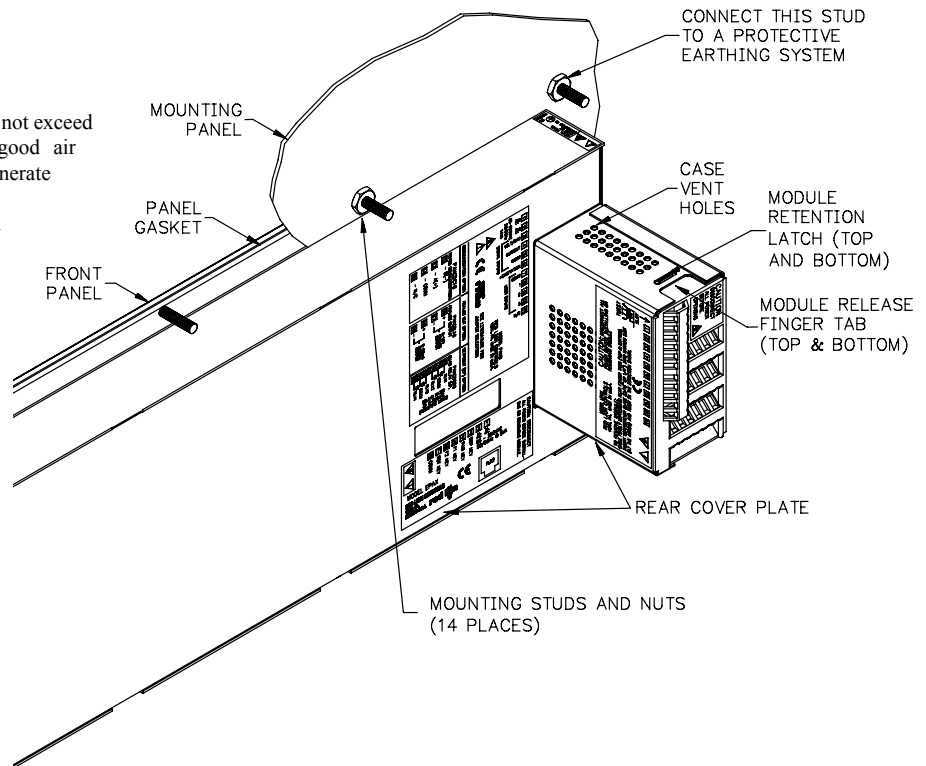

Figure 4, Installing The EPAX Into A Panel

# 3.0 WIRING AND PROGRAMMING THE DISPLAY

Once assembled, the EPAX and MPAX have all the same functions and capabilities of our PAX Series Intelligent Panel Meters. Therefore, you will find the appropriate PAX information packed with the MPAX Module. Simply follow the instructions to wire and program the display for your application.

*Note: Both the EPAX and the MPAX module require power. It is recommended to connect the primary AC power to the EPAX terminal block, then jumper to the MPAX module.*

## EPAX PROGRAMMING

The unit is a large display, designed to be remotely mounted. Therefore, the unit does not have a programming keypad. Unit programming must be accomplished by one of the following three methods:

### Optional Programming Remote (EPAXPGM0)

This optional programming remote plugs into the EPAX through an RJ12 connector and a 10 foot cable. The buttons on the programming box function the same as the PAX unit. Simply program the EPAX exactly as the PAX instructions indicate. The programming box can be left connected to the EPAX for future programming changes or can be disconnected and used to program additional EPAX units.

### RJ12 CONNECTOR ON BOTTOM OF UNIT

RJ12 FEMALE	
PIN	NAME
1	DSP KEY
2	PAR KEY
3	F1 KEY
4	F2 KEY
5	RST KEY
6	COMM

### Rear Terminal Block

External normally open switches can be wired via the terminal block to allow unit programming. A minimum of 3 switches would be required. Each external switch must be wired between the key and the common terminal.

### EPAX TERMINAL BLOCK

### Optional Serial Programming

Like all PAX units, you can purchase an RS232 or RS485 Comms Card and program the unit via Windows® based software programs.

## MODEL IFMA - DIN-RAIL FREQUENCY TO ANALOG CONVERTER

- SIMPLE ON-LINE RANGE SETTING  
(Using Actual Input Signal or Signal Generator)
- USER SETTABLE FULL SCALE FREQUENCY FROM  
1 Hz to 25 KHz
- FOUR OUTPUT OPERATING RANGES  
(0 to 5 V, 0 to 10 V, 0 to 20 mA, and 4 to 20 mA)
- PROGRAMMABLE INPUT CIRCUIT ACCEPTS OUTPUTS FROM A  
VARIETY OF SENSORS
- 85 to 250 VAC and 9 to 32 VDC POWERED VERSIONS  
AVAILABLE
- LOW FREQUENCY CUT-OUT AND OVERRANGE INDICATION
- 3-WAY ELECTRICAL ISOLATION (POWER/INPUT/OUTPUT)
- INPUT AND OUTPUT INDICATION LEDS

UL Recognized Component,  
File # E137808

### DESCRIPTION

The Model IFMA accepts a frequency input, and outputs an analog voltage or current in proportion to the input frequency, with 0.1% accuracy. The full scale input frequency can be set to any value from 1 Hz to 25 KHz, either with a frequency source, or digitally with the on-board rotary switch and push-button.

The IFMA utilizes a seven position DIP switch, a rotary switch, a push-button and two indication LEDs to accomplish input circuit configuration, operational parameter set-up, and Input/Output indication. The input circuitry is DIP switch selectable for a variety of sources.

The indication LEDs are used during normal operation to display the input and output status of the IFMA. These LEDs are also used to provide visual feedback to the user of the existing parameter settings during parameter set-up.

The IFMA operates in one of four output modes. The programmable minimum and maximum response times provide optimal response at any input frequency.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat profile rail according to EN 50 022 - 35 x 7.5 and 35 x 15, and G profile rail according to EN 50 035 - G 32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

### SPECIFICATIONS

#### 1. POWER:

**AC Operation:** 85 to 250 VAC, 48 to 62 Hz; 6.5 VA

**DC Operation:** 9 to 32 VDC; 2.5 W

**Power Up Current:**  $I_p = 600$  mA for 50 msec. max.

#### 2. SENSOR POWER: (AC version only) +12 VDC $\pm 25\%$ @ 60 mA max.

#### 3. OPERATING FREQUENCY RANGE:

From 0 Hz to 25 KHz; user selectable.

#### 4. SIGNAL INPUT: DIP switch selectable to accept signals from a variety of sources, including switch contacts, outputs from CMOS or TTL circuits, magnetic pickups, and all standard RLC sensors.

**Current Sourcing:** Internal 1 K $\Omega$  pull-down resistor for sensors with current sourcing output. (Max. sensor output current = 24 mA @ 24 V output.)

**Current Sinking:** Internal 3.9 K $\Omega$  pull-up resistor for sensors with current sinking output. (Max. sensor current = 3 mA.)

**Low Bias:** Input trigger levels  $V_{IL} = 0.25$  V,  $V_{IH} = 0.75$  V; for increased sensitivity when used with magnetic pickups.

**Hi Bias:** Input trigger levels  $V_{IL} = 2.5$  V,  $V_{IH} = 3.0$  V; for logic level signals.

**Max. Input Signal:**  $\pm 90$  V; 2.75 mA max. (With both Current Sourcing and Current Sinking resistors switched off.)

#### 5. SIGNAL VOLTAGE OUTPUT (Selectable):

0 to 5 VDC @ 10 mA max.

0 to 10 VDC @ 10 mA max.

#### 6. SIGNAL CURRENT OUTPUT (Selectable):

0 to 20 mA @ 10 VDC min.

4 to 20 mA @ 10 VDC min.

#### 7. OUTPUT COMPLIANCE:

**Voltage:** 10 V across a min. 1K $\Omega$  load (10 mA). Factory calibrated for loads greater than 1 M $\Omega$ .

**Current:** 20 mA through a max. 500 $\Omega$  load (10 VDC).

#### 8. ACCURACY: $\pm 0.1\%$ of full scale range ( $\pm 0.2\%$ for 0 to 5 VDC range).

#### 9. RESOLUTION:

Voltage : 3.5 mV min.

Current: 5  $\mu$ A min.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS FOR AVAILABLE SUPPLY VOLTAGES

### EMC EMISSIONS:

Meets EN 50081-2: Industrial Environment.  
 CISPR 11 Radiated and conducted emissions

### EMC IMMUNITY:

Meets EN 50082-2: Industrial Environment.  
 ENV 50140 - Radio-frequency radiated electromagnetic field<sup>1</sup>  
 ENV 50141 - Radio-frequency conducted electromagnetic field

- EN 61000-4-2 - Electrostatic discharge (ESD)<sup>2</sup>  
 EN 61000-4-4 - Electrical fast transient/burst (EFT)  
 EN 61000-4-8 - Power frequency magnetic field

### Notes:

- For operation without loss of performance:  
 Unit is mounted on a rail in a metal enclosure (Buckeye SM7013-0 or equivalent) and I/O cables are routed in metal conduit connected to earth ground.
- This device was designed for installation in an enclosure. To avoid electrostatic discharge, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches, etc.) typical anti-static precautions should be observed before touching the unit.  
 Refer to the EMC Installation Guidelines section of this bulletin for additional information.

### 15. ENVIRONMENTAL CONDITIONS:

**Operating Temperature:** 0 to 50°C

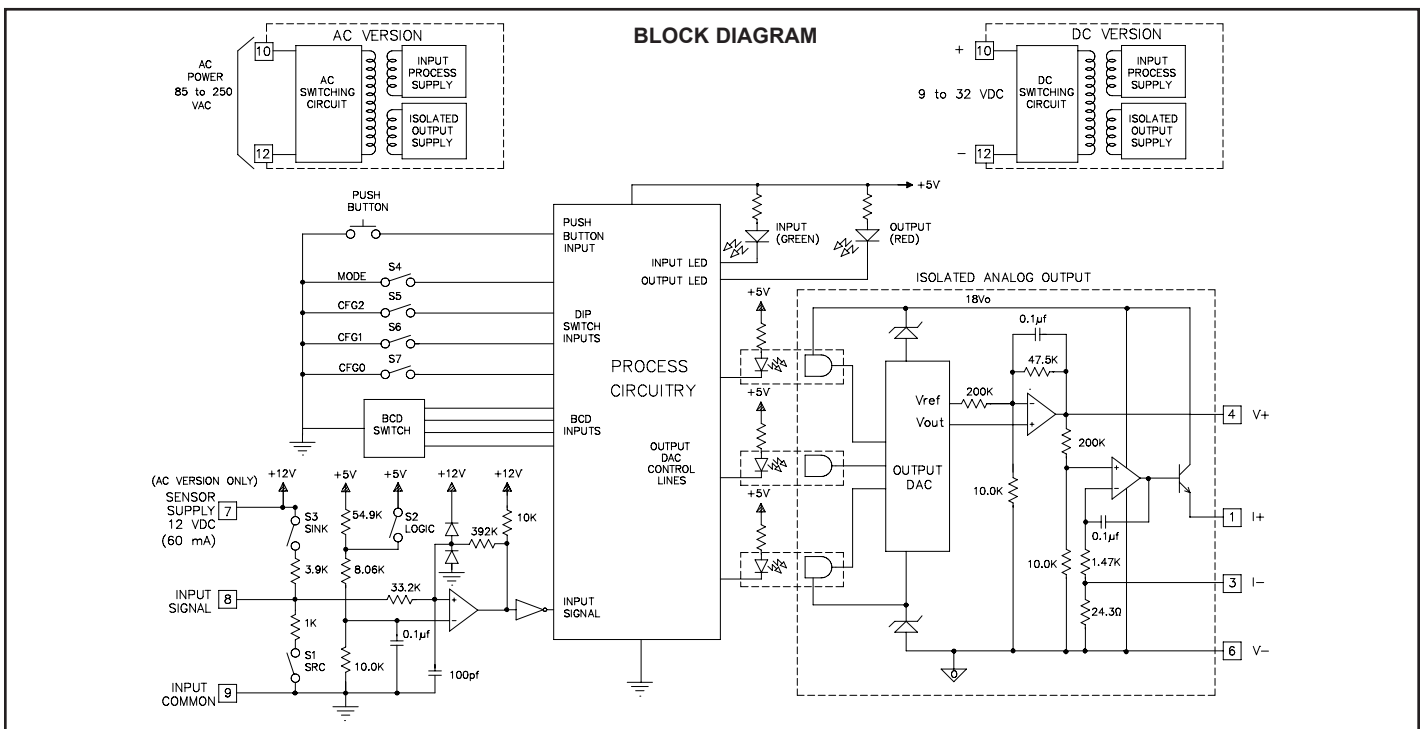

**Storage Temperature:** -40 to 80°C

**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.

**Altitude:** Up to 2000 meters

16. **CONSTRUCTION:** Case body is green, high impact plastic. Installation Category II, Pollution Degree 2

17. **WEIGHT:** 6 oz. (0.17 Kg)

## OVERVIEW

The Model IFMA continuously monitors a frequency input and outputs a voltage or current signal in proportion to the input signal. The output is accurate to  $\pm 0.1\%$  of full scale for Operating Modes 2, 3, and 4. Operating Mode 1 is accurate to  $\pm 0.2\%$  of full scale. The green Input LED blinks at the rate of the input frequency. At about 100 Hz, the Input LED will appear to be solid on. At very low frequencies, the Input LED blinks slowly and may also appear to be solid on. A loss of signal may also cause the Input LED to remain on, depending on the DIP switch set-up. In this case, the red LED also turns on.

The Minimum Response Time parameter sets the minimum update time of the output. The actual response time is the Minimum Response Time plus up to one full period of the input signal. The IFMA counts the negative edges occurring during the update time period, and computes the average frequency value for that time. This action filters out any high frequency jitter that may be present in the input signal. The longer the Minimum Response Time, the more filtering occurs.

The Maximum Response Time parameter sets the Low Frequency Cut-out response time for the unit. If a new edge is not detected within the time specified by the Maximum Response Time setting, the unit sets the output to the existing Low Frequency Cut-out Value setting depending on the selected range and calibration setting.

The unit also indicates Low Frequency Cut-out by turning ON the output LED. The Maximum Response Time can be set shorter than the Minimum Response Time. In this case, as long as the input signal period is shorter than the Maximum Response Time, the unit continues to indicate the input frequency at its output. But, if the input period at any time exceeds the Maximum Response Time, the unit immediately takes the output to the Low Frequency Cut-out Value, regardless of the Minimum Response Time setting.

The IFMA is calibrated at the factory for all of the selected ranges. However, the user can adjust the minimum calibration to any value less than the Full Scale value, and the Full Scale value to any value greater than the minimum value. If the minimum and full scale values are brought closer together, the accuracy of the unit decreases proportionate to the decreased range of the unit (See Calibration).

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful installation or troublesome installation.

Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

- Fair-Rite # 0443167251 (RLC #FCOR0000)
- TDK # ZCAT3035-1330A
- Steward #28B2029-0A0

Line Filters for input power cables:

- Schaffner # FN610-1/07 (RLC #LFIL0000)
- Schaffner # FN670-1.8/07
- Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker.

## POWER AND OUTPUT CONNECTIONS

### AC Power

Primary AC power is connected to terminals 10 and 12 (labeled AC). For best results, the AC Power should be relatively "clean" and within the specified variation limits. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off, should be avoided.

### DC Power

The DC power is connected to terminals 10 and 12. The DC plus (+) power is connected to terminal 10 and the minus (-) is connected to terminal 12.

It is recommended that separate supplies be used for sensor power and unit power. Using the same supply for both will negate isolation between input and power.

### Current Output

When using Operating Mode 3 or 4, the output device is connected to terminals 1(I+) and 3 (I-).

### Voltage Output

When using Operating Mode 1 or 2, the output device is connected to terminals 4 (V+) and 6 (V-).

*Note: Although signals are present at voltage and current outputs at the same time, only the selected mode is in calibration at any one time.*

*Example: Operating Mode 2 is selected. The voltage level present at the voltage terminals is in calibration, but the signal appearing at the current terminals does not conform to either of the current output modes.*

## INPUT CIRCUITS, SENSOR CONNECTIONS AND CONFIGURATION SWITCH SET-UP

The Model IFMA uses a comparator amplifier connected as a Schmidt trigger circuit to convert the input wave form into the pulse form required for proper circuit operation. Three set-up switches are used to configure the input circuit to accept signals from a wide variety of sources, as follows:

S1 - ON: Connects a 1 K $\Omega$  pull-down resistor for sensors with sourcing outputs. (Maximum sensor output current is 24 mA @ 24 VDC output.)

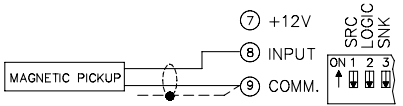

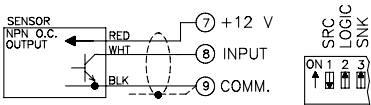

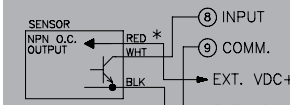

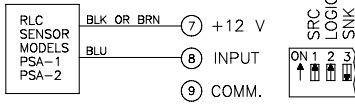

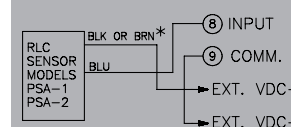

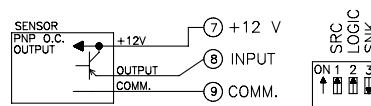

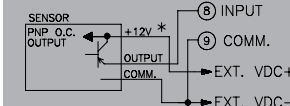

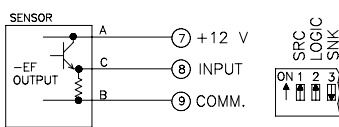

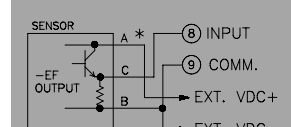

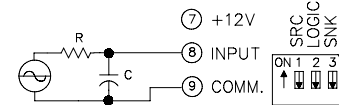

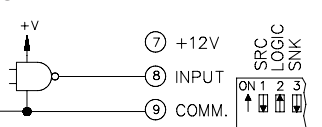

S2 - ON: For logic level signals. Sets the input bias levels to  $V_{IL} = 2.5 \text{ V}$ ,  $V_{IH} = 3.0 \text{ V}$ .

OFF: For increased sensitivity when used with magnetic pickups. Sets the input bias levels to  $V_{IL} = 0.25 \text{ V}$ ,  $V_{IH} = 0.75 \text{ V}$ .

S3 - ON: Connects a 3.9 K $\Omega$  pull-up resistor for sensors with current sinking outputs. (Max. sensor current = 3 mA.)

### CONNECTIONS & CONFIGURATION SWITCH SET-UP FOR VARIOUS SENSOR OUTPUTS

**Note:** Separate power supplies must be used for sensor power and input power to maintain the isolation breakdown voltage specification. If isolation between power and input is not needed, then a single supply can be used for both unit and sensor power.

<p><b>MAGNETIC PICKUPS</b></p>  <p><b>RECOMMENDED RULES FOR MAGNETIC PICKUP CONNECTIONS</b></p> <p>1. Connect the shield to the common Terminal "9" at the input of the IFMA. DO NOT connect the shield at the pickup end. Leave the shield "open" at the pickup and insulate the exposed shield to prevent electrical contact with the frame or case. (Shielded cable, supplied on some RLC magnetic pickups, has open shield on pickup end.)</p>	<p><b>SENSORS WITH CURRENT SINK OUTPUT (NPN O.C.)</b></p> <div style="display: flex; justify-content: space-between;"> <div style="width: 48%;"> <p><b>AC VERSION</b></p>  <p>RLC SENSOR MODELS: ASTC, LMPC, PSAC, LSC, RPCC, RPCB, RPCH, RPCQ</p> </div> <div style="width: 48%; background-color: #f0f0f0; padding: 5px;"> <p><b>DC VERSION</b></p>  <p><small>*Check sensor power requirements before wiring.</small></p> </div> </div>

### CONFIGURING THE IFMA

To begin set-up, place DIP switch 4 to the on (up) position. DIP switches 5, 6, and 7 access unit configuration settings. Upon entry to a set-up parameter, the Input LED blinks the current numerical value of a setting at a 1 Hz rate. A setting of "1" is indicated by one blink (1/2 sec on, 1/2 sec off), through a setting of "9", which is indicated by nine blinks. A setting of "0" is indicated by a single short flash (40 msec on, 1 sec off). The decimal point position is the last number blinked. After the entire value is indicated, the IFMA pauses two seconds and repeats the value.

During entry of a new value, if the Mode switch (S4) or any of the CFG DIP switch positions are changed before the push button is pressed, the IFMA aborts the entry process and retains the previous setting.

DIP SWITCH	DESCRIPTION	SECTION
	Operating Mode	(1.0)
	Input Range Setting Using an Input Signal or Frequency Generator	(2.0)
	Input Range Setting Using the Rotary Switch	(3.0)
	Minimum Response Time	(4.0)
	Maximum Response Time (Low Frequency Cut-Out Setting)	(5.0)
	Analog Output Minimum Value	(6.0)
	Analog Output Full Scale Value	(6.0)

*Note:* To return to normal operation, place DIP switch 4 in the down (RUN) position.

( ) Indicates Configuration Section

## OUTPUT INDICATION

**Over range on the output :** The Output LED (red) turns on and the Output is “clamped” at the maximum level.

**Low Frequency Cut-Out :** The Output LED (red) turns on to indicate the input frequency is below the Zero Frequency setting.

**Invalid Entry during Set-up :** The Input LED (green) and the Output LED (red) alternately blink until a valid entry is made.

FACTORY SETTINGS		
Parameter	Setting	Value
Operating Mode	4	4 to 20 mA
Input Range	10.000	10 KHz
Minimum Response	0	5 msec
Maximum Response	0	1024 times Input Range Period (102 msec, 9.8 Hz)

### 1.0 Operating Mode (Analog Output)

Step 1.1

Step 1.2

Step 1.3

Step 1.4

- Place DIP switch 4 to the ON (up) position and DIP switches 5, 6, and 7 as shown.
- Green input LED blinks the Setting corresponding to the Operating Mode shown below, pauses and repeats the value.

Setting	Operating Mode
1	0 to 5 VDC
2	0 to 10 VDC
3	0 to 20 mA
4	4 to 20 mA

- ◆ **Factory calibration values are restored when the Operating Mode is changed.**
- ◆ **If existing operating mode setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 1.3.**

- Press the push-button. The Green input LED blinks rapidly to indicate the Operating mode setting is now accessed.
- Turn the rotary switch to the selected numerical value for the output desired (see the list in Step 1.2).
- Press the push-button. The Green input LED blinks value entered, pauses, and repeats the new Operation setting.

- ◆ **If the new Operating mode setting is acceptable, this section is complete\*.**
- ◆ **If the new Operating mode setting is not the desired setting, repeat from Step 1.3.**
- ◆ **If the Red output LED blinks, the rotary switch numerical value is invalid. Repeat Steps 1.4 and 1.5.**

\* Section complete; place DIP switch 4 to the Down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

### 2.0 On-Line Input Range Setting Using Actual Input Signal Or Frequency Generator

Step 2.1

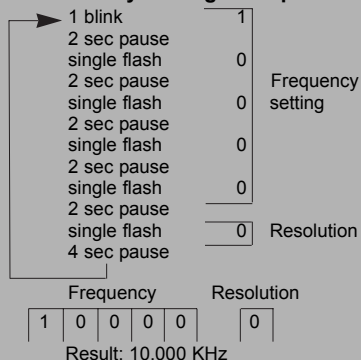

Step 2.2

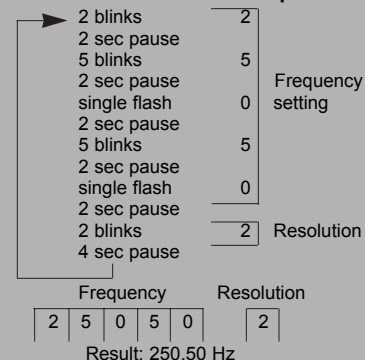

Step 2.4

- Place DIP switch 4 to the ON position and DIP switches 5, 6, and 7 as shown.
- The Green input LED blinks the existing Input Range setting as shown in the examples below. Six full digits of numerical information blink with a short pause between digits and a longer pause before repeating. The first five digits are the existing input range setting of the frequency magnitude. The sixth digit is the frequency resolution (the number of digits to the right of the decimal point).

#### Factory Setting Example

#### Additional Example:

- ◆ **If the existing Input Range setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 2.3.**

- Apply the maximum input signal.
- Press the push-button. The Green input LED blinks rapidly. The acquisition process takes two seconds plus one period of the input signal.

- ◆ **If the new input range setting is valid, the Green input LED turns on solid. Continue to Step 2.5.**
- ◆ **If Red output LED blinks, the new input range setting is invalid, outside the acceptable 1 Hz to 25 KHz range. Repeat Steps 2.3 and 2.4.**

- Press the push-button. The Green input LED blinks the new Input Range setting. This section is complete\*. Verify the Input Range setting as shown in Step 2.2.

\* Section complete; place DIP switch 4 to the Down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

**PREFERRED METHOD**

### 3.0 Input Range Setting Using The Rotary Switch

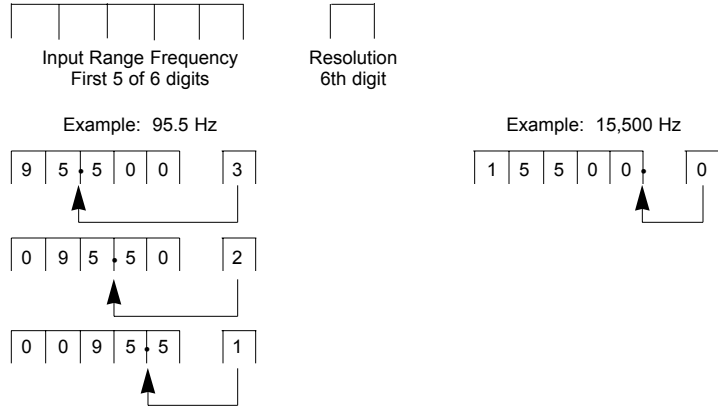

**ALTERNATIVE METHOD IF INPUT SIGNAL IS NOT AVAILABLE**

- 3.1 Place DIP switch 4 to the ON(up) position and DIP switches 5, 6, and 7 as shown.
- 3.2 The Green input LED blinks the existing Input Range setting, pauses and repeats. Six full digits of numerical information blink with a short pause between digits and a longer pause at the end, before repeating. The first five digits are the existing input range setting magnitude. The sixth digit is the frequency resolution (the number of digits to the right of the decimal point).

◆ *If the existing Input Range setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 3.3.*

3.3 Determine the Input Range frequency and record in the space provided below.

- 3.4 Press the push-button. The Green input LED blinks rapidly. Input Range setting is now accessed.
- 3.5 Turn the rotary switch to the first selected numerical value. Press the push-button. The Green input LED continues to blink rapidly. First of six digits is entered.
- 3.6 Turn the rotary switch to the second selected numerical value. Press the push-button. The Green input LED continues to blink rapidly. Second of six digits is entered.
- 3.7 Repeat Step 3.6 three more times, then go to Step 3.8. This enters a total of five of the required six numerical digits.
- 3.8 Turn the rotary switch to the selected numerical value for resolution requirement. Press the push-button. The Green input LED blinks the new Input Range setting (as described in [Step 2.2](#)), pauses, and repeats the value.

- ◆ *If the new Input Range setting is acceptable, this section is complete\*.*
- ◆ *If the new Input Range setting is not the desired setting, repeat Steps 3.4, through 3.8.*
- ◆ *If the Red output LED blinks, the numerical value entered is invalid. Repeat Steps 3.3 through 3.8.*

\* Section complete; place DIP switch 4 to the Down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

### 4.0 Minimum Response Time Setting

- 4.1 Position DIP switch 4 to the ON(up) position and DIP switches 5, 6, and 7 as shown.
- 4.2 The Green input LED blinks the corresponding Minimum Response Time Setting (see following list), pauses and repeats.

Setting	Time
0	5 msec
1	10 msec
2	20 msec
3	50 msec
4	100 msec

Setting	Time
5	200 msec
6	500 msec
7	1 sec
8	5 sec (not valid for input range > 3906 Hz)
9	10 sec (not valid for input range > 3906 Hz)

◆ *If the existing Minimum Response Time setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 4.3.*

- 4.3 Press the push-button. The Green input LED blinks rapidly. Minimum Response Time setting is now accessed.
- 4.4 Turn the rotary switch to the selected numerical value for Minimum Response Time desired (see list in Step 4.2).
- 4.5 Press the push-button. The Green input LED blinks the value entered, pauses, and repeats the new Minimum Response Time setting.

- ◆ *If the new Minimum Response Time setting is acceptable, this section is complete\*.*
- ◆ *If the new Minimum Response Time setting is not acceptable, repeat from step 4.3.*
- ◆ *If the Red output LED blinks, the rotary switch numerical value is invalid. Repeat Steps 4.4 and 4.5.*

\* Section complete; place DIP switch 4 to the Down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

## 5.0 Maximum Response Time Setting (Low Frequency Cut-Out Setting)

Step 5.2

Step 5.1

Step 5.3

Step 5.4

Setting '9' Selected

- 5.1 Place DIP switch 4 to the ON (up) position and DIP switches 5, 6, and 7 as shown.
- 5.2 The Green input LED blinks the corresponding Maximum Response Time Setting (see following list), pauses and repeats.

Setting	Time
0	1024 times Input Range period (40 msec min., 10 sec max.)
1	10 msec (100 Hz)
2	20 msec (50 Hz)
3	50 msec (20 Hz)
4	100 msec (10 Hz)

Setting	Time
5	200 msec (5 Hz)
6	500 msec (2 Hz)
7	1 sec (1 Hz)
8	5 sec (.2 Hz)
9	10 sec (.1 Hz)

◆ *If the existing Maximum Response Time setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 5.3.*

- 5.3 Press the push-button. The Green input LED blinks rapidly. Maximum Response Time setting is now accessed.
- 5.4 Turn the rotary switch to the selected numerical value for Maximum Response Time desired. (see list in Step 5.2)
- 5.5 Press the push-button. The Green input LED blinks the value entered, pauses, and repeats the new Maximum Response Time setting.

- ◆ *If the new Maximum Response Time setting is acceptable, this section is complete\*.*
- ◆ *If the new Maximum Response Time setting is not acceptable, repeat from Step 5.3.*
- ◆ *If the Red output LED blinks, the rotary switch numerical value is invalid. Repeat Steps 5.4 and 5.5.*

\* Section complete; place DIP switch 4 to the Down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

## 6.0 Calibration

The IFMA is factory calibrated for all operating modes. These settings are permanently stored in the unit's configuration memory. The IFMA automatically selects the proper calibration setting for the selected Operation mode.

The Minimum and Full Scale output values established at the factory can be changed using the calibration routines. The Minimum output value can be adjusted to any value less than the Full Scale output value, and the Full Scale value can be adjusted to any value greater than the Minimum value.

Changing the factory calibration settings does affect the accuracy of the unit. Specified accuracy for modes 2, 3, and 4 holds until the factory calibration range has been halved. This does not apply to mode 1, since it already uses only half of the IFMA's output range. When increasing the output range, the new calibration settings can not exceed the factory Full Scale value by more than 10%. The 0 to 5 VDC range can be doubled.

The IFMA can store user calibration settings for only one mode at a time. If calibration is changed for one operating mode, and the user then selects a different operating mode, the unit reverts to factory calibration settings. Calibration steps can be combined (added) to obtain a total calibration change. This is done by repeated push-button entries of the same value, or different values, before saving the change. The calibration steps as shown in the table at right are approximations. A current or volt meter should be connected to the appropriate output pins to verify the actual calibration setting.

### Approximate Calibration Increments

ROTARY SWITCH	VOLTAGE	CURRENT
1	3 mV	5 $\mu$ A
2	5 mV	10 $\mu$ A
3	10 mV	25 $\mu$ A
4	25 mV	50 $\mu$ A
5	50 mV	100 $\mu$ A
6	100 mV	200 $\mu$ A
7	200 mV	400 $\mu$ A
8	400 mV	800 $\mu$ A

### Calibration Direction

The default direction for calibration changes is up (increasing values) on entry to either calibration routine. This direction can be toggled from within the routine with the following steps:

1. Enter the calibration routine you wish to change (Minimum or Full Scale).
2. Press the push-button. The Green input LED blinks rapidly.
3. Turn the rotary switch to position 9. Press the push-button.
4. The Output LED indicates the direction of calibration:

OFF = Increasing Value  
ON = Decreasing Value

Step 6.2

Step 6.2

Step 6.2

### Analog Output Minimum Value

### Analog Output Full Scale Value

- 6.1 Connect a current or voltmeter of appropriate accuracy to the desired output pins (voltage or current)
- 6.2 Place DIP switch 4 to the ON position and DIP switches 5, 6, and 7 as shown. The Green input LED blinks slowly.

6.3 Press the push-button to enable the rotary switch. The Green input LED now blinks at a faster rate, indicating that calibration values are accessible.

6.4 Turn rotary switch to appropriate numerical setting for calibration (see list in Step 6.0), while monitoring the output signal. Press the push-button. Calibration is raised or lowered by this approximate value, depending on calibration direction.

- ◆ If this setting meets your requirements, go to step 6.5. If more calibration is required, repeat step 6.4 until the calibration meets your requirements.
- ◆ If you overshoot your desired value, reverse calibration direction as shown in 6.0 and continue calibration until the value meets your requirements.

6.5 Turn the rotary switch to 0 and press the push-button. This saves the new user calibration setting.

- ◆ If you want to return to factory calibration, exit Calibration and then re-enter. Turn rotary switch to 0 and press push-button twice. This reloads the factory calibration setting for the selected mode of operation.
- ◆ When calibrating the Minimum output value, if the red output LED blinks while in the down direction, the requested calibration setting is beyond the output's absolute minimum value. The calibration setting is held at the absolute minimum value. Reverse calibration direction and repeat from step 6.4.
- ◆ When calibrating Full Scale, if the red output LED blinks while in the up direction, the requested calibration setting is beyond the output's absolute maximum value. The calibration setting is held at the maximum value. Reverse calibration direction and repeat from step 6.4.
- ◆ If an attempt is made to calibrate the Full Scale value lower than the Minimum value, or conversely, the Minimum value higher than the Full Scale value, the red output LED blinks, and the IFMA sets the two values equal. Reverse calibration direction and repeat from step 6.4.

### Calibration Example (Scaling):

A customer using the 0 to 10 VDC output range of the IFMA wants the Minimum value to be at 1 VDC. To do this, connect a voltmeter to the output of the IFMA to monitor the output voltage. Access Configuration Mode by placing DIP switch 4 to the ON (up) position. Access Analog Output Minimum value by placing DIP switches 5 and 7 up, and DIP switch 6 down. Press the push-button to enable changes to the calibration value. Turn the rotary switch to position 8 and press the push-button. The voltmeter should reflect an increase of about 400 mV. With the rotary switch still at position 8, press the push-button again. The voltmeter should now read approximately 800 mV. Turn the rotary switch to a position lower than 8 to effect a smaller change in calibration. Continue adjusting the rotary switch and pressing the push-button until 1 VDC is displayed on the voltmeter. Turn the rotary switch to position 0 and press the push-button. This action saves the new calibration setting for the Minimum value.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

### INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32, and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

#### G Rail Installation

To install the IFMA on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out and away from the rail.

#### T Rail Installation

To install the IFMA on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

### APPLICATION

A customer needs a unit to output a signal to a chart recorder for a flow rate system. There is an existing APLR rate indicator receiving an input from a PSAC inductive proximity sensor. The IFMA Frequency to Analog Converter is connected in parallel with the APLR to output the signal to the chart recorder.

The flow rate is measured in gal/min. and needs to be converted to a 0 to 10 VDC signal. The Operating Mode of the IFMA is set for a 0 to 10 VDC output signal. The PSAC measures 48 pulses/gal. with a maximum flow rate of 525 gal/min. The Maximum Response Time is set to setting '9' (10 sec). The chart recorder will record 0 VDC at 0.125 gal/min, and 10 VDC at 525 gal/min.

The Input Range can be set one of two ways. By entering the calculated maximum frequency with the rotary switch, or by applying the maximum frequency signal of the process to the input of the IFMA. To set the input with the rotary switch, first determine the maximum frequency generated by the maximum output of the sensor using the following formula:

$$\text{Max. Freq.} = \frac{\text{unit/measure} \times \text{pulses/unit}}{\text{seconds/measure}}$$

$$\text{Max. Freq.} = \frac{525 \text{ GPM} \times 48 \text{ PPG}}{60 \text{ sec.}} = 420 \text{ Hz}$$

Set the Input Range with the rotary switch to 420 Hz.

## MODEL IFMR - DIN-RAIL SPEED SWITCH

- SIMPLE ON-LINE TRIP FREQUENCY SETTING (USING ACTUAL INPUT SIGNAL OR FREQUENCY GENERATOR)
- USER SETTABLE TRIP FREQUENCY FROM 0.1 Hz to 25 KHz
- OVER-SPEED, UNDER-SPEED, AND ZERO-SPEED DETECTION
- RELAY LATCHING, ALARM OVERRIDE, AND ALARM RESET FUNCTIONS
- PROGRAMMABLE INPUT CIRCUIT ACCEPTS OUTPUTS FROM A VARIETY OF SENSORS
- HYSTERESIS AND OFFSET FUNCTIONS AVAILABLE
- 85 to 250 VAC and 9 to 32 VDC VERSIONS AVAILABLE
- INPUT AND RELAY STATUS INDICATION LED'S

UL Recognized Component,  
File # E137808

### DESCRIPTION

The Model IFMR accepts a frequency input, and controls a single relay (SPDT) based on the value of the input frequency. The Trip frequency can be set to any value from 0.1 Hz to 25 KHz. The IFMR can be set to trip on overspeed, or underspeed (including zero speed). Offset and hysteresis values can be incorporated into the trip setting to eliminate output chatter. LED indicators for both the Input signal and the Relay status are provided. Two separate input connections for external push-buttons are also provided. One external input overrides the trip detection function, and holds the relay in the release state as long as the input is pulled to common. The other external input clears a latched trip condition when pulled to common.

The IFMR utilizes a seven position DIP switch, a rotary switch, a push-button and two indication LEDs to accomplish input circuit configuration, operational parameter set-up, input signal, and relay status indication. The input circuitry is DIP switch selectable for a variety of sources.

The indication LEDs are used during normal operation to display the input signal and relay status of the IFMR. These LEDs are also used to provide visual feedback to the user of the current parameter settings during parameter set-up.

The IFMR operates in one of six output modes, as selected by the user. The programmable Minimum Response Time provides optimum response vs. input filtering for any input frequency. The offset and hysteresis settings provide flexible adjustment of the relay trip and release points.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat profile rail according to EN 50 022 - 35 x 7.5 and 35 x 15, and G profile rail according to EN 50 035 - G32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**WARNING: SPEED SWITCHES MUST NEVER BE USED AS PRIMARY PROTECTION AGAINST HAZARDOUS OPERATING CONDITIONS.** Machinery must first be made safe by inherent design, or the installation of guards, shields, or other devices to protect personnel in the event of a hazardous machine speed condition. The speed switch may be installed to help prevent the machine from entering the unsafe speed.

### SPECIFICATIONS

- POWER:**
  - AC Powered Versions:** 85 to 250 VAC; 48 to 62 Hz; 5.5 VA
  - DC Powered Versions:** 9 to 32 VDC; 2.0 W
  - Power Up Current:**  $I_p = 600$  mA for 50 msec max.
- SENSOR POWER:** (AC version only) +12 VDC  $\pm 25\%$  @ 60 mA max.
- OPERATING FREQUENCY RANGE:** 0 Hz to 25 KHz
- SIGNAL INPUT:** DIP switch selectable to accept signals from a variety of sources, including switch contacts, outputs from CMOS or TTL circuits, magnetic pickups, and all standard RLC sensors.
  - Current Sourcing:** Internal 1 K $\Omega$  pull-down resistor for sensors with current sourcing output. (Max. sensor output current = 24 mA @ 24 V output.)
  - Current Sinking:** Internal 3.9 K $\Omega$  pull-up resistor for sensors with current sinking output. (Max. sensor current = 3 mA.)
  - Low Bias:** Input trigger levels  $V_{IL} = 0.25$  V,  $V_{IH} = 0.75$  V; for increased sensitivity when used with magnetic pickups.
  - Hi Bias:** Input trigger levels  $V_{IL} = 2.5$  V,  $V_{IH} = 3.0$  V; for logic level signals.
  - Max. Input Signal:**  $\pm 90$  V; 2.75 mA max. (with both Current Sourcing and Current Sinking resistors switched off).

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS FOR AVAILABLE SUPPLY VOLTAGES	
		9 to 32 VDC	85 to 250 VAC
IFMR	Speed Switch	IFMR0036	IFMR0066

For more information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC distributor.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS (Cont'd)

5. **CONTROL INPUTS:** Active low ( $V_{IL} = 0.5$  V max.) internally pulled up to 5 VDC through a 100 K $\Omega$  resistor ( $I_{SNK} = 50$   $\mu$ A). Response Time = 1 msec.  
**Alarm Reset:** Unlatches the relay when pulled to common while the input frequency is in the release region.  
**Alarm Override:** Causes the IFMR to unconditionally release the relay when pulled to common.
6. **RELAY CONTACT OUTPUT:** FORM "C" (SPDT) contacts max. rating. 5 A @ 120/240 VAC or 28 VDC (*resistive load*), 1/8 H.P. @ 120 VAC (*inductive load*). The operate time is 5 msec nominal and the release time is 3 msec nominal.
7. **RELAY LIFE EXPECTANCY:** 100,000 cycles at max. rating. (*As load level decreases, life expectancy increases.*)
8. **ACCURACY:**  $\pm 0.1\%$  of the trip frequency setting.
9. **INPUT IMPEDANCE:** 33 K $\Omega$  min. with the sink and source DIP switches in the OFF positions. (*See Block Diagram*)
10. **MINIMUM RESPONSE TIME:** From 5 msec. +1 period to 10 sec. +1 period in ten steps (*excluding relay operate time*).
11. **HYSTERESIS AND OFFSET:** From 0.25% to 33.33% of Trip Frequency in nine steps. Hysteresis and/or Offset can also be set to 0 (*Disabled*).
12. **INPUT AND POWER CONNECTIONS:** Screw in terminal blocks
13. **ISOLATION BREAKDOWN VOLTAGE (Dielectric Withstand):** 2200 V between power & input, and power & output; 500 V between input & output for 1 minute.
14. **CERTIFICATIONS AND COMPLIANCES:**  
**SAFETY**

## ELECTROMAGNETIC COMPATIBILITY

### Immunity to EN 50082-2

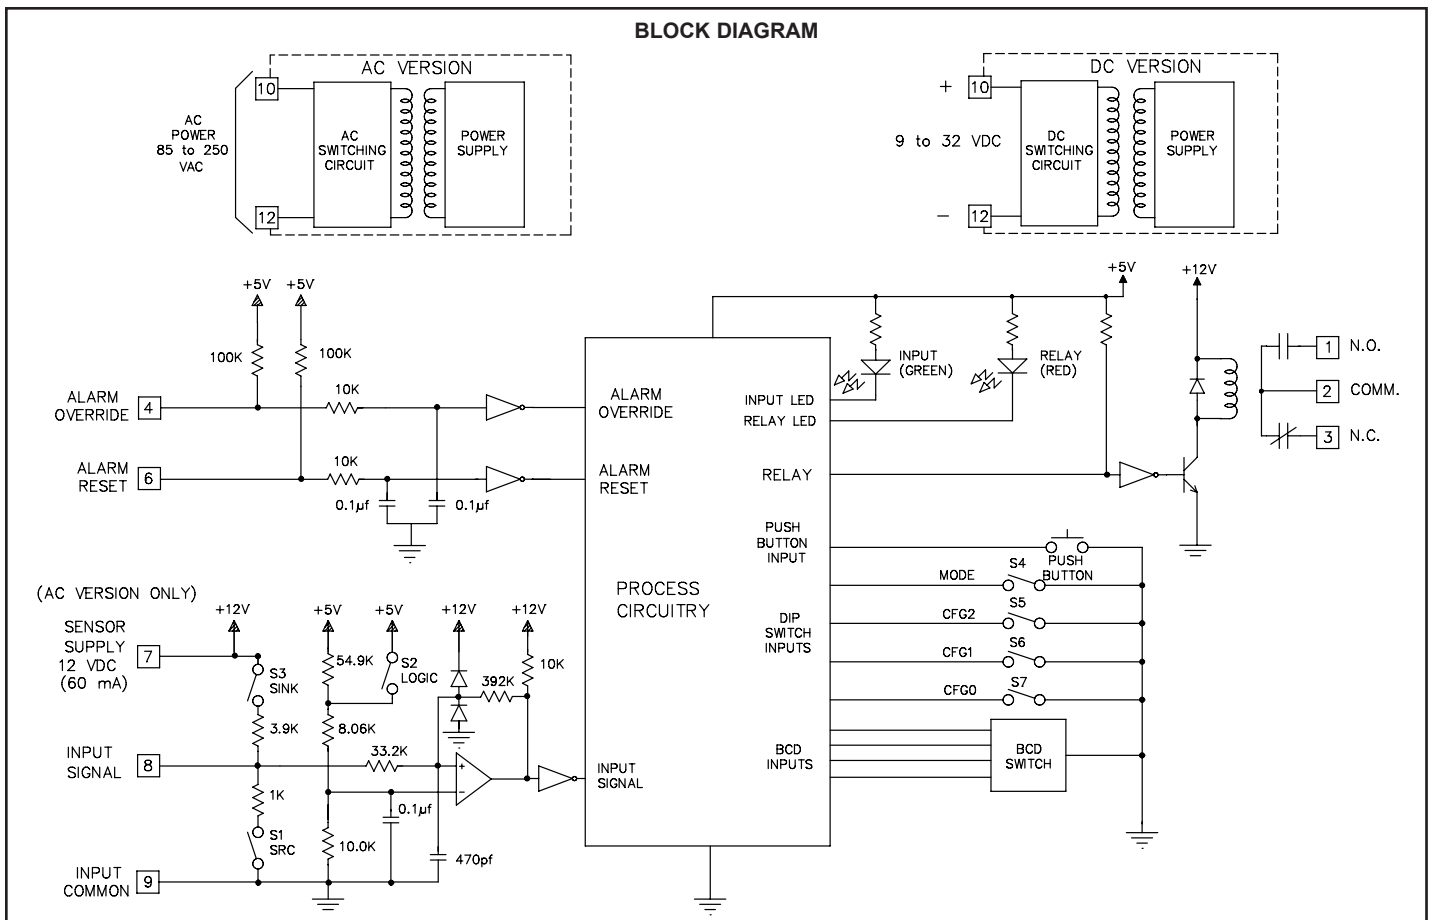

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>2</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m

### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A Power mains class A
-----------------	----------	--

### Notes:

- This device was designed for installation in an enclosure. To avoid electrostatic discharge, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches, etc.) typical anti-static precautions should be observed before touching the unit.
  - For operation without loss of performance:  
 Unit is mounted on a rail in a metal enclosure (Buckeye SM7013-0 or equivalent) and I/O cables are routed in metal conduit connected to earth ground.  
 Refer to the EMC Installation Guidelines section of this bulletin for additional information.
15. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0 to 50°C  
**Storage Temperature:** -40 to 80°C  
**Operating and Storage Humidity:** 85% max. (non-condensing) from 0°C to 50°C.  
**Altitude:** Up to 2000 meters
16. **CONSTRUCTION:** Case body is black, high impact plastic. Installation Category II, Pollution Degree 2
17. **WEIGHT:** 6 oz. (0.17 Kg)

## OVERVIEW

The Model IFMR continuously monitors the input signal and controls an output relay based on the frequency of the input signal, the chosen Operation Mode (Underspeed or Overspeed), and the Trip and Release points the user has selected. The green Input LED blinks at the rate of the input frequency. At about 100 Hz, the Input LED will appear to be solid on. At very low frequencies, the Input LED blinks slowly and may also appear to be solid on. A loss of signal may also cause the Input LED to remain on, depending on the DIP switch set-up. In this case, the red Relay LED also turns on. The IFMR indicates the status of the relay with the Relay LED (Red). Whenever the relay is in the Trip state, the IFMR turns ON the Relay LED. In the Release state, the Relay LED is OFF.

For Overspeed detection, when the input frequency (averaged over the Minimum Response Time) exceeds the Trip point, the IFMR trips the relay. With the relay in the Trip condition, the input frequency must fall below the Release point for the relay to release.

For Underspeed detection, the relay trips when the input frequency (averaged over the Minimum Response Time) falls below the Trip point. The relay releases only after the input frequency has exceeded the Release point. Two of the Underspeed operating modes allow the machine or system that supplies the input signal to reach normal operating speed before the IFMR responds to an Underspeed condition. For Zero Speed applications, bear in mind that Zero Speed detection and Underspeed detection are identical.

The Minimum Response Time parameter sets the minimum update time of the output. The actual response time is the Minimum Response Time plus up to one full period of the input signal. The IFMR counts the negative edges occurring during the update time period, and computes the average frequency value for that time. This action filters out any high frequency jitter that may be present in the input signal. The longer the Minimum Response Time, the more filtering occurs.

The Offset value is added to the Trip Frequency to determine the Trip Point for Overspeed operation. For Underspeed operation the Trip point becomes the Trip Frequency minus the Offset value.

If No Hysteresis has been selected, the Trip and Release points are identical, which can lead to cycling or “chattering” of the relay at input frequencies hovering around the Trip point. If Hysteresis is selected, the Release point is set to the Trip point (including Offset) minus the Hysteresis value for Overspeed detection. For Underspeed detection, the Release point is set to the Trip point (including Offset) plus the Hysteresis value.

Two input pins (Alarm Override and Alarm Reset) are provided for the optional connection of push-buttons. The Alarm Override pin causes the IFMR to unconditionally Release the relay, regardless of the input frequency, or the state of the relay, when pulled to common. When the Alarm Override pin is released from common, the operation of the IFMR returns to normal, and the status of the relay is updated based on the input frequency.

The Alarm Reset pin is only active when the IFMR is in one of the Latch operation modes. With the Latch function selected, the relay “latches” into the Trip state whenever a Trip condition is detected. The relay remains latched until the Alarm Reset pin is pulled to common while the input frequency is in the Release region. The Alarm Reset pin is ignored while the input frequency is in the Trip region.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful installation or a troublesome installation.

Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application.

Listed below are the recommended methods of connecting the shield, in order of their effectiveness.

- a. Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
  3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
  4. In very electrically noisy environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
    - Ferrite Suppression Cores for signal and control cables:
      - Fair-Rite # 0443167251 (RLC #FCOR0000)
      - TDK # ZCAT3035-1330A
      - Steward #28B2029-0A0
    - Line Filters for input power cables:
      - Schaffner # FN610-1/07 (RLC #LFIL0000)
      - Schaffner # FN670-1.8/07
      - Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
  5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit (AC or DC) be protected by a fuse or circuit breaker.

## POWER AND OUTPUT CONNECTIONS

### AC Power

Primary power is connected to terminals 10 and 12 (labeled AC). For best results, the AC Power should be relatively “clean” and within the specified variation limits. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off, should be avoided.

### DC Power

The DC power is connected to Terminals 10 and 12. The DC plus (+) is connected to Terminal 10 and the minus (-) is connected to Terminal 12. It is recommended that separate supplies be used for sensor power and unit power. Using the same supply for both will negate isolation between input and power.

### Output Wiring

Terminals 1, 2, and 3 are used to connect to the relay output. Terminal 1 is the normally open contact. Terminal 3 is the normally closed contact, and Terminal 2 is the output relay common.

# INPUT CIRCUITS, SENSOR CONNECTIONS AND CONFIGURATION SWITCH SET-UP

The Model IFMR Speed Switch uses a comparator amplifier connected as a Schmidt trigger circuit to convert the input wave form into the pulse form required for proper circuit operation. Three set-up switches are used to configure the input circuit to accept signals from a wide variety of sources, as follows:

S1 - ON: Connects a 1 KΩ pull-down resistor for sensors with sourcing outputs. (Maximum sensor output current is 24 mA @ 24 VDC output.)

S2 - ON: For logic level signals, sets the input bias levels to  $V_{IL} = 2.5 V$ ,  $V_{IH} = 3.0 V$ .

OFF: For increased sensitivity when used with magnetic pickups, sets the input bias levels to  $V_{IL} = 0.25 V$ ,  $V_{IH} = 0.75 V$ .

S3 - ON: Connects a 3.9 KΩ pull-up resistor for sensors with current sinking output. (Max. sensor current = 3 mA.)

## CONNECTIONS & CONFIGURATION SWITCH SET-UP FOR VARIOUS SENSOR OUTPUTS

**Note:** Separate power supplies must be used for sensor power and input power to maintain the isolation breakdown voltage specification. If isolation between power and input is not needed, then a single supply can be used for both unit and sensor power.

<p><b>MAGNETIC PICKUPS</b></p> <p><b>RECOMMENDED RULES FOR MAGNETIC PICKUP CONNECTIONS</b></p> <p>1. Connect the shield to the common Terminal "9" at the input of the IFMR. DO NOT connect the shield at the pickup end. Leave the shield "open" at the pickup and insulate the exposed shield to prevent electrical contact with the frame or case. (Shielded cable, supplied on some RLC magnetic pickups, has open shield on pickup end.)</p>	<p><b>SENSORS WITH CURRENT SINK OUTPUT (NPN O.C.)</b></p> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <p><b>AC VERSION</b></p> <p>RLC SENSOR MODELS: ASTC, LMPC, PSAC, LSC, RPGC, RRGB, RPHG, RPHG</p> </div> <div style="width: 45%;"> <p><b>DC VERSION</b></p> <p>*Check sensor power requirements before wiring.</p> </div> </div>

## CONFIGURING THE IFMR

Upon entry to a set-up parameter, the Input LED blinks the current numerical value of a setting at a 1 Hz rate. A setting of "1" is indicated by one blink (½ sec on, ½ sec off), through a setting of "9", which is indicated by nine blinks. A setting of "0" is indicated by a single short flash (40 msec on, 1 sec off). After the entire value is indicated, the IFMR pauses two seconds and repeats the value.

During entry of a new value, if the Mode switch (S4) or any of the CFG DIP switch positions are changed before the push button is pressed, the IFMR aborts the entry process and retains the previous setting.

To begin set-up, place DIP switch 4 to the on (up) position. DIP switches 5, 6, and 7 access unit configuration settings.

DIP SWITCH	DESCRIPTION	SECTION
	Operating Mode	(1.0)
	Set Trip Frequency Using an Input Signal or Frequency Generator	(2.0)
	Set Trip Frequency Using the Rotary Switch	(3.0)
	Set Minimum Response Time	(4.0)
	Set Relay Trip Point	(5.0)
	Set Relay Release Point	(6.0)

**Note:** To return to normal operation, place DIP switch 4 in the down (RUN) position.

( ) Indicates Configuration Section

## RELAY INDICATION

**Overspeed:** The Relay LED (red) turns on to indicate the input signal has exceeded the trip frequency.

**Underspeed:** The Relay LED (red) turns on to indicate the input signal is below the trip frequency setting.

**Invalid Entry during Set-up:** The Input LED (green) and the Relay LED (red) alternately blink until a valid entry is made.

FACTORY SETTINGS		
	Setting	Parameter
Operating Mode	1	Low Speed Operation, Trip on Overspeed
Trip Frequency	10000	10 KHz
Minimum Response	0	5 msec
Trip Point Offset	0	None
Trip Point Hysteresis	1	0.25%

H

## 1.0 Operating Mode

Step 1.2

Step 1.1

Step 1.3

Step 1.4

Setting '2' Selected

1.1 Place DIP switch 4 to the ON (up) position and DIP switches 5, 6, and 7 as shown.

1.2 Green input LED blinks the setting corresponding to the Operating Mode shown below, pauses and repeats the value.

Setting	Operating Mode
1	OVERSPEED trip, automatic Release upon return to normal
2	OVERSPEED latched trip, Release only after ALM Reset pulled to Common
3	UNDERSPEED trip, automatic Release upon return to normal
4	UNDERSPEED trip, start-up condition* ignored, automatic Release upon return to normal
5	UNDERSPEED latched trip, Release only after ALM Reset pulled to Common
6	UNDERSPEED latched trip, start-up condition* ignored, Release only after ALM Reset pulled to Common

\* Refers to initial application of power to the IFMR, not the input frequency.

◆ *If existing operating mode setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 1.3.*

1.3 Press the push-button. The Green input LED blinks rapidly to indicate the Operating mode setting is now accessed.

1.4 Turn the rotary switch to the selected numerical value for output desired (see the list in Step 1.2).

1.5 Press the push-button. The Green input LED blinks the value entered, pauses, and repeats the new operation setting.

◆ *If the new Operating mode setting is acceptable, this section is complete\*.*

◆ *If the new Operating mode setting is not the desired setting, repeat Steps 1.3, 1.4, and 1.5.*

◆ *If Red output LED blinks, the rotary switch numerical value is invalid. Repeat Steps 1.4 and 1.5.*

\* Section complete; place DIP switch 4 to the down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

## 2.0 On-Line Trip Frequency Setting Using Actual Input Signal or Frequency Generator

Step 2.2

Step 2.1

Step 2.4

### Factory Setting Example

1 blink	1	Frequency setting
2 sec pause		
single flash	0	
2 sec pause		
single flash	0	
2 sec pause		Resolution
single flash	0	
2 sec pause		
single flash	0	
4 sec pause		

Frequency Resolution  
 1 0 0 0 0 0 0  
 Result: 10,000 Hz

### Additional Example

2 blinks	2	Frequency setting
2 sec pause		
5 blinks	5	
2 sec pause		
single flash	0	
2 sec pause		Resolution
5 blinks	5	
2 sec pause		
single flash	0	
2 sec pause		

Frequency Resolution  
 2 5 0 5 0 2  
 Result: 250.50 Hz

**PREFERRED METHOD**

### 3.0 Set Trip Frequency Using The Rotary Switch

Step 3.2

Step 3.1

Step 3.4

Step 3.5

Setting '2' Selected

**ALTERNATIVE METHOD IF INPUT SIGNAL IS NOT AVAILABLE**

- 3.1 Place DIP switch 4 to the ON position and DIP switches 5, 6, and 7 as shown.
- 3.2 The Green input LED blinks the existing Trip Frequency setting, pauses and repeats. Six full digits of numerical information blink with a 2 sec. pause between digits and a 4 sec. pause at the end, before repeating. The first five digits are the existing Trip Frequency magnitude. The sixth digit is the frequency resolution (the number of digits to the right of the decimal point).

◆ *If the existing Trip Frequency setting is your desired requirement, this section is complete\*. Otherwise, continue with Step 3.3.*

- 3.3 Determine the Trip Frequency and record in the space provided below.

- 3.4 Press the push-button. The Green input LED blinks rapidly. Trip Frequency setting is now accessed.
- 3.5 Turn the rotary switch to the first selected numerical value. Press the push-button. The Green input LED continues to blink rapidly. First of six numerical digits is entered.
- 3.6 Turn the rotary switch to the second selected numerical value. Press the push-button. The Green input LED continues to blink rapidly. Second of six numerical digits is entered.
- 3.7 Repeat Step 3.6 three more times then go to Step 3.8. This enters a total of five of the required six numerical digits.
- 3.8 Turn the rotary switch to the selected numerical value for resolution requirement. Press the push-button. The Green input LED blinks the new Trip Frequency setting (as described in [Step 2.2](#)), pauses, and repeats the value.

- ◆ *If the new Trip Frequency setting is acceptable, this section is complete\*.*
- ◆ *If the new Trip Frequency setting is not the desired setting, repeat Steps 3.4, through 3.8.*
- ◆ *If the Red relay LED blinks, the numerical value entered is invalid. Repeat Steps 3.3 through 3.8.*

\* Section complete; place DIP switch 4 to the down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

### 4.0 Set Minimum Response Time

Step 4.2

Step 4.1

Step 4.3

Step 4.4

Setting '2' Selected

- 4.1 Place DIP switch 4 to the ON position and DIP switches 5, 6, and 7 as shown.
- 4.2 The Green input LED blinks the existing Minimum Response Time setting (see following list), pauses and repeats.

Setting	Time
0	5 msec
1	10 msec
2	20 msec
3	50 msec
4	100 msec

Setting	Time
5	200 msec
6	500 msec
7	1 sec
8	5 sec (not valid for trip frequency > 3906 Hz)
9	10 sec (not valid for trip frequency > 3906 Hz)

Note: Minimum Response Times do not include the relay's operate response time of 5 msec., or the release response time of 3 msec.

- 4.3 Press the push-button. The Green input LED blinks rapidly. Minimum Response Time setting is now accessed.
- 4.4 Turn the rotary switch to the selected numerical value for Minimum Response Time desired (see list in Step 4.2).
- 4.5 Press the push-button. The Green input LED blinks the value entered, pauses, and repeats the new setting.

- ◆ *If the new Minimum Response Time setting is acceptable, this section is complete\*.*
- ◆ *If the new Minimum Response Time setting is not the desired setting, repeat Steps 4.3, 4.4, and 4.5.*
- ◆ *If the Red relay LED blinks, the rotary switch numerical value is invalid. Repeat Steps 4.4 and 4.5.*

\* Section complete; place DIP switch 4 to the down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

## 5.0 Set Relay Trip Point (Offset)

Step 5.2

Step 5.1

Step 5.3

Step 5.4

Setting '9'  
Selected

For Overspeed operation, the Relay Trip point is internally set to the Trip Frequency plus the Offset value. For Underspeed operation, the Relay Trip point is internally set to the Trip Frequency minus the Offset value. The Offset value is equal to the Trip Frequency multiplied by the selected Offset percentage.

**Example:** The Offset value is calculated as shown below.

Trip Frequency = 250 Hz  
 Rotary Switch Setting = 4 (2.00%)  
 Offset Value = 250 Hz x 2.00% (0.02) = 5 Hz

Trip Point:  
 OVERSPEED = 250 + 5 = 255 Hz  
 UNDERSPEED = 250 - 5 = 245 Hz

5.1 Place DIP switch 4 to the ON position and DIP switches 5, 6, and 7 as shown.

5.2 The Green input LED blinks the existing setting (see following list), pauses and repeats.

Setting	Percentage
0	0.00% (NO Offset)
1	0.25% (0.0025)
2	0.50% (0.0050)
3	1.00% (0.0100)
4	2.00% (0.0200)
5	5.00% (0.0500)
6	10.00% (0.1000)
7	20.00% (0.2000)
8	25.00% (0.2500)
9	33.33% (0.3333)

5.3 Press the push-button. The Green input LED blinks rapidly. Trip Point Offset setting is now accessed.

5.4 Turn the rotary switch to the selected numerical value for Trip Point Offset desired (see list in Step 5.2).

5.5 Press the push-button. The Green input LED blinks the value entered, pauses, and repeats the new setting.

- ◆ If the new Trip Point Offset setting is acceptable, this section is complete\*.
- ◆ If the new Trip Point Offset setting is not the desired setting, repeat Steps 5.3, 5.4, and 5.5.
- ◆ If the Red relay LED blinks, the rotary switch numerical value is invalid. Repeat Steps 5.4 and 5.5.

\* Section complete; place DIP switch 4 to the down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

## 6.0 Set Relay Release Point (Hysteresis)

Step 6.2

Step 6.1

Step 6.3

Step 6.4

Setting '9'  
Selected

For Overspeed operation, the Relay Release point is set to the Relay Trip point minus the Hysteresis value. For Underspeed operation, the Relay Release point is set to the Relay Trip point plus the Hysteresis value. The hysteresis value is calculated by multiplying the hysteresis percentage by the current trip frequency. If No Hysteresis (setting = 0) is selected, the Relay Trip and Release points are identical, which can lead to chattering or cycling of the relay at input frequencies hovering around the Relay Trip point.

**Example:** Using the Trip Frequency and Offset value as shown in the example above, the hysteresis value is calculated as shown below.

Rotary Switch Setting = 3 (1.00%)  
 Hysteresis Value = 250 Hz x 1.00% (0.01) = 2.5 Hz

Release Point:  
 OVERSPEED = 250 + 5 - 2.5 = 252.5 Hz  
 UNDERSPEED = 250 - 5 + 2.5 = 247.5 Hz

6.1 Place DIP switch 4 to the ON position and DIP switches 5, 6, and 7 as shown.

6.2 The Green input LED blinks the existing setting (see following list), pauses, and repeats.

Setting	Percentage
0	0.00% (NO Hysteresis)
1	0.25% (0.0025)
2	0.50% (0.0050)
3	1.00% (0.0100)
4	2.00% (0.0200)
5	5.00% (0.0500)
6	10.00% (0.1000)
7	20.00% (0.2000)
8	25.00% (0.2500)
9	33.33% (0.3333)

6.3 Press the push-button. The Green input LED blinks rapidly. Trip Point Hysteresis setting is now accessed.

6.4 Turn the rotary switch to the selected numerical value for Hysteresis desired (see list in Step 6.2).

6.5 Press the push-button. The Green input LED blinks the value entered, pauses and repeats the new setting.

- ◆ If the new Trip Point Hysteresis setting is acceptable, this section is complete\*.
- ◆ If the new Trip Point Hysteresis setting is not the desired setting, repeat Steps 6.3, 6.4, and 6.5.
- ◆ If the Red relay LED blinks, the rotary switch numerical value is invalid. Repeat Steps 6.4 and 6.5.

\* Section complete; place DIP switch 4 to the down position for normal operation, or change DIP switches 5, 6, and 7 for the next Configuration Section.

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32 , and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

### G Rail Installation

To install the IFMR on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

### T Rail Installation

To install the IFMR on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## APPLICATION 1

An APLR is connected to an LMPC (logic magnetic pickup) that is sensing the speed of a 60 tooth gear attached to a shaft. The shaft speed should not exceed 2000 RPM.

The IFMR is placed in parallel with the APLR to activate an alarm when an overspeed condition is detected, and to turn off the alarm when the speed returns to normal. The Mode of Operation is set for Mode #1 (overspeed trip, automatic release upon return to normal).

To set the value of the alarm, either apply the maximum input signal as described in Section 2.0 or determine the Trip Frequency using the following formula:

$$\text{Trip Freq.} = \frac{\text{units/measure} \times \text{pulses/unit}}{\text{seconds/measure}}$$

$$\text{Trip Freq.} = \frac{2000 \text{ RPM} \times 60 \text{ PPR}}{60 \text{ sec}} = 2000 \text{ Hz}$$

Set the Trip Frequency with the rotary switch for 2000 Hz.

With Trip point Offset set at 0.00% (No Offset) and Trip Point Hysteresis set at 0.25%; activation of the relay occurs at 2000 Hz, and release occurs at 1995 Hz.

## APPLICATION 2

The IFMR can be used in a speed monitoring system to detect when the system drops below setpoint.

The IFMR is wired to a PSAC (inductive proximity sensor) that is sensing a key way on the shaft of a motor. The motor is turning at 1750 RPM. When the speed of the motor drops below 1250 RPM, the IFMR latches the output until the user resets the output with an external push button.

The mode of operation of the IFMR is set for 5 (UNDERSPEED Latched trip, release only after Alarm Reset pulled to common). Determine the Trip Frequency using the following formula:

$$\text{Trip Freq.} = \frac{\text{RPM} \times \text{PPR}}{60}$$

$$\text{Trip Freq.} = \frac{1250 \text{ RPM} \times 1 \text{ PPR}}{60 \text{ sec}} = 20.83 \text{ Hz.}$$

Set the Trip Frequency with the rotary switch for 20.83 Hz.

## MODEL AFCM - ANALOG TO FREQUENCY CONVERTER MODULE

- VOLTAGE/CURRENT TO FREQUENCY CONVERTER
- 3-WAY ISOLATION OF INPUT / OUTPUT SIGNALS
- UNIVERSAL CONVERSION MODULE - INPUTS AND OUTPUTS SELECTED VIA DIP SWITCH SETTINGS
- ULTRA SLIM DESIGN – ONLY 0.244" WIDE
- 19 to 30 VDC POWER

UL Recognized Component,  
File # E257265

### DESCRIPTION

The configurable analog to frequency converter is used to convert analog standard signals to frequency signals or pulse width modulated (PWM) signals. Input signal ranges are 0 - 20 mA, 4 - 20 mA, 0 - 10 mA, 2 - 10 mA, 0 - 10 V, 2 - 10 V, 0 - 5 V, or 1 - 5 V.

The DIP switches are accessible on the side of the housing and allow the following parameters to be configured:

- Input signal
- Output values
- Output type (frequency or PWM)
- Filter type (for smoothing interferences on the input signal)
- Input over/under range fault detection

### SAFETY SUMMARY

The device may only be installed and put into operation by qualified personnel. The corresponding national regulations must be observed.

### SPECIFICATIONS

#### INPUT

- INPUT SIGNAL RANGE (Configurable):** 0 - 20 mA, 4 - 20 mA, 0 - 10 mA, 2 - 10 mA, 0 - 10 V, 2 - 10 V, 0 - 5 V, 1 - 5 V
- MAX. INPUT SIGNAL:**  
Current inputs: 100 mA  
Voltage inputs: 30 VDC
- INPUT RESISTANCE:**  
Current inputs: 50  $\Omega$ , approx.  
Voltage inputs: 110 K $\Omega$ , approx.

#### OUTPUT

- OUTPUT SIGNAL RANGE (Configurable):**  
Frequencies: 0 - 10 kHz, 0 - 5 kHz, 0 - 2.5 kHz, 0 - 1 kHz, 0 - 500 Hz, 0 - 250 Hz, 0 - 100 Hz, 0 - 50 Hz  
PWM: 7.8 kHz, 3.9 kHz, 1.9 kHz, 977 Hz, 488 Hz, 244 Hz, 122 Hz, 61 Hz
- MIN. LOAD:**  
Frequency: 6 K $\Omega$   
PWM: 2 K $\Omega$
- MAX. LOAD CURRENT:** 20 mA
- OUTPUT:** NPN open collector transistor
- MAX. SWITCHING VOLTAGE:** 30 V
- OVER-RANGE/UNDER-RANGE FAULT DETECTION:** Configurable
- OUTPUT PROTECTION:** Short circuit and polarity protection

#### GENERAL DATA

- SUPPLY VOLTAGE:** 19.2 - 30 VDC
- NOMINAL VOLTAGE:** 24 VDC
- CURRENT CONSUMPTION:** < 10 mA
- POWER CONSUMPTION:** < 200 mW
- TRANSMISSION ERROR:** < 0.1%
- TEMPERATURE COEFFICIENT (MAX.):** < 0.02%/K
- STEP RESPONSE:**  
0% to 99%: < 15 msec + (1/T)  
With Largest Filter: < 1 sec + (1/T)
- TEST VOLTAGE (INPUT / OUTPUT / SUPPLY):** 1.5 kV, 50 Hz, 1 min
- AMBIENT TEMPERATURE RANGE:**  
Operation: -20 t +65°C (-4 to 148°F)  
Storage: -40 to +85°C (-4 to 183°F)
- FAULT DETECTION:** Red LED under clear cover top

### DIMENSIONS In inches (mm)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
AFCM	Analog to Frequency Converter Module	AFCM0000

11. CERTIFICATIONS AND COMPLIANCES:

Conformance With EMC Guideline 89/336/EEC And Low Voltage Directive 73/23/EEC

Immunity to Interference According to EN 61000-6-2

Discharge of static electricity (ESD)	EN 61000-4-2	Criterion B <sup>1</sup>
Electromagnetic HF field	EN 61000-4-3	Criterion A <sup>2</sup>
Fast transients (Burst)	EN 61000-4-4	Criterion B <sup>1</sup>
Surge voltage capacities (Surge)	EN 61000-4-5	Criterion B <sup>1</sup>
Conducted disturbance	EN 61000-4-6	Criterion A <sup>2</sup>

Noise Emission According to EN 61000-6-4

Noise emission of housing	EN 55011	Class A <sup>3</sup>
---------------------------	----------	----------------------

- <sup>1</sup> Criterion B: Temporary impairment to operational behavior that is corrected by the device itself.
- <sup>2</sup> Criterion A: Normal operating behavior within the defined limits.
- <sup>3</sup> Class A: Area of application industry.

12. CONNECTIONS: Wire Gauge: 24-12 AWG, Stripping length: 0.47" (12 mm)

13. CONSTRUCTION: Polybutylenterephthalate PBT, black

14. MOUNTING: Standard DIN top hat (T) profile rail according to EN50022 - 35x7.5

15. WEIGHT: 2 oz. (54 g)

WIRING CONNECTIONS

Primary power is connected to terminals 7 or 3 (19.2 – 30 VDC) and 8 or 4 (GND 3). For best results, the Power should be relatively “clean” and within the specified variation limits. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off, should be avoided.

RECEIVING DEVICE SET UP FOR SINK (PULL UP RESISTOR).

The input signal is connected to terminal 1 (In UI) and 2 (GND 1). Connections for the output signal is on terminals 5 (Out f) and 6 (GND 2).

RECEIVING DEVICE SET UP FOR SOURCE (PULL DOWN RESISTOR).

CONFIGURATION

DIP Switch S1

Using DIP switch S1, you can set the input values, and the values for Moving Average Filter and Over sampling.

1	2	3	4	ANALOG IN
				0 – 10V
	ON			1 – 5V
		ON		0 – 5V
	ON	ON		2 – 10V
ON			ON	0 – 20 mA
ON	ON		ON	4 – 20 mA
ON		ON	ON	0 – 10 mA
ON	ON	ON	ON	2 – 10 mA

The moving average filter can group values (1, 2, 4, 6) using moving window averaging to form a new measured value. In moving window averaging, the average of a fixed number of measured values is taken, whereby the oldest value is always dropped and the most recent added.

5	6	MOVING WINDOW AVERAGING
		1 value
ON		2 values
	ON	4 values
ON	ON	6 values

7	8	OVER SAMPLING
		1 value
ON		10 values
	ON	50 values
ON	ON	100 values

In order to smooth the measured values, an average can be formed from several measured values (1, 10, 50, 100). This process is called Over sampling. In oversampling, the average is updated every time the selected number of values is reached.

DIP Switch S2

Using DIP switch S2, you can set the output values, the output type and fault detection.

Output Signals

Frequency Output:

Variable frequency/period duration T

1	2	3	4	FREQUENCY OUTPUT
				0 - 10 kHz
ON				0 - 5 kHz
	ON			0 - 2.5 kHz
ON	ON			0 - 1 kHz
		ON		0 - 500 Hz
ON		ON		0 - 250 Hz
	ON	ON		0 - 100 Hz
ON	ON	ON		0 - 50 Hz

PWM Output

(Pulse Wide Modulation):

Variable pulse to pause ratio/ fixed period duration T

Change can only be read by PWM input meters.

1	2	3	4	PWM OUTPUT
			ON	7.8 Hz
ON			ON	3.9 Hz
	ON		ON	1.9 Hz
ON	ON		ON	977 Hz
		ON	ON	488 Hz
ON		ON	ON	244 Hz
	ON	ON	ON	122 Hz
ON	ON	ON	ON	61 Hz

Fault Detection

5	6	INPUT OVER RANGE
		Freeze at 100% measuring range end value
ON		105% measuring range end value
	ON	110% measuring range end value
ON	ON	Fault detection OFF (continues past end value)

7	8	INPUT UNDER RANGE
		Freeze at 100% measuring range start value
ON		105% measuring range end value
	ON	110% measuring range end value
ON	ON	Fault detection OFF (stops at start value)

INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

T Rail Installation

To install the AFCM on a “T” style rail, angle the module so that the top groove of the “foot” is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the “foot”, and pry upwards on the module until it releases from the rail.

# MODEL IAMS – INTELLIGENT UNIVERSAL SIGNAL CONDITIONING MODULE

- UNIVERSAL INPUT, PROCESS, mA DC, VDC, TC, 100 (RTD, POTENTIOMETER, AND LINEAR RESISTANCE)
- UNIVERSAL POWER SUPPLY, 21.6 to 253 VAC/ 19.2 to 300 VDC
- 3-WAY ISOLATION (POWER/SIGNAL/OUTPUT)
- CHOOSE SETPOINTS AND/OR ANALOG OUTPUT MODELS
- PROGRAMMING/DISPLAY MODULE
- PROGRAMMING AVAILABLE IN SEVEN DIFFERENT LANGUAGES

## GENERAL DESCRIPTION

The IAMS — Universal Signal Conditioners unmatched capability provides users the ultimate in flexibility. As a signal conditioner, the unit provides complete isolation and conversion capability to satisfy almost any application. The Universal Input accepts Process, DC Current, DC Voltage, Thermocouples, RTDs, Potentiometers, and Linear Resistance signals allowing the module to be connected to most common sensors. The setpoint model allows dual setpoint control capability through dual Form A relays. The analog model provides a retransmitted analog signal. A third model provides both analog and control capability. The power supply is also universal, accepting 21.6 to 253 VAC/ 19.2 to 300 VDC as its power source. Add the optional programming module and the unit is easily programmed through menu style programming. The module can also be used to provide a display of the process variable when it is not being used for programming.

The IAMS features well over 100 combinations of inputs to outputs configurations. Input specific terminals allow for the various signals and sensors to be connected to the unit while the input ranges and resolutions are adjusted in the input programming loop of the unit. The menu style programming allows the user quick and easy set-up by using the PGMMOD, programming module. The module is required to program the IAMS. However, if you are using more than

one IAMS, only one programming module is required. The module can store programming from one unit and load it to a second unit reducing set-up time for multiple installations. When the programming module is not being used for programming, it can indicate the input parameters, just like a panel meter.

The unit's overall full scale accuracy typically exceeds 0.1 % depending on the range selection and scaling. The microprocessor based design provides ease of field scaling and the onboard E<sup>2</sup>PROM stores scaling values for future recall. All units come factory precalibrated for all input and output ranges. Factory or custom field scaling can be selected in the Advanced programming loop. The IAMS can be factory recalibrated in the field if desired.

The unit's environmental operating temperature range is -20° C to 60° C. DIN rail mounting saves time and panel space. The units are equipped with mounting feet to attach to top hat profile rail according to EN50022 – 35 x 7.5 and 35 x 15.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## DIMENSIONS In inches (mm)

**CAUTION: Risk of Danger**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

**INSTALLATION**

**WARNING**  
To keep the safety distances, the relay contacts on the devices must not be connected to both hazardous and non-hazardous voltages at the same time.

The IAMS devices must be mounted on a DIN rail according to DIN 46277.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
IAMS	Intelligent Universal Signal Cond with Analog Output	IAMS0001
	Intelligent Universal Signal Cond w/Dual Setpoints	IAMS0010
	Intelligent Universal Signal Cond w/Analog Output and Dual Setpoints	IAMS0011
	Programming Display Module	PGMMOD00

## GENERAL SPECIFICATIONS

- DISPLAY:** See Display/ Programming Module
- POWER:**  
AC Power: 21.6 to 253 VAC, 50/60 Hz  
DC Power: 19.2 to 300 VDC,
- CONSUMPTION:**  $\leq 2.5$  W
- FUSE:** 400 mA SB/250 VAC
- ISOLATION:** Between input, supply and outputs - 2.3 kVAC/250 VAC
- INPUTS:**

### Current Input:

Programmable Ranges: 0 to 20 and 4 to 20 mA DC  
Measurement range: -1 to 25 mA  
Input resistance: Nom. 20  $\Omega$  + PTC 50  $\Omega$   
Sensor error detection: 4 to 20 loop break, yes  
Supply Voltage: 16-25 VDC, 20 mA max (Terminal 43 and 44)

### Voltage Input:

Programmable Ranges: 0 to 1, 0.2 to 1, 0 to 5, 1 to 5, 1 to 10, and 2 to 10 VDC  
Measurement range: -20 mV to 12 VDC  
Input resistance: Nom. 10 M $\Omega$

### Thermocouple Inputs:

Thermocouple Type: B, E, J, K, L, N, R, S, T, U, W3, W5, and LR  
Cold Junction Compensation: via internally mounted sensor  $< \pm 1.0$  °C  
Sensor Error Detection: All TC types, yes  
Sensor Error Current: When detecting 2  $\mu$ A, otherwise 0  $\mu$ A

TYPE	MIN. VALUE	MAX. VALUE	STANDARD
B	+400 °C	+1820 °C	IEC 60584-1
E	-100 °C	+1000 °C	IEC 60584-1
J	-100 °C	+1200 °C	IEC 60584-1
K	-180 °C	+1372 °C	IEC 60584-1
L	-200 °C	+900 °C	DIN 43710
N	-180 °C	+1300 °C	IEC 60584-1
R	-50 °C	+1760 °C	IEC 60584-1
S	-50 °C	+1760 °C	IEC 60584-1
T	-200 °C	+400 °C	IEC 60584-1
U	-200 °C	+600 °C	DIN 43710
W3	0 °C	+2300 °C	ASTM E988-90
W5	0 °C	+2300 °C	ASTM E988-90
LR	-200 °C	+800 °C	GOST 3044-84

## RTD, Linear Resistance, Potentiometer Inputs

RTD Types: Pt10, Pt20, Pt50, Pt100, Pt200, Pt250, Pt300, Pt400, Pt500, Pt1000, Ni50, Ni100, Ni120, and Ni1000

INPUT TYPE	MIN. VALUE	MAX. VALUE	STANDARD
Pt100	-200 °C	+850 °C	IEC60751
Ni100	-60 °C	+250 °C	DIN 43760
Lin. R	0 Ω	10000 Ω	-
Potentiometer	10 Ω	100 kΩ	-

Cable Resistance per wire: RTD, 50 Ω max.

Sensor Current: RTD, Nom. 0.2 mA

Sensor Error Detection: RTD, yes

Short Circuit Detection: RTD, < 15 Ω

### 7. STEP RESPONSE TIME: (0 to 90% or 100 to 10%)

Temperature input: ≤ 1 sec

Current/Voltage input: ≤ 400 msec

### 8. ACCURACY: The greater of the general and basic values.

GENERAL VALUES		
Input Type	Absolute Accuracy	Temperature Coefficient
All	≤ ±0.1% of span	≤ ±0.1% of span/°C

BASIC VALUES		
Input Type	Basic Accuracy	Temperature Coefficient
mA	≤ ±4 µA	≤ ±0.4 µA/°C
Volt	≤ ±20 µV	≤ ±2 µV/°C
Pt100	≤ ±0.2 °C	≤ ±0.01 °C/°C
Lin. R	≤ ±0.1 Ω	≤ ±0.01 Ω/°C
Potentiometer	≤ ±0.1 Ω	≤ ±0.01 Ω/°C
TC Type: E, J, K, L, N, T, U	≤ ±1 °C	≤ ±0.5 °C/°C
TC Type: B, R, S, W3, W5, LR	≤ ±2 °C	≤ ±0.2 °C/°C

### 9. CALIBRATION TEMPERATURE: 20 to 28 °C

### 10. RELAY OUTPUTS: Dual Form A. Contacts rated at 2 A AC or 1 A DC

Hysteresis: 0.1 to 25 % (1 to 2999 display counts)

On and off delay: 0 to 3600 sec

Sensor Error Detection: Break / Make / Hold

Max. Voltage: 250 Vrms

Max. Current: 2 A AC or 1 ADC

Max. Power: 500 VA

## 11. ANALOG OUTPUT:

Current Output:

Signal Range (Span): 0 to 20 mA

Programmable Measurement Range: 0 to 20, 4 to 20, 20 to 0, and 20 to 4 mA

Load Resistance: 800 Ω max.

Output Compliance: 16 VDC max.

Load Stability: = 0.01 % of span, 100 Ω load

Sensor Error Detection: 0 / 3.5 mA / 23 mA / none

Output Limitation: For 4 to 20 and 20 to 4 mA signals - 3.8 to 20.5 mA

For 0 to 20 and 20 to 0 mA signals - 0 to 20.5 mA

Current Limit: = 28 mA

Voltage Output:

Signal Range: 0 to 10 VDC

Programmable Signal Ranges: 0 to 1, 0.2 to 1, 0 to 10, 0 to 5, 1 to 5, 2 to 10, 1 to 0, 1 to 0.2, 5 to 0, 5 to 1, 10 to 0, and 10 to 2 V

Load: 500 K Ω min

## 12. ENVIRONMENTAL CONDITIONS:

Operating Temperature: -20 to +60 °C

Operating and Storage Humidity: 95% relative humidity (non-condensing)

## 13. CERTIFICATIONS AND COMPLIANCES:

**ELECTROMAGNETIC COMPATIBILITY:**

**EMC 2004/108/EC Emission and Immunity** EN 61326

EMC Immunity Influence <± 0.5% of span

Extended EMC Immunity: NAMUR NE 21,

A criterion, burst <± 1% of span

**SAFETY**

**LVD 2006/95/EC**

EN 61010-1

**Factory Mutual Approved**, Report #3034432, FM 3600, 3611, 3810, and ISA 82.02.01

**FM, applicable in:** Class I, Div. 2, Group A, B, C, D

Class I, Div. 2, Group IIC

Zone 2

Max. ambient temperature for T5 60°C

**UL Listed**, File # E324843, UL508, CSA C22.2 No. 14-M95

LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

### 14. CONSTRUCTION: IP 50/IP20 Touch Safe, case body is black high impact plastic. Pollution Degree 1.

### 15. CONNECTIONS: High compression cage-clamp terminal block. Use

60/75°C copper conductors only.

Wire strip length: 0.3" (7.5 mm)

Wire gage: 26 – 14 AWG stranded wire

Torque: 4.5 inch-lbs (0.5 N-m) max

### 16. WEIGHT: 5 oz (145 g)

5.6 oz (160 g) with programming module

# ACCESSORY

## Display/ Programming Module

The module easily connects to the front of the IAMS and is used to enter or adjust the programming of the module. For applications that require more than one IAMS, the same programming module can be used to program multiple units. In fact, it can store the configuration from one module and download the same configuration to another module. When the module is not being used for programming, it can provide a display of the process data and status.

**Display:** LCD display with 4 lines; line 1 is 0.2" (5.5 mm) and displays the input signal, line 2 is 0.13" (3.33 mm) and displays units, line 3 is 0.13" (3.33 mm) and displays analog output or tag number, line 4 shows communication and relay status

**Programming Mode:** Three push buttons combined with a simple and easily understandable menu structure and help text guides you effortlessly through the configuration steps. The actual configuration/set-up will be explained in the Programming Section.

**Password Protection:** Programming access may be blocked by assigning a password. The password is saved in the IAMS to guard against unauthorized modifications to the configuration. A default password of "2008" allows access to all configuration menus.

# 1.0 INSTALLING THE UNIT

The IAMS is designed to mount to a top hat profile DIN rail. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

# 2.0 INSTALLING THE PROGRAMMING MODULE

The PGMMOD, Programming/Display Module is designed to connect to the front of the IAMS. Insert the top of the programming module first, then allow the bottom to lock into the IAMS.

When programming is complete, leave the programming module in place to display the process data or press the release tab on the bottom of the programming module.

# 3.0 WIRING THE UNIT

## WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the sides of the unit. All conductors should conform to the unit's voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes, and regulations. It is recommended that power supplied to the unit (DC or AC) be protected by a fuse or circuit breaker.

When wiring the unit, compare the numbers on the terminal blocks against those shown in wiring drawings for proper wire position. Insert the wire under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. The unit becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful installation or troublesome installation.

Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.

2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. Switching of inductive loads produces high EMI. Use of snubbers across inductive loads suppresses EMI.
 

Snubber: RLC#SNUB0000.

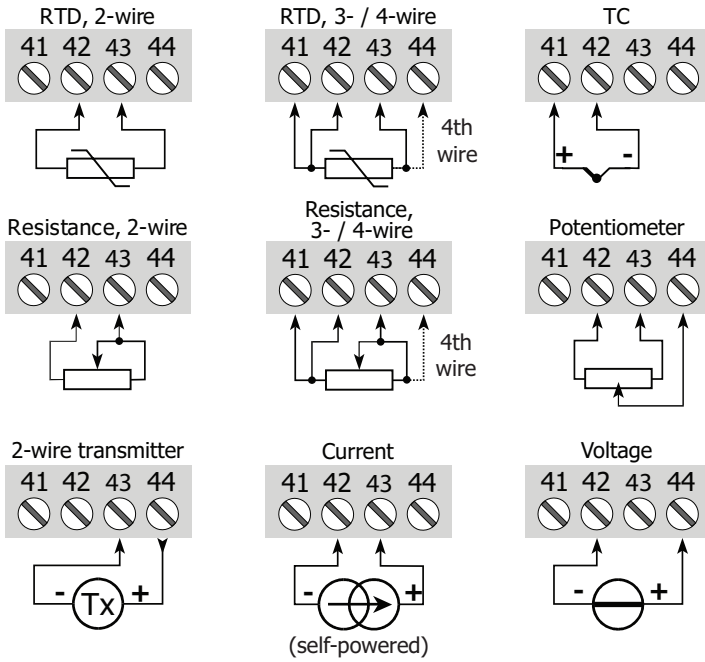

### 3.1 POWER WIRING

Supply:

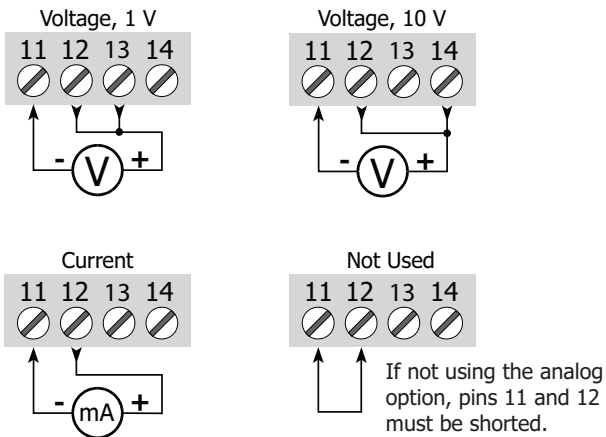

Note: For DC power connection, there is no polarity concerns.

### 3.2 INPUT SIGNAL WIRING

### 3.3 ANALOG OUTPUT WIRING

### 3.4 SETPOINT OUTPUT WIRING

# 4.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

H

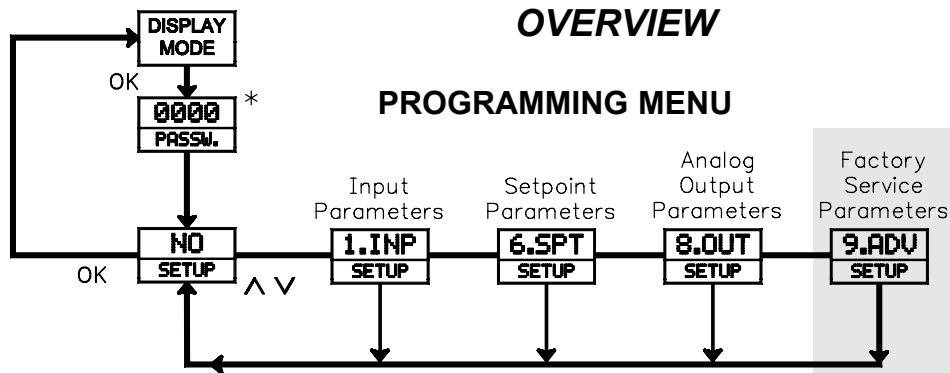

**DISPLAY:** Total of four lines.

	Display Mode	Programming Mode
Line 1	Displays input signal	Shows the selected parameter value
Line 2	Displays input units	Shows the selected parameter
Line 3	Displays output signal	Shows scrolling help text
Line 4	Displays communication and relay status	Shows communication and relay status

**PUSH BUTTONS:** Configuration of the unit is by the use of the three function keys. These keys are only active in the programming mode.

- ∧ - increases the numerical value or choose the next selection
- OK - Enters programming mode, saves the chosen value and proceeds to the next selection
- ∨ - decreases the numerical value or choose the previous selection

# 5.0 PROGRAMMING THE UNIT

**Warning:** Save all programming changes before entering 9.ADV SETUP. Do this by exiting the Program Mode at the NO SETUP prompt and then reentering.

\* If password is enabled.

## STEP BY STEP PROGRAMMING INSTRUCTIONS:

### PROGRAMMING MODE ENTRY (OK KEY)

A programming module, PGMMOD00 is required to program the unit. The programming mode is entered by pressing the **OK** key. If the password protection is enabled, entry of the password is required to gain access. If the password protection is disabled, direct access to programming will occur.

### MENU ENTRY (ARROW & OK KEYS)

Upon entering the programming mode (set-up), the arrow keys will index between the programming modules. Select the desired module, press the **OK** key enter the module programming.

### PARAMETER SELECTION AND ENTRY (ARROW & OK KEYS)

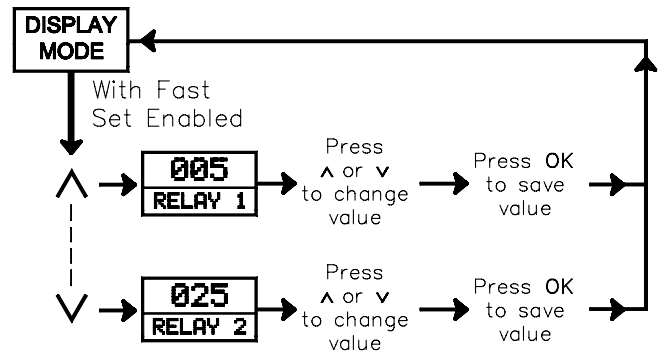

In each of the Programming Modules are parameters that can be configured to the desired action for a specific application. Each parameter has a list of selections or a numeric value that can be entered. The parameters are displayed on line #2 and the selection is on line #1. The arrow keys will move through the selection list or increase or decrease the numeric values. Once the selection or numeric value is set to the desired action, press the **OK** key to enter the data and move to the next parameter.

### PROGRAMMING MODE EXIT (ARROW & OK KEYS)

After completing a programming module loop, the display will return to the set-up position. At this time additional programming modules can be selected for programming or the selection of "NO" can be entered. Entering "NO" will exit the Programming Mode, save any changes, and enable the Display Mode. (If power loss occurs before returning to the display mode, verify recent parameter changes.)

**Note:** The unit will return to the Display Mode from any menu after 1 minute without a key press or by pressing and holding the OK key for 2 seconds. In these cases, verify recent parameter changes.

## FAST SET MENU

### FAST SETPOINT MODE

- ∧ - displays setpoint 1 and increases the shown setpoint value
- OK - saves the changed setpoint value and returns to the Display Mode (Holding for 2 seconds returns to the Display Mode without saving.)
- ∨ - displays setpoint 2 and decreases the shown setpoint value

# 5.1 MODULE 1 - SIGNAL INPUT PARAMETERS

H

## PARAMETER MENU - VOLTAGE, CURRENT AND POTENTIOMETER

## PARAMETER MENU - TEMPERATURE

### INPUT TYPE (IN TYPE)

VOLT  
INTYPE

VOLT CURR LIN.R  
POTM TEMP

Select the appropriate Input Type for the application.

Note: Changing the input parameters may affect the setpoint and/or analog programming.

### MAXIMUM RESISTANCE (R 100%)

2500  
R 100%

0.0 to 9999

Enter the high resistance value.

The next five parameters apply to the voltage, current, linear resistance and potentiometer input types.

### INPUT TYPE (VOLT)

VOLT  
INTYPE

If input type is selected for voltage, the following parameters appear.

#### VOLTAGE RANGE (U.RANGE)

2-10 0-1 0-5 0-10  
U.RANGE 0.2-1 1-5 2-10

Select the appropriate Voltage Range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution.

### INPUT TYPE (CURR)

CURR  
INTYPE

If input type is selected for current, the following parameters appear.

#### CURRENT RANGE (I.RANGE)

4-20 0-20 4-20  
I.RANGE

Select the appropriate Current Range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution.

### INPUT TYPE (LIN.R)

LIN.R  
INTYPE

If input type is selected for linear resistance, the following parameters appear.

#### WIRE CONNECTION (CONNEC.)

3W 2W 3W 4W  
CONNEC.

Select the wires the sensor or signals has to connect to the unit.

#### MINIMUM RESISTANCE (R 0%)

0 0.0 to 9998  
R 0%

Enter the low resistance value.

### UNIT IDENTIFICATION (UNIT)

UNIT  
%

Select one of the 69 available units as listed below.

°C	hp	kW	mA	PH
°F	hPa	kWh	mbar	rPM
%	Hz	l	mils	s
A	in	l/h	min	S
bar	in/h	l/min	mm	t
cm	in/min	l/s	mm/s	t/h
ft	in/s	m	mol	uA
ft/h	ips	m/h	mPa	um
ft/min	K	m/min	mV	uS
ft/s	kA	m/s	MW	V
g	kg	m/s <sup>2</sup>	MWh	W
gal/h	kJ	m <sup>3</sup>	N	Wh
gal/min	kPa	m <sup>3</sup> /h	Ohm	yd
GW	kV	m <sup>3</sup> /min	Pa	

### DECIMAL POINT (DEC.P)

111.1  
DEC.P

1111 111.1  
11.11 1.111

Select the appropriate decimal point location.

### DISPLAY LOW (DISP.LO)

0.0  
DISP.LO

-199.9 to 999.9

Enter the low display value.

### DISPLAY HIGH (DISP.HI)

1000  
DISP.HI

-199.9 to 999.9

Enter the high display value.

The remaining parameters in this module apply to temperature input type only.

**INPUT TYPE (TEMP)**

TEMP  
INTYPE

If input type is selected for temperature, the following parameters appear.

**TEMPERATURE SENSOR (SENSOR)**

Ni  
SENSOR

Pt, Ni, or TC

Select the appropriate temperature sensor.

RTD -Select the appropriate RTD sensor.

TYPE: Pt10 Pt20 Pt50 Pt100  
Pt200 Pt250 Pt300  
Pt400 Pt500 Pt1000  
WIRE CONNECTION: 2W 3W 4W

NICKEL SENSORS -Select the appropriate Nickel sensor.

TYPE: Ni50 Ni100,  
Ni120 Ni1000

WIRE CONNECTION: 2W 3W 4W

THERMOCOUPLE -Select the appropriate Thermocouple sensor.

TYPE: TC.B TC.E TC.J TC.K TC.L  
TC.N TC.R TC.S TC.T TC.U  
TC.W3 TC.W5 TC.Lr

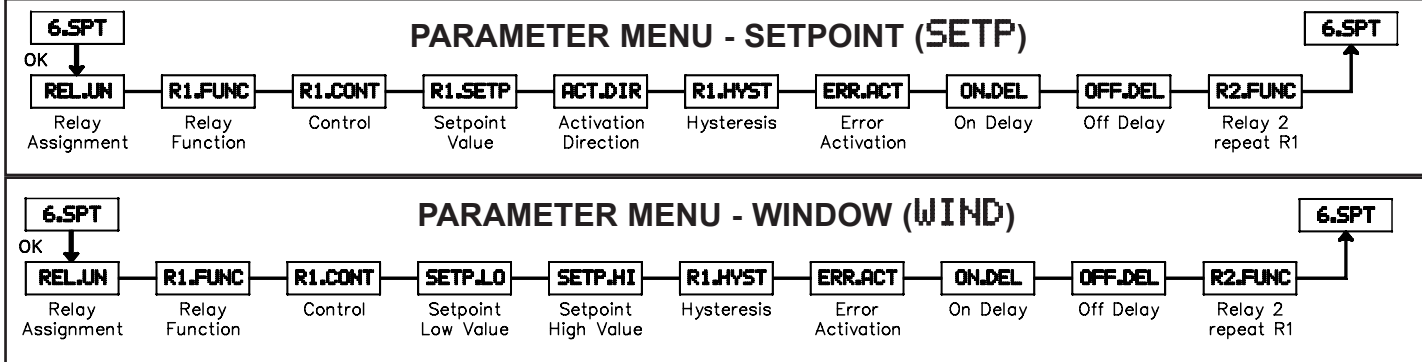

**UNIT IDENTIFICATION (UNIT)**

°C  
UNIT

°F or °C

Select the appropriate unit for the temperature being displayed.

**5.2 MODULE 6 - SETPOINT PARAMETERS (REQUIRES SETPOINT OPTION)**

**RELAY ASSIGNMENT (REL.UN)**

DISP  
REL.UN

DISP or PERC

Select relay assignment to display units or percent of the input.

**RELAY 1 FUNCTION (R1.FUNC)**

SETP  
R1.FUNC

SETP WIND ERR  
POW OFF

Select how relay 1 is to function. For SETP the relay is controlled by setpoint one. Select WIND and the relay is controlled by 2 setpoints. For ERR the relay indicates sensor alarm only. Select POW and the relay indicates power status. For OFF the relay is disabled.

**RELAY 1 FUNCTION (SETP)**

SETP  
R1.FUNC

If the relay function is selected for setpoint, the following parameters appear.

**RELAY 1 CONTROL (R1.CONT)**

N.O.  
R1.CONT

N.O. or N.C.

Select relay 1 operation, normally open or normally closed.

**RELAY 1 SETPOINT VALUE (R1.SETP)**

50.0  
R1.SETP

-200 to 850.0

Enter the relay 1 setpoint value.

**ACTIVATION DIRECTION (ACT.DIR)**

INCR  
ACT.DIR

INCR or DECR

Select the direction relay 1 should activate, increasing signal or decreasing signal.

**RELAY 1 HYSTERSIS (R1.HYST)**

1.0  
R1.HYST

0.1 to 262.5

Enter relay 1 hysteresis value.

**RELAY 1 ERROR ACTIVATION (ERR.ACT)**

NONE  
ERR.ACT

HOLD, CLOS, OPEN, and NONE

Select relay 1 error mode action.

**RELAY 1 ON DELAY (ON.DEL)**

0  
ON.DEL

0 to 3600

Enter relay 1 On Delay Time.

**RELAY 1 OFF DELAY (OFF.DEL)**

0  
OFF.DEL

0 to 3600

Enter relay 1 Off Delay Time.

**RELAY 1 FUNCTION (WIND)**

WIND  
R1.FUNC

If the relay function is selected for window, the following parameters appear.

**RELAY 1 CONTROL (R1.CONT)**

**CIW**  
R1.CONT      CIW or C-IW

Select relay 1 contact to be open inside the window or closed in the window.

**SETPOINT LOW VALUE (SETP.LO)**

**60.0**  
SETP.LO      -200 to 849.9

Enter the window's low value.

**SETPOINT HIGH VALUE (SETP.HI)**

**60.0**  
SETP.HI      -199.9 to 850.0

Enter the window's high value.

**RELAY WINDOW HYSTERESIS (R1.HYST)**

**1.0**  
R1.HYST      0.1 to 262.5

Set the window's hysteresis value.

**RELAY 1 ERROR ACTIVATION (ERR.ACT)**

**NONE**  
ERR.ACT      HOLD, CLOS, OPEN, and NONE

Select relay 1 error mode action.

**RELAY 1 ON DELAY (ON.DEL)**

**0**  
ON.DEL      0 to 3600

Enter relay 1 On Delay Time.

**RELAY 1 OFF DELAY (OFF.DEL)**

**0**  
OFF.DEL      0 to 3600

Enter relay 1 Off Delay Time.

**RELAY 1 FUNCTION (ERR)**

**ERR**  
R1.FUNC      If the relay function is selected for error mode, the following parameters appear.

**RELAY 1 ERROR ACTIVATION (ERR.ACT)**

**OPEN**  
ERR.ACT      CLOS OPEN

Select relay 1 error mode action.

The POW and OFF selection have no programming capabilities.

**For Relay 2, repeat the steps listed for Relay 1.**

**5.3 MODULE 8 - ANALOG OUTPUT PARAMETERS (REQUIRES ANALOG OUTPUT OPTION)**

**ANALOG OUTPUT TYPE (ANA.OUT)**

**CURR**  
ANA.OUT      VOLT or CURR

Select either Voltage or Current output.

**OUTPUT LOW VALUE (OUT.LO) For TEMP only**

**0.0**  
OUT.LO      -200 or 849.0

Enter the value for the output Low Value.

**OUTPUT RANGE (O.RANGE)**

**0-10**  
O.RANGE      Select the appropriate range based on the analog output type selected.

VOLTAGE -Select the appropriate voltage range.  
RANGE: 0-1, 0.2-1, 0-5, 1-5, 1-10, or 2-10

CURRENT -Select the appropriate current range.  
RANGE: 0-20, 4-20, 20-0, or 20-4

**OUTPUT HIGH VALUE (OUT.HI) For TEMP only**

**150.0**  
OUT.HI      -199 or 850.0

Enter the value for the output High Value.

**OUTPUT ERROR (OUT.ERR) For CURR only**

**23mA**  
OUT.ERR      NONE, 0mA, 3.5mA, or 23mA

This parameter is only available if the analog output type is selected for current. Select the proper Error action, if needed.

# 5.4 MODULE 9 - ADVANCED PARAMETERS

H

## ADVANCED SETTING (ADV.SET)

MEM DISP CAL  
SIM PASS LANG

Select the advanced setting menu to make the desired change.

## ADVANCED SETTING (MEMORY)

If the advanced setting is selected for memory, the following parameter appears.

### MEMORY SETTING (MEMORY)

LOAD or SAVE

Select save to save unit set-up to the display module or select load to download saved set-up to the unit.

## ADVANCED SETTING (DISP)

If the advanced setting is selected for display, the following parameters appear.

### LCD CONTRAST (CONTRA.)

0 to 9

Select the desired Display Contrast.

### LCD BACKLIGHT ADJUSTMENT (LIGHT)

0 to 9

Select the desired Display Backlight.

### TAG NUMBER (TAGNO.)

A to 9

Enter a custom 6 character device tag.

### LINE 3 SET UP (LINE 3)

A.OUT or TAG

Select the proper display for Line 3.

## ADVANCED SETTING (CAL)

If the advanced setting is selected for calibration (applied input scaling), the following parameters appear as selected in the input setup. A temperature example is shown.

### CALIBRATION LOW (CAL.LO)

No or YES

Calibrate the input low to the process value.

### LOW CALIBRATION POINT VALUE (Low Input Signal)

-200 to 850.0

Apply the low input signal, then enter the value for the Low Value Point.

### CALIBRATION HIGH (CAL.HI)

NO or YES

Calibrate the input high to the process value.

### HIGH CALIBRATION POINT VALUE (High Input Signal)

-200 to 850.0

Apply the high input signal, then enter the value for the High Value Point.

### USE PROCESS CALIBRATION VARIABLES (USE.CAL)

NO or YES

Use Process Calibration Variables.

## ADVANCED SETTING (SIM)

If the advanced setting is selected for simulation, the following parameters appear.

### INPUT SIMULATION (ENA.SIM)

YES or No

Enable Input Simulation.

### INPUT SIMULATION VALUE (°C)

-200 to 850.0

Enter the Input Simulation Value, as selected in the input setup.

### RELAY SIMULATION (REL.SIM)

Use the ▲ and ▼ to toggle between relay 1 and 2.

## ADVANCED SETTING (PASS)

If the advanced setting is selected for password, the following parameters appear.

### PASSWORD PROTECTION (EN.PASS)

YES or No

Enable Password protection.

### ENTER NEW PASSWORD (NEW.PAS) \*

0000 to 9999

Enter New Password.

### ENABLE FAST SET (EN.FAST)

YES or No

Enable fast set functionality of the setpoints. .

\* Universal code 2008 will allow access to a locked unit.

## ADVANCED SETTING (LANG)

If the advanced setting is selected for LANGUAGE, the following parameter appears.

### SELECT PROGRAMMING LANGUAGE (LANGUA)

DE DK ES FR  
IT SE UK

Set programming language.

## MODEL IAMA - UNIVERSAL SIGNAL CONDITIONING MODULE

- 3-WAY ISOLATION OF ANALOG SIGNALS
- UNIVERSAL CONVERSION MODULE - INPUTS AND OUTPUTS SELECTED VIA DIP SWITCH SETTINGS
- OVER 100 INPUT AND OUTPUT ANALOG CONVERSION COMBINATIONS
- CHOOSE LINEAR OR SQUARE ROOT EXTRACTION MODEL
- ALL RANGES ARE FACTORY PRECALIBRATED. CUSTOM FIELD CALIBRATION IS AVAILABLE FOR ALL RANGES WHILE MAINTAINING THE FACTORY CALIBRATION FOR FUTURE USE
- 11 to 36 VDC AND 24 VAC MODULE POWER

UL Recognized Component,  
File # E179259

### GENERAL DESCRIPTION

The IAMA – Universal Signal Conditioning Module Series can isolate and convert over 100 combinations of analog signal ranges. The IAMA3535 converts and transmits signals linearly proportional to the input, while the IAMA6262 transmits the scaled square root of the input signal. This allows the IAMA6262 to provide a signal that is linear to flow rate in applications utilizing a differential pressure transducer.

DIP switch range selection eliminates the need to order and stock different modules for each input and output signal range, and allows quick and convenient setup for over 100 standard signal conversions. By utilizing the Field mode of calibration, the user can customize the input and output scaling for odd applications, including reversal of the output relative to the input.

In addition to the conversion capabilities, the IAMA modules feature optically isolated Input/Output signal circuits and transformer isolated Power to Output circuits.

The modules' overall full scale accuracy typically exceed 0.05% depending upon range selection and scaling. The microprocessor based design provides ease of field scaling and the onboard E<sup>2</sup>PROM stores scaling values for future recall. Both models come factory precalibrated for all input and output ranges. Factory or custom field scaling can be selected by a simple mode switch change. The IAMA can be factory recalibrated in the field if desired.

The modules' environmental operating temperature range is -20°C to +65°C. DIN rail mounting saves time and panel space. The units are equipped with universal mounting feet for attachment to standard DIN style rails, including top hat profile rail according to EN50022 - 35x7.5 and 35 x 15 and G profile rail according to EN50035-G32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior  
to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
IAMA	Linear Universal Signal Conditioning Module	IAMA3535
	Square Root Universal Signal Conditioning Module	IAMA6262

### SPECIFICATIONS

- POWER:** 11 to 36 VDC, 3 W max. or 24 VAC, ±10%, 50/60 Hz, 4.8 VA max.
- INPUT/OUTPUT RANGES:** See Tables 2 and 3
- ZERO/SPAN ADJUSTMENTS:** Digital (DIP Switch Transition)
- MAX INPUT SIGNAL:**  
**Current Input:** 110 mA DC, 1.1 VDC  
**Voltage Inputs:** Terminal 7- 1 VDC +10%  
Terminal 8- 10 VDC +10%  
Terminal 9- 100 VDC +10%
- INPUT RESISTANCE:**  
**Current:** 10 Ω  
**Voltage:** > 100 K
- INPUT PROTECTION:** Surge suppressor diodes
- MAX OUTPUT CURRENT:**  
**Current Output:** 22 mA  
**Voltage Output:** 10 mA
- LOAD RESISTANCE:**  
**Current Output:** ≤ 600 Ω  
**Voltage Output:** ≥ 1 KΩ
- OUTPUT COMPLIANCE:**  
**Current:** 4 to 20 mA, 0 to 20 mA: 12 V min (≤ 600 Ω)  
0 to 1 mA: 10 V min (≤ 10 KΩ)  
**Voltage:** 10 VDC across a min. 1 KΩ load (10 mA). Factory calibrated for loads of > 1 MΩ.
- ISOLATION LEVEL INPUT TO OUTPUT:** 1.5 kV @ 50/60 Hz, 1 min
- STEP RESPONSE:** To within 99% of full scale: 300 msec
- ACCURACY (INCLUDING LINEARITY):** Factory: ±0.1% of span max. for all ranges except 1 mA, 2 mA, and 20 mV. These ranges are accurate to ±0.2% of span max. All ranges can be field calibrated to 0.1% of span max.
- RESOLUTION:** 0.01% full scale input, 0.01% full scale output

### DIMENSIONS In inches (mm)

**14. ENVIRONMENTAL CONDITIONS:****Operating Temperature Range:** -20 to +65 °C**Storage Temperature Range:** -40 to +85 °C**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from -20 to +65 °C**Temperature Coefficient:** ± 0.01%/°C (100 PPM/°C) max.**Altitude:** Up to 2000 meters**15. \* Terminal number is dependent on max. input voltage.

**MODULE ISOLATION**

IAMA modules feature "3-Way" Signal Isolation. The 3-Way isolation is a combination of optical and transformer isolation. The optical isolation provides common mode voltage (CMV) isolation up to 1.5 kV between the sensor input and the process signal output. The IAMA's power is isolated from the sensor signal input and the process signal output by a DC/DC transformer isolation circuit.

**OVERVIEW**

The IAMA3535 continuously monitors a voltage or current input and provides a linearly proportional voltage or current output, while the IAMA6262 transmits the scaled square root of the input signal. This allows the IAMA6262 to provide a signal that is linear to flow rate in applications utilizing a differential pressure transducer. Both units have two modes of operation known as Factory and Field modes. Factory mode is used when the default input and output ranges are suitable. Field mode can be independently selected for both the input and output, and allows the user to custom calibrate, or scale the signal. If Factory mode is selected, the IAMAs use factory presets for the selected input or output range. If Field mode is selected, the IAMAs can be custom scaled within a selected input or output range. Field mode also allows the IAMA to reverse its output in relation to its input.

The units are factory precalibrated for minimum and full scale for all input and output ranges. The factory calibration values are permanently stored in E<sup>2</sup>PROM and should not be changed in the field, unless unacceptable error or a factory checksum error occurs. See Factory Recalibration for details. Field scaling is achieved by applying minimum and full scale values from a calibration source and storing the values by a single DIP switch transition. Field scaling is available for all input and output ranges and the values are permanently stored in E<sup>2</sup>PROM until reprogramming occurs.

After field scaling, the IAMAs can be changed between Factory and Field modes for a particular range, which restores the respective setting. The Factory and Field E<sup>2</sup>PROM locations contain the same calibration values when the IAMA is received from the factory. Therefore, until the IAMA is field scaled, factory and field modes perform identically. See SCALING PROCEDURE for detailed instructions on field programming the IAMA.

The units can be scaled to any minimum scale and full scale values within the extent of the selected range. The closer together the minimum and full scale values are to each other, the less accurate the signal will be. For example, if the 0 to 1 V input range is selected, and the unit is scaled for 0 to 0.5 V, the signal has the same resolution as the 0 to 1 V range. Since this resolution will be two times the percentage of span for 0.5 V, more accuracy can be achieved by using the 0 to 0.5 V range.

The input may exceed the full scale value for the selected range by 10% of span, but the IAMA will not update the output beyond 10% over range.

The red and green LED's indicate the status of the modules during scaling and normal operation. Table 1, LED Indications, details the LED indications for various unit conditions.

The IAMA – Signal Conditioning Module Series is designed for use in industrial environments. Suppressor diodes protect both input and output circuits from wiring errors and transient high voltage conditions.

**INPUTS**

The IAMAs accept a full range of process signal inputs and isolate and convert these signals to common industrial control signals. The input signal combinations are configured by making specific DIP switch selections on the 10 position DIP switch.

**OUTPUTS**

As with the input choices, the process signal output of the modules is DIP switch selectable. A 1 position DIP switch is used to select between the 1 mA/20 mA output ranges. The maximum output current signal is 22 mA with ≤600 Ω output resistance and the maximum output voltage signal is 11 V with ≥1 KΩ output resistance.

**ZERO AND SPAN**

The input zero and span are set by first applying the minimum value then transitioning S1-2 to store that value. Next, the full scale value is applied and the DIP switch transition stores the value. The output scaling is performed in a similar manner but the output is driven to the desired minimum and full scale values by the calibration source applied to the input. S1-1 is used to store the minimum and full scale output values.

The span is defined by:  $\text{span} = (\text{full scale} - \text{minimum scale})$ .

**ILLEGAL RANGE SELECTIONS AND CHANGES**

The ranges should only be selected before power is applied. If an invalid input or output range is selected when power is applied the output is set to approximately 0 VDC and the red LED indicates the error according to Table 1. Power must be removed and valid ranges selected for the IAMA to operate properly.

If S1 switches 3 through 10 are changed while the IAMA is operating, the red LED indicates a range change according to Table 1, LED Indications and the output goes to the previously stored range minimum scale value. Normal operation will be resumed if the switches are placed back in the previous positions or power is removed and restored.

## CHECKSUM ERRORS

A checksum is performed every time power is applied to the IAMA. If a checksum error occurs, the LEDs will indicate where the error occurred according to Table 1, LED Indications. Operation with a checksum error is not recommended but can be done in critical situations. If an error occurs, recalibration of the field or factory ranges to be used must be performed.

If a field checksum error occurs, the IAMA will operate only in factory mode. If a factory checksum occurs, the IAMA will operate only in a previously calibrated field mode. Do not perform a field scaling until the factory checksum is cleared. Since a checksum error is a high priority LED indication, the LEDs will indicate the error until it is cleared. This will exclude other LED information.

**TABLE 1, LED INDICATIONS**

CONDITION	GREEN LED	RED LED
Normal Operation	On	Off
Scaling Mode	Alternate with Red	Alternate with Green
Under Range	Off	Slow Flash (0.8 sec rate)
Over Range	Off	Fast Flash (0.4 sec rate)
Invalid Range	Off	On
Illegal Range Change	Off	On
Factory Checksum	Off	On, short off
Field Checksum	On, short off	Off
User Factory Calibration	Fast Flash for 2 sec	Off

## GETTING STARTED

One method for the Input (1 or 2 below) should be configured, and one method for the Output (3 or 4 below) should be configured.

1. FACTORY preprogrammed settings for the Input, see Section 1.0
2. FIELD scaling method for the Input, see Section 2.0
3. FACTORY preprogrammed setting for the Output, see Section 3.0
4. FIELD scaling method for the Output, see Section 4.0

*Note: The ranges should only be changed while power is removed from the IAMA.*

**TABLE 2, OUTPUT RANGE SETTINGS**

	OUTPUT RANGE	RANGE DIP SWITCHES		
		3	4	5
VOLTAGE OUTPUTS	0 - 5 V	0	0	0
	0 - 10 V	0	0	1
CURRENT OUTPUTS	0 - 1 mA	0	1	0
	4 - 20 mA	0	1	1
	0 - 20 mA	1	0	0

*Note: DIP switch settings 0 = OFF 1 = ON*

**TABLE 3, INPUT RANGE SETTINGS**

	RANGE	RANGE DIP SWITCHES				
		6	7	8	9	10
INPUT VOLTAGE	0 - 20 mV	0	0	0	0	0
	0 - 50 mV	0	0	0	0	1
	0 - 100 mV	0	0	0	1	0
	0 - 200 mV	0	0	0	1	1
	0 - 500 mV	0	0	1	0	0
	0 - 1 V	0	0	1	0	1
	0 - 2 V	0	0	1	1	0
	1 - 5 V	0	0	1	1	1
	0 - 5 V	0	1	0	0	0
	0 - 10 V	0	1	0	0	1
	0 - 20 V	0	1	0	1	0
	0 - 50 V	0	1	0	1	1
	0 - 100 V	0	1	1	0	0
	INPUT CURRENT	0 - 1 mA	0	1	1	0
0 - 2 mA		0	1	1	1	0
0 - 5 mA		0	1	1	1	1
0 - 10 mA		1	0	0	0	0
4 - 20 mA		1	0	0	0	1
0 - 20 mA		1	0	0	1	0
0 - 50 mA		1	0	0	1	1
0 - 100 mA	1	0	1	0	0	

*Note: DIP switch settings 0 = OFF 1 = ON*

## FIELD OR FACTORY MODE SELECTION

### SELECTING FIELD MODE (2 Methods):

1. Scale the input or output according to SCALING PROCEDURE 2.0 or 4.0
2. Before applying power, set the input or output (or both) field/factory switch to the up (field) position. Field calibration values will be restored upon power-up. If the IAMA has not been previously field calibrated, the E<sup>2</sup>PROM will contain the factory calibration values which will be restored.

### SELECTING FACTORY MODE (2 Methods):

1. Before applying power to the IAMA set the input or output (or both) field/factory switch to the down (factory) position. Factory calibration values will be restored upon power-up.
2. While power is applied to the IAMA and it is operating in the field input and/or output mode, set the desired field/factory switch(s) to the down (factory) position. The factory calibration values will be restored.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation.

Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC #FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward #28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC #LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom #1VR3

*Note: Reference manufacturer's instructions when installing a line filter.*
5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the numbers on the label to identify the position number with the proper function. Strip the wire, leaving approximately 1/4" (6 mm) of bare wire exposed. Insert the wire into the terminal, and tighten the screw until the wire is clamped tightly.

## POWER AND OUTPUT CONNECTIONS

### Power

Primary power is connected to terminals 2 and 3 (labeled VDC- and VDC+). For best results, the Power should be relatively “clean” and within the specified variation limits. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off, should be avoided.

### Current Output

Wiring for a current output is connected to terminals 1 (IOUT-) and 4 (IOUT+). DIP switch S2 should be set for the desired full scale output current. (20 mA = ON; 1 mA = OFF).

### Voltage Output

Wiring for a voltage output is connected to terminals 5 (VOUT-) and 6 (VOUT+).

**Note:** Although signals are present at voltage and current outputs at the same time, only the selected range is in calibration at any one time.

**Example:** A 0 to 10 VDC output is selected. The voltage level present at the voltage output terminals is in calibration, but the signal appearing at the current output terminals does not conform to any of the current output ranges.

## INPUT CONNECTIONS

### Current Input

Wiring for a current input is connected to terminals 10 (IIN) and 12 (INPUT COMMON).

### Voltage Input

Wiring for a voltage input is connected to terminal 12 (INPUT COMMON) and one of the three available voltage terminals listed below, depending on maximum input voltage.

- Terminal 7: 1 VDC max.
- Terminal 8: 10 VDC max.
- Terminal 9: 100 VDC max.

## SCALING PROCEDURE

The accuracy of the IAMA is dependent on the accuracy of the calibration source and the voltage or current meter used in the scaling process.

If an out of range (see Table 1 for LED indications) or illegal (full scale less than minimum scale) scaling is attempted, the factory calibration values will be stored in place of the field values. This will prohibit erroneous operation of the IAMA. The scaling procedure will have to be repeated.

The final storage of the zero and full scale values to E<sup>2</sup>PROM is not done until the last transition of the mode/calibration DIP switches (S1-1 or S1-2). Therefore, the scaling can be aborted any time before the full scale value is saved. This is accomplished by cycling power to the IAMA. The IAMA will restore the factory or previous field scaling values at power up depending on the setting of the DIP switches. See Mode Selection for more detailed instructions for selecting factory and field modes at power up. See Table 2 and 3 for the input and output range DIP switch settings.

### 1.0 INPUT SET-UP USING FACTORY CONFIGURATION

- 1.1 Remove power.
- 1.2 Connect signal wires to the correct input terminals based on the maximum signal input.
  - Terminal 7: max. signal input 1 VDC
  - Terminal 8: max. signal input 10 VDC
  - Terminal 9: max. signal input 100 VDC
  - Terminal 10: max. signal input 100 mA
  - Terminal 12: signal common
- 1.3 Set Input Range switches (S1 switches 6 through 10) to the desired Input Range (See Table 3). (0 to 10 VDC range shown).
- 1.4 Set Input Field/Fact. switch (S1 switch 2) to the off position.
- 1.5 Apply power to the IAMA.
  - Solid illumination of Green LED if signal is within the minimum and maximum limits of the selected input range.
  - Slow blinking of Red LED if signal decreases below minimum limit of selected input range.
  - Rapid blinking of Red LED if signal increases above maximum limit of selected input range.
- 1.6 Input set-up complete. Go to Step 3.0 or Step 4.0.

## 2.0 INPUT SCALING USING FIELD CONFIGURATION

- 2.1 Remove power.
- 2.2 Connect signal source to the correct input terminals based on the maximum signal input.
  - Terminal 7: max. signal input 1 VDC
  - Terminal 8: max. signal input 10 VDC
  - Terminal 9: max. signal input 100 VDC
  - Terminal 10: max. signal input 100 mA
  - Terminal 12: signal common
- 2.3 Set Input Range switches (S1 switches 6 through 10) to the desired input range (See Table 3). Select the lowest possible range that will support the desired maximum signal. Example: if the desired span is 20 mV to 85 mV, the best range selection is 0 to 100 mV. The 0 to 200 mV will also suffice, but the accuracy will be reduced. (0 to 10 VDC range shown).
- 2.4 Set Input Field/Fact. switch (S1 switch 2) to the off position.
- 2.5 Apply power to the IAMA and allow a warm up period of five minutes. Follow the manufacturer's warm up procedure for the calibration source.
- 2.6 Set Input Field/Fact. switch (S1 switch 2) to the on position. *The Red and Green LEDs will alternately blink.*
- 2.7 Apply desired minimum scale signal.
- 2.8 Set Input Field/Fact. switch (S1 switch 2) to the off position. *The Red and Green LEDs will alternately blink. If the signal is equal or below the minimum limit of the selected range, the Red LED blinks slowly and the Green LED turns off. Removing power aborts scaling, begin at Step 2.1.*
- 2.9 Apply maximum scale input. *The Red and Green LEDs will alternately blink.*
- 2.10 Set Input Field/Fact. switch (S1 switch 2) to the on position. *Red LED extinguishes and Green LED becomes solid. Your scaled values are now saved and recalled if the Input Field/Fact. switch (S1 switch 2) is in the on position when power is applied. Red LED will blink slowly if signal is equal to or below minimum limit and blinks rapidly if signal increases above maximum limit.*
- 2.11 Input scaling complete. Go to Step 3.0 or Step 4.0.

## 3.0 OUTPUT SET-UP USING FACTORY CONFIGURATION

- 3.1 Remove power.
- 3.2 For voltage output values, go to Step 3.4  
For current output values, continue at Step 3.3
- 3.3 Set 20 mA/1 mA switch (S2) to desired full scale output. (20 mA - on; 1 mA - off)
- 3.4 Set Output Field/Fact. switch (S1 switch 1) to the off position.
- 3.5 Set Output Range switches (S1 switches 3, 4, and 5) to the desired Output Range (See Table 2). (4 to 20 mA range shown)
- 3.6 Connect external device to appropriate IAMA output terminals.
  - Terminal 6: + Voltage
  - Terminal 5: - Voltage
  - Terminal 4: + Current
  - Terminal 1: - Current
- 3.7 Apply power to the IAMA and allow a warm up period of five minutes. Output set-up complete.

## 4.0 OUTPUT SCALING USING FIELD CONFIGURATION

- 4.1 Remove power.
- 4.2 For voltage output scaling, go to Step 4.4.  
For current output scaling, continue at Step 4.3.
- 4.3 Set 20 mA/1 mA switch (S2) to desired full scale output.  
(20 mA - on; 1 mA - off)
- 4.4 Set Output Field/Fact. switch (S1 switch 1) to the off position.
- 4.5 Set Output Range switches (S1 switches 3, 4, and 5) to the desired Output Range (See Table 2). Select the lowest possible range that will support the desired full scale output. Example: if the desired span is 1 V to 4 V, the best range selection is 0 to 5 V. (0 to 5 VDC range shown)
- 4.6 Connect volt or current meter to appropriate IAMA output terminals.  
Terminal 6: + Voltage  
Terminal 5: - Voltage  
Terminal 4: + Current  
Terminal 1: - Current
- 4.7 An input signal is required to complete output scaling. If previous scaled input is used (completed in Step 2.0), Input Field/Fact. switch (S1 switch 2) and Input Range switches (S1 switches 6 through 10) must remain in the same positions. If another signal source is used, set Input Field/Fact. switch (S1 switch 2) to off position and Input Range switches (S1 switches 6 through 10) to the desired input range (See Table 3).
- 4.8 Connect input signal source to the correct input terminals based on the maximum signal input.  
Terminal 7: max. signal input 1 VDC  
Terminal 8: max. signal input 10 VDC  
Terminal 9: max. signal input 100 VDC  
Terminal 10: max. signal input 100 mA  
Terminal 12: signal common
- 4.9 Apply power to the IAMA and allow a warm up period of five minutes.
- 4.10 Set Output Field/Fact. switch (S1 switch 1) to the on position.  
*The Red and Green LEDs will alternately blink.  
If Red LED blinks slowly, increase signal until Red and Green LEDs alternately blink.*
- 4.11 Adjust the input signal until the desired \* minimum output level is displayed on the volt or current meter.  
*The Red and Green LEDs will alternately blink.*
- 4.12 Set Output Field/Fact. switch (S1 switch 1) to the off position.  
*The Red and Green LEDs alternately blink.  
If the signal is equal to or below the minimum limit of the selected range, the Red LED blinks slowly and the Green LED turns off. Removing power aborts scaling. Start over at Step 4.1.*
- 4.13 Adjust the input signal until the desired \* maximum output level is displayed on the volt or current meter.
- 4.14 Set Output Field/Fact. switch (S1 switch 1) to the on position.  
*Red LED extinguishes and Green LED becomes solid. Your scaled values are now saved and will be recalled if the Output Field/Fact. switch (S1 switch 1) is in the on position when power is applied.*
- 4.15 Output scaling is complete.

\* If the minimum output is higher than the maximum output the module reverses its output behaviour accordingly.

## RECALIBRATING FACTORY STORED VALUES

H

**WARNING:** Read the complete procedure at least once before attempting to recalibrate the factory values. This procedure should only be performed due to factory checksum error or unacceptable error. This procedure should be performed by qualified technicians using accurate calibration equipment.

The following list outlines conditions that are unique to factory recalibration:

1. Unlike the field scaling procedures, there are no software under and over range indications while performing a factory recalibration. Therefore, care must be taken to insure the selected range extents are not exceeded. The minimum scale and full scale calibration values must be set to the extents of the range being calibrated.  
For example: If the Input Range DIP switches are set for the 4-20 mA range, minimum scale must be set at 4 mA, and full scale must be set at 20 mA.
2. At least one input calibration must be completed before calibrating any output range. When calibrating the input voltage range, it is recommended that a range above 1 V be used to provide better accuracy.
3. If multiple input or output ranges are to be calibrated, DO NOT REMOVE POWER TO CHANGE THE RANGE. Place the appropriate Field/Fact. DIP switch; S1-1 for outputs, and S1-2 for inputs to the down position, and set the remaining DIP switches for the range to be calibrated. *Note: Be sure to change the terminal wiring to match the Input or Output range DIP switch settings before performing the calibration procedure. Set calibration source to 0 V or 0 mA before changing wiring.*

### INPUT RECALIBRATION

1. To enter the factory calibration mode, set switches S1-1 and S1-2 down, S1-3 through S1-5 up, and S1-6 through S1-10 down.
2. Connect a signal source to the correct input terminals based on the maximum signal input to be calibrated. If an output range will be calibrated after the input range is calibrated, connect a voltage or current meter to the appropriate output terminals at this time.
3. Apply power to the IAMA. After the version number indication, the green LED will flash rapidly for 2 seconds indicating the factory calibration mode has been entered. Allow the IAMA to warm up for 5 minutes minimum and follow the manufacturer's warm up procedure for the calibration source.
4. Set the Input Range DIP switches to the desired input range according to Table 3.
5. Complete Steps 2.6 through 2.10 of Input Scaling Using Field Configuration. *Note: There will be no over or under range indication of the LED's during this procedure, so use care not to exceed the range extents.*
6. If an output is to be calibrated, continue from #2 of Output Recalibration below. If no further input or output calibration is to be completed, return S1-1 and S1-2 to the down position and remove power from the IAMA. Apply power and check for accurate operation of the newly calibrated range or ranges.

### OUTPUT RECALIBRATION

1. Complete 1 through 5 of the input recalibration procedure for at least one range.
2. For current output, set 20 mA/1 mA switch (S2) to desired full scale output. (20 mA - on; 1 mA - off)
3. Set Output Field/Fact. switch (S1 switch 1) to the off position.
4. Set the Output Range DIP switches to the desired output range according to Table 2.
5. Complete Steps 4.10 through 4.14 of Output Scaling Using Field Configuration. *Note: There will be no over or under range indication of the LED's during this procedure, so use care not to exceed the range extents.*
6. If no further calibration is to be completed, return S1-1 and S1-2 to the down position and remove power from the IAMA. Apply power and check for accurate operation of the newly calibrated range or ranges.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

### INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32, and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

#### G Rail Installation

To install the IAMA on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out and away from the rail.

#### T Rail Installation

To install the IAMA on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

### APPLICATION

Cost efficiency measurements of a printing company included the reduction of bulk stock of the various inks used in their printing processes. The company currently had various ink flow and level devices with different current and voltage outputs and wanted to record these measurements into a control room PC. Several IAMA Universal Signal Conditioning Modules were the answer. The IAMA's universal input allowed for easy signal conditioning of the various output signals to the required PC's Bus Board 0 to 10 VDC input signal. The factory calibration settings of the IAMA could be used with the devices in which the flow and level pressure was linear to the signal. The IAMA could also be scaled utilizing the field calibration method with the devices where pressure affected the signal slope specifications. In this case, the IAMA's re-transmitted 0 to 10 VDC output was field calibrated, negating the expense and time required to rewrite the PC's software parameters. In addition to accepting multiple signal types and field calibration features, the IAMA also provides the necessary electrical isolation between the control room PC and the hazards of the printing floor electrical noise.

## MODEL IAMA - CONFIGURABLE 3-WAY ISOLATING AMPLIFIER

- 3-WAY ISOLATION OF ANALOG SIGNALS
- UNIVERSAL CONVERSION MODULE - INPUTS AND OUTPUTS SELECTED VIA DIP SWITCH SETTINGS
- OVER 35 INPUT AND OUTPUT ANALOG CONVERSION COMBINATIONS
- ULTRA SLIM DESIGN – ONLY 0.244" WIDE
- 19 to 30 VDC POWER

PROCESS CONTROL  
EQUIPMENT FOR HAZARDOUS  
LOCATIONS 31ZN  
CLASS 1, DIV 2  
GROUPS A, B, C, D T5

### GENERAL DESCRIPTION

The IAMA can isolate and convert over 35 combinations of analog signal ranges. The IAMA converts and transmits signals linearly proportional to the input. DIP switch range selection eliminates the need to order and stock different modules for each input and output signal range, and allows quick and convenient setup for over 35 standard signal conversions. In addition to the conversion capabilities, the IAMA modules feature optically isolated Input/Output signal circuits and isolated Power to Input, Power to Output circuits. The modules' overall full scale accuracy typically exceed 0.04%. DIN rail mounting saves time and panel space. The units are equipped with universal mounting feet for attachment to standard top hat profile rail according to EN50022 - 35x7.5.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION:** Read complete instructions prior to installation and operation of the unit.

**CAUTION:** Risk of electric shock.

### SPECIFICATIONS

- POWER:** 19.2 to 30 V DC, 450 mW max.
- INPUT / OUTPUT RANGES:** See table 1
- SPAN ADJUSTMENT:** Potentiometer, located below transparent top cover.
- MAX INPUT SIGNAL:**  
Current: 50 mA  
Voltage: 30 V
- INPUT RESISTANCE:**  
Current: Approx. 50  $\Omega$   
Voltage: Approx. 100 k $\Omega$
- MAX OUTPUT SIGNAL:**  
Current: 28 mA/12.5 V  
Voltage: 12.5 V/22 mA
- LOAD RESISTANCE:**  
Current: 500  $\Omega$  max.  
Voltage: 10 k $\Omega$  min
- OUTPUT COMPLIANCE:**  
Current: 12.5 V max (500  $\Omega$ ). Ripple: < 20 mV  
Voltage: 22 mA (10 k $\Omega$ ). Ripple: < 20 mV
- TRANSMISSION ERROR:**  
The transmission error without adjustment is < 0.4%. Using the potentiometer, the error can be adjusted to < 0.1%.
- TEMPERATURE COEFFICIENT:**  
Max.: < 0.01%/K  
Typ.: < 0.002%/K
- CUT-OFF FREQUENCY:** 100 Hz
- STEP RESPONSE (FROM 10 to 90 %):** 3.5 msec
- TEST VOLTAGE (Input/Output/Supply):** 1.5 kV, 50 Hz, 1 min.
- ENVIRONMENTAL CONDITIONS:**  
Operating Temperature Range: -20°C to 65°C (-4°F to 149°F)  
Storage Temperature Range: -40°C to +85°C (-40°F to 185°F)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
IAMA	Configurable 3-Way Isolating Amplifier	IAMA0006

15. TESTS/APPROVALS:

**UL US LISTED 31ZN**

**PROCESS CONTROL EQUIPMENT FOR HAZARDOUS LOCATIONS**

**Class I Div 2 Groups A, B, C, D T5**

A) This equipment is suitable for use in Class I, Division 2, Groups A, B, C and D or non-hazardous locations only.

B) Warning - explosion hazard - substitution of components may impair suitability for Class 1, Division 2.

C) Warning - explosion hazard - do not disconnect equipment unless power has been switched off or the area is known to be non-hazardous.

16. CERTIFICATIONS AND COMPLIANCES:

Conformance With EMC Guideline 89/336/EEC And Low Voltage Directive 73/23/EEC

Immunity to Interference According to EN 61000-6-2<sup>1</sup>

Discharge of static electricity (ESD)	EN 61000-4-2	Criterion B <sup>2</sup>
Electromagnetic HF field	EN 61000-4-3	Criterion A <sup>3</sup>
Fast transients (Burst)	EN 61000-4-4	Criterion B <sup>2</sup>
Surge voltage capacities (Surge)	EN 61000-4-5	Criterion B <sup>2</sup>
Conducted disturbance	EN 61000-4-6	Criterion A <sup>3</sup>

Noise Emission According to EN 50081-2

Noise emission of housing	EN 55011 <sup>4</sup>	Class A <sup>5</sup>
---------------------------	-----------------------	----------------------

<sup>1</sup> EN 61000 corresponds to IEC 1000

<sup>2</sup> Criterion B: Temporary impairment to operational behavior that is corrected by the device itself.

<sup>3</sup> Criterion A: Normal operating behavior within the defined limits.

<sup>4</sup> EN 55011 corresponds to CISPR11

<sup>5</sup> Class A: Area of application industry.

- 17. **CONNECTIONS:** 12 AWG max., Stripping length: 0.47" (12 mm)
- 18. **CONSTRUCTION:** Polybutylenterephthalate PBT, black
- 19. **MOUNTING:** Standard DIN top hat (T) profile rail according to EN50022 - 35x7.5
- 20. **WEIGHT:** 2 oz. (54 g)

**BLOCK DIAGRAM**

**INPUTS**

The IAMA accepts a full range of process signal inputs and isolates and converts these signals to common industrial control signals. The input signal combinations are configured by making specific DIP switch selections on the 6 and 2 position DIP switches.

**OUTPUTS**

As with the input choices, the process signal output of the modules is DIP switch selectable. The maximum output current signal is 28 mA with =500 Ω output resistance and the maximum output voltage signal is 12.5 V with =10 KΩ output resistance. The transmission error without adjustment is < 0.4%. Using the potentiometer, the error can be adjusted to < 0.1%.

**TABLE 1 - CONFIGURATION**

RANGES		DIP SWITCHES								
		OUTPUT (S2)						INPUT (S1)		
IN	OUT	1	2	3	4	5	6	1	2	
0 - 10 V	0 - 20 mA	off	off	off	off	off	off	off	off	off

	0 - 5 V	ON	ON	off	ON	ON	off	off	off	ON
	1 - 5 V	ON	ON	off	off	off	off	off	off	ON

## WIRING CONNECTIONS

Primary power is connected to terminals 7 or 3 (19.2 – 30 VDC) and 8 or 4 (GND 3). For best results, the power should be relatively “clean” and within the specified variation limits. Drawing power from heavily loaded circuits or from circuits that also power loads that cycle on and off, should be avoided.

The input signal is connected to pins 1 (In U,I) and 2 (GND 1). Connections for the output signal are made on pins 5 (Out U,I) and 6 (GND 2).

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

### T Rail Installation

To install the IAMA on a “T” style rail, angle the module so that the top groove of the “foot” is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the “foot”, and pry upwards on the module until it releases from the rail.

## APPLICATION

Cost efficiency measurements of a printing company included the reduction of bulk stock of the various inks used in their printing processes. The company currently had various ink flow and level devices with different current and voltage outputs and wanted to record these measurements into a control room PC. Several IAMA Universal Signal Conditioning Modules were the answer. The IAMA's universal input allowed for easy signal conditioning of the various output signals to the required PC's Bus Board 0 to 10 VDC input signal. In this case, the IAMA's re-transmitted 0 to 10 VDC output was field calibrated, negating the expense and time required to rewrite the PC's software parameters. In addition to accepting multiple signal types, the IAMA also provides the necessary electrical isolation between the control room PC and the hazards of the printing floor electrical noise.

## MODEL AAMA - UNIVERSAL SIGNAL CONDITIONING MODULE

- 3-WAY ISOLATION OF ANALOG SIGNALS
- UNIVERSAL CONVERSION MODULE - INPUTS AND OUTPUTS CAN BE SELECTED VIA DIP SWITCH SETTINGS
- OVER 100 INPUT AND OUTPUT ANALOG CONVERSION COMBINATIONS
- 18 to 30 VDC MODULE POWER

### DESCRIPTION

The AAMA3535 Universal Signal Conditioning Module can isolate and convert over 100 combinations of industry standard analog signal ranges. The universal DIP switch selection feature eliminates the need to order and stock different modules for each input and output signal.

In addition to the conversion capabilities, the AAMA3535 module features an optically isolated Input/Output signal circuit and a transformer (galvanically) isolated Power to Input, Power to Output circuit.

The AAMA3535 module meets the stringent IEC 801 Standard for surge suppression, noise emission and noise immunity. The module is also CE marked for European applications.

The module's overall full scale accuracy can exceed 0.005% depending upon range selection and calibration. A hybrid SMD calibration circuit stores all range and amplification settings. The hybrid circuit maintains a very high accuracy and low drift output signal.

The module's environmental operating temperature range is  $-20^{\circ}\text{C}$  to  $+65^{\circ}\text{C}$ . The modular high density packaging and mounting saves time and panel space. The modules snap onto standard 35 mm flat DIN rail, and uses removable terminal blocks for easy module wiring.

### SPECIFICATIONS

1. **POWER SUPPLY VOLTAGE:** 18 to 30 VDC @ 60 mA
2. **INPUT RANGES:**

0 to 60 mV	0 to 100 mV	0 to 200 mV	0 to 300 mV	0 to 500 mV
0 to 1 V	0 to 5 V	0 to 10 V	0 to 20 V	$\pm 100$ mV
$\pm 200$ mV	$\pm 300$ mV	$\pm 500$ mV	$\pm 1$ V	$\pm 2$ V
$\pm 5$ V	$\pm 10$ V	$\pm 20$ V	0 to 5 mA	0 to 20 mA
4 to 20 mA	1 to 5 V			

3. **ZERO/SPAN ADJUSTMENTS:** Range Dependent
4. **MAX. INPUT SIGNAL:**  
**Current Input:** 50 mA  
**Voltage Input:** 30 V
5. **INPUT RESISTANCE:**  
**Current:** 50  $\Omega$   
**Voltage:** 1 M $\Omega$

6. **INPUT PROTECTION:** Surge suppressor diodes

7. **OUTPUT RANGES:**

0 to 5 V	$\pm 5$ V	0 to 10 V	$\pm 10$ V
0 to 20 mA	4 to 20 mA	1 to 5 V	

8. **MAX. OUTPUT SIGNAL:**

**Current Output:** 30 mA  
**Voltage Output:** 15 V

9. **LOAD RESISTANCE:**

**Current Output:**  $\leq 500 \Omega$  max.  
**Voltage Output:**  $\geq 5 \text{ K}\Omega$

### DIMENSIONS In inches (mm)

10. **ISOLATION LEVEL INPUT/OUTPUT:** 1.5 kV @ 50 Hz, 1 minute Opto Isolation
11. **POWER TO INPUT/OUTPUT:** 1.0 kV @ 50 Hz, 1 minute Transformer DC/DC
12. **MAX. INPUT FREQUENCY:** 30 Hz
13. **RESPONSE TIME:** 0.034 sec. max.
14. **OVERALL FULL SCALE ACCURACY:** 0.1% to 0.05% Dependent on Calibration Source
15. **OPERATING TEMPERATURE RANGE:**  $-20$  to  $+65^{\circ}\text{C}$  ( $-4$  to  $145^{\circ}\text{F}$ )
16. **TEMPERATURE COEFFICIENT:** 100 ppm/K
17. **CONSTRUCTION:** Case body is green, high impact plastic
18. **CONNECTIONS:** 14 AWG wire max.
19. **MOUNTING:** Standard DIN Top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15
20. **WEIGHT:** 3.76 oz (106.59 g)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
AAMA	Universal Signal Conditioning	AAMA3535

The AAMA3535 module is ordered nonconfigured, allowing the user the flexibility to select their input and output signals by setting the appropriate DIP switch combination.

**MODULE ISOLATION**

AAMA3535 modules feature “3-Way” Signal Isolation. The 3-Way isolation is a combination of optical and transformer isolation. The optical isolation provides common mode voltage (CMV) isolation up to 1.0 kV between the sensor input and the process signal output. The module’s power is isolated from the sensor signal input and the process signal output by a DC/DC transformer isolation circuit.

**SURGE AND SHORT CIRCUIT PROTECTION**

The Signal Conditioning Module is designed for use in industrial environments. Stringent IEC testing has shown that the modules pass the IEC 801.2 (Electrostatic Discharge) and IEC 801.4 (Electrical Fast Transient/Burst) tests. Suppressor diodes protect both input and output circuits from wiring errors.

**INPUTS**

The AAMA3535 module accepts a full range of process signal inputs and will isolate and/or convert these signals to common industrial control signals. The input and output signal combinations are configured by making specific DIP switch selections. The DIP switches can be easily accessed by pushing the side tabs and sliding the module up in the case.

**OUTPUTS**

As with the input choices, the process signal outputs of the module are DIP switch selectable. The maximum output current signal is 30 mA with  $\leq 500 \Omega$  output resistance and the maximum output voltage signal is 15 V with  $\geq 5 K\Omega$  output resistance.

**ZERO AND SPAN**

The AAMA3535 module incorporates two potentiometers for adjusting separate zero and span settings. The module provides a  $\pm 5\%$  zero and span fine calibration adjustment. To use this calibration feature, the zero point should be set first, by adjusting the potentiometer labeled ZERO. Adjusting the Zero reference will proportionally offset the output range. After the Zero has been set, adjusting the SPAN potentiometer will change the signal gain.

**INPUT/OUTPUT DIP SWITCH SELECTION TABLES**  
**DIP SWITCH SELECTIONS FOR 0-5 VOLT OUTPUT**

Input	DIP SWITCH 2										DIP SWITCH 1								Input
	1	2	3	4	5	6	7	8	9	10	1	2	3	4	5	6	7	8

### CALIBRATION PROCEDURE

Module accuracy is dependent upon your calibration reference. The higher your calibration source accuracy, the lower the overall signal conditioner conversion error.

#### CALIBRATION OF MODULES WITH 0 to 5 V, 0 to 10 V

Output adjustment of the 0 to 5 V or 0 to 10 V range:

1. Set DIP switches as shown in the DIP switch selection Tables.
2. Apply power, and let the unit stabilize for 5 minutes.
3. Set up output adjustment:
  - a. Apply low scale input range value; adjust zero pot for 0 V, ±0.5 mV.
  - b. Finally, apply full scale input from calibration source; adjust span pot for full scale ±0.5 mV.

#### CALIBRATION OF MODULES

##### WITH ±5 V, ±10 V, 1 to 5 V, 4 to 20 mA OR 0 to 20 mA

Output adjustment of ±5 V, ±10 V, 1 to 5 V, 4 to 20 mA or 0 to 20 mA ranges:

1. Set DIP switches as shown in the DIP switch selection Tables.
2. Apply power, and let the unit stabilize for 5 minutes.

3. Set up output adjustment:

- a. Apply low scale input range value from calibration source; record output as MV1. (If using 0 to 20 mA output range, apply 2 mA for low scale input value.)
- b. Apply full scale input from calibration source; record output as MV2.

4. With full scale input value still applied:

- a. First calculate the span pot adjustment point "A" using the formula:  
 $A = MV2 \times \text{constant} / (MV2 - MV1)$ . Adjust the span pot for value "A", plus or minus the adjustment tolerance. (See below table for constant and tolerance.)
- b. Finally, adjust the zero pot for the nominal full scale output value, plus or minus the adjustment tolerance.

The Constants and Adjustment Tolerances are as follows:

INPUT RANGE	CONSTANT	ADJUSTMENT TOLERANCE
±5 V	10 V	±0.5 mV
±10 V	20 V	±0.5 mV
1 to 5 V	4 V	±1 mV
0 to 20 mA	18 mA	±1 µA
4 to 20 mA	16 mA	±1 µA

## MODEL AIMI - 0 (4) TO 20 MA PASSIVE LOOP POWERED ISOLATOR

### DESCRIPTION

The AIMI0202 passive isolator is used for the electrical isolation and processing of analog 0(4) to 20 mA standard current signals. The AIMI0202 provides electrical isolation between the control electronics and process I/O. In addition, interference signals above 75 Hz are effectively suppressed.

Input and output circuit do not require separate auxiliary power. The AIMI0202 obtains power from the input signal. The modules are snapped onto symmetrical DIN rails in accordance with EN 50 022.

### VOLTAGE DROP AT INPUT

When using the AIMI0202, ensure that the current-driving voltage of the measuring transducer is sufficient for driving the maximum current of 20 mA, with a power loss of 2.5 V ( $2.5 \text{ V} + (20 \text{ mA} * \text{RLOAD})$ ).

Voltage drop across the input is calculated by determining the load resistance of the output loop, drawing a vertical line to the curve, then horizontally to the voltage drop.

### SPECIFICATIONS

1. **INPUT RANGE:** 0(4) to 20 mA
2. **MAXIMUM INPUT CURRENT/VOLTAGE:** 50 mA/30 VDC
3. **INPUT RESISTANCE@ 20mA:** 125-1125  $\Omega$  (dependent on load)
4. **VOLTAGE DROP AT INPUT:** (See Chart at Right)
5. **MAXIMUM INPUT FREQUENCY:** <75 Hz
6. **RESPONSE TIME:** 5 msec. max.
7. **OUTPUT SIGNAL:** 0(4) to 20 mA  
**Max. Load Resistance:**  $\leq 1375 \Omega @ 20 \text{ mA}$
8. **ISOLATION VOLTAGE:** 510 V, 50 Hz, for 1 minute
9. **ACCURACY:**  $\leq 0.1\%$  of full scale
10. **OPERATING TEMPERATURE RANGE:** -10 to +70°C
11. **TEMPERATURE COEFFICIENT:**  $\leq 0.002\%/K$  of the measured value
12. **CONSTRUCTION:** Case body is green, Polyamide PA
13. **MOUNTING:** Standard DIN style rail, including top hat (T) profile rail according to EN50022 -  $35 \times 7.5$  and  $35 \times 15$ , and G profile rail according to EN50035 - G32.
14. **WEIGHT:** 2.976 oz (84.37 g)

### WIRING CONNECTIONS

Connect transducer to input (Terminals 1 & 2), observing polarity. A power supply may be required for loop powered transducers.

The energy for the supply on the input side is taken from the analog input signal. Due to the dynamic input resistance, a power loss of approximately 2.5 V drops at the module input.

### ORDERING INFORMATION

MODEL NO.	INPUT	OUTPUT	PART NUMBER
AIMI	0 (4)-20 mA	0 (4)-20 mA	AIMI0202

# MODEL APMR - 3 PHASE FAULT DETECTION DIN RAIL MODULE

- PROTECTS AGAINST PHASE LOSS, UNBALANCE, UNDER VOLTAGE, AND PHASE REVERSAL
- AVAILABLE IN 230, 380, OR 480 VAC
- LOW COST
- DIN RAIL MOUNTABLE
- INRUSH UNDER VOLTAGE DELAY

UL Recognized Component,  
File # E137808

## DESCRIPTION

The APMR protects three phase equipment, mostly motors, from destructive line conditions. Specifically it detects Phase Reversal, Phase Loss, Phase Unbalance and Low Voltage. All of these conditions, except for Phase Reversal, produce excessive heating of motor windings, causing immediate or cumulative damage to the motor. Phase Reversal will cause a motor to operate in the reverse intended direction, possibly damaging machinery.

There are three models available; 230 VAC, 380 VAC, and 480 VAC. The 230 VAC model is used with 208, 220, 230, and 240 VAC rated equipment. The 380 VAC model is used with 380 and 415 VAC (European) equipment. The 480 VAC model is used with 440, 460, and 480 VAC rated equipment. The electrical connection is three wire Delta or WYE configurations (no neutral connection required).

The output is SPDT relay and LED. The relay is typically connected in series with a motor contactor coil to inhibit motor start or to disconnect the motor in the presence of a fault condition. The relay automatically resets when the fault clears. The relay is typically used in a latching configuration so the motor has to be restarted after the fault is cleared. The LED illuminates green when all conditions are normal - no fault. When the LED is green, the relay is energized. When a fault occurs, the LED turns red and the relay is de-energized. If phase loss occurs on L1 or L3 the LED turns-off and the relay is de-energized.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

**WARNING:** 3 Phase Fault Detection Modules must never be used as "Primary" protection against hazardous operating conditions. Machinery must first be made safe by inherent design or the installation of guards, shields, or other devices to protect personnel in the event of a hazardous machine condition.

## SPECIFICATIONS

- POWER:**  
**230 VAC:** 185 min to 264 max, 3 VA (Typ)⇒Nominal is 185 to 240, 48 to 62 Hz.  
**380 VAC:** 320 min to 457 max, 3 VA (Typ)⇒Nominal is 320 to 415, 48 to 62 Hz.  
**480 VAC:** 380 min to 528 max, 3 VA (Typ)⇒Nominal is 380 to 480, 48 to 62 Hz.
- OUTPUT:** SPDT 10 A @ 240 VAC (resistive load); 1/2 HP @ 240 VAC  
**Response Time:**  
**Phase Reversal:** Not greater than 120 msec  
**Low Voltage:** 0.1 to 20 sec, user adjustable  
**Phase Loss and Unbalance:** Not greater than 100 ms
- TEMPERATURE COEFFICIENTS:**  
**Unbalance:** ±0.5% Over temperature range  
**Undervoltage:** ±200 PPM/°C
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature:** 0 to 55°C  
**Storage Temperature:** -40 to 80°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0°C to 50°C.  
**Altitude:** Up to 2000 meters
- ISOLATION BREAKDOWN RATING:** 3000 V
- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

UL Recognized Component, File # E137808, UL 508, CSA C22.2 No. 14  
 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Simulation of cordless telephone	ENV 50204	Level 3; 10 V/m 900 MHz ± 5 MHz 200 Hz, 50% duty cycle

#### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A
-----------------	----------	-------------------

Refer to EMC Installation Guidelines for additional information.

- MOUNTING:** Universal mounting foot for attachment to standard DIN style mounting rails, including top hat (T) profile rail according to EN50022 - 35 X 7.5 and 35 X 15, and G profile rail according to EN50035 - G32.
- CONNECTION:** Compression type terminal block
- CONSTRUCTION:** High impact black plastic case. Installation Category II, Pollution Degree 2.
- WEIGHT:** 7.0 oz. (0.20 Kg)

## FUNCTION DESCRIPTIONS

### PHASE UNBALANCE

Unbalance occurs in 3 phase systems when single phase loads are added without regard to voltage effects on the remaining phases. This unbalance in phase voltage causes excessive motor current producing temperatures in excess of specifications. The relationship between voltage unbalance and percentage of temperature rise is approximately the square of the percent voltage unbalance times two. ie., - % temperature rise = (% unbalance<sup>2</sup> X 2).

Therefore, a 4% voltage unbalance will result in approximately a 32% increase in winding temperature. The effect of temperature rise is immediate failure of winding insulation if unbalance is severe as with single phasing. If unbalance is slight, gradual winding degradation will result in premature insulation failure. The APMR will detect slight unbalances that thermal and magnetic devices usually miss.

### PHASE LOSS

Phase Loss is an extreme case of unbalance known as "single phasing" where a total loss of one of the phases occurs. During this condition the motor will continue to run and the full current is drawn from the remaining phases. Unless the motor is lightly loaded motor failure will occur. The APMR will detect Phase Loss even with regenerated voltages present.

### PHASE REVERSAL

Reversing any two of the three phases will cause a motor to rotate opposite the intended direction causing damage to machinery. Reversal can occur during maintenance of distribution systems. The APMR will detect Phase Reversal regardless of load conditions.

### UNDERVOLTAGE

Undervoltage can occur during Brownouts, excessive system loading and motor startups. An undervoltage **Time Delay** is provided with the undervoltage detection to eliminate false tripping during startups when a motor draws many times its operating current.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- The unit should be mounted in a metal enclosure, that is properly connected to protective earth.
  - If the bezel is exposed to high Electro-Static Discharge (ESD) levels, above 4 Kv, it should be connected to protective earth. This can be done by making sure the metal bezel makes proper contact to the panel cut-out or connecting the bezel screw with a spade terminal and wire to protective earth.
- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the panel where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VB3

Corcom #1VR3

**Note:** Reference manufacturer's instructions when installing a line filter.

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the number on the label to identify the position number with the proper function. Strip wire, leaving approximately 1/4" (6mm) of bare wire exposed. Insert the wire into the terminal, and tighten the screw until the wire is clamped tightly.

### SETUP

1. Adjust the dials on the APMR to the following settings:
  - a. Under Voltage to minimum (CCW)
  - b. Under Voltage Delay to minimum (CCW)
  - c. % Unbalanced to maximum (CW)

2. Connect input wire from the fused 3 phase line voltage to Terminals 7 (L1), 9 (L2), and 11 (L3). In Wye systems, connection to neutral wire is not required. Do not wire output contacts until Step 9.

3. TURN POWER ON. When the internal relay energizes, and the Red LED glows green, the phase sequence is correct and the voltages on all three phases are above the minimum under voltage setting.
  - a. If the internal output relay does not energize, and the LED stays red, TURN POWER OFF and swap any two (2) of the three (3) input wires. This corrects the phase sequence if the monitor was connected in reverse rotation.
 

*Note: Insure that the motor is wired for correct rotation.*

4. Select the proper under voltage trip point. (This is the dial marked Under Voltage.) The under voltage setting should be the same as the minimum operating voltage for the equipment to be protected.

*Note: If the recommended setting is not known, turn the Undervoltage adjustment knob CW until the relay de-energizes and the LED glows red. Turn the knob CCW until the relay energizes and the LED glows green. This procedure assumes that the line voltages are at an acceptable level when the adjustments are made.*

5. Set the **Under Voltage Delay** to the desired value. This is the maximum time period that an under voltage condition can exist before de-energizing the internal relay. The exact value of the delay depends on the type of equipment being protected and the quality of the available three phase power. A setting too low, will cause unnecessary interruptions due to momentary dips in the line voltage. On the other hand, if the time delay is too long, damage to the equipment can occur before a legitimate under voltage condition is detected. Three phase motors have a starting current that is many times higher than the normal full load current but lasts for only a few seconds. Setting the delay slightly longer than the duration of this inrush period will prevent the APMR from being tripped due to a low voltage condition caused by the starting current.

*Note: The under voltage delay applies only to under voltage conditions. Exceeding the phase unbalance trip setting or a phase loss will de-energize the relay instantly regardless of the delay setting.*

6. Phase **Unbalance** setting. Maximum permissible unbalance and phase voltages that most three phase powered equipment can tolerate are very seldom specified. In most locations, three phase voltages typically are not perfectly balanced. Use your own discretion when setting this value. Too low of a setting (CCW) can cause unnecessary tripping. Too high of a setting (CW) does not provide adequate protection.

An alternative procedure is to turn the Unbalance adjustment CCW until the relay de-energizes and the LED turns red. Turn the knob CW until the relay energizes and the LED turns green.

*Note: This procedure assumes that the line voltages are sufficiently balanced when the adjustments are made. % Voltage Unbalance is defined by NEMA as: [(Maximum Deviation From Average Voltage/Average Voltage) X 100] where Average Voltage = (L1 + L2 + L3)/3.*

*Note: NEMA recommends not to operate motors with a phase unbalance greater than 5%.*

7. When the phase sequence is correct and the line voltages are within preset limits, the internal relay of the APMR will energize. The LED indicator glows green to show a normal condition.
8. TURN POWER OFF. Refer to the wiring diagram for proper output contact connections.
9. After proper connections are made, TURN POWER ON. The internal relay energizes allowing the monitored load to become active.

### INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32 , and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15.

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

#### G Rail Installation

To install the APMR on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

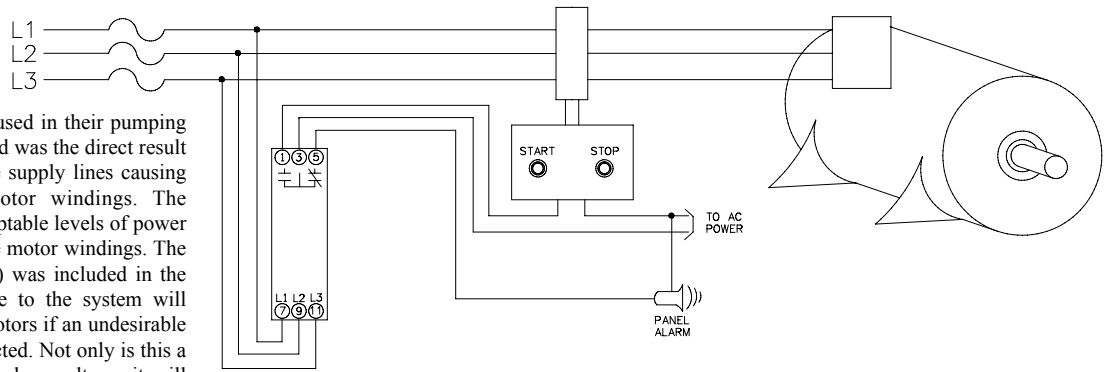

#### T Rail Installation

To install the APMR on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

**APPLICATION**

A waste water treatment plant had just completed a costly repair program, reconditioning several motors used in their pumping process. The necessity to rebuild was the direct result of unbalanced and low voltage supply lines causing excessive heating to the motor windings. The continual operation below acceptable levels of power supply lead to the failure of the motor windings. The APMR (3 phase fault detector) was included in the repair program. This upgrade to the system will automatically shut down the motors if an undesirable power supply condition is detected. Not only is this a safeguard against unbalance or low voltage, it will also detect phase loss or reversal. An alarm will also trigger in the control room, alerting the operators of the shut down action.

**TROUBLESHOOTING**

For further technical assistance, contact technical support at the appropriate company numbers listed.

**ORDERING INFORMATION**

MODEL NO.	DESCRIPTION	PART NUMBERS FOR AVAILABLE SUPPLY VOLTAGES

# MODEL IRMA - INTELLIGENT RTD MODULE WITH ANALOG OUTPUT

- USER PROGRAMMABLE INPUT  
(RTD  $\alpha=0.00385$  (DIN 43760),  $\alpha=0.00392$ , or resistance)
- 12 to 42 VDC LOOP POWERED (4 to 20 mA Output)
- MICROPROCESSOR CONTROLLED
- SIMPLE ADJUSTABLE RANGE SETTING (Using Input Signal)
- RTD BREAK DETECTION
- MOUNTS ON "T" AND "G" STYLE DIN RAILS
- 2-WAY ELECTRICAL ISOLATION (INPUT/OUTPUT & POWER)
- HIGH-DENSITY PACKAGING (22.5 mm wide)
- WIDE OPERATING TEMPERATURE RANGE

## DESCRIPTION

The IRMA accepts a 2, 3, or 4 wire RTD or resistance input and converts it into a 4 to 20 mA current output. The 4 to 20 mA output is linearly proportional to the temperature or the resistance input. This output is ideal for interfacing to indicators, chart recorders, controllers, or other instrumentation equipment.

The IRMA is loop-powered which means that the same two wires are carrying both the power and the output signal. The unit controls the output current draw from 4 to 20 mA in direct proportion to the input while consuming less than 4 mA for operation. The conversion to a current output signal makes the IRMA less susceptible to noise interference and allows accurate transmission over long distances. Two-Way isolation allows the use of grounded RTD's which can provide additional noise reduction benefits.

The IRMA uses an eight position DIP switch to accomplish the input sensor configuration, range selection, and unit calibration. A simple range setting technique (Field Calibration) is used so the actual input signal adjusts the output current for scaling. This technique eliminates the need for potentiometers which are vulnerable to changes due to vibration.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat rail (T) according to EN 50 022 - 35 X 7.5 and 35 X 15, and G profile according to EN 50 035 - G 32.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## SPECIFICATIONS

1. **POWER:** 12 to 42 VDC \*(Loop powered). The power supply must have a 30 mA min. capacity.  
[\* Min. voltage must be increased to include the drop across any current display indicator]
2. **INPUT:** RTD 2, 3, or 4 wire, 100 ohm platinum,  $\alpha=0.00385$  (DIN 43760),  $\alpha=0.00392$ , or resistance [selectable via DIP switch]  
**Excitation:** 0.170 mA nominal  
**Lead resistance:** Less than 0.5°C with 15 ohms max. per lead  
*Note: There is no lead compensation for 2 wire input. Field calibration should be accomplished with equivalent series resistance.*
3. **OUTPUT:** 4 to 20 mA Linear output with Temperature or resistance input.  
**Ripple:** Less than 15 mV peak-to-peak max., across 250Ω load resistor (up to 120 Hz frequencies).
4. **RANGE & ACCURACY:** (12 Bit resolution)  
**Accuracy:**  $\pm ( 0.075\% \text{ Range} + 0.1^\circ\text{C} [\text{Conformity}] )$  at 23°C after 20 min. warm-up, conforming to ITS-90.  
*Note: RTD conformity does not apply to resistance input.*  
**Relative Humidity:** Less than 85% RH (non-condensing)  
**Span:** The input span can be set to a min. of 1/8 of the full scale range, anywhere within that range.  
**Range Accuracy:**

## DIMENSIONS In inches (mm)

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
IRMA	Intelligent RTD Module	IRMA2003

RTD $\alpha = 0.00385$	0	0 0 0 0	-160 to 654°C	$\pm 0.61^\circ\text{C}$
	1	0 0 0 1	-108 to 207°C	$\pm 0.24^\circ\text{C}$
	2	0 0 1 0	-5 to 414°C	$\pm 0.31^\circ\text{C}$
	3	0 0 1 1	194 to 608°C	$\pm 0.31^\circ\text{C}$
RTD $\alpha = 0.00392$	0	1 0 0 0	-157 to 640°C	$\pm 0.60^\circ\text{C}$
	1	1 0 0 1	-106 to 203°C	$\pm 0.23^\circ\text{C}$
	2	1 0 1 0	-5 to 406°C	$\pm 0.31^\circ\text{C}$
	3	1 0 1 1	190 to 596°C	$\pm 0.30^\circ\text{C}$
OHMS	0	0 1 0 0	35.5 to 331.0 Ω	$\pm 0.222 \Omega$
	1	0 1 0 1	57.0 to 178.5 Ω	$\pm 0.091 \Omega$
	2	0 1 1 0	98.0 to 252.0 Ω	$\pm 0.116 \Omega$
	3	0 1 1 1	173.5 to 316.5 Ω	$\pm 0.107 \Omega$

Note: DIP switch settings      ON = 1      OFF = 0

## SPECIFICATIONS (Cont'd)

5. **SENSOR BREAK DETECTION:** Upscale to 22.5 mA (nominal) or Downscale to 3.6 mA (nominal) [selectable via DIP switch]
6. **RESPONSE TIME:** 400 msec (to within 99% of final value w/step input; typically, response is limited to response time of probe.)
7. **DIELECTRIC WITHSTAND VOLTAGE:** 1500 VAC for 1 minute  
**Working Voltage:** 50 VAC from input to output.
8. **CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>2</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m

#### Emissions to EN 50081-2

RF interference	EN 55011	Enclosure class A
-----------------	----------	-------------------

### Notes:

1. This device was designed for installation in an enclosure. To avoid electrostatic discharge, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure, (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the device.

2. Self-recoverable loss of performance during EMI disturbance at 10 V/m:  
Analog output signal may deviate during EMI disturbance.  
For operation without loss of performance:  
Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent).  
I/O and power cables are routed in metal conduit connected to earth ground.

### 9. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** -25°C to 75°C (-13°F to 167°F)

**Storage Temperature Range:** -40°C to 85°C (-40°F to 185°F)

**Temperature Coefficient:** ± 0.01% of input range per °C

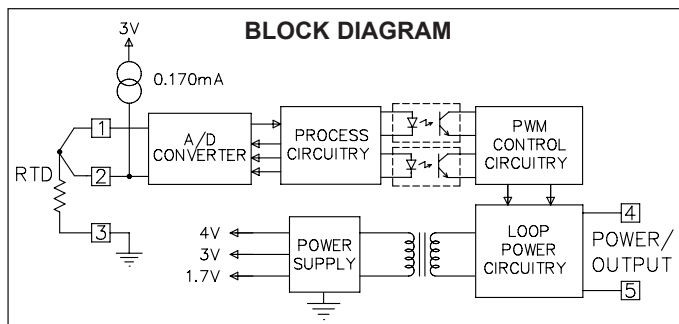

**Altitude:** Up to 2000 meters.

10. **MOUNTING:** Universal mounting foot for attachment to standard DIN style mounting rails, including top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15, and G profile rail according to EN50035 - G32.

11. **CONNECTION:** Compression type terminal block

12. **CONSTRUCTION:** High impact green plastic case

13. **WEIGHT:** 2.7 oz (76.54 g)

## FUNCTION DESCRIPTIONS

### Open Sensor Detection

The output can be set to go Upscale or Downscale for the detection of an open sensor. The Upscale setting makes the output go to 22.5 mA (nominal). The Downscale setting makes the output go to 3.5 mA (nominal). This setting is always active, so changes in the setting are effective immediately.

### Calibration Malfunction

If the unit has scaling problems (current remains at 3.5 mA nominal), check the voltage between the RTD- Input (-) and TEST pad (+) [located next to the DIP switches on the side of the unit]. For normal operation the voltage is 0 V (nominal). If the voltage is +3 V (nominal), a problem occurred storing information in the E<sup>2</sup>PROM. When this happens, perform a Basic Calibration and then a Field Calibration. Turn off power for 5 seconds. Turn on power and check the voltage between the TEST pad (+) and RTD- Input (-). If the voltage is still +3 V (nominal), contact the factory.

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. For the purpose of EMC testing, both input and output lines on the unit were connected with 25 feet (8 m) of cable. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

1. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - c. Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.

2. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

3. Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

4. In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

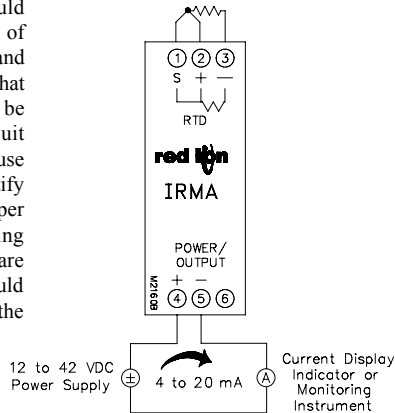

Corcom #1VR3

Note: Reference manufacturer's instructions when installing a line filter.

5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the numbers on the label to identify the position number with the proper function. Strip the wire, leaving approximately 1/4" (6 mm) of bare wire exposed (stranded wire should be tinned with solder). Insert the wire into the terminal, and tighten the screw until the wire is clamped tightly.

## INPUT AND POWER/OUTPUT CONNECTIONS

### INPUT

When connecting the RTD or resistance device, be certain that the connections are clean and tight. Attach the device to terminals #2 and #3. Install a copper sense lead of the same gauge as those used to connect the device. Attach one end of the wire at the probe where the lead connected to terminal #2 is attached and the other end to terminal #1. This configuration will provide complete lead wire compensation. If a sense wire is not utilized, then Terminal #1 should be shorted to terminal #2. To avoid errors due to lead wire resistance, field calibration should be performed with a series resistance equal to the total lead resistance in the system. Always refer to the probe manufacturer's recommendations for mounting, temperature range, shielding, etc.

### POWER/OUTPUT

The unit has the power and current output sharing the same two wires (loop-powered). Connect DC power to terminals #4 and #5, observing the correct polarity, with a current meter/indicator connected in between so that the output current can be monitored. Be certain that the DC power is relatively "clean" and within the 12 to 42 VDC range at the terminals. The current meter voltage drop must be included in the power supply considerations.

## DIP SWITCH SETTING DESCRIPTIONS

SWITCH	DESCRIPTION	
1	OUTPUT CAL	Output Calibration

3	1	1

## FACTORY SETTINGS

The unit is shipped from the factory calibrated for a 4 to 20 mA output using a type 385 RTD in range 0. The IRMA should be calibrated by the operator for the application environment it will be used in. If the unit is not recalibrated by the operator, the following table lists the temperature ranges for each RTD type.

TYPE	RANGE	TEMPERATURE RANGE
385	0	150°C to 606°C
392	0	150°C to 595°C

# CALIBRATION PROCEDURES

## 1.0 Field Calibration

Allow a 30 minute warm-up period before starting Field Calibration. Field Calibration scales the 4 to 20 mA output to a temperature or resistance input. This procedure assigns an input value to 4 mA and an input value to 20 mA. The microprocessor handles configuring the output so it is linear to the temperature or resistance input. The Field Calibration procedure is described below.

*Note: The unit needs to have the Field Calibration completed by the operator before normal operation. To abort this calibration and reset to the previous settings, set the FIELD CAL switch OFF prior to the final OFF setting of the OUTPUT CAL switch (Step 1.11) and turn off power. Wait 5 seconds and then turn on power and the previous settings will be loaded.*

RTD temperature to resistance conversion table

Temperature °C	alpha 0.00385 ohms	alpha 0.00392 ohms	Temperature °C	alpha 0.00385 ohms	alpha 0.00392 ohms
-160	35.53	34.38	300	212.03	214.08
-150	39.71	38.64	350	229.69	232.07
-100	60.25	59.55	400	247.05	249.77

Field Calibration Wiring

Step 1.2

Step 1.3

Step 1.5

Step 1.7

Step 1.9

Step 1.11

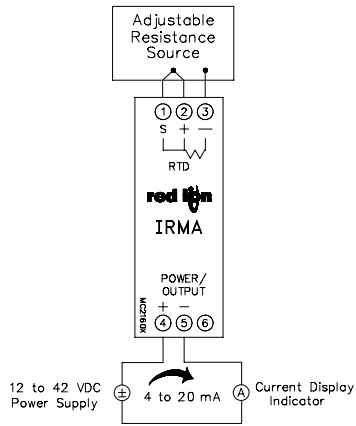

Step 1.12

### Field Calibration with an Accurate Adjustable Resistance Source

- 1.1 Connect an Adjustable Resistance Source with an accuracy of 0.03% to the RTD input terminals using a third sense wire. For 2 wire sensors short terminal #1 to terminal #2.
- 1.2 Set the Type and Range for the RTD or resistance used in your application (DIP switches #4, #6, #7 and #8). (RTD alpha=0.00385, Range 0 shown)
- 1.3 Set the FIELD CAL switch (#2) ON. [Current goes to 3.6 mA (nominal)]
- 1.4 Set the resistance source to the desired resistance for the 4 mA output. For 2 wire sensors add the system lead resistance to the desired value.
- 1.5 Set the OUTPUT CAL switch (#1) ON. [Current stays at 3.6 mA (nominal)]
- 1.6 Adjust the input resistance up until the output equals 4 mA.
- 1.7 Set the OUTPUT CAL switch (#1) OFF. [Current increases to 22.3 mA (nominal)]
- 1.8 Set the resistance source to the desired resistance for the 20 mA output. For 2 wire sensors add the system lead resistance to the desired value.
- 1.9 Set the OUTPUT CAL switch (#1) ON. [Current decreases to 20.5 mA (nominal)]
- 1.10 Adjust the input resistance down until the output equals 20 mA.
- 1.11 Set the OUTPUT CAL switch (#1) OFF.
- 1.12 Set the FIELD CAL switch (#2) OFF.
- 1.13 Disconnect the resistance source from the IRMA and connect the actual sensor to be used in the application.

## 2.0 Basic Calibration (Factory Calibration)

Basic Calibration Wiring

The Basic Calibration should only be performed with an ambient temperature between 21°C and 29°C. The Basic Calibration was performed on the unit at the factory and generally does not need to be done again. This procedure initializes the unit by calibrating the input circuitry. The Basic Calibration should be performed only if a condition exists as described in the “Calibration Malfunction” section. After completion of this calibration, the unit needs to be scaled in Field Calibration. The Basic Calibration procedure is described below.

*Note: To abort this calibration and reset to the previous settings, set the BASIC CAL switch OFF prior to the final setting of the OUTPUT CAL switch (Step 2.15) and turn off power for 5 seconds. Then turn on power and the previous settings will be loaded.*

- 2.1 Connect an Adjustable Resistance Source with an accuracy of 0.03% to the RTD input terminals using a third sense wire. Set the RANGE (#7&#8), TYPE (#4), OUTPUT CAL (#1), and FIELD CAL (#2) switches OFF. Set the BASIC CAL switch (#3) ON.
- 2.2 Apply power and allow a 30 minute warm-up period. [Current goes to 3.5 mA (nominal)]
- 2.3 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.4 Set the resistance source to 40 ohms and wait 5 seconds.
- 2.5 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.6 Set the resistance source to 60 ohms and wait 5 seconds.
- 2.7 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.8 Set the resistance source to 100 ohms wait 5 seconds.
- 2.9 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.10 Set the resistance source to 175 ohms and wait 5 seconds.
- 2.11 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.12 Set the resistance source to 250 ohms and wait 5 seconds.
- 2.13 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.14 Set the resistance source to 315 ohms and wait 5 seconds.
- 2.15 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.16 Set the BASIC CAL switch (#3) OFF. [Current increases to 3.6 mA (nominal) or more]
- 2.17 Perform a Field Calibration. (See Section 1.0)

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32 , and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

### G Rail Installation

To install the IRMA on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

### T Rail Installation

To install the IRMA on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

## APPLICATION

An aluminum manufacturer had the requirement to heat soak aluminum ingots before they were to advance into their hot roll mill. The system is being controlled by a PLC that allows the material to move to the next of twelve zones as soon as the aluminum ingot reaches the soak temperature. An IRMA, RTD Loop powered signal conditioner was used to transmit each zone temperature, measured by an RTD sensor, to the PLC. Because the heat soak procedure was accomplished in an eighty foot furnace tunnel, a relatively long wire run was required to connect each RTD with the PLC. The IRMA transmitter converts and linearizes the RTD signal into a 4 to 20 mA signal that can be run long distances to connect to the PLC.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## MODEL IRMA DC - INTELLIGENT RTD MODULE WITH ANALOG OUTPUT

- MOUNTS ON "T" AND "G" STYLE DIN RAILS
- 3-WAY ELECTRICAL ISOLATION (POWER/INPUT/OUTPUT)
- MULTIPLE ANALOG OUTPUTS (0 to 20 mA, 4 to 20 mA, and 0 to 10 VDC)
- WIDE OPERATING TEMPERATURE RANGE (-25°C to 75°C)
- LED INDICATION (POWER & MEMORY ERROR)
- 9 to 32 VDC POWERED

### DESCRIPTION

The IRMA accepts an RTD or resistance input and converts it into a voltage or current output. The output is linearly proportional to the temperature or resistance input. This output is ideal for interfacing to indicators, chart recorders, controllers, or other instrumentation equipment.

The IRMA is DC powered. The DC power input is isolated from the signal input and analog output. The unit scales the analog output proportionally to the RTD or resistance input signal. The analog output may be configured for one of the following: 0 to 20 mA, 4 to 20 mA, or 0 to 10 VDC. Making the signal conversion with the IRMA to a current output signal, makes the signal less susceptible to noise interference and allows accurate transmission over long distances. The 3-Way isolation allows the use of grounded RTD's which can provide additional noise reduction benefits.

The IRMA uses an eight position DIP switch to accomplish the input sensor configuration, range selection, and unit calibration. A simple range setting technique (Field Calibration) is used so the actual input signal adjusts the output for scaling. This technique eliminates the need for potentiometers which are vulnerable to changes due to vibration.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat rail (T) according to EN 50 022 - 35 x 7.5 and 35 x 15, and (G) profile according to EN 50 035 - G 32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

CAUTION: Read complete instructions prior to installation and operation of the unit.

### SPECIFICATIONS

1. **POWER:** 9 to 32 VDC; 1.75 W. 200 mA max. current. The power supply must have 400 mA for 200 msec. surge capacity.
2. **INPUT:** RTD 2, 3, or 4 wire, 100 ohm platinum,  $\alpha = 0.00385$  (DIN 43760),  $\alpha = 0.00392$ , or resistance [selectable via DIP switches].  
**Excitation:** 0.170 mA nominal  
**Lead resistance:** Less than 0.5°C with 15 ohms max. per lead  
*Note: There is no lead compensation for 2 wire input. Field calibration should be performed with equivalent series resistance.*
3. **OUTPUT:** All output signals scaled linearly using temperature or resistance input. Unit is shipped set for the 4 to 20 mA output. 4 to 20 mA or 0 to 20 mA selected via internal jumper.  
**Voltage Output Compliance:**  
0 to 10 VDC across min. 1 K $\Omega$  load (10 mA)  
20 mV peak to peak max. ripple (for frequencies up to 120 Hz)  
**Current Output Compliance:**  
0 to 20 mA through max. 600 $\Omega$  load (12 VDC)  
4 to 20 mA through max. 600 $\Omega$  load (12 VDC)  
15 mV peak to peak max. ripple across 600 $\Omega$  load (for frequencies up to 120 Hz)
4. **RTD BREAK DETECTION:** Nominal values shown in the following order: (0 to 20 mA, 4 to 20 mA, and 0 to 10 VDC).  
**Upscale:** 22.9 mA, 22.5 mA, and 11.5 VDC  
**Downscale:** -0.5 mA, 3.5 mA, and -0.4 VDC
5. **RESPONSE TIME:** 400 msec. (to within 99% of final value w/step input; typically, response is limited to response time of probe.)
6. **TEMPERATURE EFFECTS:**  
**Temperature Coefficient:**  $\pm 0.025\%$  of input range per °C
7. **DIELECTRIC WITHSTAND VOLTAGE:** 1500 VAC for 1 minute  
**Working Voltage:** 50 VAC  
Power input to Signal input, Power input to Signal output, & Signal input to Signal output.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
IRMA	Intelligent RTD Module	IRMA3035

## 8. RANGE & ACCURACY: (12 Bit resolution)

**Accuracy:**  $\pm (0.075\% \text{ Range} + 0.1^\circ\text{C} [\text{Conformity}])$  at  $23^\circ\text{C}$  after 45 min. warm-up, conforming to ITS-90.

**Note:** RTD Conformity does not apply to resistance input. For best accuracy, calibration should be performed under operating conditions.

**Relative Humidity:** Less than 85% RH (non-condensing)

**Span:** The input span can be set to a min. of 1/8 of the full scale range, anywhere within that range.

### Range Accuracy

INPUT	RANGE	DIP SWITCH TYPE RANGE 4 6 7 8	TEMPERATURE & OHMS RANGE	RANGE ACCURACY
RTD alpha = 0.00385	0	0 0 0 0	-160 to 654°C	$\pm 0.61^\circ\text{C}$
	1	0 0 0 1	-108 to 207°C	$\pm 0.24^\circ\text{C}$
	2	0 0 1 0	-5 to 414°C	$\pm 0.31^\circ\text{C}$
	3	0 0 1 1	194 to 608°C	$\pm 0.31^\circ\text{C}$
RTD alpha = 0.00392	0	1 0 0 0	-157 to 640°C	$\pm 0.60^\circ\text{C}$
	1	1 0 0 1	-106 to 203°C	$\pm 0.23^\circ\text{C}$
	2	1 0 1 0	-5 to 406°C	$\pm 0.31^\circ\text{C}$
	3	1 0 1 1	190 to 596°C	$\pm 0.30^\circ\text{C}$
OHMS	0	0 1 0 0	35.5 to 331.0 $\Omega$	$\pm 0.222 \Omega$
	1	0 1 0 1	57.0 to 178.5 $\Omega$	$\pm 0.091 \Omega$
	2	0 1 1 0	98.0 to 252.0 $\Omega$	$\pm 0.116 \Omega$
	3	0 1 1 1	173.5 to 316.5 $\Omega$	$\pm 0.107 \Omega$

Note: DIP switch settings ON = 1 OFF = 0

**Accuracy Example:**  
RTD 385 Range "0"  
-160°C to 654°C

Range	Conformity	Total Error
( $\pm 0.61^\circ\text{C} + \pm 0.1^\circ\text{C}$ )	=	$\pm 0.71^\circ\text{C}$

## 9. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

IEC 1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 kV contact <sup>1</sup> Level 3; 8 kV air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m <sup>2</sup> 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 kV I/O Level 3; 2 kV power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz – 80 MHz
Power frequency magnetic fields	EN 61000-4-8	Level 4; 30 A/m

#### Emission to EN 50081-2

RF interference	EN 55011	Enclosure class B
-----------------	----------	-------------------

### Notes:

- This device was designed for installation in an enclosure. To avoid electrostatic discharge, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the unit.

- Self-recoverable loss of performance during EMI disturbance at 10 V/m: Analog output signal may deviate during EMI disturbance.

For operation without loss of performance:

Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent)

I/O and power cables are routed in metal conduit connected to earth ground.

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

### 10. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** -25°C to 75°C (-13°F to 167°F)

**Storage Temperature Range:** -40 to 85°C (-40°F to 185°F)

**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from -25°C to 75°C.

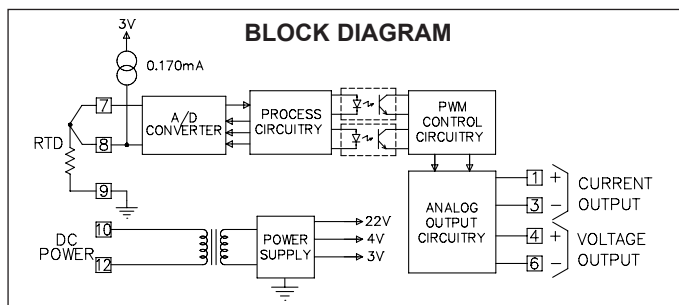

**Altitude:** Up to 2000 meters

- MOUNTING:** Universal mounting foot for attachment to standard DIN style mounting rails, including top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15, and G profile rail according to EN50035 - G32.

- CONNECTION:** Compression type terminal block

- CONSTRUCTION:** High impact black plastic case, Installation Category I, Pollution Degree 2.

- WEIGHT:** 4.02 oz. (114.0 g)

## FUNCTION DESCRIPTIONS

### Open Sensor Detection

The output can be set to go Upscale or Downscale for the detection of an open sensor. The nominal values for each output range are listed under RTD Break Detection in the Specifications section. This setting is always active, so changes to the setting are effective immediately.

### Unit Malfunction

If the unit has scaling problems (output remains at -0.5 mA, 3.5 mA, or -0.5 VDC nominal), check the ERROR LED on the front of the unit. An E<sup>2</sup>PROM problem is indicated when the ERROR LED is on. If the ERROR LED is on, perform a Basic Calibration followed by a Field Calibration. Turn the power off for 5 seconds. Turn power on and check if the ERROR LED is on. If the LED is on, contact the factory.

## EMC INSTALLATION GUIDELINES

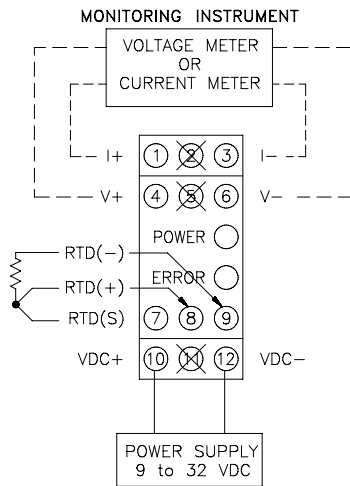

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC #FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward #28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC #LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom #1VR3

**Note:** Reference manufacturer's instructions when installing a line filter.
- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the numbers on the label to identify the position number with the proper function. Strip the wire, leaving approximately 1/4" (6 mm) of bare wire exposed (stranded wire should be tinned with solder). Insert the wire into the terminal, and tighten the screw until the wire is clamped tightly.

## INPUT AND POWER/OUTPUT CONNECTIONS

### INPUT

When connecting the RTD or resistance device, be certain that the connections are clean and tight. Attach the device to terminals #8 and #9. Install a copper sense lead of the same gauge as those used to connect the device. Attach one end of the wire at the probe where the lead connected to terminal #8 is attached and the other end to terminal #7. This configuration will provide complete lead wire compensation. If a sense wire is not utilized, then Terminal #7 should be shorted to terminal #8. To avoid errors due to lead wire resistance, field calibration should be performed with a series resistance equal to the total lead resistance in the system. Always refer to the probe manufacturer's recommendations for mounting, temperature range, shielding, etc.

### OUTPUT

Connect the output signal wires to the desired output terminals. For voltage output, use terminals #4 and #6; for current output, use terminals #1 and #3 observing proper polarity. Only one output may be used at a time. The unit is factory set for a 4 to 20 mA output. The voltage output will track the current output linearly within  $\pm 2.5\%$  deviation of range endpoints.

To select 0 to 20 mA, output you must open the case and cut the wire jumper. The jumper is located to the left side of the board as shown in the drawing.

Remove this side of the unit case.

## POWER

Connect DC power to terminals #10 and #12 observing proper polarity. Be certain DC power is within the 9 to 32 VDC specifications.

## POWER LED

The IRMA has a green LED located on the front to indicate that power is applied to the unit.

## DIP SWITCH SETTING DESCRIPTIONS

SWITCH	LABEL	DESCRIPTION
1	OUTPUT CAL	Output Calibration

3	1	1

## FACTORY SETTINGS

The unit is shipped from the factory calibrated for a 4 to 20 mA output using a type 385 RTD in range 0. The IRMA should be Field calibrated by the operator for the application environment it will be used in. If the unit is not recalibrated by the operator, the following table lists the temperature ranges for each RTD type.

NOMINAL FACTORY FIELD CALIBRATION		
TYPE	RANGE	TEMPERATURE RANGE
385	0	150°C to 606°C
392	0	150°C to 595°C

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

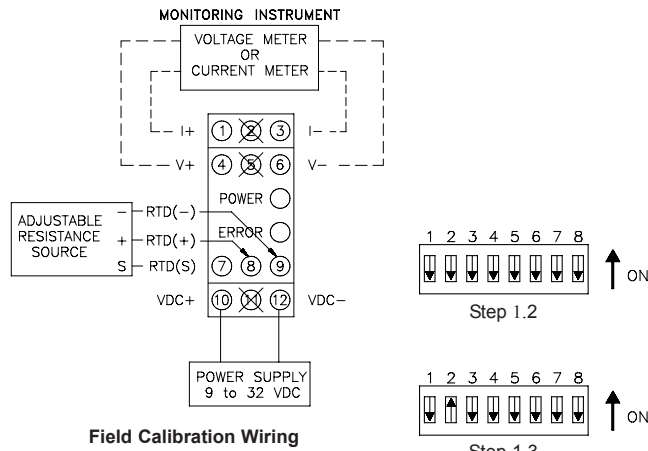

## 1.0 Field Calibration

Field Calibration scales the selected output to a temperature or resistance input. This procedure assigns an input value to the low end and an input value to the high end. The microprocessor handles configuring the output so it is linear to the temperature or resistance input. The Field Calibration procedure is described below.

*Note: The unit needs to have the Field Calibration completed by the operator before normal operation. To abort this calibration and reset to the previous settings, set the FIELD CAL switch OFF prior to the final OFF setting of the OUTPUT CAL switch (Step 1.11) and turn off power. Wait 5 seconds and then turn on power and the previous settings will be loaded.*

### RTD temperature to resistance conversion table

Temperature °C	alpha 0.00385	alpha 0.00392	Temperature °C	alpha 0.00385	alpha 0.00392
-160	35.53	34.38	300	212.03	214.08
-150	39.71	38.64	350	229.69	232.07
-100	60.25	59.55	400	247.05	249.77
-50	80.30	79.96	410	250.49	253.28
0	100.00	100.00	450	264.13	267.18
50	119.40	119.75	500	280.92	284.30
100	138.5	139.20	550	297.42	301.13
150	157.33	158.36	590	310.41	314.38
190	172.17	173.48	600	313.63	317.66
200	175.85	177.23	640	326.38	330.68
250	194.09	195.80	650	329.54	333.90

Field Calibration Wiring

### Field Calibration with an Accurate Adjustable Resistance Source

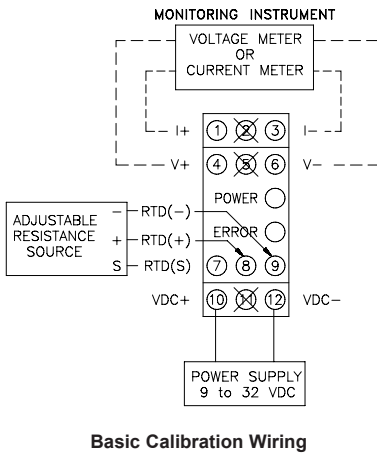

*Note: The nominal output value for the various output ranges are designated in the following order: (0 to 20 mA, 4 to 20 mA, 0 to 10 VDC)*

- 1.1 Connect resistance source to the RTD input terminals using a third sense wire. (For 2 wire sensors, short terminal #7 to terminal #8.)
- 1.2 Set the type and Range for the RTD or resistance used in your application. (DIP switches #4, #6, #7 & #8). (RTD alpha = 0.00385, Range 0 shown). APPLY OPERATING VOLTAGE and allow 45 minute warm-up period.
- 1.3 Set the FIELD CAL switch (#2) ON. [Output goes to -0.8 mA, 3.5 mA, or -0.4 V nominal]
- 1.4 Set the input resistance to the value intended to generate the analog low endpoint (For 2 wire sensors, add the system lead resistance to the desired value.)
- 1.5 Set the OUTPUT CAL switch (#1) ON. [Output stays at -0.8 mA, 3.5 mA, or -0.4 V nominal]
- 1.6 Adjust the input signal up until the analog output equals desired low value. [0 mA, 4 mA, or 0 V]
- 1.7 Set the OUTPUT CAL switch (#1) OFF. [Output increases to 22.9 mA, 22.5 mA, or 11.5 V nominal]
- 1.8 Set the input resistance to the value intended to generate the analog high endpoint. (For 2 wire sensors, add the system lead resistance to the desired value.)
- 1.9 Set the OUTPUT CAL switch (#1) ON. [Output decreases to 21.1 mA, 20.7 mA, or 10.6 V nominal]
- 1.10 Adjust the input signal down until the output equals desired high value. [20 mA, 20 mA, or 10 V]
- 1.11 Set the OUTPUT CAL switch (#1) OFF.
- 1.12 Set the FIELD CAL switch (#2) OFF.
- 1.13 Disconnect the resistance source from the IRMA and connect the actual sensor to be used in the application.

## 2.0 Basic Calibration

Basic Calibration Wiring

The Basic Calibration should only be performed with an ambient temperature between 21°C and 29°C. The Basic Calibration was performed on the unit at the factory and generally does not need to be done again. This procedure initializes the unit by calibrating the input. The Basic Calibration should be performed only if a condition exists as described in the "Unit Malfunction" section. After completion of this calibration, the unit needs to be scaled in Field Calibration. The Basic Calibration procedure is described below.

*Note: To abort this calibration and reset to the previous settings, set the BASIC CAL switch(#3) OFF prior to the final setting of the OUTPUT CAL switch (#1) (Step 4.17) and turn off power for 5 seconds. Then turn on power and the previous settings will be loaded.*

*Note: The nominal output value for the various output ranges are designated in the following order: (0 to 20 mA, 4 to 20 mA, 0 to 10 VDC)*

- 2.1 Connect an adjustable resistance source with an accuracy of 0.03% to the RTD input terminals using a third sense wire. Set the RANGE (#7& #8), TYPE (#4), OUTPUT CAL (#1), and FIELD CAL (#2) switches OFF. Set the BASIC CAL switch (#3) ON.
- 2.2 Apply operating power and allow a 45 minute warm-up period. [Current goes to -0.9 mA, 3.4 mA, or -0.5 V(nominal)]

- 2.3 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.4 Set the resistance source to 40 ohms and wait 5 seconds.
- 2.5 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.6 Set the resistance source to 60 ohms and wait 5 seconds.
- 2.7 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.8 Set the resistance source to 100 ohms wait 5 seconds.
- 2.9 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.10 Set the resistance source to 175 ohms and wait 5 seconds.
- 2.11 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.12 Set the resistance source to 250 ohms and wait 5 seconds.
- 2.13 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 2.14 Set the resistance source to 315 ohms and wait 5 seconds.
- 2.15 Set the OUTPUT CAL switch (#1) ON and then OFF.

- 2.16 Set the BASIC CAL switch (#3) OFF. [Current increases to 3.6 mA (nominal) or more]

- 2.17 Perform a Field Calibration. (See Section 1.0)

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32, and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

### G Rail Installation

To install the IRMA on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

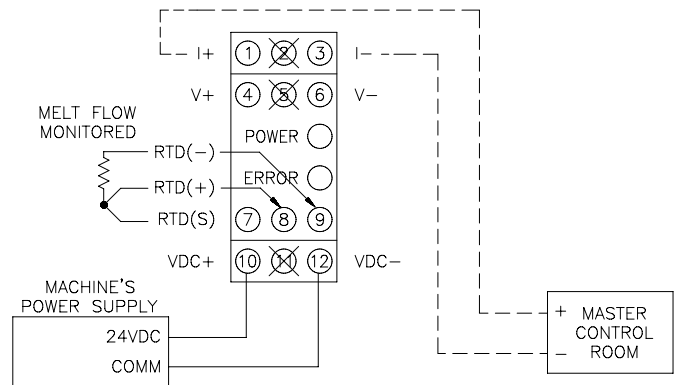

### T Rail Installation

To install the IRMA on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

## APPLICATION

The temperature of certain industrial plastics is critical for melt flow of an injection molding process. Different plastic grades and the complexity of the mold determine required temperatures for efficient material flow. The master control room monitors the temperature of the melt flow of each injection mold machine. They will determine whether the operator may start the process on his machine or override the injection molding process. The injection molding machines are located throughout the plant, posing an RTD signal loss problem from long cable runs. The IRMA DC powered unit is mounted at the machine and uses the local 24 VDC for power. The signal loss problem is solved using the 4 to 20 mA analog output for the long cable run to the master control room.

# MODEL ITMA - INTELLIGENT THERMOCOUPLE MODULE WITH ANALOG OUTPUT

- USER PROGRAMMABLE INPUT (Thermocouple types J, K, T, & E, or millivolt)
- 12 to 42 VDC LOOP POWERED (4 to 20 mA Output)
- MICROPROCESSOR CONTROLLED
- SIMPLE ADJUSTABLE RANGE SETTING (Using Input Signal)
- THERMOCOUPLE BREAK DETECTION
- MOUNTS ON "T" AND "G" STYLE DIN RAILS
- 2-WAY ELECTRICAL ISOLATION (INPUT/OUTPUT & POWER)
- HIGH-DENSITY PACKAGING (22.5 mm wide)
- WIDE OPERATING TEMPERATURE RANGE

## DESCRIPTION

The ITMA accepts a thermocouple or millivolt input and converts it into a 4 to 20 mA current output. The 4 to 20 mA output is linearly proportional to the temperature or the millivolt input. This output is ideal for interfacing to indicators, chart recorders, controllers, or other instrumentation equipment.

The ITMA is loop-powered which means that the same two wires are carrying both the power and the output signal. The unit controls the output current draw from 4 to 20 mA in direct proportion to the input change while consuming less than 4 mA for power. The conversion to a current output signal makes the ITMA less susceptible to noise interference and allows accurate transmission over long distances. The 2-Way isolation allows the use of grounded thermocouples which can provide additional noise reduction benefits.

The ITMA uses a ten position DIP switch to accomplish the input sensor configuration, range selection, and unit calibration. A simple range setting technique (Field Calibration) is used so the actual input signal adjusts the output current for scaling. This technique eliminates the need for potentiometers which are vulnerable to changes due to vibration.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat rail (T) according to EN 50 022 - 35 x 7.5 and 35 x 15, and G profile according to EN 50 035 - G 32.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
ITMA	Intelligent Thermocouple Module	ITMA2003

CAUTION: Read complete Instructions prior to installation and operation of the unit.

## SPECIFICATIONS

- POWER:** 12 to 42 VDC \*(Loop powered). The power supply must have a 30 mA min. capacity.  
[\* Min. voltage must be increased to include the drop across any current display indicator]
- INPUT:** J, K, T, E, mV [selectable via DIP switch]
- OUTPUT:** 4 to 20 mA Linear output with Temperature or mV input.  
**Ripple:** Less than 15 mV peak-to-peak max., across 250Ω load resistor (up to 120 Hz frequencies).
- RANGE & ACCURACY:** (12 Bit resolution)  
**Accuracy:** ± ( 0.075% Range + 0.25°C [Conformity] + 0.50°C [Ice Point]) at 23°C after 20 min. warm-up, conforming to ITS-90.  
*Note: TC Conformity and Ice Point do not apply to mV input.*  
**Relative Humidity:** Less than 85% RH (non-condensing)  
**Span:** The input span can be set to a min. of 1/8 of the full scale range, anywhere within that range.

Thermocouple Accuracy for each type and the corresponding ranges:

TC (INPUT)	RANGE	DIP SWITCH TYPE RANGE 6 7 8 9 10	TEMPERATURE & mV RANGE	RANGE ACCURACY	WIRE COLOR

Accuracy Example:  
Type "J" Range "0"  
-136°C to 111°C

Range	Conformity	Ice Point	Total Error
(±0.19°C +	±0.25°C	+ ±0.50°C)	= ±0.94°C

5. **TC BREAK DETECTION:** Upscale to 22.5 mA (nominal) or Downscale to 3.6 mA (nominal) [selectable via DIP switch]
6. **RESPONSE TIME:** 400 msec (to within 99% of final value w/step input; typically, response is limited to response time of probe.)
7. **ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** -25°C to 75°C (-13°F to 167°F)  
**Storage Temperature Range:** -40°C to 85°C (-40°F to 185°F)  
**Operating and Storage Humidity:** 85% max. (non-condensing) from -25°C to 75°C.  
**Temperature Coefficient:**  $\pm 0.01\%$  of input range per °C  
**Ice Point Compensation:**  $\pm 0.75^\circ\text{C}$  for a 50°C change in temperature  
**Altitude:** Up to 2000 meters.
8. **DIELECTRIC WITHSTAND VOLTAGE:** 1500 VAC for 1 minute, at 50 VAC working volts, from Input to Output
9. **CERTIFICATIONS AND COMPLIANCES:**

**SAFETY**

IEC 1010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

**ELECTROMAGNETIC COMPATIBILITY****Immunity to EN 50082-2**

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact Level 3; 8 Kv air
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz

**Emissions to EN 50081-2**

RF interference	EN 55011	Enclosure class A
-----------------	----------	-------------------

**Notes:**

- This device was designed for installation in an enclosure. To avoid electrostatic discharge, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the unit.
- Self-recoverable loss of performance during EMI disturbance at 10 V/m: Process signal may deviate during EMI disturbance.  
For operation without loss of performance:  
Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent)  
I/O and power cables are routed in metal conduit connected to earth ground.

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

10. **MOUNTING:** Universal mounting foot for attachment to standard DIN style mounting rails, including top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15, and G profile rail according to EN50035 - G32.
11. **CONNECTION:** Compression type terminal block
12. **CONSTRUCTION:** High impact black plastic case. Installation Category I, Pollution Degree 2.
13. **WEIGHT:** 2.7 oz (76.54 g)

**FUNCTION DESCRIPTIONS****Open Sensor Detection**

The output can be set to go Upscale or Downscale for the detection of an open sensor. The Upscale setting makes the output go to 22.5 mA (nominal). The Downscale setting makes the output go to 3.5 mA (nominal). This setting is always active, so changes in the setting are effective immediately.

**Ice Point Compensation**

The Ice Point Compensation for the thermocouple sensors can be enabled (DIP Switch OFF) or disabled (DIP Switch ON). The mV sensor input is not affected by this setting. Generally, the Ice Point Compensation is always enabled.

**Calibration Malfunction**

If the unit has scaling problems (current remains at 3.5 mA nominal), check the voltage between the TC- Input (-) and TEST pad (+) [located next to the DIP switches on the side of the unit]. For normal operation the voltage is -1.77 V (nominal). If the voltage is +1.23 V (nominal), a problem occurred storing information in the E<sup>2</sup>PROM. When this happens, perform a Basic Calibration and then a Field Calibration. Turn off power for 5 seconds. Turn on power and check the voltage between the TEST pad (+) and TC- Input (-). If the voltage is still +1.23 V (nominal), contact the factory.

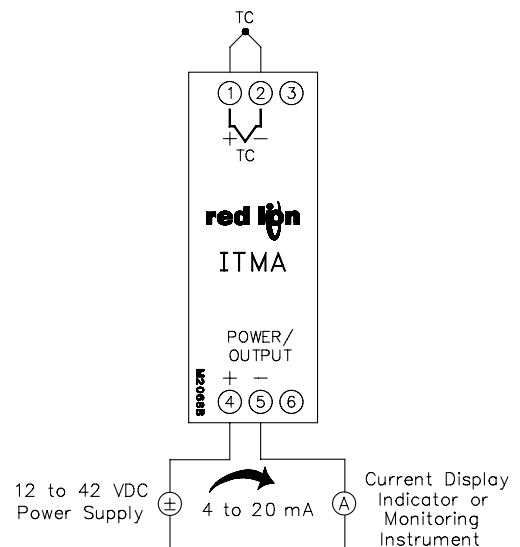

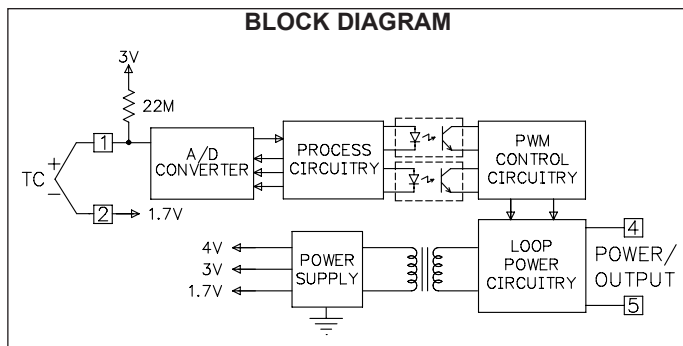

**FACTORY SETTINGS**

The unit is shipped from the factory calibrated for a 4 to 20 mA output using a type J thermocouple in range 3. The ITMA should be Field calibrated by the operator for the application environment it will be used in. If the unit is not recalibrated by the operator, the following table lists the temperature ranges for the given thermocouple types.

TYPE	RANGE	TEMPERATURE RANGE
J	3	-50°C to 500°C
K	3	-85°C to 790°C
T	3	-195°C to 162°C
E	3	3°C to 602°C

**WIRING CONNECTIONS**

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the numbers on the label to identify the position number with the proper function. Strip the wire, leaving approximately 1/4" (6 mm) of bare wire exposed (stranded wire should be tinned with solder). Insert the wire into the terminal, and tighten the screw until the wire is clamped tightly.

## INPUT AND POWER/OUTPUT CONNECTIONS

### Input

When connecting the thermocouple, be certain that the connections are clean and tight. The negative thermocouple lead is connected to Terminal #2 (TC-) and the positive lead is connected to Terminal #1 (TC+). If the thermocouple probe cannot be connected directly to the module, thermocouple wire or thermocouple extension-grade wire must be used to extend the connection points (copper wire does not work). Always refer to the thermocouple manufacturer's recommendations for mounting, temperature range, shielding, etc.

### Power/Output

The unit has the power and current output sharing the same two wires (loop-powered). Connect DC power to terminals #4 and #5, observing the correct polarity, with a current meter/indicator connected in between so that the output current can be monitored. Be certain that the DC power is relatively "clean" and within the 12 to 42 VDC range at the terminals. The current meter voltage drop must be included in power supply considerations.

### DIP SWITCH SETTING DESCRIPTIONS

SWITCH	DESCRIPTION

# CALIBRATION PROCEDURES

## 1.0 Field Calibration

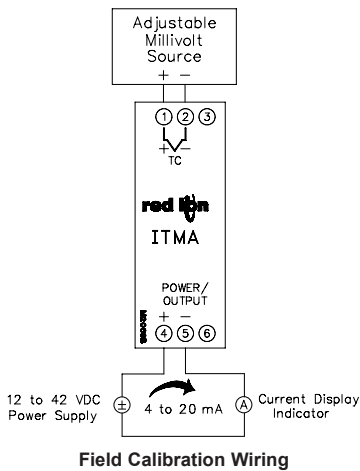

Field Calibration scales the 4 to 20 mA output to a temperature or mV input. This procedure assigns an input value to 4 mA and an input value to 20 mA. The microprocessor handles configuring the output so it is linear to the temperature or mV input. The Field Calibration procedure is described below.

*Note: Allow a 30 minute warm-up period before calibrating. The unit needs to have the Field Calibration completed by the operator before normal operation. To abort this calibration and reset to the previous settings, set the FIELD CAL switch OFF prior to the final OFF setting of the OUTPUT CAL switch (Step 1.13) and turn off power. Wait 5 seconds and then turn on power and the previous settings will be loaded.*

### Field Calibration with a Thermocouple Calibrator

- 1.1 Enable the Ice Point Compensation on the Thermocouple Calibrator and set it to the Thermocouple type being used in your application.
- 1.2 Connect the thermocouple wire as selected in step 1 to the TC input terminals of the ITMA and the thermocouple calibrator.
- 1.3 Set the ICE PT EN/DIS switch (#4) OFF to enable Ice Point Compensation.
- 1.4 Set the Type and Range for the thermocouple or mV used in your application (DIP switches #6 through #10). (TC type "J", Range 0 shown)
- 1.5 Set the FIELD CAL switch (#2) ON. [Current goes to 3.6 mA (nominal)]
- 1.6 Apply the input signal for the 4 mA output.
- 1.7 Set the OUTPUT CAL switch (#1) ON. [Current stays at 3.6 mA (nominal)]
- 1.8 Adjust the input signal up until the output equals 4 mA.
- 1.9 Set the OUTPUT CAL switch (#1) OFF. [Current increases to 22.3 mA (nominal)]
- 1.10 Apply the input signal for the 20 mA output.
- 1.11 Set the OUTPUT CAL switch (#1) ON. [Current decreases to 20.5 mA (nominal)]
- 1.12 Adjust the input signal down until the output equals 20 mA.
- 1.13 Set the OUTPUT CAL switch (#1) OFF.
- 1.14 Set the FIELD CAL switch (#2) OFF.
- 1.15 Disconnect the thermocouple calibrator from the ITMA and connect the actual sensor to be used in the application.

## 2.0 Field Calibration With an Accurate Adjustable Millivolt Source: (Alternate Method)

This calibration procedure can be used to assign the high and low input values if a thermocouple calibrator is not available.

*Note: To abort this calibration and reset to the previous settings, set the FIELD CAL switch OFF prior to the final OFF setting of the OUTPUT CAL switch (Step 2.12) and turn off power. Wait 5 seconds and then turn on power and the previous settings will be loaded.*

- 2.1 Connect the accurate Adjustable Millivolt Source to the TC input terminals.
- 2.2 Set the ICE PT EN/DIS switch (#4) ON to disable Ice Point Compensation.
- 2.3 Set the Type and Range for the thermocouple or mV used in your application (DIP switches #6 through #10). (TC type "J", Range 0 shown)
- 2.4 Set the FIELD CAL switch (#2) ON. [Current goes to 3.6 mA (nominal)]
- 2.5 Apply the input signal (mV equivalent for the thermocouple temperature) for the 4 mA output.
- 2.6 Set the OUTPUT CAL switch (#1) ON. [Current stays at 3.6 mA (nominal)]
- 2.7 Adjust the input signal up until the output equals 4 mA.
- 2.8 Set the OUTPUT CAL switch (#1) OFF. [Current increases to 22.3 mA (nominal)]
- 2.9 Apply the input signal (millivolt equivalent for the thermocouple temperature) for the 20 mA output.
- 2.10 Set the OUTPUT CAL switch (#1) ON. [Current decreases to 20.5 mA (nominal)]
- 2.11 Adjust the input signal down until the output equals 20 mA.
- 2.12 Set the OUTPUT CAL switch (#1) OFF.
- 2.13 Set the FIELD CAL switch (#2) OFF.
- 2.14 Set the ICE PT EN/DIS switch (#4) OFF to enable Ice Point Compensation.
- 2.15 Disconnect millivolt source from the ITMA and connect the actual sensor to be used in the application.

### 3.0 Ice Point Calibration

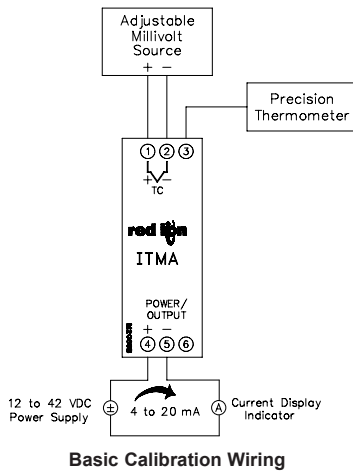

The Ice Point Calibration should only be performed with an ambient temperature between 21°C and 29°C. This Calibration was performed on the unit at the factory during the Basic Calibration and generally does not need to be done again. The Ice Point Compensation can be adjusted through this calibration. The Ice Point Calibration procedure is described below.

*Note: Calibration can be aborted by setting the BASIC CAL switch OFF prior to the setting of the OUTPUT CAL switch OFF. (Step 3.6)*

- 3.1 Connect a precision mV source with an accuracy of 0.02% to Terminal #1 TC+ Input and Terminal #2 TC- Input. Set the OUTPUT CAL switch (#1) and ICE PT EN/DIS switch (#4) OFF. Set the BASIC CAL (#3) and FIELD CAL (#2) switches ON. The positions of switches #5 thru #10 are not relevant for this calibration procedure.
- 3.2 Connect a precision thermometer (accuracy of 0.1°C) to the unused terminal (#3) beside the TC Input terminals.
- 3.3 Apply power and allow a 30 minute warm-up period. [Current goes to 3.5 mA (nominal)]
- 3.4 Using the temperature indicated by the precision thermometer, input an equivalent 1 mV/°C signal to the TC Input terminals and wait 5 seconds.
- 3.5 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 3.6 Set the BASIC CAL switch (#3) and FIELD CAL switch (#2) OFF. [Current increases to 3.6 mA (nominal) or more]

## 4.0 Basic Calibration

H

Basic Calibration Wiring

Step 4.1

Steps 4.3 to 4.15

Step 4.16

Step 4.17

Step 4.18

The Basic Calibration should only be performed with an ambient temperature between 21°C and 29°C. The Basic Calibration was performed on the unit at the factory and generally does not need to be done again. This procedure initializes the unit by calibrating the input, and the Ice Point Compensation. The Basic Calibration should be performed only if a condition exists as described in the "Calibration Malfunction" section. After completion of this calibration, the unit needs to be scaled in Field Calibration. The Basic Calibration procedure is described below.

*Note: To abort this calibration and reset to the previous settings, set the BASIC CAL switch OFF prior to the final setting of the OUTPUT CAL switch (Step 4.17) and turn off power for 5 seconds. Then turn on power and the previous settings will be loaded.*

- 4.1 Connect a precision mV source with an accuracy of 0.02% to Terminal #1 (TC+ Input) and Terminal #2 (TC- Input). Set the ICE PT EN/DIS switch (#4), RANGE (#9&#10), TYPE (#6, #7, and #8), OUTPUT CAL (#1), and FIELD CAL (#2) switches OFF. Set the BASIC CAL switch (#3) ON.
- 4.2 Apply power and allow a 30 minute warm-up period. [Current goes to 3.5 mA (nominal)]
- 4.3 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.4 Input -9 mV and wait 5 seconds.
- 4.5 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.6 Input 6 mV and wait 5 seconds.
- 4.7 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.8 Input 22 mV and wait 5 seconds.
- 4.9 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.10 Input 41 mV and wait 5 seconds.
- 4.11 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.12 Input 63 mV and wait 5 seconds.
- 4.13 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.14 Input 77 mV and wait 5 seconds.
- 4.15 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.16 Ice Point Calibration.
  - a. If ice point calibration is not desired, go to step 4.17.
  - b. To Enable ice point calibration, set the FIELD CAL switch (#2) ON.
    1. Connect a precision thermometer (accuracy of 0.1°C) to the unused terminal beside the TC Input terminals.
    2. Allow 5 minutes for the temperature to equalize.
    3. Using the temperature indicated by the precision thermometer, input an equivalent 1 mV/°C signal to the TC Input terminals.
- 4.17 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.18 Set the BASIC CAL switch (#3) and FIELD CAL switch (#2) OFF. [Current increases to 3.6 mA (nominal) or more]
- 4.19 Perform a Field Calibration. (See Section 1.0)

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32, and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

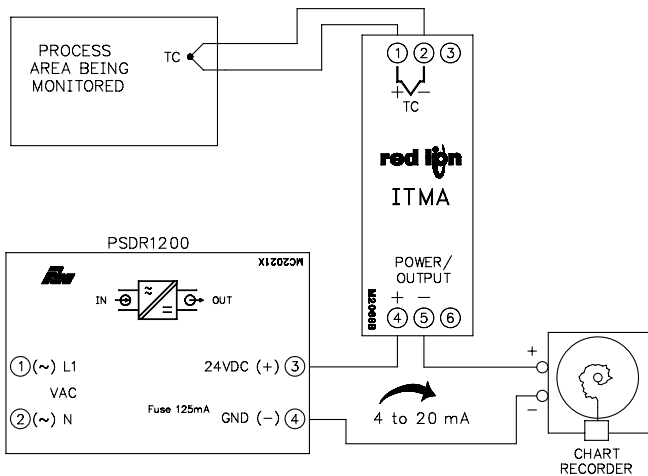

### G Rail Installation

To install the ITMA on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

### T Rail Installation

To install the ITMA on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

## APPLICATION

A meat processing plant needs to keep daily records of the process area temperature. FDA regulations require the temperature to be 22°C at all times. The ITMA can be used for this application, with the added benefit of being DIN rail mounted to save space.

The ITMA will sense the process area temperature, and transmit a 4 to 20 mA output to a chart recorder. The processing plant uses a "J" type thermocouple with a range of -136°C to 111°C. The ITMA is field calibrated to output 4 mA at 0°C and 20 mA at 44°C. See Section 1.0 for the Field Calibration procedure.

The ITMA output receives its power from a PSDR1200 Signal Conditioning Power Supply with a +24 VDC output.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## MODEL ITMA DC - INTELLIGENT THERMOCOUPLE MODULE WITH ANALOG OUTPUT

- **USER PROGRAMMABLE INPUT**  
(Thermocouple types J, K, T, & E, or millivolt)
- **MICROPROCESSOR CONTROLLED**
- **SIMPLE ADJUSTABLE RANGE SETTING** (Using Input Signal)
- **THERMOCOUPLE BREAK DETECTION**
- **MOUNTS ON "T" AND "G" STYLE DIN RAILS**
- **3-WAY ELECTRICAL ISOLATION** (POWER/INPUT/OUTPUT)
- **MULTIPLE ANALOG OUTPUTS** (0 to 20 mA, 4 to 20 mA, and 0 to 10 VDC)
- **WIDE OPERATING TEMPERATURE RANGE** (-25°C to 75°C)
- **POWER & MEMORY ERROR INDICATION**
- **9 to 32 VDC POWERED**

### DESCRIPTION

The ITMA accepts a thermocouple or millivolt input and converts it into a voltage or current output. The voltage or current output is linearly proportional to the temperature or millivolt input. This output is ideal for interfacing to indicators, chart recorders, controllers, or other instrumentation equipment.

The ITMA is DC powered. The DC power input is isolated from the signal input and analog output. The unit scales the analog output proportionally to the thermocouple or millivolt input signal. The analog output may be configured for one of the following: 0 to 20 mA, 4 to 20 mA, or 0 to 10 VDC. Making the signal conversion with the ITMA to a current output signal, makes the signal less susceptible to noise interference and allows accurate transmission over long distances. The 3-Way isolation allows the use of grounded thermocouples which can provide additional noise reduction benefits.

The ITMA uses a ten position DIP switch to accomplish the input sensor configuration, range selection, and unit calibration. A simple range setting technique (Field Calibration) is used so the actual input signal adjusts the output for scaling. This technique eliminates the need for potentiometers which are vulnerable to changes due to vibration.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat rail (T) according to EN 50 022 - 35 x 7.5 and 35 x 15, and (G) profile according to EN 50 035 - G 32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

CAUTION: Read complete instructions prior to installation and operation of the unit.

### SPECIFICATIONS

1. **POWER:** 9 to 32 VDC; 1.75 W The power supply must have 300 mA for 200 msec. surge capacity.
2. **INPUT:** J, K, T, E, mV [selectable via DIP switch]
3. **OUTPUT:** All output signals scaled linearly using temperature or mV input. Unit is shipped set for 4 to 20 mA output. 4 to 20 mA or 0 to 20 mA selected via internal jumper.  
**Voltage Output Compliance:**  
 0 to 10 VDC across min 1 K $\Omega$  load (10 mA)  
 20 mV peak to peak max. ripple (for frequencies up to 120 Hz)  
**Current Output Compliance:**  
 0 to 20 mA through max. 600 $\Omega$  load (12 VDC)  
 4 to 20 mA through max. 600 $\Omega$  load (12 VDC)  
 15 mV peak to peak max. ripple across 600 $\Omega$  load (for freq. up to 120 Hz)
4. **TC BREAK DETECTION:** Nominal values shown in the following order: (0 to 20 mA, 4 to 20 mA, and 0 to 10 VDC).  
**Upscale:** 22.9 mA, 22.5 mA, and 11.5 VDC  
**Downscale:** -0.5 mA, 3.5 mA, and -0.4 VDC
5. **RESPONSE TIME:** 400 msec (to within 99% of final value w/step input; typically, response is limited to response time of probe.)
6. **TEMPERATURE EFFECTS:**  
**Temperature Coefficient:**  $\pm 0.025\%$  of input range per  $^{\circ}\text{C}$   
**Ice Point Compensation:**  $\pm 0.75^{\circ}\text{C}$  for a  $50^{\circ}\text{C}$  change in temperature
7. **DIELECTRIC WITHSTAND VOLTAGE:** 1500 VAC for 1 minute  
**Working Voltage:** 50 VAC  
 Power input to Signal input, Power input to Signal output, & Signal input to Signal output.
8. **RANGE & ACCURACY:** (12 Bit resolution)  
**Accuracy:**  $\pm (0.075\% \text{ Range} + 0.25^{\circ}\text{C} [\text{Conformity}] + 0.50^{\circ}\text{C} [\text{Ice Point}])$   
 at  $23^{\circ}\text{C}$  after 20 min. warm-up, conforming to ITS-90.  
*Note: TC Conformity and Ice Point do not apply to mV input*

**Relative Humidity:** Less than 85% RH (non-condensing)

**Span:** The input span can be set to a min. of 1/8 of the full scale range, anywhere within that range.

**Thermocouple Accuracy for each type and the corresponding ranges:**

-----------------	----------	-------------------

**Notes:**

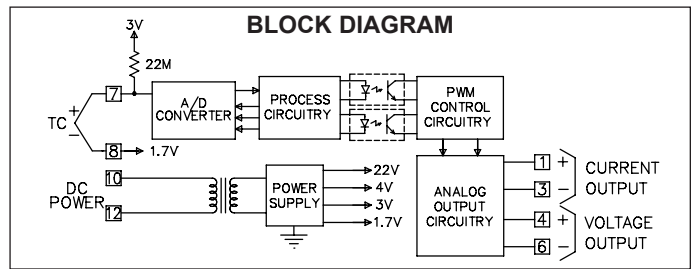

- This device was designed for installation in an enclosure. To avoid electrostatic discharge, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the unit.
- Self-recoverable loss of performance during EMI disturbance at 10 V/m: Process signal may deviate during EMI disturbance.

For operation without loss of performance:

Unit is mounted in a metal enclosure (Buckeye SM7013-0 or equivalent)  
I/O and power cables are routed in metal conduit connected to earth ground.

Refer to the EMC Installation Guidelines section of this bulletin for additional information.

**14. WEIGHT:** 4.02 oz. (114.0 g)

**FUNCTION DESCRIPTIONS**

**Open Sensor Detection**

The output can be set to go Upscale or Downscale for the detection of an open sensor. The nominal values for each output range are listed under TC Break Detection in the Specifications section. This setting is always active, so changes to the setting are effective immediately.

**Ice Point Compensation**

The Ice Point Compensation for the thermocouple sensors can be enabled (DIP Switch OFF) or disabled (DIP Switch ON). The mV sensor input is not affected by this setting. Generally, the Ice Point Compensation is always enabled.

**Unit Malfunction**

If the unit has scaling problems (output remains at -0.5 mA, 3.5 mA, or -0.5 VDC nominal), check the ERROR LED on the front of the unit. An E<sup>2</sup>PROM problem is indicated when the ERROR LED is on. If the ERROR LED is on, perform a Basic Calibration followed by a Field Calibration. Turn the power off for 5 seconds. Turn power on and check if the ERROR LED is on. If the LED is on, contact the factory.

**EMC INSTALLATION GUIDELINES**

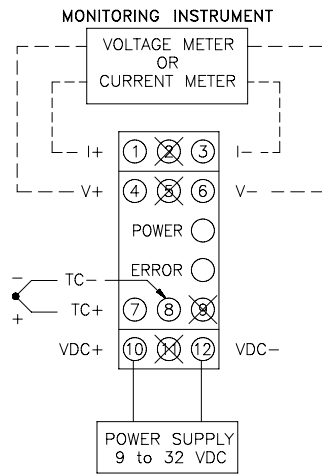

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the unit may be different for various installations. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the rail where the unit is mounted to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal and Control cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection. Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:
  - Ferrite Suppression Cores for signal and control cables:
    - Fair-Rite # 0443167251 (RLC #FCOR0000)
    - TDK # ZCAT3035-1330A
    - Steward #28B2029-0A0
  - Line Filters for input power cables:
    - Schaffner # FN610-1/07 (RLC #LFIL0000)
    - Schaffner # FN670-1.8/07
    - Corcom #1VR3

**Note:** Reference manufacturer's instructions when installing a line filter.
- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## WIRING CONNECTIONS

All conductors should meet voltage and current ratings for each terminal. Also, cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that power supplied to the unit be protected by a fuse or circuit breaker. When wiring the unit, use the numbers on the label to identify the position number with the proper function. Strip the wire, leaving approximately 1/4" (6 mm) of bare wire exposed (stranded wire should be tinned with solder). Insert the wire into the terminal, and tighten the screw until the wire is clamped tightly.

## INPUT, OUTPUT, AND POWER CONNECTIONS

### INPUT

Ensure thermocouple wire ends are stripped and clean. Connect positive thermocouple lead to terminal #7 (TC+). Connect negative thermocouple lead to terminal #8 (TC-). If the thermocouple probe cannot be connected directly to the module, thermocouple wire or thermocouple extension-grade wire must be used to extend the connection (copper wire does not work). Always refer to the thermocouple manufacturer's recommendations for: mounting, temperature range, shielding, etc.

Remove this side of the unit case.

## OUTPUT

Connect the output signal wires to the desired output terminals. For voltage output, use terminals #4 and #6; for current output, use terminals #1 and #3 observing proper polarity. Only one output may be used at a time. The unit is factory set for a 4 to 20 mA output. The voltage output will track the current output nominally within a  $\pm 2.5\%$  deviation range.

To select 0 to 20 mA, output you must open the case and cut the wire jumper. The jumper is located to the left side of the board as shown in the drawing.

## POWER

Connect DC power to terminals #10 and #12 observing proper polarity. Be certain DC power is within the 9 to 32 VDC specifications.

## POWER LED

The ITMA has a green LED located on the front to indicate that power is applied to the unit.

## DIP SWITCH SETTING DESCRIPTIONS

SWITCH	LABEL	DESCRIPTION
1	OUTPUT CAL	Output Calibration
2	FIELD CAL	Field Calibration
3	BASIC CAL	Basic Calibration
4	ICE PT DIS/EN	Ice Point Compensation - Disabled (ON) / Enabled (OFF)
5	OPEN SEN UP/DN	Open Sensor Detection - Upscale (ON) / Downscale (OFF)
6	TC TYPE	Thermocouple Type - 3 switch combination setting
7		
8		
9	RANGE	Sensor Range - 2 switch combination setting
10		

## TC Type and Range switch settings (ON = 1 OFF = 0)

TC TYPE	DIP SWITCH		
	6	7	8
J	0	0	0
K	0	0	1
T	0	1	0
E	0	1	1
mV	1	1	1

RANGE	DIP SWITCH	
	9	10
0	0	0
1	0	1
2	1	0
3	1	1

## FACTORY SETTINGS

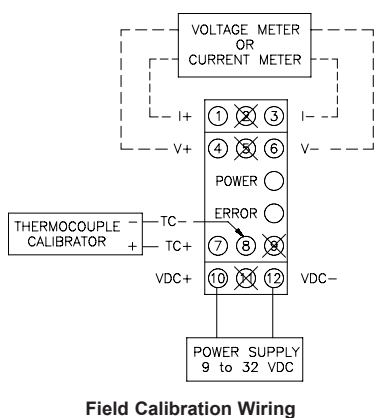

The unit is shipped from the factory calibrated for a 4 to 20 mA output using a type J thermocouple in range 3. The ITMA should be Field calibrated by the operator for the application environment it will be used in. If the unit is not recalibrated by the operator, the following table lists the temperature ranges for the given thermocouple types.

NOMINAL FACTORY FIELD CALIBRATION		
TYPE	RANGE	TEMPERATURE RANGE
J	3	-50°C to 500°C
K	3	-85°C to 790°C
T	3	-195°C to 162°C
E	3	3°C to 602°C

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## 1.0 Field Calibration

*Note: The nominal output value for the various output ranges are designated in the following order: (0 to 20 mA, 4 to 20 mA, 0 to 10 VDC)*

Allow a 30 minute warm-up period before starting Field Calibration. Field Calibration scales the voltage or current output to a temperature or mV input. This procedure assigns an input value to analog output low and an input value to analog output high. The microprocessor handles configuring the output so it is linear to the temperature or mV input. The Field Calibration procedure is described below.

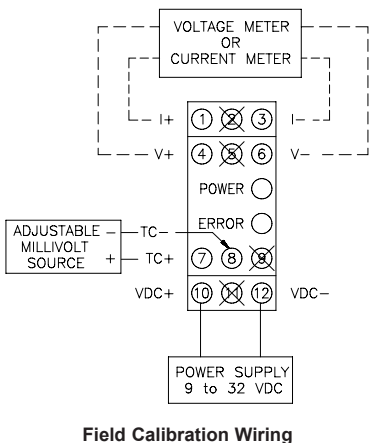

*Note: The unit needs to have the Field Calibration completed by the operator before normal operation. To abort this calibration and reset to the previous settings, set the FIELD CAL switch(#2) OFF prior to the final OFF setting of the OUTPUT CAL switch (Step 1.13) and turn off power. Wait 5 seconds and then turn on power and the previous settings will be loaded.*

### Field Calibration with a Thermocouple Calibrator

- 1.1 Enable the Ice Point Compensation on the Thermocouple Calibrator and set it to the Thermocouple type being used in your application.
- 1.2 Connect the thermocouple wire as selected in step 1 to the TC input terminals of the ITMA and the thermocouple calibrator.
- 1.3 Set the ICE PT EN/DIS switch (#4) OFF to enable Ice Point Compensation.
- 1.4 Set the Type and Range for the thermocouple or mV used in your application (DIP switches #6 through #10). (TC type "J", Range 0 shown)
- 1.5 Set the FIELD CAL switch (#2) ON. [Output goes to -0.8 mA, 3.5 mA, or -0.4 V nominal]
- 1.6 Apply the input signal for the analog output low value.
- 1.7 Set the OUTPUT CAL switch (#1) ON. [Output stays at -0.8 mA, 3.5 mA, or -0.4 V nominal]
- 1.8 Adjust the input signal up until the output equals desired low value.
- 1.9 Set the OUTPUT CAL switch (#1) OFF. [Output increases to 22.9 mA, 22.5 mA, or 11.5 V nominal]
- 1.10 Apply the input signal for the analog output high value.
- 1.11 Set the OUTPUT CAL switch (#1) ON. [Output decreases to 21.1 mA, 20.7 mA, or 10.6 V nominal]
- 1.12 Adjust the input signal down until the output equals desired high value.
- 1.13 Set the OUTPUT CAL switch (#1) OFF.
- 1.14 Set the FIELD CAL switch (#2) OFF.
- 1.15 Disconnect the thermocouple calibrator from the ITMA and connect the actual sensor to be used in the application.

## 2.0 Field Calibration With an Accurate Adjustable Millivolt Source: (Alternate Method)

*Note: The nominal output value for the various output ranges are designated in the following order: (0 to 20 mA, 4 to 20 mA, 0 to 10 VDC)*

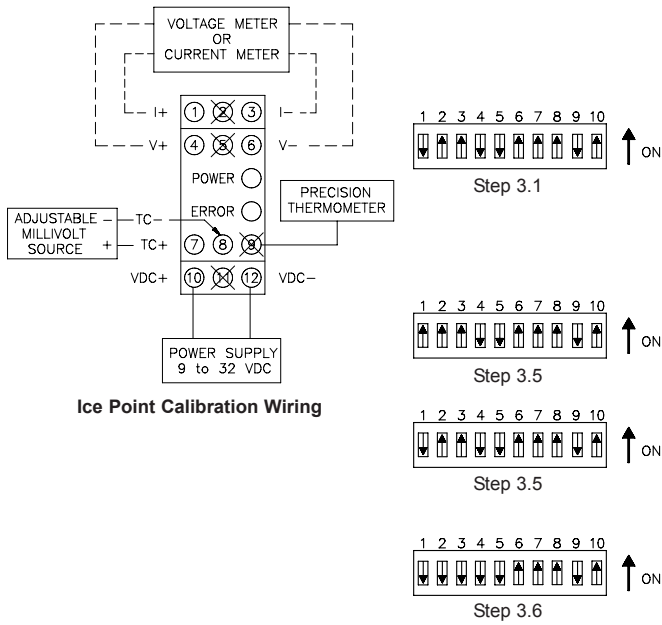

This calibration procedure can be used to assign the high and low input values if a thermocouple calibrator is not available.

*Note: To abort this calibration and reset to the previous settings, set the FIELD CAL switch(#2) OFF prior to the final OFF setting of the OUTPUT CAL switch (Step 2.12) and turn off power. Wait 5 seconds and then turn on power and the previous settings will be loaded.*

- 2.1 Connect the accurate Adjustable Millivolt Source to the TC input terminals.
- 2.2 Set the ICE PT EN/DIS switch (#4) ON to disable Ice Point Compensation.
- 2.3 Set the Type and Range for the thermocouple or mV used in your application (DIP switches #6 through #10). (TC type "J", Range 0 shown)
- 2.4 Set the FIELD CAL switch (#2) ON. [Output goes to -0.8 mA, 3.5 mA, or -0.4 V nominal]
- 2.5 Apply the input signal (mV equivalent for the thermocouple temperature) for the analog output low value.
- 2.6 Set the OUTPUT CAL switch (#1) ON. [Output stays at -0.8 mA, 3.5 mA, or -0.4 V nominal]
- 2.7 Adjust the input signal up until the output equals desired low value.
- 2.8 Set the OUTPUT CAL switch (#1) OFF. [Output increases to 22.9 mA, 22.5 mA, or 11.5 V nominal]
- 2.9 Apply the input signal (millivolt equivalent for the thermocouple temperature) for the analog output high value.
- 2.10 Set the OUTPUT CAL switch (#1) ON. [Output decreases to 21.1 mA, 20.7 mA, or 10.6 V nominal]
- 2.11 Adjust the input signal down until the output equals desired high value.
- 2.12 Set the OUTPUT CAL switch (#1) OFF.
- 2.13 Set the FIELD CAL switch (#2) OFF.
- 2.14 Set the ICE PT EN/DIS switch (#4) OFF to enable Ice Point Compensation.
- 2.15 Disconnect millivolt source from the ITMA and connect the actual sensor to be used in the application.

### 3.0 Ice Point Calibration

Note: The nominal output value for the various output ranges are designated in the following order: (0 to 20 mA, 4 to 20 mA, 0 to 10 VDC)

The Ice Point Calibration should only be performed with an ambient temperature between 21°C and 29°C. This Calibration was performed on the unit at the factory during the Basic Calibration and generally does not need to be done again. The Ice Point Compensation can be adjusted through this calibration. The Ice Point Calibration procedure is described below.

Note: Calibration can be aborted by setting the BASIC CAL switch(#3) OFF prior to the setting of the OUTPUT CAL switch OFF. (Step 3.6)

- 3.1 Connect a precision mV source with an accuracy of 0.02% to Terminal #7 TC+ Input and Terminal #8 TC- Input. Set the OUTPUT CAL switch (#1) and ICE PT EN/DIS switch (#4) OFF. Set the BASIC CAL (#3) and FIELD CAL (#2) switches ON. The positions of switches #5 thru #10 are not relevant for this calibration procedure.
- 3.2 Connect a precision thermometer (accuracy of 0.1°C) to the unused terminal (#9) beside the TC Input terminals.
- 3.3 Apply power and allow a 30 minute warm-up period. [Output goes to -0.9 mA, 3.4 mA, or -0.5V nominal]
- 3.4 Using the temperature indicated by the precision thermometer, input an equivalent 1 mV/°C signal to the TC Input terminals and wait 5 seconds.
- 3.5 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 3.6 Set the BASIC CAL switch (#3) and FIELD CAL switch (#2) OFF. [Output increases to -0.8 mA, 3.5 mA, or -0.38 V nominal, or more]

### 4.0 Basic Calibration

Note: The nominal output value for the various output ranges are designated in the following order: (0 to 20 mA, 4 to 20 mA, 0 to 10 VDC)

The Basic Calibration should only be performed with an ambient temperature between 21°C and 29°C. The Basic Calibration was performed on the unit at the factory and generally does not need to be done again. This procedure initializes the unit by calibrating the input, and the Ice Point Compensation. The Basic Calibration should be performed only if a condition exists as described in the "Unit Malfunction" section. After completion of this calibration, the unit needs to be scaled in Field Calibration. The Basic Calibration procedure is described below.

Note: To abort this calibration and reset to the previous settings, set the BASIC CAL switch(#3) OFF prior to the final setting of the OUTPUT CAL switch (Step 4.17) and turn off power for 5 seconds. Then turn on power and the previous settings will be loaded.

- 4.1 Connect a precision mV source with an accuracy of 0.02% to Terminal #7 (TC+ Input) and Terminal #8 (TC- Input). Set the ICE PT EN/DIS switch (#4), RANGE (#9&#10), TYPE (#6, #7, and #8), OUTPUT CAL (#1), and FIELD CAL (#2) switches OFF. Set the BASIC CAL switch (#3) ON.
- 4.2 Apply power and allow a 30 minute warm-up period. [Output goes to -0.9 mA, 3.4 mA, or -0.5 V nominal]
- 4.3 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.4 Input -9 mV and wait 5 seconds.
- 4.5 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.6 Input 6 mV and wait 5 seconds.
- 4.7 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.8 Input 22 mV and wait 5 seconds.
- 4.9 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.10 Input 41mV and wait 5 seconds.
- 4.11 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.12 Input 63 mV and wait 5 seconds.
- 4.13 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.14 Input 77 mV and wait 5 seconds.
- 4.15 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.16 Ice Point Calibration.
  - a. If ice point calibration is not desired, go to step 4.17.
  - b. To Enable ice point calibration, set the FIELD CAL switch (#2) ON.
    1. Connect a precision thermometer (accuracy of 0.1°C) to the unused terminal beside the TC Input terminals.
    2. Allow 5 minutes for the temperature to equalize.
    3. Using the temperature indicated by the precision thermometer, input an equivalent 1 mV/°C signal to the TC Input terminals.
- 4.17 Set the OUTPUT CAL switch (#1) ON and then OFF.
- 4.18 Set the BASIC CAL switch (#3) and FIELD CAL switch (#2) OFF. [Output increases to -0.8 mA, 3.5 mA, or -0.4 V nominal, or more]
- 4.19 Perform a Field Calibration. (See Section 1.0)

### INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32 , and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

#### G Rail Installation

To install the ITMA on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

#### T Rail Installation

To install the ITMA on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

### APPLICATION

The temperature of certain industrial plastics is critical for melt flow of an injection molding process. Different plastic grades and the complexity of the mold determine required temperatures for efficient material flow. The master control room monitors the temperature of the melt flow of each injection mold machine. They will determine whether the operator may start the process on his machine or override the injection molding process. The injection molding machines are located throughout the plant, posing a thermocouple signal loss problem from long cable runs. The ITMA DC powered unit is mounted at the machine and uses the local 24 VDC for power. The signal loss problem is solved using the 4 to 20 mA analog output for the long cable run to the master control room.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
ITMA	Intelligent Thermocouple Module	ITMA3035

## MODEL ICM4 - SERIAL CONVERTER MODULE (RS232C/RS485)

- ALLOWS COMMUNICATIONS BETWEEN RS232 CONTROL EQUIPMENT AND PRODUCTS WITH RS485 SERIAL COMMUNICATIONS
- WIDE DC INPUT POWER RANGE (+9 to 32 VDC)
- HALF DUPLEX (RS485) AND FULL DUPLEX (RS422)
- LED INDICATION FOR RXD, TXD, and POWER
- UNIVERSAL MOUNTING FOOT FOR DIN RAIL INSTALLATION

UL Recognized Component,  
File # E179259

### DESCRIPTION

The ICM4 Serial Converter Module provides the capability of interfacing equipment with RS485 serial communications to equipment with RS232 communications. Data format of the RS232 and RS485 equipment must be the same.

For full duplex (RS422), the DIP switch on the side of the module must be in the RS422 position. For half duplex (RS485), the DIP switch must be in the RS485 position. In half duplex mode, the RS485 driver is enabled using the leading edge of the first character transmitted (RXD input). After the last character transmits, the converter waits one character time (at 9600 baud) to disable the RS485 driver.

There are 3 LED's that can be viewed from the front of the converter module. A green power LED indicates power is on, a red RS232 TXD LED flashes when the module is transmitting, and a green RS232 RXD LED flashes when the module is receiving.

An external DC power source (+9 to 32 VDC) is required to power the ICM4. The external power source and serial communications connections are made via a 12 position removable terminal block located on the front of the module.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat profile rail according to EN50022 - 35 x 7.5 and 35 x 15, and G profile rail according to EN50035 - G32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to  
installation and operation of the unit.

### SPECIFICATIONS

- POWER:** +9 to 32 VDC @ 75 mA maximum. Above 26 VDC, derate max. operating temperature to 40°C. Power supply must be Class 2 or SELV rated.
- RS232 VOLTAGES:**  
**Receive Data Pin:** ± 30 VDC max.  
**Mark Condition:** ≤ 0.8 VDC  
**Space Condition:** ≥ 2.4 VDC  
**Transmit Data Pin:**  
**Mark Condition:** -8 VDC (typ.)  
**Space Condition:** +8 VDC (typ.)
- RS485 VOLTAGES:**  
**Differential Output Voltage:** ± 5 VDC max. under no load  
**Differential Input Voltage:** ± 5 VDC max.  
**Mark Condition:** ≤ -0.2 VDC  
**Space Condition:** ≥ +0.2 VDC  
**RS485 Drive Capability:** Up to 32 RS485 receivers connected in parallel.  
**RS485 Drive Disable Time:** 4 msec. max.
- MAXIMUM CABLE LENGTH:**  
**RS232:** 50 feet  
**RS485:** 4000 feet
- BAUD RATE:** 9600 min., 19200 max.
- CERTIFICATIONS AND COMPLIANCES:**

#### SAFETY

UL Recognized Component, File #E179259, UL3101-1, CSA C22.2 No. 1010-1

## SPECIFICATIONS (Cont'd)

### 7. ENVIRONMENTAL CONDITIONS:

**Operating Temperature Range:** 0 to 50°C. Derate max. operating temperature to 40°C above 26 VDC.

**Storage Temperature:** -40 to +75°C

**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0 to 50°C

**Altitude:** Up to 2000 meters

8. **CONSTRUCTION:** Case body is black, high impact plastic. Installation Category I, Pollution Degree 2.

9. **MOUNTING:** Standard DIN rail top hat (T) profile rail according to EN50022- 35 X 7.5 and 35 X 15

10. **WEIGHT:** 3.2 oz. (90.7 g)

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- DC power to the unit should be relatively clean and within the specified limits. Connecting power to the unit from circuits that power inductive loads that cycle on and off, such as contactors, relays, motors, etc., should be avoided. This will reduce the chance of noise spikes entering the DC power connection and affecting the unit.
- The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the unit to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.
- Never run Signal cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.
- Signal cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection.

Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

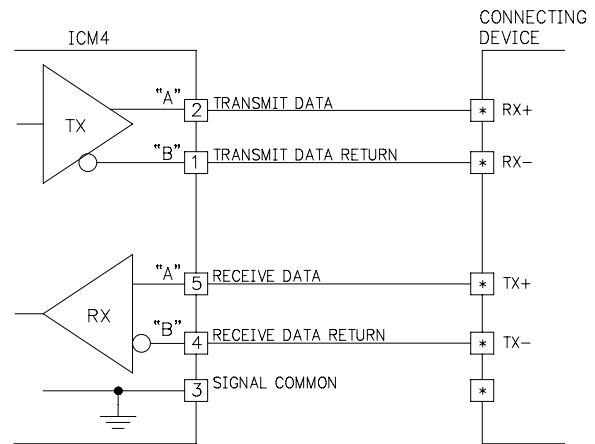

**Note:** Reference manufacturer's instructions when installing a line filter.

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

## SIDE VIEW OF ICM4

## TYPICAL RS422 CONNECTIONS

### Notes:

- Connect shield drain wire to earth ground.
- Place DIP switch on the side of the ICM4 in the 422 position.
- RS422 polarity: Terminal "A" is negative with respect to Terminal "B" in the mark (logic 1) condition.

### TYPICAL RS485 CONNECTIONS

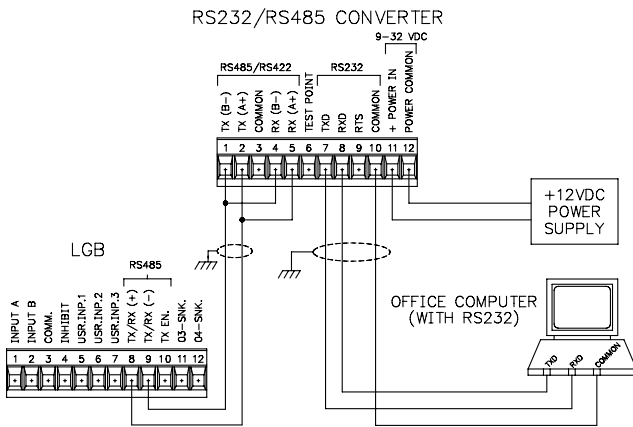

- Notes:**
1. Connect shield drain wire to earth ground.
  2. Place DIP switch on the side of the ICM4 in the 485 position.
  3. The transmit and receive data lines of the ICM4 should be wired together.

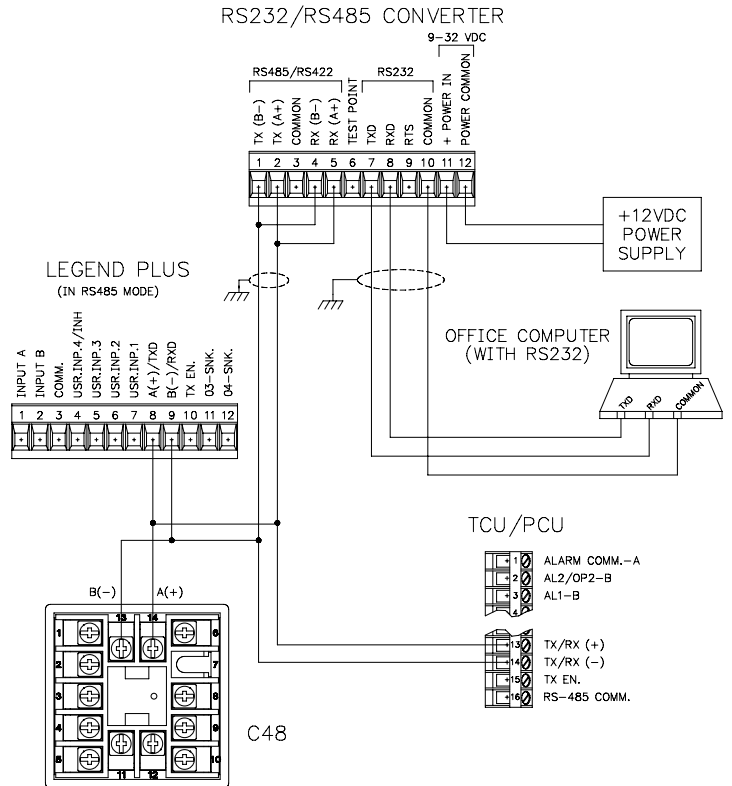

### TYPICAL RS232 CONNECTIONS

### TYPICAL CONNECTION FOR SINGLE UNIT

### TYPICAL CONNECTION FOR MULTIPLE UNITS

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32 , and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

### G Rail Installation

To install the ICM4 on a “G” style DIN rail, angle the module so that the upper groove of the “foot” catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

### T Rail Installation

To install the ICM4 on a “T” style rail, angle the module so that the top groove of the “foot” is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the “foot”, and pry upwards on the module until it releases from the rail.

## MODEL ICM5 – THREE WAY ISOLATED SERIAL CONVERTER MODULE (RS232C/RS485)

- 9 PIN D-SUB CONNECTOR FOR RS232 CONNECTION
- SWITCHABLE TERMINATION AND BIASING RESISTORS
- MODULAR RJ JACK OR SCREW TERMINAL FOR RS485 CONNECTION

- ALLOWS COMMUNICATIONS BETWEEN RS232 CONTROL EQUIPMENT AND PRODUCTS WITH RS422/RS485 SERIAL COMMUNICATIONS
- THREE WAY ISOLATION PROTECTS SERIAL EQUIPMENT FROM GROUND LOOPS (1000 VDC)
- AUTOMATIC RS485 DRIVER CONTROL
- DIP SWITCH SELECTABLE BAUD RATES 9600, 19200, 38400, 57600, 115200
- WIDE DC INPUT POWER RANGE (+9 to 26 VDC)
- HALF DUPLEX (RS485) AND FULL DUPLEX (RS422)
- LED INDICATION FOR RXD, TXD, and POWER
- UNIVERSAL MOUNTING FOOT FOR DIN RAIL INSTALLATION
- SELECTABLE DTE & DCE OPERATION WORKS WITH ANY RS232 CABLE

UL Recognized Component,  
File # E179259

### DESCRIPTION

The ICM5 Serial Converter Module provides the capability of interfacing equipment with RS485 serial communications to equipment with RS232 communications while providing three way isolation. Data format of the RS232 and RS485 equipment must be the same.

The unit can be configured for full duplex (RS422), or half duplex (RS485) operation. In half duplex mode, the RS485 driver is automatically enabled using the leading edge of the first character that is received on the RS232 side. After the last character is received, the converter waits one character time (at the selected baud rate) to disable the RS485 driver.

An external DC power source (+9 to 26 VDC) is required to power the ICM5. The external power source and RS485 communications connections are made via a 7-position removable terminal block located on the front of the module. A modular RS485 connector is also provided for fast and efficient connection to other Red Lion devices that use a modular connector. The RS232 connection is provided via a standard D-SUB 9-pin male connector. The ICM5 can be configured for DTE or DCE operation, allowing the use of modem or null-modem cables.

There are 3 LEDs that can be viewed from the front of the converter module. A green power LED indicates power is on, a red RS232 TXD LED flashes when the module is transmitting, and a green RS232 RXD LED flashes when the module is receiving.

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including top hat profile rail according to EN 50 022 - 35x7.5 and 35x15, and G profile rail according to EN 50 035 - G32.

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION:**  
Read complete instructions prior to  
installation and operation of the unit.

### SPECIFICATIONS

- POWER:** +9 to 26 VDC @ 125 mA maximum. 85 mA typical  
Power Supply must be Class 2 or SELV rated.
- RS232 VOLTAGES:**  
**Receive Data Pin:**  $\pm 30$  VDC max.  
**Mark Condition:**  $\leq 0.8$  VDC  
**Space Condition:**  $\geq 2.4$  VDC  
**Transmit Data Pin:**  
**Mark Condition:** -8 VDC (typ.)  
**Space Condition:** +8 VDC (typ.)
- RS485 VOLTAGES:**  
**Differential Output Voltage:**  $\pm 5$  VDC max. under no load  
**Differential Input Voltage:**  $\pm 5$  VDC max.  
**Mark Condition:**  $\leq -0.2$  VDC  
**Space Condition:**  $\geq +0.2$  VDC  
**RS485 Drive Capability:** Up to 32 RS485 receivers connected in parallel  
**RS485 Drive Disable Time:** one character time (at the set baud rate)
- MAXIMUM CABLE LENGTH:**  
**RS232:** 50 feet (15.24 m)  
**RS485:** 4000 feet (1219.2 m)
- BAUD RATE:** 9600 min., 115200 max.
- ISOLATION:** 1000 VDC
- ENVIRONMENTAL CONDITIONS:**  
**Operating Temperature Range:** 0 to 50°C.  
**Storage Temperature:** -40 to +75°C  
**Operating and Storage Humidity:** 85% max. relative humidity (non-condensing) from 0 to 50°C  
**Altitude:** Up to 2000 meters

## 8. CERTIFICATIONS AND COMPLIANCES:

### SAFETY

UL Recognized Component, File #E179259, UL3101-1, CSA 22.2 No. 1010-1  
 Recognized to U.S. and Canadian requirements under the Component  
 Recognition Program of Underwriters Laboratories, Inc.  
 IEC CB Scheme Test Certificate #US/5141A/UL,  
 CB Scheme Test Report #01ME11540-0702001  
 Issued by Underwriters Laboratories, Inc.  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment  
 for measurement, control, and laboratory use, Part 1.

### ELECTROMAGNETIC COMPATIBILITY

#### Immunity to EN 50082-2

Electrostatic discharge	EN 61000-4-2	Level 2; 4 Kv contact <sup>1</sup> Level 3; 8 Kv air <sup>1</sup>
Electromagnetic RF fields	EN 61000-4-3	Level 3; 10 V/m 80 MHz - 1 GHz
Fast transients (burst)	EN 61000-4-4	Level 4; 2 Kv I/O Level 3; 2 Kv power
RF conducted interference	EN 61000-4-6	Level 3; 10 V/rms 150 KHz - 80 MHz

#### Emissions to EN 50081-1

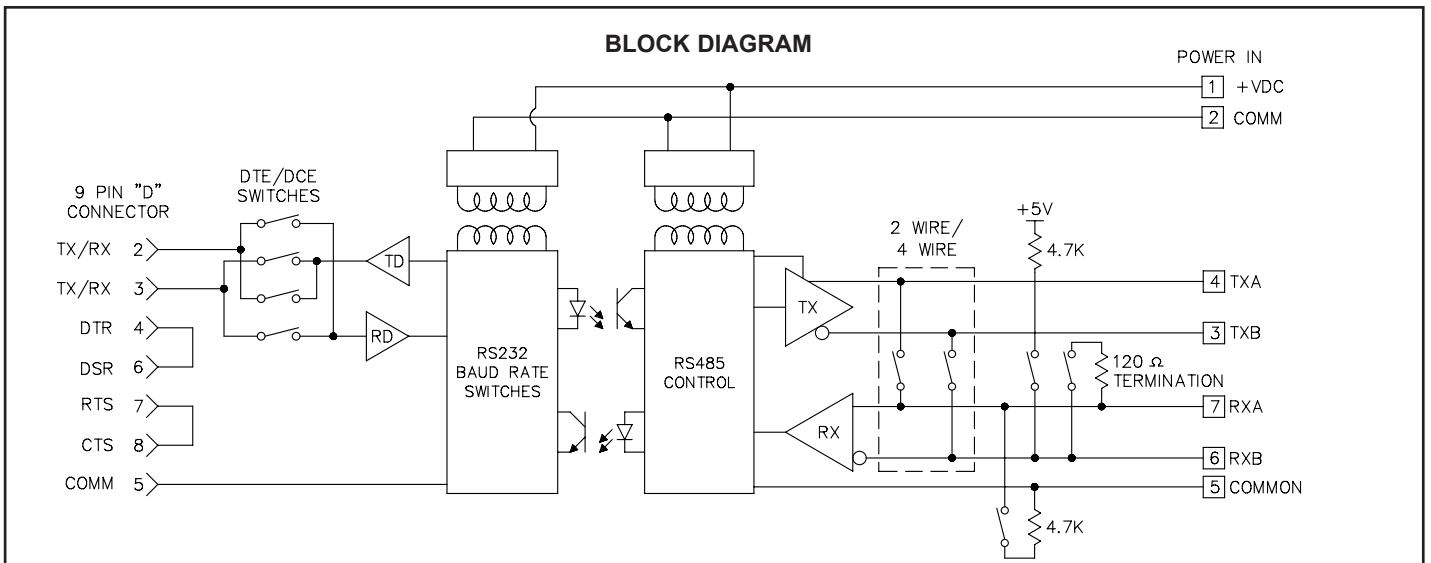

RF interference	EN 55022	Enclosure class B Power mains class B
-----------------	----------	--

### Note:

1. This device was designed for installation in an enclosure. To avoid electrostatic discharge to the unit in environments with static levels above 4 Kv, precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure, (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the unit.

Refer to EMC Installation Guidelines for additional information.

- CONSTRUCTION:** Case body is black, high impact plastic. Installation Category I, Pollution Degree 2.
- MOUNTING:** Standard DIN rail top hat (T) profile rail according to EN50022- 35 X 7.5 and 35 X 15
- WEIGHT:** 3.3 oz. (93.6 g)

## EMC INSTALLATION GUIDELINES

Although this unit is designed with a high degree of immunity to ElectroMagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of electrical noise, source or coupling method into the unit may be different for various installations. In extremely high EMI environments, additional measures may be needed. Cable length, routing and shield termination are very important and can mean the difference between a successful or a troublesome installation. Listed below are some EMC guidelines for successful installation in an industrial environment.

- DC power to the unit should be relatively clean and within the specified limits. Connecting power to the unit from circuits that power inductive loads that cycle on and off, such as contactors, relays, motors, etc., should be avoided. This will reduce the chance of noise spikes entering the DC power connection and affecting the unit.
- The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - Connect the shield only at the unit to earth ground (protective earth).
  - Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is above 1 MHz.
  - Connect the shield to common of the unit and leave the other end of the shield unconnected and insulated from earth ground.

- Never run Signal cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run in metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter.

- Signal cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
- In extremely high EMI environments, the use of external EMI suppression devices, such as ferrite suppression cores, is effective. Install them on Signal cables as close to the unit as possible. Loop the cable through the core several times or use multiple cores on each cable for additional protection.

Install line filters on the power input cable to the unit to suppress power line interference. Install them near the power entry point of the enclosure. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal cables:

Fair-Rite # 0443167251 (RLC #FCOR0000)

TDK # ZCAT3035-1330A

Steward #28B2029-0A0

Line Filters for input power cables:

Schaffner # FN610-1/07 (RLC #LFIL0000)

Schaffner # FN670-1.8/07

Corcom #1VR3

**Note:** Reference manufacturer's instructions when installing a line filter.

- Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.

### SIDE VIEW OF ICM5

### DIP SWITCH SETTINGS

#### Top Bank of 10 Switches

##### Switches 1-5 - BAUD

Select the appropriate baud rate. This adjusts the time delay for the automatic RS485 driver controller. Only one of the baud switches should be in the ON position.

##### Switches 6-7 - PULL UP / PULL DOWN

These switches connect 4.7 KΩ biasing resistors to the A and B lines of the 485 receiver. To minimize loading of the network, these should only be used if no other device in the system provides biasing.

##### Switches 8-9 - OFF 4 WIRE / ON 2 WIRE

These switches can be used to internally jumper the A and B lines of the RS485 driver and receiver together. This allows 2-wire operation without the use of external jumper wires. To use the RJ-11 connector, the ICM5 must be in 2-wire mode. Both switches should be in the same position.

##### Switch 10 - 120 Ω TERMINATION

This switch connects a 120 Ω resistor across the A and B lines of the RS485 receiver. The use of the resistor prevents signal reflection, or echoing, at high baud rates, over long distances. This should only be turned on if the ICM5 is the first, or last, device in a multi-drop network that is experiencing reflection due to long cable distances.

#### Bottom Bank of 7 Switches

##### Switches 1-2 - OFF 422 / ON 485

These switches enable and disable the automatic RS485 driver control. In the 422 position, the driver is always enabled, allowing 4-wire full duplex operation. In the 485 position, the driver is enabled as soon as characters are received on the RS232 side. When the RS485 driver has transmitted the last character, it waits one character time (at the selected baud rate), and then enters a high-impedance state. The receiver is also enabled and disabled in a similar fashion to prevent transmitted characters from being echoed back. This allows 2-wire, half-duplex operation, without the use of handshake lines. Both switches should be in the same position.

##### Switch 3 - N/C

No Connection

##### Switches 4-7 - OFF DCE / ON DTE

These switches configure the RS232 port to act as a DCE or DTE device. With all of the switches in the DCE position, pin 2 of the DB-9 connector is the RS-232 receiver, and pin 3 is the RS232 transmitter. DTE configures pin 2 as the transmitter, and pin 3 as the receiver. These switches allow the use of modem or null-modem cables. All of these switches should be in the DCE or DTE position. No other combinations are valid.

### DEFAULT SETTINGS

BAUD RATE 9600  
DCE

Connect shield (drain wire) to earth ground.

\* - Application Dependent

## TYPICAL CONNECTION FOR RS485 DEVICES

## TYPICAL RS485 CONNECTIONS USING RJ-11

## CONNECTING TO PARADIGM INTERFACE

## INSTALLATION

The unit is equipped with a universal mounting foot for attachment to standard DIN style mounting rails, including G profile rail according to EN50035 - G32, and top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15. The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

### G Rail Installation

To install the ICM5 on a "G" style DIN rail, angle the module so that the upper groove of the "foot" catches under the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, push up on the bottom of the module while pulling out away from the rail.

### T Rail Installation

To install the ICM5 on a "T" style rail, angle the module so that the top groove of the "foot" is located over the lip of the top rail. Push the module toward the rail until it snaps into place. To remove a module from the rail, insert a screwdriver into the slot on the bottom of the "foot", and pry upwards on the module until it releases from the rail.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
ICM5	RS232/RS485 Converter Module	ICM50000
CBJ	6" RJ-11 Jumper Cable	CBJ11BD5

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

## MODEL ICM8 – COMMUNICATION GATEWAY

- COMMUNICATION GATEWAY FOR RED LION PRODUCTS
- PROTOCOLS AVAILABLE: RS232, RS485 AND ETHERNET
- PROGRAMMABLE VIA CRIMSON SOFTWARE
- USB PROGRAMMING PORT
- EXTENSIVE BUILT-IN DRIVER LIST ALLOWS EASY DATA MAPPING TO PLCs, PCs, AND SCADA SYSTEMS
- 10 BASE-T/100 BASE-TX ETHERNET CONNECTION CAN CONNECT TO AN UNLIMITED NUMBER OF DEVICES VIA FOUR PROTOCOLS SIMULTANEOUSLY

### GENERAL DESCRIPTION

The ICM8 is designed to act as a communication gateway offering multiple protocol conversion for any Red Lion Product. With two serial ports (one RS232 and one RS485) and a 10 Base-T/100 Ethernet Port, the unit performs protocol conversion, allowing disparate devices to communicate seamlessly with one another. Programming the unit can be accomplished via the RS232 or the USB Port using Crimson Software. It is important to note that this device is designed to function with Red Lion Product and will not offer protocol conversion if a Red Lion Products is not connected to at least one of the serial ports.

The ICM8'S DIN rail mounting saves time and panel space and snaps easily onto standard top hat (T) profile DIN rail.

### SOFTWARE

The ICM8 is programmed with Windows® compatible Crimson 2.0 software. The software is an easy to use graphical interface which can be purchased as part of a kit that includes a manual and cables, or downloaded free of charge from [www.redlion.net](http://www.redlion.net).

### SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use the controller to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the controller. An independent and redundant temperature limit indicator with alarm outputs is strongly recommended.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

### SPECIFICATIONS

1. **POWER:** 24 VDC  $\pm$  10% 200 mA max. Must use a Class 2 or SELV rated power supply.
2. **COMMUNICATIONS:**
  - USB/PG Port:** Adheres to USB specification 1.1. Device only using Type B connection.
  - Serial Ports:** Format and Baud Rates for each port are individually software programmable up to 115,200 baud.
  - RS232/PG Port:** RS232 port via RJ12
  - COMMS Ports:** RS485 port via RJ11
  - Ethernet Port:** 10 BASE-T / 100 BASE-TX
3. **LEDs:**
  - STS – Status LED indicates condition of ICM8.
  - TX/RX – Transmit/Receive LEDs show serial activity.
  - Ethernet – Link and activity LEDs.
4. **MEMORY:**
  - On-board User Memory: 4 Mbytes of non-volatile Flash memory.
  - On-board SDRAM: 2 Mbytes

### DIMENSIONS In inches (mm)

**Immunity to Industrial Locations:**

Electrostatic discharge	EN 61000-4-2	Criterion B <sup>3</sup> 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion B 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion A 1kV L-L, 2 kV L&N-E power
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms

**Emissions:**

Emissions	EN 55011	Class A
-----------	----------	---------

*Notes:*

1. *Criterion A: Normal operation within specified limits.*
2. *Criterion B: Temporary loss of performance from which the unit self-recovers.*
3. *This device was designed for installation in an enclosure. To avoid electrostatic discharge to the unit in environments with static levels above 4 kV precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the unit.*

6. ENVIRONMENTAL CONDITIONS:

Operating Temperature Range: 0 to 50°C  
 Storage Temperature Range: -30 to +70°C  
 Operating and Storage Humidity: 80% max relative humidity, non-condensing, from 0 to 50°C  
 Altitude: Up to 2000 meters

7. **CONSTRUCTION:** Case body is black high impact plastic and stainless steel. Installation Category I, Pollution Degree 2.
8. **POWER CONNECTION:** Removable wire clamp screw terminal block. Wire Gage Capacity: 24 AWG to 12 AWG  
Torque: 4.45 to 5.34 in/lb (0.5 to 0.6 N-m)
9. **MOUNTING:** Snaps onto standard DIN style top hat (T) profile mounting rails according to EN50022 -35 x 7.5 and -35 x 15.
10. **WEIGHT:** 12.3 oz (348g)

**HARDWARE INSTALLATION**

**Figure 1 - Attach ICM8 To DIN Rail**

**POWER SUPPLY REQUIREMENTS**

It is very important that the power supply is mounted correctly if the unit is to operate reliably. Please take care to observe the following points:

- The power supply must be mounted close to the unit, with usually not more than 6 feet (1.8 m) of cable between the supply and the ICM8. Ideally, the shortest length possible should be used.
- The wire used to connect the ICM8's power supply should be at least 22-gage wire. If a longer cable run is used, a heavier gage wire should be used. The routing of the cable should be kept away from large contactors, inverters, and other devices which may generate significant electrical noise.
- A power supply with a Class 2 or SELV rating is to be used. A Class 2 or SELV power supply provides isolation to accessible circuits from hazardous voltage levels generated by a mains power supply due to single faults. SELV is an acronym for "safety extra-low voltage." Safety extra-low voltage circuits shall exhibit voltages safe to touch both under normal operating conditions and after a single fault, such as a breakdown of a layer of basic insulation or after the failure of a single component has occurred.

## EMC INSTALLATION GUIDELINES

Although Red Lion Controls Products are designed with a high degree of immunity to Electromagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into a unit may be different for various installations. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed are some EMI guidelines for a successful installation in an industrial environment.

1. To reduce the chance of noise spikes entering the unit via the power lines, connections should be made to a clean source. Connecting to circuits that also power loads such as contactors, relays, motors, solenoids etc. should be avoided.
2. The unit should be mounted in a metal enclosure, which is properly connected to protective earth.
3. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.
  - a. Connect the shield to earth ground (protective earth) at one end where the unit is mounted.
  - b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is over 1 MHz.
  - c. Connect the shield to common of the Data Station and leave the other end of the shield unconnected and insulated from earth ground.

4. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run through metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter. Also, Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. In extremely high EMI environments, the use of external EMI suppression devices is effective. The following EMI suppression devices (or equivalent) are recommended:

Ferrite Suppression Cores for signal and control cables:

Fair-Rite part number 0443167251 (RLC part number FCOR0000)

TDK part number ZCAT3035-1330A

Steward part number 28B2029-0A0

Line Filters for input power cables:

Schaffner part number FN610-1/07 (RLC part number LFIL0000)

Schaffner part number FN670-1.8/07

Corcom part number 1 VR3

Visit RLC's web site at [www.redlion.net](http://www.redlion.net) for more information on EMI guidelines, Safety and CE issues as they relate to Red Lion Controls products.

## TROUBLESHOOTING

1. This module is designed to operate with Red Lion panel meters only. Please make sure a Red Lion product is connected to either one of the two serial ports for the gateway to be active.
2. The Ethernet port is equipped with data LEDs. If they are blinking, the converter is active and the data is available at the port. Please verify the receiving equipment is properly programmed.
3. If for any reason you have trouble operating, connecting, or simply have questions concerning your new ICM8, contact Red Lion's technical support. For contact information, refer to the back page of this bulletin for phone and fax numbers.

EMAIL: [techsupport@redlion.net](mailto:techsupport@redlion.net)  
 Web Site: <http://www.redlion.net>

## COMMUNICATING WITH THE ICM8

### CONFIGURING THE ICM8

The ICM8 is configured using Crimson 2.0 software. Crimson 2.0 is available as a free download from Red Lion's website, or it can be ordered on CD. Updates to Crimson 2.0 for new features and drivers are posted on the website as they become available. By configuring the ICM8 using the latest version of Crimson 2.0, you are assured that your unit has the most up to date feature set. Crimson 2.0 software can configure the ICM8 through the RS232/PG port or USB/PG port. The USB/PG port is connected using a standard USB cable with a Type B connector.

The driver needed to use the USB port will be installed with Crimson 2.0. The RS232/PG port uses a programming cable made by Red Lion to connect to the DB9 COM port of your computer. If making your own cable, refer to the "ICM8 Port Pin Outs" for wiring information.

### CABLES AND DRIVERS

Red Lion has a wide range of cables and drivers for use with many different communication types. A list of these drivers and cables along with pin outs is available from Red Lion's website. New cables and drivers are added on a regular basis. If making your own cable, refer to the "ICM8 Port Pin Outs" for wiring information.

### ETHERNET COMMUNICATIONS

Ethernet communications can be established at either 10 BASE-T or 100 BASE-TX. The Crimson 2.0 manual contains additional information on Ethernet communications.

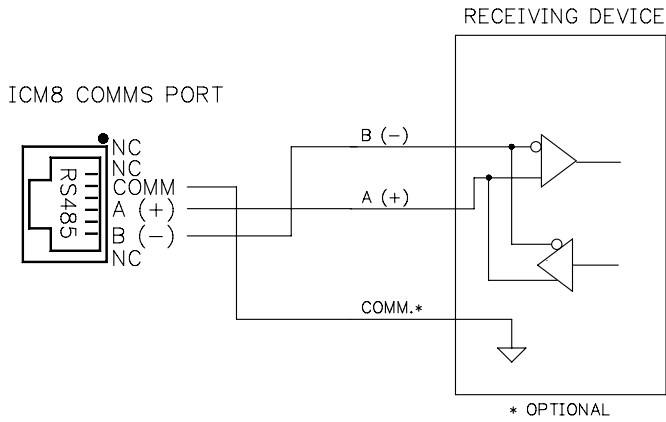

### RS232 PORTS

The ICM8 has one RS232 port. The port can be used for programming or communications.

## RS485 PORT

The ICM8 has one RS485 port.

*Note: All Red Lion devices connect A to A and B to B, except for Paradigm devices. Refer to [www.redlion.net](http://www.redlion.net) for additional information.*

## LEDS

### STS – STATUS LED

The green Status LED provides information regarding the state of the ICM8. This includes indication of the various stages of the start-up routine (power-up), and any errors that may occur.

### Startup Routing

	INDICATION
Rapidly Flashing	ICM8 is currently running the boot loader and/or being flash upgraded by Crimson
Steady	ICM8 is operating properly

### USER COMMUNICATION PORTS - TX/RX LEDES

LED	INDICATION
GREEN	Transmitting
RED	Receiving

### ETHERNET LEDES

LED	INDICATION
YELLOW (Solid)	Link Established
YELLOW (Flashing)	Network Activity
GREEN	10 BASE-T Communications
AMBER	100 BASE-T Communications

<sup>1</sup> Contact your Red Lion distributor or visit our website for complete selection.

<sup>2</sup> Use this part number to purchase Crimson on CD with a printed manual, USB cable, and RS-232 cable. Otherwise, download free of charge from [www.redlion.net](http://www.redlion.net).

<sup>3</sup> Red Lion offers RJ modular jack adapters. Refer to the DR literature for complete details.

# SWITCH08 - DIN RAIL MOUNTED 8 PORT ETHERNET SWITCH

- UNMANAGED SWITCH REQUIRES NO CONFIGURATION
- SUPPORTS 10/100 MDPS NETWORK
- AUTO HALF/FULL DUPLEX NEGOTIATION
- AUTO-CROSSING DETECTION SUPPORTS STANDARD AND CROSSOVER ETHERNET CABLES

UL Recognized Component,  
File # E244362

## DESCRIPTION

The SWITCH08 is an eight-port Ethernet switch designed to simplify network expansion, while improving the network's efficiency. Eight 10/100 Base-T ports, with auto negotiation of half or full duplex connections requires no setup, reducing installation time. The SWITCH08 also offers an auto-crossing feature, which allows connections to be made with any combination of standard or crossover Ethernet cables.

The SWITCH08 may be powered with two DC sources, allowing for redundancy in critical applications. A relay output provides a warning signal if the backup supply fails, ensuring continued operation when needed.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

CAUTION: Read complete instructions prior to installation and operation of the unit.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
SWITCH	8-Port Ethernet Switch	SWITCH08

## SPECIFICATIONS

- POWER:** 24 VDC  $\pm 20\%$ , 4.8 W
- RELAY OUTPUT:** Single N.C. 24 VDC @ 100 mA max.
- LEDs:**
  - V1+ and V2+ - On when proper voltage is present at respective terminal
  - Link/Act - On indicates link established; blinking indicates network activity on the port.
  - 100 - On indicates 100 Mbps connection established; off indicates 10 Mbps connection.
- ENVIRONMENTAL CONDITIONS:**
  - Operating Temperature Range:** 0 to +55°C
  - Storage Temperature Range:** -20 to +70°C
  - Operating and Storage Humidity:** 30-95%, non-condensing
  - Altitude:** Up to 1500 meters
- CONSTRUCTION:** Brushed aluminum housing.
- CONNECTIONS:**
  - POWER:** Removable wire clamp screw terminal block.
  - Wire Gage Capacity:** 24 AWG to 12 AWG
  - Torque:** 4.45 to 5.34 in/lb (0.5 to 0.6 N-m)
  - ETHERNET:** 8-position RJ-45 female connector
- MOUNTING:** Snaps onto standard DIN style top hat (T) profile mounting rails according to EN50022 -35 x 7.5 and -35 x 15.

## 8. CERTIFICATIONS AND COMPLIANCES:

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion B
Electromagnetic RF fields	EN 61000-4-3	Criterion A
Fast transients (burst)	EN 61000-4-4	Criterion A
Surge	EN 61000-4-5	Criterion B
RF conducted interference	EN 61000-4-6	Criterion A
Magnetic interference	EN 61000-4-8	Criterion A
Emissions	EN 55022	Class A

### Mechanical:

Shock	IEC 60068-2-27	Operation: 25g, 11 msec period, half-sine shock pulse
		Storage: 50g, 11 msec period, half-sine shock pulse
Vibration	IEC 60068-2-6	Operation/Storage: 5g, 150 Hz Criterion 3
Fall	IEC 60068-2-32	3.281 ft (1 m)

9. **WEIGHT:** 0.61 lbs. (0.27 Kg)

## POWER

The SWITCH08 can be powered in various configurations with either one or two +24 VDC SELV power supplies. How it is wired depends on whether or not a backup power supply is desired for failsafe operation. (For example, if the relay isn't used, a single power supply may be connected to +V1 only.)

**NOTE: MUST USE SELV POWER SUPPLIES**

## RELAY OUTPUT

The N.C. relay output remains closed as long as the proper voltage is present at both +V1 and +V2 terminals. In the event of a voltage failure at one of the terminals, the contact is opened. This may be used to signal other systems that one of the power supplies has failed.

## MOUNTING

Mount the SWITCH08 to a grounded standard DIN rail. The switch will be grounded once it is snapped onto the rail. Additionally the noise immunity can be improved in environments with high electromagnetic smog by a low-impedance connection to the functional earth through terminal 7.

**NOTE: The SWITCH08 module was designed for use with SELV in accordance with IEC 950 / EN 60950 / VDE 0805**

# MODEL HESS - HALL EFFECT SPEED SENSOR

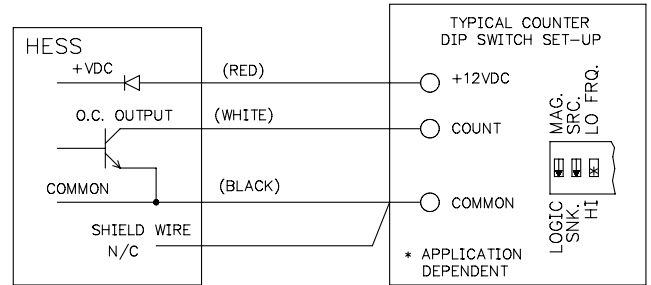

- DETECTS STEEL SENSING GEARS OR OTHER FERROUS TARGETS
- NPN OPEN COLLECTOR OUTPUT
- OPERATES FROM 0 TO 10 KHz
- 3/8" DIAMETER STAINLESS STEEL CASE
- EPOXY ENCAPSULATED FOR OIL, DIRT & MOISTURE RESISTANCE
- IDEAL FOR TACHOMETRIC INPUTS

## DESCRIPTION

The Hall Effect speed sensor (HESS) is ideal for sensing steel gears or other ferrous targets from 0 to 10 KHz. This sensor does not have a minimum threshold speed as does a magnetic pickup sensor. However, when the sensor is first powered up, the output state is indeterminate (*Hi or Lo*) when the sensor is not detecting metal. The unit operates from a +8 to +30 VDC power supply and is reverse polarity protected. The sensor face can be mounted flush into metal panels. The case is stainless steel and is supplied with 10 feet (3 M) of cable. The stranded shield wire is not connected to the sensor circuit or case.

## SPECIFICATIONS

1. **POWER SUPPLY:** +8 to +30 VDC @ 30 mA max.; reverse polarity protected.
  2. **MAXIMUM SENSING DISTANCE:** 0.040" (1 mm).
  3. **OUTPUT:** NPN O.C. transistor;  $V_{MAX} = 30$  VDC;  $V_{SAT} = 1 V_{MAX}$  @ 30 mA max. load.
  4. **OPERATING TEMPERATURE RANGE:** -25°C to 70°C (-14°F to 158°F).
  5. **CABLE LENGTH:** 10 feet (3.05 M).
  6. **OPERATING FREQUENCY:** 0 to 10 KHz.
  7. **WIRE:** 3 wire, 22 AWG with stranded shield wire and 100% foil coverage; grey PVC jacket.
- Color Code:** Red (+VDC), Black (Comm.), White (Output).
8. **CABLE STRAIN RELIEF:** 10 lbs. (4.5 Kg.) for 1 minute.
- Note: DO NOT adjust sensor air gap while target (gear) is moving.*

## TARGET SIZE

The HESS can detect gears as small as 24 D.P. or other ferrous targets with equal or greater dimensions. The sensor is compatible with all Red Lion Controls Sensing Gears.

# MODEL PSAH - HALL EFFECT SPEED SENSOR

I

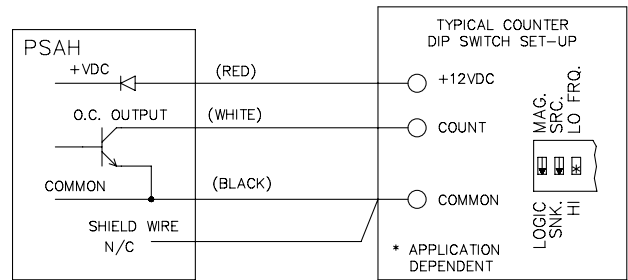

- DETECTS STEEL SENSING GEARS OR OTHER FERROUS TARGETS
- NPN OPEN COLLECTOR OUTPUT
- OPERATES FROM 0 TO 10 KHz
- IDEAL FOR RATE APPLICATIONS

## DESCRIPTION

The Hall Effect speed sensor (PSAH) is ideal for sensing steel gears or other ferrous targets from 0 to 10 KHz. This sensor does not have a minimum threshold speed as does a magnetic pickup sensor. However, when the sensor is first powered up, the output state is indeterminate (*Hi or Lo*) when the sensor is not detecting metal. The unit operates from a +8 to +30 VDC power supply and is reverse polarity protected. The sensor face can be mounted flush into metal panels. The case is stainless steel and is supplied with 10 feet (3 M) of cable. The stranded shield wire is not connected to the sensor circuit or case.

## SPECIFICATIONS

1. **POWER SUPPLY:** +8 to +30 VDC @ 30 mA max.; reverse polarity protected.
2. **MAXIMUM SENSING DISTANCE:** 0.040" (1 mm).
3. **OUTPUT:** NPN O.C. transistor;  $V_{MAX} = 30$  VDC;  $V_{SAT} = 1 V_{MAX}$  @ 30 mA max. load.
4. **OPERATING FREQUENCY:** 0 to 10 KHz.
5. **OPERATING TEMPERATURE RANGE:** -25°C to 70°C (-14°F to 158°F).
6. **OUTPUT CABLE:** Integrally potted 10 ft PVC jacketed, 3 wire, 22 AWG conductors, with stranded shield wire and 100% foil coverage; grey PVC jacket.  
**Color Code:** Red (+VDC), Black (Comm.), White (NPN OC Output).
7. **CONSTRUCTION:** Epoxy encapsulated 0.297 sensor in 0.75" ±0.005" dia. #304 stainless steel case.

## TARGET SIZE

# INDUCTIVE PROXIMITY SENSORS

- SENSE FERROUS & NON-FERROUS METAL OBJECTS TO "ZERO SPEED"
- 2-WIRE CURRENT SOURCE (NAMUR) & 3-WIRE NPN TRUE OPEN COLLECTOR OUTPUTS
- 5 SIZES & 3 SENSING DISTANCES FOR APPLICATION VERSATILITY
- L.E.D. TARGET INDICATOR (PSA 2B, 6B, 7B, & 8B)

## DESCRIPTION & OPERATION

Inductive Proximity Sensors detect the presence of metal objects which come within range of their oscillating field and provide target detection to "zero speed". Internally, an oscillator creates a high frequency electromagnetic field (RF) which is radiated from the coil and out from the sensor face (See Figure 1). When a metal object enters this field, eddy currents are induced into the object.

As the metal moves closer to the sensor, these eddy currents increase and result in an absorption of energy from the coil which dampens the oscillator amplitude until it finally stops.

Figure 1

## MODELS PSA-1B & 2B

The 2-wire Models PSA-1B and 2B contain only the coil and oscillator circuit (See Figure 2). With no metal object being sensed, the circuit oscillates and draws greater than 2.2 mA of supply current. As a metal object of sufficient size is brought into the sensing field, the oscillator amplitude dampens and finally stops, resulting in less than 1 mA of circuit current being drawn. This greater than 2.2 mA to less than 1 mA change in circuit current between oscillating and non-oscillating conditions is converted into a usable voltage signal ( $V_s$ ) by placing a resistor ( $R_s$ ) in series with the sensor leads.

Figure 2

## PSA-1B & PSA-2B SPECIFICATIONS

	PSA-1B	PSA-2B
1. Power Supply:	+5 to +30 VDC	
2. Maximum Switching Frequency:	5 KHz	500 Hz
3. Output:	Less than 1 mA Target Sensed; Greater than 2.2 mA No Target.	
4. Maximum Sensing Distance:	0.059" (1.5 mm)	0.394" (10 mm)
5. Wire Color Code:	Brown = +VDC; Blue = Count	
6. Operating Temperature:	-25°C to +70°C (-14°F to +158°F)	
7. Construction:	NEMA 1, 3, 4, 6, 13, and IEC IP 67.	

## DIMENSIONS In inches (mm)

### PSA-1B

### PSA-2B

In addition to the coil and oscillator circuit, the 3-wire Models PSA-6B, 7B, and 8B each contain a Detector Circuit and NPN Transistor Output (See Figure 3). In these units, the Detector Circuit senses when the oscillator stops, and turns on the Output Transistor which controls the load. The Detector Circuit also turns on an integrally case mounted L.E.D., visually indicating when a metal object is sensed.

Figure 3

### PSA-6B, 7B, & 8B

These Inductive Proximity Sensors have a maximum sensing distance of 0.059" (1.5 mm), 0.197" (5 mm) and 0.394" (10 mm) respectively, and operate over a wide power supply range (See Specifications Below). They are each housed in threaded metal cases and are supplied with 2 metal jam nuts for mounting. The NPN transistor outputs are true open collector and are compatible with most RLC counter and rate input circuits. Maximum sensing frequencies are 2 KHz, 1 KHz, and 500 Hz respectively. In addition, the outputs are overload and short circuit protected. These sensors are shielded for flush mounting in metal applications.

2. PSA 7B & 8B case = chromed brass.
3. PVC Cable Jacket.

## SELECTION & APPLICATION OF PROXIMITY SENSORS

Selection of the proper proximity sensor depends on the size, material, and spacing of the target being sensed and the sensing distance that can be maintained. The maximum sensing distance is defined as the distance in which the sensor is just close enough to detect a ferrous target whose diameter is equal to or greater than the sensor diameter. In actual application, the sensing distance should be between 50 to 80% of the maximum sensing range to assure reliable detection. For target sizes smaller than the sensor diameter, the maximum sensing distance can be estimated from the curve (See Figure 4). A further reduction factor must also be applied if the target material is non-ferrous metal (See Figure 5). Ideally, spacing between adjacent targets should be at least one sensor diameter so that the first target completely leaves the sensors field before the next target appears. Individual targets can still be resolved as separate objects if this spacing is reduced to 70 or 75% of the sensor diameter, however, this can introduce a minimum limit on sensing distance that makes adjustment more critical. All Proximity sensors are internally shielded which allows the sensor face to be flush mounted in metal applications without reducing sensing distance. In applications where proximity sensors must be placed next to each other, a distance of at least 1 sensor diameter should separate sensors to eliminate any frequency interference (See Figure 6).

### MAXIMUM SENSING DISTANCE REDUCTION FACTORS

Typical reduction factors for various non-

MINIMUM SENSOR

### SPACING

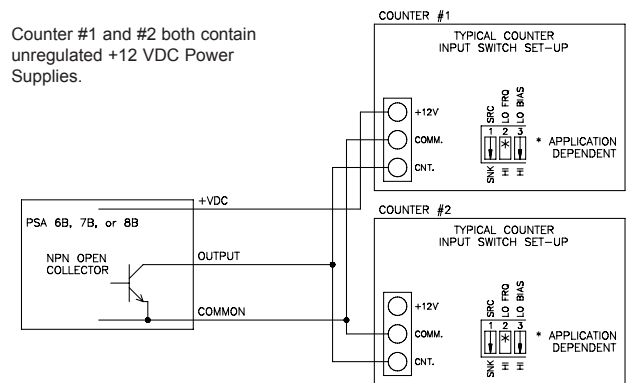

Figure 6

Note: PSA-6B, 7B, and 8B outputs are NPN open collector outputs. A PSA-6B, 7B, or 8B may be used as an input to more than 1 indicator or control only if the respective power supplies of each unit are "unregulated" and can load share. It is recommended to use only one power supply for sensor power. An indicator or control with a regulated power supply may not be paralleled.

Counter #1 and #2 both contain unregulated +12 VDC Power Supplies.

## TYPICAL HOOK-UPS

## APPLICATION SELECTION CHART

	PSA-1B	PSA-2B	PSA-6B	PSA-7B	PSA-8B

# MODEL PSAC - 3-WIRE INDUCTIVE PROXIMITY SENSOR WITH CURRENT SINK OUTPUT

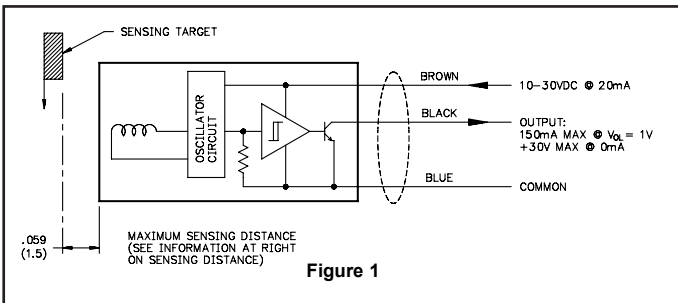

## DESCRIPTION

The PSAC offers a NPN Open Collector output that is compatible with most Red Lion Controls' Motion Monitors, Counters, and Controls. This sensor has a maximum sensing distance of 0.059" (1.5 mm) and can detect ferrous and non-ferrous metal targets from zero speed to 5 KHz.

The 0.25" diameter pole piece is epoxy encapsulated in a stainless steel case measuring 0.75" Dia. x 3.5" L and is supplied with a 10, 25 or 50 ft., 3-wire, cable. Overall dimensions, including the neoprene strain-relief boot are 0.90" Dia. x 4.5" L. Operating temperature range is -25° to +70°C.

## SPECIFICATIONS

- SUPPLY VOLTAGE:** +10 - 30 VDC @ 20 mA max.; **Unit is not Reverse Polarity Protected.**
- MAXIMUM SWITCHING FREQUENCY:** 5 KHz
- OUTPUT:** NPN Open Collector Transistor;  
 $V_{OH} = 30$  VDC max.;  $V_{OL} = 1$  V max @ 150 mA.
- MAXIMUM SENSING DISTANCE:** 0.059" (1.5 mm)
- OUTPUT CABLE:** Integrally potted 10, 25, or 50 ft. PUR jacketed 3-wire 24 AWG conductors.  
**BROWN** = +VDC, **BLUE** = Common, **BLACK** = NPN O.C. Output
- OPERATING TEMPERATURE RANGE:** -25°C to +70°C (13°F to +158°F)
- CONSTRUCTION:** Epoxy Encapsulated 0.25" dia. sensor in 0.750"  $\pm$ 0.005" dia. #304 stainless steel case.

## 3/4" DIAMETER CYLINDRICAL SENSOR MOUNTING

The PSAC and other Red Lion Controls 3/4" dia. cylindrical pickups may be easily mounted using Model 5400100 **BLOCK MOUNT** (see diagram at right). This machined block of solid aluminum provides for rigid mounting using the 2 included #8-32 x 1/2" screws. The one screw split-clamp design allows for easy adjustment of airgap and locks the unit securely without deforming the case. Alternative plug mounts are available. See Model LMP for details.

- SENSE FERROUS AND NON-FERROUS METAL OBJECTS
- OPERATES FROM ZERO TO 5 KHZ PULSE OUTPUT RATE
- SENSES TARGETS AS SMALL AS 12 D.P. GEAR TEETH
- IDEAL FOR TACHOMETER, COUNTER AND CONTROL INPUT

## PSAC APPLICATION

PSAC application depends on the size, material, and spacing of the targets being sensed and the sensing distance that can be maintained. The maximum sensing distance is defined as that distance where the sensor is just close enough to detect a ferrous target whose diameter is equal to or greater than the sensor diameter. For the PSAC, the internally potted sensor diameter is 0.25". In an actual application the sensing distance should be between 50-70% of the maximum to assure reliable detection. For target sizes smaller than the 0.25" sensor diameter, the maximum sensing distance can be estimated from the curve in Fig. 2. A further reduction factor must also be applied if the target material is a non-ferrous metal as shown in Fig. 3.

Ideally, spacing between adjacent targets should be at least 0.25" so that the first target completely leaves the sensors' viewing field before the next target appears. Individual targets can still be resolved as separate objects if this spacing is reduced to 70 or 75% of the sensor diameter, however this can introduce a minimum limit on sensing distance that makes adjustment a bit more critical.

The PSAC is internally shielded which allows the sensor face to be flush mounted in metal applications without reducing sensing distance.

## ORDERING INFORMATION

# “FLAT PACK” RECTANGULAR INDUCTIVE PROXIMITY SENSORS

- IDEAL FOR LIMITED SPACE APPLICATIONS
- SENSE FERROUS & NON-FERROUS METAL OBJECTS TO “ZERO SPEED”
- 3-WIRE NPN TRUE OPEN COLLECTOR OUTPUTS
- 2 SIZES & SENSING DISTANCES FOR APPLICATION VERSATILITY
- L.E.D. TARGET INDICATOR

## DESCRIPTION & OPERATION

Inductive Proximity Sensors detect the presence of metal objects that come within range of their oscillating field and provide target detection to “zero speed”. Internally, an oscillator creates a high frequency electromagnetic field (RF) that is radiated from the coil and out from the sensor face (See Figure 1). When a metal object enters this field, eddy currents are induced into the object.

As the metal moves closer to the sensor, these eddy currents increase and result in an absorption of energy from the coil that dampens the oscillator amplitude until it finally stops.

Figure 1

## MODELS PSAFP1 & PSAFP2

In addition to the coil and oscillator circuit, the 3-wire Models PSAFP1 and PSAFP2 each contain a Detector Circuit and NPN Transistor Output (See Figure 2). In these units, the Detector Circuit senses when the oscillator stops, and turns on the Output Transistor that controls the load. The Detector Circuit also turns on an integrally case mounted L.E.D., visually indicating when a metal object is sensed.

Figure 2

### LED STATES

- LED ON (GREEN) POWER ON
- LED ON (YELLOW) OUTPUT ENERGIZED
- LED ON (FLASHING GREEN) SHORT CIRCUIT WARNING

These Inductive Proximity Sensors have a maximum sensing distance of 0.078" (2 mm) and 0.393" (10 mm) respectively, and operate over a wide power supply range (See Specifications Below). They are each housed in plastic with a top active face. The NPN transistor outputs are true open collector and are compatible with most Red Lion counter and rate meter input circuits. Maximum sensing frequencies are 2 KHz and 500 Hz respectively. In addition, the outputs are overload and short circuit protected. These sensors are shielded for flush mounting in metal applications.

## SELECTION & APPLICATION OF PROXIMITY SENSORS

Selection of the proper proximity sensor depends on the size, material, and spacing of the target being sensed and the sensing distance that can be maintained. The maximum sensing distance is defined as the distance when the sensor is just close enough to detect a ferrous target whose diameter is equal to or greater than the sensor diameter. In actual application, the sensing distance should be between 50 to 80% of the maximum sensing range to assure reliable detection. For target sizes smaller than the sensor diameter, the maximum sensing distance can be estimated from the curve (See Figure 3). A further reduction factor must also be applied if the target material is non-ferrous metal (See Figure 4). Ideally, spacing between adjacent targets should be at least one sensor diameter so that the first target completely leaves the sensors field before the next target appears. Individual targets can still be resolved as separate objects if this spacing is reduced to 70 or 75% of the sensor diameter, however, this can introduce a minimum limit on sensing distance that makes adjustment more critical. All proximity sensors are internally shielded which allows the sensor face to be flush mounted in metal applications without reducing sensing distance. In applications where proximity sensors must be placed next to each other, a distance of at least 1 sensor diameter should separate sensors to eliminate any frequency interference (See Mounting below).

### MAXIMUM SENSING DISTANCE REDUCTION FACTORS

Reduction in the maximum sensing distance due to decrease in diameter of ferrous targets.

Figure 3

Typical reduction factors for various non-ferrous targets with diameters equal to or greater than sensor diameter.

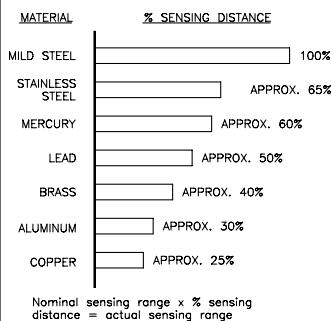

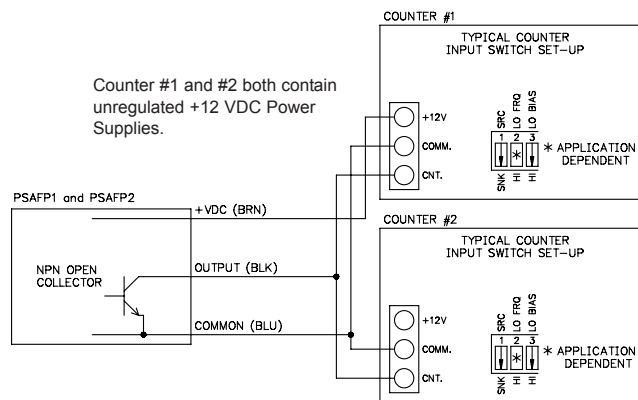

Figure 4

PSAFP100 and PSAFP200 outputs are NPN open collector outputs. A PSAFP100 and PSAFP200 may be used as an input to more than 1 indicator or control only if the respective power supplies of each unit are "unregulated" and can load share. It is recommended to use only one power supply for sensor power. An indicator or control with a regulated power supply may not be paralleled.

# MAGNETIC PROXIMITY SWITCH - RESPONDS TO FERROUS METALS & REQUIRES NO EXTERNAL POWER & RUGGED, FOR HOSTILE ENVIRONMENTS

## SPECIFICATIONS

1. **\*SWITCH CONTACT RATING:** 1250 watts max.; 120, 240, 480, 600 VAC; 10 cps resistive load.
2. **RESPONSE TIME:** 8 msec.
3. **REPEATABILITY:** 0.002" Typical
4. **LIFE:** Tested to mechanical and electrical life of over 2 billion cycles. (Actual life varies with electrical load.)
5. **OPERATING TEMPERATURE RANGE:** -50°C to +120°C (-60°F to +250°F)

\* - Derate at higher cycle rates, inductive loads and for DC uses.

## DESCRIPTIONS

This sensor is ideal for generating switch-contact count signals from passing steel or iron castings, weldments, stampings, "Tin-cans", pulley spokes, etc. A flux-field, generated by internal permanent magnets is arranged to hold the SPDT switch contact in the N.C. position. When an external mass of magnetic material (*target*) approaches the sensing area, it shunts away a part of this field, causing the switch contact to transfer to the N.O. position. The distance, at which this occurs, is called the "Sensing Distance" and it depends on the size, shape and thickness of the ferrous target. The curve below shows variation of sensing distance with target area of steel plate, 0.1" or more in thickness. For very thin sheet steel (0.01" to 0.02") derate sensing distance by 50%. Once the N.O. switch transfer is made, the target must move away approximately 2 times the sensing distance to re-establish the original N.C. contact closure.

These switches can be operated at speeds up to 60 counts/sec and have a life rating of 2-billion operations when used in low-current, low-voltage electronic counting applications. Operating temperature range is -50° to +120°C.

# MAGNETIC PICKUPS & IN-LINE PREAMPLIFIER

## SIMPLE, RELIABLE & ECONOMICAL PULSE GENERATORS FOR:

### SPEED SWITCHES DIGITAL TACHOMETERS FREQUENCY TO D.C. CONVERTERS

#### FEATURES INCLUDE

- SELF-GENERATING, NO EXT. POWER NEEDED
- WIDE OPERATING TEMPERATURE RANGE
- EPOXY ENCAPSULATED, MECHANICALLY RUGGED
- IMPERVIOUS TO DIRT, OIL & WATER
- NO MAINTENANCE REQUIRED
- LOW COST
- M12 CONNECTOR (MODEL SPECIFIC)

### DESCRIPTION OF OPERATION

A Magnetic Pickup consists of a permanent magnet, a pole-piece, and a sensing coil all encapsulated in a cylindrical case. An object (*target*) of iron, steel, or other magnetic material, passing closely by its pole-piece causes distortion of the magnetic flux field passing through the sensing coil and pole-piece, which in turn generates a signal voltage. The magnitude of the signal voltage depends on the relative size of the magnetic target, its speed of approach, and how close it approaches. The polarity of the signal depends on whether the target is moving toward or away from the pole-piece.

Magnetic Pickups are most frequently used to sense passing teeth on a gear, sprocket, or timing belt wheel, to bolt-heads, key-ways, or other moving machine mounted targets. Typical targets and resulting signal wave forms are shown below in Fig. 1.

### SELECTING A MAGNETIC PICKUP

Selecting a magnetic pickup is a matter of matching a pickup to a gear (*or other target*), to provide enough input signal to a tachometer, speed-switch, or other device for operation at the required minimum speed. The open-circuit output from a magnetic pickup is directly proportional to speed, and once the minimum operating speed conditions have been met, excess signal will always be available at higher speeds.

The "1-Volt Threshold Speed" column in the Application and Ordering Table (*next pg.*) provides a convenient guide for estimating minimum operating speeds. This value is the linear surface-speed of a reference gear required to generate a 1-Volt peak, open-circuit output at an air-gap of 0.005". The reference gear listed for each pickup is near the optimum size for that pickup, as defined by the criteria in Fig. 1B. The RPM listed is for a reference gear with 60 teeth running at that surface-speed. Gears with larger teeth provide about the same or somewhat more output at the same surface-speed, while gears with smaller teeth or fewer number of teeth yield lower outputs. Figures 1C - 1F need a very high surface speed to generate a 1-Volt peak. The "Minimum Gear Size" column lists the Diametral Pitch size at which the output drops to 40-60% of the output when the reference gear is used. Gears with very small teeth in relation to the pole-piece diameter, deliver greatly reduced outputs, as shown in Fig. 1A. Threshold outputs when using targets other than gear teeth can be estimated by their relative size with respect to the reference gear teeth. For more information

on gears, definitions and relationships, see the Sensing Gears Bulletin.

The 1-Volt Threshold Speeds are based on a 0.005" air-gap. In applications where this air-gap cannot be maintained or where the air-gap can vary due to eccentricity of the sensing gear, a correction factor can be applied from the curve in Fig 2. The effect of electrical loading is usually minimal at low speeds and low output frequencies, however, output voltage drop due to loading at high frequency or with low impedance inputs can be estimated based on the Output Impedance data.

*Note: Magnetic Pickups are used primarily for tachometer and other speed related functions. They are not normally used for counting since loss of counts will occur at low speeds. Therefore, counters are not designed to accept outputs directly from conventional magnetic pickups. In special applications where counting occurs only at running speed or where low-speed count loss is acceptable, a Model ASTC can be used, or a different type of sensor can be used as a substitute.*

### TYPICAL APPLICATION EXAMPLE

A Digital Tachometer, with an input sensitivity of 0.25 V is to be used with a Magnetic Pickup and gear to indicate speed down to 75 RPM. What are the alternative choices?

Since the input voltage required by the tachometer is only 0.25 V, the surface speeds and reference gear RPM's required would only be 2 of the 1-Volt Threshold Speeds listed. The MP-25TA with a 60-tooth, 24 D.P. reference gear would obviously fall short since this combination will not develop 0.25 V until the reference gear speed reaches 250 RPM.

The MP-37CA with the 60-tooth, 20 D.P. reference gear would both prove suitable since they would deliver the required 0.25 V at 50 and 45 RPM respectively. They would also provide some additional margin for air-gap variation. The curve of Fig. 2 shows a typical output drop of about 25% when the air-gap is increased from 0.005" to 0.0075". Since the minimum operating speed in this application is 75 RPM, the additional sensitivity can be traded for a wider air-gap allowance.

The MP-62TA and MP-75TX with their respective reference gears would allow operation at even lower speeds. With both of these pickups it would be possible to drop to a smaller gear pitch for this application.

## NOTES:

- 1) Surface speed of listed reference gear to produce 0.8 volt peak min., open-circuit output @ 0.005" air-gap.
- 2) Gear pitch where output will drop to 40-60% of that generated by the reference gear size, at the same surface speed.
- 3) UL Listed CSA Certified, Class I Group A, B, C and D; Class II Group E, F and G. (VDO Control Systems, Inc.) PN#AIRPAX/70085-1010-005, UL File #E40545 (N), CSA File #042648.
- 4) Polarity, all pickups: white output lead goes positive with respect to black when target approaches pole.
- 5) 2-Wire shielded cable is recommended for all magnetic pickup outputs. Connect the shield to the "COMMON" or "GROUND" terminal of the instrument being used and leave the shield un-connected at the pickup.

Magnetic Pickup signal leads should never be run in conduit, troughs, or bundles with other power or control voltage lines.

- 6) Lead length of magnetic pickup should not be extended. An in-line pre-amplifier (ASTC) can be placed on the end of the provided length which would allow longer length after the in-line pre-amplifier.
- 7) M12 unit color codes for 1 meter cable is:

## ORDERING INFORMATION

The following cables are for use with magnetic pickups MP37TAC1 and MP62TAC1, which have M12 connectors.

MODEL NO.	DESCRIPTION	PART NUMBERS
CCM	Mating Cable With M12 Connector, 1 Meter In Length	CCM12S01

# LOGIC MAGNETIC PICKUPS - SUPER-SENSITIVE MAGNETIC PICKUPS WITH CURRENT SINKING OUTPUT OR CURRENT SOURCING OUTPUT

- DETECTS STEEL SENSING GEARS OR OTHER MOVING FERROUS TARGETS
- BUILT-IN PULSE SHAPING AMPLIFIER PROVIDES ULTRA-LOW-SPEED OPERATION WITH LARGE AIR GAPS
- TWO OUTPUT SIGNAL VERSIONS
- 3/4" DIAMETER STAINLESS STEEL CASE
- EPOXY ENCAPSULATED SENSOR FOR OIL, DIRT & MOISTURE RESISTANCE

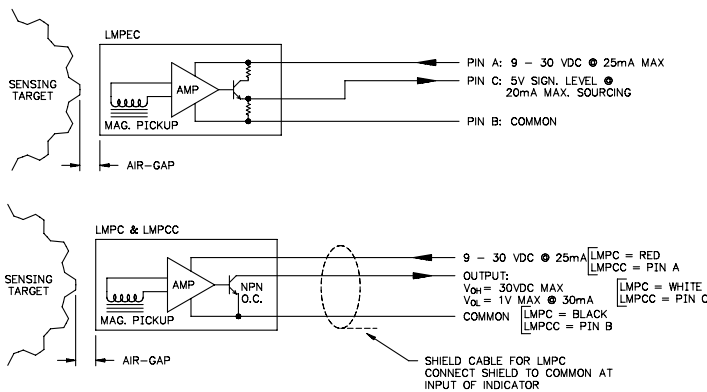

## DESCRIPTION

LOGIC MAGNETIC PICKUPS (LMP's) provide sensing sensitivities several orders of magnitude greater than standard magnetic pickups when detecting moving ferrous targets. By locating a high gain pre-amplifier & signal processing circuit "inside" the mag pickup housing, larger airgaps and slower target surface speeds can be achieved thereby greatly expanding application versatility as compared with conventional mag pickups. In addition, these units have excellent noise immunity and a frequency response to 10 KHz. The stainless steel sensing pole is mounted flush to the plastic sensing face allowing greater ease of setting airgaps and eliminating snagging the pole with a moving target.

Two output types are available (see ordering information). The **NPN Open Collector Transistor Output** unit provides a negative going current sinking output with the approach of a ferrous target and is current limited to 40 mA. The **Transistor Emitter-Follower Output** unit provides positive going 5 V pulses with the approach of a ferrous target and can source 20 mA of load current. The Open Collector units are available with either an integrally potted 10, 25 or 50 foot 3-wire shielded cable with neoprene strain relief boot or a polarized 3-pin 5/8"-24 threaded connector for quick change versatility (see following page for mating extension cable). The Emitter-Follower output unit is available in the 3-pin connector version only.

## SPECIFICATIONS

- SUPPLY VOLTAGE (all versions):** +9 to +30 VDC @ 25 mA max.
- NPN OPEN COLLECTOR OUTPUT (LMPC & LMPC):**  $V_{OH} = 30$  VDC max.;  $V_{OL} = 1$  Vmax. @ 30 mA, output current is limited to 40 mA.
- EMITTER-FOLLOWER OUTPUT (LMPEC):** +5 V signal level @ 20 mA max. current sourcing.
- OPERATING FREQUENCY (all versions):** 10 KHz max.
- OPERATING TEMPERATURE:** -18°C to +60°C (0°F to +140°F)
- CONSTRUCTION:** Epoxy encapsulated in 0.750" ±0.005" dia. #304 stainless steel case. Plastic sensing face with stainless steel sensing pole.
- OUTPUT CABLE (LMPC only):** Integrally potted 10, 25 or 50 ft. PVC jacketed, 3-wire 22 AWG conductors, with stranded shield and 100% foil shield coverage.  
**RED = +VDC, BLK = COMMON, WHT = NPN O.C. OUTPUT**
- OUTPUT CONNECTOR (LMPC & LMPEC):** Polarized 5/8"-24 thread 3-pin connector.  
**A = +VDC, B = COMMON, C = SIGNAL OUTPUT**

## DIMENSIONS In inches (mm)

### LMPC

### LMPC & LMPEC

## CONNECTOR BACK VIEW

MODEL	DIMENSIONS	
	A	B
LMPC	3.5" (88.9)	4.125" (104.8)
LMPEC	3.0" (76.2)	3.625" (92.1)

### 3-PIN CONNECTOR EXTENSION CABLE (LMPC & LMPEC)

This cable and connector assembly (see diagram below) is composed of PVC jacketed, 3-wire 22 AWG conductors with stranded shield and 100% foil shield coverage for noise immunity and is oil and water resistant. Connector/cable junctions are silicone sealed. The 5/8"-24 threaded ring is fitted with an O-ring to make a moisture proof connection. Cable is available in 10, 25, or 50 foot lengths.

#### 3-PIN CONNECTOR EXTENSION CABLE

PVC jacketed, 3-wire, 22 AWG conductors with stranded shield and 100% foil shield coverage. There is no connection of stranded shield wire to 3-pin connector. Shield may be connected to instrument common for increased noise immunity.

### 3/4" DIAMETER CYLINDRICAL SENSOR MOUNTING

Logic Magnetic Pickups and other Red Lion Controls 3/4" dia. cylindrical pickups may be easily mounted using Model 5400100 **BLOCK MOUNT** (see diagram below). This machined block of solid aluminum provides for rigid mounting using the two included #8-32 x 1/2" screws. The one screw split-clamp design allows for easy adjustment of airgap and locks the unit securely without deforming the case.

The **PLUG MOUNT** (see diagram below) allows 3/4" dia. cylindrical sensors to be mounted in "thru-wall" applications. The Plug Mounts 3/4-14 NPT thread is installed into a threaded wall or casing. The sensor is then installed through the plug mount. The sensor-to-target airgap is adjusted and the sensor is tightened into position by two #8-32 set screws. Tightening the ferrule nut compresses a teflon ferrule around the sensor providing an oil tight seal. Plug Mounts are available in both steel and stainless steel (see ordering information).

# MODEL ARCJ - NEMA "C" FACE-MOUNTED MOTOR ADAPTER KITS FOR CONVENIENT ADAPTATION OF SENSORS & SENSING GEARS TO GEAR CASE OR FOOT-MOUNTED NEMA "C" FACE MOTORS

## DESCRIPTION

ARCJ Ring Adapters can be quickly and easily installed on foot-mounted motors with NEMA type "C" face mount end bells, or between motor and gear case flange.

The ARCJ ring, with integral junction box, is cast aluminum with precision machined mounting surfaces. Kits are supplied complete with a 60-tooth sensing gear, factory installed magnetic pickup or HESS sensor, and mounting hardware. The maximum recommended gear speed for all kits is 5,000 RPM. Two ARCJ ring sizes and five gear bores cover the range of motor frame sizes as listed in the Ordering Information.

Wiring connections to the sensor are made by removing the gasketed junction box cover. Two threaded female (1/2" NPT) conduit connections are provided for right or left conduit entry (as shown in the Dimension drawing). A threaded plug is supplied with each kit for sealing the un-used conduit entry.

The 60-tooth steel sensing gear (kit supplied) results in direct RPM indication when used with a 1 second time-base rate indicator (tachometer).

Red Lion Controls rate indicators can be configured to provide a complete speed sensing and indication system. The following two sensor options (next page) are available with the ARCJ kits in order to meet a wide variety of applications.

## MAGNETIC PICKUP SENSOR

The ARCJ kits with this sensor option use the Red Lion Controls MP-37CA Magnetic Pickup. This sensor does not require external power.

The Magnetic Pickup is factory installed in the ring to provide a nominal sensor/gear air gap of 0.007" (0.18 mm) to 0.010" (0.25 mm). This provides adequate output from the sensor for most applications. However, if output must be maximized, the air gap can be easily user-adjusted to 0.005" (0.13 mm) minimum, once the particular gear being used is mounted on the motor shaft. (Refer to Magnetic Pickup literature for more details, enclosed in ARCJ kits.)

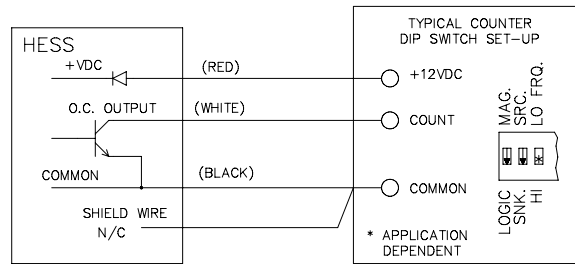

## HALL EFFECT SPEED SENSOR (HESS)

The ARCJ kits with the HESS sensor requires an external +8 to +30 VDC power source. This sensor does **NOT** have a minimum threshold speed as does a magnetic pickup sensor. However, when the sensor is first powered up, the output state is indeterminate when the sensor is not detecting metal. The sensor face can be mounted flush into metal panels. The case is stainless steel and is supplied with 10 feet (3 M) of cable. The stranded shield wire is not connected to the sensor circuit or the case.

The sensor to gear air gap is factory set to a nominal gap of 0.015" (0.38 mm). The air gap can be adjusted by the user from 0.005" (0.13 mm) to 0.040" (1.02 mm), which allows 0.005" (0.13 mm) maximum total gear runout.

## SPECIFICATIONS (HESS Sensor)

- POWER SUPPLY:** +8 to +30 VDC @ 30 mA max; Reverse Polarity Protected.
- MAXIMUM SENSING DISTANCE:** 0.040" (1 mm).
- OUTPUT:** NPN O.C. transistor;  $V_{SAT} = 1 \text{ V max @ } 30 \text{ mA max. load.}$
- OPERATING TEMPERATURE RANGE:** -25°C to 70°C (-14°F to 158°F)
- CABLE LENGTH:** 10 feet (3.05 M)
- OPERATING FREQUENCY:** 0 to 10 KHz
- WIRE COLOR CODE:** 3-wire, 22 AWG with stranded drain wire and 100% foil coverage; grey PVC jacket.
- CABLE STRAIN RELIEF:** 10 lbs (4.5 Kg) for 1 minute.  
*Note: Do NOT adjust sensor air gap while target (gear) is moving.*

# MODEL ZR - C-FACE ENCODER WITH LINE DRIVER OUTPUT FOR MOTOR FEEDBACK

- THRU-SHAFT DESIGN FOR EASY MOUNTING
- EXCELLENT CHOICE FOR VECTOR MOTOR DRIVE CONTROL
- DESIGNED FOR INDUSTRIAL ENVIRONMENTS
- GASKET KIT INCLUDED
- QUADRATURE LINE DRIVER OUTPUT
- POSITIVE INDEX PULSE

## DESCRIPTION

The Model ZR C-face encoder for motor feedback is a rugged, high resolution, high temperature (100°C) encoder designed to mount directly on NEMA C-face motors. The ZR contains a precision bearing and internal coupling that virtually eliminates inaccuracies induced by motor shaft runout. This encoder is ideal for applications using high performance AC vector motors.

The thru-shaft design allows fast and simple mounting of the encoder directly to the accessory shaft or to the drive shaft of the motor, using the standard motor face (NEMA sizes 56C, 143TC, 145TC, 182C, 184C). The tough anodized aluminum housing with thru-shaft design resists the vibration and hazards of an industrial environment.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

1. **SUPPLY:** 5 to 28 VDC, 40 mA current draw typical, 100 mA maximum.
2. **OUTPUT:** Quadrature Line driver, 20 mA max per channel (meets RS-422 at 5 VDC supply). Incremental - two square waves in quadrature with A leading B for clockwise shaft rotation. Positive pulse index.

*Note: Line driver outputs are intended for motion controllers that have line driver receivers.*

3. **CYCLES PER REVOLUTION:** 1024 or 2048
4. **MOUNTING:** NEMA 56C, 143TC, 145TC, 182C and 184C

5. **MAX MECHANICAL SPEED:** 6000 RPM
6. **MAX. FREQUENCY:** 200 KHz
7. **NOISE IMMUNITY:** Tested to BS EN61000-4-2; IEC801-3; BS EN61000-4-4; DDENV 50141; DDENV 50204; BS EN55022; BS EN61000-6-2; BS EN50081-2
8. **SYMMETRY:** 180° (±18°) electrical
9. **MIN EDGE SEP:** 67.5° electrical
10. **RISE TIME:** Less than 1 microsecond

8. **WEIGHT:** 2.60 lb. (1.18 Kg) with gland nut  
3.00 lb. (1.36 Kg) with all other connector options

*Note: All weights typical.*

### ENVIRONMENTAL CONDITIONS

1. **OPERATING TEMPERATURE:** 0 to +70°C
2. **STORAGE TEMPERATURE:** -25 to +100°C
3. **HUMIDITY:** 98% RH non-condensing
4. **VIBRATION:** 10 g @ 58 to 500 Hz
5. **SHOCK:** 50 g @ 11 msec duration
6. **SEALING:** IP65

## MOUNTING INSTRUCTIONS

### Mounting Kit Items Included:

- 4 ea. - 3/8" 16 x 1.0" Length Socket Head Cap Screws, Black Alloy.
- 4 ea. - 3/8" High Collar Spring Lock washer, Steel Zinc.
- 1 ea. 3/32" Hex Allen Wrench, Long arm.

*Note: The ZR encoder can mount to many types of C face devices. In these mounting instructions, we will refer to the device as a motor.*

### Step 1

After carefully unpacking the unit, inspect to insure the motor shaft is the correct size and free of all burrs or aberrations. Slide the ZR Encoder over the motor shaft. **DO NOT USE EXCESSIVE FORCE:** There is a rubber O-ring in the Encoder locking collar that will provide a small amount of resistance as it engages the shaft. If the encoder does not slide easily See Note 1 below.

### Step 2

Install the four 3/8" 16 x 1.0" socket head cap screws with lock washers through the holes in the Encoder C face and tighten securely to the motor.

### Step 3

Insure the shaft locking collar is flush with the Encoder cover plate. Prevent the motor shaft from turning (See Note 2 for additional information) and tighten the four 4-40 Allen head cap screws in the locking collar evenly in a crossing pattern. See Figure 1. Make sure the screws are securely tightened and the front of the locking collar remains flush with the encoder cover plate. If the collar does not turn true when the motor shaft is rotated, loosen the four screws and repeat the procedure.

### In Case of Difficulty:

**Note 1:** Make sure the four 4-40 Allen head cap screws in the front of the Encoder locking collar are loose and the collar is not cocked or jammed. Clean the shaft of any burrs using fine crocus cloth. The O-ring in the Encoder locking collar may need a small amount of additional lubrication.

**Note 2:** When tightening the screws in the locking collar avoid holding the motor shaft with anything that may scar or burr the shaft.

# MACHINED STEEL SENSING GEARS FOR EXCITING SENSORS

Sensing Gears are available in a variety of sizes to cover most applications where a sensor is to be used, but a suitable existing machine gear is not available. Split-type gears are convenient for use on machine drive shafts where a shaft-end is not available to mount a standard gear. Hubless gears are ideal for mounting in tight locations or when only a short shaft stub is available. Hub-type, Split, and Hubless gears can be supplied with special bores (See notes below Ordering Information & Dimensions table).

*Caution: RLC's machined steel sensing gears are NOT to be used as driving or driven gears in a power transmission system.*

\* A portion of the teeth near the cap screws are milled away. However, at least 1/4" of the teeth face width is available, allowing sensing of all teeth.

**SPECIAL BORES:** Hub-Type, Split, and Hubless gears can be supplied with special bore sizes between the Stock Bore and Max. Special Bore sizes listed above. To order Special Bores, substitute 9999 for the last 4 digits of the part number and specify special bore size required.

**ASSEMBLY NOTE FOR SPLIT GEARS:** When tightening the split gear halves on a shaft, it is recommended that the flat washer spacers be used to help keep the gap between halves equal.

Run-out should be checked after installation is complete. Always use the supplied lock washers when tightening the socket head cap screws. Torque these screws to 182 in. lbs.

## STANDARD SPUR GEAR DEFINITIONS, RELATIONSHIPS & FORMULA

Gear parameters are fundamentally related to their use as power transmission elements. Although these parameters are not the most convenient when using gears to excite magnetic pickups, they can be easily converted to more useful form, once the basic definitions are understood.

**PITCH DIAMETER (P.D.)** - The diameter of the circle described by the tooth-to-tooth contact point when running in mesh with the teeth of another gear. This point is roughly half way between the root (bottom) and the tip of the gear tooth. The Pitch Diameter is slightly smaller than the outside diameter of the gear.

**DIAMETRAL PITCH (D.P.)** - The number of teeth/inch of Pitch Diameter. Thus a 20 D.P. gear has 20 teeth for each inch of Pitch Diameter. A 60-tooth, 20 D.P. gear would have a pitch diameter of 3", a 60T, 10 D.P. gear has a Pitch Diameter of 6".

**PRESSURE ANGLE** - Pressure angle relates to tooth shape and strength. It has no significant effect on the operation of the gear for exciting magnetic pickups, and pickups can be used with gears of any pressure angle.

**OUTSIDE DIAMETER (O.D.)** - The outside diameter is the overall diameter of the gear to the tops of the teeth, and is used for calculating surface speed when the gear is used to excite a magnetic sensor. The O.D. can be determined from the following formula:

$$\text{O.D.} = \frac{\text{Nt}(\text{No. of teeth}) + 2}{\text{D.P. (Diametral Pitch)}}$$

**Example:** A 60T, 16 D.P. Gear has an O.D. of:

$$\text{O.D.} = \frac{60 + 2}{16} = 3.875 \text{ inches}$$

**SURFACE SPEED** - The output of a magnetic pickup depends on the linear surface speed of the tops of the passing gear teeth. Surface speed is normally expressed in inches/sec. and can be calculated for a given gear as follows:

$$\text{Surface Speed in inches /sec.} = \frac{\text{RPM} \times \text{O.D.} \times \pi}{60}$$

$$\text{or; RPM} = \frac{\text{Surface Speed} \times 60}{\text{O.D.} \times \pi}$$

**Example:** What is the surface speed of the 60T, 20 D.P. Gear when running at 50 RPM? At what RPM will the 1-Volt Threshold Speed (10 inches/sec.) for the MP-62TA be realized?

$$\text{Gear O.D.} = \frac{60 + 2}{20} = 3.1" \text{ (From O.D. formula above)}$$

$$\text{Surface Speed} = \frac{50 \times 3.1 \times \pi}{60} = 8.115 \text{ inches /sec.}$$

$$\text{1-Volt Threshold RPM (@ 10 in/sec.)} = \frac{10 \times 60}{3.1 \times \pi} = 61.61 \text{ RPM}$$

**OUTPUT SIGNAL FREQUENCY** - The frequency generated by passing gear teeth is related to gear RPM and the number of gear teeth (Nt) by the following:

$$\text{Output frequency (Hz or teeth/sec.)} = \frac{\text{RPM} \times \text{Nt}}{60}$$

# MODELS ZUJ AND ZUL - LARGE THRU-BORE ROTARY PULSE GENERATORS FOR MOTOR FEEDBACK

## GENERAL DESCRIPTION

The ZUJ and ZUL are high performance units that are ideal for fast revving motor mount applications. The injection molded housing is grooved with "cooling fins", and can take the extreme heat of the motion control industry.

The unit comes equipped with a 3.5" to 5.90" B.C. tether arm to mount to a 4.5" motor face.

This revolutionary encoder can also be adapted to various standard and metric sized motor shafts by using individual sleeves (Sold separately).

Electrically the unit offers line driver outputs, limited to 20 mA per channel. The outputs are standard quadrature with index and are also available with reverse phasing for the typical motor drive controller application. The separation is 90° with output A leading output B for clockwise rotation. Output B leads output A for the reverse phased output, for clockwise rotation.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

- SUPPLY VOLTAGE:** 4.75 to 28 VDC, 100 mA max. (no load)
- OUTPUTS:** Line driver,  $V_{OH} = 40$  VDC max.; 20 mA max. current.  
Incremental - two square waves with A leading B for clockwise rotation. B leads output A for the reverse phased.  
*Note: Line driver outputs are intended for motion controllers that have line driver receivers.*
- MAX. PULSE RATE:** 250 KHz
- INDEX:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 20 mA max. current. Once per revolution centered over output Channel A. Index is a positive going pulse.
- MAXIMUM MECHANICAL SPEED:** 4000 RPM
- MINIMUM EDGE SEPARATION:** 45° electrical min, 63° electrical or better typical
- RISE TIME:** Less than 1 microsecond
- ACCURACY:** Within 0.1° mechanical from one cycle to any other cycle, or 6 arc minutes.

### MECHANICAL SPECIFICATIONS

- BORE SIZE:**  $\frac{5}{8}$ " or 1.0" (15.875 or 25.4 mm)
- BORE TOLERANCES:** -0.0000"/+0.0008"
- USER SHAFT TOLERANCES:**  
Radial Runout: 0.005" max  
Axial Endplay: +/- 0.050" max
- MAXIMUM ACCELERATION:**  $1 \times 10^5$  rad/sec<sup>2</sup>
- STARTING TORQUE:** 4.0 oz-in typical (28.24 N-mm)

### 6. MOMENT OF INERTIA:

$7.6 \times 10^{-4}$  oz-in-sec<sup>2</sup>

# MODEL ZR - C-FACE ENCODER WITH NPN OPEN COLLECTOR OUTPUT

- THRU-SHAFT DESIGN FOR EASY MOUNTING
- EXCELLENT CHOICE FOR VECTOR MOTOR DRIVE CONTROL
- DESIGNED FOR INDUSTRIAL ENVIRONMENTS
- QUADRATURE OUTPUT
- POSITIVE INDEX PULSE
- C-FACE GASKET KIT INCLUDED

## DESCRIPTION

The Model ZR C-face encoder is a rugged, high resolution, high temperature (100°C) encoder designed to mount directly on NEMA C-face motors. The ZR contains a precision bearing and internal coupling that virtually eliminates inaccuracies induced by motor shaft runout. This encoder is ideal for applications using high performance AC vector motors.

The thru-shaft design allows fast and simple mounting of the encoder directly to the accessory shaft or to the drive shaft of the motor, using the standard motor face (NEMA sizes 56C, 143TC, 145TC, 182C, 184C). The tough anodized aluminum housing with thru-shaft design resists the vibration and hazards of an industrial environment. In addition, a C-face gasket kit is included free for motor shaft protection and enclosure.

## Open Collector Output Wiring

The ZR series of sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (40 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

1. **SUPPLY:** 4.75 to 28 VDC, 40 mA current draw typical, 100 mA maximum.
2. **OUTPUT:** NPN Open Collector transistor,  $V_{OH} = 40$  VDC max.; 100 mA max. current. Incremental - two square waves in quadrature with A leading B for clockwise rotation. Positive pulse index.
3. **CYCLES PER REVOLUTION:** 256 or 1024

*Note: Review the max. input rate of the RLC counter being used. The high output rate of the 1024 version will quickly reach the max. input capability of RLC quadrature counters. At 1024 PPR, high pulse rates are reached at low RPM.*

4. **MAX MECHANICAL SPEED:** 6000 RPM
5. **MAX. FREQUENCY:** 200 KHz
6. **NOISE IMMUNITY:** Tested to BS EN61000-4-2; IEC801-3; BS EN61000-4-4; DENV 50141; DENV 50204; BS EN55022; BS EN61000-6-2; BS EN50081-2
7. **SYMMETRY:** 180° ( $\pm 18^\circ$ ) electrical
8. **MIN EDGE SEP:** 67.5° electrical
9. **RISE TIME:** Less than 1 microsecond

### MECHANICAL SPECIFICATIONS

1. **BORE DIAMETER:** 0.625" or 1.0"
2. **BORE TOLERANCE:** +0.0015"/-0.000"
3. **MOMENT OF INERTIA:**  $3.3 \times 10^{-3}$  oz-in-sec<sup>2</sup> typical
4. **USER SHAFT TOLERANCES:**  
Radial Runout: 0.005"  
Axial Endplay:  $\pm 0.015$ "
5. **CABLE CONNECTION:** 36" pigtail with 24 AWG conductors

FUNCTION	WIRE COLOR
+ VDC	RED
COMMON	BLACK
DATA A	WHITE
DATA B	GREEN
INDEX Z	ORANGE

6. **HOUSING:** All metal construction
7. **MOUNTING:** NEMA 56C to 184C
8. **WEIGHT:** 2.60 lb. (1.18 Kg) with gland nut  
3.00 lb. (1.36 Kg) with all other connector options

*Note: All weights typical.*

### ENVIRONMENTAL CONDITIONS

1. **OPERATING TEMPERATURE:** 0 to +100°C for high temp. option
2. **STORAGE TEMPERATURE:** -25 to +100°C
3. **HUMIDITY:** 98% RH non-condensing
4. **VIBRATION:** 10 g @ 58 to 500 Hz
5. **SHOCK:** 50 g @ 11 msec duration
6. **SEALING:** IP50

## MOUNTING INSTRUCTIONS

### Mounting Kit Items Included:

- 4 ea. - 3/8" 16 x 1.0" Length Socket Head Cap Screws, Black Alloy.
- 4 ea. - 3/8" High Collar Spring Lock washer, Steel Zinc.
- 1 ea. 3/32" Hex Allen Wrench, Long arm.

*Note: The ZR encoder can mount to many types of C face devices. In these mounting instructions, we will refer to the device as a motor.*

### Step 1

After carefully unpacking the unit, inspect to insure the motor shaft is the correct size and free of all burrs or aberrations. Slide the ZR Encoder over the motor shaft. **DO NOT USE EXCESSIVE FORCE:** There is a rubber O-ring in the Encoder locking collar that will provide a small amount of resistance as it engages the shaft. If the encoder does not slide easily See Note 1 below.

### Step 2

Install the four 3/8" 16 x 1.0" socket head cap screws with lock washers through the holes in the Encoder C face and tighten securely to the motor.

### Step 3

Insure the shaft locking collar is flush with the Encoder cover plate. Prevent the motor shaft from turning (See Note 2 for additional information) and tighten the four 4-40 Allen head cap screws in the locking collar evenly in a crossing pattern. See Figure 1. Make sure the screws are securely tightened and the front of the locking collar remains flush with the encoder cover plate. If the collar does not turn true when the motor shaft is rotated, loosen the four screws and repeat the procedure.

### In Case of Difficulty:

**Note 1:** Make sure the four 4-40 Allen head cap screws in the front of the Encoder locking collar are loose and the collar is not cocked or jammed. Clean the shaft of any burrs using fine crocus cloth. The O- ring in the Encoder locking collar may need a small amount of additional lubrication.

**Note 2:** When tightening the screws in the locking collar avoid holding the motor shaft with anything that may scar or burr the shaft.

## GENERAL DESCRIPTION

The Model ZSD encoder is ideal for applications requiring a miniature, high precision, low cost encoder, designed with all metal construction for years of trouble-free operation.

The NPN Open Collector outputs are each current limited to 20 mA. The outputs are standard quadrature with index, available in resolutions up to 2500 pulses per shaft revolution. The quadrature separation is typically 90 electrical degrees. Output A leads output B for clockwise rotation of the encoder shaft.

## Open Collector Output Wiring

The ZSD sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages (40 VDC max.) different than the encoder supply voltage. NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

# MODELS ZOD AND ZOH - THRU-BORE ROTARY PULSE GENERATORS

## (ZOH REPLACES THE MODEL RPGO)

### I GENERAL DESCRIPTION

The Model ZOD and ZOH are Thru-Bore Encoders. The ZOD has a bore of 0.25" (6.35 mm) and the ZOH is a 0.375" (9.5 mm) bore. These units are ideal for applications requiring a miniature, high precision, low cost encoder, designed with all metal construction for years of trouble-free operation.

The encoders have a flexible butterfly mount and blind hollow shaft. These encoders use two set screws that are 90° apart to clamp the encoder's hub to the motor shaft. The NPN Open Collector outputs are each current limited to 100 mA. The outputs are standard quadrature with index, and are available in resolutions up to 2500 pulses per shaft revolution. The quadrature separation is typically 90 electrical degrees. Output A leads output B for clockwise rotation of the encoder shaft.

### SPECIFICATIONS

#### ELECTRICAL SPECIFICATIONS

- SUPPLY VOLTAGE:** 4.75 to 28 VDC, 100 mA max. with no output load
- OUTPUTS:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 20 mA max. current. Incremental - Two square waves in quadrature with A leading B for clockwise rotation.
- MAX. FREQUENCY:** 200 KHz
- INDEX:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 20 mA max. current. Once per revolution centered over output Channel A. Index is a positive going pulse.

- OPERATING TEMPERATURE:** -20°C to 85°C
- STORAGE TEMPERATURE:** -25°C to +85°C
- HUMIDITY:** 98% RH non-condensing
- VIBRATION:** 10 g @ 58 to 500 Hz
- SHOCK:** 80 g @ 11 msec duration
- SEALING:** IP64 standard

#### Open Collector Output Wiring

The ZOD and ZOH encoders have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (40 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

Notes: The following list of options are available, contact the factory for details

- ♦ Additional wiring configurations, including M12 connectors
- ♦ Additional output configurations, including Line Driver and Push-Pull
- ♦ Additional mounting and shaft/bore sizes
- ♦ Additional pulses, including 10, 120, 200, 360, 512, 1024, 1500, 1800, and 2048
- ♦ When using higher resolutions, use caution and verify input specifications to avoid frequency limitations
- ♦ CE approved models available

# MODEL ZCG - SINGLE CHANNEL OUTPUT ROTARY PULSE GENERATOR MODEL ZFG and ZGG - SINGLE CHANNEL OUTPUT LENGTH SENSORS (Replaces MODELS RPGC, LSCS and LSCD respectively)

- **VARIOUS PULSE PER REVOLUTION (PPR) RATES**  
Up to 200 PPR for fine, high-resolution counting or precision speed measurement from slow shaft speeds.
- **UP TO 10 KHz OUTPUT FREQUENCY**
- **CURRENT SINK OUTPUT**
- **LENGTH SENSORS AVAILABLE WITH:**  
Single or Dual Ended Shaft
- **SEALED PRECISION BALL BEARINGS**
- **VARIOUS CABLE LENGTHS AVAILABLE**

- **RUGGED CAST ALUMINUM HOUSING**
- **3/8" DIA. STAINLESS STEEL SHAFT**
- **WIDE INPUT SUPPLY VOLTAGE RANGE & LOW CURRENT OPERATION**
- **EASY INSTALLATION**  
Eliminates air-gap, sensing distance, and beam alignment procedures of other types of sensing.
- **IDEAL FOR DUSTY, DIRTY ENVIRONMENTS**  
Where "Non Contact" sensing means are impractical.

## DESCRIPTION

The units are rugged, incremental encoders that convert shaft rotation into a current sinking pulse train.

Internally, a single L.E.D. light source and a photologic sensor in conjunction with a shaft-mounted, durable, metal-etched encoder disc, provides signal accuracy and reliability to 10 KHz. The DC input power supply requirement is a versatile +8 to +35 VDC, and is reverse polarity protected. The NPN Open Collector Transistor Output is current limited to 40 mA and is compatible with most RLC counters, rate indicators, controllers and accessories.

All units are packaged in a rugged cast aluminum housing with a gasketed, rear aluminum cover. The 3/8" (9.53 mm) diameter heavy duty stainless steel shaft and sealed, lifetime-lubricated precision ball bearings are preloaded for minimum end play and rated for continuous use up to 6000 RPM. They are designed to meet NEMA 13/IP54 environmental requirements. All units are supplied with 10 feet (3M) of PVC jacketed 3-wire, 22 AWG cable with stranded shield wire and 100% foil shield coverage. Operating Temperature range is -18 °C to +60 °C.

## ROTARY PULSE GENERATOR

The ZCG can be direct-coupled to a machine shaft by means of a flexible bellows, spring or rubber sleeve type coupler, etc., that allows for axial and radial misalignment. They can also be coupled with instrument timing belts and pulleys or gears. The housing may be rigidly face-mounted with the 4, #8-32 threaded holes. The 3-wire shielded cable exits through a cord connector.

## LENGTH SENSOR

The length sensors are available in both Single Ended Shaft (ZFG) and Double Ended Shaft (ZGG) versions, both of which include a Stainless Steel Handle Tube for mounting and 10 feet (3.05 M) of 3-wire shielded cable. When mounted to a Length Sensor Hinge Clamp Assembly (See Model LSAHC001) and coupled with one or two Measuring Wheels (See Measuring Wheels), a low cost, versatile and highly accurate length measurement system can be configured.

## LENGTH SENSOR MEASUREMENT ACCURACY

Factors which affect measurement accuracy include Measuring Wheel accuracy and wear, and material conditions. Ideally, materials which are hard, thin and strong provide good readings. Conversely, soft, thick and elastic materials can present problems in obtaining true readings. Count or Rate Indicators with "input scaling" can compensate for Measuring Wheel wear and material elasticity and compliance errors. In addition, English/Metric conversions may also be accomplished.

## Open Collector Output Wiring

The ZCG, ZFG, and ZGG series of sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages (40 VDC max.) different than the encoder supply voltage. NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## LENGTH SENSOR MOUNTING CONSIDERATION

1. Length Sensors should be mounted so measuring wheel(s) contact ribbon, strip or web as it passes over a roller. As an alternative, wheel(s) can be driven by roller surface next to material being measured.
2. Note: The weight at the Length Sensor unit provides sufficient traction for accurate operation when mounted, with arm angle from horizontal not exceeding  $\pm 30^\circ$ .
3. Tension on signal cable can cause wheel(s) to lift. Make sure cable is clamped to machine frame near the unit and allow slack.

### ZFG DIMENSIONS In inches (mm)

# MODEL LSAHC - LENGTH SENSOR HINGE CLAMP ASSEMBLY

The Length Sensor Hinge Clamp Assembly provides an easy method for attachment and mounting of the length sensors and LSCB1 Conversion Bracket. The removable top on the solid zinc LSAHC mounting block allows quick installation of the Length Sensor handle tube and provides secure clamping retention. The mounting block pivots freely in zinc right angle brackets to allow mounting the assembly via clearance holes for 1/4" dia. bolts.

The lock washers must be used as indicated (between the bolt head and the top clamp piece). Assemble the top clamp piece as follows.

1. Tighten both bolts so that the top clamp half draws down evenly on the sensor tube.
2. Tighten the bolts until both lock washers are flat.
3. Then turn each bolt an additional 1/2 to 3/4 turn.

## DIMENSIONS In inches (mm)

**CAUTION:** Downward tension on signal cable can cause wheel(s) to lift. Make sure cable is clamped to machine frame near encoder and allow slack.

**NOTE:** The weight at the Length Sensor unit provides sufficient traction for accurate operation when mounted as shown, with arm angle from horizontal not exceeding  $\pm 30^\circ$ , and with hinge clamp toward the far extreme of the extension arm.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER

# MODEL ZCH - QUADRATURE OUTPUT ROTARY PULSE GENERATOR MODEL ZFH and ZGH - QUADRATURE OUTPUT LENGTH SENSORS (Replaces MODELS RPGQ, LSQS and LSQD respectively)

- 100, 200 & 500 PULSES PER REVOLUTION
- QUADRATURE CURRENT SINKING OUTPUTS TO 50 KHz  
For position measurement, bi-directional counting and systems with mechanical backlash
- SEALED PRECISION BALL BEARINGS
- RUGGED CAST ALUMINUM HOUSING
- 3/8" DIA. STAINLESS STEEL SHAFT
- WIDE INPUT SUPPLY VOLTAGE RANGE & LOW CURRENT OPERATION
- VARIOUS CABLE LENGTHS AVAILABLE

## DESCRIPTION

The units are rugged, incremental encoders that convert shaft rotation into a current sinking pulse train.

Internally, a single L.E.D. light source and a photologic sensor in conjunction with a shaft-mounted, durable, metal-etched encoder disc, provides signal accuracy and reliability to 50 KHz. The DC input power supply requirement is a versatile +8 to +28 VDC, and is reverse polarity protected. The NPN Open Collector Transistor Output is current limited to 40 mA and is compatible with most RLC counters, rate indicators, controllers and accessories.

All units are packaged in a rugged cast aluminum housing with a gasketed, rear aluminum cover. The 3/8" (9.53 mm) diameter heavy duty stainless steel shaft and sealed, lifetime-lubricated precision ball bearings are preloaded for minimum end play and rated for continuous use up to 6000 RPM. They are designed to meet NEMA 13/IP54 environmental requirements. All units are supplied with 10 feet (3M) of PVC jacketed 3-wire, 22 AWG cable with stranded shield wire and 100% foil shield coverage.

## ROTARY PULSE GENERATOR

The ZCH can be direct-coupled to a machine shaft by means of a flexible bellows, spring or rubber sleeve type coupler, etc., that allows for axial and radial misalignment. They can also be coupled with instrument timing belts and pulleys or gears. The housing may be rigidly face-mounted with the 4, #8-32 threaded holes. The 3-wire shielded cable exits through a cord connector.

## LENGTH SENSOR

The length sensors are available in both Single Ended Shaft (ZFH) and Double Ended Shaft (ZGH) versions, both of which include a Stainless Steel Handle Tube for mounting and 10 feet (3.05 M) of 3-wire shielded cable. When mounted to a Length Sensor Hinge Clamp Assembly (See Model LSAHC001) and coupled with one or two Measuring Wheels (See Measuring Wheels), a low cost, versatile and highly accurate length measurement system can be configured.

## LENGTH SENSOR MEASUREMENT ACCURACY

Factors which affect measurement accuracy include Measuring Wheel accuracy and wear, and material conditions. Ideally, materials which are hard, thin and strong provide good readings. Conversely, soft, thick and elastic materials can present problems in obtaining true readings. Count or Rate Indicators with "input scaling" can compensate for Measuring Wheel wear and material elasticity and compliance errors. In addition, English/Metric conversions may also be accomplished.

## LENGTH SENSOR ACCESSORIES

The Length Sensor Hinge Clamp Assembly provides an easy method for attachment & mounting the Length Sensors and LSCB1 Conversion Bracket. The removable top on the solid aluminum LSAHC mounting block allows quick installation of the Length Sensor handle tube and provides secure clamping retention. The mounting block steel shaft pivots freely in oil impregnated sintered bronze bushings, and aluminum right angle brackets allow mounting the assembly via clearance holes for 1/4" (6.35 mm) dia. bolts (See LSAHC Dimensions & Mounting).

## Open Collector Output Wiring

The ZCH, ZFH, and ZGH series of sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages (40 VDC max.) different than the encoder supply voltage. NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## ZFH DIMENSIONS In inches (mm)

This is the side view of the Model ZFH. All other dimensions (including the handle tube) are the same as the Model ZGH. See below.

## ZGH DIMENSIONS In inches (mm)

## SPECIFICATIONS

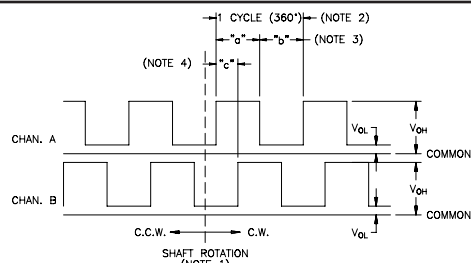

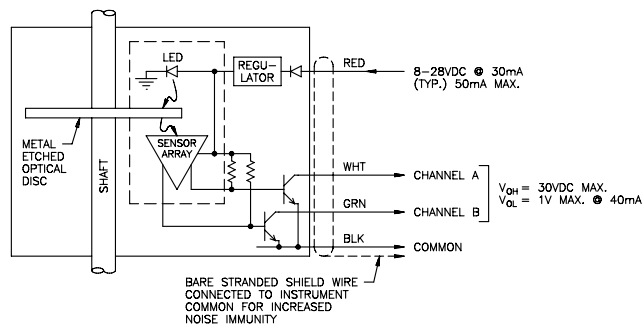

### ELECTRICAL SPECIFICATIONS

- SUPPLY VOLTAGE:** +8 to +28 VDC (including power supply ripple) @ 50 mA max. (30 mA typ.); Reverse polarity protected.
- OUTPUTS:** NPN Open Collector Transistor,  $V_{OH} = 30$  VDC max.,  $V_{OL} = 1$  V max @ 40 mA. Output current is limited to 40 mA. Incremental - Two square waves in quadrature with Channel A leading B for clockwise rotation.
- OUTPUT FREQUENCY:** Up to 50 KHz
- OUTPUT DUTY CYCLE:** Channel A & B: 50/50 nominal. (See Figure 1, Note 3)
- QUADRATURE OUTPUT PHASE:**  $90^\circ \pm 15^\circ$  (See Figure 1, Note 3)
- CABLE CONNECTIONS:** RED = +VDC; BLACK = Common; WHITE = Channel A Output; GREEN = Channel B Output.

### MECHANICAL SPECIFICATIONS

- MAXIMUM MECHANICAL SPEED:** 6000 RPM
- RADIAL SHAFT LOAD:** 15 lbs. max. (66.7N)
- AXIAL SHAFT LOAD:** 15 lbs. max. (66.7N)
- STARTING TORQUE:** 3 oz.-in. (21.2N-mm)
- MOMENT OF INERTIA:**  
Single Shaft =  $1.03 \times 10^{-4}$  oz. - in. - sec.<sup>2</sup> ( $7.30 \times 10^{-4}$  N - mm - sec.<sup>2</sup>)  
Dual Shaft =  $1.30 \times 10^{-4}$  oz. - in. - sec.<sup>2</sup> ( $9.21 \times 10^{-4}$  N - mm - sec.<sup>2</sup>)
- OPERATING TEMPERATURE:** 0°C to +70°C
- WEIGHT (LESS CABLE):**  
ZCH: 14.3 oz (406 g)  
ZFH: 22.0 oz (623 g)  
ZGH: 22.7 oz (643 g)

## EQUIVALENT CIRCUIT & CONNECTIONS

### NOTES:

- Channel A leads Channel B for clockwise shaft rotation when viewed from housing front. Conversely, Channel B leads Channel A for Counterclockwise shaft rotation.
- The number of lines on the optical disc determines the Pulses Per Revolution (PPR).
- Duty Cycle is the relationship of output "High" time, "a", to output "Low" time, "b", and is expressed as a High/Low percentage ratio, i.e. % High time =  $a/(a+b) \times 100$ ; % Low time =  $b/(a+b) \times 100$ .
- Quadrature Phase "c" is specified as the lead or lag between Channel A & B in electrical degrees. Nominally  $90^\circ$  (1/4 cycle).

### LENGTH SENSOR MOUNTING CONSIDERATION

- Length Sensors should be mounted so measuring wheel(s) contact ribbon, strip or web as it passes over a roller. As an alternative, wheel(s) can be driven by roller surface next to material being measured.
- Note: The weight at the Length Sensor unit provides sufficient traction for accurate operation when mounted, with arm angle from horizontal not exceeding  $\pm 30^\circ$ .
- Tension on signal cable can cause wheel(s) to lift. Make sure cable is clamped to machine frame near the unit and allow slack.

MODEL NO.	DESCRIPTION	PART NUMBER
LSAHC	Length Sensor Hinge Clamp Assembly	LSAHC001

Length Sensors should be mounted so measuring wheel(s) contact ribbon, strip or web as it passes over a roller. As an alternative, wheel(s) can be driven by roller surface next to material being measured.

# MODEL ZUK - LARGE THRU-BORE ROTARY PULSE GENERATORS

## GENERAL DESCRIPTION

The ZUK is a high performance unit that is ideal for fast revving motor mount applications. This industrial strength model features the largest thru bore available in a 2.5" encoder, mounting directly on shafts as large as 1.125" (28 mm.) The injection molded housing is grooved with "cooling fins", and can take the extreme heat of the motion control industry.

The ZUK comes equipped with a 3 point Flex Mount adapting to both 2.25" and 2.75" motor faces. It is also available with an optional "tether arm" mounting kits for additional motor compatibility.

This revolutionary encoder can also be adapted to various standard and metric sized motor shafts by using an accessory sleeve kit, or individual sleeves (Sold separately).

Electrically the ZUK offers NPN open collector outputs, each limited to 100 mA. The outputs are standard quadrature with index and are also available with quadrature reverse phasing for the typical motor drive controller application. The quadrature separation is 90° with output A leading output B for clockwise rotation. Output B leads output A for the reverse phased output, for clockwise rotation.

## Open Collector Output Wiring

The ZUK series of sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (40 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

- SUPPLY VOLTAGE:** 4.75 to 28 VDC, 100 mA max. (no load)
- OUTPUTS:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 20 mA max. current. Incremental - two square waves in quadrature with A leading B for clockwise rotation.
- MAX. PULSE RATE:** 250 KHz
- INDEX:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 20 mA max. current. Once per revolution centered over output Channel A. Index is a positive going pulse.
- MAXIMUM MECHANICAL SPEED:** 4000 RPM
- MIN EDGE SEP:** 45° electrical min, 63° electrical or better typical
- RISE TIME:** Less than 1 microsecond
- ACCURACY:** Within 0.01° mechanical from one cycle to any other cycle, or 0.6 arc minutes.

### MECHANICAL SPECIFICATIONS

- BORE SIZE:** 1.125" (28 mm)
- BORE TOLERANCES:** -0.0000"/+0.0008"
- USER SHAFT TOLERANCES:**  
Radial Runout: 0.005" max  
Axial Endplay: +/- 0.050" max
- STARTING TORQUE:** 4.0 oz-in typical (28.24 N-mm) IP66
- MOMENT OF INERTIA:**  
 $7.6 \times 10^{-4}$  oz-in-sec<sup>2</sup>
- MAX ACCELERATION:**  $1 \times 10^5$  rad/sec<sup>2</sup>
- ELECTRICAL CONNECTOR:** 7-pin MS type connector

FUNCTION	PIN	CABLE WIRE COLOR
+VDC	A	Red
Common	B	Black
Data A	C	White
Data B	D	Green

## GENERAL DESCRIPTION

The Model ZPJ is a thru-bore encoder with a bore of 0.625" (15.875 mm). Additional mounting kits are available to adapt it to both standard and metric shaft sizes. This unit is ideal for applications requiring a miniature, high precision, low cost encoder, designed with all metal construction for years of trouble-free operation.

The ZPJ encoder has a flexible arm mount and blind hollow shaft. It uses two set screws that are  $90^\circ$  apart to clamp the encoder's hub to the motor shaft. The NPN Open Collector outputs are each current limited to 20 mA. The outputs are standard quadrature with index, and are available in resolutions up to 2500 pulses per shaft revolution. The quadrature separation is typically 90 electrical degrees. Output A leads output B for clockwise rotation of the encoder shaft.

## Open Collector Output Wiring

The ZPJ encoder has open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (40 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## ENVIRONMENTAL SPECIFICATIONS

# MODELS ZBG AND ZBH STANDARD DUTY ENCODER (Replaces MODEL RPGB) MODEL ZHG HEAVY DUTY ENCODER (Replaces MODEL RPGH)

- CURRENT SINK OUTPUTS
- HIGH PULSE PER REVOLUTION (PPR) RATES  
Up to 1200 PPR for fine, high-resolution counting or precision speed measurement from slow shaft speeds.
- QUADRATURE OUTPUT  
For position measurement, bi-directional counting and in systems with backlash counting requirements.
- AVAILABLE WITH MS AND M12 CONNECTORS

## MODEL ZBG and ZBH - FOR GENERAL INDUSTRIAL SERVICE (Replaces Model RPGB)

The units contain an L.E.D. light source and a photo sensor that scans a shaft-mounted, slotted disc. An internal pulse-shaping amplifier circuit delivers a rectangular pulse signal from the current sinking output in response to the passing slots as it rotates. They can be direct-coupled to a machine shaft by means of a flexible-bellows, spring, or rubber sleeve type coupling that allows for axial and radial misalignment. They can also be coupled with light instrument timing-belts. Timing-belt drives also allow convenient gear-up or gear-down speed ratio changes that can be useful for obtaining non-standard PPR rates.

## MODEL ZHG - HEAVY-DUTY SEALED HOUSING (Replaces Model RPGH)

These heavy duty units feature a heavy cast aluminum housing with 1/4" thick aluminum cover plates and O-ring seals. Heavy duty bearings are double-sealed and allow radial shaft loading of 30 lbs (13.6 Kg).

A 1/2" (12.7 mm) NPT Conduit entry permits signal wiring to be run via flex-conduit to an internal terminal block. Electrical characteristics are identical to those for the Model ZBG. Terminal board markings correspond to the Pin-Out identification of the ZBG.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

1. **SUPPLY VOLTAGE:** +5 to +28 VDC @ 80 mA max.
2. **OUTPUT:** Current Sinking

**ZBG and ZHG (Single Channel):** 250 mA max.

**ZBH (Quadrature):** 250 mA max. current per output. Incremental - two square waves in quadrature with Channel A leading Channel B for clockwise rotation. (Quad. Phase relationship is  $90^\circ \pm 36^\circ$ )

*Note: NPN Transistor outputs have 1.5 K $\Omega$  load resistors returned to supply for internal feed back purposes. This does not interfere with the ability to use these outputs as conventional "Open-Collector" outputs as long as the supply voltage for the ZB is supplied by the indicator or control receiving its output signal. The ZB's internal load resistor also allows the output to be used as a current source, however, load current must be limited to 1 mA max.*

3. **MAXIMUM SHAFT SPEED:** 6000 RPM
4. **MAXIMUM FREQUENCY:**

**Single Channel:** 20 KHz

**Quadrature:** 20 KHz

PPR available up to 1270 for both single channel and quadrature.

### MECHANICAL SPECIFICATIONS

1. **RADIAL SHAFT LOAD**

**ZBG & ZBH:** 20 lbs. operating (9 kg)

**ZHG:** 30 lbs. operating (13.6 kg)

2. **AXIAL SHAFT LOAD:** 10 lbs operating (4.5 kg)

3. **STARTING TORQUE:**

**ZBG & ZBH:** 0.38 oz-in (2.68 N-mm)

**ZHG:** 1 oz-in (7.06 N-mm)

4. **MOMENT OF INERTIA:**  $6.5 \times 10^{-6}$  oz-in-sec<sup>2</sup>

5. **CONNECTIONS:** Consult factory for special lengths.

**6-pin MS Connector:** #14S-6P-6 or cable/connector assembly (4-wire shielded), 10' (3.05 m), 25' (7.62 m), or 50' (15.24 m) long, must be ordered separately.

**M12 Cable/Connector Assembly:** 5-Wire Shielded, 4 meters or 10 meters long, must be ordered separately.

6. **HOUSING:** Black non-corrosive finished 6063-T6 aluminum.

7. **BEARINGS:** ABEC3 double sealed ball bearings

8. **WEIGHT:**

**ZBG & ZBH:** 10 oz (283.5 g)

**ZHG:** 3.8 lbs (1.72 Kg)

### ENVIRONMENTAL SPECIFICATIONS

1. **OPERATING TEMPERATURE:** 0° to 85°C
2. **STORAGE TEMPERATURE:** -25°C to +85°C
3. **HUMIDITY:** 98% RH non-condensing
4. **VIBRATION:** 10 g @ 58 to 500 Hz
5. **SHOCK:** 50 g @ 11 msec duration

### Cable Connections

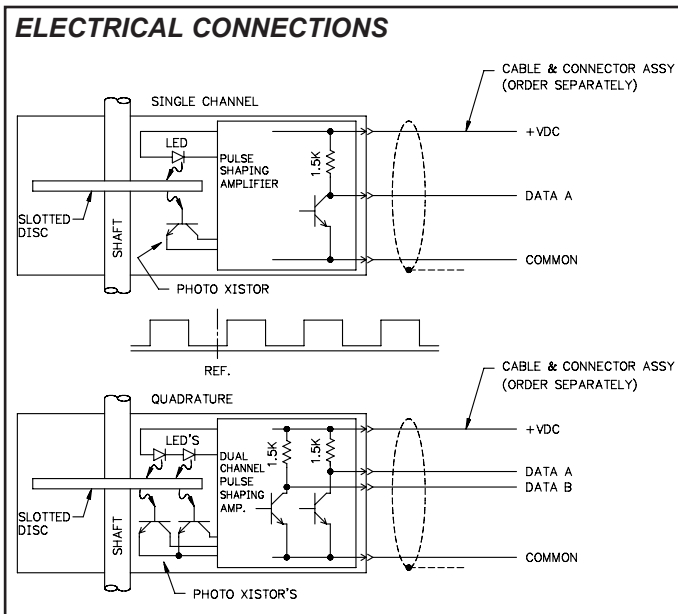

The tables below list the pin connections from the ZBG and ZHG single channel and ZBH quadrature encoder to the optional CCARPG or CCM cable.

## LENGTH SENSOR CONVERSION BRACKET (P/N LSCB1000) ADAPTS ZBG and ZBH ROTARY PULSE GENERATOR TO LENGTH MEASUREMENT

The tubular arm length of this bracket, related to the wheel axis center-line of the ZBG or ZBH is 6.8" similar to the length sensors. The 10' long, 4-wire, shielded cable (included with conversion bracket) has the same color coding as described for the ZBG and ZBH cable P/N CCARPG01. Screws for mounting the conversion bracket are included.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
LSCB	Length Sensor Conversion Bracket for ZBG and ZBH	LSCB1000
	Length Sensor Conversion Bracket for ZBG and ZBH (Special Length)	LSCB1099
--	Hinge Clamp Assembly for Length Sensors & Conversion Bracket (Above)	LSAHC001

### DESCRIPTION

This conversion bracket allows the customer to assemble a custom length sensor by purchasing the following items separately.

1. Length Sensor Conversion Bracket (P/N LSCB1000)
2. ZBG or ZBH with appropriate PPR and Single Channel or Quadrature Output.
3. One or two measuring wheels. Install OF & OK measuring wheels with set screw hub facing ZBG shaft (as shown). Apply thread locking material to wheel set screw threads during installation to ZBG or ZBH shaft.
4. Hinge Clamp Assembly (P/N LSAHC001)

*Note: To complete installation, insure guards, shields or other devices are in place to protect personnel from rotating equipment.*

### LENGTH SENSOR MEASUREMENT ACCURACY

Factors which affect measurement accuracy include Measuring Wheel accuracy and wear, and material conditions. Ideally, materials which are hard, thin and strong provide good readings, conversely, soft, thick and elastic materials can present problems in obtaining true readings. The great majority of these situations, where this effect is consistent, can be compensated for by applying a multiplier to the quadrature output pulse train so as to obtain a corrected measurement. Counter or Rate Indicators with "input scaling" can compensate for Measuring Wheel wear and material elastic and compliance errors. In addition, English/Metric conversions may also be accomplished (See RLC catalog for more information).

### SELECTING APPROPRIATE WHEEL SIZE & PPR (Pulses Per Rev.) OF ROTARY PULSE GENERATOR

When the desired output of a length sensor and wheel combination is either in feet or inch units, selection of the proper combination is relatively straight forward. For example, with a 1-foot wheel circumference, a 1 PPR Rotary Pulse Generator will deliver 1 pulse/ft, 12 PPR would deliver 12 pulses/ft (1 pulse/inch); 100 PPR would yield 100 pulses/ft; and 120 PPR would permit measuring to 1/10th of an inch (1/120th of a foot).

### MODEL LSAHC - LENGTH SENSOR HINGE CLAMP ASSEMBLY

The Length Sensor Hinge Clamp Assembly provides an easy method for attachment and mounting of the Length Sensors and LSCBI Conversion Bracket. The removable top on the solid zinc LSAHC mounting block allows quick installation of the Length Sensor handle tube and provides secure clamping retention. The mounting block pivots freely in zinc right angle brackets to allow mounting the assembly via clearance holes for 1/4" dia. bolts.

The lock washers must be used as indicated (between the bolt head and the top clamp piece). Assemble the top clamp piece as follows.

1. Tighten both bolts so that the top clamp half draws down evenly on the sensor tube.
2. Tighten the bolts until both lock washers are flat.
3. Then turn each bolt an additional 1/2 to 3/4 turn.

#### DIMENSIONS In inches (mm)

**CAUTION:** Downward tension on signal cable can cause wheel(s) to lift. Make sure cable is clamped to machine frame near encoder and allow slack.

**NOTE:** The weight at the Length Sensor unit provides sufficient traction for accurate operation when mounted as shown, with arm angle from horizontal not exceeding ±30°, and with hinge clamp toward the far extreme of the extension arm.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
LSAHC	Length Sensor Hinge Clamp Assembly	LSAHC001

Length Sensors should be mounted so measuring wheel(s) contact ribbon, strip or web as it passes over a roller. As an alternative, wheel(s) can be driven by roller surface next to material being measured.

# MODEL ZDH - 2" FLANGE MOUNT ROTARY PULSE GENERATOR MODEL ZNH - 2.5" FLANGE MOUNT ROTARY PULSE GENERATOR (REPLACES THE MODEL RPGD AND RPGN RESPECTIVELY)

## GENERAL DESCRIPTION

The ZDH and ZNH series of sensors are heavy duty, extremely rugged, reliable, yet compact encoders designed for harsh factory and plant floor environments. Both models are flange mount and conform to NEMA 4, 13 and IP66 standards. Typical applications include motion control feedback, machine control, process control, elevator controls, conveyors, textile equipment, robotics and food processing.

## Open Collector Output Wiring

The ZDH and ZNH series of sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (40 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## REPLACEMENT

Note: The RPGD connections are made by a 24 inch cable. The ZDH uses a 7-Pin MS connector.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

- SUPPLY VOLTAGE:** 4.75 to 28 VDC, 100 mA max. with no output load
- OUTPUTS:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 100 mA max. current. incremental - two square waves in quadrature with A leading B for clockwise shaft rotation.
- MAX. FREQUENCY:** Up to 1 MHz
- INDEX:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 100 mA max. current. Once per revolution centered over Output Channel A. Index is a positive pulse.
- INPUT RIPPLE:** 100 mV peak to peak at 0 to 100 KHz.
- NOISE IMMUNITY:** Tested to BS EN61000-4-2; IEC801-3; BS EN61000-4-4; DDENV 50141; DDENV 50204; BS EN55022; BS EN61000-6-2; BS EN50081-2
- SYMMETRY:**
  - 1 to 6000 CPR:**  $180^\circ (\pm 18^\circ)$  electrical at 100 KHz output
  - 6001 to 20,480 CPR:**  $90^\circ (\pm 36^\circ)$  electrical
- QUAD PHASING:**
  - 1 to 6000 CPR:**  $90^\circ (\pm 22.5^\circ)$  electrical

# MODEL ZMD - MINIATURE LENGTH SENSOR (Replaces MODEL LSM)

- COMPACT SIZE
- QUADRATURE OUTPUT
- BUILT-IN SPRING TENSIONING
- VERTICAL, HORIZONTAL, OR UPSIDE-DOWN MOUNTING
- REDUCES INSTALLATION TIME
- VARIOUS MEASURING WHEELS AVAILABLE

## DESCRIPTION

Designed for light to medium duty sensing applications, the Miniature Length Sensor, Model ZMD, is compact in size and easy-to-use.

It features a built-in spring-loaded torsion arm that provides a simple-to-adjust torsion load, allowing the unit to be mounted in almost any orientation, including upside down. Using a 6" or 200 mm wheel, the ZMD can be used on almost any surface, while operating at speeds up to 3000 feet per minute. The housing is a durable, conductive composite material that will eliminate static build up. Whether you need to measure speed, position, or distances, the Model ZMD is the ideal solution. For other pulse rates and/or wiring configurations, contact the factory for further details.

## Open Collector Output Wiring

The ZMD sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (40 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

- INPUT VOLTAGE:** 4.75 to 28 VDC max for temperatures up to 85°C; 4.75 to 24 VDC for temperatures between 85°C to 100°C, reverse polarity protected.
- INPUT CURRENT:** 100 mA max (65 mA typical) with no output load
- OUTPUTS:** NPN Open Collector Transistor,  $V_{OH} = 40$  VDC max.; 20 mA max. current. Incremental - Two square waves in quadrature with A leading B for clockwise rotation, as viewed from the wheel side.
- MAX FREQUENCY:** 200 KHz standard
- NOISE IMMUNITY:** Tested to BS EN61000-6-2; BS EN50081-2; BS EN61000-4-2; BS EN61000-4-3; BS EN61000-4-6, BS EN500811
- SYMMETRY:** 180° ( $\pm 18^\circ$ ) electrical
- QUAD. PHASING:** 90° ( $\pm 22.5^\circ$ ) electrical
- MIN. EDGE SEP:** 67.5° electrical
- ACCURACY:** Within 0.017° mechanical or 1 arc-minute from true position. (for PPR>189)

### MECHANICAL SPECIFICATIONS

- MAXIMUM MECHANICAL SPEED:** 6000 RPM. Higher speeds may be achievable, contact the factory.
- SHAFT MATERIAL:** Stainless Steel
- SHAFT TOLERANCE:** +0.0000/-0.0004" (+0.000/-0.010 mm)
- RADIAL SHAFT LOAD:** 5 lb. max. Rated load of 2 to 3 lb for bearing life of  $1.2 \times 10^{10}$  revolutions
- AXIAL SHAFT LOAD:** 5 lb. max. Rated load of 2 to 3 lb for bearing life of  $1.2 \times 10^{10}$  revolutions
- STARTING TORQUE:** 0.05 oz-in IP50; 0.4 oz-in IP65
- ELECTRICAL CONNECTION:** 2 meter Cable, (foil and braid shield, 24 AWG conductors). Drain wire internally connected to case..

# MODEL ZLZ - LINEAR CABLE ENCODER (Replaces MODEL LES)

- LOW COST LINEAR SOLUTION
- 50 OR 500 PULSES PER INCH
- STAINLESS STEEL CABLE
- 0 TO 50 INCHES OF CABLE MEASUREMENT
- VARIOUS CABLE ASSEMBLIES AVAILABLE

## DESCRIPTION

The Linear Cable Encoder can provide an accurate, yet low cost solution for Linear Measurement applications. Common applications include robotics, extrusion presses, valve positioning, textile machinery, and gate control positioning, just to name a few. The ZLZ has some unique advantages over other sensing solutions. Using a stainless steel cable, perfect parallel alignment is no longer required and with a 50 inch cable reach, it can easily be mounted away from harsh environments. The ZLZ is available in a quadrature output, allowing the sensor to operate in positioning applications.

Additional cable exit configurations, pulses per inch, and mating connectors are available on special request. Contact the factory for details.

### Open Collector Output Wiring

The ZLZ sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be “pulled up” to external voltages (40 VDC max.) different than the encoder supply voltage. NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

1. **INPUT VOLTAGE:** 4.75 to 28 VDC
2. **INPUT CURRENT:** 80 mA maximum with no output load
3. **INPUT RIPPLE:** 100 mV peak-to-peak at 0 to 100 KHz
4. **OUTPUT:** NPN open collector; 250 mA max per channel; Incremental - square wave with channel A leading B during linear extension.
5. **INDEX:** Once per 5" cable extension or retraction
6. **MAX FREQUENCY:** 0 to 125 KHz
7. **SYMMETRY:** 180° (±18°) electrical
8. **QUAD PHASING:** 90° (±22.5°) electrical
9. **RISE TIME:** Less than 1 µsec

### MECHANICAL SPECIFICATIONS

1. **FULL STROKE LENGTH (FSL):** 50" standard. Longer measuring ranges may be available, please contact customer service
2. **FINISH:** Black powder coated aluminum
3. **ACCURACY:** ±0.10% FSL
4. **REPEATABILITY:** ±0.015% FSL
5. **LINEAR RESOLUTION:** Up to 500 cycles per inch (0.002" per cycle)
6. **CABLE MATERIAL:** 0.034" nylon coated stainless steel rope
7. **CABLE TENSION:** 20 oz maximum typical
8. **LIFE (CYCLES):** 1,000,000 predicted at zero angle cable exit
9. **CONNECTOR TYPE:** 6-Pin MS type connector
10. **WEIGHT:** 19 oz (538.64 g)

### ENVIRONMENTAL SPECIFICATIONS

1. **OPERATING TEMPERATURE:** 0°C to 85°C
2. **SEALING:** IP65 standard

# COMPACT DC POWERED PHOTO-ELECTRIC SENSORS

- RETROREFLECTIVE, PROXIMITY (DIFFUSE) & OPPOSED BEAM PAIRS
- MODULATED LED LIGHT BEAMS FOR IMMUNITY TO AMBIENT LIGHT
- +10 to +30 VDC OPERATION WITH REVERSE POLARITY PROTECTION
- NPN & PNP (CURRENT SINKING AND SOURCING ) OUTPUTS
- RUGGED VALOX HOUSING MEETS NEMA 1, 2, 3, 3S, 4, 4X, 12, & 13 STANDARDS
- LED SIGNAL STRENGTH INDICATOR MAKES ALIGNMENT EASY & PROVIDES INDICATION OF LIGHT SIGNAL DETERIORATION

## DESCRIPTION

These compact self-contained and powerful Retroreflective, Proximity (Diffuse) and Opposed Beam Pair Photo-electric Sensors provide application flexibility in counting, positioning and object detection. All units are interchangeable with conventional 18 mm threaded barrel-type photo-electrics and inductive proximity sensors. Their small 2-1/8" x 1-1/4" x 1/2" size, in addition to various mounting options, greatly increases alignment ease and application possibilities.

All units can be powered from +10 to +30 VDC and are reverse polarity protected. Current sinking NPN and current sourcing PNP Open Collector Transistors are protected from continuous overload and inductive load transients and are rated to 150 mA, with low saturation voltage and less than 1  $\mu$ A offstate leakage current. In addition, no false outputs are generated at power-up. A 6 foot long 4 conductor PVC jacketed cable with strain relief provides supply input and transistor outputs.

A gasketed removable back cover provides access to the LIGHT/DARK Operate Mode Selector. When in the "Light Operate" (LO) position, outputs turn on when light is received by the detector. When in the "Dark Operate" (DO) position, the outputs are turned on when light is not detected. Also accessible is a 15-turn screwdriver adjustable GAIN potentiometer that enables precise adjustment of system sensitivity. A rear mounted LED Signal Strength Indicator "lights" whenever the sensor sees a light condition and "blinks" at a rate proportional to the received signals strength (the stronger the signal, the faster the rate). This LED allows for easy alignment and monitoring of signal strength deterioration due to dirty optics or changes in alignment.

## SPECIFICATIONS

- POWER REQUIREMENTS:** +10 to +30 VDC, 10% Ripple Max., Reverse Polarity Protected, 25 mA max. (Model EMDC = 20 mA max.)
- OUTPUTS:** Current Sinking NPN and Current Sourcing PNP Open Collector Transistors; Short Circuit Protected to +30 VDC, Internal Zener Diode Protected;  
 $I_{SNK} = 150$  mA each;  $V_{OH} = 30$  VDC max.  
 NPN  $V_{SAT} = 0.2$  V @ 10 mA load; 1 V max. @ 150 mA max. load  
 PNP  $V_{SAT} =$  Less than 1 V @ 10 mA load; less than 2 V @ 150 mA max. load  
**Offstate Leakage Current** = Less than 1  $\mu$ A
- RESPONSE TIME:** Responds to a "light" or "dark" signal duration of 1 msec. or greater.
- OPERATING TEMPERATURE:** -4° to +158°F (-20° to +70°C)
- WEIGHT:** 3.5 oz (99.2 g)

## MOUNTING

Various mounting methods have been designed to simplify alignment and provide versatility in any industrial environment. The integral 18 mm threaded lens can be interchanged with existing threaded entries common to 18 mm barrel sensors and inductive proximity switches. The threaded lens can also be installed into panel thicknesses of 5/16" through a 0.71" diameter hole and tightened into place with the supplied mounting nut. Two #4 screw clearance through-holes on 0.95" centers are available for side mounting or side nesting of multiple units on 1/2" centers for scanning large areas or for code reading applications. Units may also be mounted using the stainless steel Bottom-Mount or Side-Mount Bracket Kits (Models MB2 or MB3). These brackets allow 2 axes of movement & greatly simplify alignment.

## MODEL RRDC - RETROREFLECTIVE SENSOR

The Model RRDC is a compact, DC powered, retroreflective photo-electric sensor with maximum detection range of 15 feet (with 3" dia. reflector Model RT2). The "visible" LED light beam allows for easy alignment and is modulated, providing immunity to ambient light. The small beam size of 1/2" at 1 foot from the lens, makes it a good choice for detecting relatively small objects.

In operation, the visible LED light beam is directed at a prismatic photo transistor, amplified and demodulated. An object which then breaks this beam will trigger the outputs.

## ALIGNMENT

Apply DC power to the RRDC and direct its visible light beam at a reflective target (Models RT1 or RT2) while observing the Signal Strength LED on the back of the unit. Optimum alignment occurs when the sensor is receiving the maximum amount of reflected light and the GAIN (sensitivity) potentiometer is adjusted for the highest pulse rate on the Signal Strength LED. Note that glass, metallic objects, and other highly reflective surfaces may not be detected. In these applications, mount the sensor and reflector at any angle to the object to minimize direct reflections.

## MODEL PRDC - PROXIMITY SENSOR

The Model PRDC is a compact, DC powered, Proximity (Diffuse) photo-electric sensor with a 12" maximum detecting distance (as measured with a 90% reflective white test card). This sensor requires no special reflectors or reflective tapes and the limited 12" sensing range reduces detection of background reflections. It is ideally suited for detection of transparent or translucent objects, parts ejected from presses, and rotating targets such as pulley spokes. A modulated "infrared" LED light beam provides immunity to ambient light.

In operation, the modulated light beam is reflected by the object to be detected. Actual sensing range is determined by the surface area and the amount of reflectivity of the object. This reflected light is sensed by a photo-transistor, amplified, demodulated and then energizes the outputs.

### ALIGNMENT

With the PRDC in its sensing position, apply DC Power and direct the infrared light beam at the object to be detected. While observing the Signal Strength LED, adjust the GAIN (sensitivity) potentiometer for the highest LED pulse rate. Now remove the sensed object. If the LED goes out, no further adjustment is necessary. If the LED remains lit, the sensor is "seeing" reflected light from the background. Reduce the GAIN by steps until the sensor "sees" the object but not the background. Then turn the pot counter clockwise 2 more full turns. If the background is still being sensed, it will be necessary to reduce its reflectivity by either moving it back or painting it flat black.

## MODELS EMDC & RCDC - OPPOSED BEAM EMITTER/ RECEIVER SENSOR PAIR

The Models EMDC (Emitter) and the RCDC (Receiver) are compact, DC powered, Opposed Beam photo-electric sensor pairs with a 10 foot sensing range. The Emitter contains a high power modulated "infrared" LED. The Receiver contains a sensitive photo-transistor, amplifier-demodulator and output transistors. In operation, these outputs will be triggered when the Receiver detects that an object begins to break the Emitter beam. Due to their high gain, they are ideally suited for detecting opaque objects in dirty and dusty areas or when condensation or oil film environments are present. The small 1/8" well defined beam size allows for sensing small parts accurately and provides repeatable edge sensing of opaque objects to better than 0.01" for accurate positioning applications. Greater accuracies can be achieved by aperturing the Emitter, Receiver or both. However, aperturing will result in reduced sensing distances. While the beam size is small, the Receiver has a wide field of view which allows easy "line-of-sight" alignment.

### ALIGNMENT

Temporarily mount the Emitter-Receiver Pair opposite, and in line-of-sight, to each other. Apply DC power to both and aim the Emitter at the Receiver. Move the Receiver up-down-left-right until the Signal Strength LED lights. Optimum alignment occurs when the Signal Strength LED flashes at the highest rate obtainable with the GAIN (Sensitivity) potentiometer adjusted to the lowest setting needed to light the LED. Mount the units in place. Opposed Beam Pairs should be used at their highest possible gain. Therefore, have the object to be detected in "sensing position" and adjust the GAIN potentiometer fully clockwise (maximum gain). If the Signal Strength LED comes on, "burn-through" is occurring, and will require that the GAIN pot be backed off (counter clockwise) until the LED goes out and then backed off 2 more full turns. Note that Opposed Beam Pairs must be aligned properly and mounted securely. Excessive movement or vibration can cause loss of alignment and intermittent or false operation.

## MB2 BOTTOM MOUNT BRACKET KIT INSTALLATION

1. Remove lense mounting nut on sensor and bottom lense screw.
2. Align mounting foot (A) under lense as shown with threaded insert facing down and attach to lense with long kit supplied screw (B).
3. Place sensor mounting peg into bracket hole.
4. Install screw, with washers, into long slotted bracket hole and into mounting foot threaded insert.

## MB3 SIDE MOUNT BRACKET KIT INSTALLATION

1. Remove lense mounting nut from sensor.
2. Install screws with flat washers, through side clearance holes in sensor and through top hole and slot of bracket.
3. Install lockwashers and tighten hex nuts.

## MOUNTING OPTIONS

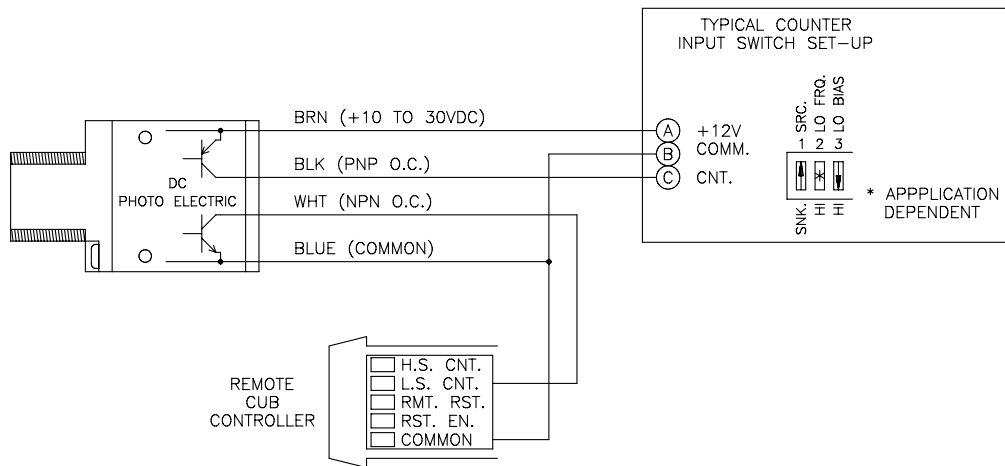

### MB3 SIDE MOUNTING BRACKET

### MB2 BOTTOM MOUNTING BRACKET

## TYPICAL HOOKUP

## DIMENSION DRAWINGS

### EMDC HOOKUP

1. GAIN (sensitivity) control: rotate clockwise to increase gain.
2. "SIGNAL STRENGTH" LED indicator pulse at a rate proportional to received light signal strength.
3. LIGHT/DARK OPERATE SELECT control: DARK OPERATE = fully counter clockwise; LIGHT OPERATE = fully clockwise.
4. 6' PVC-jacketed 4-wire cable supplied (2-wire, EMDC).

# MODELS PRM & RRM – MINIATURE DC POWERED PHOTO-ELECTRIC SENSOR

- RETROREFLECTIVE, PROXIMITY (DIFFUSE) & OPPOSED BEAM PAIRS
- +10 to +30 VDC OPERATION WITH REVERSE POLARITY PROTECTION
- COMPLEMENTARY NPN (CURRENT SINKING) OUTPUTS
- DURABLE BLACK POLYCARBONATE/ABS ALLOY HOUSING MEETS NEMA 6 AND IP65 STANDARDS
- LED'S DISPLAY OPERATING STATUS
- PUSH BUTTON DIGITAL GAIN ADJUSTMENT

## GENERAL DESCRIPTION

These miniature self-contained and powerful Retroreflective, Proximity (Diffuse) and Opposed Beam Pair Photo-electric Sensors provide application flexibility in counting, positioning and object detection. All units are interchangeable with conventional 12 mm threaded barrel-type photo-electrics and inductive proximity sensors. Their small size, in addition to various mounting options, greatly increases alignment ease and application possibilities.

All units can be powered by supplies ranging from +10 to +30 VDC and are reverse polarity protected. The complementary NPN open collector (Current Sinking) outputs are protected from continuous overload and inductive load transients and are rated to 150 mA, with low saturation voltage and less than 10  $\mu$ A off-state leakage current. In addition, no false outputs are generated at power-up. Two versions of the sensor are available, a 6 foot (1.83 M) long 4 conductor PVC jacketed cable or 6 inch long quick disconnect Pico-style connector provides supply input and transistor output.

These miniature sensors offer a digital gain adjustment that uses a single sealed push button to streamline installation and setup. The user simply holds the button in to achieve maximum sensitivity, and then can click the button for seven decremental settings to fine tune for your application. They also feature smart new status indicators. Green and amber LED's display operating status from three directions, indicate "power on" and "light sensed" and flash to signal "maximum gain," "gain reduced one increment" and "minimum gain" conditions. You can tell operating status of your sensors at a glance.

## MODEL RRMDC - RETROREFLECTIVE SENSOR

The Model RRMDC is a miniature, DC powered, retroreflective photo-electric sensor with maximum detection range of 6.5 feet [1.98 M] (with 3" dia. reflector Model RT2). The "visible" LED light beam allows for easy alignment and is modulated, providing immunity to ambient light. The small beam size makes it a good choice for detecting relatively small objects.

In operation, the visible LED light beam is directed at a photo transistor, amplified and demodulated. An object which then breaks this beam will trigger the output.

## MODEL PRMDC - PROXIMITY SENSOR

The Model PRMDC is a miniature, DC powered, Proximity (Diffuse) photo-electric sensor with a 8" maximum detecting distance. This sensor requires no special reflectors or reflective tapes and the limited 8" sensing range reduces detection of background reflections. It is ideally suited for detection of transparent or translucent objects, parts ejected from presses, and rotating targets such as pulley spokes. A modulated "infrared" LED light beam provides immunity to ambient light.

In operation, the modulated light beam is reflected by the object to be detected. Actual sensing range is determined by the surface area and the amount of reflectivity of the object. This reflected light is sensed by a photo-transistor, amplified, demodulated and then energizes the outputs.

## MODELS EMMDC & RCMDC - OPPOSED BEAM EMITTER/ RECEIVER SENSOR PAIR

The Models EMMDC (Emitter) and the RCMDC (Receiver) are miniature, DC powered, Opposed Beam photo-electric sensor pairs with a 13 foot sensing range. The Emitter contains a high power modulated "infrared" LED. The Receiver contains a sensitive photo-transistor, amplifier-demodulator and output transistor. In operation, this output will be triggered when the Receiver detects that an object begins to break the Emitter beam. Due to their high gain, they are ideally suited for detecting opaque objects in dirty and dusty areas or when condensation or oil film environments are present.

## SPECIFICATIONS

- POWER REQUIREMENTS:** +10 to +30 VDC (10% Ripple Max.)  
Current Draw: 25 mA max. (exclusive of load)  
Reverse Polarity Protected
- REPEATABILITY:** Opposed Mode: 1 msec, All others: 175  $\mu$ sec.
- OUTPUTS:** Current Sinking Complementary NPN Open Collector Transistor; Short Circuit Protected  
 $I_{SNK}$ : 150 mA max. each;  $V_{OH}$  = 30 VDC max.  
 $V_{SAT}$ : 1 V @ 10 mA load  
Offstate Leakage Current : Less than 10  $\mu$ A @ 30 VDC
- OUTPUT RESPONSE TIME:** Opposed Mode: 8 msec ON, 4 msec OFF, All others 1.5 msec
- OPERATING TEMPERATURE:** -4° to +131°F (-20° to +55°C)
- WEIGHT:** 0.4 oz. (1.13 g)

## DIMENSIONS In inches (mm)

## SET-UP AND INSTALLATION USING THE PHOTOELECTRIC LED INDICATORS

The photoelectric has two bright LEDs; both are visible from the back, and each is visible from one side of the sensor. They indicate the following:

**Green steady:** Power ON

**Amber steady:** Light sensed

**Green flashing rapidly 5 times:** Maximum gain

**Single green flash:** Push button "click" registered, gain reduced by one increment

**Amber/Green alternating:** Minimum gain (can not reduce further)

### SETTING SENSITIVITY

The unit features an extremely simple method for setting sensitivity (gain).

Simply hold the push button until the LED flashes rapidly, 5 times. The sensor is automatically set to maximum gain.

Reduce gain by pressing the push button briefly ("clicking" it) up to 7 times; gain will reduce in single increments with each click. Amber and green LEDs alternate after the lowest setting is reached.

If the gain is accidentally set too low, hold the push button until gain increases to the maximum level, then click the push button down to the appropriate level. Gain may be readjusted in this way at any time.

The integral 12 mm threaded lens can be interchanged with existing threaded entries common to 12 mm barrel sensors and inductive proximity switches. The threaded lens can also be installed into panel thicknesses of 3/16" through a 0.51" diameter hole and tightened into place with the supplied mounting nut. Two #4 screw clearance through-holes on 0.55" centers are available for side mounting or side nesting of multiple units on 1/2" centers for scanning large areas or for code reading applications. Units may also be mounted using the stainless steel Bottom-Mount or Side-Mount Bracket Kits (Models MBM2 or MBM3). These brackets allow 2 axes of movement & greatly simplify alignment.

# MODEL PT - PRESSURE TRANSMITTER

- COMPACT STAINLESS STEEL HOUSING
- M12 QUICK DISCONNECT
- EXCELLENT EMC RESISTANCE
- SHORT CIRCUIT AND REVERSE POLARITY PROTECTION
- IP67 PROTECTION RATING
- CERAMIC TECHNOLOGY THAT PROVIDES LONG TERM RELIABLE OPERATION

## DESCRIPTION

The PT Series Pressure Transmitters are designed to provide accurate and dependable pressure measurement, even in the most demanding applications. The reliability of solid-state design and the durability of the stainless steel case are the cornerstone of their design.

Proven ceramic component technology allows long-term stability and high tolerance to overpressure conditions. The 4 to 20 mA output can easily be connect to any Red Lion process meter for monitoring and/or control. Short circuit and reverse polarity protection are built-in to the circuitry, further enhancing this pressure transmitters.

The transmitter housing is constructed of stainless steel and provides an IP 67 level of protection. The fluid connection is a standard G 1/4 thread, while the electrical connection is a M12 connector.

Additional pressure ranges and accessories are available on special request, contact the factory for more details.

## SPECIFICATIONS

1. ACCURACY:  $\leq 0.3\%$  Full Scale
2. MEDIUM TEMPERATURE:  $-40^{\circ}\text{F}$  to  $+302^{\circ}\text{F}$  ( $-40^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$ )
3. OPERATING VOLTAGE: 8 to 33 VDC
4. OUTPUT: 4 to 20 mA
5. CURRENT CONSUMPTION:  $\leq 20$  mA
6. DYNAMIC RESPONSE:  $< 2$  msec
7. SHORT CIRCUIT PROTECTION: Yes
8. REVERSE POLARITY PROTECTION: Yes
9. DEGREE OF PROTECTION: IP 67
10. HOUSING MATERIAL: SST 1.4305 (AISI 303)
11. ELECTRICAL CONNECTION: M12x1
12. FLUID CONNECTION: G 1/4
13. SHOCK RESISTANCE: 75 G, 11 msec per IEC 68-2-27
14. VIBRATION RESISTANCE: 20 G, 15 mm per IEC 68-2-6

## SAFETY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION:** Read complete instructions prior to installation and operation of the unit.

# MODEL TMP - FIELD CUTTABLE TEMPERATURE SENSOR PROBES AND ACCESSORIES

- THERMOCOUPLE OR RTD
- 24" PROBE CUTTABLE TO 3.5"
- MEASURE TEMPERATURES UP TO 704 °C/1300 °F
- MOUNTING AND WIRING ACCESSORIES

## GENERAL DESCRIPTION

Model TMP Thermocouple and RTD Temperature Probes are field cuttable to the desired length. The probes can be trimmed to within 3.5" (88.9 mm) of the probe tip allowing for greater application flexibility. Accessory hardware is available to wire and mount the probes in the user's existing thermowell.

Optional spring loaded fittings (sold separately) slide along the probe sheath to proper immersion depth as determined by the user. These fittings allow for strong contact between the probe and the thermowell to improve response.

## SPECIFICATIONS

1. **THERMOCOUPLE:** Ungrounded J, K, T and E calibration available.
2. **RTD:** 3 Wire, 100W, Class "A" DIN Platinum per IEC751 (385 ALPHA)
3. **PROBE SHEATH:** 0.25" (6.35mm)
4. **PROBE LENGTH:** 24" (0.6M) as supplied, can be field cut down to 3.5" (88.9mm).
5. **LEAD WIRE:** 6" (152.4mm) 24 gauge
6. **WIRE INSULATION:** Neoflon PFA, Fiberglass or High Temperature Glass. As specified by part number.

## CUTTING THE TUBING

The thermocouple and RTD probes have a crimp mark located 3" (76.2 mm) from the tip. This indicates the end of the internal seal. Damage to the probe will occur if trimmed within 3.5" (88.9 mm) of the tip.

1. Determine the desired probe length and mark it with a pen or marker. Secure the probe within a tube vice being careful not to deform or flatten the probe.
2. "Score" the tubing with a tubing cutter. Make one or two revolutions with the cutter. Do not cut completely through the tubing to prevent burrs or a sharp lip on the inside of the tubing.

3. Use a pair of pliers to grasp the excess tubing to be removed.
4. Use a narrow range of motion to slowly work the excess tubing from side to side until it separates from the probe. Using a wide range of motion will deform the tube and prevent installation of the tube sleeve.
5. Remove the excess tubing and trim the leads to the desired length.
6. Install the tube sleeve in the open end of the tube to protect the leads from any sharp edges on the inside of the tube.

(One tube sleeve is included with each probe.)

## INSTALLATION

1. Orient the probe and the spring loaded fitting as shown below.
2. Screw the spring loaded fitting one complete turn into the thermowell (not included).
3. Push the probe into the fitting until it touches the bottom of the thermowell.
4. Hold the probe to the bottom of the thermowell and tighten the fitting. This ensures good contact between the probe and the bottom of the thermowell.
5. Completely tighten the fitting into the thermowell.

*Note: The probe must be inserted only as shown below to prevent damage to the fitting.*

If it becomes necessary to separate the probe and the fitting, first disconnect the wires and then unscrew the fitting completely from the thermowell. Pull the probe through the fitting from the end that was screwed into the thermowell. The fitting will present resistance to the probe removal if you attempt to go in the wrong direction.

## MODELS TMPC, TMPU, & TMPB THERMOCOUPLES

### MODEL TMPC - HIGH TEMPERATURE THERMOCOUPLE

#### GENERAL DESCRIPTION

The model TMPC thermocouple is double-protected with abrasion resistant Inconel overbraid with high temperature ceramic fiber insulation. A temperature rating of up to 980° C (1800° F) continuous service and 1090° C (2000° F) short-term service makes these probes ideal for many high temperature measurement applications. Ideal applications include profiling ovens and furnaces.

- Flexible and Abrasion Resistant
- Smooth, rounded tip on "hot" side
- Male high temperature standard size ceramic connector on "cold" side

#### SPECIFICATIONS

1. **WIRE:** 20 AWG, 10 feet in length; standard limits of error
2. **INSULATION:** Nextel<sup>®</sup> ceramic fiber. (Not to be exported)
3. **TEMPERATURE:** 980 °C (1800 °F) continuous  
1090 °C (2000 °F) short-term service depending on TC type
4. **CONNECTOR:** High temperature ceramic standard size style connector -29 to 650 °C (-20 to 1200 °F)
5. **PROBE:** Grounded TC junction with Inconel overbraid welded to form a smooth, round tip

# MODEL TMPU - UTILITY THERMOCOUPLES

## GENERAL DESCRIPTION

Utility thermocouple probes are basic products for temperature measurement. They are typically connected to a hand held thermometer. The unit features a rugged handle that is permanently molded to a probe sheath. A retractable cable is connected with strain relief to the handle end, and termination is provided by a miniature male connector.

- **RETRACTABLE CABLE WITH SUPERIOR MEMORY**
- **MINIATURE CONNECTOR FOR USE WITH HAND HELD THERMOMETERS**
- **MOLDED HANDLE RATED TO 220° C (425° F)**
- **MEETS OR EXCEEDS SLE AND EN 60584-2: TOLERANCE CLASS 1**

\* For connector information see TMPCNM01 on page 875.

## SPECIFICATIONS

1. **HANDLE TEMPERATURE RATING:** 220° C (425° F)
2. **THERMOCOUPLE JUNCTION:** Grounded
3. **CABLE LENGTH:** 1 foot expands to 5 feet
4. **PROBE LENGTH:** 12 inches
5. **MAX PROBE TEMPERATURE:**  
**304SS:** 900 °C (1650 °F)  
**Inconel:** 1150 °C (2100 °F)

# MODEL TMPB - SPRING LOADED COMPRESSION FITTING THERMOCOUPLE

## GENERAL DESCRIPTION

The spring-loaded compression fitting thermocouple is ideally suited for measuring plastic processing machinery temperatures at the crosshead, die or barrel. It has a 5 foot stainless steel cable, with a 3/16" sheath diameter and a brass compression fitting with 1/8" NPT.

- **IDEAL FOR EXTRUDERS/MOLDING AND MACHINE PROCESS TEMPERATURE**
- **COLD END TERMINATION IS HIGH TEMPERATURE NICKEL ZINC FERRITE CORE STANDARD MALE CONNECTOR**
- **STANDARD MALE CONNECTOR IS DESIGNED FOR SUPPRESSION OF ELECTROMAGNETIC INTERFERENCE**

## SPECIFICATIONS

1. **THERMOCOUPLE JUNCTION:** Type K, grounded
2. **CABLE:** 5 feet, 0.188 dia. stainless steel
3. **CONNECTOR SPECIFICATIONS:** Extra heavy duty solid male pin male connector  
**Case Material:** High temperature liquid crystal polymer (LCP)  
**Temperature ratings:**  
 Ferrite core effectiveness: 120° C (248° F)  
 LCP Material: 260° C (500° F)  
**Impedance:** (±20%): 35 ohms @ 25 MHz  
 70 ohms @ 100 MHz

# QUICK DISCONNECT TEMPERATURE PROBES AND ACCESSORIES

## MODEL TMP - QUICK DISCONNECT TEMPERATURE PROBES

- **MATING FEMALE CONNECTOR (with "write on label") AND PLCM CABLE CLAMP WITH LOCKING CLIP INCLUDED WITH MINIATURE AND STANDARD SIZE PROBES**
- **CHOICE OF 304 SS, INCONEL 600 OR XL SHEATH**
- **XL HIGH TEMPERATURE PROBE AVAILABLE**
- **MEETS OR EXCEEDS SLE AND EN 60584-2: TOLERANCE CLASS 1**
- **COLOR CODED CONNECTOR BODY**
- **WIRE SOLD SEPARATELY**

### GENERAL DESCRIPTION

Model TMP Quick Disconnect Thermocouples are available with both miniature and standard size connector termination. These rugged probes feature a variety of calibration types, sheath materials and diameters, and are available with an ungrounded junction. A high temperature probe is also available that can be mated with a standard female universal connector. All temperature probes are rated at the tolerance standard SLE, (Special Limits Of Error), which is  $\pm 2^\circ$  C degrees of error.

### SPECIFICATIONS

1. **SHEATH:** Constructed of 304 stainless steel, Inconel 600, or XL (High Temperature Probe only)
2. **SHEATH DIAMETER:** 0.062" or 0.125"
3. **PROBE LENGTH:** 12" Ungrounded junction.
4. **CONNECTOR BODY:** Glass Filled Nylon, rated to 220° C.
5. **WIRE:** Sold separately, see accessory details

## MODEL TMPCB - RETRACTABLE SENSOR CABLES

### GENERAL DESCRIPTION

The retractable sensor cables are color coded and for use with thermocouples. The cables have a superior jacket construction, employing the latest in jacketing material: TPE (thermoplastic elastomer), a unique family of thermoplastics which exhibits characteristics previously found only in rubber compounds. TPE is extremely tough and flexible, and has excellent abrasion resistance. This special construction technique yields an expansion rate of up to 500%. These retractable cables are for use with electronic type indicators, either panel, handheld or bench type models.

- COMPATIBLE WITH J, K, T AND E THERMOCOUPLE CALIBRATIONS
- EXPANSION RATIO UP TO 500% - 1 Ft (300 mm) OF CABLE STRETCHES TO 5 Ft (1500 mm)
- IDEAL FOR USE WITH HANDHELD AND BENCH STAND ELECTRONIC INDICATORS
- BARE WIRE ENDS

6. **CONSTRUCTION:** 28 AWG stranded wire (7 strand x 36 gauge)
7. **LENGTH:** 2 feet (600 mm)

# ACCESSORIES

## MODEL TMPCN - QUICK DISCONNECT STANDARD CONNECTORS

### GENERAL DESCRIPTION

Standard Connectors are for use with the Standard Quick Disconnect TC Probes. They are available in both male and female termination, and include a "write on label" for easy identification. The female standard connector is a universal connector, meaning it can be used to terminate male versions of both the standard and miniature connector.

### SPECIFICATIONS

1. **CONNECTOR BODY MATERIAL:** Glass Filled Nylon, for temperature ranges of -29 to 220° C (-20 to 425 °F).
2. **CONNECTOR BODY COLOR:** ANSI color coded
3. **WIRE GAGE:** Accepts stranded or solid wire up to 14 AWG
4. **WIRE TERMINATION:** Combination Phillips/Slot Screws

# TRANSITION JOINT PROBES AND ACCESSORIES

## MODEL TMP - TRANSITION JOINT PROBES

I

- CHOICE OF 304 SS, INCONEL 600 OR XL SHEATH
- STRIPPED BARE WIRE ENDS
- XL HIGH TEMPERATURE PROBE AVAILABLE
- EASILY ATTACHES TO STANDARD AND MINI STYLE CONNECTORS (SEE ACCESSORIES)
- MEETS OR EXCEEDS SLE AND EN 60584-2: TOLERANCE CLASS 1

### GENERAL DESCRIPTION

Model TMPTJ transition joint probes are rugged temperature probes that feature a spring strain relief at the “cold” end of the probe that prevents pinching of the thermocouple wire that can occur in certain applications. These versatile probes come in a variety of sheath diameters and materials. The probes are standard 12" long transitioning to 40" of wire with exposed leads.

### SPECIFICATIONS

1. **SHEATH:** Constructed of 304 stainless steel, Inconel 600, or XL (High Temperature Probe)
2. **SHEATH DIAMETER:** 0.063" or 0.125"
3. **PROBE LENGTH:** 12" Ungrounded junction.
4. **CONNECTOR BODY:** Glass Filled Nylon, rated to 260° C.
5. **WIRE INSULATION:** Neoflon PFA
6. **LEAD LENGTH:** 40" (1 meter) with stripped ends

## MODEL TMPRT - SURFACE MOUNT AND PIPE PLUG RTD SENSORS

I

**SURFACE MOUNT**

**PIPE PLUG**

## MODEL TMPRT - ADVANCED DESIGN SURFACE MOUNT RTD SENSOR

### GENERAL DESCRIPTION

Model TMPRT "stick-on" style RTD temperature sensor mounts on flat surfaces and provides Class B accuracy for critical monitoring applications. Based on a bare 2 X 2 X .08 mm thin film platinum RTD, the unit is supplied in a Neoflon PFA PFA insulated configuration and can be easily applied using its self-adhesive backing. Some of the applications of this versatile RTD sensor include monitoring chip, heat sink, and environmental temperatures in electronic devices; checking piping or ducting temperatures; monitoring motor and transformer core heat; testing insulation capabilities, as well as checking other applications in which surface and/or gradient temperatures need to be monitored and controlled.

- 100 Ω DIN CLASS B ( $\pm 0.12\%$  AT 0°C) ACCURACY STANDARD
- EASY-INSTALLATION SILICONE BASED, SELF BACKING RATED TO 260°C (500°F)
- SENSOR CAN BE REAPPLIED
- STRIPPED 3 WIRE LEADS (CONNECTORS SOLD SEPARATELY)
- 10 FOOT LEAD LENGTH
- IDEAL FOR FLAT OR CURVED SURFACES

### SPECIFICATIONS

- MINIMUM/MAXIMUM TEMPERATURE:**  
-73° C (-100° F) to 260° C (500° F) continuous
- SENSING ELEMENT:** 100 Ω at 0° C (32° F)  
Temperature coefficient of 0.00385 Ω/Ω/°C (IEC60751)
- ACCURACY:**  $\pm 0.12\%$  at 0° C (DIN Class B)
- RESPONSE TIME:** Less than 0.9 s (63% response time in water flowing at 3 feet per second), less than 2 sec response time on a hot plate.
- LEAD WIRE:** 10 foot 26 AWG stranded nickel plated copper, Neoflon PFA PFA-insulated and jacket cable
- ADHESIVE PAD DIMENSIONS:** 1 x ¾" (25 X 19 mm)

# MODEL TMPRT - PIPE PLUG RTD SENSOR

## GENERAL DESCRIPTION

The pipe plug RTD sensor is a unit specially designed for use in pressure vessel applications. Its 3 wire construction provides connectivity to most hand held instruments with Red/Red/White per IE/ASTM-E-1137. The unit features a high accuracy 100 Ω Class A DIN platinum element and steel braided, Neoflon PFA insulated wires for the necessary durability and protection demanded by harsher environments.

- IDEAL FOR USE IN PRESSURE VESSEL APPLICATIONS, 172 BAR (2500 PSI) MAXIMUM
- 6 MM (0.24") DIAMETER, SST PROBE
- STEEL BRAIDED, NEOFロン PFA INSULATED LEAD WIRES
- HIGH ACCURACY 100 Ω CLASS A DIN PLATINUM ELEMENT (ALPHA = 0.00385)
- STRAIN RELIEF SPRING

## SPECIFICATIONS

1. **WIRE:** 72" long 26 AWG insulated Neoflon PFA
2. **MAX TEMPERATURE:** 230° C (450° F)
3. **TERMINATION:** Stripped bare wire ends
4. **OVERBRAID:** Stainless Steel
5. **THREADS:** 1/4" NPT
6. **SENSING ELEMENT END DIAMETER:** .24" (6mm)

## ORDERING INFORMATION

TMPRT	PIPE PLUG RTD SENSOR	6'	STRIPPED BARE WIRE ENDS	TMPRT002

# MODEL TMPCN - RTD PROBE CONNECTORS

## GENERAL DESCRIPTION

RTD Mini Connectors are for use with RTD probes. They are miniature size, and are available in both male and female termination.

## SPECIFICATIONS

1. **CONNECTOR BODY MATERIAL:** Glass Filled Nylon, for temperature ranges of -29 to 220° C.
2. **CONNECTOR BODY COLOR:** White
3. **WIRE GAGE:** Accepts stranded or solid wire up to 20 AWG
4. **WIRE TERMINATION:** Combination Phillips/Slot Screws
5. **CONNECTOR ENDS:** Copper

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	TYPE	TERMINATION	PART NUMBER
TMPCN	RTD miniature male connector	U	MALE	TMPCNM09
	RTD miniature female connector	U	FEMALE	TMPCNM10

# MODELS TMPT AND TMPTR - THERMOCOUPLE OR RTD CONNECTOR WITH BUILT IN 4-20 mA TEMPERATURE TRANSMITTER

I

- HIGH ACCURACY, REPEATABILITY AND STABILITY
- CONNECTOR DESIGN CONVERTS INPUT SIGNAL TO A STANDARD 2-WIRE, 4-20 mA OUTPUT
- PROVIDES "OPEN SENSOR WIRE" SIGNAL INDICATION
- ENCAPSULATED HOUSING
- COMPENSATES FOR LONG LEAD WIRES
- FACTORY CALIBRATED, NO ADJUSTMENTS REQUIRED
- MODELS FOR J, K, T (UNGROUNDING) THERMOCOUPLES AND 100 OHM, 0.00385 3-WIRE RTD'S

## GENERAL DESCRIPTION

The model TMPT's internal circuitry conditions the non-linear millivolt output of a thermocouple, across a specified temperature range, and retransmits it as a standard 2-wire 4-20 mA analog output. The TMPTR also provides a 2-wire 4-20 mA output by conditioning the resistive change of a 100Ω, 0.00385 RTD sensor and transmitting it as a 4-20 mA output.

## SPECIFICATIONS

### TMPT SPECIFICATIONS

1. **SUPPLY VOLTAGE:** 9 to 24 VDC @ 30 mA
2. **OUTPUT:** 4 to 20 mA
3. **TEMPERATURE RANGE:** See Ordering Information
4. **ACCURACY:** ± 0.5% of full scale millivolt input @ 23° C plus the non-linearity of the thermocouple type (note that the TMPT does not compensate for thermocouple non-linearity)
5. **TEMPERATURE COEFFICIENT:** ± 0.002 mA/°C
6. **MAX LOOP LOAD:** (Ω) = (V supply - 9 V)/0.02 A
7. **TRANSMITTER OPERATING TEMPERATURE:** -40° to 85°C
8. **AGENCY APPROVAL:** CE
9. **RESPONSE TIME:** 120 msec (0 to 63% FS)
10. **THERMOCOUPLE JUNCTION:** Ungrounded
11. **CABLE CONNECTIONS:** 10 foot 2-wire shielded cable

WIRE COLOR CODE	FUNCTION
RED	+VDC
BLACK	OUTPUT
WHITE	SHIELD

\* Max cable run is determined by max loop load and wire resistance (≈1000ft).

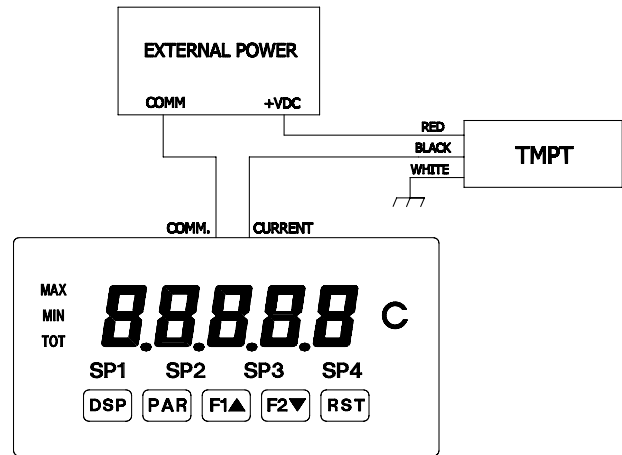

### TMPTR SPECIFICATIONS

1. **SUPPLY VOLTAGE:** 9 to 24 VDC @ 30 mA
2. **OUTPUT:** 4 to 20 mA
3. **TEMPERATURE RANGE:** 2 - 569° C (36 - 1056° F)
4. **INPUT:** 3 wire, PT100 (α = 0.00385)
5. **OPEN SENSOR WIRE INDICATION:**
  - Leg 1: Open = 27 mA
  - Leg 2: Open = 2.2 mA
  - Leg 3: Open = 2.2 mA
6. **INPUT CONNECTION:** 3 prong miniature connector
7. **CABLE CONNECTIONS:** 10 foot 2-wire shielded cable

WIRE COLOR CODE	FUNCTION
RED	+VDC
BLACK	OUTPUT
WHITE	SHIELD

\* Max cable run is determined by max loop load and wire resistance (≈1000ft).

# MODEL CT - CURRENT TRANSFORMER

## SPECIFICATIONS

1. **Operating Frequency:** 50 to 400 Hz.
2. **Insulation Class:** 0.6 KV BIL 10 KV full wave.
3. **Terminals:** Brass studs No. 8-32 UNC with flat washer and hex nuts.
4. **Window Diameter:** 1.13" (28.7 mm).
5. **Weight:** 8.0 oz (226.0 g).

UL Recognized Component  
 (Instrument Transformers, Inc., PN# 2SFT500-0.1, 2SFT500, 2SFT201,  
 File # E93779)

*Note: The listed current ratio of the current transformer is based on the primary conductor passing once through the transformer opening. The ratio is reduced in multiples by looping the conductor through the opening. A transformer having a ratio 200:5 changes to a ratio of 100:5 if two loops are made through the transformer with the primary conductor. The ratio of the transformer will be 50:5 if four loops are made with the primary conductor, etc.*

## ORDERING INFORMATION

## MODEL CT004 - CURRENT TRANSFORMER

### DESCRIPTION

The CT004 is intended for use with temperature controllers for monitoring heater current. The CT004 is suitable for general purpose AC current monitoring applications up to 40 Amps.

### SPECIFICATIONS

1. CURRENT RATIO: 40:0.1A
2. MAX HEATER CURRENT: 50 A.
3. DIELECTRIC STRENGTH: 1000 VAC ( For 1 minute)
4. VIBRATION RESISTANCE: 50 Hz (Approx. 10 G)
5. TERMINALS: Solder type
6. WINDOW DIAMETER: 0.228" (5.8 mm).
7. WEIGHT: 0.406 oz (11.5 g).

Notes: Refer to the instruction manual of the temperature controller for connection information and max. heater current allowable by the temperature controller.

### DIMENSIONS In inches (mm)

# MODEL CTD - DC CURRENT TRANSDUCER

- THREE JUMPER SELECTABLE INPUT RANGES
- OUTPUT IS MAGNETICALLY ISOLATED FROM THE INPUT
- INTERNAL POWER REGULATION
- SPLIT-CORE CASE FOR EASY INSTALLATION

## GENERAL DESCRIPTION

CTD transducer combines a Hall Effect sensor and a signal conditioner into a single package. This provides higher accuracy, lower wiring costs, easier installation and saves valuable panel space. The CTD has jumper selectable current input ranges and industry standard 4-20 mA output with a split-core case.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## SPECIFICATIONS

1. **OUTPUT SIGNAL:** 4-20 mA
2. **OUTPUT LIMIT:** 23 mA
3. **ACCURACY:** 1.0% FS
4. **REPEATABILITY:** 1.0% FS
5. **RESPONSE TIME:** to 90% of step change 100 msec
6. **FREQUENCY RANGE:** DC
7. **POWER SUPPLY:** 22 – 26 VAC/VDC  
Power input and output signal are not isolated.
8. **POWER CONSUMPTION:** 2 VA
9. **LOADING:** 650 $\Omega$  max.
10. **ISOLATION VOLTAGE:** 3 kV (monitored line to output)
11. **LINEARITY:** 0.75% FS
12. **CURRENT RANGES:** Three selectable Ranges: 0 – 50 A  
0 – 75 A  
0 – 100 A
13. **CASE:** UL 94V-0 Flammability rated thermoplastic
14. **ENVIRONMENTAL:** -4 to 122 °F (-20 to 50 °C)  
0-95% RH, non-condensing

## INSTALLATION

Run wire to be monitored through opening in the sensor. Be sure the monitored current flows in the same direction as the arrow on the sensor. The arrow is just above the hinge, with the “+” symbol on the left, the “-” symbol on the right. The CTD transducers work in the same environment as motors, contactors, heaters, pull-boxes, and other electrical enclosures. They can be mounted in any position or hung directly on wires with a wire tie. Just leave at least one inch (25.4 mm) distance between sensor and other magnetic devices.

### Split-Core Versions

Press the tab in the direction as shown to open the sensor. After placing the wire in the opening, press the hinged portion firmly downward until a definite click is heard and the tab pops out fully.

### KEEP SPLIT-CORE SENSORS CLEAN.

Silicone grease is factory applied on the mating surfaces to prevent rust and improve performance. Be careful not to allow grit or dirt onto the grease in the contact area. Operation can be impaired if the mating surfaces do not have good contact. Check visually before closing.

## OUTPUT WIRING

Connect control or monitoring wires to the sensor. Use up to 14 AWG copper wire and tighten terminals to 4 inch-pounds torque.

### 4-20mA:

The current loop is powered by the CTD Transducer. Maximum loop impedance is 650 Ω.

#### CONNECTION NOTES:

- Deadfront captive screw terminals.
- 12–22 AWG solid or stranded.
- Observe polarity.

## RANGE SELECT

CTD transducers feature field selectable ranges. The ranges are factory calibrated, eliminating time consuming and inaccurate field setting of zero or span.

1. Determine the normal operating amperage of your monitored circuit.
2. Select the range that is equal to or slightly higher than the normal operating amperage.
3. Place the range jumper in the appropriate position.

## TROUBLE SHOOTING

### 1. Output Signal Too Low

- A. The jumper may be set in a range that is too high for current being monitored. Move jumper to the correct range.
- B. Power supply is inadequate. Check power supply. Make sure it is of sufficient voltage with all loads at maximum. CTD Series draw 2.0 VA.
- C. Output load too high. Check output load, be sure it is no more than 650 Ω.

### 2. Output Signal is always at maximum

- A. The jumper may be set in a range that is too low for current being monitored. Move jumper to the correct range.

### 3. Sensor has no output

- A. Polarity is not properly matched. Check and correct wiring polarity
- B. Monitored load is not DC or is not on. Check that the monitored load is DC and that it is actually on.
- C. Split Core models: The core contact area may be dirty. Open the sensor and clean the contact area.

## ORDERING INFORMATION

# MODEL CTL - AVERAGE RESPONDING AC CURRENT TRANSDUCERS

- AVERAGE RESPONDING OUTPUT: 0-10 VDC or 4-20 mA
- JUMPER SELECTABLE RANGES
- OUTPUT IS MAGNETICALLY ISOLATED FROM THE INPUT
- SPLIT-CORE AND FIXED-CORE CASES

## GENERAL DESCRIPTION

CTL Series transducers combine a current transformer and a signal conditioner into a single package. This provides higher accuracy, lower wiring costs, easier installation and saves valuable panel space.

The CTL Series transducers have jumper selected current input ranges and industry standard 0-10 VDC or 4-20 mA outputs. The CTL Series is designed for application on "linear" or sinusoidal AC loads. Available in a split-core or solid-core case. Select the CTL Series for constant speed loads or On/Off loads.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## INSTALLATION

Run wire to be monitored through opening in the sensor. The CTL Series transducers work in the same environment as motors, contactors, heaters, pull-boxes, and other electrical enclosures. They can be mounted in any position or hung directly on wires with a wire tie. Just leave at least one inch (25.4 mm) distance between sensor and other magnetic devices.

### Split-Core Versions

Press the tab in the direction as shown to open the sensor. After placing the wire in the opening, press the hinged portion firmly downward until a definite click is heard and the tab pops out fully.

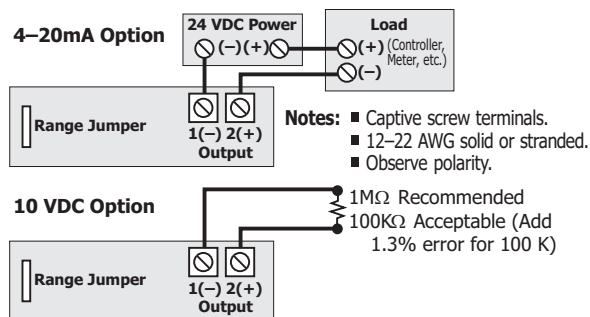

### KEEP SPLIT-CORE SENSORS CLEAN.

Silicone grease is factory applied on the mating surfaces to prevent rust and improve performance. Be careful not to allow grit or dirt onto the grease in the contact area. Operation can be impaired if the mating surfaces do not have good contact. Check visually before closing.

## OUTPUT WIRING

Connect control or monitoring wires to the sensor. Use up to 14 AWG copper wire and tighten terminals to 7 inch-pounds torque for solid-core models and 9 inch-pounds torque for split-core models. Be sure the output load or loop power requirements are met (see diagram).

## POWER SUPPLY CONNECTIONS

## RANGE SELECT

CTL series transducers feature field selectable ranges. The ranges are factory calibrated, eliminating time consuming and inaccurate field setting of zero or span.

1. Determine the normal operating amperage of your monitored circuit
2. Select the range that is equal to or slightly higher than the normal operating amperage.
3. Place the range jumper in the appropriate position.

## TROUBLE SHOOTING

### 0-10 VDC OUTPUT MODELS

#### 1. Sensor Has No Output

- A. Polarity is not properly matched. Check and correct wiring polarity.
- B. Monitored load is not AC or is not on. Check that the monitored load is AC and that it is actually on.
- C. Split Core models: The core contact area may be dirty. Open the sensor and clean the contact area.

#### 2. Output Signal Too Low

- A. The jumper may be set in a range that is too high for current being monitored. Move jumper to the correct range.
- B. Output load too low. Check output load, be sure that it is at least 100KΩ and preferably 1 MΩ.
- C. Monitored current is below minimum required. Loop the monitored wire several times through the aperture until the “sensed” current rises above minimum. Sensed Amps = (Actual Amps) x (Number of Loops). Count loops on the inside of the aperture.

#### 3. Output Signal Is Always At Maximum

- A. The jumper may be set in a range that is too low for current being monitored. Move jumper to the correct range.

### 4-20 mA OUTPUT MODELS

#### 1. Sensor Has No Output

- A. Power supply is not properly sized. Check power supply voltage and current rating.
- B. Polarity is not properly matched. Check and correct wiring polarity
- C. Split Core models: The core contact area may be dirty. Open the sensor and clean the contact area.

#### 2. Output Signal Too Low

- A. The jumper may be set in a range that is too high for current being monitored. Move jumper to the correct range.
- B. The load current is not sinusoidal.
- C. Monitored current is below minimum required. Loop the monitored wire several times through the aperture until the “sensed” current rises above minimum. Sensed Amps = (Actual Amps) x (Number of Loops). Count loops on the inside of the aperture.

#### 3. Sensor Is Always At 4 mA

- A. Monitored load is not AC or is not on. Check that the monitored load is AC and that it is actually on.

#### 4. Output Signal Is Always At 20 mA

- A. The jumper may be set in a range that is too low for current being monitored. Move jumper to the correct range.

# MODEL CTR - TRUE RMS AC CURRENT TRANSDUCER

- TRUE RMS OUTPUT
- JUMPER SELECTABLE RANGES
- OUTPUT IS MAGNETICALLY ISOLATED FROM THE INPUT
- SPLIT-CORE CASE

## GENERAL DESCRIPTION

CTR Series transducers combine a current transformer and a signal conditioner into a single package. This provides higher accuracy, lower wiring costs, easier installation and saves valuable panel space.

The CTR Series transducers are available in 4-20 mA output only. The CTR Series provides a “True RMS” output on distorted waveforms found on VFD or SCR outputs, and on linear loads in “noisy” power environments. Select the CTR Series for variable speed or SCR controlled loads.

The current waveform of a typical linear load is a pure sine wave. In VFD and SCR applications, however, output waveforms are rough approximations of a sine wave. There are numerous spikes and dips in each cycle. CTR transducers use a mathematical algorithm called “True RMS”, that integrates the actual waveform over time. The output is the amperage component of the true power (heating value) of the AC current waveform. True RMS is the only way to accurately measure distorted AC waveforms.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

**CAUTION: Read complete instructions prior to installation and operation of the unit.**

**CAUTION: Risk of electric shock.**

## SPECIFICATIONS

1. **OUTPUT SIGNAL:** 4 to 20 mA DC, loop-powered, True RMS
2. **OUTPUT LIMIT:** 23 mA
3. **FREQUENCY RANGE:** 10-400 Hz (All Waveforms)
4. **RESPONSE TIME:** to 90% of step change 600 msec
5. **ACCURACY:** 0.8% FS
6. **POWER SUPPLY:** 24 VDC Nominal, 40 VDC Max.
7. **INPUT RANGES:** (Jumper Selectable)

## INSTALLATION

Run wire to be monitored through opening in the sensor. Be sure the monitored current flows in the same direction as the arrow on the sensor. The CTR Series transducers work in the same environment as motors, contactors, heaters, pull-boxes, and other electrical enclosures. They can be mounted in any position or hung directly on wires with a wire tie. Just leave at least one inch (25.4 mm) distance between sensor and other magnetic devices.

### Split-Core Versions

Press the tab in the direction as shown to open the sensor. After placing the wire in the opening, press the hinged portion firmly downward until a definite click is heard and the tab pops out fully.

### KEEP SPLIT-CORE SENSORS CLEAN.

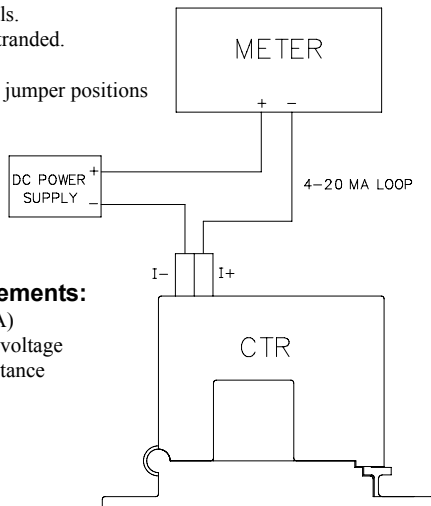

Silicone grease is factory applied on the mating surfaces to prevent rust and improve performance. Be careful not to allow grit or dirt onto the grease in the contact area. Operation can be impaired if the mating surfaces do not have good contact. Check visually before closing.

## OUTPUT WIRING

Connect control or monitoring wires to the sensor. Use up to 14 AWG copper wire and tighten terminals to 9 inch-pounds torque. Be sure the output load or loop power requirements are met (see diagram).

### Connection Notes:

- Captive screw terminals.
- 14-22 AWG solid or stranded.
- Observe Polarity
- See label for ranges & jumper positions

### Loop Voltage Requirements:

$$V_L = 12V + (R_L \times 20 \text{ mA})$$

Where:  $V_L$  = Min. Loop voltage  
 $R_L$  = Loop Resistance

## RANGE SELECT

CTR series transducers feature field selectable ranges. The ranges are factory calibrated, eliminating time consuming and inaccurate field setting of zero or span.

1. Determine the normal operating amperage of your monitored circuit
2. Select the range that is equal to or slightly higher than the normal operating amperage.
3. Place the range jumper in the appropriate position.

## TROUBLE SHOOTING

### 1. Sensor Has No Output

- A. Power supply is not properly sized. Check power supply voltage and current rating.
- B. Polarity is not properly matched. Check and correct wiring polarity.
- C. Split Core models: The core contact area may be dirty. Open the sensor and clean the contact area.

### 2. Output Signal Too Low

- A. The jumper may be set in a range that is too high for current being monitored. Move jumper to the correct range.
- B. Output load too high. Check output load, be sure that  $V_L$  does not exceed 40 VDC.
- C. Monitored current is below minimum required. Loop the monitored wire several times through the aperture until the "sensed" current rises above minimum. Sensed Amps = (Actual Amps) x (Number of Loops). Count loops on the inside of the aperture.

### 3. Output Signal Is Always At 4mA

- A. Monitored load is not AC or is not on. Check that the monitored load is AC and that it is actually on.

### 4. Output Signal Is Always At 20mA

- A. The jumper may be set in a range that is too low for current being monitored. Move jumper to the correct range.

# MODEL CTS - AC CURRENT OPERATED SWITCH

- UNIVERSAL OUTPUT
- SELF-POWERED
- EASILY ADJUSTABLE SETPOINT
- FIXED OR SPLIT-CORE CASE

## GENERAL DESCRIPTION

CTS Series Transducers are self-powered, solid-state current-operated switches that trigger when the current level sensed through the aperture exceeds the adjusted setpoint. The solid state output contacts can switch AC or DC; this "universal" output makes them well suited for application in automation systems.

CTS Series Current Operated Switches combine a current transformer, signal conditioner and limit alarm into a single package for use in status monitoring or proof of operation applications. Offering an extended setpoint range of 1-150 A and universal, solid-state outputs, the self-powered CTS can be tailored to provide accurate and dependable digital indication of over-current conditions across a broad range of applications. Available in solid-core enclosure styles or in a split-core case to maximize ease of installation.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## SPECIFICATIONS

1. **POWER SUPPLY:** None - self powered
2. **OUTPUT:** Magnetically isolated normally open solid-state switch
3. **OUTPUT RATING:** 0.15A, 240 VAC/VDC
4. **OFF STATE LEAKAGE:** <10  $\mu$ A
5. **RESPONSE TIME:** 120 msec
6. **HYSTERESIS:** Approx 5% of Setpoint
7. **SETPOINT RANGES AND MAXIMUM AMPS:**

MODEL	SETPOINT RANGE	MAXIMUM INPUT AMPS

11. **CASE:** UL 94V-0 Flammability rated thermoplastic
12. **ENVIRONMENTAL:** -58 to 149 °F (-50 to 65 °C)  
0-95% RH, non-condensing
13. **TORQUE RATINGS:** 5 in-lbs
14. **LISTING:** UL 508 Industrial Control Equipment, CSA C22.2 No. 14-M95, and CE Certified.

## INSTALLATION

Run wire to be monitored through opening in the sensor. The CTS Series transducers work in the same environment as motors, contactors, heaters, pull-boxes, and other electrical enclosures. They can be mounted in any position or hung directly on wires with a wire tie. Just leave at least one inch (25.4 mm) distance between sensor and other magnetic devices.

### Split-Core Versions

Press the tab in the direction as shown to open the sensor. After placing the wire in the opening, press the hinged portion firmly downward until a definite click is heard and the tab pops out fully.

### KEEP SPLIT-CORE SENSORS CLEAN.

Silicone grease is factory applied on the mating surfaces to prevent rust and improve performance. Be careful not to allow grit or dirt onto the grease in the contact area. Operation can be impaired if the mating surfaces do not have good contact. Check visually before closing.

### OUTPUT WIRING

Connect control or monitoring wires to the sensor. Use up to 14 AWG copper wire and tighten terminals to 5 inch-pounds torque. Be sure the output load does not exceed the switch rating.

**CAUTION:** Incandescent lamps can have “Cold Filament Inrush” current of up to 10 times their rated amperage. Use caution when switching lamps.

### SETPOINT ADJUSTMENT

CTS Series SETPOINT is adjusted with a 4-turn potentiometer (CTSS) or a 15-turn potentiometer (CTSF). The pot is shipped factory set to the lowest setpoint, fully clockwise (CW). Turning the pot counter-clockwise (CCW) will increase the setpoint. The pot has a slip-clutch to prevent damage at either end of its rotation. To determine where the adjustment is, turn the pot all the way CW. This will return it to the minimum setpoint.

#### Adjustment Notes:

1. Output contacts are solid-state. Check output status by applying voltage to the contacts and reading the voltage drop across the contacts. An Ohmmeter set on “Continuity” will give misleading results.
2. It is recommended that the setpoint be adjusted to allow for voltage variations of 10-15%.

#### Typical Adjustment

1. Turn the pot to minimum setpoint (4 or 15 turns CW).
2. Have normal operating current running through the sensor. The output should be tripped since the pot is at its minimum setpoint. For units with LED, it should be flashing fast (2 to 3 times per second).
3. Turn the pot CCW until the unit un-trips. This is indicated by the slow flashing of the LED (once every 2 to 3 seconds), or by the changing of the output switch status.
4. Now turn the pot CW slowly until the unit trips again. It is now set at the current level being monitored.
  - A. To Set UNDERLOAD - Turn the pot about 1/8 turn further CW.
  - B. To Set OVERLOAD - Turn the pot about 1/8 turn further CCW.

MONITORED AMPS	OUTPUT	SMART-LED
None or <Min.	OPEN	OFF
Below Trip Level	OPEN	SLOW (2 sec)
Above Trip Level	CLOSED	FAST (0.5 sec)

## TROUBLE SHOOTING

### 1. Sensor Is Always Tripped

- A. The setpoint may be too low. Turn pot CCW to increase setpoint.
- B. Switch has been overloaded and contacts are burned out. Check the output load, remembering to include inrush on inductive loads (coils, motors, ballasts).

### 2. Sensor Will Not Trip

- A. The setpoint may be too high. Turn pot CW to decrease setpoint.
- B. Split Core models: The core contact area may be dirty. Open the sensor and clean the contact area.
- C. Monitored current is below minimum required. Loop the monitored wire several times through the aperture until the “sensed” current rises above minimum. Sensed Amps = (Actual Amps) x (Number of Loops). Count loops on the inside of the aperture.
- D. Switch has been overloaded and contacts are burned out. Check the output load, remembering to include inrush on inductive loads (coils, motors, ballasts).

# SUB-CUB 1 & 2 - COMPLETE 6-DIGIT COMPONENT COUNTERS

## APPLICATIONS INCLUDE:

- VENDING MACHINES
- VIDEO GAMES
- COMPUTERS
- UTILITY METERS
- OFFICE COPIERS
- P.C.'S
- FLOW METERS
- TEST EQUIPMENT
- DISPENSING EQUIP.
- MACHINE CONTROLS
- MEDICAL EQUIPMENT
- PORTABLE INSTRUMENTS

## - LSI COUNTER CHIP WITH LCD DISPLAY - SNAP MOUNTS DIRECTLY ON P.C. BOARD

- AVAILABLE IN TWO SIZES  
SUB-CUB 1 - 0.2" (5 mm) HIGH DISPLAY  
\*SUB-CUB 2 - 0.35" (8.9 mm) HIGH DISPLAY
- SOLDERLESS, ELASTOMERIC INTERCONNECTS
- ULTRA-LOW POWER, 5 V AT 15  $\mu$ A TYPICAL
- LATCHABLE DISPLAY WITH LEADING ZERO BLANKING
- COUNT RATES TO 500 KHZ
- IDEAL IN APPLICATIONS FOR:  
REGISTER, STATUS & USAGE COUNTING  
FREQUENCY, EPUT, & RPM INDICATION  
TIMER, PULSE-WIDTH & PERIOD READOUT

\* ACCESSORY HARDWARE AVAILABLE FOR PANEL MOUNTING SUB-CUB 2

## DESCRIPTION

As a completely self-contained counter/display module, SUB-CUB's can be treated as a component just like any other I.C. The modules contain a custom monolithic counter/driver chip that performs all the counting functions together with a 6-digit LCD readout. The latchable display with the separate reset function permits these modules to be used as frequency or rate meters, timers, phase-angle or pulse width indicators and for other complex readout requirements in addition to simple high speed counting.

These modules are ideal for internal "on-board" applications where a readout of count, frequency, time, etc. is needed within a circuit enclosure for

maintenance, diagnostic, tune-up, or other data readout requirements. The SUB-CUB 2, with its larger display, can also be mounted with a convenient bezel kit to provide a very flexible and economical panel instrument.

SUB-CUB's snap-mount directly on any 1/16" P.C. Board that has been etched to provide a mating interconnect pad pattern with two mounting holes and a polarizing "key" hole. Interconnections to the P.C. Board as well as internal connections are made with elastomeric connectors that provide corrosion-proof, gas tight, interface contacts for high reliability.

## MOUNTING & DIMENSIONS

Snap in mounting on the P.C. Board is facilitated by two, split, lock-ramp pins which engage mounting holes drilled in the P.C. Board. The silicone rubber elastomeric connectors compress to accommodate P.C. Board thickness variation of  $\pm 0.005"$  (0.13 mm).

## DIMENSIONS

In Inches (mm)

## P.C. BOARD LAYOUT

P.C. Board pads may be gold or tin-lead plated. Pad surface must be flat without excessive tin-lead build-up. (Layout views are from SUB-CUB-D mounting side of board.)

Note: All hole size tolerances  $\pm 0.003"$  (0.08mm)  
All other tolerances  $\pm 0.005"$  (0.13 mm)

# SUB-CUB2-8A - 8-DIGIT COMPONENT COUNTER

- SUB-CUB2-8A - 8-DIGIT COMPONENT COUNTER
- LSI COUNTER CHIP AND 0.30" (7.62 mm) HIGH LCD DISPLAY
- SOLDERLESS, ELASTOMERIC INTERCONNECTS (Snap Mounts Directly Onto P.C. Board)
- LATCHABLE DISPLAY WITH SELECTABLE LEADING ZERO BLANKING
- COUNT RATES TO 500 KHz
- LOW POWER, 30  $\mu$ A AT 5 V (Typical)

\* ACCESSORY HARDWARE AVAILABLE FOR PANEL MOUNTING SUB-CUB2-8A

## DESCRIPTION

The SUB-CUB2-8A is a completely self-contained 8-digit LCD counter/display module. The module can be treated as a component just like any other I.C. The SUB-CUB2-8A can be used in simple high speed counting applications as well as more complex applications such as frequency meters, pulse width meters, etc.

Since it is a P.C. Board mounted component, the SUB-CUB2-8A is easily integrated into applications where a readout of count, frequency, or time is needed within a circuit enclosure. The SUB-CUB2-8A bezel and interface

board can be used to provide a convenient and economical panel mounted display.

The SUB-CUB2-8A snap-mounts directly onto any 1/16" P.C. Board that has been etched to provide a mating interconnect pad pattern and drilled for two mounting holes and a polarizing "key" hole. Interconnections to the P.C. Board as well as internal connections are made with elastomeric connectors that provide an easy, corrosion-proof, and gas-tight interface for high reliability.

## MOUNTING & DIMENSIONS

Snap in mounting on the P.C. Board is facilitated by two, split, lock-ramp pins which engage mounting holes drilled in the P.C. Board. The silicone rubber elastomeric connectors compress to accommodate P.C. Board thickness variations of  $\pm 0.005$ " (0.13 mm).

## DIMENSIONS In Inches (mm)

## P.C. BOARD LAYOUT

P.C. Board pads may be gold or tin-lead plated. Pad surface must be flat without excessive tin-lead build-up. (Layout view is from the SUB-CUB2-8A mounting side of the board.)

Pad area must be clean and free of contaminants so that proper electrical contact can be made.

Note: All hole size  $\pm 0.003$ " (0.08 mm)  
All other tolerances  $\pm 0.005$ " (0.13 mm)

# SUB CUB D - 8-DIGIT COMPONENT COUNTER WITH 6-DIGIT LCD DISPLAY

U.S. PATENT NO. 4599600

- TRUE QUADRATURE WITH RESOLUTIONS UP TO 4 TIMES THE ENCODED INPUT
- BI-DIRECTIONAL COUNTING WITH UP/DOWN CONTROL
- POLARITY INDICATION
- 3 POSITION DECIMAL POINT WITH SELECTABLE LEADING ZERO BLANKING
- SOLDERLESS, ELASTOMERIC INTERCONNECTS (Snap mounts directly onto P.C. board)
- ULTRA LOW POWER, 15  $\mu$ A AT 5.0 V (Typical)

## DESCRIPTION

A completely self-contained counter/display module, the new SUB CUB D can be treated as a component just like any other I.C. The SUB CUB D provides all of the capabilities of the SUB CUB 2 with two additional modes of operation. These are: Bi-directional counting with UP/DOWN control ... ideal for length measurement, where a change in direction can occur; and Quadrature counting (two pulse trains, shifted from one another by 90°) ... commonly used for positioning applications. The SUB CUB D has the additional capability of inhibiting counts on both inputs, used under certain conditions to prevent false counts.

The SUB CUB D snap mounts directly onto a 1/16" thick P.C. Board which has been etched with the proper mating pattern (shown below). Four elastomeric connectors provide corrosion-proof, gas-tight contacts which afford high reliability. In addition, the SUB CUB D is available with a bezel mounting kit, which will allow the unit to be mounted as a panel instrument.

## MOUNTING & DIMENSIONS

Snap-in mounting onto P.C. Board is facilitated by two, split, lock-ramp pins which engage mounting holes drilled into the P.C. Board. The silicone rubber elastomeric connectors compress to accommodate P.C. Board thickness variation of  $\pm 0.005"$ .

## DIMENSIONS

In Inches (mm)

## P.C. BOARD LAYOUT

P.C. Board pads may be gold or tin-lead plated. Pad surface must be flat without excessive tin-lead build-up. (Layout view is from SUB CUB D mounting side of board.)

Pad area must be clean and free of contaminants so that proper electrical contact can be made.

Note: All hole size tolerances  $\pm 0.003"$  (0.08 mm)  
All other tolerances  $\pm 0.005"$  (0.13 mm)

# SUB-CUB-T - COMPLETE 5 1/2-DIGIT COMPONENT TIMER/COUNTER

- LSI TIMER/COUNTER CHIP WITH CRYSTAL CONTROLLED OSCILLATOR AND 0.35" (9 mm) HIGH LCD DISPLAY
- SNAP MOUNTS DIRECTLY ONTO P.C. BOARD
- SOLDERLESS, ELASTOMERIC INTERCONNECTS
- ULTRA LOW POWER, 15  $\mu$ A @ 5.0 VDC TYPICAL
- TIMES IN HOURS, 0.1 HOURS, 0.01 HOURS, AND 0.1 MINUTES
- COUNTS IN X1,  $\times 10$ ,  $\times 100$ , AND  $\times 1000$
- DEBOUNCE SELECTABLE IN COUNTER MODES
- COUNT RATES UP TO 500 KHz
- ANNUNCIATOR TO INDICATE TIMER RUNNING
- ACCEPTS AC VOLTAGE ON SIGNAL INPUT DIRECTLY THROUGH INPUT RESISTOR

## DESCRIPTION

As a completely self-contained timer/counter/display module, the SUB-CUB-T can be treated as a component, just like any other I.C. The module contains a low power integrated circuit (*that performs all of the timing and counting functions*), a 32.768 KHz quartz crystal (*which provides a stable time reference*) and a 5 1/2-digit LCD readout. The SUB-CUB-T has 4 Control inputs which when set either high or low, determine the mode of operation. The BP and WINK outputs can be used to select either no decimal point, or a decimal point in the first or second position. The SIGNAL input is used to activate the timer (*when in the timing modes*) or to increment the counter (*when in the counting modes*).

The SUB-CUB-T is ideal for internal "on board" applications where a readout of elapsed time or count is needed within a circuit enclosure for maintenance, diagnostic, or other data readout requirements. It can also be mounted with a convenient bezel kit to provide a very flexible and economical panel instrument.

The SUB-CUB-T snap-mounts directly onto any 1/16" P.C. Board that has been etched to provide a mating interconnect pad pattern with two mounting holes and a polarizing "key" hole. Interconnections to the P.C. Board, as well as the internal connections, are made with elastomeric connectors that provide a corrosion-proof, gas-tight, interface contact for high reliability.

## MOUNTING & DIMENSIONS

Snap-in mounting onto P.C. Board is facilitated by two, split, lock-ramp pins which engage mounting holes drilled into the P.C. Board. The silicone rubber elastomeric connectors compress to accommodate P.C. Board thickness variation of  $\pm 0.005$ ".

## DIMENSIONS In Inches (mm)

## P.C. BOARD LAYOUT

P.C. Board pads may be gold or tin-lead plated. Pad surface must be flat without excessive tin-lead build-up. (*Layout view is from SUB-CUB-T mounting side of board.*)

Pad area must be clean and free of contaminants so that proper electrical contact can be made.

Note: All hole size tolerances  $\pm 0.003$ " ( 0.08 mm)  
All other tolerances  $\pm 0.005$ " (0.13mm)

# MODEL MDMU - MINIATURE DISPLAY MODULE COUNTER/TIMER/TACH

- LCD, POSITIVE REFLECTIVE OR NEGATIVE TRANSMISSIVE WITH YELLOW/GREEN OR RED BACKLIGHTING
- COUNTER, TIMER, & TACH ALL IN A SINGLE UNIT
- RATE MULTIPLIER/PRESCALER FROM 0.0001 TO 1.9999 IN COUNT AND TACH MODES
- 9 RANGES IN TIMER MODE
- SELECTABLE DECIMAL POINTS
- 5 VDC POWERED
- PANEL MOUNT OR PC BOARD MOUNT

## DESCRIPTION

The MDMU is a complete 6 digit Counter/Timer/Tach in a small panel or printed circuit board mounted package. It is designed to operate from a 5 VDC power supply. It has a 6 digit LCD, with 0.35" high digits, and 5 selectable decimal points. In the timer modes, a flashing annunciator is supplied to indicate that the signal input of the MDMU is active. The displays are available in positive image reflective (black digits, reflective background) or negative image transmissive (illuminated digits, dark background) with red or yellow/green backlighting.

The MDMU has four Mode Select and three Decimal Point Select inputs available for determining the basic operation. Certain functions can also be selected through programming. In most applications, the MS and DP inputs are hard wired to select the appropriate function (counter, timer and tach) and decimal point position (counter and tach only). If changes to the MDMU configuration are required, or if a rate multiplier/prescale is desired, the PROGRAM input must be used to enter the appropriate information.

The integrated circuit is bonded directly to the printed circuit board and is mechanically protected. Internal electrical interface connections use elastomeric connectors to provide a corrosion resistant connection. This reliable construction also reduces the space requirements.

# MODEL MDMV - MINIATURE DISPLAY MODULE D.C. VOLTMETER

- LCD, POSITIVE REFLECTIVE OR NEGATIVE TRANSMISSIVE WITH YELLOW/GREEN OR RED BACKLIGHTING
- 1 pA INPUT LEAKAGE CURRENT TYPICAL
- 200 mV FULL SCALE
- AUTOMATIC ZEROING CIRCUIT
- SELECTABLE DECIMAL POINTS
- POLARITY INDICATION
- 5 VDC POWERED
- FIVE SELECTABLE DISPLAY ANNUNCIATORS
- PANEL MOUNT OR PC BOARD MOUNT

## DESCRIPTION

The MDMV is a small panel or printed circuit board mount digital voltmeter. With advantages of accuracy, size, and ease of installation, it is an ideal replacement for analog meters. The unit has a 3½-digit LCD display with 0.4" (10.2 mm) high digits. The displays are available in positive image reflective (black digits, reflective background) or negative image transmissive (illuminated digits, dark background) with red or yellow/green backlighting.

The integrated circuit is bonded directly to the printed circuit board and is mechanically protected. Internal electrical interface connections use elastomeric connectors to provide a corrosion resistant connection. This reliable construction also reduces the space requirements.

The MDMV module is designed to operate from a +5 VDC supply. The module measures input voltages from 0 to ±199.9 mV DC relative to the supply common.

Auto-zeroing is provided by the module, therefore no zero adjustment is required. If the input signal exceeds the input range, the unit display will indicate an overrange condition.

The module has three selectable decimal point positions and five selectable annunciators (BAT, V, A, m, µ). The BAT (Battery) annunciator is used to indicate a low battery condition, while the others are used to indicate Volts and Amperes.

# MODEL PSDR - 24 V POWER SUPPLIES @ 1, 2, OR 4 A

## DESCRIPTION

The compact PSDR power supplies are industrial input voltage supplies with primary switched-mode regulator technology. They feature low output ripple and adjusted output voltage from 22.5 to 28.5 VDC. The output is electronically protected against overloads and short circuits.

The modules snap onto standard 35 mm flat DIN rails and use removable terminal blocks for easy wiring.

## SPECIFICATIONS

### 1. POWER REQUIREMENTS:

Nominal Input Voltage: 100 to 240 VAC  
 Input Voltage Range: 85 to 264 VAC or 90 to 350 VDC  
 Current Consumption at nominal input voltage:  
 PSDR0100: 0.5 A to 0.2 A @ 100 to 240 VAC, 0.4 to 0.1 A @ 90 to 350 VDC  
 PSDR0200: 0.82 A to 0.33 A @ 100 to 240 VAC, 0.65 to 0.19 A @ 90 to 350 VDC  
 PSDR0400: 1.8 A to 0.7 A @ 100 to 240 VAC, 1.3 to 0.4 A @ 90 to 350 VDC

### 2. FREQUENCY: 50 to 60 Hz

### 3. INPUT RECOMMENDED BACKUP FUSE:

Power Circuit Breaker: 6 A or 10 A  
 Characteristic: B (EN 60898)

### 4. SURGE VOLTAGE PROTECTION: Varistor

### 5. POWER OUTPUT: Nominal value of 24 VDC ±1%. Adjustable from 22.5 to 28.5 VDC via potentiometer

### 6. EFFICIENCY AT 230 VAC AND NOMINAL VALUES: > 80 %

### 7. ENVIRONMENTAL CONDITIONS:

Operating Temperature Range: -25 to 60°C  
 Storage Temperature: -40 to 85°C  
 Humidity, no moisture condensation: 95 % at 25°C  
 Vibration in acc. with IEC 68-2-6: < 15 Hz, amplitude ±2.5 mm;  
 15 Hz - 150 Hz, 2.3 g  
 Shock in all directions acc. with IEC 68-2-27: 30 g  
 Contamination in acc. with EN 50178: Degree of pollution 2

### 8. STANDARDS AND CERTIFICATIONS:

Electrical Safety (of information technology equipment)	EN 60950 / VDE 0805  UL Recognized UL 60 950
Industrial regulating devices	 UL 508 listed
Electronic equipment for use in electrical power installations (surge voltage category III)	EN 50178 / VDE 0160
Limitation of output power	NEC Class 2
Safe isolation	VDE 0100-410
Protection against electric shock	DIN VDE 0106-101

## CE In conformance with EMC guideline 89/336/EEC and low-voltage directive 73/23/EEC

### EMC (Electromagnetic compatibility)

#### Immunity in accordance with EN 61000-6-2

Discharge of static electricity (ESD)	EN 61000-4-2 <sup>2)</sup>	Housing > Level 3 Contact discharge: 8 kV Discharge in air: 8 kV
Electromagnetic HF field	EN 61000-4-3 <sup>1)</sup>	Housing/Field 3 Frequency/Field intensity: 80-1000 MHz / 10 V/m
Fast transients (Burst)	EN 61000-4-4 <sup>2)</sup>	Input: 4 kV (Level 4) <sup>4)</sup> Output: 2 kV (Level 3) <sup>4)</sup> Signal: 1 kV (Level 2) <sup>4)</sup>
Surge voltage capacities (Surge)	EN 61000-4-5 <sup>2)</sup>	Input: 4 kV <sup>4)</sup> / 2 kV <sup>4)</sup> (Level 4) Output: 0.5 kV <sup>4)</sup> / 0.5 kV <sup>3)</sup> (Level 1) Signal: 0.5 kV <sup>4)</sup> (Level 1)
Conducted disturbance	EN 61000-4-6 <sup>1)</sup>	I/O/S: Level 3 Frequency/U <sub>c</sub> : 0.15-80 MHz / 10 V
Voltage dips	EN 61000-4-11 <sup>2)</sup>	Input: see mains buffering > 20 ms
Simulation mobile phones	ENV 50204	Frequency: 900 MHz, 1800 MHz Field intensity: 20 V/m

#### Noise emission according to EN 50081-2

Emitted radio interference	EN 55011 (EN 55022) Class B <sup>5)</sup>
Radio interference voltage	EN 55011 (EN 55022) Class B <sup>5)</sup>

EN 55011 corresponds to CISPR11 / EN 55022 corresponds to CISPR22  
 EN 61000 corresponds to IEC 1000

- 1) Criterion A: Normal operating behavior within the defined limits.
- 2) Criterion B: Temporary impairment to operational behavior, that is corrected by the device itself.
- 3) Symmetrical: Conductor to conductor.
- 4) Asymmetrical: Conductor to ground.
- 5) Class B: Area of application industry and residential.

- 9. ISOLATION VOLTAGE: Input/Output 3 kVAC
- 10. INSTALLATION POSITION: On horizontal mounting rail according to EN 50022-35
- 11. CONNECTIONS: 24 to 14 AWG max. Torque 4.5 to 5.3 inch-lbs (0.5-0.6 Nm).
- 12. MOUNTING: Standard DIN rail top hat (T) profile rail according to EN50022 - 35 X 7.5 and 35 X 15. Can be mounted in rows with vertical Spacing > 5 cm or horizontally with no space.
- 13. CONSTRUCTION: Case body is black, high impact plastic. IP20 touch safe. Protection Class II.
- 14. MTBF (Mean Time Between Failure): >500000 h in acc. with IEC 1709 (SN 29500)
- 15. WEIGHT:
  - PSDR0100: 7.4 oz. (210 g)
  - PSDR0200: 8.8 oz. (250 g)
  - PSDR0400: 14.1 oz. (400 g)

## DIMENSIONS In inches (mm)

# CONNECTION AND OPERATION INSTRUCTIONS

**Caution:** Danger! Never work on live equipment!  
**Caution:** When the device is opened, a dangerous voltage may remain at the electrolytic capacitors for up to 2 minutes after shutdown!

The installation must be performed by a specialist in accordance with the requirements of EN 60950.  
 For vertical installations we recommend a minimum spacing of 5 cm (1.97 in.) between other modules and this power supply to ensure sufficient convection.  
 No minimum spacing is required for horizontal alignment.  
 The mains feed line must have an appropriate fixing or strain relief outside of the device.  
 The supply-side installation and the connection via screw terminal blocks must be done in a way that ensures protection against electric shock.

## PROTECTION

The device must be installed in accordance with the specifications of EN 60950.

It must be possible to switch off the device using a suitable disconnecting device outside the power supply. For example, primary side line protection could be used.

*In case of DC applications it is necessary to connect in series an adequate fuse.*

## RAIL MOUNTING

The power supply unit can be snapped onto all mounting rails in accordance with EN 50022-35. Installation should be made horizontally (input terminal blocks below).

## CABLE CONNECTION

The device is equipped with COMBICON plug connectors.

This easy-to assemble connection method allows devices to be exchanged easily and the electrical connection to be visibly isolated.

### Connecting Cables:

Cable cross sections from 0.2 to 2.5 mm<sup>2</sup> rigid (solid)/flexible (stranded) (AWG 24-14) may be used.

To maintain UL, use copper cable rated for an operating temperature of 75°C/170°F.

### For Reliable And Touch-proof Contacts:

Strip the connection ends (7 mm - See Figure).

## ORDERING INFORMATION

MODEL NO.	OUTPUT	PART NUMBER
PSDR1	24 VDC @ 1A	PSDR0100
PSDR2	24 VDC @ 2A	PSDR0200
PSDR4	24 VDC @ 4A	PSDR0400

## INPUT

The input connection is made by the screw connections "L(+)" and "N(-)" (torque 0.5 Nm) on the COMBICON plug connection.

For device protection, there is an internal fuse. Additional device protection is not necessary.

Recommended backup fuses are power circuit-breakers 6 A or 10 A, characteristic B (or identical function). In DC applications, a suitable backup fuse must be wired in.

If the internal fuse is triggered, there is most probably a malfunction in the device. In this case, the device must be inspected in the factory!

## OUTPUT

The 24 VDC connection is made by the screw connections "+" and "-" (torque 0.5 Nm) on the COMBICON plug connection. At the time of delivery, the output voltage is 24 VDC. The output voltage can be set from 22.5 to 28.5 VDC on the potentiometer.

The device is electronically protected against short circuits and idling. In the event of an error, the output voltage is limited to max 35 VDC.

## Function Monitoring

For function monitoring, there is the active DC OK switching output and the DC OK LED.

The 24 VDC signal is measured between the "DC OK" and "-" connection terminal blocks and can be loaded with 20 mA maximum. This signal output indicates that the output voltage has fallen below 21.5 VDC when "active high" changes to "low".

The DC OK signal is isolated from the power output.

	STATUS 1	STATUS 2
Green LED "DC OK"	on	off
Active DC OK switching output	U = +24 V (in reference to "-")	U = 0 V (in reference to "-") U <sub>OUT</sub> ≤ 21.5 V
Status	Normal operation of the power supply. U <sub>OUT</sub> > 21.5 V	• Secondary consumer short-circuit or overload • No mains voltage or device faulty

## Output Characteristic Curve

The device functions following the U-I characteristic curve. Under load, the operating point follows this curve. In the event of a short circuit or overload, the output current is limited to I<sub>BOOST</sub>. The secondary voltage is reduced until the short circuit on the secondary side has been remedied.

## Thermal Behavior

In the case of ambient temperatures above +60°C, the output capacity has to be reduced by 2.5% per Kelvin increase in temperature.

From +70°C or a thermal overload, the device reduces the output power for its own protection, and returns to normal operation when it has cooled down.

## MODEL APS - OCTAL PLUG-IN ACCESSORY POWER SUPPLY

### PROVIDES . . .

- +12 VDC "HELPER" SUPPLY FOR LOAD SHARING WITH UNREGULATED COUNTER SYSTEMS WITH UNUSUAL SENSOR AND ACCESSORY LOADS, OR . . .
- "STAND-ALONE" APPLICATIONS FOR POWERING SENSORS AND ACCESSORIES

### DESCRIPTION

The Model APS is an unregulated +12 VDC supply designed to load share when connected in parallel with internal power supplies of many Red Lion Controls Counters and Rate Indicators. It can also be used as a general purpose "Stand-alone" power supply to power other control circuits, sensors and accessories. The APS is furnished for 115 VAC or 230 VAC,  $\pm 10\%$ , 50/60 Hz primary supply. Operating temperature range is  $-20^{\circ}$  to  $+50^{\circ}\text{C}$ . Output current is per regulation curve.

### OPERATING TEMPERATURE RANGE:

-45° to +60°C

**ELECTRICAL LIFE:** In excess of 100,000 operations

@ rated load.

**WEIGHT:** 3 oz (85.1 g)

Mating sockets sold separately. See Ordering Information.

# MODEL APSIS - Octal Plug-in Accessory Power Supply With 20 mA Current Sources

## PROVIDES...

- 24 VDC UNREGULATED "HELPER" SUPPLY FOR LOAD SHARING WITH OTHER 24 VOLT SYSTEMS WITH UNUSUAL SENSOR AND ACCESSORY LOADS OR...
- "STAND-ALONE" APPLICATIONS FOR POWERING +24 VDC SENSORS AND ACCESSORIES OR...
- TWO 20 mA CURRENT SOURCES, EACH CAPABLE OF SUPPLYING 20 mA OF CURRENT FOR SERIAL COMMUNICATION LOOPS AND POWERING UP TO 16 UNITS PER LOOP.

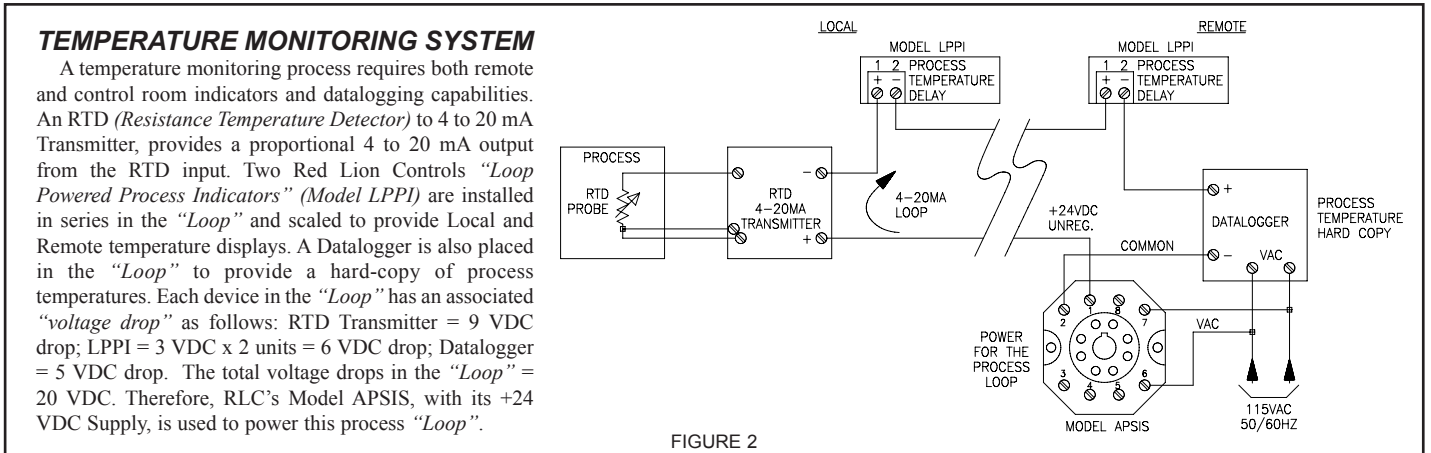

## DESCRIPTION

The Model APSIS is a convenient plug-in unregulated +24 VDC power supply designed to "load share" when connected in parallel with other +24 VDC unregulated systems with unusual power requirements due to sensor or accessory loading (see Fig.1). It can also be used as a general purpose stand-alone supply to power +24 VDC control circuits, sensors and accessories (see Fig.2). In addition, two 20 mA Current Source outputs are available, each capable of powering up to 16 Serial Communications units (see Fig.3). The APSIS is available in 115 and 230 VAC  $\pm 10\%$ , 50/60 Hz. primary supply (see Ordering Information). Operating temperature range is  $-20^{\circ}\text{C}$  to  $+50^{\circ}\text{C}$ .

## SPECIFICATIONS

1. **POWER SOURCE:** 2 versions, 115 VAC or 230 VAC  $\pm 10\%$ , 50/60 Hz., 11 VA max. (see Ordering Information).
2. **POWER OUTPUT:** +24 VDC unregulated @ 200 mA max. current\*, Ripple = 1.5 V P-P max.
3. **OUTPUT:** Two 20 mA current sources, each capable of supplying 20 mA of current for serial communication loops and powering up to 16 units per loop.
4. **OPERATING TEMPERATURE:**  $-20^{\circ}\text{C}$  to  $+50^{\circ}\text{C}$  ( $-4^{\circ}\text{F}$  to  $+122^{\circ}\text{F}$ )

\* Maximum available output current derates to 175 mA with 1 source active and 150 mA max. with both sources active.

## PROCESS MONITORING SYSTEM

8 Apollo Thermocouples (APLTC) and 8 GEMINIs, all with isolated 20 mA Current Loop Serial Communications, monitor and control processes within a plant. All units, which are located in different areas of the plant, are tied together in series in two "Loops" (one Transmit Tx, the other Receive Rx) and are connected to a Central Computer located in another area of the plant. Since there are more than 7, and no more than 16 units in the "Loop", the APSIS +20 mA Current Source Outputs are used to power each "Loop". (Both Apollo Thermocouple and Gemini units can power up to 7 units in a "Loop" when using their internal 20 mA sources. However, their sources may not be tied together to power more than 7 units.) Each unit is assigned a different address number and the same Baud rate (see appropriate APLTC or Gemini data sheet). An application program is written which allows the Central Computer to send and retrieve data from any APLTC or Gemini.

### OUTPUT VOLTS/CURRENT

\* Unregulated output +(2) 20mA current sources (if used).

\*Unregulated output +(2) 20 mA current sources (if used).

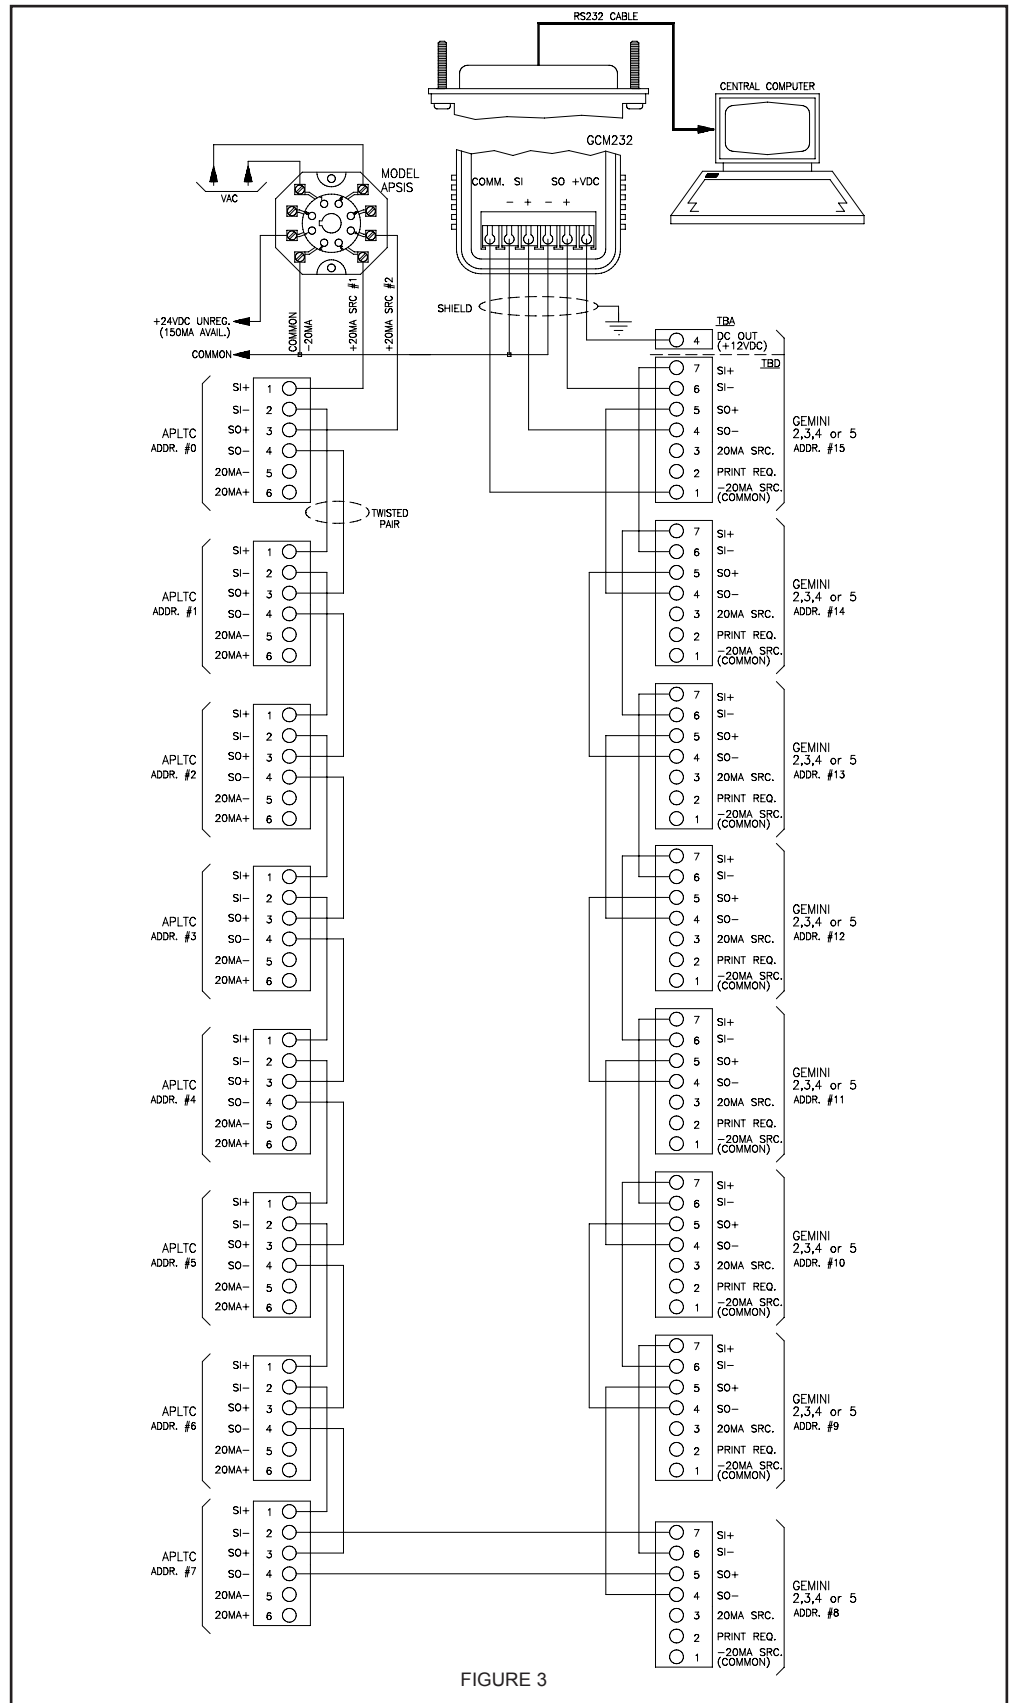

FIGURE 3

# MODEL MLPS1 and MLPS2 - MICRO-LINE POWER SUPPLIES

- PROVIDES POWER FOR THE MICRO-LINE SERIES
- MLPS1: 12 VDC OUTPUT @ 400 mA
- MLPS2: 24 VDC OUTPUT @ 200 mA
- EASILY ATTACHED TO BACK OF DT8, CUB4 AND CUB5

UL Recognized Component,  
File # E179259

## DESCRIPTION

The Model MLPS power supplies are designed to attach to the rear of the Micro-Line Series. The MLPS1 provides a 12 VDC output, while the MLPS2 provides a 24 VDC output. Both supplies can be powered from an 85-250 VAC source.

*Caution: The maximum output current of the MLPS1 is 400 mA and the MLPS2 is 200 mA. Check the specifications of the specific counter(s)/indicator(s) and sensors(s) being used to ensure that total current requirements do not exceed the respective values of the power supplies.*

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the manual or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**CAUTION: Risk of Danger.**  
Read complete instructions prior to installation and operation of the unit.

**CAUTION: Risk of electric shock.**

## ORDERING INFORMATION

- CERTIFICATIONS AND COMPLIANCES:**

### SAFETY

UL Recognized Component, File # E179259, UL 61010-1, CSA C22.2 No. 61010-1  
 Recognized to U.S. and Canadian requirements under the Component Recognition Program of Underwriters Laboratories, Inc.  
 Output meets Class 2 power requirements per UL 1310.  
 IECCE CB Scheme Test Certificate # US/8946/UL,  
 CB Scheme Test Report # E179259-V2-S1  
 Issued by Underwriters Laboratories, Inc.  
 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.

### ELECTROMAGNETIC COMPATIBILITY

Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.

### Immunity to Industrial Locations:

Electrostatic discharge	EN 61000-4-2	Criterion A 4 kV contact discharge 8 kV air discharge
Electromagnetic RF fields	EN 61000-4-3	Criterion A 10 V/m
Fast transients (burst)	EN 61000-4-4	Criterion A 2 kV power 1 kV signal
Surge	EN 61000-4-5	Criterion B 1 kV L-L, 2 kV L&N-E power 1 kV signal
RF conducted interference	EN 61000-4-6	Criterion A 3 V/rms
Voltage dip/interruptions	EN 61000-4-11	Criterion A 0.5 cycle
<b>Emissions:</b>	EN 55011	Class B

### Notes:

1. Criterion A: Normal operation within specified limits.
2. Criterion B: Temporary loss of performance from which the unit self-recovers.
3. **CONSTRUCTION:** High impact black plastic. Mounting hardware included. Installation Category II, Pollution Degree 2.
4. **CONNECTION:** Two position terminal block which accepts one 14 AWG wire (torque terminal screws to 5 inch-lbs. [0.56 N-m]).
5. **WEIGHT:** 2 oz (47 g)

## INSTALLATION ENVIRONMENT

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

## Installation Procedure

The MLPS is shipped with all the necessary hardware to mount to the rear of an installed Micro-Line unit. Refer to the instructions that correspond to your Micro-Line unit for proper installation.

## TROUBLESHOOTING

For further technical assistance, contact technical support at the appropriate company numbers listed.

### CUB4, DT8

The user must remove the common and V+ screw terminals on the rear of the Micro-Line unit. Install the 1/4" hex drive stand-offs into the common and V+ terminals. The MLPS is then mounted to the stand-offs using the screw terminals and square washers. AC power can then be connected to the terminal block of the MLPS.

### CUB5

The user must remove the common and V+ screw terminals on the rear of the Micro-Line unit. Install the 3/16" hex drive stand-offs into the common and V+ terminals. The MLPS is then mounted to the stand-offs using the supplied screws and square washers. AC power can then be connected to the terminal block of the MLPS.

# MODEL PSMA POWER SUPPLY & INTERFACE MODULE

## PROVIDES POWER FOR SENSORS & ACCESSORIES WITH SIGNAL CONDITIONING FOR INPUT TO CUB COUNTERS\* & DITAK TACHOMETERS\*

### ALLOWS CUB COUNTERS & DITAK TACHOMETERS TO OPERATE WITH:

- 2-WIRE PROXIMITY SENSORS,
- ROTARY PULSE GENERATORS,
- LOGIC MAGNETIC PICKUPS,
- MEASURING WHEEL LENGTH SENSORS,
- CLOCK OSCILLATOR MODULES,
- AND MANY OTHER SENSORS, CIRCUITS AND ACCESSORIES

\* PSMA intended for use with CUB 1, 2, and 7 Counters and Ditak 8 and 9 Tachometers.

### DESCRIPTION

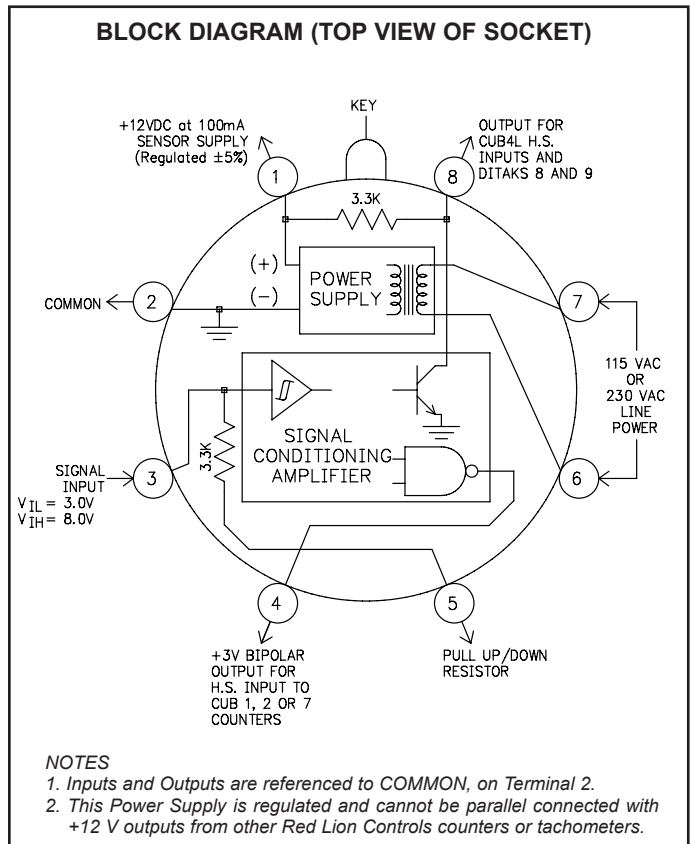

Cub Counters and Ditak Tachometers are basically self-powered devices and do not have built-in capability for powering electronic sensors or accepting high level sensor outputs. The PSMA provides a convenient plug-in answer to those applications requiring electronic sensors or accessories for pulse input to Cub Counters or Ditak Tachometers.

The PSMA is available in 115 VAC and 230 VAC primary power input versions, and delivers regulated D.C. voltage for sensors and accessories. The signal conditioning amplifier can accept NPN or PNP Open Collector Inputs, or 2-Wire Proximity Sensor Inputs.

The signal conditioning amplifier supplies two separate outputs, one for direct drive to the H.S. Input of Cub Counters, and the other for direct drive input to the PSM Input of the Ditak. A "pulse stretcher" is used in the circuit that provides the output drive to Cub Counters (Terminal 4). This stretcher allows the PSM to accept 50  $\mu$ sec input pulses, standard on some Red Lion Controls' sensors and accessories, and expand it to the 100  $\mu$ sec pulse, as required by the Cub Counters. The Ditak output (Terminal 8) is not pulse stretched, allowing this output to continue functioning to the full 10 KHz limit of the Ditak.

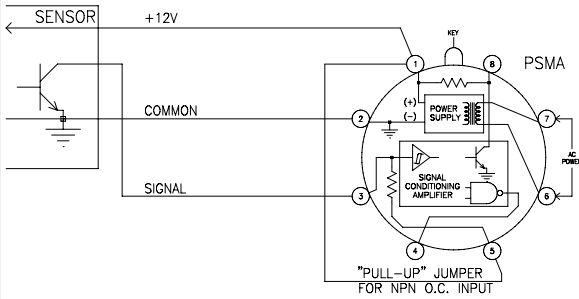

### SPECIFICATIONS

1. **POWER SOURCE:** 2 versions, for 115 VAC  $\pm 10\%$  50/60 Hz, or 230 VAC  $\pm 10\%$  50/60 Hz. (See Ordering Information.)
2. **POWER OUTPUT TO SENSORS OR ACCESSORIES:** 12 VDC regulated  $\pm 5\%$ , 100 mA max.
3. **INPUT SIGNAL:** (Terminal 3) NPN Open Collector (sink), PNP Open Collector (source), or 2-wire Input. Built-in 3.3 K resistor (Terminal 5) can be jumper connected for pull-up, pull-down, or left unconnected as required. Input Schmidt trigger levels as shown on BLOCK DIAGRAM.
4. **OUTPUTS:** (Terminal 4) Bi-polar drive to H.S. Input of Cub Counters supplies 100  $\mu$ sec negative going logic pulse (switches from +3 to 0 volts) in response to a trailing (negative going) edge of the input pulse. This output will drive up to 3 Cub Counters in parallel. (Terminal 8) NPN Loaded Collector to drive the input of Ditaks. The output voltage on this terminal is in phase with the input signal going into Terminal 3. The high level of this voltage will be clamped to 6.2V by the zener diode in the Ditak. This output can drive up to 3 Ditak units.
5. **OPERATING FREQUENCY:**
  - 0 to 5 KHz with Cub Counters;
  - 0 to 10 KHz with Ditaks.

# CONVERTER MODULES

## ADAPTS MANY RED LION CONTROLS' COUNTERS AND ACCESSORIES TO A WIDE RANGE OF SIGNAL SOURCES

### VCM - VOLTAGE CONVERTER MODULES

Converts AC/DC voltages to acceptable signal inputs for many RLC counters and accessories, provides input/output isolation.

### TCM - TRIAC CONVERTER MODULE

Accepts unloaded, high off-state leakage triac output from sensors and programmable controllers.

### LCM - LOGIC CONVERTER MODULE

For interface with CMOS, TTL, and other logic circuits to +28 VDC, at speeds to 5000 cps. Allows Cub Counters to share sensor outputs with other series counters.

These miniature sized modules are completely encapsulated in PVC, which provides protection against oil, water, dirt, and mechanical damage. They can be quickly and easily mounted to the back of counter enclosures or to any nearby panel surface by a self-stick adhesive pad.

## VCM - VOLTAGE CONVERTER MODULES

VCM's are provided in 2 series, VCM [A-D] and VCM [E-H], to increase the application flexibility of many RLC Counters and Accessories.

### VCM [A-D]

These modules provide a convenient way to adapt CUB Counters\* to most any machine control voltage signal. They also make it easy to upgrade electro-mechanical counter installations with CUB Counters.

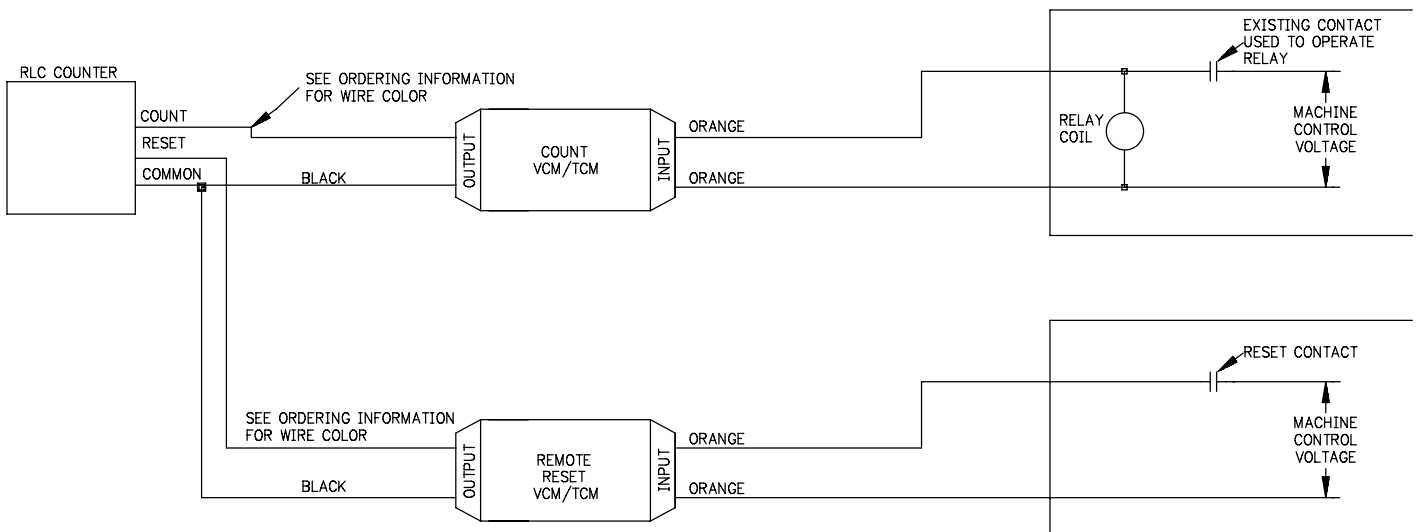

They are available in four overlapping input voltage ranges that cover the spectrum from 4-270 V (See VCM [A-D] Ordering Information for specific input voltage ranges). The non-polarized input of these modules will accept A.C. (50/60 Hz) or D.C. control voltages and at count speeds up to 30 cps. The output is an NPN Open-Collector Transistor compatible with either the L.S. Count or Remote Reset inputs of Cub Counters. Electrical isolation between input and output is achieved by means of an internal opto-isolator.

\* VCM [A-D] intended for use with Cub 1, 2, 4, and 7 Counters and Cub 5 with DC Voltage.

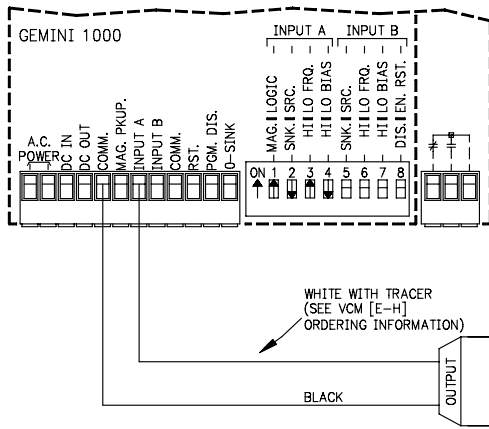

### VCM [E-H]

These modules open up new application possibilities by adapting the Count Inputs of Gemini, Libra, Apollo, Lynx, Legends, PAXC, PAXI, CUBC, SC Series Counters, RMX - Rate Multiplier and the ACS Anti-Coincidence Summer to machine control voltage signals. The non-polarized input of these modules accept the four most widely used AC/DC voltage ranges and at count speeds up to 30 cps (See VCM [E-H] Ordering Information for specific input voltage ranges). Electrical isolation between the input and the NPN Open-Collector Transistor output is achieved by means of a UL listed opto-isolator rated at 1500 V Peak continuous.

## ELECTRICAL CONNECTIONS FOR VCM [A-D] & TCM (Shown with optional VCM for Control Voltage Remote Reset)

## TCM - TRIAC CONVERTER MODULE

The TCM\* is a specialized version of the VCM [A-D]. It is specifically designed to operate with photo-electric sensors and programmable controllers that have 115 VAC Triac outputs. Due to protective suppression circuits connected in parallel with Triacs, these outputs have a high OFF-State Leakage current, which, if unloaded, is sufficient to keep a VCM in the ON condition continuously.

The TCM incorporates a current bias that offsets output leakage currents of up to 4 mA and allows the application of CUB Counters to most unloaded Triac outputs. These modules are available for operation with 115 VAC ±10%

50/60 Hz only. They operate at count rates up to 10 cps, and also provide input/output electrical isolation. Connections for the TCM are the same as those for the VCM [A-D].

*Note: VCM's can be used with Triac outputs that are also driving substantial loads, since the load will shunt the leakage current away from the VCM input.*

\* TCM intended for use with Cub 1, 2, 4, and 7 Counters and Cub 5 with DC Voltage.

## LCM - CONVERTER MODULE

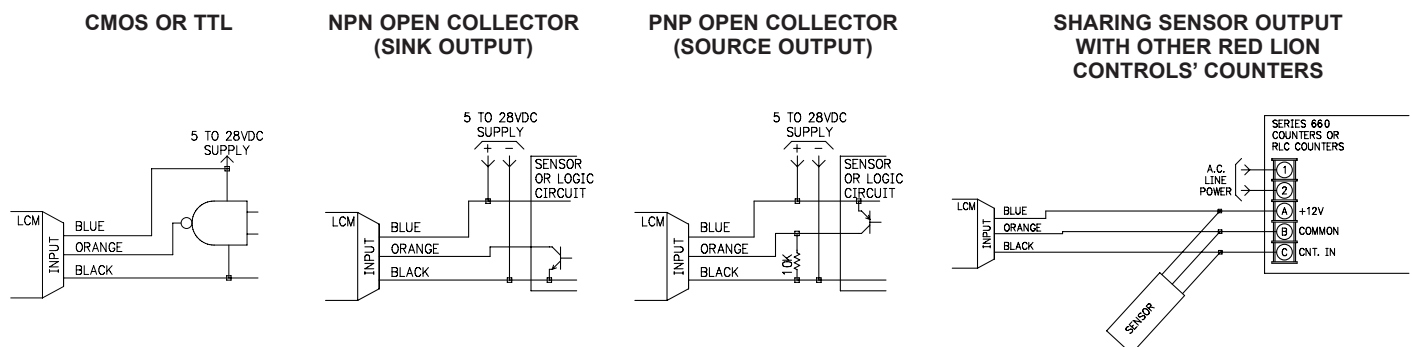

The LCM adapts CUB Counters to practically any type of logic and sensor output, and to any count signal voltage from +3 to +28 VDC. The module accepts input count pulses from NPN Open-Collector Transistor outputs, Bi-Polar outputs, or sourcing outputs such as Emitter-Follower or PNP Open-Collector Transistors (*Sourcing outputs must be externally loaded with a load of 10 Kohms or less*). The LCM output is a Bi-Polar drive that is compatible with either the Low-Speed or High-Speed Counter inputs as well as the Remote Reset input\* of the CUB Counters. The output is inverted with respect to the input which causes the CUB Counter to increment on the leading (*positive going*) edge of a count pulse similar to other Red Lion Controls' counter series. Power for operation of the LCM can be normally obtained from the existing D.C. power supply used to operate the sensor or other logic circuitry. The LCM will operate from any D.C. power source ranging from +5 to +28 VDC, and draws a maximum of 7 mA. No filtering or de-bounce circuits are included in the LCM itself, since these are already provided within the CUB Counters. When the LCM output is applied to the H.S. input of CUB Counters, count rates to 5000 cps can be accommodated (*100 μsec minimum pulse width*).\*\* When count pulse signals are generated by switch contacts the LCM output can be applied to the L.S. input of the CUB to de-bounce these pulses. Minimum pulse width when driving the L.S. input is 10 msec and maximum count rate is 50 cps.

\* *When used to operate Remote Reset input, the LCM will reset counter when input to LCM goes high due to signal inversion.*

\*\* *Some Red Lion Controls' sensors and accessories deliver a 50 μsec output pulse that will not be accepted by CUB Counters. (The PSMA Power Supply and Interface Module has a 50 to 100 μsec pulse stretcher circuit which can be used. See data sheet on PSMA).*

# MODEL RS - DIN RAIL RELAY SYSTEM

- TERMINAL BLOCKS WITH BUILT-IN RELAY OUTPUTS
- SLIM DESIGN SAVES DIN RAIL SPACE
- REPLACEABLE RELAY SAVES DOWNTIME
- JUMPERS SAVE WIRING TIME

UL Recognized Component,  
File # E257265

## DESCRIPTION

The RS Relay System provides a compact, modular means of adding relay outputs to any transistor output device. The RSRLYB Relay Block serves as the base for a miniature, 24 volt coil relay, capable of switching up to 250 VAC at 6 Amps. Accessories, such as Jumpers, Buss Blocks, and Relay Markers are available to save installation time and money.

## RELAY BLOCK-RSRLYB

The RS Relay System is built around the Relay Block. The Relay Block is a 6.2 mm wide terminal block that serves as the base for the miniature plug-in relay (included). The relay has a 24 VDC coil, and its SPDT output can switch loads up to 250 VAC at 6 Amps. With its plug-in design, the relay can be replaced in seconds. The Block has a built-in suppression circuit to reduce EMC interference. Other features include an input LED, and reverse polarity protection. The RSRLYB00 is shipped in packages of 5 pieces, with the relay installed.

## SPECIFICATIONS

1. NOMINAL INPUT VOLTAGE: 24 VDC
2. TYPICAL INPUT CURRENT @ 24 VDC: 9 mA
3. TYPICAL OPERATE TIME: 4 msec
4. TYPICAL RELEASE TIME: 8 msec
5. CONTACT TYPE: SPDT (Form C)
6. CONTACT MATERIAL: AgSnO
7. MAX. CONTACT VOLTAGE: 250 V AC/DC
8. MIN. CONTACT VOLTAGE: 12 V AC/DC
9. LIMITING CONTINUOUS CURRENT: 6 A
10. MAX. INRUSH CURRENT: 30 A
11. MIN. SWITCHING CURRENT: 10 mA
12. MAX. POWER RATING (RESISTIVE LOAD): 140 W

13. MIN. SWITCHING POWER: 120 mW
14. INPUT TO OUTPUT ISOLATION: 4 kV, 50 Hz., 1 minute
15. AMBIENT TEMPERATURE RANGE: -20 to 60°C (-4 to 140°F)
16. NOMINAL OPERATING MODE: 100% Duty Cycle
17. INFLAMMABILITY CLASS: VO according To UL 94
18. MECHANICAL LIFE: 20 million cycles
19. CONSTRUCTION: Case body is green, Polyimide PA non-reinforced
20. CONNECTIONS: 14 AWG max. Torque 4-6 in-lb.
21. MOUNTING: Standard DIN Top Hat (T) profile rail according to EN50022  
-35 x 7.5 and 35 x 15.
22. WEIGHT: 0.073 lb. (33.1 g)

## 2-POSITION JUMPER-RSJMPR

The RSJMPR Jumper can be used to bridge connections between adjacent Relay Blocks. This avoids the tedious task of wire-jumping signals such as commons or neutrals together. The maximum current capability of the RSJMPR is 6 A. The RSJMPR is available in three different colors, and is shipped in packages of 20 pieces.

## SPECIFICATIONS

1. MAX. CURRENT: 6 A
2. LENGTH: 0.24" (6 mm)
3. COLOR: Available in Red, Blue, and Gray

## CONTINUOUS JUMPER-RSCJMP

The RSCJMP can be used to bridge up to 80 adjacent Relay Blocks with total currents as high as 30 A. For currents above 6 A, the Buss Block must be used as the starting point. This cut-to-length jumper is available in three colors, and is shipped in packages of 2 pieces.

### SPECIFICATIONS

1. **MAX. CURRENT:** 30 A
2. **LENGTH:** 19.7" (500 mm)
3. **COLOR:** Available in Red, Blue, and Gray

## BUSS BLOCK-RSBUSS

The 9 mm wide Buss Block is the same shape as the RSRLYB Relay Block. It can be used as a starting point for the continuous jumper in applications requiring up to 30 A. In applications that require less than 6 A, the starting point for the jumper(s) can take place at one of the Relay Blocks.

### SPECIFICATIONS

1. **MAX. CURRENT:** 30 A
2. **MAX. VOLTAGE:** 250 V
3. **CONSTRUCTION:** Case body is gray, Polyimide PA non-reinforced
4. **CONNECTIONS:** 10 AWG max. Torque 4-6 in-lb.
5. **WEIGHT:** 0.077 lb. (34.9 g)

## BARRIER-RSBARR

The Barrier is always required at the start and end of a Relay System to provide protective separation according to VDC 0106-101. The Barrier should also be used to isolate adjacent Relay Blocks with voltage potentials greater than 250 V. The RSBARR is equipped with prescored breakout points at the bridging positions so that individual bridges can pass through if needed. The RSBARR00 is shipped in packages of 2 pieces.

### SPECIFICATIONS

1. **COLOR:** Black

## RELAY MARKERS-RSMARK

The RSMARK00 Relay Markers can be used to label the Relay Blocks. After labeling or writing on the Marker, it is snapped onto the engagement lever of the Relay Block, providing a visual means of identification. The RSMARK00 is shipped in packages of 100 pieces.

### SPECIFICATIONS

1. **COLOR:** White

# MODEL RLY5 - SOLID STATE POWER UNIT

- SWITCHES UP TO 45 AMPERES @ 240 VAC
- LOW LEVEL DC INPUT CONTROL SIGNAL (3-32 VDC)
- OPTICALLY-ISOLATED OUTPUT
- ZERO VOLTAGE TURN-ON, ZERO CURRENT TURN-OFF FOR REDUCED RFI
- INTERNAL SNUBBERS TO REDUCE FALSE TRIGGERING RELATED TO HIGH  $dv/dt$  APPLICATIONS
- SUPPLIED WITH HIGH EFFICIENCY HEATSINK FOR SUPERIOR THERMAL and SURGE CURRENT RATINGS

## GENERAL DESCRIPTION

The SSR Power Unit is a solid state relay which can switch load currents up to 45 Amperes @ 240 VAC. The unit interfaces directly with a SSR Drive Module (OMD00003). The input and output terminals are isolated from each other to eliminate ground loops and noise problems. The unit features a zero voltage turn-on and a zero current turn-off detector to minimize radiated RFI when switching. An internal snubber minimizes inrush currents and guards against false triggering of the output; related to high  $dv/dt$  applications. A low DC control signal of +3 to +32 VDC is all that is needed for the switching operation. The solid state switch, highlighted by the inverse-parallel SCR output, provides a greatly increased operational life over a mechanical relay by avoiding the usual relay contact problems: arcing, bouncing, mechanical failure, etc. The solid state relay is shipped mounted to the high efficiency heatsink for immediate installation.

## SPECIFICATIONS

### OUTPUT SPECIFICATIONS

1. **Operating Voltage Range:** 50-280 VAC RMS
2. **Operating Frequency Range:** 47-63 Hz
3. **Maximum Continuous Load Current:** See Thermal Rating Code
4. **Maximum Surge Load Current:** See Peak Surge Current Curve
5. **Minimum Load Current:** 40 mA RMS
6. **Maximum Off-State Leakage Current:** 10 mA RMS
7. **Maximum Transient Voltage:** 600 V peak
8. **Maximum Output Voltage Drop:** 1.6 V peak
9. **Power Dissipation at Full Load:** 50 Watts
10. **Maximum I<sup>2</sup>T:** 1600A<sup>2</sup>sec  
(For Fusing Purposes, t = 8.3 msec)
11. **Minimum Off-State  $dv/dt$  protection:** 500 V/usec

### INPUT SPECIFICATIONS

(Use with RLC SSR Drive Module, OMD00003)

1. **Control Voltage Range:** 3 to 32 VDC
2. **Maximum Turn-on Voltage:** 3 VDC
3. **Minimum Turn-off Voltage:** 1 VDC
4. **Maximum Reverse Voltage:** -32 VDC
5. **Minimum Input Impedance:** 1500  $\Omega$
6. **Maximum Turn-on/Turn-off time:** 8.3 msec

### GENERAL SPECIFICATIONS

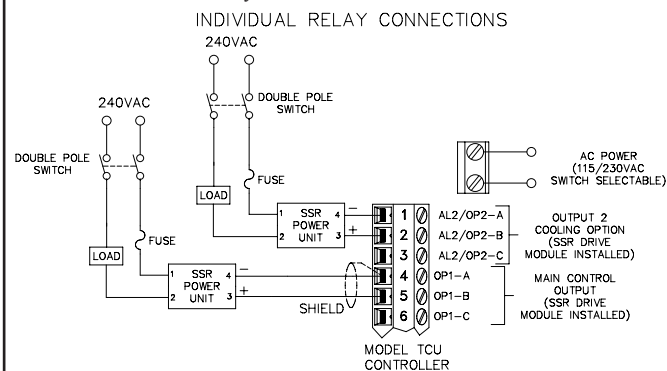

1. **Isolation (Input to Output to Base):** 4000 V RMS
2. **Insulation Resistance:** 10 G $\Omega$
3. **Operating Temperature Range:** -30° to +75°C
4. **Storage Temperature Range:** -40° to +120°C

## INSTALLATION

It is recommended to mount the unit outside of an enclosure in an area where there is unrestricted air flow. The unit should always be mounted with the fins in a vertical position to maximize heat dissipation. If mounting the unit inside an enclosure, the internal temperature of the enclosure will normally be higher than the surrounding area and must be accounted for. At full rated load, the unit will dissipate 50 watts and achieve a case temperature in excess of 90°C. In all installations, it is important to allow at least two inches around the power unit for proper ventilation.

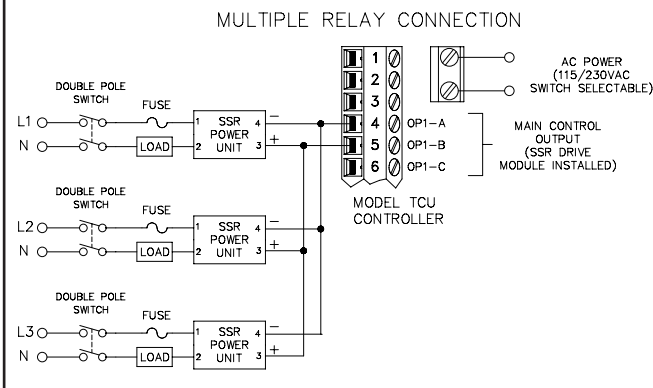

## CONNECTIONS

Separate power feed lines should be run to the load side of the relay. The controller unit and the load should NEVER share the same power feed. It is recommended to install the SSR Power Unit as close to the load as possible to keep the power cable runs short. This will help reduce noise from radiating into other equipment. The input control signal cable can be run over distances in excess of 200 ft. with shielded cable from the controller to the SSR power unit. Connect the shield to the minus "-" terminal of the control signal, on the SSR Power Unit and at only one end.

## MULTIPLE UNITS

For increased power handling, up to four SSR Power Units may be parallel connected, and all controlled by a single output of an SSR Drive Module (OMD00003). The output of the SSR Power Units must NOT be parallel connected to the same load because of unequal current sharing among the devices. The outputs should be wired to individual heaters, but they may share the same supply. If five or more SSR Power Units are required, a Relay Output Module (OMD00000) may be used in conjunction with an external +12 VDC power source (RLC Model APS01000) to switch the SSR Power Units.

## OPERATION

The following are important aspects of operation of the SSR power unit which must be considered. Adhering to these guidelines will ensure reliable and trouble free operation.

## THERMAL RATING CURVES

The Thermal Rating Curve will determine the maximum allowable ambient operating temperature for the maximum continuous load current. The two parameters must intersect in the Safe Operating Area of the graph. Operation outside the safe operating area will shorten the life of or cause permanent damage to the SSR Power Unit.

The ambient temperature of the power unit should be measured with all of the associated equipment operating to verify the Thermal Ratings.

## SURGE CURRENT

When the SSR Power Unit switches a load on, an in-rush (surge) current that is higher than the continuous load current will flow. The surge current can be estimated from the table below which outlines the ratio of surge to steady state current for various load devices. The surge current duration must be within the Safe Operating Area of the Peak Surge Current vs. Time Figure. Surge currents outside the safe operating area will shorten the life of or cause permanent damage to the power unit.

Load Device	Ratio Surge Current to Steady State Current
Incandescent Bulbs (cold)	5
Quartz Heaters (cold)	7
Motors (motionless)	10
Compressors	10

## FUSING

The output of the SSR Power Unit should be protected by a fast blow I<sup>2</sup>t fuse (Bussman KAX-30 or equivalent). This guards against long duration surge currents, short circuits, etc., which may damage the SSR Power Unit.

## MECHANICAL INTERRUPT SWITCH

The off-state output leakage current of the power unit is 10 mA maximum. The voltage level of the output will rise proportional to the resistance of the load due to this leakage current. Full line voltage can be measured when the output is connected to a high resistance load and the power unit is in the off-state.

A mechanical interrupt switch (double pole) should be placed between both sides of the line voltage and the load. The switch should be opened when servicing any part of the output wiring. When measuring the off-state output voltage of the unit for correct operation, load the output of the SSR Power Unit with a small resistance (approximately 100 ohms).

## SNUBBING

The power unit has internal snubbers to guard against transients generated by most loads. Loads with low power factors (ie. motors) may require additional external snubbing network.

# MODEL RLY6/RLY6A - SINGLE PHASE DIN RAIL MOUNT SOLID STATE RELAY

- INTEGRATED HEAT SINK
- OPTICALLY ISOLATED
- SOLID STATE SWITCHING
- SINGLE PHASE OUTPUT RATING: 25 A (RLY6) or 40 A (RLY6A)
- SWITCHING: 24 TO 660 VAC
- CONTROL SIGNAL: 4 TO 32 VDC
- ZERO VOLTAGE TURN-ON
- MOUNTS ON DIN RAIL OR DIRECTLY TO PANEL
- 4000 VOLT ISOLATION
- BUILT-IN SNUBBER
- LED "ON" INDICATOR
- CAGE CLAMP TERMINATIONS

 UL Recognized Component, File #E191578

 LR 702877

## GENERAL DESCRIPTION

The RLY60000 is a solid state relay that switches load currents up to 25 A; the RLY6A000 switches load currents up to 40 A. These units feature a zero voltage turn-on detector to minimize radiated RFI when switching. An internal snubber guards against false triggering of the output related to high dv/dt applications. A low level DC control signal of 4 to 32 VDC is all that is needed for the switching operation. These units, highlighted by the inverse-parallel SCR output, provide a greatly increased operational life over mechanical relays by avoiding the usual relay contact problems such as: arcing, bouncing, and mechanical failure.

The RLY6/RLY6A can be directly controlled by logic/SSR drive output or sourcing output of Red Lion Controls products.

## SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this unit to directly command motors, valves, or other actuators not equipped with safeguards. To do so, can be potentially harmful to persons or equipment in the event of a fault to the unit.

## SPECIFICATIONS

(For Fusing Purposes, T = 8.3 msec.)  
11. **Dv/Dt @ V<sub>OUT</sub> (Max.):** 500 V/μsec

### INPUT SPECIFICATIONS

- CONTROL VOLTAGE RANGE: 4 to 32 VDC
- TURN-ON VOLTAGE (MIN.): 4 VDC
- TURN-OFF VOLTAGE (MAX.): 1 VDC
- REVERSE VOLTAGE PROTECTION: -75 VDC
- INPUT CURRENT (MAX.): 8 mA

### GENERAL SPECIFICATIONS

- ISOLATION (INPUT TO OUTPUT TO BASE): 4000 V<sub>RMS</sub>
- CAPACITANCE INPUT TO OUTPUT: 3 pf
- OPERATING TEMPERATURE RANGE: -40°C to +80°C

## SAFE OPERATING CONDITIONS

The relay must always operate within the "Safe Operating Area" of the Derating Curve Figure. Operations outside the Safe Operating Area will shorten the life of, or cause permanent damage to, the relay. The ambient temperature should be measured 1" (25 mm) below the relay (when mounted to a vertical surface) and with all of the associated equipment operating.

**RLY6 25 A Derating Curve**

**RLY6A 40 A Derating Curve**

It is strongly recommended that a 0.18" (4.6 mm) clearance is maintained on all four sides of the relay. If the relays are mounted against each other, then the end relays must be derated by additional 10% (of the Derating Curve) and the middle relays by 20%.

In small enclosures, adequate ventilation must be provided to assure proper safe operating temperature. Accumulation of dust and dirt on the heat sink fins will also affect heat dissipation. In extreme dust and dirt conditions, the relay must be derated by additional 20%.

## SCHEMATIC

## FUSING

Devices such as electromechanical circuit breakers and slow blow fuses cannot react quickly enough to protect this relay in a shorted condition. Fast "semiconductor fuses" with appropriate I<sup>2</sup>T ratings are strongly recommended.

## MECHANICAL INTERRUPT SWITCH

The off-state leakage current of the power unit is 8 mA maximum. The voltage level of the output will rise proportional to the resistance of the load due to this leakage current. Full line voltage can be measured when the output is connected to a high resistance load and the power unit is in the off-state.

A mechanical interrupt switch is recommended between both sides of the line voltage and the load. The switch should be opened when servicing any part of the output wiring. When measuring the off-state output voltage of the unit for correct operation, load the output of the RLY6/RLY6A with a small resistance (approximately 100 ohms).

## WIRING GUIDELINES

The controlling device and the relay load should NEVER share the same power feed. It is recommended that this relay be installed as close as possible to the load to keep the power cable runs short. The control voltage can run over distances in excess of 200 feet with shielded cable. If using shielded cable, connect the shield to the minus "-" terminal of the control signal at one end only.

PAXLBK	Units Label Kit for 5 Digit PAX	PAXLBK10

# MODEL LX - LABEL ACCESSORY FOR LPAX

## DESCRIPTION

The LX label accessories allow the 5 digit LPAX display to be customized with an engineering unit. The label is affixed to the embossed area on the bezel of the LPAX. The LPAX module is then programmed to turn on its backlighting, which illuminates the label from behind.

## LX LABEL ACCESSORY

# MODEL CUB5USB - USB PROGRAMMING OPTION CARD

## DESCRIPTION

This bulletin serves as a guide for the installation, configuration and operation of the CUB5 USB Programming plug-in card for the CUB5. The plug-in card is a separately purchased option card that plug into the main circuit board of the meter. The CUB5USB card in conjunction with the Crimson® programming software enables the user to configure CUB5 on a PC. The CUB5USB requires installation of drivers which are included with the Crimson Programming software. Following installation of the drivers, the card appears as a Virtual communications port.

Crimson is a Windows® based program that allows configuration of the CUB® 5 meters from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the CUB5 meters. The CUB5 program can then be saved in a PC file for future use. A CUB5 serial plug-in card is required to program the meter using the software.

## INSTALLING PLUG-IN CARDS

The card plugs into the main circuit board of the meter as shown.

Perform USB driver installation below prior to powering the CUB5 and connecting CUB5USB to PC USB port.

## SPECIFICATIONS

### CUB5USB PROGRAMMING CARD

**Type:** USB Virtual Comms Port  
**Baud Rate:** 300 to 38.4k  
**Unit Address:** 0 to 99

## CRIMSON 2 SYSTEM REQUIREMENTS

- Windows 2000, XP, or Vista
- RAM and free disk space as required by the chosen operating system.
- An additional 50 MB of disk space for software installation.
- A display of at least 800 by 600 pixels
- A USB port for downloading to the CUB5

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
CUB5USB	CUB5 USB Programming Card	CUB5USB0
CBLUSB	Type A to B USB Cable	CBLUSB00
SFCRD*	Crimson 2 PC Configuration Software for Windows 98, ME, 2000 and XP	SFCRD200

\* Crimson software is available for download from <http://www.redlion.net/>

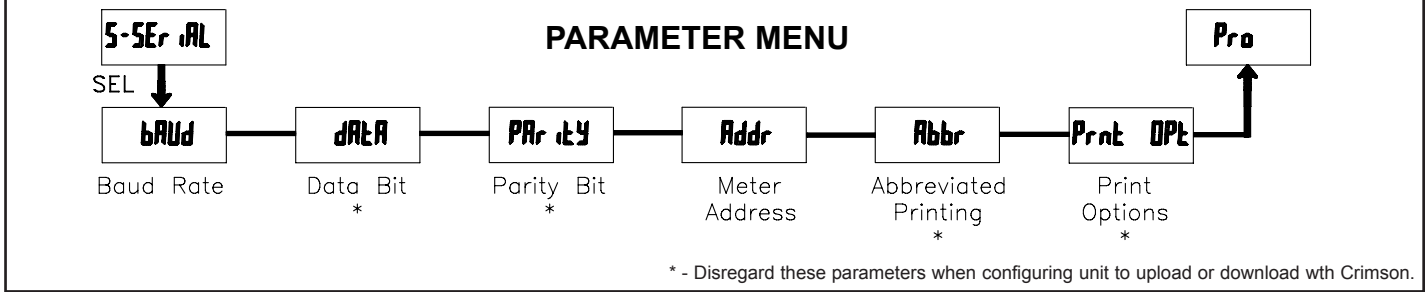

## USB DRIVER INSTALLATION

1. Download and install the latest Crimson 2 build on your Windows® compatible PC. Earlier builds may not have the RLC Virtual Comm port drivers. Crimson software is available as a free download at <http://www.redlion.net>.
2. Install CUB5USB card into CUB5 meter and apply power to the CUB5.
3. Connect Type A USB cable to computer and CUB5USB option card. Windows will prompt you for the location of the drivers for the device. The default location for these drivers is "C:\Program Files\Red Lion controls\Crimson 2.0\Device." When the hardware setup appears, choose "Install from a list or Specific location," click Next, and then check "Include this location..." and click the Browse button. Point the Wizard at the location specified above or whatever other location you specified during installation of the software. It is important that you perform this step correctly, or you may have to manually remove the drivers using the Device Manager, and repeat the installation once more.

*Note: Crimson's USB drivers have not been digitally signed by Microsoft®, and you will therefore see a dialog offering you the chance to stop the installation. You should be sure to select the Continue option to indicate that you do indeed wish to install the drivers.*

4. Windows will automatically assign a comms port to the CUB5USB. To determine the port assigned, open "System Properties" from within Windows® Control Panel. Select the Hardware tab, and click the "Device Manager" button. Expand the "Ports" line. Take note of which Comms port is assigned to "RLC Virtual Comm port". It must be Com4 or lower to operate with Crimson 2. If higher, right-click on the entry and select "Properties," "Port Settings" tab, and then "Advanced" button. Select a Coms port that is COM4 or lower and is not physically being used.

# MODULE 5 - SERIAL COMMUNICATIONS PARAMETERS (5-5Er)

Module 5 is the programming module for the Serial Communications Parameters. The only parameters of concern when utilizing the CUB5USB programming option card to communicate with Crimson 2 programming software is the Baud Rate and Meter Address. The Parameters are only accessible when an optional CUB5USB, RS232 or RS485 serial communications card is installed in the meter.

## BAUD RATE

<b>bAUD</b> ↩	300	1200	4800	19200
↩ <b>9600</b>	600	2400	9600	38400

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

## DATA BIT \*

<b>dAtA</b> ↩	7-bit	8-bit
↩ <b>7-bit</b>		

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

## PARITY BIT\*

<b>PAR</b> ↩	NO	Odd	EVEN
↩ <b>Odd</b>			

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to NO, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

<b>Addr</b> ↩	0 to 99
↩ <b>00</b>	

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING \*

<b>Abbr</b> ↩	NO	YES
↩ <b>NO</b>		

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select NO for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select YES for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS \*

<b>OPT</b> ↩	NO	YES
↩ <b>NO</b>		

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting YES displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as YES in the sublist will be transmitted during a block print. Parameters entered as NO will not be sent.

The "Print All" (P-ALL) option selects all meter values for transmitting (YES), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. For example, the Setpoint value(s) will not be sent unless an optional setpoint card is installed in the meter.

\* - Disregard these parameters when configuring unit to upload or download with Crimson software.

# MODEL CUB5COM -SERIAL COMMUNICATIONS PLUG-IN OPTION CARDS

## DESCRIPTION

This bulletin serves as a guide for the installation, configuration and operation of the RS232 and RS485 serial communications plug-in cards for the CUB5. The plug-in cards are separately purchased option cards that plug into the main circuit board of the meter. Only one communication card can be used at a time.

Crimson is a Windows® based program that allows configuration of the CUB5 meters from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the CUB5 meters. The CUB5 program can then be saved in a PC file for future use. A CUB5 serial plug-in card is required to program the meter using the software.

## INSTALLING PLUG-IN CARDS

The cards plug into the main circuit board of the meter as shown.

## SPECIFICATIONS

### RS485 SERIAL COMMUNICATIONS CARD

**Type:** RS485 multi-point balanced interface (non-isolated)  
**Baud Rate:** 300 to 38.4k  
**Data Format:** 7/8 bits; odd, even, or no parity  
**Bus Address:** 0 to 99; max 32 meters per line  
**Transmit Delay:** Selectable, 2 msec min. or 50 msec min.

### RS232 SERIAL COMMUNICATIONS CARD

**Type:** RS232 half duplex (non-isolated)  
**Baud Rate:** 300 to 38.4k  
**Data Format:** 7/8 bits; odd, even, or no parity

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
CUB5COM	RS485 Serial Communications Card	CUB5COM1
	RS232 Serial Communications Card	CUB5COM2
CBL	RS232 Programming Cable (DB9-RJ11)	CBLPROG0
	RS485 Programming Cable (DB9-RJ11)	CBPRO007
SFCRD*	Crimson 2 PC Configuration Software for Windows 98, ME, 2000 and XP	SFCRD200

\* Crimson software is available for download from <http://www.redlion.net/>

**WARNING:** Disconnect all power to the unit before installing Plug-in card.

**CAUTION:** The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

## WIRING CONNECTIONS

Connections to the serial communications cards are made through an RJ11 modular connector. Connector pin-outs for the RS485 and RS232 cards are shown below.

### RJ11 CONNECTOR PIN OUTS

# MODULE 5 - SERIAL COMMUNICATIONS PARAMETERS (5-5Er)

Module 5 is the programming module for the Serial Communications Parameters. These parameters are used to match the serial settings of the CUB5 with those of the host computer or other serial device. The Serial Setup Parameters are only accessible when an optional RS232 or RS485 serial communications module is installed in the meter.

## BAUD RATE

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting and receiving.

## DATA BIT

Select either 7- or 8-bit data word length. Set the word length to match the other serial communications equipment on the serial link.

## PARITY BIT

This parameter only appears when the Data Bit parameter is set to a 7-bit data word length. Set the parity bit to match that of the other serial equipment on the serial link. The meter ignores parity when receiving data and sets the parity bit for outgoing data. If parity is set to NO, an additional stop bit is used to force the frame size to 10 bits.

## METER ADDRESS

Enter the serial node address. With a single unit, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING

This parameter determines the formatting of data transmitted from the meter in response to a Transmit Value command or a Block Print Request. Select NO for a full print transmission, consisting of the meter address, mnemonics, and parameter data. Select YES for abbreviated print transmissions, consisting of the parameter data only. This setting is applied to all the parameters selected in the PRINT OPTIONS. (Note: If the meter address is 0, the address will not be sent during a full transmission.)

## PRINT OPTIONS

This parameter selects the meter values transmitted in response to a Print Request. A print request is also referred to as a block print because more than one parameter can be sent to a printer or computer as a block.

Selecting YES displays a sublist for choosing the meter parameters to appear in the print block. All active parameters entered as YES in the sublist will be transmitted during a block print. Parameters entered as NO will not be sent.

The "Print All" (P-ALL) option selects all meter values for transmitting (YES), without having to individually select each parameter in the sublist.

Note: Inactive parameters will not be sent regardless of the print option setting. For example, the Setpoint value(s) will not be sent unless an optional setpoint card is installed in the meter.

## ANALOG MODELS - CUB5V, CUB5I, CUB5P, CUB5TC, CUB5RT

DISPLAY	DESCRIPTION	FACTORY SETTING	MNEMONIC
INP	Input	YES	INP
HI	Maximum	NO	MAX
LO	Minimum	NO	MIN
SPt-1	Setpoint 1	NO	SP1
SPt-2	Setpoint 2	NO	SP2

# Sending Serial Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a command terminator character, \* or \$.

## Command Chart

Command	Description	Notes
N	Node (meter) Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by a register ID character.
V	Value Change (write)	Write to register of the meter. Must be followed by a register ID character and numeric data.
R	Reset	Reset a register value or setpoint output. Must be followed by a register ID character
P	Block Print Request (read)	Initiates a block print output. Registers in the print block are selected in Print Options.

## Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

1. The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
2. After the optional address specifier, the next character is the command character.
3. The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints all the active selections chosen in the Print Options menu parameter.
4. If constructing a value change command (writing data), the numeric data is sent next.
5. All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See Command Response Time section for differences in meter response time when using the \* and \$ terminator.

## Register Identification Chart

Analog Models - CUB5V, CUB5I, CUB5P, CUB5TC, CUB5RT

ID	Value Description	MNEMONIC	Applicable Commands	Transmit Details (T and V)
A	Input	INP	T	5 digit
B	Maximum	MAX	T, R	5 digit
C	Minimum	MIN	T, R	5 digit
D	Setpoint 1 (Reset output 1)	SP1	T, R, V	5 digit positive/4 digit negative
E	Setpoint 2 (Reset output 2)	SP2	T, R, V	5 digit positive/4 digit negative

## Command String Examples:

1. Node address = 17, Write 350 to the setpoint 1 value  
String: N17VD350\*
2. Node address = 5, Read input, response time of 50 msec min  
String: N5TA\*
3. Node address = 0, Reset Setpoint 1 output  
String: RD\*
4. Node address = 31, Request a Block Print Output, response time of 2 msec min  
String: N31P\$

## Transmitting Data to the Meter

Numeric data sent to the meter must be limited to transmit details listed in the Register Identification Chart. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (For example: The meter's scaled decimal point position is set for 0.0 and 25 is written to a register. The value of the register is now 2.5. In this case, write a value of 250 to equal 25.0).

*Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.*

# Receiving Data From The Meter

Data is transmitted from the meter in response to either a transmit command (T), a block print request command (P) or a User Input print request. The response from the meter is either a full field transmission or an abbreviated transmission, depending on the selection chosen in Module 5.

## Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-15	9 byte data field; 7 bytes for number, one byte for sign, one byte for decimal point
16	<CR> (carriage return)
17	<LF> (line feed)
18	<SP>* (Space)
19	<CR>* (carriage return)
20	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The first two characters transmitted are the meter address. If the address assigned is 0, two spaces are substituted. A space follows the meter address field. The next three characters are the register mnemonic, as shown in the Register Identification Chart.

The numeric data is transmitted next. The numeric field (bytes 7 to 15) is 9 characters long. When a requested display value exceeds the meter's display limits, decimal points are sent in place of numerical data to indicate a display overrange.

The remaining 7 positions of this field consist of a minus sign (for negative values), a floating decimal point (if applicable), and five positions for the requested value. The data within bytes 9 to 15 is right-aligned with leading spaces for any unfilled positions.

## Abbreviated Transmission

Byte	Description
1-9	9 byte data field, 7 bytes for number, one byte for sign, one byte for decimal point
10	<CR> (carriage return)
11	<LF> (line feed)
12	<SP>* (Space)
13	<CR>* (carriage return)
14	<LF>* (line feed)

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and the register mnemonic, leaving only the numeric part of the response.

## Meter Response Examples (Analog models):

1. Node address = 17, full field response, Input = 875  
17 INP 875 <CR><LF>
2. Node address = 0, full field response, Setpoint 1 = -250.5  
SP1 -250.5<CR><LF>
3. Node address = 0, abbreviated response, Setpoint 2 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

## Command Response Time

The meter can only receive data or transmit data at any one time (half-duplex operation). During RS232 transmissions, the meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\* or \$) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

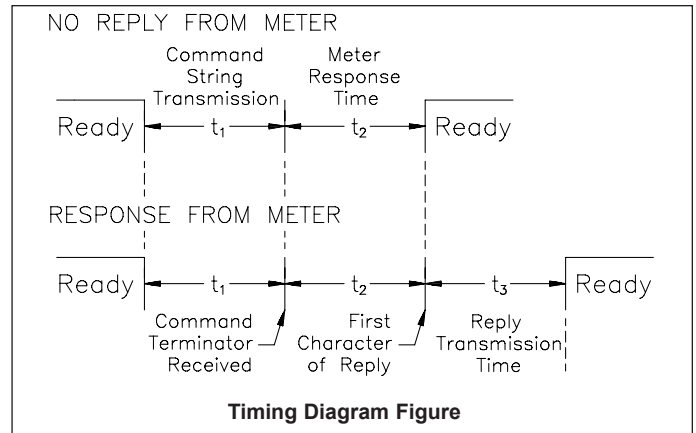

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The '\*' terminating character results in a response time of 50 msec. minimum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time ( $t_2$ ) of 2 msec. minimum. The faster response time of this terminating character requires that sending drivers release within 2 msec. after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel. At the end of  $t_3$ , the meter is ready to receive the next command.

$$t_3 = (10 \text{ times the \# of characters}) / \text{baud rate}$$

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

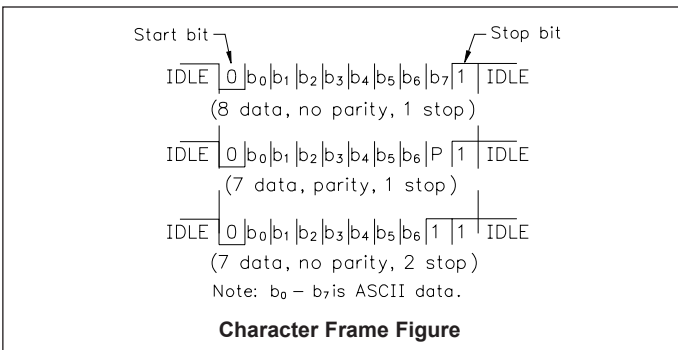

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character. The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV

\* Voltage levels at the Receiver

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is "framed" with a beginning start bit, an optional parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start Bit and Data Bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted.

### Parity Bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The CUB5 meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop Bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit. If 7 data bits and no parity is selected, then 2 stop bits are sent from the meter.

# MODEL PAXUSB - USB PROGRAMMING OPTION CARD

## DESCRIPTION

This bulletin serves as a guide for the installation, configuration and operation of the PAX USB Programming plug-in card. The plug-in card is a separately purchased option card that plug into the main circuit board of the meter. The PAX USB card in conjunction with the Crimson® programming software enables the user to configure a PAX on a PC. The PAXUSB requires installation of drivers which are included with the Crimson Programming software.

Following installation of the drivers, the card appears as a Virtual communications port.

Crimson is a Windows® based program that allows configuration of the PAX® meters from a PC. Crimson offers standard drop-down menu commands, that make it easy to program the PAX meters. The PAX program can then be saved in a PC file for future use. A PAX serial plug-in card is required to program the meter using the software.

## INSTALLING AN OPTION CARD

**CAUTION:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, handle the cards by the edges only. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**WARNING:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit card.
2. Locate the option card connector for the type of option card to be installed. Hold the unit by the rear connector, not the display board, when installing an option card.
3. Install the option card by aligning the option card connector with the slot bay in the rear cover. The cards are keyed by position with different main board connector locations. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.
5. Perform USB driver installation below prior to powering the PAX and connecting PAXUSB to PC USB port.

## USB DRIVER INSTALLATION

1. Download and install the latest Crimson 2 build on your Windows® compatible PC. Earlier builds may not have the RLC Virtual Comm port drivers. Crimson software is available as a free download at <http://www.redlion.net>.
2. Install PAXUSB card into the meter and apply power to the PAX.
3. Connect Type A to mini B USB cable to computer and PAX option card. Windows will prompt you for the location of the drivers for the device. The default location for these drivers is "C:\Program Files\Red Lion controls\Crimson 2.0\Device." When the hardware setup appears, choose "Install from a list or Specific location," click Next, and then check "Include this location..." and click the Browse button. Point the Wizard at the location specified above and whatever other location you specified during installation of the software. It is important that you perform this step correctly, or you may have to manually remove the drivers using the Device Manager, and repeat the installation once more.

*Note: Crimson's USB drivers have not been digitally signed by Microsoft®, and you will therefore see a dialog offering you the chance to stop the installation. You should be sure to select the Continue option to indicate that you do indeed wish to install the drivers.*

4. Windows will automatically assign a comms port to the PAXUSB. To determine the port assigned, open "System Properties" from within Windows® Control Panel. Select the Hardware tab, and click the "Device Manager" button. Expand the "Ports" line. Take note of which Comms port is assigned to "RLC Virtual Comm port". It must be Com4 or lower to operate with Crimson 2. If higher, right-click on the entry and select "Properties," "Port Settings" tab, and then "Advanced" button. Select a Coms port that is COM4 or lower and is not physically being used.

## SPECIFICATIONS

### PAXUSB PROGRAMMING CARD

**Type:** USB Virtual Comms Port

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not Isolated from all other commons.

**PAXH Isolation:**

**Isolation To Sensor Common:** 1400 Vrms for 1 min.

Working Voltage: 125 V

**Isolation To User Input Common:** 500 Vrms for 1 min.

Working Voltage: 50 V

**Baud Rate:** 300 to 19.2k

**Unit Address:** 0 to 99; only 1 meter can be configured at a time

## CRIMSON 2 SYSTEM REQUIREMENTS

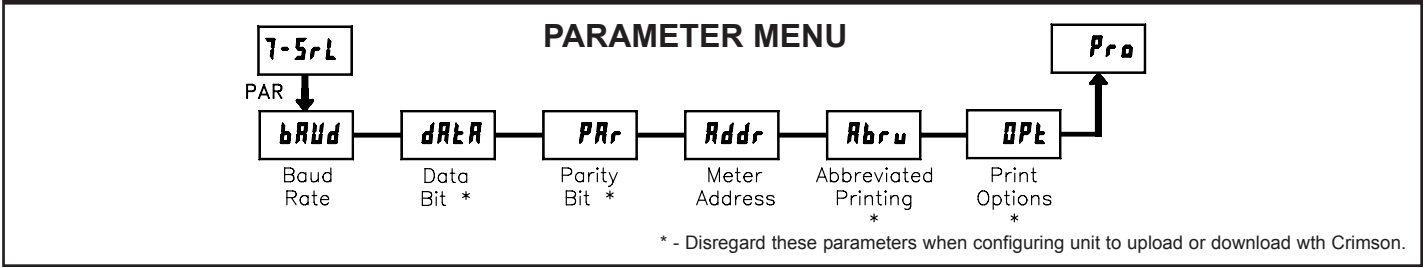

- Windows 2000, XP, or Vista
- RAM and free disk space as required by the chosen operating system.
- An additional 50 MB of disk space for software installation.
- A display of at least 800 by 600 pixels
- A USB port for downloading to the PAX

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXUSB	PAX USB Programming Card	PAXUSB00
CBLUSB	Type A to mini B USB Cable	CBLUSB01
SFCRD*	Crimson 2 PC Configuration Software for Windows 98, ME, 2000 and XP	SFCRD200

\* Crimson software is available for download from <http://www.redlion.net/>

# MODULE 7 - SERIAL COMMUNICATIONS PARAMETERS (7-5rL)

It is necessary to match the PAX meter's serial communications parameters to the host's parameters before communications can be established. This is accomplished by using the PAX front panel keys to enter 7-5rL.

The only parameters of concern when utilizing the PAXUSB programming option card to communicate with Crimson 2 programming software is the Baud Rate and Meter Address. The Parameters are only accessible when an optional PAXUSB, RS232 or RS485 serial communications card is installed.

## BAUD RATE

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting.

## DATA BIT \*

Select either 7 or 8 bit data word lengths. Set the word length to match that of other serial communication equipment. Since the meter receives and transmits 7-bit ASCII encoded data, 7 bit word length is sufficient to request and receive data from the meter.

## PARITY BIT \*

Set the parity bit to match that of the other serial communications equipment used. The meter ignores the parity when receiving data, and sets the parity bit for outgoing data. If no parity is selected with 7-bit word length the meter transmits and receives data with 2 stop bits. (For example: 10 bit frame with mark parity)

## METER ADDRESS

Enter the serial node address. With a single unit on a bus, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## ABBREVIATED PRINTING \*

Select abbreviated transmissions (numeric only) or full field transmission. When the data from the meter is sent directly to a terminal for display, the extra characters that are sent identify the nature of the meter parameter displayed. In this case, select NO. When the data from the meter goes to a computer, it may be desirable to suppress the node address and mnemonic when transmitting. In this case, set this parameter to YES.

## PRINT OPTIONS \*

YES - Enters the sub-menu to select those meter parameters to appear in the block print. For each parameter in the sub-menu select YES for the parameter to appear with the block print, and NO to disable the parameter.

\* - Disregard these parameters when configuring unit to upload or download with Crimson software.

# MODEL PAXCDC -SERIAL COMMUNICATIONS PLUG-IN OPTION CARDS

## DESCRIPTION

This bulletin serves as a guide for the installation, configuration and operation of the RS232 and RS485 cards for the PAX family of meters. Only one communication card can be used at a time.

The PAX meter can be fitted with up to three different option cards. The slot bays of the option cards are dedicated to a particular card function. The option card functions are: serial communications, analog output and setpoint output. Only one card from each function category can be installed into the meter.

## INSTALLING AN OPTION CARD

**Caution:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, handle the cards by the edges only. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit card.
2. Locate the option card connector for the type of option card to be installed. Hold the unit by the rear connector, not the display board, when installing an option card.
3. Install the option card by aligning the option card connector with the slot bay in the rear cover. The cards are keyed by position with different main board connector locations. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.
5. Apply the option card label to the bottom side of the meter. **Do not cover the vents on the top surface of the meter.** The surface of the case must be clean for the label to adhere properly. Apply the label to the area designated by the large case label.

## ORDERING INFORMATION

MODEL	DESCRIPTION	PART NUMBER
PAXCDC	RS485 Serial Communications Output Card with Terminal Block	PAXCDC10
	Extended RS485 Serial Communications Output Card with Dual RJ11 Connector	PAXCDC1C
	RS232 Serial Communications Output Card with Terminal Block	PAXCDC20
	Extended RS232 Serial Communications Output Card with 9 Pin D Connector	PAXCDC2C

K

# SPECIFICATIONS

## PAXH Isolation For Both Cards:

**Isolation To Sensor Common:** 1400 Vrms for 1 min.  
Working Voltage: 125 V

**Isolation To User Input Common:** 500 Vrms for 1 min.  
Working Voltage: 50 V

## RS485 Communication Card

**Type:** RS485 multi-point balanced interface

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.  
Working Voltage: 50 V. Not Isolated from all other commons.

**Baud Rate:** 300 to 19.2k

**Data Format:** 7/8 bits; odd, even, or no parity

**Bus Address:** 0 to 99, max 32 meters per line

**Transmit Delay:** Selectable; 2 - 50 msec or 50 - 100 msec

## RS232 Communication Card

**Type:** RS232 half duplex

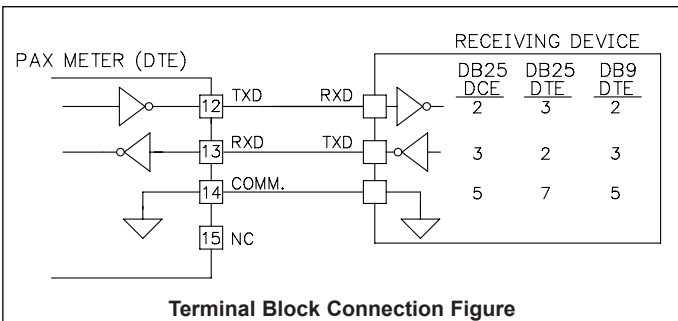

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.  
Working Voltage: 50 V. Not Isolated from all other commons.

**Baud Rate:** 300 to 19.2k

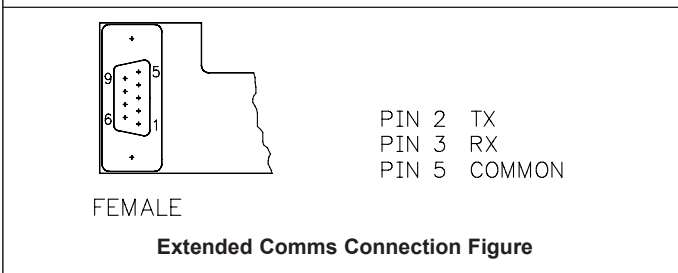

**Data Format:** 7/8 bits; odd, even or no parity

# WIRING CONNECTIONS

## RS232 Communications

Terminal Block Connection Figure

Extended Comms Connection Figure

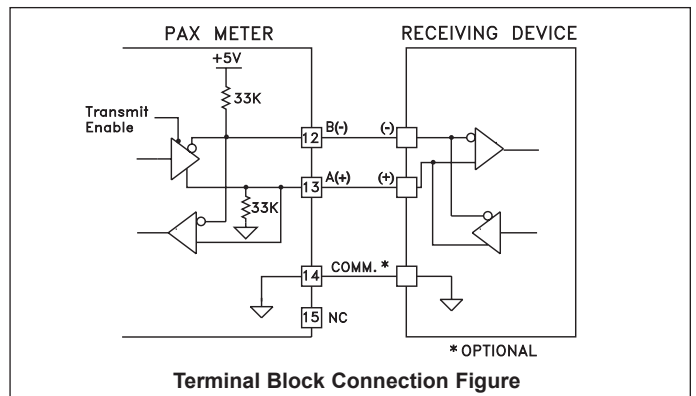

RS232 is intended to allow only two devices to communicate over distances up to 50 feet. Data Terminal Equipment (DTE) transmits data on the Transmitted Data (TXD) line and receives data on the Received Data (RXD) line. Data Computer Equipment (DCE) receives data on the TXD line and transmits data on the RXD line. The PAX emulates a DTE. If the other device connected to the meter also emulates a DTE, the TXD and RXD lines must be interchanged for communications to take place. This is known as a null modem connection. Most printers emulate a DCE device while most computers emulate a DTE device.

Some devices cannot accept more than two or three characters in succession without a pause in between. In these cases, the meter employs a busy function.

As the meter begins to transmit data, the RXD line (RS232) is monitored to determine if the receiving device is "busy". The receiving device asserts that it is busy by setting the RXD line into a space condition (logic 0). The meter then suspends transmission until the RXD line is released by the receiving device.

## RS485 Communications

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the PAX is limited to 19.2k baud). The same pair of wires is used to both transmit and receive data. An RS485 bus is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

Terminal Block Connection Figure

Extended Comms Connection Figure

# MODULE 7 - SERIAL COMMUNICATIONS PARAMETERS (7-5rL)

It is necessary to match the PAX meter's serial communications parameters to the host's parameters before communications can be established. This is accomplished by using the PAX front panel keys to enter 7-5rL.

Indicates Program Mode Alternating Display.

Parameter	<b>bAUd</b>	
		Selection/Value
		<b>9600</b>

Factory Settings are shown.

## METER ADDRESS

**AAdr** ←

↵

0 to 99

Enter the serial node address. With a single unit on a bus, an address is not needed and a value of zero can be used (RS232 applications). Otherwise, with multiple bussed units, a unique address number must be assigned to each meter. The node address applies specifically to RS485 applications.

## BAUD RATE

**bAUd** ←

↵

300    1200    4800    19200  
600    2400    9600

Set the baud rate to match that of other serial communications equipment. Normally, the baud rate is set to the highest value that all of the serial communications equipment is capable of transmitting.

## ABBREVIATED PRINTING

**Abru** ←

↵

YES    NO

Select abbreviated transmissions (numeric only) or full field transmission. When the data from the meter is sent directly to a terminal for display, the extra characters that are sent identify the nature of the meter parameter displayed. In this case, select **NO**. When the data from the meter goes to a computer, it may be desirable to suppress the node address and mnemonic when transmitting. In this case, set this parameter to **YES**.

## DATA BIT

**dAtA** ←

↵

7    8

Select either 7 or 8 bit data word lengths. Set the word length to match that of other serial communication equipment. Since the meter receives and transmits 7-bit ASCII encoded data, 7 bit word length is sufficient to request and receive data from the meter.

## PRINT OPTIONS

**OPt** ←

↵

YES    NO

**YES** - Enters the sub-menu to select those meter parameters to appear in the block print. For each parameter in the sub-menu select **YES** for the parameter to appear with the block print, and **NO** to disable the parameter.

\*Setpoints 1-4 are setpoint plug-in card dependent.

Input Value	<b>INP</b>	YES	NO
Max and Min Values	<b>HILO</b>	YES	NO
Total Value	<b>Tot</b>	YES	NO
Setpoint values*	<b>SPAt</b>	YES	NO

## PARITY BIT

**PAr** ←

↵

Odd    EVEN    NO

Set the parity bit to match that of the other serial communications equipment used. The meter ignores the parity when receiving data, and sets the parity bit for outgoing data. If no parity is selected with 7-bit word length the meter transmits and receives data with 2 stop bits. (For example: 10 bit frame with mark parity)

## Sending Commands and Data

When sending commands to the meter, a string containing at least one command character must be constructed. A command string consists of a command character, a value identifier, numerical data (if writing data to the meter) followed by a the command terminator character \* or \$.

### Command Chart

Command	Description	Notes
N	Node Address Specifier	Address a specific meter. Must be followed by one or two digit node address. Not required when node address = 0.
T	Transmit Value (read)	Read a register from the meter. Must be followed by register ID character.
V	Value change (write)	Write to register of the meter. Must be followed by register ID character and numeric data.
R	Reset	Reset a register or output. Must be followed by register ID character
P	Block Print Request (read)	Initiates a block print output. Registers are defined in programming.

### Command String Construction

The command string must be constructed in a specific sequence. The meter does not respond with an error message to illegal commands. The following procedure details construction of a command string:

1. The first 2 or 3 characters consist of the Node Address Specifier (N) followed by a 1 or 2 character node address number. The node address number of the meter is programmable. If the node address is 0, this command and the node address itself may be omitted. This is the only command that may be used in conjunction with other commands.
2. After the optional address specifier, the next character is the command character.
3. The next character is the register ID. This identifies the register that the command affects. The P command does not require a register ID character. It prints according to the selections made in print options.
4. If constructing a value change command (writing data), the numeric data is sent next.
5. All command strings must be terminated with the string termination characters \* or \$. The meter does not begin processing the command string until this character is received. See timing diagram figure for differences of \* and \$ terminating characters.

## Receiving Data

Data is transmitted by the meter in response to either a transmit command (T), a print block command (P) or User Function print request. The response from the meter is either a full field transmission or an abbreviated transmission. In this case, the response contains only the numeric field. The meter response mode is established in programming.

### Full Field Transmission

Byte	Description
1, 2	2 byte Node Address field [00-99]
3	<SP> (Space)
4-6	3 byte Register Mnemonic field
7-18	12 byte data field; 10 bytes for number, one byte for sign, one byte for decimal point (The T command may be a different byte length)
19	<CR> carriage return
20	<LF> line feed
21	<SP>* (Space)
22	<CR>* carriage return
23	<LF>* line feed

\* These characters only appear in the last line of a block print.

The first two characters transmitted are the node address, unless the node address assigned =0, in which case spaces are substituted. A space follows the node address field. The next three characters are the register ID (Serial Mnemonic).

The numeric data is transmitted next. The numeric field is 12 characters long (to accommodate the 10 digit totalizer), with the decimal point position floating within the data field. Negative values have a leading minus sign. The data field is right justified with leading spaces.

### Register Identification Chart

ID	Value Description	Register ID	Applicable Commands/Comments
A	Input	INP	T, P
B	Total	TOT	T, P, R (Reset command resets total to zero)
C	Max Input	MAX	T, P, R (Reset command resets MAX to current reading)
D	Min Input	MIN	T, P, R (Reset command resets MIN to current reading)
E	Setpoint 1	SP1	T, P, V, R (Reset command resets the setpoint output)
F	Setpoint 2	SP2	T, P, V, R (Reset command resets the setpoint output)
G	Setpoint 3	SP3	T, P, V, R (Reset command resets the setpoint output)
H	Setpoint 4	SP4	T, P, V, R (Reset command resets the setpoint output)
I	Analog Output Register	AOR	T, V (Applies to manual mode)
J	Control Status Register	CSR	T, V

### Command String Examples:

1. Node address = 17, Write 350 to Setpoint 1, response delay of 2 msec min  
String: N17VE350\$
2. Node address = 5, Read Input value, response delay of 50 msec min  
String: N5TA\*
3. Node address = 0, Reset Setpoint 4 output, response delay of 50 msec min  
String: RH\*

### Sending Numeric Data

Numeric data sent to the meter must be limited to 5 digits (-19,999 to 99,999). If more than 5 digits are sent, the meter accepts the last 5. Leading zeros are ignored. Negative numbers must have a minus sign. The meter ignores any decimal point and conforms the number to the scaled resolution. (For example: the meter's scaled decimal point position = 0.0 and 25 is written to a register. The value of the register is now 2.5 In this case, write a value = 25.0).

Note: Since the meter does not issue a reply to value change commands, follow with a transmit value command for readback verification.

The end of the response string is terminated with a carriage return <CR> and <LF>. When block print is finished, an extra <SP><CR> <LF> is used to provide separation between the blocks.

### Abbreviated Transmission

Byte	Description
1-12	12 byte data field, 10 bytes for number, one byte for sign, one byte for decimal point
13	<CR> carriage return
14	<LF> line feed
15	<SP>* (Space)
16	<CR>* carriage return
17	<LF>* line feed

\* These characters only appear in the last line of a block print.

The abbreviated response suppresses the node address and register ID, leaving only the numeric part of the response.

### Meter Response Examples:

1. Node address = 17, full field response, Input = 875  
17 INP 875 <CR><LF>
2. Node address = 0, full field response, Setpoint 2 = -250.5  
SP2 -250.5<CR><LF>
3. Node address = 0, abbreviated response, Setpoint 2 = 250, last line of block print  
250<CR><LF><SP><CR><LF>

**(CSR) Control Status Register**

The Control Status Register is used to both directly control the meter's outputs (setpoints and analog output), and interrogate the state of the setpoint outputs. The register is bit mapped with each bit position within the register assigned to a particular control function. The control function are invoked by writing to each bit position. The bit position definitions are:

- bit 0: Setpoint 1 Output Status  
0 = output off  
1 = output on
- bit 1: Setpoint 2 Output Status  
0 = output off  
1 = output on
- bit 2: Setpoint 3 Output Status  
0 = output off  
1 = output on
- bit 3: Setpoint 4 Output Status  
0 = output off  
1 = output on
- bit 4: Manual Mode  
0 = automatic mode  
1 = manual mode
- bit 5: Always stays 0, even if 1 is sent.
- bit 6: Sensor Status (PAXT only)  
0 = sensor normal  
1 = sensor fail
- bit 7: Always stays 0, even if 1 is sent.

Although the register is bit mapped starting with bit 7, HEX <> characters are sent in the command string. Bits 7 and 5 always stay a zero, even if a "1" is sent. This allows ASCII characters to be used with terminals that may not have extended character capabilities.

Writing a "1" to bit 4 of CSR selects manual mode. In this mode, the setpoint outputs are defined by the values written to the bits b0, b1, b2, b3; and the analog output is defined by the value written to the AOR. Internal control of these outputs is then overridden.

In automatic mode, the setpoint outputs can only be reset off. Writing to the setpoint output bits of the CSR has the same effect as a Reset command (R). The contents of the CSR may be read to interrogate the state of the setpoint outputs and to check the status of the temperature sensor (PAXT only).

**Examples:**

1. Set manual mode, turn all setpoints off:

```

          7 6 5 4 3 2 1 0:bit location
VJ<30>* or VJ0*   ASCII 0 = 0 0 1 1 0 0 0 0 or <30>
V is command write, J is CSR and * is terminator.
    
```

2. Turn SP1, SP3 outputs on and SP2, SP4 outputs off:

```

          7 6 5 4 3 2 1 0:bit location
VJ<35>* or VJ5*   ASCII 5 = 0 0 1 1 0 1 0 1 or <35>
    
```

3. Select Automatic mode:

```

          7 6 5 4 3 2 1 0:bit location
VJ<40>* or VJ@*   ASCII @ = 0 1 0 0 0 0 0 0 or <40>
    
```

*Note: Avoid writing values <0A> (LF), <0D> (CR), <24> (\$), and <2E> (\*) to the CSR. These values are interpreted by the meter as end of command control codes and will prematurely end the write operation.*

**(AOR) Analog Output Register**

The Analog Output Register controls the analog output of the meter. The manual mode must first be engaged by setting bit 4 of the Control Status Register. The range of values of this register is 0 to 4095, which corresponds to 0 mA, 0 V and 20 mA, 10 V; respectively. The table lists correspondence of the output signal with the register value.

Register Value	Output Signal*	
	I (mA)	V (V)
0	0.000	0.000
1	0.005	0.0025
2047	10.000	5.000
4094	19.995	9.9975
4095	20.000	10.000

*\*Due to the absolute accuracy rating and resolution of the output card, the actual output signal may differ 0.15% FS from the table values. The output signal corresponds to the range selected (20 mA or 10 V).*

Writing to this register while the meter is in the manual mode causes the output signal to update immediately. While in the automatic mode, this register may be written to, but the output will not update until the meter is placed in manual mode.

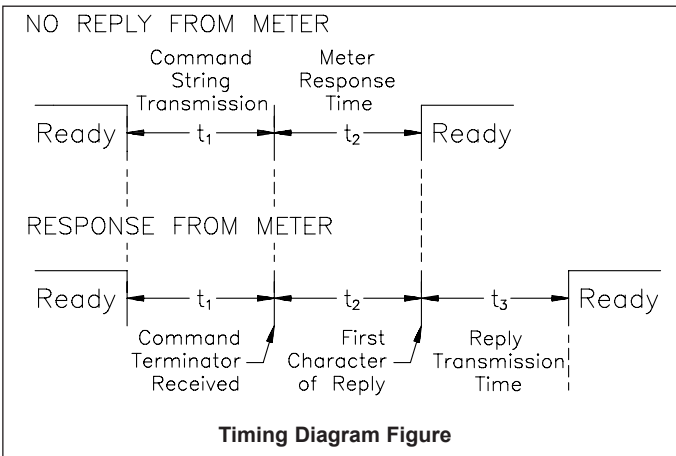

**Examples:**

1. Set output to full scale:  
V14095\*
2. Set output to zero scale:  
V10\*

**K**

**Command Response Time**

The meter can only receive data or transmit data at any one time (half-duplex operation). The meter ignores commands while transmitting data, but instead uses RXD as a busy signal. When sending commands and data to the meter, a delay must be imposed before sending another command. This allows enough time for the meter to process the command and prepare for the next command.

At the start of the time interval  $t_1$ , the computer program prints or writes the string to the com port, thus initiating a transmission. During  $t_1$ , the command characters are under transmission and at the end of this period, the command terminating character (\*) is received by the meter. The time duration of  $t_1$  is dependent on the number of characters and baud rate of the channel.

$$t_1 = (10 * \# \text{ of characters}) / \text{baud rate}$$

At the start of time interval  $t_2$ , the meter starts the interpretation of the command and when complete, performs the command function. This time interval  $t_2$  varies from 2 msec to 50 msec. If no response from the meter is expected, the meter is ready to accept another command.

If the meter is to reply with data, the time interval  $t_2$  is controlled by the use of the command terminating character. The standard command line terminating character is '\*'. This terminating character results in a response time window of 50 msec minimum and 100 msec maximum. This allows sufficient time for the release of the sending driver on the RS485 bus. Terminating the command line with '\$' results in a response time window ( $t_2$ ) of 2 msec minimum and 50 msec maximum. The faster response time of this terminating character requires that sending drivers release within 2 msec after the terminating character is received.

At the beginning of time interval  $t_3$ , the meter responds with the first character of the reply. As with  $t_1$ , the time duration of  $t_3$  is dependent on the number of characters and baud rate of the channel.  $t_3 = (10 * \# \text{ of characters}) / \text{baud rate}$ . At the end of  $t_3$ , the meter is ready to receive the next command.

The maximum serial throughput of the meter is limited to the sum of the times  $t_1$ ,  $t_2$  and  $t_3$ .

## Communication Format

Data is transferred from the meter through a serial communication channel. In serial communications, the voltage is switched between a high and low level at a predetermined rate (baud rate) using ASCII encoding. The receiving device reads the voltage levels at the same intervals and then translates the switched levels back to a character.

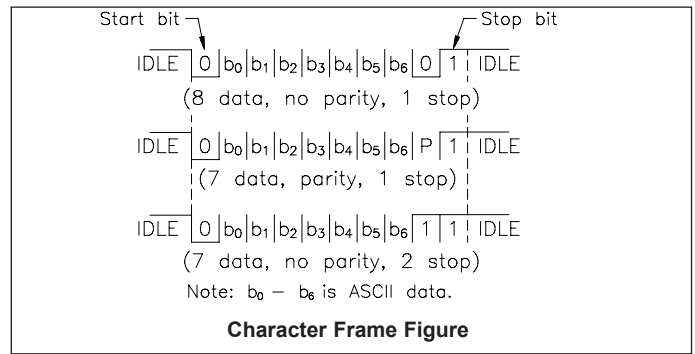

The voltage level conventions depend on the interface standard. The table lists the voltage levels for each standard.

LOGIC	INTERFACE STATE	RS232*	RS485*
1	mark (idle)	TXD,RXD; -3 to -15 V	a-b < -200 mV
0	space (active)	TXD,RXD; +3 to +15 V	a-b > +200 mV
* Voltage levels at the Receiver			

Data is transmitted one byte at a time with a variable idle period between characters (0 to ∞). Each ASCII character is “framed” with a beginning start bit, an optional error detection parity bit and one or more ending stop bits. The data format and baud rate must match that of other equipment in order for communication to take place. The figures list the data formats employed by the meter.

### Start bit and Data bits

Data transmission always begins with the start bit. The start bit signals the receiving device to prepare for reception of data. One bit period later, the least significant bit of the ASCII encoded character is transmitted, followed by the remaining data bits. The receiving device then reads each bit position as they are transmitted. Since the sending and receiving devices operate at the same transmission speed (baud rate), the data is read without timing errors.

### Parity bit

After the data bits, the parity bit is sent. The transmitter sets the parity bit to a zero or a one, so that the total number of ones contained in the transmission (including the parity bit) is either even or odd. This bit is used by the receiver to detect errors that may occur to an odd number of bits in the transmission. However, a single parity bit cannot detect errors that may occur to an even number of bits. Given this limitation, the parity bit is often ignored by the receiving device. The PAX meter ignores the parity bit of incoming data and sets the parity bit to odd, even or none (mark parity) for outgoing data.

### Stop bit

The last character transmitted is the stop bit. The stop bit provides a single bit period pause to allow the receiver to prepare to re-synchronize to the start of a new transmission (start bit of next byte). The receiver then continuously looks for the occurrence of the start bit.

# MODEL PAXCDC -DEVICENET™ OUTPUT OPTION CARD

## DESCRIPTION

The DeviceNet Option Card (PAXCDC30) is designed for the PAX series of meters. It fits into the Comms slot of any PAX meter and allows the meter to communicate with a DeviceNet bus. The card supports Polling, Bit Strobe, and

Explicit Message Commands. The MAC ID and the Baud Rate are switch adjustable via a DIP switch. A bicolor LED is used to indicate the meter's status in relationship to the bus.

### INSTALLING AN OPTION CARD

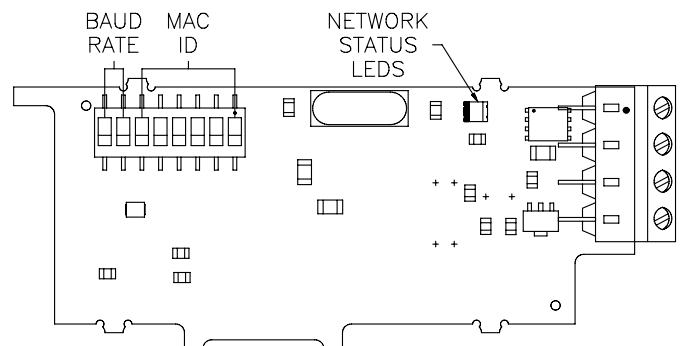

**Caution:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit card.
2. Locate the option card connector for the type of option card to be installed. Hold the unit by the rear connector, not the display board, when installing an option card.
3. Install the option card by aligning the option card connector with the slot in the rear cover. The cards are keyed by position with different main board connector locations. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.
5. Apply the option card label to the bottom side of the meter. Do not cover the vents on the top surface of the meter. The surface of the case must be clean for the label to adhere properly. Apply the label to the area designated by the large case label.
6. See manual for wiring connections and programming procedures.

### DIP SWITCHES

Both MAC ID and baud rate are set via DIP switches on the DeviceNet™ option card. See the DIP switch setting table for more details on these DIP switches. Configuration of MAC ID and baud rate is not supported over DeviceNet™.

### NETWORK STATUS LEDs

The network status LEDs provide visual indication to the operator of the DeviceNet™ card's current status.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXCDC	PAX DeviceNet™ Output Card	PAXCDC30

## DeviceNet™ SPECIFICATIONS

### POWER SUPPLY

**Source:** Supplied by DeviceNet™ bus.

The bus does not power the host.

**Voltage:** 11 to 25 VDC.

**Current:**

Nominal: 40 mA at 25 VDC.

Inrush: 550 mA for 5 msec at 25 VDC.

\*Power must be applied to the PAX meter before bus power is applied to the card.

### NETWORK SPECIFICS

**Compatibility:** Group 2 Server Only, not UCMM capable.

**Baud Rates:** 125 Kbaud, 250 Kbaud, and 500 Kbaud.

**Bus Interface:** Phillips 82C250 or equivalent with mis-wiring protection per DeviceNet™ Volume 1 Section 10.2.2.

**Node Isolation:** Bus powered, isolated node.

**Host Isolation:** 500 Vrms for 1 minute (50 V working) between DeviceNet™ and meter input common.

**Bus Connection:**

12 V+

13 CAN\_H

14 CAN\_L

15 V-

Shield: No Connection

### INSTALLATION INFORMATION

**Factory Settings:**

**Baud rate:** 125 KBs.

**MAC ID:** 63

**Strobe Register:** 07h

**Polling flags:** All on.

**Swap data flag:** Off.

**Store Flags:** All on.

### DIP SWITCH SETTING TABLE

SWITCH #	SETTING
1 - 6	MAC ID (all off = 0, all on = 63) Switch 1 is LSB (1), switch 6 is MSB (32).
7 off, 8 off	125 K baud
7 on, 8 off	250 K baud
7 off, 8 on	500 K baud
7 on, 8 on	N/A

### CONNECTION SIZES

**Device Profile:** This product conforms to the DeviceNet™ specification Volumes I and II of version 2.0.

**Device Configuration:** No DeviceNet™ configuration is supported. However, some meter configuration is supported.

MESSAGE	PRODUCED	CONSUMED
Explicit	4 Bytes	4 Bytes
Polled	4 Bytes	6 Bytes
Bit Strobe	4 Bytes	8 Bytes

## NETWORK STATUS LEDs

**Flashing Red LED:**

This device is the only device on the network (waiting for an acknowledgment to its duplicate MAC ID check), or an I/O connection has timed out, or a recoverable error has occurred.

**Flashing Green LED:**

The device is functioning correctly and is waiting to be commissioned by a bus master.

**Solid Red LED:**

The device has encountered a non-recoverable fault, such as a duplicate MAC ID response, and has removed itself from the bus, or the device is in a power up reset state and is attempting to come on line.

**Solid Green LED:**

The device is on line, functioning correctly and has been commissioned by a bus master.

## SUPPORTED CONNECTIONS

**Polled Command:** The Polled Command consumes 6 bytes of data, and is used to get, set, or reset attributes. The meter attribute is determined by the value in byte 0 of the data field. Refer to the Attribute Identification Chart for the appropriate value. Byte 1 determines the action: 0 = get, 1 = set, 2 = reset. The next 4 bytes are the new attribute value for the set command. For get or reset commands, enter 4 zeros. The data response from the Polled Command is in the format of a 4 byte hexadecimal number. For the get command (0), the response is the attribute value. For the set command (1), the response is an echo of the data input. For the reset command (2), all 0s are returned.

**Bit Strobe Command:** The Bit Strobe Command consumes eight bytes of data, or less. This is a read only predetermined meter attribute. The data response from the Bit Strobe Command is in the format of a 4 byte hexadecimal number. The register that will be read using the Bit Strobe command is determined by setting Attribute 2, Instance 1, Class 100\* (decimal) with a value that represents the desired attribute. Refer to the Attribute Identification Chart for the appropriate value.

\*Class 100 (decimal) is a vendor specific class.

## EXPLICIT MESSAGE COMMAND

**Get Attribute:** The attribute that will be read using the Get Attribute command is determined by setting Service Code 14, Instance 1, Class 100\* (decimal), and the attribute with a value that represents the desired meter attribute. Refer to the Attribute Identification Chart for the appropriate value. The data response from the Get Attribute Command is in the format of a 4 byte hexadecimal number.

**Set Attribute:** The attribute that will be set using the Set Attribute command is determined by setting Service Code 16, Instance 1, Class 100\* (decimal), and the attribute with a value that represents the desired meter attribute. Refer to the Attribute Identification Chart for the appropriate value. The data field for the Set Attribute Command is entered as a 4 byte hexadecimal number.

**Reset Attribute:** The attribute that will be reset using the Reset Attribute command is determined by setting Service Code 5, Instance 1, Class 100\* (decimal), and the attribute with a value that represents the desired meter attribute. Refer to the Attribute Identification Chart for the appropriate value.

\*Class 100 (decimal) is a vendor specific class.

Note: Not all meter attributes respond to a Set or Reset Attribute command. Refer to the Attribute Identification Chart for details.

## Vendor Specific Error Responses

CODE ERROR #	ERROR CODE MEANING
1F (General Code)	Vendor Specific Error
1 (Additional Code)	Meter Response Time-out
2 (Additional Code)	Vendor Service Not Supported
3 (Additional Code)	Command String Syntax Error

## Attribute Identification Chart

VALUE	DESCRIPTION				SERVICE CODES SUPPORTED				POLLING	STORE

① Data Swap: (1 byte), Attribute 1, Instance 1, Class 100 (decimal). Data is normally sent and entered as follows: Pax display value = 500000 (7A120h). 4 byte value sent would be 20 A1 07 00. Setting the data swap value to 1 would result in the data being sent as 00 07 A1 20. This attribute can only be set to 0 or 1, all other values are ignored. The factory setting value is 0. Data Byte is saved in EEPROM memory.

④ DIP Switch Values: (1 byte), Attribute 6, Instance 1, Class 100 (decimal). Returns the dip switch setting. Switch 1 = LSB, 1 = on.

③ Polling Flags: (3 bytes) Attribute 3 - 5, Instance 1, Class 100 (decimal). The DeviceNet card is continually requesting values from the PAX unit. The polling flags determine what values are requested during each loop. Setting the flags to "1" enables the card to poll that particular value. A "0" value disables it. Turning polling flags off allows the card to request fewer values and therefore decreases the internal loop time, which allows the values that are polled to be updated more often.

#### TYPICAL UPDATE TIMES

PAX	PAXI/PAXCK/PAXDP
All values (10) – 1.00 sec	All values (19) – 750 msec
5 values – 500 msec	10 values – 430 msec
1 value – 100 msec	5 values – 230 msec
	1 value – 52 msec

If a Set Attribute is executed for any value, that value is automatically updated to the latest value, regardless of whether the polling flag is on or off. On power up, all values are updated regardless of Polling flag settings. Polling flag values are saved in EEPROM memory. Factory settings is "on" for all Polling flags.

See Meter Attribute Identification Chart for polling flags.

⑤ Store Flags: (3 bytes) Attribute 26 - 28, Instance 1, Class 100 (decimal). This set of flags determines whether the attribute is stored to EEPROM when a Set or Reset service code is executed. If the flag is 0, the value is not saved to EEPROM memory in the PAX. If the flag is 1, the value is saved immediately to EEPROM memory in the PAX. Factory setting is "on" for all Store Flags. The attributes are grouped in blocks. Storing one attribute may cause others to be stored. If an attribute is SET frequently, its store flag should be set to 0 to increase EEPROM life.

### MANUAL MODE DESCRIPTION ⑥ (CSR) Control Status Register [16] (PAX)

The Control Status Register is used to directly control the meter's outputs (setpoints and analog output), or view the state of the setpoint outputs and the status of the temperature sensor (PAXT only). The attribute is bit mapped with each bit position within the attribute assigned to a particular control function. The control functions are invoked by writing to each bit position. The bit position definitions are:

bit 0: SP1 Output	}	0 = output off 1 = output on	bit 5: Always stays 0, even if 1 is sent.
bit 1: SP2 Output			bit 6: Sensor Status (PAXT only)
bit 2: SP3 Output			0 = sensor normal
bit 3: SP4 Output			1 = sensor fail
bit 4: Manual Mode			bit 7: Always stays 0, even if 1 is sent.
0 = automatic mode			
1 = manual mode			

In Manual Mode, the setpoint outputs are defined by the values written to bits b0, b1, b2, b3; and the analog output is defined by the value written to the AOR. Internal control of these outputs is then overridden. In automatic mode, the setpoint outputs can only be reset off.

#### Example:

- Select manual mode for all outputs:  
Value to write to attribute 16: 0010h

## MANUAL MODE DESCRIPTION (CONTINUED)

### (MMR) Auto/Manual Mode Register [23] (PAXI/PAXCK/PAXDP)

This attribute sets the controlling mode for the outputs. In Auto Mode (0) the meter controls the setpoint output. In Manual Mode (1) the outputs are defined by the attribute SOR. When transferring from auto mode to manual mode, the meter holds the last output value (until the attribute is changed by a write). Each output may be independently changed to auto or manual. Select values to place in manual mode by writing appropriate value to attribute 23. The bit position definitions are:

PAXI/PAXDP	PAXCK
bit 0: Analog Output bit 1: SP4 bit 2: SP3 bit 3: SP2 bit 4: SP1	bit 0: SP4 bit 1: SP3 bit 2: SP2 bit 3: SP1
} } } } }	} } } } }
0 = Auto Mode 1 = Manual Mode	0 = Auto Mode 1 = Manual Mode

#### Example:

- Select manual mode for all outputs and AOR (PAXI, PAXDP):  
Value to write to attribute 23: 001Fh

### (SOR) Setpoint Output Register [25] (PAXI/PAXCK/PAXDP)

This attribute is used to view or change the states of the setpoint outputs. Reading from this attribute will show the present state of all the setpoint outputs. A "0" in the setpoint location means the output is inactive and a "1" means the output is active.

In Automatic Mode (See MMR Description), the meter controls the setpoint output state. In Manual Mode, writing to this attribute will change the output state. The bit position definitions are:

bit 0: SP1	}	0 = Output off 1 = Output on
bit 1: SP2		
bit 2: SP3		
bit 3: SP4		

#### Examples:

- Turn all outputs on:  
Value to write to attribute 25 - 000Fh.
- Turn outputs 1, 3 on:  
Value to write to attribute 25 - 0005h.
- Turn all outputs off:  
Value to write to attribute 25 - 0000h.

### (AOR) Analog Output Register (Not PAXCK)

The Analog Output Register controls the analog output of the meter. The manual mode must first be engaged by setting bit 4 of the CSR (PAX) or bit 0 of the MMR (PAXI). The range of values of this attribute is 0 to 4095, which corresponds to 0 mA, 0 V and 20 mA, 10 V; respectively. If a value larger than 4095 is written to the AOR Attribute, 4095 will be loaded. The table lists correspondence of the output signal with the attribute value.

*\*Due to the absolute accuracy rating and resolution of the output card, the actual output signal may differ 0.15% FS from the table values. The output signal corresponds to the range selected (20 mA or 10 V).*

Attribute Value	Output Signal*	
	I (mA)	V (V)
0	0.000	0.000
1	0.005	0.0025
2047	10.000	5.000
4094	19.995	9.9975
4095	20.000	10.000

Writing to this attribute while the meter is in the manual mode causes the output signal to update immediately. While in the automatic mode, this attribute may be written to, but the output will not update until the meter is placed in manual mode.

#### Examples:

- Set output to full scale:  
Value to write to attribute 15 (PAX) or attribute 24 (PAXI) - 0FFFh (4095).
- Set output to zero scale:  
Value to write to attribute 15 (PAX) or attribute 24 (PAXI) - 0000h (0).

# MODEL PAXCDC -MODBUS OUTPUT OPTION CARD

## DESCRIPTION

This product bulletin covers the MODBUS Communication Card for the PAX Meters. The card will allow the PAX Meter to transmit Display Values,

Setpoints and Reset Values via MODBUS RS485 communication, in the RTU and ASCII modes.

### INSTALLING AN OPTION CARD

**Caution:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit card.
2. Locate the option card connector for the type of option card to be installed. Hold the unit by the rear connector, not the display board, when installing an option card.
3. Install the option card by aligning the option card connector with the slot in the rear cover. The cards are keyed by position with different main board connector locations. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.
5. Apply the option card label to the bottom side of the meter. Do not cover the vents on the top surface of the meter. The surface of the case must be clean for the label to adhere properly. Apply the label to the area designated by the large case label.
6. See manual for wiring connections and programming procedures.

K

### MODBUS SPECIFICATIONS

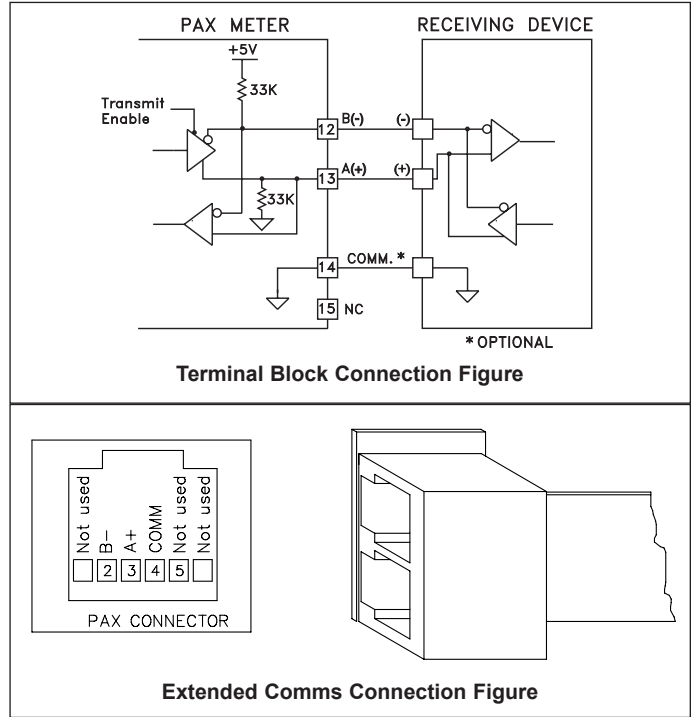

1. **Type:** RS485; RTU and ASCII MODBUS modes
2. **Isolation To Sensor & User Input Commons:** 500 Vrms for 1 minute. Working Voltage: 50 V. Not isolated from all other commons.
3. **Baud Rates:** 300 to 38400.
4. **Data:** 7/8 bits
5. **Parity:** No, Odd, or Even
6. **Addresses:** 1 to 247.
7. **Transmit Delay:** Programmable; See Transmit Delay explanation.

### ORDERING INFORMATION

MODEL	DESCRIPTION	PART NUMBER
PAXCDC	PAX MODBUS Output Card	PAXCDC40
	PAX MODBUS Output Card with RJ11 Connector	PAXCDC4C

## RS485 COMMUNICATIONS

The RS485 communication standard allows the connection of up to 32 devices on a single pair of wires, distances up to 4,000 ft. and data rates as high as 10M baud (the PAX is limited to 19.2k baud). The same pair of wires is used to both transmit and receive data. RS485 is therefore always half-duplex, that is, data cannot be received and transmitted simultaneously.

## SERIAL SET-UP DIP SWITCH OPERATION

Serial port configuration is accomplished through two banks of DIP switches on the MODBUS card. The bank of 8 switches sets the Unit Address, the bank of 7 switches sets the Serial port parameters (ASCII/RTU, 7/8 bits, Parity, and Baud rate). Changes to the switch settings are only detected on power-up of the unit. After changing a switch setting, power to the unit must be cycled for the new switch setting to take effect.

Both unit address and serial set-up are set via DIP switches on the MODBUS option card. See the DIP switch setting table for more details on these DIP switches.

For the Unit Address bank, the high order bit is switch 1, and the ON position is a '1', the OFF position is a '0'. Legal unit addresses are 1 to 247. When a Unit Address of 0 is selected, the card responds to Unit Address 1. When a Unit Address of 248 through 255 is selected, the card responds to Unit Address 247.

For the serial bank, the following settings apply:

SWITCH	SETTINGS AVAILABLE		FACTORY SETTINGS
1	OFF: ASCII	ON: RTU	RTU
2	OFF: 7 Bits	ON: 8 Bits	8 Bits
3	OFF: None	ON: Parity	No Parity
4	OFF: Even	ON: Odd	OFF
5	Baud Rate	(See Baud Rate Switch Selections)	9600
6	Baud Rate		
7	Baud Rate		

## BAUD RATE SWITCH SELECTIONS

	5	6	7
38400:	ON	ON	ON
19200:	ON	ON	OFF
9600:	ON	OFF	ON
4800:	ON	OFF	OFF
2400:	OFF	ON	ON
1200:	OFF	ON	OFF
600:	OFF	OFF	ON
300:	OFF	OFF	OFF

## MODBUS SUPPORTED FUNCTION CODES

### COIL FUNCTIONS

#### FC01: Read Coils

#### FC05: Force Single Coil, FC15: Force Multiple Coils.

- Valid coil addresses are 1-49.
- Block starting point can not exceed coil 49.

### HOLD REGISTER FUNCTIONS

#### FC03: Read Holding Registers.

#### FC06: Preset Single Register, FC16: Preset Multiple Registers.

- Valid register address are 40001 – 40039, 40041, 40042, 41001 – 41010.
- Up to 16 registers can be requested at one time.
- Block starting point can not exceed the register boundaries.
- Holding registers are a mirror of Input registers (FC04).
- Unused registers will return a value of HEX <8000>.
- If a register is implemented, but does not exist for a particular unit configuration (such as SP3, SP4) a value of HEX <0000> will be returned.
- Registers 41001 – 41010 contain the slave ID. See FC17.
- Broadcast write is supported for FC06 & FC16. Register writes using address “0” will be recognized by the MODBUS card, regardless of address DIP switch setting.

### OTHER SUPPORTED FUNCTIONS

#### FC04:

Returns the same values as FC03, except the register number starts with “3” (Ex: Pax Input Hi is 30001)

#### FC08 – Fetch Comm. Event Counter.

The MODBUS response breaks down as follows:

“:010804”<TOT HI><TOT LO><GOOD HI><GOOD LO>XX<CR><LF>

The “TOT HI” and “TOT LO” values are the total number of messages that were received, that started with the card’s address. The “GOOD HI” and “GOOD LO” are “good” messages (correct address, parity, and checksum). The values are reset on power up and every time the FC08 function is requested.

#### FC17 - Report Slave ID.

The following is sent upon FC17 request:

Unit Address, 17 (FC code), RLC-PAX(I or ?) 00?, 0100 (for code version 1.00), 16 (number of read supported registers), 16 (number of write supported registers), 00 (number of registers available for GUID/Scratch pad memory), checksum of the string.

The following is the HEX of a PAXI (with unit address of 247):

:<F7><11><14><52><4C><43><2D><50><41><58><49><30><30><3F><30><01><00><00><10><00><10><00><00><XX><CR><LF>

XX is the LRC Checksum

## PAX MANUAL MODE DESCRIPTION

### (CSR) Control Status Register [40021]

The Control Status Register is used to directly control the meter’s outputs (setpoints and analog output), or view the state of the setpoint outputs and the status of the temperature sensor (PAXT only). The register is bit mapped with each bit position within the register assigned to a particular control function. The control functions are invoked by writing to each bit position. The bit position definitions are:

bit 0: SP1 Output	} 0 = output off 1 = output on	bit 5: Always stays 0, even if 1 is sent.
bit 1: SP2 Output		bit 6: Sensor Status (PAXT only)
bit 2: SP3 Output		0 = sensor normal
bit 3: SP4 Output		1 = sensor fail
bit 4: Manual Mode		bit 7: Always stays 0, even if 1 is sent.
0 = automatic mode		
1 = manual mode		

In Manual Mode, the setpoint outputs are defined by the values written to bits b0, b1, b2, b3; and the analog output is defined by the value written to the AOR. Internal control of these outputs is then overridden. In automatic mode, the setpoint outputs can only be reset off.

### (MMR) Auto/Manual Mode Register [40036] (PAXI/PAXCK)

This register sets the controlling mode for the outputs. In Auto Mode (0) the meter controls the setpoint output. In Manual Mode (1) the outputs are defined by the registers SOR. When transferring from auto mode to manual mode, the meter holds the last output value (until the register is changed by a write). Each output may be independently changed to auto or manual. Select values to place in manual mode by writing appropriate value to holding register 40036. The bit position definitions are:

<b>PAXI</b>		<b>PAXCK</b>	
bit 0: Analog Output	} 0 = Auto Mode 1 = Manual Mode	bit 0: SP4	} 0 = Auto Mode 1 = Manual Mode
bit 1: SP4		bit 1: SP3	
bit 2: SP3		bit 2: SP2	
bit 3: SP2		bit 3: SP1	
bit 4: SP1			

#### Examples:

- Select manual mode for all outputs (PAX):  
Value to write to holding register 40021: 0010h
- Select manual mode for all outputs and AOR (PAXI, PAXCK):  
Value to write to holding register 40036: 001Fh

### (SOR) Setpoint Output Register [40038] (PAXI/PAXCK)

This register is used to view or change the states of the setpoint outputs. Reading from this register will show the present state of all the setpoint outputs. A “0” in the setpoint location means the output is inactive and a “1” means the output is active.

In Automatic Mode (See MMR Description), the meter controls the setpoint output state. In Manual Mode, writing to this register will change the output state. The bit position definitions are:

bit 0: SP1	} 0 = Output off 1 = Output on
bit 1: SP2	
bit 2: SP3	
bit 3: SP4	

#### Examples:

- Turn all outputs on:  
Value to write to holding register 40038: 000Fh.
- Turn outputs 1, 3 on:  
Value to write to holding register 40038: 0005h.
- Turn all outputs off:  
Value to write to holding register 40038: 0000h.

### (AOR) Analog Output Register (Not PAXCK)

The Analog Output Register controls the analog output of the meter. The manual mode must first be engaged by setting bit 4 of the CSR (PAX) or bit 0 of the MMR (PAXI). The range of values of this register is 0 to 4095, which corresponds to 0 mA, 0 V and 20 mA, 10 V; respectively. If a value larger than 4095 is written to the AOR register, 4095 will be loaded. The table lists correspondence of the output signal with the register value.

Register Value	Output Signal*	
	I (mA)	V (V)
0	0.000	0.000
1	0.005	0.0025
2047	10.000	5.000
4094	19.995	9.9975
4095	20.000	10.000

\*Due to the absolute accuracy rating and resolution of the output card, the actual output signal may differ 0.15% FS from the table values. The output signal corresponds to the range selected (20 mA or 10 V).

Writing to this register while the meter is in the manual mode causes the output signal to update immediately. While in the automatic mode, this register may be written to, but the output will not update until the meter is placed in manual mode.

#### Examples:

- Set output to full scale:  
Value to write to holding register 40020 (PAX) or 40037 (PAXI): 0FFFh (4095).
- Set output to zero scale:  
Value to write to holding register 40020 (PAX) or 40037 (PAXI): 0000h (0).

## HOLDING REGISTERS

Values less than 65,535 will be in (LO word). Values greater than 65,535 will continue into (HI word). Negative values are represented by two's complement of the combined (HI word) and (LO word).

\* See Coil Table for register mapping and Coil Descriptions for functionality.

### Notes:

- Any registers marked with “—” are unused and will return a value of HEX <8000>.
- If a value larger than 4095 is written to the AOR register, 4095 will be loaded.
- TRX delay is the minimum time from the reception of the last character in the MODBUS Query until the response is started. The minimum delay value is equal to 2 character times (2 msec min.). The user can increase the delay time by writing to the TRX Delay register. Any value written to the TRX Delay register that is less than the value calculated at power up will be ignored. The TRX Delay value is stored in E<sup>2</sup>PROM memory. On power-up, the calculated value is compared to the value read back from the E<sup>2</sup>PROM. The greater of the 2 values will be used as the TRX Delay value and will be written to the TRX Delay register.
- Numeric data is limited to value -19999 to 99999.
- Numeric data is limited to the value listed for that parameter according to the meter's literature.

## COIL DESCRIPTIONS

### Coils 1-4: Output Coils

These coils are used to read or change the states of the Setpoint Outputs. To change the state of the output(s), the output(s) must be in manual mode. Refer to the CSR or MMR/SOR registers in the Manual Mode Description section.

### Coils 5-10: Reset Coils

These coils are used to perform the Reset command for the values listed. Forcing the coil “on” causes the appropriate value in the unit to be reset. The coil is cleared after the command is executed, therefore, the coil value read will always be 0 (zero).

### Coils 11-29: Polling Coils

The MODBUS card is continually requesting values from the PAX unit. The polling bit coils determine what values are requested during each loop. Setting the coils to “1” enables the card to poll that particular value. A “0” value disables it. Turning polling coils off allows the user to request fewer values and therefore decreases the internal loop time, which allows the values that are polled to be updated more often.

If a MODBUS read is issued for any value, that value is automatically updated to the latest value, regardless of whether the polling bit is on or off. On power up, all values are updated regardless of Polling bit settings. Polling coil values are saved in E<sup>2</sup>PROM memory. Factory settings is “on” for all Polling coils.

TYPICAL UPDATE TIMES**	
PAX	PAXI/PAXCK
All values (10) - 1.15 sec	All values (19) - 900 msec
5 values - 500 msec	10 values - 480 msec
1 value - 100 msec	5 values - 230 msec
	1 value - 52 msec

\*\*Update time is the typical time to update the internal memory provided no MODBUS requests are incoming.

### Coils 21-29 (PAX), Coils 31-49 (PAXI/PAXCK): Terminating Coils

This set of coils determines what terminating character is sent to the PAX meter when a write command is executed. If the flag is 0, a \$ is used as the terminating character and the value is not saved to E<sup>2</sup>PROM memory in the PAX. If the flag is 1, an \* is used as the terminating character and the value is saved to E<sup>2</sup>PROM memory in the PAX.

### Coil 30: Response Delay

When a write command is issued, the new value is written to the PAX. If the coil is off, the MODBUS write response is not issued until the value is read back from the PAX. For MODBUS reads, if a polling coil is off, the response is not issued until the latest value is read back from the PAX. If the coil is set “on” the MODBUS response is issued as soon the received command is complete. The write coil is saved in E<sup>2</sup>PROM memory. Factory setting is on.

# MODEL PAXCDC - PROFIBUS-DP COMMUNICATIONS OPTION CARD

- CONNECTS PAX METER TO PROFIBUS-DP NETWORK
- STANDARD 9-PIN D-SUB CONNECTOR INTERFACE
- CYCLIC I/O DATA TRANSMISSION, UP TO 84 BYTES IN/OUT
- OPERATING RANGE FROM 9.6 KBAUD TO 12 MBAUD WITH AUTOMATIC BAUD RATE DETECTION
- STATION ADDRESS SET THROUGH ROTARY SWITCHES
- CONFIGURATION VIA SELECTION OF PRE-CONFIGURED MODULES FOR ANALOG OR DIGITAL PAX METER TYPE
- FREEZE MODE AND SYNC MODE SUPPORTED
- DIAGNOSTIC LEDs INDICATE CARD STATUS
- PNO CERTIFIED, CONFORMANCE TESTED SLAVE DEVICE

## DESCRIPTION

The PAX PROFIBUS-DP Communications Option Card provides a direct connection for a PAX panel meter to a PROFIBUS-DP Network. This allows a PROFIBUS Master device, such as a PLC, to control and monitor the operation of the PAX meter. The meter functions as an intelligent PROFIBUS-DP Slave device on the Network.

The PROFIBUS-DP Network connects through a 9-pin D-subminiature female connector on the rear of the card. The card is installed in the PAX meter using a slotted rear cover, allowing the PROFIBUS-DP Connector to extend beyond the rear of the PAX case. Power for the card is provided internally from the power supply of the PAX meter. The PROFIBUS-DP Network is isolated from the control electronics on the card using high-speed optocouplers.

This fully featured communications card supports Automatic Baud Rate Detection, with an operating range of 9.6 Kbaud up to 12 Mbaud. The Station Address is set via rotary switches. The card's address is read at power up.

Data Exchange with the Master device occurs through cyclic I/O data transmission. The size of the I/O data block is determined by the selection of pre-configured Modules for Analog or Digital PAX meter type. All data values are in 32-bit integer format, Motorola byte ordering. The PROFIBUS-DP protocol per EN 50170 is implemented using the Siemens SPC3 ASIC. Three on-board Diagnostic LEDs indicate the status of Data Exchange (DATA), the SPC3 Watchdog (WD) and DP State Machine (DP).

## PNO Conformance and GSD File

The PAX PROFIBUS-DP Card is PNO certified, having passed the conformance test for PROFIBUS-DP Slave devices, Certificate No. Z01170. The PNO Identifier for this PROFIBUS device is 0x09D0. The functional characteristics are described in GSD file REDL09D0.GSD. The GSD file and PAX bitmap can be downloaded from the Red Lion Controls website.

## SPECIFICATIONS

- 1. FIELDBUS TYPE:** PROFIBUS-DP per standard EN 50170, implemented with Siemens SPC3 ASIC
- 2. BUS INTERFACE:** Isolated RS485 through 9-Pin D-Sub connector
- 3. NETWORK ISOLATION:** 500 Vrms for 1 minute (50 V working) between PROFIBUS-DP network and PAX Sensor & User Input commons. Not isolated from other PAX option card commons.
- 4. POWER:** Card powered internally by the PAX meter
- 5. OUTPUT POWER:** +5 VDC @ 90 mA max. available on the D-Sub connector pins 5 (GND) and 6 (+5 V)
- 6. BAUD RATES:** 9.6 Kbaud to 12 Mbaud, Auto Baud Rate Detection
- 7. STATION ADDRESS:** 0 to 125, set by rotary switches
- 8. SUPPORTED FUNCTIONS:**
  - FREEZE Mode: Supported
  - SYNC Mode: Supported
  - FAIL SAFE Mode: Not Supported
  - EXTERNAL DIAGNOSTIC DATA: Not Supported
- 9. INSTALLATION REQUIREMENTS:**
  - Installed Depth: 4.88" (124 mm) from the rear of the PAX bezel
  - Additional Height: 0.35" (9 mm) above the PAX case surface

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXCDC	PAX PROFIBUS-DP Communications Card	PAXCDC50

K

## INSTALLING AN OPTION CARD

**Caution:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit card.
2. Locate the option card connector for the serial communication card. Hold the unit by the rear cover, not the display board, when installing an option card.
3. Install the option card by aligning the option card with the slot in the rear cover. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.

## PRINCIPLE OF OPERATION

The PAX PROFIBUS-DP Card provides the PROFIBUS Network with access to an Input Data Block (data written to the PROFIBUS Network from the PAX) and an Output Data Block (data read from the PROFIBUS Network by the PAX). Using an internal high speed protocol, the card scans each PAX register in turn, continuously reading Input Data and only writing Output Data on demand. The PAX registers are mapped into each Input and Output Data Block, allowing the PROFIBUS Network read/write access to all the registers in the PAX. The structure of these Data Blocks is described in more detail in section **Data Block Structure**.

The Input Data and Output Data Blocks are updated at the end of each scan of the host PAX Meter. In order to increase the rate that new data is made available to the PROFIBUS Network, a scheme is employed that reduces the number of registers polled by the card in each scan to only those that are required in the application. This Polled Read Mask maps each bit to a PAX register index which, when set, will force that register to be read from the PAX Meter. This Polled Read Mask is defined as User Parameter Data and is described in more detail in section **Parameterization**.

Due to the cyclic nature of data exchange in the PROFIBUS network changing Output Data in a slave device, a scheme is employed that indicates which registers need to be written to the PAX Meter. This Demand Write Mask maps each bit to a register index which when set, will perform a "once only" write from the Output Data Block to the PAX Meter. Clearing and re-setting the bit in the Demand Write Mask will cause the value to be written again. The Demand Write Mask is part of the Data Block structure and is described in detail in section **Demand Write and Store Request Masks**.

## STATION ADDRESS

The station address is set using three rotary switches allowing the ID to be set in standard decimal notation (e.g. address = 123 - SWC = 1, SWB = 2, SWA = 3). Valid addresses range from 0 to 125. If an address greater than 125 is set, the card will default to a station address of 125.

*Note: The card will not default to 125 if set for 999, this number is a special test mode.*

## DIAGNOSTIC LEDs

Three LEDs indicate the status of the SPC3 DP Control State Machine (DP), the Watchdog State Machine (WD) and the PROFIBUS-DP Data Exchange State (DATA) as shown in Table 1. The LEDs are viewable through the vents on the top of the PAX case.

**Table 1 - LED Indication of PROFIBUS-DP Card Status**

LED STATE			CARD STATUS
DP (Red)	WD (Green)	DATA (Red)	
FLASHING	FLASHING	OFF	Bus Not Connected
OFF	FLASHING	OFF	Baud Rate Search
OFF	ON	OFF	Baud Control
FLASHING	ON	OFF	Waiting for Parameterization
ON	ON	OFF	Waiting for Configuration
OFF	OFF	ON	Data Exchange

K

## PARAMETERIZATION

The Polled Read Mask defines which PAX registers will be polled by the card and therefore updated in the Input Data Block. The Polled Read Mask is a 32-bit integer with each bit mapped to a PAX register index. The Polled Read Mask is configured in the card by the Master sending a Parameterization telegram with 4 bytes of User Parameter Data representing the Polled Read Mask, in Motorola byte ordering.

Table 2 shows the User Parameter bytes representing the Polled Read Mask and gives the default value and a typical example. The default Polled Read Mask indicates PAX register index 0 will be updated in the Input Block. The example Polled Read Mask indicates that PAX registers 0 and 8 will be updated in the Input Block.

**Table 2 - User Parameter Data**

BYTE	0	1	2	3	4
DESCRIPTION	-	Polled Read Mask			
DEFAULT	0x00	0x00	0x00	0x00	0x01
EXAMPLE	0x00	0x00	0x00	0x01	0x01

## CONFIGURATION

The 2 basic PAX meter types are the Analog PAX (5-digit units) and the Digital PAX (6-digit units). They differ in the number of registers available and therefore the size of the Data Block required to map all the registers completely. Each PAX register is represented as a 32-bit Integer requiring 2, 16-bit words or 4 bytes. Configuration of the Data Block is by the selection of pre-configured modules, identified in the GSD file as “PAX Digital (6-digit)” and “PAX Analog (5-digit)”, that correspond to the host PAX Meter type.

## DATA EXCHANGE

### Demand Write and Store Request Masks

The Demand Write Mask defines how data is written to the PAX. The Demand Write Mask is a 32-bit integer with each bit mapped to a PAX register index. Setting a bit in the Demand Write Mask of the Output Data Block will force the corresponding register to be written “once only” to the PAX. Clearing and re-setting the bit will cause the value to be written again. The Demand Write Mask is part of the Data Block structure.

The Write Service Status register in the Input Data Block reports when the register has been written to the PAX by setting the corresponding bit. By monitoring this register a PLC program can detect when the Output Data has been serviced. The bit will be cleared in the Service Status register when the corresponding bit is cleared in the Demand Write Mask.

The Store Mask defines how the written value is to be stored in the PAX. The PAX meters have some values stored in EEPROM so they may power up in the last saved state. For values that change often it is possible to exceed the life of an EEPROM with repeated writes to the same address location - this method inhibits writes to EEPROM. The Store Mask is a 32-bit integer with each bit mapped to a PAX register index. Setting a bit will inhibit the corresponding register from being saved to EEPROM.

### Data Block Structure

Table 3 shows the Data Block Structure, consisting of the Write and Store Masks and the individual PAX Data Registers. Each Data Register value is a 32-bit Integer, with Motorola byte ordering. For the Analog PAX meters, the Data Block size is 48 bytes Input, 48 bytes Output. For the PAXDP and the Digital PAX meters, the Data Block size is 84 bytes Input, 84 bytes Output.

**Table 3 - Data Block Structure**

REGISTER INDEX (Mask Bit)	DATA BLOCK BYTES	PAX ANALOG INPUT METER (5-Digit)	PAXDP ANALOG INPUT METER (5-Digit)	PAXI DIGITAL COUNT / RATE (6-Digit)	PAXCK DIGITAL CLOCK / TIMER (6-Digit)
-	1 - 4	Demand Write Mask (Output) / Service Status (Input)

\* Indicates Read-Only parameters. All other parameters are Read/Write.

\*\* Indicates PAX Manual Mode Registers. See next section for description.

\*\*\* Indicates bit value must not be set in the Parameterization polled read masks.

## PAX MANUAL MODE REGISTERS

### CSR - Control Status Register (PAX Analog Only)

The Control Status Register is used to directly control the meter's outputs (setpoints and analog output), or view the state of the setpoint outputs and the status of the temperature sensor (PAXT only). The CSR register is bit mapped, with the bit positions of the least-significant byte assigned to specific control functions. The control functions are invoked by writing to the appropriate bit position. The bit position definitions are:

bit 0: Setpoint 1 Output	} 0 = output off 1 = output on	bit 5: Unused (always stays 0)
bit 1: Setpoint 2 Output		bit 6: Sensor Status (PAXT only)
bit 2: Setpoint 3 Output		0 = sensor normal
bit 3: Setpoint 4 Output		1 = sensor fail
bit 4: Auto/Manual Mode		bit 7: Unused (always stays 0)
0 = automatic mode		
1 = manual mode		

Setting bit 4 of the CSR selects Manual Mode. In this mode, the setpoint outputs are defined by the values written to bits b0, b1, b2, b3; and the analog output is defined by the value written to the Analog Output Register (AOR). Internal control of these outputs is then overridden.

In Automatic Mode, the setpoint outputs can only be Reset off. The contents of the CSR may be read to interrogate the state of the setpoint outputs and to check the status of the temperature sensor (PAXT only).

### MMR - Auto/Manual Mode Register (PAXDP/PAXI/PAXCK)

This register sets the controlling mode for each output in the PAX meters. Each output may be independently changed to Auto or Manual mode. The MMR register is bit mapped, with the bit positions of the least-significant byte assigned to specific outputs. Auto or Manual mode is selected by writing to the appropriate bit position. The bit position definitions are:

PAXDP/PAXI	PAXCK
bit 0: Analog Output	bit 0: Setpoint 4 Output
bit 1: Setpoint 4 Output	bit 1: Setpoint 3 Output
bit 2: Setpoint 3 Output	bit 2: Setpoint 2 Output
bit 3: Setpoint 2 Output	bit 3: Setpoint 1 Output
bit 4: Setpoint 1 Output	

0 = Auto Mode, 1 = Manual Mode

In Auto Mode (0) the meter controls the setpoint output state and the Analog Output (PAXDP/PAXI only). In Manual Mode (1) the setpoint outputs are defined by the value in the Setpoint Output Register (SOR); and the Analog Output is defined by the value written to the Analog Output Register (AOR). When transferring from Auto Mode to Manual Mode, the meter holds the last output value (until the register is changed by a write).

### SOR - Setpoint Output Register (PAXDP/PAXI/PAXCK)

The Setpoint Output Register is used to view or change the states of the setpoint outputs in the PAX meters. Reading this register will show the present state of all the setpoint outputs. A "0" means the output is inactive and a "1" means the output is active.

In Auto Mode (see MMR description), the meter controls the setpoint output state. In Manual Mode, the four least-significant bits of the SOR are assigned to specific outputs. Writing to the appropriate bit position defines the state of the setpoint output. The bit position definitions are:

bit 0: Setpoint 4 Output Status	} 0 = Output Off 1 = Output On
bit 1: Setpoint 3 Output Status	
bit 2: Setpoint 2 Output Status	
bit 3: Setpoint 1 Output Status	

### (AOR) Analog Output Register (Not applicable to PAXCK)

The Analog Output Register value defines the signal level of the meter's analog output. The range of values for this register is 0 to 4095 (0FFFh), which corresponds to the analog output signal ranges shown in Table 4.

Table 4 - Analog Output Signal Ranges

Register Value	Output Signal*		
	0-20 mA	4-20 mA	0-10 V
0	0.000	4.000	0.000
1	0.005	4.004	0.0025
2047	10.000	12.000	5.000
4094	19.995	19.996	9.9975
4095	20.000	20.000	10.000

\*Due to the absolute accuracy rating and resolution of the output card, the actual output signal may differ 0.15% FS from the table values. The output signal corresponds to the range selected (0-20 mA or 0-10 V).

In Automatic mode, the meter controls the analog output signal level. Reading the AOR will show the present value of the analog output signal. While in Automatic mode, this register may be written to, but it has no effect until the analog output is placed in the Manual mode.

In Manual mode, writing to the AOR causes the analog output signal level to update per the value written. Manual mode is engaged by setting bit 4 of the CSR (PAX Analog meter) or bit 0 of the MMR (PAXDP/PAXI). If a value larger than 4095 is written to the AOR, 4095 will be loaded.

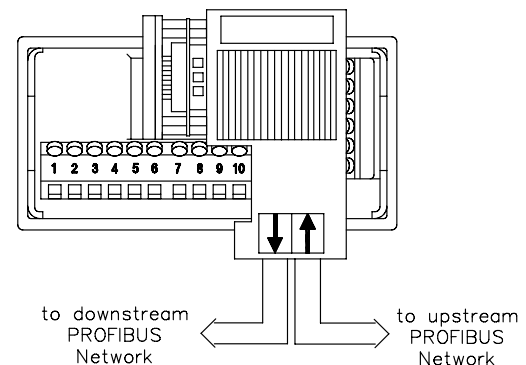

## INSTALLATION AND CONNECTION

### Installation Clearance Required - In Inches (mm)

### PROFIBUS-DP Network Connection

PROFIBUS plug connectors such as Siemens 6ES7 972-0BA10-0XA0 are recommended. When wiring the connector, be sure to observe the proper direction for data flows, indicated by the arrows on the connector. When the PAX meter is the last device on the network, set the terminating resistor switch on the connector to the "ON" position.

# MODEL PAXCDS -SETPOINT OUTPUT PLUG-IN OPTION CARDS

## DESCRIPTION

This bulletin serves as a guide for the installation, configuration and operation of PAX Setpoint cards. The setpoint cards are available as dual relay, quad relay, quad sourcing transistor, or quad sinking transistor outputs. Only one setpoint card can be installed at a time.

The PAX meter can be fitted with up to three option cards. The slot bays of the option cards are dedicated to a particular card function. The option card functions are: serial communications, analog output and setpoint output. Only one card from each function category can be installed.

### INSTALLING AN OPTION CARD

**Caution:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit board.
2. Locate the option card connector for the type of option card to be installed. Hold the unit by the rear connector, not the display board, when installing an option card.
3. Install the option card by aligning the option card connector with the slot in the rear cover. The cards are keyed by position with different main board connector locations. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.
5. Apply the option card label to the bottom side of the meter. **Do not cover the vents on the top surface of the meter.** The surface of the case must be clean for the label to adhere properly. Apply the label to the area designated by the large case label.

### PAX REAR TERMINAL CONNECTIONS

#### DUAL RELAY PAXCDS10 OUTPUT FIELD TERMINALS

#### QUAD RELAY PAXCDS20 OUTPUT FIELD TERMINALS

#### QUAD SINKING PAXCDS30 OUTPUT FIELD TERMINALS

#### QUAD SOURCING PAXCDS40 OUTPUT FIELD TERMINALS

## SPECIFICATIONS

### Setpoint Output Cards: Four types of field installable cards

**Response Time:** 200 msec. max. to within 99% of final readout value (digital filter and internal zero correction disabled) 700 msec. max. (digital filter disabled, internal zero correction enabled)  
 PAXH only: 1 sec. max. to within 99% of final readout value (digital filter disabled)

PAXT only: 200 msec. typ.; 700 msec max. (digital filter disabled)

#### PAXH Isolation For All Four Cards:

Isolation To Sensor Common: 1400 Vrms for 1 min.  
 Working Voltage: 125 V

Isolation To User Input Common: 500 Vrms for 1 min.  
 Working Voltage: 50 V

#### Dual Relay Card: PAXCDS10

Type: Two FORM-C relays  
 Isolation To Sensor & User Input Commons: 2000 Vrms for 1 min.  
 Working Voltage: 250 V

#### Contact Rating:

One Relay Energized: 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 HP @120 VAC, inductive load  
 Total Current With Both Relays Energized not to exceed 5 amps  
 Life expectancy: 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

#### Quad Relay Card: PAXCDS20

Type: Four FORM-A relays  
 Isolation To Sensor & User Input Commons: 2300 Vrms for 1 min.  
 Working Voltage: 250 V

#### Contact Rating:

One Relay Energized: 3 amps @ 250 VAC or 30 VDC (resistive load), 1/10 HP @120 VAC, inductive load  
 Total Current With All Four Relays Energized not to exceed 4 amps  
 Life Expectancy: 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads

#### Quad Sinking Open Collector: PAXCDS30

Type: Four isolated sinking NPN transistors.  
 Isolation To Sensor & User Input Commons: 500 Vrms for 1 min.  
 Working Voltage: 50 V. Not Isolated from all other commons.  
 Rating: 100 mA max @  $V_{SAT} = 0.7 V$  max.  $V_{MAX} = 30 V$

#### Quad Sourcing Open Collector: PAXCDS40

Type: Four isolated sourcing PNP transistors.  
 Isolation To Sensor & User Input Commons: 500 Vrms for 1 min.  
 Working Voltage: 50 V. Not Isolated from all other commons.  
 Rating: Internal supply: 24 VDC  $\pm 10\%$ , 30 mA max. total all four  
 External supply: 30 VDC max., 100 mA max each output

## ORDERING INFORMATION

MODEL	DESCRIPTION	PART NUMBER
PAXCDS	Dual Relay Output Card	PAXCDS10
	Quad Relay Output Card	PAXCDS20
	Quad Sinking Open Collector Output Card	PAXCDS30
	Quad Sourcing Open Collector Output Card	PAXCDS40

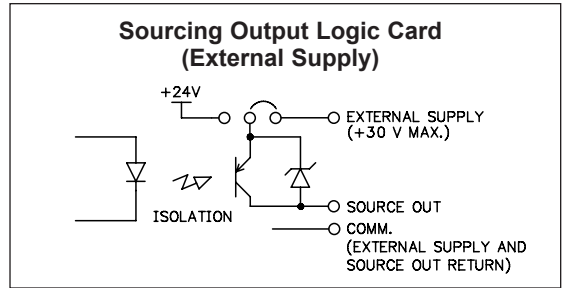

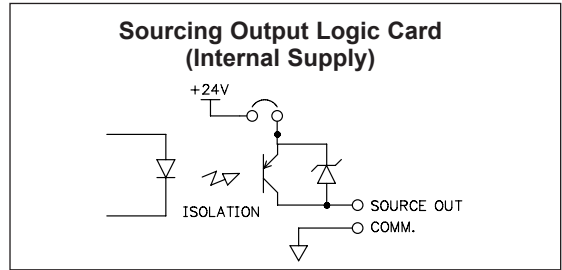

## MODULE 6 - Setpoint (Alarm) Parameters (6-SPt)

### SETPOINT SELECT

Enter the setpoint (alarm output) to be programmed. The **n** in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to **SPSEL nn**. Repeat step for each setpoint to be programmed. The **nn** chosen at **SPSEL** will return to **Prn nn**. The number of setpoints available is setpoint output card dependent.

### Quad Sourcing Open Collector Output Card Supply Select

For Quad Sourcing Plug-in Card (PAXCDS40), set the jumper for internal or external supply operation before applying power.

## SETPOINT ACTION

$R_{c}t-n$   $\leftarrow$  **OFF**  $Rb-HI$   $Rb-LO$   $RU-HI$   $RU-LO$   
 $dE-HI$   $dE-LO$   $bAND$   $totLo$   $totHI$   
 $\leftarrow$  **OFF**

Enter the action for the selected setpoint (alarm output). See Setpoint Alarm Figures for a visual detail of each action.

- OFF** = Setpoint always off, (returns to SPSEL NO)
- Rb-HI** = Absolute high, with balanced hysteresis
- Rb-LO** = Absolute low, with balanced hysteresis
- RU-HI** = Absolute high, with unbalanced hysteresis
- RU-LO** = Absolute low, with unbalanced hysteresis
- dE-HI** = Deviation high, with unbalanced hysteresis \*
- dE-LO** = Deviation low, with unbalanced hysteresis \*
- bAND** = Outside band, with unbalanced hysteresis \*
- totLo** = Lower Totalizer absolute high, unbalance hysteresis\*\*
- totHI** = Upper Totalizer absolute high, unbalance hysteresis\*\*

\* Deviation and band action setpoints are relative to the value of setpoint 1. It is not possible to configure setpoint 1 as deviation or band actions. It is possible to use setpoint 1 for an absolute action, while its value is being used for deviation or band.

\*\* The lower Totalizer action **totLo** allows setpoints to function off of the lower 5 digits of the Totalizer. The upper Totalizer action **totHI** allows setpoints to function off of the upper 4 digits of the Totalizer. To obtain absolute low alarms for the Totalizer, program the **totLo** or **totHI** output logic as reverse.

## SETPOINT VALUE

$SP-n$   $\leftarrow$  **- 9999 to 9999**  
 $\leftarrow$  **10.00**

Enter desired setpoint alarm value. These setpoint values can also be entered in the Display Mode during Program Lock-out when the setpoint is programmed as **Ent** in Parameter Module 3. When a setpoint is programmed as deviation or band acting, the associated output tracks **SP1** as it is changed. The value entered is the offset, or difference from **SP1**.

## HYSTERESIS VALUE

$HYS-n$   $\leftarrow$  **1 to 65000**  
 $\leftarrow$  **0.02**

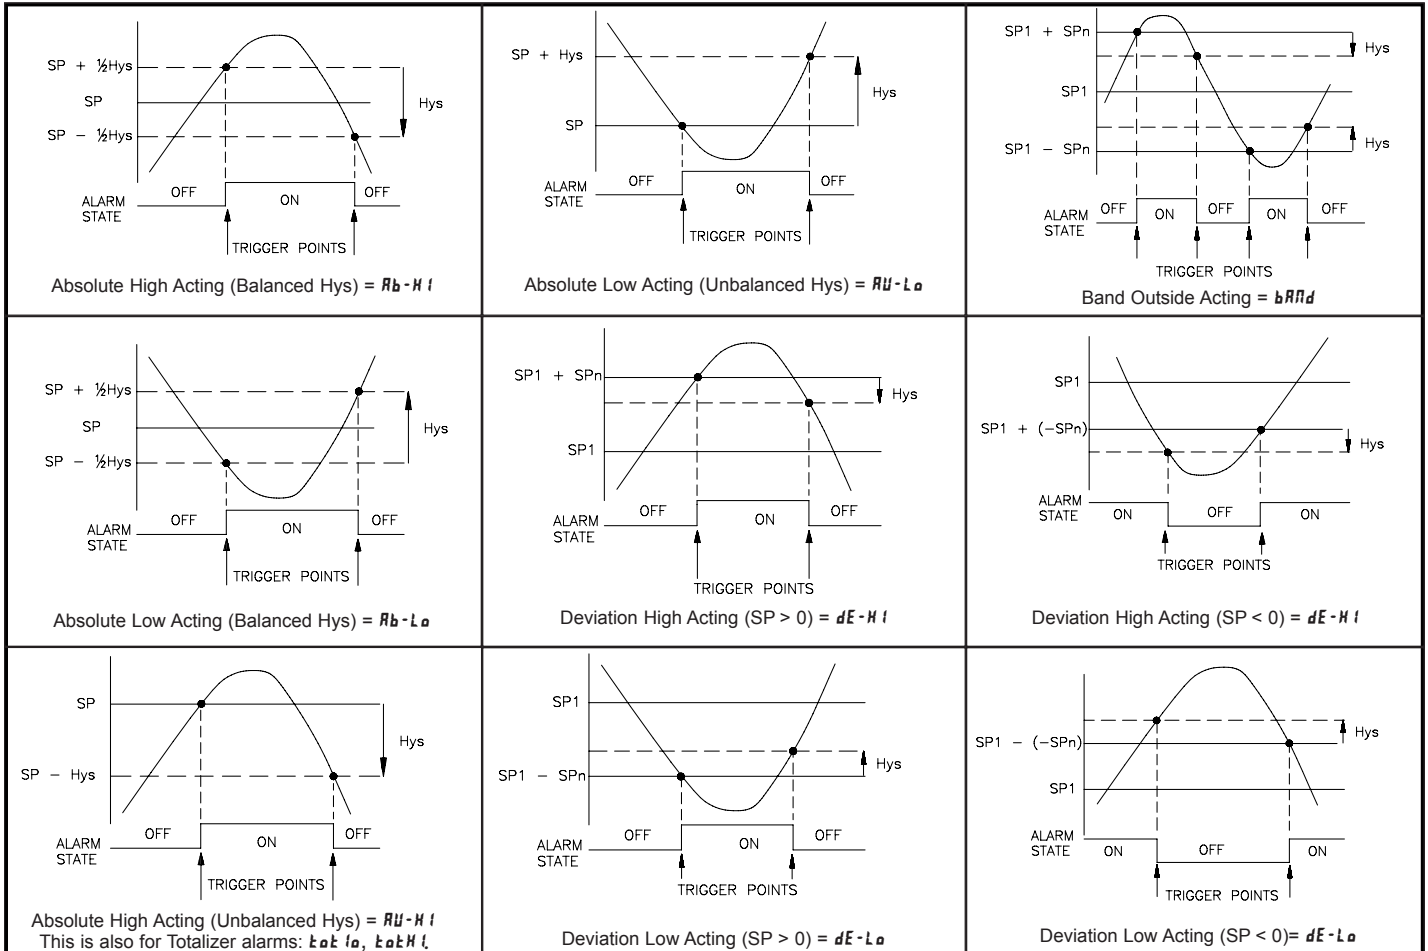

Enter desired hysteresis value. See Setpoint Alarm Figures for visual explanation of how setpoint alarm actions (balance and unbalance) are affected by the hysteresis. When the setpoint is a control output, usually balance hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

*Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.*

**K**

## Setpoint Alarm Figures

With reverse output logic **rEu**, the below alarm states are opposite.

### ON TIME DELAY

**t0n-n**  $\leftarrow$   
 $\leftarrow$  **0.0**

**0.0** to **3275.0** Sec

Enter the time value in seconds that the alarm is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the alarm status per the response time listed in the Specifications. When the output logic is **rEu**, this becomes off time delay. Any time accumulated at power-off resets during power-up.

### OFF TIME DELAY

**t0f-n**  $\leftarrow$   
 $\leftarrow$  **0.0**

**0.0** to **3275.0** Sec

Enter the time value in seconds that the alarm is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the alarm status per the response time listed in the Specifications. When the output logic is **rEu**, this becomes on time delay. Any time accumulated at power-off resets during power-up.

### OUTPUT LOGIC

**out-n**  $\leftarrow$   
 $\leftarrow$  **nor**

**nor** **rEu**

Enter the output logic of the alarm output. The **nor** logic leaves the output operation as normal. The **rEu** logic reverses the output logic. In **rEu**, the alarm states in the Setpoint Alarm Figures are reversed.

### RESET ACTION

**r5t-n**  $\leftarrow$   
 $\leftarrow$  **Auto**

**Auto** **LALC1** **LALC2**

Enter the reset action of the alarm output.

**Auto** = Automatic action; This action allows the alarm output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Alarm Figures. The "on" alarm may be manually reset (off) immediately by a front panel function key or user input. The alarm remains reset off until the trigger point is crossed again.

**LALC1** = Latch with immediate reset action; This action latches the alarm output on at the trigger point per the Setpoint Action shown in Setpoint Alarm Figures. Latch means that the alarm output can only be turned off by front panel function key or user input manual reset, serial reset command or meter power cycle. When the user input or function key is activated (momentary or maintained), the corresponding "on" alarm output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

**LALC2** = Latch with delay reset action; This action latches the alarm output on at the trigger point per the Setpoint Action shown in Setpoint Alarm Figures. Latch means that the alarm output can only be turned off by front panel function key or user input manual reset, serial reset command or meter power cycle. When the user input or function key is activated (momentary or maintained), the meter delays the event until the corresponding "on" alarm output crosses the trigger off point. (Previously latched alarms are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous Latch 2 reset if it is not activated at power up.)

### STANDBY OPERATION

**5tb-n**  $\leftarrow$   
 $\leftarrow$  **no**

**no** **YES**

When **YES**, the alarm is disabled (after a power up) until the trigger point is crossed. Once the alarm is on, the alarm operates normally per the Setpoint Action and Reset Mode.

### SETPOINT ANNUNCIATORS

**L1t-n**  $\leftarrow$   
 $\leftarrow$  **nor**

**OFF** **nor** **rEu** **FLASH**

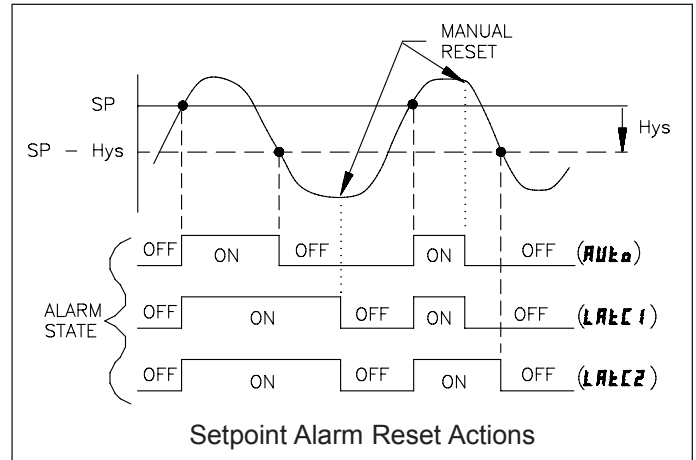

The **OFF** mode disables display setpoint annunciators. The **nor** mode displays the corresponding setpoint annunciators of "on" alarm outputs. The **rEu** mode displays the corresponding setpoint annunciators of "off" alarms outputs. The **FLASH** mode flashes the corresponding setpoint annunciators of "on" alarm outputs.

### PROBE BURN-OUT ACTION (PAXT ONLY)

**brn-n**  $\leftarrow$   
 $\leftarrow$  **off**

**on** **off**

Enter the probe burn-out action. In the event of a temperature probe failure, the alarm output can be programmed to go on or off.

### Alternate Setpoints

An Alternate list of setpoint values can be stored and recalled as needed. The Alternate list allows an additional set of setpoint values. (The setpoint numbers nor rear terminal numbers will change in the Alternate list.) The Alternate list can only be activated through a function key or user input programmed for **L15t** in Module 2. When the Alternate list is selected, the Main list is stored and becomes inactive. When changing between Main and Alternate, the alarm state of Auto Reset Action alarms will always follow their new value. Latched "on" alarms will always stay latched during the transition and can only be reset with a user input or function key. Only during the function key or user input transition does the display indicate which list is being used.

# MODEL PAXCDL -ANALOG OUTPUT PLUG-IN OPTION CARD

## DESCRIPTION

This bulletin serves as a guide for the installation, configuration and operation of the PAX® Analog Output card. The analog output can be configured for 0 to 20 mA, 4 to 20 mA or 0-10 VDC. Only one range can be used at a time.

The PAX® meter can be fitted with up to three optional plug-in cards. The slot bays of the plug-in cards are dedicated to a particular card function. The plug-in card functions are: serial communications, analog output and setpoint output. Only one card from each function category can be installed.

## INSTALLING AN OPTION CARD

**Caution:** The option and main circuit cards contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter AND load circuits before accessing the unit.

1. Remove the main assembly from the rear of the case. Squeeze the finger holds on the rear cover, or use a small screwdriver to depress the side latches to release it from the case. It is not necessary to separate the rear cover from the main circuit card.
2. Locate the option card connector for the type of option card to be installed. Hold the unit by the rear connector, not the display board, when installing an option card.
3. Install the option card by aligning the option card connector with the slot bay in the rear cover. The cards are keyed by position with different main board connector locations. Be sure the connector is fully engaged and the tab on the option card rests in the alignment slot on the display board.
4. Slide the assembly back into the case. Be sure the rear cover latches fully into the case.
5. Apply the option card label to the bottom side of the meter. **Do not cover the vents on the top surface of the meter.** The surface of the case must be clean for the label to adhere properly. Apply the label to the area designated by the large case label.

### ANALOG OUTPUT FIELD TERMINALS

## SPECIFICATIONS

### Analog Output Card

**Types:** 0 to 20 mA, 4 to 20 mA and 0 to 10 VDC

**Isolation To Sensor & User Input Commons:** 500 Vrms for 1 min.

Working Voltage: 50 V. Not isolated from all other commons.

#### PAXH Only:

Isolation To Sensor Common: 1400 Vrms for 1 min.

Working Voltage: 125 V

Isolation To User Input Common: 500 Vrms for 1 min.

Working Voltage: 50 V

**Accuracy:** 0.17% of FS (18 to 28°C); 0.4% of FS (0 to 50°C)

**Resolution:** 1/3500

#### Compliance:

10 VDC: 10 KΩ load min.

20 mA: 500 Ω load max. (self-powered)

**Update Time:** 200 msec. max. to within 99% of final readout value (digital filter and internal zero correction disabled)

700 msec. max. (digital filter disabled, internal zero correction enabled)

**PAXH only:** 1 sec. max. to within 99% of final readout value (digital filter disabled)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PAXCDL	Analog Output Card	PAXCDL10

# MODULE 8 - Analog Output Parameters (B-Out)

Indicates Program Mode Alternating Display.

Parameter **TYPE** ←

↙ **4-20** ↘ Selection/Value

Factory Settings are shown.

**TYPE** ←

↙ **4-20** ↘

### ANALOG TYPE

SELECTION	RANGE
0-20	0 to 20 mA
4-20	4 to 20 mA
0-10	0 to 10 V

Enter the analog output type. For 0-20 mA or 4-20 mA use terminals 18 and 19. For 0-10 V use terminals 16 and 17. Only one range can be used at a time.

### ANALOG ASSIGNMENT

**RS IN** ←

↙ **inP** ↘

Enter the source for the analog output to retransmit:

- inP** = Display Input Value
- HI** = Maximum Display Input Value
- LO** = Minimum Display Input Value
- tot** = Totalize Display Value

### ANALOG LOW SCALE VALUE

**RN-LO** ←

↙ **0.00** ↘

- 99999 to 99999

Enter the Display Value that corresponds to 0 mA (0-20 mA), 4 mA (4-20 mA) or 0 VDC (0-10 VDC).

### ANALOG HIGH SCALE VALUE

**RN-HI** ←

↙ **100.00** ↘

- 99999 to 99999

Enter the Display Value that corresponds to 20 mA (0-20 mA), 20 mA (4-20 mA) or 10 VDC (0-10 VDC).

### ANALOG UPDATE TIME

**udt** ←

↙ **0.0** ↘

0.0 to 10.0

Enter the analog output update rate in seconds. A value of 0.0 allows the meter to update the analog output at a rate of 20/sec.

### PROBE BURN-OUT ACTION (PAXT ONLY)

**burn** ←

↙ **LO** ↘

LO HI

Enter the probe burn-out action. In the event of a temperature probe failure, the analog output can be programmed for low or high scale.

# INSTALLATION CONSIDERATIONS OF ELECTRONIC INSTRUMENTS & CONTROLS, IN INDUSTRIAL ENVIRONMENTS

Most electronic equipment designed for use in industrial environments has a high degree of noise immunity and protection against damage. But even the best can experience difficulties in operation if certain minimal considerations are not adhered to when installing the equipment. When relay contacts are used to switch inductive loads, such as auxiliary relays or solenoids, extremely large voltage spikes can be generated when the relay contact opens, these voltage spikes can cause pitting of the relay's contacts, thereby reducing its usable life.

The internal functioning components of an electronic instrument operate on a low DC voltage, generally 5 V, and respond to signals as low as 1 V or less. In contrast, stray voltage spikes in excess of 100 V and sometimes thousands of volts can be detected in the industrial environment. These voltage spikes can be coupled from power lines that are powering equipment that contains S.C.R. circuitry, or in other ways causes rapid load changes on the AC line. These spikes can also be coupled from lines that are actuating AC or DC solenoids or actuators. In other words, any wiring in an industrial application should be considered a potential noise source.

How can these noise spikes get into the instrument? There are three major ways that noise spikes can enter the instrument.

1. Noise can enter directly, via the AC power input. It is recommended that electronic instruments be connected to a relatively clean source of power. If this cannot be accomplished, there are means of suppressing noise or isolating the instrument from the noise. These consist of everything from simple inductive load suppressors (M.O.V.'s) to constant voltage isolation transformers, depending on the severity of power line disturbance.
2. Noise can enter via the input leads. Here, there are two modes (See Fig. 1) by which the noise can enter. Normal mode, which means the noise enters on the input lead, with respect to the instrument common; and common mode, which means the noise enters on both the input and the instrument common with respect to earth ground (power line neutral). It is recommended that sensor input and control input wiring not be run in the same conduit or raceways with power lines or current carrying control lines. It is also recommended that these lines be kept away from inductive loads such as motors, solenoids, relays and contactors. For best results, it is recommended that two-conductor shielded cable be used to connect these inputs. The shield should be connected to the input common at the instrument only. In addition, the input common should only be connected to machine ground (earth) at one point, preferably a direct connection to the input common terminal.
3. The third way noise can enter the instrument is via the output lines. This is one of the most overlooked sources of trouble. When an output is driving an inductive load, such as solenoids, contactors, or relays; a large noise

spike, several times the supply voltage, is generated every time the output is turned off. This noise spike, in addition to physically degrading the relay contact, can radiate off the output lines and into more sensitive areas of the instrument. The surest way to alleviate this situation is to suppress the noise spike. It is best to do it at the noise source (See Fig. 2), to prevent noise currents from flowing in the output lines. There are several ways to do this. If it is a DC device, then either a diode or a M.O.V. (Metal Oxide Varistor) can be placed across the device to suppress it. The greater the current load of the device, the higher wattage diode required. If it is an AC load, then a M.O.V. or capacitor and resistor in series can be used. It can be seen that the output lines can be noise sources and as such should be kept away from the instrument's own input lines, as well as the input lines of other instruments.

In addition to the foregoing considerations, care should be taken when connecting input and output returns to the instrument's common. When separate input and output commons are provided, they should not be mixed. When an output device return is connected to an input common (See Fig. 4), the output current will flow in the input common line. This will cause a noise voltage to be present, which can affect the operation of the instrument.

In summary, it is much easier to eliminate problems when building up a system than after it is installed.

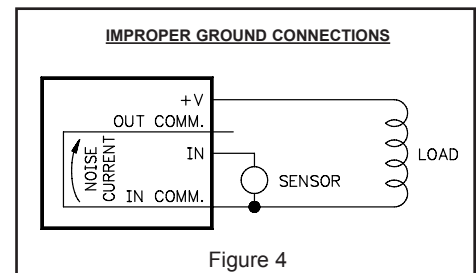

Figure 4

# MODEL FCOR - FERRITE SUPPRESSION CORE

## DESCRIPTION

This Ferrite suppression core is packaged in a nylon case ready to clamp on a single cable or several cables connecting to electronic equipment. The purpose of the core is to attenuate conducted Electro-Magnetic Interference (EMI) in the 25 MHz to 200 MHz range. Increasing the number of cable turns through the core increases the impedance of the core. A higher impedance results in greater EMI attenuation.

Placing more than one core on a cable increases the impedance at a slower rate than adding turns to one core. The impedance for multiple cores is equal to the sum of each core's impedance. For a given application, start with a single core using 2 turns. Add additional turns or additional cores as necessary.

*Note: Increasing the number of turns beyond two will tend to degrade performance at higher frequencies (see Specifications).*

Place the cores on the cables as close to the equipment as possible unless the equipment is mounted in a shielded enclosure and the source of the EMI is from outside the enclosure. In this case, place the cores on the cable just inside or outside the entry point of the enclosure.

## SPECIFICATIONS

1. MAX. CABLE DIAMETER: 0.390" (9.9 mm)
2. IMPEDANCE (OHMS):

# OF TURNS	25 MHz MIN.	100 MHz $\pm 20\%$
1	110	225
2	440	900
4	1760	1000

# OF TURNS = The number of times the cable passes through the core.

3. WEIGHT: 0.63 oz. (18 g)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
FCOR	Ferrite Suppression Core	FCOR0000

# INDUCTIVE LOAD SUPPRESSOR

## DESCRIPTION

These devices, when installed across an inductive load, such as a contactor, solenoid or relay, will suppress transient surges during a switching. This will enhance relay life and provide increased reliability of operation.

There are two devices available, one for use in 115 volt circuits and one for use in 230 volt circuits.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
ILS1	115 VAC Inductive Load Suppressor	ILS11500
ILS2	230 VAC Inductive Load Suppressor	ILS23000

## ILS SPECIFICATIONS \*

DEVICE MODEL NUMBER	RATED VOLTAGE		RATED PEAK SINGLE PULSE TRANSIENT CURRENT (AMPS)	SINGLE PULSE TRANSIENT ENERGY JOULES	POWER DISSIPATION WATTS	CLAMPING VOLTAGE VOLTS
	AC VOLTS	DC VOLTS				
ILS1	130	175	6500	80	1.0	340 V @ 100 A
ILS2	275	370	6500	150	1.0	710 V @ 100 A

\*NOTE: These devices will suppress most transient surges. However, if the device heats up or stops functioning after a short period of time a higher joules rated device may be required.

# R-C SNUBBER NOISE AND ARC SUPPRESSOR

## SPECIFICATIONS

1. **R-C Value:** 0.1 µf, 47 Ω 1/2 Watt (±30%)
2. **Max. Line Voltage:** 250 V rms or 250 VDC
3. **Frequency:** DC to 62 Hz
4. **Peak Pulse Voltage:** 1200 V max.

UL recognized component  
 (Okaya Electric America, Inc. PN# XEB0471, UL-1414, File # E47474)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
SNUB	R-C Snubber Inductive Load Suppressor	SNUB0000

## GENERAL DESCRIPTION

The R-C Snubber is intended to suppress the “inductive kick” from motors, solenoids or relay coils. High energy noise spikes are generated whenever current is interrupted through an inductive load. These noise spikes may interfere with associated equipment causing erratic operation and may also accelerate relay contact wear. Applied across an inductive load, the R-C snubber suppresses the noise spikes and extends contact life.

## DIMENSIONS In inches (mm)

[All Dimensions are nominal]

## APPLICATION

The R-C snubber inductive load suppressor should be applied as shown below. Placing the suppressor across the contact in many cases can work as well, but for maximum effect, it is best to place the suppressor directly

across the load. All inductive loads in a system should be suppressed in this manner to avoid mutual interference. The suppressors are effective in both AC and DC circuits.

Preferred Application

Alternate Application

\* Use a snubber across all contacts in the load circuit.

# MODEL LFIL - GENERAL PURPOSE LINE FILTER

## DESCRIPTION

This line filter can be used in AC or DC power supply lines to attenuate conducted Electro-Magnetic Interference (EMI). EMI is the most common cause of erratic operation in electronic equipment. Line filters should be installed close to electronic equipment and mounted directly to a metal enclosure that is connected to earth ground (protective earth).

*Note: Always connect the earth lead of the filter to the power line ground (protective earth).*

Figure 1

The ideal location for the line filter is directly inside the metal enclosure in which the unit is mounted when the source of EMI is external to the enclosure (See Figure 1). Mount the filter where the power enters the enclosure. If the enclosure contains many different types of equipment or EMI generating devices, such as motors or contactors, then the EMI source may be inside the enclosure. In this case, mount the line filter as close to the unit as possible (See Figure 2).

Figure 2

If the panel and enclosure are non-conductive, then the power feed ground is the only earth ground connection. Connecting only the earth lead of the filter to the earth ground without mounting the filter directly to a metal enclosure will not be as effective.

## DIMENSIONS "In inches (mm)"

## SPECIFICATIONS

- CURRENT RATING:** 1.15 A @ 25°C ; 1 A @ 40°C

## NEMA 4/IP65 ENCLOSURES

- RUGGED STEEL CONSTRUCTION
- COMPLETELY SEALED FOR WASH-DOWN
- VERSATILE MOUNTING OPTIONS FOR MACHINE OR DESK-TOP

### DESCRIPTION

This series of enclosures is designed for applications requiring a water resistant instrument enclosure. These rugged enclosures are fabricated of formed steel with all seams welded to withstand NEMA 4/IP65 wash-down applications. The kits are coated with a durable flat black polyurethane finish.

Electrical connections to the enclosed instrument are easily made through a removable access panel at the rear of the enclosure. The panel can be drilled to accept conduit fittings or other types of wiring connectors.

The enclosures can be mounted free-standing or securely fastened to a mounting surface with brackets which are provided with each enclosure. The brackets also allow the enclosures to be raised and/or tilted from the mounting surface in order to achieve the most favorable operating position. Self-stick rubber pads are provided which can be applied to the bottom of the enclosure. These rubber pads will protect the mounting surface and are particularly useful for free-standing installations.

### DIMENSIONS In inches (mm)

DESCRIPTION	A	B	C

Apollo & IM Series NEMA 4 Enclosure	3.00" (76.2)	4.75" (120.6)	8.00" (203.2)
Gemini Series NEMA 4 Enclosure	3.50" (88.9)	6.00" (152.4)	8.00" (203.2)

### ORDERING INFORMATION

DESCRIPTION	PART NUMBER
Legend & Libra Series NEMA 4/IP65 Enclosure	ENC40000
Apollo & IM Series NEMA 4/IP65 Enclosure	ENC50000
Gemini Series NEMA 4/IP65 Enclosure	ENC60000

# Installation

The RLC ASTRO LINE products (GEMINI, LIBRA, APOLLO) have side openings in the case for panel mounting latches, special latches are supplied with each enclosure to engage the latch openings and securely retain the instrument. The installation procedure is as follows:

1. Verify that the enclosure brackets are installed into the enclosure with the bracket screws backed out more than half way from the brackets but keeping the screw head flush against the enclosure rear.
2. Slide the panel gasket over the rear of the unit until it is against the back of the bezel.
3. Hold the unit on its side so that a side bracket opening is facing up and insert the unit into the enclosure front opening.
4. The bracket hook should fall into the unit bracket opening. Keeping the meter and enclosure on their side, turn the bracket screw tight.

5. Flip the meter and enclosure to the other side.
6. The other bracket hook should fall into the unit bracket opening. Keeping the meter and enclosure on their side, turn the other bracket screw tight.
7. Verify that both screws are tight enough so that the front panel gasket is compressed to at least 50% of its original thickness.
8. Install any connectors or conduit fittings to the rear access panel. Make the desired wiring connections to the enclosed unit.
9. Install the rear panel gasket with the adhesive side against the enclosure and the screw clearance holes aligned with the threaded holes in the enclosure.
10. After all electrical connections have been made, attach the rear access panel to the rear of the enclosure with the four screws and washers provided.

# NEMA 4 PAX SERIES ENCLOSURES

## ENC5B & ENC5C - PLASTIC ENCLOSURES

- RUGGED POLYCARBONATE CONSTRUCTION
- COMPLETELY SEALED FOR NEMA 4X/IP65 WASH-DOWN
- EASY MOUNTING OPTIONS

### DESCRIPTION

These enclosures are designed for applications requiring a water resistant instrument enclosure. The ENC5B and ENC5C enclosures are fabricated of polycarbonate and are designed to withstand NEMA 4X/IP65 wash-down applications. The enclosures must be drilled to accept conduit fittings or other types of wiring connectors. The enclosures can be used free-standing, or securely fastened to a mounting surface. The enclosures are precut for either one or two meters. When properly installed, the meter and the enclosure can withstand NEMA 4X wash-down applications.

Electrical connections to the enclosed instrument are easily made by drilling the desired location on the back or side of the enclosure. Select the proper drill size to accommodate the conduit fitting or other wire connector. To maintain the enclosure NEMA 4X rating, sealed connectors must be used. Also enclosed are wall fastening lugs, which can be used to easy mount the enclosure to a wall.

### ORDERING INFORMATION

MODEL NO	DESCRIPTION	PART NUMBER
ENC5B	NEMA 4X/IP65 Enclosure for One PAX Meter	ENC5B000
ENC5C	NEMA 4X/IP65 Enclosure for Two PAX Meters	ENC5C000

For More information on Pricing, Enclosures & Panel Mount Kits, refer to the RLC Catalog or contact your local RLC Distributor.

### ENC5B AND ENC5C INSTALLATION

It is recommended to wire the unit before mounting it in the enclosure to ensure good electrical connections. The following steps outline the most common sequence for installing a unit.

1. Determine the location of the conduit fitting and drill the necessary hole. Install the fitting and bring the wiring into the enclosure.
2. Slide the panel gasket over the rear of the unit to the back of the bezel.
3. Install the unit through the opening in the front of the lid until the bezel flange contacts the panel.
4. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the enclosure. The mounting clip has latching features which engage into mating features on the unit's housing.  
*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*
5. While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots in the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79 N-cm]). Do not over-tighten the screws.
6. If the gasket is not adequately compressed, and the mounting screws can no longer be turned, loosen the mounting screws and check that the mounting clip is latched as close as possible to the inside of enclosure. Repeat the procedure for tightening the screws.
7. Connect the necessary wires to the unit for the application desired.
8. Assemble the enclosure with the screws provided. Alternately tighten each screw to ensure uniform gasket pressure.

# ENC5A - STEEL ENCLOSURE

- RUGGED STEEL CONSTRUCTION
- COMPLETELY SEALED FOR NEMA 4/IP65 WASH-DOWN
- VERSATILE MOUNTING OPTIONS FOR MACHINE OR DESKTOP

## DESCRIPTION

The ENC5A enclosure is fabricated of formed steel with all seams welded to withstand NEMA 4/IP65 wash-down applications. The kit is coated with a durable flat black polyurethane finish.

Electrical connections to the enclosed instrument are easily made through a removable access panel at the rear of the enclosure. The panel must be drilled to accept conduit fittings or other types of wiring connectors.

The enclosure can be used free-standing or securely fastened to a mounting surface with brackets which are provided with each enclosure. The brackets also allow the enclosure to be raised and/or tilted from the mounting surface in order to achieve the most favorable operating position. Self-stick rubber pads are provided which can be applied to the bottom of the enclosure. These rubber pads will protect the mounting surface and are particularly useful for free-standing installations.

## DIMENSIONS In inches (mm)

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
ENC5A	NEMA 4/IP65 Enclosure for PAX & Short Apollo	ENC5A000

For More information on Pricing, Enclosures & Panel Mount Kits, refer to the RLC Catalog or contact your local RLC Distributor.

## ENC5A INSTALLATION

1. Mark the location on the rear panel for your wire connector or conduit fitting, and drill the necessary hole. Connect your wire connector or fitting to the rear panel.
2. Remove the center sections of the front and rear panel gaskets. These centers contain the optional foam rubber feet for the enclosure.
3. Apply the adhesive side of the panel gasket to the front and rear openings of the enclosure. DO NOT APPLY THE ADHESIVE SIDE OF THE GASKET TO THE FRONT OR REAR PANELS.
4. Install the unit to the front panel according to the standard panel installation instructions found in the product literature.
5. Route the wires to be connected to the unit from the conduit fitting through the rear of the enclosure and out the front.
6. Connect the necessary wires to the unit for the application desired.
7. Attach the front and rear panels to the enclosure with the screws and washers provided. Alternately tighten each screw to ensure uniform gasket compression. Visually inspect the sponge rubber gasket. The gasket should be compressed to about 75 to 80% of its original thickness.
8. For a free-standing enclosure, apply the self-stick foam rubber pads to the features on the bottom of the enclosure to protect the mounting surface.
9. To securely mount the enclosure, attach the adjustable mounting brackets to the enclosure using the washers and bolts provided. Secure the mounting brackets to the desired mounting location. The mounting screws to attach the brackets to your surface are not provided due to the variety of installation options available.

# MODEL ENC8 - NEMA 4 ENCLOSURES FOR CUB4, CUB5, DT8 & DT9 UNITS

## ENC8A & ENC8B - PLASTIC ENCLOSURES

**ENC8A DIMENSIONS In inches (mm)**

### DESCRIPTION

These enclosures are designed for applications requiring a water resistant instrument enclosure. The enclosures are fabricated of polycarbonate and are designed to withstand NEMA 4X/IP65 wash-down applications. The enclosures must be drilled to accept conduit fittings or other types of wiring connectors. The enclosures can be used free-standing, or securely fastened to a mounting surface.

### ORDERING INFORMATION

MODEL NO	DESCRIPTION	PART NUMBER
ENC8A	Plastic Enclosure for single units	ENC8A000
ENC8B	Plastic Enclosure for units with an MLPS1 attached	ENC8B000

For More information on Pricing, Enclosures & Panel Mount Kits, refer to the RLC Catalog or contact your local RLC Distributor.

**ENC8B DIMENSIONS In inches (mm)**

### ENC8A INSTALLATION

It is recommended to wire the unit before mounting it in the enclosure to ensure good electrical connections. The following steps outline the most common sequence for installing a unit without an MLPS1 attached.

- Determine the location of the conduit fitting and drill the necessary hole. Install the fitting and bring the wiring into the enclosure.
- Slide the panel gasket over the rear of the unit to the back of the bezel.
- Assemble nut fastener and mounting screw onto both sides of the mounting clip. The tip of the screw should not project from the hole in mounting clip.
- Install the unit through the opening in the front of the lid until the bezel flange contacts the panel.
- Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the enclosure. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

- Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness (Recommended torque is 28 to 36 in.-oz.). If not, gradually turn mounting screws to further compress the gasket.
- If the gasket is not adequately compressed, and the mounting screws can no longer be turned, loosen the mounting screws and check that the mounting clip is latched as close as possible to the inside of enclosure. Repeat the procedure for tightening the screws.

- Connect the necessary wires to the unit for the application desired.
- Assemble the enclosure with the screws provided. Alternately tighten each screw to ensure uniform gasket pressure.

## ENC8B w/ MLPS1 Installation

Installing a unit with an MLPS1 attached requires some planning. It is recommended that the unit with the MLPS1 attached be temporarily installed in the enclosure to determine the best location for the conduit fitting to avoid interference with the MLPS1.

1. Determine the location of the conduit fitting and drill the necessary hole. Install the fitting and bring the wiring into the enclosure.
2. Slide the panel gasket over the rear of the unit to the back of the bezel.
3. Remove the common and V+ screw terminals from the rear of the unit (save for later use) and replace them with the stand-offs (supplied with the MLPS1).
4. Assemble nut fastener and mounting screw onto both sides of the mounting clip. The tip of the screw should not project from the hole in mounting clip.
5. Install the unit through the opening in the front of the lid until the bezel flange contacts the panel mounted gasket.
6. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the enclosure. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

7. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness (Recommended torque is 28 to 36 in-oz.). If not, gradually turn mounting screws to further compress the gasket.
8. If the gasket is not adequately compressed, and the mounting screws can no longer be turned, loosen the mounting screws and check that the mounting clip is latched as close as possible to the inside of enclosure. Repeat the procedure for tightening the screws.

9. Mount the MLPS1 and optional sensor wires needed, to the stand-offs using the screw terminals from the unit with the supplied square washers.
10. Connect AC power to the terminal block of the MLPS1.
11. After all electrical connections have been made, assemble the enclosure with the screws provided. Alternately tighten each screw to ensure uniform gasket pressure.

## ENC8 - STEEL ENCLOSURE

### DESCRIPTION

This enclosure is designed for use with the CUB4, CUB5, DT8 & DT9 units. The enclosures are large enough to accommodate a Micro-line Power Supply (MLPS1) attached to the unit. These rugged enclosures are fabricated of formed steel with all seams welded to withstand NEMA 4/IP65 wash-down applications. The kits are coated with a durable black polyurethane finish.

The holes for conduit fittings or other types of wiring connectors can be drilled through the removable rear access panel, or through the enclosure itself.

The enclosures can be free standing or securely fastened to a mounting surface with the brackets and hardware found in the mounting kit (provided with the enclosure). The brackets also allow the enclosure to be raised and/or tilted from the mounting surface in order to achieve the most favorable operating position. Provided are four self-stick foot pads that can be applied to the bottom of the enclosure to protect the mounting surface. The foot pads are particularly useful for free standing installations.

### DIMENSIONS In inches (mm)

### ORDERING INFORMATION

MODEL NO	DESCRIPTION	PART NUMBER
ENC8	NEMA 4/IP65 ENCLOSURE	ENC80000

For More information on Pricing, Enclosures & Panel Mount Kits, refer to the RLC Catalog or contact your local RLC Distributor.

## ENC8 INSTALLATION

It is recommended to wire the unit before mounting it in the enclosure to ensure good electrical connections. The following steps outline the most common sequence for installing a unit without an MLPS1 attached.

1. Determine the location of the conduit fitting and drill the necessary hole.
2. Apply adhesive side of panel gasket to rear enclosure opening.  
**DO NOT APPLY THE ADHESIVE SIDE OF THE GASKET TO THE ACCESS PANEL.**
3. Slide the panel gasket over the rear of the unit to the back of the bezel.
4. Assemble nut fastener and mounting screw onto both sides of the mounting clip. The tip of the screw should not project from the hole in mounting clip.
5. Route the wire to be connected to the unit from the conduit fitting through the mounting clip, and then through the rear of the enclosure and out the front.
6. Connect the necessary wires to the unit for the application desired.
7. Install the unit through the opening in the front of the enclosure until the bezel flange contacts the panel.
8. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the enclosure. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

9. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness (Recommended torque is 28 to 36 in-oz.). If not, gradually turn mounting screws to further compress the gasket.

12. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the sponge rubber gasket. The gasket should be compressed to about 75 to 80% of its original thickness.

## ENC8 w/ MLPS1 Installation

Installing a unit with an MLPS1 attached requires some planning. It is recommended that the unit with the MLPS1 attached be temporarily installed in the enclosure to determine the best location for the conduit fitting to avoid interference with the MLPS1.

1. Mark the location of the conduit fitting and drill the necessary hole.
2. Apply adhesive side of panel gasket to rear enclosure opening.  
**DO NOT APPLY THE ADHESIVE SIDE OF THE GASKET TO THE ACCESS PANEL.**
3. Slide the panel gasket over the rear of the unit to the back of the bezel.
4. Remove the common and V+ screw terminals from the rear of the unit (save for later use) and replace them with the hex drive stand-offs (supplied with the MLPS1).
5. Assemble nut fastener and mounting screw onto both sides of the mounting clip. The tip of the screw should not project from the hole in mounting clip.
6. Route the wire to be connected to the unit from the conduit fitting through the mounting clip, and then through the rear of the enclosure and out the front.
7. Connect the necessary wires to the unit for the application desired.
8. Install the unit through the opening in the front of the enclosure until the bezel flange contacts the panel mounted gasket.
9. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the enclosure. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

10. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the front panel gasket. The gasket should be compressed to about 75 to 80% of its original thickness (Recommended torque is 28 to 36 in-oz.). If not, gradually turn mounting screws to further compress the gasket.
11. If the gasket is not adequately compressed, and the mounting screws can no longer be turned, loosen the mounting screws and check that the mounting clip is latched as close as possible to the inside of enclosure. Repeat the procedure for tightening the screws.
12. Connect AC power to the terminal block of the MLPS1.

13. Mount the MLPS1 and optional sensor wires needed, to the stand-offs using the screw terminals from the unit with the supplied square washers.
14. After all electrical connections have been made, attach the rear access panel to the enclosure with the eight screws provided.
15. Alternately tighten each screw to ensure uniform gasket pressure. Visually inspect the sponge rubber gasket. The gasket should be compressed to about 75 to 80% of its original thickness.

## MOUNTING THE ENCLOSURE

1. Self-stick foot pads may be applied to the features on the bottom of the enclosure to protect the mounting surface.
2. To securely mount the enclosure, attach the adjustable mounting brackets to the enclosure using the plastic washers and screws. Mounting brackets may be attached to the top or bottom of the enclosure.
3. Secure the adjustable mounting brackets to mounting location with the screws provided.

# LPAX ENCLOSURE, MOUNTING AND LABEL ACCESSORIES

## ENC9-NEMA 4/IP65 LPAX ENCLOSURE

The ENC90000 NEMA 4/IP65 enclosure provides a means of mounting the LPAX display in dirty or washdown environments. The enclosure comes with all the gaskets, hardware (except the mounting screws), and brackets required to base, ceiling, or wall mount the LPAX display. The mounting screws to attach the brackets to your surface are not provided due to the variety of installation options available.

BASE MOUNT

Rotate bracket for other installation choices.

CEILING MOUNT

- ENGINEERING UNIT LABELS
- BRACKETS FOR BASE, CEILING, OR WALL MOUNTING
- NEMA 4/IP65 ENCLOSURE FOR WASHDOWN ENVIRONMENTS
- FRONT PANEL SHROUD FOR ENHANCED VIEWING

## ENCLOSURE ASSEMBLY

1. Before drilling a hole in the enclosure for your wire connector or fitting, ensure that the location you have chosen allows enough clearance around the MPAX module.
2. Remove the center section of the gasket provided with the LPAX, and slide it over the rear of the display and onto the mounting studs.
3. Insert the LPAX into the enclosure as illustrated. Install six #10-32 keps nuts (supplied with the LPAX) and tighten evenly for uniform gasket compression. The gasket should be compressed to about 75 to 80% of its original thickness. Do not overtighten the nuts.
4. Run the wires through the hole that was drilled in the enclosure, and attach them to the LPAX. Wiring instructions are provided in the appropriate PAX bulletin shipped with the MPAX Module.
5. Remove the center section of the rear cover gasket. Apply the gasket to the rear panel of the enclosure by inserting the screws through the panel and into the holes in the gasket. Position the panel on the enclosure and start all of the screws. Alternately tighten each screw to ensure uniform gasket compression. The gasket should be compressed to about 75 to 80% of its original thickness.
6. To securely mount the enclosure, attach the adjustable mounting brackets to the enclosure using the washers and screws provided.
7. Secure the mounting brackets to the desired mounting location.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS
ENC9	NEMA 4 Enclosure for LPAX	ENC90000

## SHROUD

The optional shroud enhances the readability of the LPAX unit in areas with high intensity overhead light sources. The shroud can be used in conjunction with any installation (panel mount, enclosure, or mounting brackets). When properly installed, the shroud will not affect the integrity of a NEMA 4 installation.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS
SHR	Shroud for LPAX	SHRLPAX0

## INSTALLATION

1. Remove the center section of the gasket provided with the LPAX, and slide it over the rear of the display and onto the mounting studs.
2. Orient the shroud and gasket as shown in the assembly figure, and place it over the LPAX. The studs of the LPAX should now be protruding through the rear of the shroud.
3. Follow the remaining installation instructions for panel mounting, bracket mounting or enclosure mounting as appropriate.

## MBLPAX-MOUNTING BRACKETS

The MBLPAX mounting brackets provide an easy way to base, wall, or ceiling mount the LPAX display. The MBLPAX kit comes with two sets of brackets, and most of the hardware to mount the LPAX at virtually any angle. The screws to attach the brackets to your surface are not provided due to the variety of installation options available.

## ASSEMBLY

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBERS
MB	Mounting Bracket for LPAX	MBLPAX00

## Notes:

1. When installing the brackets, the fastener bracket must be installed on the studs of the LPAX as shown.
2. The mounting bracket may be installed with the flange facing in or out.
3. The rubber washers provided must be installed between the two mounting brackets during assembly.
4. The screws for fastening the brackets to a surface are not provided in the MBLPAX kit. The holes are 0.2" in diameter and will accept size #10 screws and smaller.

# NEMA 4 1/16 DIN SERIES ENCLOSURES

## ENC11A & ENC11B - PLASTIC ENCLOSURES

- RUGGED POLYCARBONATE CONSTRUCTION
- COMPLETELY SEALED FOR NEMA 4X/IP65 WASH-DOWN
- EASY MOUNTING OPTIONS

### DESCRIPTION

These enclosures are designed for applications requiring a water resistant instrument enclosure. The ENC11A and ENC11B enclosures are fabricated of polycarbonate and are designed to withstand NEMA 4X/IP65 wash-down applications. The enclosures must be drilled to accept conduit fittings or other types of wiring connectors. The enclosures can be used free-standing, or securely fastened to a mounting surface. The enclosures are pre-cut for either one or two meters. When properly installed, the meter and the enclosure can withstand NEMA 4X wash-down applications.

Electrical connections to the enclosed instrument are easily made by drilling the desired location on the back or side of the enclosure. Select the proper drill size to accommodate the conduit fitting or other wire connector. To maintain the enclosure NEMA 4X rating, sealed connectors must be used. Also enclosed are wall fastening lugs, which can be used to easily mount the enclosure to a wall.

### ORDERING INFORMATION

MODEL NO	DESCRIPTION	PART NUMBER
ENC11A	NEMA 4X/IP65 Enclosure for One 1/16 DIN Meter	ENC11A00
ENC11B	NEMA 4X/IP65 Enclosure for Two 1/16 DIN Meters	ENC11B00

### ENC11A AND ENC11B INSTALLATION

It is recommended to wire the unit before mounting it in the enclosure to ensure good electrical connections. The following steps outline the most common sequence for installing a unit.

1. Determine the location of the conduit fitting and drill the necessary hole. Install the fitting and bring the wiring into the enclosure.
2. Slide the panel gasket over the rear of the unit to the back of the bezel.
3. Install the unit through the opening in the front of the lid until the bezel flange contacts the panel.
4. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the enclosure. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

5. While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79 N-cm]). Do not over-tighten the screws.
6. If the gasket is not adequately compressed, and the mounting screws can no longer be turned, loosen the mounting screws and check that the mounting clip is latched as close as possible to the inside of enclosure. Repeat the procedure for tightening the screws.
7. Connect the necessary wires to the unit for the application desired.
8. Assemble the enclosure with the screws provided. Alternately tighten each screw to ensure uniform gasket pressure.

## ENC11 - STEEL ENCLOSURE

- RUGGED STEEL CONSTRUCTION
- COMPLETELY SEALED FOR WASH-DOWN
- VERSATILE MOUNTING OPTIONS FOR MACHINE OR DESKTOP

### DESCRIPTION

This enclosure is designed for applications requiring a water resistant instrument enclosure. The enclosure is fabricated of formed steel with all seams welded to withstand NEMA 4/IP65 wash-down applications. The kit is coated with a durable flat black polyurethane finish.

Electrical connections to the enclosed instrument are easily made through a removable access panel at the rear of the enclosure. The panel must be drilled to accept conduit fittings or other types of wiring connectors.

The enclosure can be used free-standing or securely fastened to a mounting surface with brackets which are provided with each enclosure. The brackets also allow the enclosure to be raised and/or tilted from the mounting surface in order to achieve the most favorable operating position. Self-adhering rubber pads are provided which can be applied to the bottom of the enclosure. These rubber pads will protect the mounting surface and are particularly useful for free-standing installations.

### DIMENSIONS In inches (mm)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
ENC11	NEMA 4 Enclosure for 1/16 DIN Units	ENC11000

# NEMA 4/IP65 LARGE DISPLAY ENCLOSURE & SHROUD FOR EPAX

Picture includes the EPAX, Nema Enclosure, and Shroud

- LIGHT-WEIGHT ALUMINUM CONSTRUCTION
- COMPLETELY SEALED FOR WASH-DOWN
- MOUNTING CHANNELS FOR VERSATILE INSTALLATION

## DESCRIPTION

The NEMA 4/IP65 Large Display Enclosure is designed to protect the EPAX from dust and hose directed water, when properly installed. This light-weight all aluminum unit utilizes welded seams and neoprene gaskets to meet NEMA 4/IP65 requirements. A textured, polyurethane coating protects against corrosion and is scratch resistant. Figure 1 below shows the overall dimensions of the Enclosure. The Display Enclosure with Mounting Channels weighs 9 pounds (4.1 Kg).

## DIMENSIONS In inches (mm)

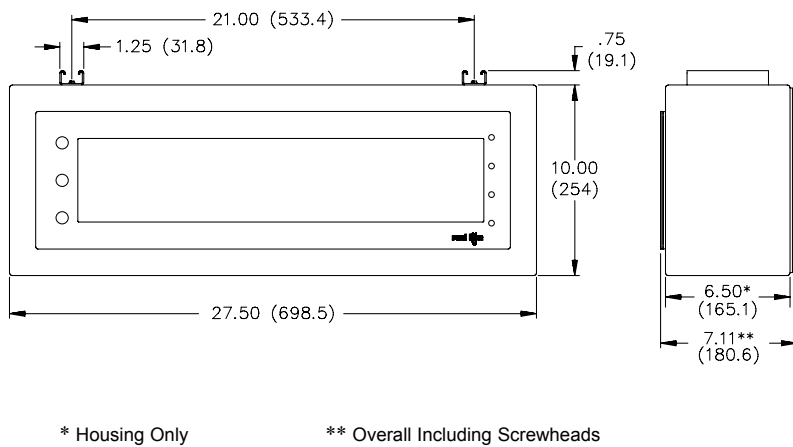

Figure 1

## MOUNTING

Provided with the enclosure are two 1/4-20 UNC x 1" hex bolts, two 1/4-20 UNC "strut nuts", and two 1/4" washers. The "strut nuts" can be installed anywhere in the channel by inserting them, spring side down, into the channels, then rotating them 90 degrees clockwise until the notches engage with the lips of the channel. The bolts and washers provided allow mounting to surfaces 1/4" to 1/2" thick (6.4 to 12.7 mm). Use longer bolts for mounting to thicker surfaces. Bolts fabricated from materials other than steel are not recommended.

Figure 3

## TYPICAL INSTALLATIONS FOR NEMA 4/IP65 ENCLOSURE

Removing the rear panel of the enclosure allows access to the Display for service. Either the rear panel or housing may be drilled to accept sealed conduit fittings, liquid-tight cable fittings or other types of wiring connectors. The enclosure may be attached to horizontal surfaces located above or below it, using the mounting channels provided.

BASEMOUNT WITH WATERTIGHT CABLE CONNECTOR ENTERING THROUGH REAR PANEL.

SUSPENDED FROM CONDUIT WITH SEALED FITTINGS. (SHOWN WITH SHROUD).

BEAM MOUNT WITH SEALED CONDUIT ENTERING FROM RIGHT SIDE.

Figure 2

## ASSEMBLY AND INSTALLATION PROCEDURE

1. Install the two mounting channels on the enclosure housing using the four #8-32 screws provided and then insert the strut nuts (*provided*). Invert enclosure if base mounting.
2. If the wiring is to be routed through the housing, make sure that the mounting channels are oriented properly before drilling, so the Display will be readable. Wiring is generally brought into the right side of the housing or rear panel, closest to the terminals of the MPAX module. Drill the proper size hole in the housing or rear panel for the wiring connector or sealed conduit fitting and attach the fitting(s).
3. Before installing the Display into the housing, be sure that the mounting channels are oriented properly for the type of installation planned. Place the gasket that is supplied with the Display over the studs extending from the front panel of the display.
4. If using the shroud, refer to the Shroud Installation Procedure. Place the Display with gasket through the holes in the housing as shown at right. Working back and forth across the stud pattern, install the #10-32 keps nuts supplied with the Display on the studs. Tighten firmly.
5. Mount the housing, using the strut nuts and steel 1/4-20 UNC bolts and washers, as shown in figure 4.
6. Connect the wires to the Display per the instructions included with the personality board.
7. Remove the center section of the rear panel gasket. Apply the gasket to the rear panel of the enclosure by inserting the #8-32 screws through the panel and into the holes in the gasket. Position the panel on the housing, start all of the screws, then firmly tighten them in a pattern working back and forth across the rear panel.

Figure 4

## DIMENSIONS FOR THE EPAX DISPLAY SHROUD

The optional EPAX Display Shroud enhances the readability of the Displays that are installed in areas with high intensity overhead light sources. The Shroud can be used with the EPAX Display in any installation, (panel mount, NEMA 4/IP65 Enclosure, or Universal Mounting Bracket). When properly assembled, the Shroud will not affect the integrity of a NEMA 4/IP65 installation. The Shroud weighs 1.0 pounds (0.45 Kg).

### DIMENSIONS In inches (mm)

Figure 5

## SHROUD INSTALLATION PROCEDURE

### Installing The Shroud On An EPAX Display In A NEMA 4/IP65 Enclosure Or Panel

1. Place a gasket over the studs extending from the rear of the front panel of the Display.
2. Orient the shroud as shown in Figure 6, and place it over the display. The studs of the display should now be protruding through the rear of the shroud.
3. Place the other gasket over the studs.
4. Install the unit into the panel or enclosure using the #10-32 keps nuts that are supplied with the Display. Tighten the nuts firmly.

## MODEL BMK3 & BMK4 - BASE MOUNT KITS

### DESCRIPTION

The Model BMK3 and 4 Base Mount Kits provide the necessary equipment for base mounting various units. The kits are coated with a durable flat black polyurethane finish and consist of two mounting legs which attach to the customer's base panel, using the hardware provided.

Model PMK3 and 4 are separate front panels, available for different sized units. After mounting the units to the appropriate PMK panel, the entire assembly is then attached to the mounting legs.

### MOUNTING PROCEDURE

1. Mark and drill holes ( $3/16"$  Dia.) in base panel for attaching the base mount legs. Use the appropriate Model PMK panel as a template for marking the mounting hole locations. NOTE: RECOMMENDED MINIMUM BASE PANEL THICKNESS IS  $1/8"$  TO SUPPORT THE WEIGHT OF THE INDICATOR WITHOUT PANEL DISTORTION.
2. Attach the base mount legs to the base panel using the machine screws and nuts provided or user supplied hardware if panel thickness exceeds  $1/4"$ .
3. Mount the indicator to the Model PMK panel, utilizing the mounting clips provided, in accordance with the panel mounting instructions supplied with the individual unit.
4. Attach the PMK panel and unit assembly to the base mount legs by using the self-tapping screws provided.

# MODEL BMK6, BMK7 & BMK7A - BASE MOUNT KIT FOR CUB4, CUB5 & DT8 UNITS

## DESCRIPTION

The BMK6, BMK7 and BMK7A base mounts are designed for use with the CUB4, CUB5, and DT8 units. The BMK7 is large enough to accommodate a Micro-line Power Supply (MLPS) attached to a CUB4 or DT8. The BMK7A will accommodate a Micro-line Power Supply (MLPS) attached to a CUB5.

The wires can either be brought through the panel on which the unit is mounted, or through the hole(s) in the enclosure itself. Grommets are provided to insert in the hole(s) on the base mount (where applicable) when wires are routed through it. The grommets are in the accessory bag with each base mount unit, along with four nuts and bolts for mounting.

The base mounts are constructed of steel with a textured black finish.

## DIMENSIONS In inches (mm)

**BMK6 - OPEN BASE MOUNT KIT  
(Without MLPS)**

**BMK7/BMK7A - CLOSED BASE MOUNT KIT  
(With or Without MLPS)**

MODEL	A	B	C
BMK7	4.00 (101.50)	3.45 (87.63)	2.80 (71.12)
BMK7A	4.62 (117.35)	4.00 (101.50)	3.50 (88.90)

## INSTALLATION

### BMK6 - Open Base Mount

Before attaching the BMK6 to the panel or frame, it is recommended to wire and mount the unit to ensure good electrical connections. The following steps outline the most common sequence for installing a unit without an MLPS attached.

1. Install the grommet (provided in the accessory bag) in the hole in the base mount.
2. Assemble nut fastener and mounting screw onto both sides of the mounting clip. The tip of the screw should not project from the hole in mounting clip.
3. Slide the panel gasket over the rear of the unit to the back of the bezel. Then install the unit through the opening in the front of the base mount until the bezel flange makes contact.
4. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the base mount. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

5. Alternately tighten each screw to ensure uniform gasket compression.
6. Connect the necessary wires from the grommet to the unit.
7. Mount the base mount enclosure to the panel or frame as application requires. Four bolts and nuts are provided with the Base Mount Kit.

## INSTALLATION

### BMK7/BMK7A - Closed Base Mount

Before attaching the BMK7/BMK7A to the panel or frame, it is recommended to wire and mount the unit to ensure good electrical connections. The following steps outline the most common sequence for installing a unit with an MLPS attached.

1. Install the grommets (provided in the accessory bag) in the holes in the base mount.
2. Slide the panel gasket over the rear of the unit to the back of the bezel.
3. Remove the common and V+ screw terminals from the rear of the unit (save for later use), and replace them with the hex drive stand-offs with round washers (supplied with the MLPS).
4. Assemble nut fastener and mounting screw onto both sides of the mounting clip. The tip of the screw should not project from the hole in mounting clip.
5. Route the wires from the grommets, through the mounting clip, into the rear of the base mount and out the front.
6. Connect the wires necessary for the application to the unit.
7. Install the unit through the opening in the front of the base mount until the bezel makes contact.
8. Slide the mounting clip over the rear of the unit until the mounting clip is against the inside of the base mount. The mounting clip has latching features which engage into mating features on the unit's housing.

*Note: It is necessary to hold the unit in place when sliding the mounting clip into position.*

9. Alternately tighten each screw to ensure uniform gasket compression.
10. Connect AC power to the terminal block of the MLPS.  
*Note: Make sure the AC selector switch is set to the appropriate position before applying power to the unit.*
11. Mount the MLPS and optional sensor wires needed to the stand-offs using the screw terminal from the unit with the supplied square washers.
12. Mount the base mount enclosure to the panel or frame as application requires. Four bolts and nuts are provided with the Base Mount Kit.

## MODEL BMK8 - BASE MOUNT KIT FOR CUB7

### DESCRIPTION

The BMK8 base mount is designed for use with the CUB7 series products. Wire feed to the CUB7 unit may be through the existing panel/frame or through the hole in the BMK8 itself.

The base mount is constructed of steel with a textured black finish and includes four mounting bolts and nuts.

### DIMENSIONS In inches (mm)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
BMK8	CUB7 BASE MOUNT KIT	BMK80000

For More information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC Distributor.

### INSTALLATION

1. Mark and drill holes (5/32") in existing panel using the BMK8 as a template. An addition hole may be cut in the existing panel for wire feed.
2. Remove the panel latch (mounting clip) from the CUB7 unit and insert the mounting screws (supplied with the CUB7) on both sides of panel latch. The tip of the screw should not project from the hole in the panel latch (mounting clip).
3. Slide the CUB7 through the cut out in the BMK8 until the bezel flange contacts the base mount. The CUB7 panel gasket is optional.
4. Slide the panel latch (mounting clip) over the rear of the unit and towards the front of the unit until it latches firmly against the inside of the base mount. Note: It is necessary to hold the CUB7 in place when sliding the mounting clip into position.
5. Alternately tighten mounting screws.
6. Route wires through existing panel wire hole or through wire hole on base mount and connect to the appropriate terminals on the CUB7.
7. Mount the CUB7/base mount assembly to the existing panel or frame utilizing the four bolts and nuts provided with the base mount.

## MODEL BMK9 - DIN RAIL MOUNT ADAPTER KIT FOR PAX

### DESCRIPTION

The BMK9 DIN rail mount kit is designed to adapt any PAX panel mount meter to DIN rail mount requirements. Wire feed to the PAX unit may be through the top or bottom of the adapter kit.

The DIN rail adapter frame is constructed of steel with a textured black finish and includes two plastic DIN rail mounting feet for attachment to a top hat (T) profile rail according to EN50022 - 35 x 7.5 and 35 x 15.

### DIMENSIONS In inches (mm)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
BMK9	DIN Rail PAX Base Mount Kit	BMK90000

For More information on Pricing, Enclosures & Panel Mount Kits refer to the RLC Catalog or contact your local RLC Distributor.

### INSTALLATION

1. Remove the panel latch (mounting clip) from the PAX meter unit and insert the mounting screws (supplied with the PAX) on both sides of panel latch. The tip of the screw should not project from the hole in the panel latch (mounting clip).
2. The PAX meter may be wired after the unit has been mounted in the adapter frame, in which case continue with Step 3. If pre-wiring the PAX is more convenient, skip to the pre-wiring step at the end of this installation procedure before returning to Step 3.
3. Slide the PAX meter through the cut out in the BMK9 and then slide the panel latch (mounting clip) over the rear of the PAX.
4. Continue sliding the PAX meter until the bezel flange contacts the adapter frame. The PAX panel gasket is optional.
5. Slide the panel latch (mounting clip) towards the front of the unit until it latches firmly against the inside of the adapter frame. Note: It is necessary to hold the PAX meter in place when sliding the mounting clip into position.
6. Alternately tighten mounting screws through the rear access holes of the adapter frame.
7. Apply both DIN rail feet to the rear of the adapter frame. The two latching pins of the rail foot are positioned into the mating holes on the adapter frame. Slight pressure applied to the center of the rail foot will snap foot into locking position.
8. Wire PAX meter appropriately.
9. To install the complete assembly on a T style rail, angle the assembly so that the top groove of both rail feet are located over the top lip of the rail. Push the assembly towards the rail until it snaps into place.
10. To remove the assembly from the rail, place a screwdriver behind the bottom groove of the foot rail and slightly pry upwards to release first rail foot. Apply same procedure to second rail foot and remove complete assembly.

### Pre-wire PAX

- 2a. Route wires through the panel latch (mounting clip) and then through the front cut out of the adapter frame from the inside to the outside. Wire PAX meter appropriately. Continue with installation at Step 3 above.

# MODEL BMK11 – CUB5 OR MLPS DIN RAIL BASE MOUNT ADAPTER KIT

## DESCRIPTION

The model BMK11 can be used to mount a CUB5 meter or a Micro Line Power Supply (MLPS) in various applications. Need a DIN rail mounted display? Simply add the DIN rail clips to the back of the BMK11, install your meter and snap it on the rail. If your application requires an inexpensive power supply, simply mount an MLPS to the BMK11 and snap it to the rail. For base mount application, just use the appropriate mounting screws to securely fasten the BMK11. Nothing could be easier.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
BMK11	CUB5 or MLPS DIN Rail Base Mount Kit	BMK11000

## DIMENSIONS In inches (mm)

BMK11 WITHOUT UNIT

BMK11 WITH CUB5

BMK11 WITH MLPS

## CUB5 INSTALLATION

1. Remove the panel latch (mounting clip) from the indicator. Insert the indicator into the BMK11 per diagram at right. Verify indicator is fully seated and latches have engaged. With latches properly engaged the indicator will not pull out of the BMK11.
2. Wire the indicator.
3. For **DIN RAIL** mounting, insert the two plastic feet as shown in the diagram at right. Angle the assembly so that the top groove of both rail feet are located over the top lip of the rail. Rotate the assembly towards the rail until it snaps into place.
4. To remove the assembly from the rail, place a screwdriver behind one of the rail feet and draw the rail foot away from the rail disengaging it from the rail. Apply the same procedure to the second rail foot and remove the complete assembly from the rail.
5. For **Base Mount**, use the holes indicated in the diagram at right, and screw or bolt the assembly to the desired mounting surface. User is responsible for selecting the appropriate screw or bolt to provide mounting to the desired surface. Base mount holes in the BMK11 are designed for #8 hardware.
6. To remove the indicator from the BMK11, slide a small screwdriver into the slot provided in the latch. Draw the latch away from the indicator until disengaged. Repeat the procedure on the other side. Once the latches are released, remove the indicator from the BMK11.

## MLPS INSTALLATION

1. Using the two nuts supplied with the BMK11, affix standoffs from MLPS hardware pack as indicated in the diagram at left.
2. Snap the MLPS over the standoffs into the BMK11 as indicated in the diagram.
3. Attach the MLPS to the standoffs using the square washers and SEMS terminal screws included with MLPS hardware pack.
4. Assembly can be wired at this time, or after the mounting is completed.
5. For **DIN RAIL** mounting, insert the two plastic feet as shown in the diagram. Angle the assembly so that the top groove of both rail feet are located over the top lip of the rail. Rotate the assembly towards the rail until it snaps into place.
6. For **Base Mount**, use the holes indicated in the diagram at left, and screw or bolt the assembly to the desired mounting surface. User is responsible for selecting the appropriate screw or bolt to provide mounting to the desired surface. Base mount holes in BMK11 are designed for #8 hardware.
7. To remove the MLPS from the BMK11, slide a small screwdriver between the MLPS and the latch wall. Draw the latch away from the MLPS until disengaged. Repeat procedure on the other side. Once latches are released remove the MLPS from the BMK11.

# MODELS PMK5, PMK7, and PMK7A - PANEL MOUNT ADAPTER KITS

## PMK5 - 1/4 DIN TO 1/8 DIN ADAPTER

This panel mount adapter kit is used to mount 1/8 DIN instruments, vertically or horizontally into an existing 1/4 DIN panel cut-out. The kit includes two durable steel mounting plates painted black and a neoprene gasket. The Adapter Kit, when used with a unit which has NEMA 4/IP65 specifications, will meet NEMA 4/IP65 requirements when properly installed. Red Lion Controls 1/8 DIN products include Temperature and Process Control Units (*Models TCU, TSC, PCU, and PSC*), and PAX Series.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PMK5	Panel Mount Adapter Kit (1/4 DIN TO 1/8 DIN)	PMK50000
PMK7	Panel Mount Adapter Kit (1/4 DIN TO 1/16 DIN)	PMK70000
PMK7A	Panel Mount Adapter Kit (1/4 DIN TO CUB)	PMK7A000

## PMK7 - 1/4 DIN TO 1/16 DIN ADAPTER

This panel mount adapter kit is used to mount 1/16 DIN instruments, into an existing 1/4 DIN panel cut-out. The kit includes two durable steel mounting plates painted black and a neoprene gasket. The Adapter Kit, when used with a unit which has NEMA 4/IP65 specifications, will meet NEMA 4/IP65 requirements when properly installed. Red Lion Controls 1/16 DIN products include Temperature and Process Control Units (*Models T48, T16, P48, and P16*), and Model C48 Counters and Timers.

### DIMENSIONS In inches (mm)

## INSTALLATION

### TYPICAL INSTALLATION

1. Remove the paper backing from the adhesive side of the adapter gasket (included with adapter kit) and carefully apply the gasket to the front of the existing panel cut-out.
2. Apply the panel gasket (provided with the unit) to one side of the mounting plate. Slide the mounting plate over the unit with the gasket facing the Bezel of the unit.
3. Insert the unit with mounting plate into the panel cut-out from the front. Slide the adapter plate over the rear of the unit. The protrusion on the adapter plate is designed to fit into the existing 1/4 DIN panel cut-out to properly position the unit.
4. Refer to the installation section of the manual, supplied with the instrument, to complete the installation.

## PMK7A - 1/4 DIN TO CUB ADAPTER

This panel mount adapter kit is used to mount CUB4, CUB5, DT8 and DT9 instruments, into an existing 1/4 DIN panel cut-out. The kit includes two durable steel mounting plates painted black and a neoprene gasket. The Adapter Kit, when used with a unit which has NEMA 4/IP65 specifications, will meet NEMA 4/IP65 requirements when properly installed.

## INSTALLATION

### TYPICAL INSTALLATION

1. Remove the paper backing from the adhesive side of the adapter gasket (included with adapter kit) and carefully apply the gasket to the front of the existing panel cut-out.
2. Apply the panel gasket (provided with the unit) to one side of the mounting plate. Slide the mounting plate over the unit with the gasket facing the Bezel of the unit.
3. Insert the unit with mounting plate into the panel cut-out from the front. Slide the adapter plate over the rear of the unit. The protrusion on the adapter plate is designed to fit into the existing 1/4 DIN panel cut-out to properly position the unit.
4. Refer to the installation section of the manual, supplied with the instrument, to complete the installation.

## PANEL MOUNT ADAPTER KIT - 1/8 DIN TO 1/16 DIN

The panel mount adapter kit is used to mount 1/16 DIN instruments into existing vertical or horizontal 1/8 DIN panel cut-outs. The kit includes two black painted durable steel mounting plates and a sponge rubber gasket. The Adapter Kit, when used with a unit which has NEMA 4/IP65 specifications, will meet NEMA 4/IP65 requirements when properly installed. Red Lion Controls 1/16 DIN products include Temperature and Process Control Units (Models T48, and P48), and the C48 units.

1. Remove the paper backing from the adhesive side of the adapter gasket (included with adapter kit) and carefully apply the gasket to the front of the existing panel cut-out.
2. Carefully remove the center section of the panel gasket (provided with the unit) and discard. Slide the panel gasket over the rear of the unit to the back of the bezel.
3. Slide the mounting plate over the rear of the unit to the back of the unit bezel.
4. Insert the unit with mounting plate into the panel cut-out from the front. Slide the adapter plate over the rear of the unit. The protrusion on the adapter plate is designed to fit into the existing 1/8 DIN panel cut-out to properly position the unit.
5. Refer to the installation section of the manual, supplied with the unit, to complete the installation.

## MODEL PMK8 - PANEL MOUNT ADAPTER KIT FOR PAX TO GEMINI CUT-OUT

The **PMK8** panel mount adapter kit is used to mount a PAX meter into an existing GEMINI panel cut-out. The kit includes two durable steel mounting plates painted black and a neoprene gasket. The Adapter Kit, when used with a meter which has NEMA 4/IP65 specifications, will meet NEMA 4/IP65 requirements when properly installed.

### ORDERING INFORMATION

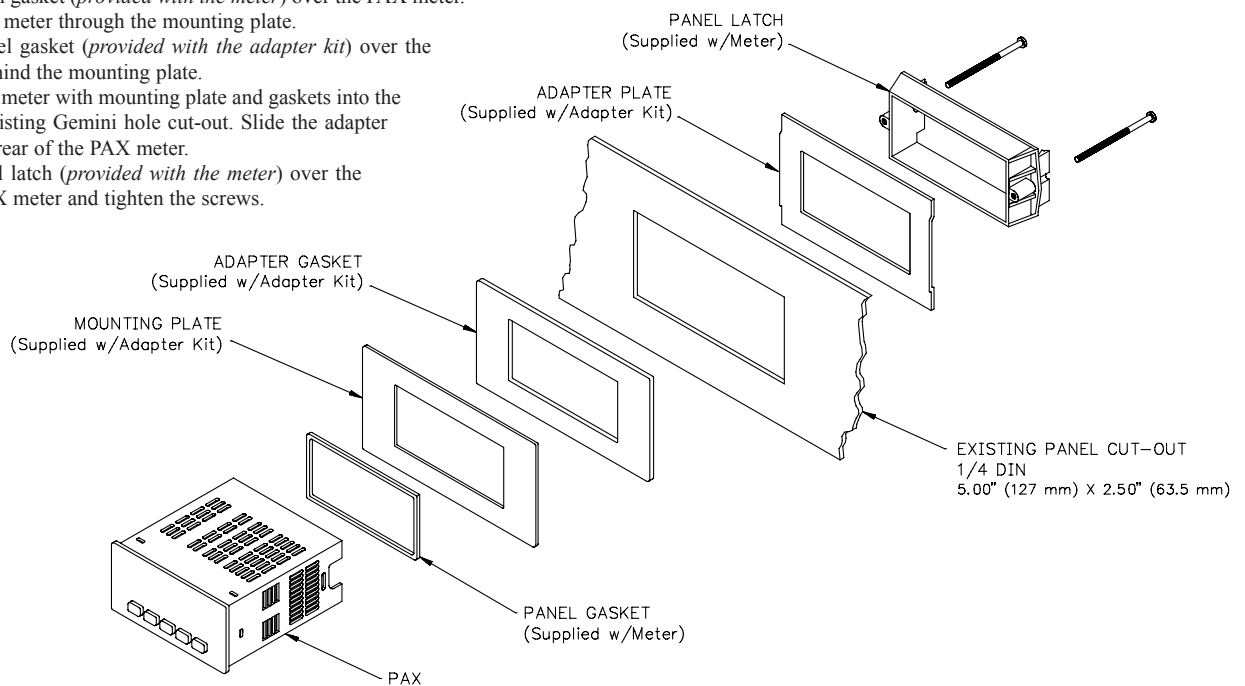

MODEL NO.	DESCRIPTION	PART NUMBER
PMK8	Panel Mount Adapter Kit (PAX to Gemini)	PMK80000

### PMK8 DIMENSIONS In inches (mm)

### PMK8 INSTALLATION

1. Apply the panel gasket (*provided with the meter*) over the PAX meter.
2. Insert the PAX meter through the mounting plate.
3. Apply the panel gasket (*provided with the adapter kit*) over the PAX meter behind the mounting plate.
4. Insert the PAX meter with mounting plate and gaskets into the front of the existing Gemini hole cut-out. Slide the adapter plate over the rear of the PAX meter.
5. Slide the panel latch (*provided with the meter*) over the rear of the PAX meter and tighten the screws.

## GEMINI SERIES PANEL ADAPTER KIT FOR DIN PANEL CUT-OUTS

The Gemini Series panel adapter kit permits the mounting of the Gemini unit to an existing 68 mm x 138 mm DIN standard panel cut-out. The kit consists of two metal adapter plates coated with a durable flat black polyurethane finish, and a neoprene gasket, which provides a sealed front panel that meets NEMA 4/IP65 specifications when properly installed.

### DIMENSIONS In inches (mm)

*Note:*  
An overall panel area of 3" x 6" is required for proper mounting.

### INSTALLATION

1. Remove the backing from the adhesive side of the adapter gasket (*included with adapter kit*) and carefully stick the gasket to the front of the existing panel cut-out.
2. Apply the standard panel mount gasket (*provided with the Gemini unit*) to one of the adapter plates and slide the plate over the Gemini unit. (*Gasket side must be facing the bezel.*)
3. Insert the Gemini unit into the panel cut-out from the front and slide the remaining adapter plate over the Gemini unit from the rear.
4. Install the two mounting clips (*provided with the Gemini unit*) as per the instructions in the Gemini manual. Install the screws into the mounting clips and tighten them evenly to apply uniform compression and to provide a water-tight seal.

**CAUTION:** Only minimum pressure is required to seal the panel. Do **NOT** overtighten the mounting screws.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PMKG1	3-PIECE KIT permits mounting to existing 2.67" x 5.43" (68 mm x 138 mm) Panel cut-out, O.A. DIM. 3" x 6" (76.2 mm x 152.4 mm)	PMKG1000

# 1/8 DIN PANEL ADAPTER KIT FOR DT3A, DT3D, SCT, & SCP PANEL CUT-OUTS

The 1/8 DIN panel adapter kit permits the mounting of the PAX and Apollo units into an existing 1.8" (45.7 mm) x 3.88" (98.5 mm) (DT3A, DT3D, SCT, & SCP) panel cut-out. The kit consists of two metal adapter plates coated with a durable flat black polyurethane finish, and a neoprene gasket, which provides a sealed front panel that meets NEMA 4/IP65 specifications when properly installed.

## DIMENSIONS In Inches (mm)

**NOTE:**  
An overall panel area of 2.25" (57.1 mm) x 4.63" (117.6 mm) is required for proper mounting.

## INSTALLATION

1. Remove the backing from the adhesive side of the adapter gasket (*included with adapter kit*) and carefully stick the gasket to the front of the existing panel cut-out.
2. Place the standard panel mount gasket (*provided with the unit*) over the unit. Then slide one of the plates over the unit. If the gasket has adhesive, apply the gasket to the plate, then slide the plate over the unit. (*Gasket must be facing the bezel.*)
3. Insert the unit into the panel cut-out from the front and slide the remaining adapter plate over the unit from the rear.
4. Install the mounting clip(s) as per the unit instructions. Tighten the mounting screws evenly to apply uniform compression and to provide a water-tight seal.

**CAUTION:** Only minimum pressure is required to seal the panel. Do NOT overtighten the mounting screws.

## ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PMKA1	3-PIECE KIT permits mounting to existing 1.8" x 3.88" (45.7 x 98.4 mm) Panel cut-out, O.A. DIM. 2.25" x 4.63" (57.1 x 117.6 mm)	PMKA1000

# INSTALLATION FOR CUB CONTROLLER PANELMOUNT KITS

Three panelmount kits for the CUB Controller are available to replace most existing miniature presettable counters on the market today. Kits come complete with adapter plates coated with a durable flat black polyurethane finish, mounting hardware, and gaskets to provide a complete sealed unit that meets NEMA 4/IP65 specifications when properly installed.

## PMKCC1 & PMKCC2

These panelmount kits adapt the CUB Controller to either a 50 mm x 50 mm or a 68 mm x 68 mm panel cut-out. The kit consists of two metal panel adaptors, one neoprene gasket and 2 3-48 x 1/2" screws. The adapter plates and gasket are pinched between the front bezel of the counter and the mounting clips (provided with the controller accessory bag). The 1/2" long screws may be necessary for thicker panel installations.

*Note: If room permits, install signal connector after unit is mounted. If there is not enough room, pull the wires through before installing as described below:*

- Pull signal connector through the following items in order:
  - One panel adapter plate.
  - Through existing panel opening.
- Slide the following items onto the counter.
  - Panel gasket
  - Adapter plate
  - Adapter gasket
- Install connector in the Cub Controller. Ensure connector is in proper orientation i.e. lockslots visible when viewed from below the case.
- Slide counter through panel cut-out from the front, and center in the panel opening.

- Install mounting clips (one on either side) with the screws provided. Tighten the screws moderately to "pinch" the gaskets and panels between the front bezel and the mounting clips. (Mounting clips are provided in accessory bag.)

## PMKCC3

For mounting proceed as follows:

1. Slide panel gasket over back of counter. (*Gasket is supplied in accessory bag with counter.*)
2. Slide counter onto adapter plate.
3. Slide adapter gasket onto counter.
4. Attach counter to adapter plate with two mounting clips and screws. (*Both mounting clips are supplied in accessory bag with counter.*)
5. Install connector in the Cub Controller. Ensure connector is in proper orientation i.e. lockslots visible when viewed from below the case.
6. Place complete assembly over existing cut-out, lining up the adapter plate mounting holes with existing holes.
7. Use two mounting screws and nuts provided with Panel Adapter Kit to secure panel to existing cut-out.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
PMKCC1	3-PIECE KIT permits mounting in existing 1.97" X 1.97" (50 mm x 50 mm) panel cut-outs O.A. 2.27" x 2.27" (57.6 mm x 57.6 mm)	PMKCC100
PMKCC2	3-PIECE KIT permits mounting in existing 2.68" x 2.68" (68 mm x 75 mm) socket box panel cut-outs, (72 mm x 72 mm DIN bezel opening) O.A. 3" x 3" (76 mm x 76 mm)	PMKCC200
PMKCC3	2-PIECE KIT permits mounting for existing 2.36" x 2.95" (60 mm x 75 mm) socket box panel cut-outs O.A. 2.36" x 2.96" (60 mm x 75 mm) Hole Centers 2.48" (63 mm)	PMKCC300

## **Terms of Sale**

All sales of Red Lion Controls products are made subject to our Terms and Conditions of Sale, which are available on request.

## **Summarized Warranty**

Red Lion Controls warrants that all equipment shall be free from defects in material and workmanship under normal use for a period of two years from date of shipment to Buyer save that Red Lion Controls does not warrant that operation of the software will be completely uninterrupted or error free, or that all program errors will be corrected. Buyer shall be responsible for determining that the equipment is suitable for Buyer's use and that such use complies with any applicable local, state or federal law.

## **Limitation of Liability**

IN NO EVENT, REGARDLESS OF THE FORM OF ACTION, SHALL RED LION CONTROLS BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL LOSSES OR DAMAGES ARISING OUT OF THE SALE OF ITS PRODUCTS. BUYER'S EXCLUSIVE REMEDY ARISING OUT OF ITS PURCHASE AND USE OF RED LION CONTROLS'S PRODUCTS, OR ARISING OUT OF ANYTHING DONE IN CONNECTION WITH ANY CONTRACT, SHALL BE FOR DAMAGES NO GREATER IN AMOUNT IN AGGREGATE THAN THE PURCHASE PRICE OF THE PRODUCTS IN RESPECT OF WHICH DAMAGES ARE CLAIMED.

## www.redlion.net

### Complete technical data, customer support and free software.

Red Lion's comprehensive web site offers complete product information and technical specifications, as well as Crimson software, updated product bulletins, technical and customer support, and contact information for your local Red Lion distributor.

- **Literature Downloads and Hardcopy Request:** Access our comprehensive library of product manuals, installation information, software manuals and application notes online, and/or request hardcopies and catalogs delivered at no charge.
- **Free Crimson® and Configuration Software:** Download demos and the latest revisions of the Red Lion Crimson® software, plus the device drivers, cable specifications, DeviceNet EDS files and Profibus GSD files required for your application.
- **Product Dimension Library:** access free downloadable dimensioned drawings in .dwg format, for easy import into your drawings.
- **Product Cross Reference:** Compare features and upgrade to Red Lion products from other brands by entering part numbers into Red Lion's *Competitor Cross Reference*.
- **Virtual Help Desk:** Use the Red Lion *Virtual Help Desk* to search our *Knowledge Base*, browse through our *Frequently Asked Questions (FAQ's)* for quick answers, read *Application Solutions* to find out how Red Lion can solve your application or watch *Product Tutorials and Presentations*.
- **Training Resources:** Learn about Red Lion's comprehensive in-house and field training programs, or use the web to join live product tutorials and presentations.
- **Online Customer Service:** Contact our Customer Service Department online for answers on your schedule. Red Lion Customer Service Representatives are ready to take your orders, check product availability and order status, handle literature requests, and answer any ordering questions you may have.
- **Lifetime Technical Support:** Find the Red Lion Technical Support Team located nearest you who will provide pre- or post-sales support on Red Lion products.
- **Agency Approvals:** Search our comprehensive database for information on UL, CE, CSA and FM approvals for Red Lion's products. View information on UL recognized or rated products, RoHS-WEEE conformity and Hazardous Area approvals.
- **Installation Tips:** Learn valuable installation information including advice on preventing noise interference in your industrial environment.

## Red Lion Controls

### A proud global member of Spectris.

Headquartered in York, Pennsylvania USA, Red Lion provides strong support for international customers through offices located in the Netherlands, China, and India, plus over 850 distributors in 65 countries. Red Lion Controls is a member of Spectris, the productivity-enhancing instrumentation and controls company. With sales of £668 million in 2007 and employing approximately 5,500 people worldwide in its 13 business units, Spectris is listed on the London Stock Exchange (symbol: SXS) and is a founder member of techMARK, the London Stock Exchange's index for technology companies. For more information on Spectris, visit [www.spectris.com](http://www.spectris.com)

Red Lion's global distribution network ensures the availability of the same high-quality Red Lion solutions virtually anywhere in the world. For single-source solutions locally or technology deployment to multiple facilities around the globe, Red Lion has the answers and products you need.

### Free live application and technical assistance at 717-767-6511

Red Lion's commitment to customer service is second to none. So when you have questions, you can talk to a real person instead of a machine. Our customer service and tech support staff stands ready to help you choose the Red Lion product that meets the needs of your application, and put you in touch with the local distributor who can serve your needs personally.

**red lion**<sup>®</sup>  
INSIGHT ENABLED

# Insight Enabled

Known worldwide as the undisputed leader in digital and analog panel meters, Red Lion has also gained acclaim for innovations in operator interface panels, protocol conversion, device-level fieldbus and LAN/WAN communications, data logging, PID controllers and signal conditioning devices. Red Lion products enable insight into your process like no other.

## MODULAR CONTROL & DATA ACQUISITION

Modular Controller Series: Versatile multi-loop and data acquisition platform with protocol conversion, web server and Ethernet connectivity and more.

- PID modules
- Analog and digital I/O
- Communication modules
- Strain gage
- Temperature input

## DIGITAL AND ANALOG PANEL METERS

The trusted and preferred brand of digital and analog panel meters in the widest range of models, sizes and capabilities, from our basic CUB indicators to versatile PAX process meters that let you change capabilities with plug-and-play, field installable cards.

- Counters, Rate Meters, Timers
- Current, Process, Voltage, Strain Gage
- Large Displays for all of the above
- Temperature; on/off, PID, limit alarm

## OPERATOR INTERFACES & DISPLAYS

Advanced HMIs with integrated Ethernet and web connectivity control and monitor multiple devices, and large LED displays communicate to the plant floor.

- G3 Series HMIs: Full-featured OI terminals
- G3 Kadet™ Series HMIs: value and essential HMI features
- Plant Floor Marquee and Big Flexible Display: LED display boards with advanced connectivity

## SIGNAL CONDITIONERS

Base- or DIN-rail mounted devices for conversion or isolation featuring microprocessor-based configuration and minimal drift.

- IAMS Universal Signal Conditioners
  - Frequency Inputs
  - Process Inputs
  - Temperature Inputs

## PROTOCOL CONVERSION AND COMMUNICATIONS

Perform protocol conversion among any of over 170 protocols.

- Data Station® Plus Series: Powerful and versatile data management platform with web-enabled communications, data logging and protocol conversion

## SENSORS AND ENCODERS

Red Lion's extensive line of sensors and encoders let you complete your application without going to additional providers.

- Encoders
- Magnetic pick-ups
- Proximity sensors
- Photoelectric sensors
- Rotary pulse generators
- Length sensors
