Table of Contents

Schneider Electric: Shaping the Future of Sensors

Schneider Electric is the first control and automation products manufacturer in the world to introduce a comprehensive family of discrete sensor products—photoelectric, proximity, and limit switches—built upon a common technology platform that combines intelligence and modularity. Because this uniform approach to sensor design is so unique, we call it Global Detection.

What is Global Detection?

Detection is an essential function to control and automate equipment within an industrial environment. It has many variations based on different machinery requirements.

Traditionally, each sensor has been specific to an application—made by specialists who focused on a single detection technology—with all the advantages and disadvantages inherent in that technology.

Global Detection is Schneider Electric's solution to that dilemma: a family of discrete sensing products built on a common technology platform. What makes Global Detection possible is a new Osiconcept™ approach, which combines smart technologies to simplify sensor selection, stocking, installation, setup, and maintenance. OSI stands for **Offering Simplicity through Innovation**.

Combining sophistication and simplicity was our primary objective in creating this new technology and product platform: selection, installation, setup, and maintenance were made as easy as possible. The second objective was availability: maximizing the number of solutions while minimizing the product catalog numbers. A third objective was adaptability: products that meet all the environmental constraints for a wide variety of installations.

We also added a fourth dimension—aesthetics—with uniform shapes, a compact body style, and a uniform blue color across all products. This is important for machine builders who want to present an image of engineering and manufacturing quality to their customers.

Innovation: Products that adapt to their environment

XS—Proximity Sensors

Conventional inductive proximity sensors can be the source of many types of application difficulties. Apart from their size, they are also sensitive to metal environments, meaning that some flush-mounted types must be shielded, while others may be unshielded. This causes variances in performance. Setup and mounting can be both difficult and time consuming.

The new Telemecanique® XS Rectangular proximity sensor line, part of the Schneider Electric Global Detection family, has been designed to eliminate all these problems. With the flattest rectangular body size available, these compact sensors integrate easily into a machine or process. The advanced microprocessor design of these **auto-adaptable proximity sensors** allows them to easily adjust to deliver maximum sensing distance, whatever the metal environment or mounting approach.

When the user presses a button, the product runs in teach mode to set the maximum sensing distance. With quick attachment mounting brackets, these sensors can be quickly installed or replaced. Once in place, there is no need to mechanically adjust their position, as tuning or precise detection is integral to the sensor. Efficiency, performance, mounting time, and flexibility have all been considered in the design of these proximity sensors to ensure maximum productivity.

XU—Photoelectric Sensors

Photoelectric sensors present some equally difficult challenges. Different sensors have been required depending on the target material—whether matte finish or reflective surfaces, light or dark colors—and the overall environment. This complicates sensor selection, leading to a great deal of trial and error. Sensor positioning and definition of the sensing range have also been difficult to determine, particularly in three dimensions, which require special mountings and protection, increasing installation costs.

Osiconcept™ Sensors Introduction

By applying the Osiconcept approach to photoelectric sensors, Schneider Electric has considerably increased their capabilities. This new XU family of Multi-Mode™ **photoelectric sensors** can do it all, operating accurately in diffuse environments and with background suppression. This unique line of photoelectric sensors combines maximum flexibility and precision. Each sensor can function in five sensing modes and two output states (NO or NC). This flexibility can reduce the typical number of product part numbers required by a factor of 10.

To increase the sensing distance from the diffuse, simply add a reflector or a transmitter and the sensor changes to retro-reflective or thru-beam mode, whichever is required. The idea of light or dark switching is no longer relevant. The targeted object has only to be detected in order to activate the output (or the reverse). The customer decides if it should be N.O. or N.C. Built-in intelligence allows the sensor to run a teach mode setup for quick installation, with the option of a second precise teach setting for very accurate and reliable detection. The sensor is capable of adapting to any surrounding environment.

Accurate setting of the sensing range is achieved without using any particular accessories. If the object to be detected is moved closer within the detection zone, just press a button and the sensor learns this modification. Also, if the object is translucent, whatever the detection method, it is simply placed in position, the adjustment button is pressed and the sensor adjusts accordingly. Mounting brackets are standard across the product line. Options include protective covers and a 3-D indexing system for setup adjustment in any direction.

Innovation: Modular approach adds flexibility

XC—Limit Switches

The Osiconcept principle has also been adapted to limit switches. The limited integration of operating heads, bodies, and contact blocks from most manufacturers can make it difficult to find exactly the right components for the configuration required for a particular application. With the new XC family of limit switches from Schneider Electric, however, the complete **modularity** of the bodies, contact blocks, operating heads, and cable entries simplifies any configuration.

More than 40 metal operating heads, completely interchangeable, can be combined with five different body styles and six conduit entries, all of which conform to standards and local customs on a worldwide basis. Limit switch components that enable up to 5,000 different configurations will be available anywhere in the world from Schneider Electric, normally within 48 hours.

The new XC limit switches are the only ones on the market with snap action contact blocks (three or four contacts) with direct opening operation. Product cabling has been simplified, reducing electrical connection time by up to 40 percent. Operating heads and levers with 3-D orientation also make installation simpler and enable mounting these limit switches in any position for accurate cam actuation.

All the new Square D® and Telemecanique® **Global Detection** products are entirely compatible with the Schneider Electric Transparent Factory: a new approach to factory management based on Ethernet and Web technologies.

This global approach to discrete sensing technology and product design means machine builders can improve performance by having less complex and more intelligent machines; distributors can improve their customer expertise with a more efficient product line offering, simplified selection, and improved selling potential; and finally, users on the factory floor can improve performance by reducing maintenance time with products that are simpler and have unparalleled flexibility.

Osiconcept™ Sensors

Environmental Protection Classification

Enclosures

An enclosure is a surrounding case constructed to provide a degree of protection for personnel against incidental contact with the enclosed equipment, and to provide a degree of protection for the enclosed equipment against specified environmental conditions.

Below is a brief description of the more common types of enclosures used by the electrical industry relating to their environmental capabilities. Refer to the appropriate sections of the standard publication for more information regarding applications, features, and design books.

Definition pertaining to nonhazardous locations

Type 1 Enclosure

Type 1 enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment.

Type 2 Enclosure

Type 2 enclosures are intended for indoor use primarily to provide a degree of protection against limited amounts of falling water and dirt.

Type 3 Enclosure

Type 3 enclosures are intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet, external ice formation, and falling dirt.

Type 3R Enclosure

Type 3R enclosures are intended for outdoor use primarily to provide a degree of protection against falling dirt, rain, sleet and external ice formation.

Type 3S Enclosure

Type 3S enclosures are intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet, and falling dirt, and to provide for operation of external mechanisms when ice laden.

Type 4 Enclosure

Type 4 enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, hose-directed water, falling dirt, sleet, snow, and formation of ice on the enclosure.

Type 4X Enclosure

Type 4X enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, hose-directed water, falling dirt, sleet, snow, and formation of ice on the enclosure.

Type 5 Enclosure

Type 5 enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, dripping, and light splashing.

Type 6 Enclosure

Type 6 enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against dust, falling dirt, dripping, light splashing, and the entry of water during occasional temporary submersion at a limited depth.

Type 6P Enclosure

Type 6P enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against dust, falling dirt, dripping, light splashing, and the entry of water during prolonged submersion at a limited depth.

Type 11 Enclosure

Type 11 enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt and dripping noncorrosive liquids.

Type 12K Enclosure

Type 12K enclosures with knockouts are intended for indoor use primarily to provide a degree of protection against dust, falling dirt and dripping noncorrosive liquids other than at knockouts.

Type 13 Enclosure

Type 13 enclosures are intended for indoor use to provide a degree of protection against lint, dust, NEMA Type 12, external condensation and spraying of water, oil and noncorrosive liquids.

The IEC publications 144, 529, and the standard DIN 40050 define the degrees of protection provided by electrical enclosures—with respect to persons, equipment within the enclosure, and the ingress of water—and enable this to be expressed by the letter IP followed by two numerals. The standard NFC 20-010 also defines the mechanical protection given by the enclosure (3rd numeral).

Example: IP559 (The table below explains the numerals.)

These standards do not apply to protection against the risk of explosion or conditions such as humidity, corrosive gases, fungi or vermin.

Certain equipment intended to be mounted in enclosures also contributes to the degree of protection achieved.

Example: push buttons on enclosures

In this case the equipment will only conform with the standard when it is correctly mounted.

Different parts of equipment can have different degrees of protection and still comply with the standards.

Example: an opening in the base of an enclosure

	1st Characteristic Numeral Protection against contact and penetration of solid bodies. Conforming to IEC, NF, DIN	2nd Characteristic Numeral Protection against the penetration of liquids. Conforming to IEC, NFC, DIN	3rd Characteristic Numeral Protection against mechanical damages. Conforming to NFC. ■		
			Mass, kg	Height of fall, m	Impact energy, J
0	Non-protected	Non-protected	Non-protected		
1	Protection against solid objects greater than 50 mm	Protection against dripping water	0.15	0.15	0.225
2	Protection against solid objects greater than 12 mm	Protection against dripping water when tilted up to 15°	0.15	0.25	0.375
3	Protection against solid objects greater than 1 mm	Protection against rain	0.25	0.20	0.50
4	Protection against solid objects	Protection against splashing water greater than 1 mm	—	—	—
5	Dust protected	Protection against water jets	0.50	0.40	2
6	Dust tight	Protection against heavy seas	—	—	—
7	—	Protection against the effects of immersion	1.50	0.40	6
8	—	Protection against immersion in cutting oils▲	—	—	—
9	—	—	5	0.40	20

■ Defined within conditions of hammer testing.

▲ Degree of protection undefined by the IEC standard. Left to the manufacturers and users to define it. Telemecanique® brand defines it as cuffing oil proof.

Photoelectric Sensors

Application Examples

01: Monitoring the flow of bottles

XUB9**WL2 or XUB0**SWL2

02: Verifying liquid presence in a vial

XUDA**SMM8 + XUFN12301 + XUFZ02

03: Monitoring the water level in a container

XUDA**SML2 + XUFN12301

04: Car washes

XUX0ARCTT16 or XUX9ARCNT16

05: Detecting small falling objects

XUVF**0M12

06: Detecting reflective objects

XUM0A*SAL2 or XUM9A**NL2

Photoelectric Sensors

Application Examples

07: Monitoring the height of lipsticks prior to capping

XUB0•SML2R + XUB0•KSNL2T or XUB2•NL2 + XUB2•KSNL2T

08: Monitoring the flow of pallets carrying bottled water

XUX0AKSAT16 or XUX1A•NT16

09: Monitoring the flow of cans

XUX0AKSAT16 or XUX1A•NT16

10: Monitoring the position of cheese

XUK0AKSAL2 or XUK5A•NL2

11: Verifying the correct seating of a screw

XUDA•SML2 + XUFN35301

12: Monitoring the flow of objects exiting vibrating bowl

XUDA•SML2 + XUFN35301

Photoelectric Sensors

Application Examples

13: Detecting springs (considered a transparent material)

XUB•01353

14: Monitoring the flow of printed circuit boards

XUM•15353•

15: Detecting dark colored objects on a conveyor

XUX0AKSAT16 or XUX5A••NT16

16: Monitoring the alignment of glass panes

XUB•01353

17: Verifying plate feed

XUV•003530 + XUVN02428

18: Verifying the presence of a plate

XUK0AKSAL2 or XUK5A••NL2

Photoelectric Sensors Application Examples

19: Indexing the height of a table

XUJK803538 (analog)

20: Detecting overlapping plates

XUK0AKSAL2 or XUK5A••NL2

21: Indexing position of robot arms

XUX0AKSAT16 or XUX5A••NT16

22: Counting televisions

XUK0AKSAL2 or XUK5A••NL2

23: Verifying the presence of a plastic cap

XUB0••SNM12 or XUB5••NM12 + XUB0••SWL2 or XUB9••WL2

24: Detecting plastic film

XUB•01353

Photoelectric Sensors

Application Examples

25: Detecting a label on a transparent background

XUVK0252

26: Counting tablets

XUV•003530

27: Verifying the presence of tablets in a bottle

XUB0•SNL2 + XUB0•KSNL2T or XUB2•NL2R + XUB2•KSNL2T

28: Verifying the presence of a label

XUM0A•SAM8 + XUM0AKSAM8T or XUM2A•NM8R + XUM2AKSNM8T

29: Verifying presence of cakes in transparent packaging

XUDA•SML2 + XUFN12301 + XUFZ01

30: Detecting incorrect positioning of a label

XUDA•SML2 + XUFN05321

Photoelectric Sensors Application Examples

31: Reading reference marks for trimming

XURK0955D

32: Detecting the end of a roll

XUM0A•SAL2 or XUM5A•NL2

33: Detecting cakes

XUM0A•SAL2 or XUM5A•NL2

34: Verifying correct positioning of labels

XU2P18•P340DL

35: Verifying the presence of adhesive

XUDA•SML2 + XUFN35301

36: Synchronizing a cutting stroke

XUVH0312

Photoelectric Sensors Application Examples

37: Monitoring the position of tooth brushes

XUV•003530

38: Monitoring the stock level in a hopper

XUDA•SML2

39: Monitoring a cake position prior to packaging

XUM0A•SAL2 or XUM5A•NL2 (miniature) + XUB•SNL2 + XUB0•KSNL2T or XUB2•NL2R + XUB2•KSNL2T (tubulars)

40: Monitoring the positioning of a book cover

XUM•15353R (color mark reader)

41: Detecting a loop

XUJK803538 (analog)

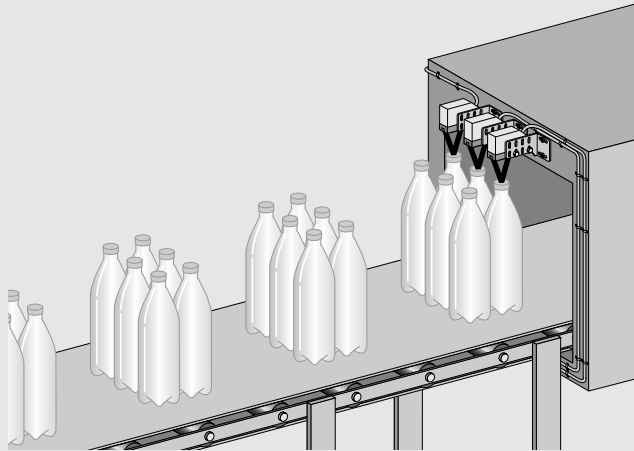

42: Monitoring the flow of cartons

XUK0AKSAL2 or XUK1A•NL2

Photoelectric Sensors Application Examples

43: Detecting bottles filled with mineral water

XUM0A•SAL2 or XUK5A•NL2

44: Zone surveillance

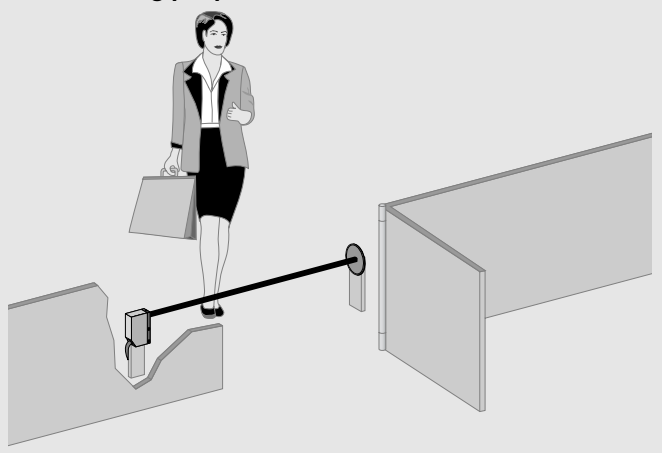

XU2P18•P340DL

45: Controlling a parking barrier

XUK0AKSAL2 or XUK1A•NL2

46: Detecting people

XUK0AKSAL2 or XUK1A•NL2

Photoelectric Sensors

Osiconcept™ Multi-Mode™ Technology

Overview

Principle

- A single product that automatically adapts to every use
Telemecanique® brand offers this major innovation: Osiconcept technology—Offering Simplicity through Innovation.
- With Osiconcept technology, simply clicking on the teach button automatically configures the product for optimal use based on the application.
 1. Diffuse proximity sensing with no accessories
 2. Diffuse proximity sensing with background suppression, with no accessories
 3. Polarized retroreflexive sensing with a reflector accessory
 4. Thru-beam sensing with thru-beam accessory
- In addition, Osiconcept technology offers:
 - the maximum range for each environment
 - a 90% reduction in the number of separate products needed
- The first sensor of its kind in the world for enhancing productivity
- A complete offering that resolves the most common sensing problems:
 - simplifying your options
 - simplifying your product inventories
 - simplifying installation
 - simplifying maintenance

Automatic Output Activation when the Object is Present

- All Osiconcept photoelectric sensors boast automatic activation of the output signal. When an object is present, the output is activated—regardless of the sensing mode used (with or without an accessory). See the figure at left.
 1. Output activated
 2. Output activated
 3. Output activated

NOTE: Reverse operation is available simply by pressing the teach button.

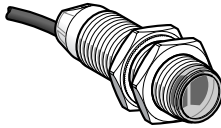

Installation

- The 3-D attachment kits provide quick installation or adjustment of Osiconcept photoelectric sensors on 3 axes.
 - Can also be used to install reflectors
 - Includes a set of brackets, screws, and covers that can be used to install all new enclosures in the Osiris® line of Osiconcept photoelectric sensors

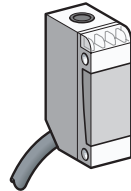

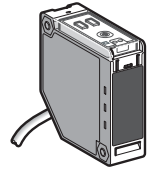

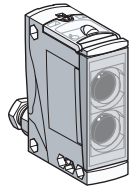

Photoelectric Sensors

Diffuse with background suppression, without accessory	0.10 (0.3)	0.28 (0.9)	1.3 (4.3)
Body style	XUM	XUK	XUX
Pages	48	52	56

A complete offer structured to the specific needs of the market today:

- Multi-Mode™ Sensors—Products for multiple functions
- General Sensors—Product with essential functions for minimum cost
- Application Specific—Products designed to perform the most difficult applications to the customer's requirements

Osiconcept™ Photoelectric Sensors

Photoelectric Sensors

XUM Miniature Rectangular DC

Optimum miniature rectangular photoelectric sensors designed for OEMs and industrial applications.

Features

- Small dimensions, designed to fit in those tight applications
- Quick connect versions
- Available in either N.C. or N.O. operation

Photoelectric Sensors

Classic 18 mm Tubular

Metal Body, High Excess Gain, Thru Beam, DC

thread
M18x1

Features

- Very high excess gain of 250,000 at 10 cm with strength to burn through polluted environments such as in car washes or lumber milling applications
- Two distinct outputs: analog and digital with PNP output
- Analog can gauge density with sharp precision, as in hopper fill applications
- Digital output is ideal for detecting the presence of an object in nearly opaque packaging
- One catalog number for both emitter and receiver
- Four-pin micro-style connector standard

Mechanical		
For usable sensing range, see excess gain curve chart		
Temperature Range	Operation	-13 to 131 °F (-25 to 55 °C)
	Storage	-40 to 158 °F (-40 to 70 °C)
Enclosure Rating	NEMA Type	3, 4, 4X, 6, 12, 13
	IEC	IP67 conforming to IEC 60529
Vibration		7 g amplitude + 1.5 mm (10–55 Hz)
Shock Resistance		30 g for 11 ms conforming to 68-2-27
Tightening Torque	Mounting Nuts	15 N•m (133 lb-in)
	Connector	2 N•m (17.7 lb-in)
Repeatability (% of Sr)		3%
LED Indicator Type		One green power LED ■ One yellow output LED ■
Enclosure Material		Nickel-plated brass
Wiring		4-pin micro-style connector
Electrical		
Voltage Limit (Including Ripple)		10–30 Vdc
Current Consumption (Maximum) (No Load)		55 mA (emitter and receiver)
Voltage Drop (Maximum)		1.5 V
Analog Output Range		4–20 mA
Current Drift Due to Temperature	At -13 to 131 °F (-25 to 55 °C)	10%
	At 32 to 104 °F (0 to 40 °C)	5%
Current Drift Due to Alignment		3%
Power-up Delay (Maximum)		50 ms
On Delay (Maximum)		15 ms
Off Delay (Maximum)		15 ms
LED Operation	Discrete (on/off) Output	Green LED is illuminated ■
	Analog Output	Yellow LED is illuminated ■
Protective Circuitry	Short Circuit Protection	Yes
	Overload Protection	Yes
	Reverse Polarity Protection	Yes
	Agency Listings	UL E 164869 CCN NRKH

■ See description of LED operation below.

Operation of LEDs in the Analog mode

When sensing a slightly opaque target at 20 mA, LED is illuminated at its maximum strength. When sensing a target that is completely opaque at 4 mA, LED is illuminated at its minimum strength.

Example

Detecting sheets of white paper weighing 80 g (2.8 oz) with emitter and receiver 10 cm apart

	1	11	27	31
Number of sheets	1	11	27	31
Analog output current (mA)	17.3	12	6	5

Connector Cables (M12 or D suffix)

XSZCD101Y	Micro-style, 4-pin, 2 m, straight
XSZCD111Y	Micro-style, 4-pin, 2 m, 90°

Additional cable options and lengths . . . Page 484
Accessories Page 82, 137

Photoelectric Sensors

Classic 18 mm Tubular

Metal Body, Analog Output, Proximity Diffuse, DC

thread
M18x1

Features

- 4 to 20 mA output that adjusts as target characteristics change
- Analog technology in popular 18 mm diameter body style
- Rugged metal enclosure with micro-style connector
- Potentiometer adjusts sensor's sensitivity and reduces the color effects of the target
- Self locking mounting nuts included

Dimensions

(1) Potentiometer
(2) Green LED

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Output Mode	Circuit Type	Voltage Range	Connection Type	Operating Frequency Maximum	Catalog Number
Proximity Diffuse 50 to 400 mm (2 to 15.7 in.) Nominal Sensing Range					
Light	Analog	12–24 Vdc	4-pin micro-style ■	20 Hz @ 10 mA	XU5M18AB20D

■ See p. 484 for matching connector cables.

Photoelectric Sensors

Classic 18 mm Tubular

Metal Body, Ultraviolet (UV), DC

thread
M18x1

Features

- Detection of ultraviolet marks and products containing UV bluing agents, as used for packaging identification and quality assurance
- Either Mark Reader or standard Diffuse sensing modes
- Sensitivity adjustment by 20-turn potentiometer
- 20 ms Off Delay built-in timing feature
- Popular 18 mm tubular body style in rugged metal enclosure with a 4-pin micro-style connection

Circuit Type	Output Mode	Voltage Range	Connection Type	Load Current Maximum	Operating Frequency Maximum	Catalog Number
Diffuse—20 mm (0.79 in.) Nominal Sensing Range*—Micro-Connector						
PNP	Light	12–24 Vdc	4-pin micro-style	100 mA	1,000 Hz	XU5M18U1D

* Excess gain one—in normal ambient conditions, maximum usable sensing distance is 75% of normal

Dimensions

1. Potentiometer
2. Green LED

Detection Curve

Target 5 x 5 cm, white 90%
Spot size at 20 mm
Oval Dia. 3 x 1 mm

Accessories Page 82, 137

Photoelectric Sensors

Classic 18 mm Tubular

Plastic Body, Laser, Thru-Beam Mode, DC

Features

- Extremely long sensing distance of 100 m (328.1 ft) in an 18 mm tubular body
- Detection of very small objects
- Adjustable beam (or focus point) down to 0.5 mm (0.02 in.)
- System checking and marginal detection LEDs
- Reserve Mode option increases beam strength for visible alignment during setup
- Mounting nuts and adjustment screwdriver included
- Micro-style connector standard ■

Circuit Type	Output Mode	Voltage Range	Load Current Maximum	Operating Frequency Maximum	Catalog Number
Thru-Beam Emitter-Receiver—100 m (328.1 ft) Nominal Sensing Distance *					
PNP	Light/dark	12–24 Vdc	100 mA	500 Hz	XU2P18PP340DL
NPN	Light/dark	12–24 Vdc	100 mA	500 Hz	XU2P18NP340DL

* Excess gain one—in normal ambient conditions, maximum usable sensing distance is 75% of normal.
 ■ See p. 484 for matching connector cables

Adjustments

The adjustment of the focusing point enables the detection of targets down to a size of 0.5 mm.

To adjust the focusing point, loosen the mounting screws (1) and rotate the serrated sleeve (2) located on the face of the sensor.

Re-tighten mounting screws.

Note: Saddle clamp XUZA218 incorporating a ball joint (see page 82) is particularly suited for mounting the sensor and adjusting the beam alignment when the sensing range is several tens of meters.

Osiris® Food and Beverage Processing, Stainless Steel

M18x1 DC Solid-State Output

Specifications		
Product certifications		CE, UL, CSA
Ambient air temperature		Operation: -25 to +55 °C. Storage: -40 to +70 °C
Vibration resistance	Conforming to IEC 60068-2-6	25 gn, amplitude ± 1.5 mm (10–55 Hz)
Shock resistance	Conforming to IEC 60068-2-27	30 gn, duration 11 ms
Degree of protection	Conforming to IEC 60529	IP 67
Connection	Pre-cabled	Pre-cabled, diameter 4.2 mm, length 2 m (3), wire c.s.a.: 4 x 0.34 mm ²
	Connector	M12 male connector, 4-pin (for suitable female connectors, including pre-wired versions, see the Cabling section beginning on page 625)
Materials	Case	Food and beverage processing stainless steel, grade 304 Cu
	Lenses	PMMA
	Cable	PvR
Rated supply voltage		12–24 V _{DC} with protection against reverse polarity
Voltage limits		10–30 V _{DC} (including ripple)
Switching capacity (sealed)		≤ 100 mA with overload and short-circuit protection
Voltage drop, closed state		≤ 1.5 V
Current consumption, no-load		≤ 30 mA (reflex and diffuse), ≤ 50 mA (thru-beam)
Maximum switching frequency		500 Hz
Delays	First-up	≤ 15 ms
	Response	≤ 1 ms
	Recovery	≤ 1 ms
Indicator lights	Supply on	Green LED, on transmitter only
	Output state	Yellow LED, on receiver only

1. Sensors available with 5 m (16.4 ft) cable: To order, add the suffix L5 to the reference selected from above.
 Example: sensor XU1N18PP341 with 5 m cable becomes XU1N18PP341L5.

Photoelectric Sensors

XUM Miniature, Classic

High Performance, DC

High performance, self contained, medium range, miniature photoelectric sensors for industrial applications.

Features

- Very small dimensions: 1.4 x 0.87 x 0.39 in. (35.5 x 22 x 9.9 mm) fixed.
- Marginal detection signal (MDS) provided for alarm output and alignment help.
- Test input—system checking
- Light/dark selectable
- Short range proximity mode for background avoidance
- Color mark detection. Green and red light for difficult contrast sensing
- Two LED alignment system
- Mounting bracket included.

For options, see page 91.

Type	Output Mode	Voltage Range	Load Current Maximum	Operating Frequency Maximum	Catalog Number
Convergent Beam [▲]—Sensing Range 15 mm (0.6 in.) [*]					
Red light					
PNP 3-wire	Light /dark	12–24 V	100 mA	500 Hz	XUMH15353R

Photoelectric Sensors

XUK Subcompact, Classic DC

Features

- Increasingly popular rectangular body style perfect for mounting flat against machine wall
- Versatility incorporated in every mode of detection
- Universal features simplify retrofit
- 10 s, three-mode programmable time delay
- High gain reserve produces superior sensing distances
- Smallest multi voltage time-delay photo available
- Mounting bracket included (adapts to competitive models)
- Hinged, locking plastic cover protects adjustments

XUC Compact, Limit Switch Body Style

DC or AC/DC Timer

Features

- Sleek but rugged compact body with very long sensing distances
- Solid-state (NPN or PNP selectable) or Relay output (N.O./N.C.)
- Built-in 0–15 s timer option on AC/DC models
- Alarm output on DC versions
- Adjustable background suppression in Diffuse modes
- Oversized potentiometer for sensitivity adjustment
- Two 360° LED indicators (output and stability)
- Light/dark selectable
- Hinged transparent cover protects adjustments
- Cable or connector versions (see p. 484 for cables)
- 30 mm (1.18 in.) tubular base with mounting nuts
- UL rated for outdoor use, NEMA Type 4X

Photoelectric Sensors

XUL Subcompact

DC, AC/DC

Cable

Micro-style connector

Features

- Subcompact, medium-range, self-contained photoelectric sensors for industrial applications
- DC or AC/DC solid-state output, AC/DC relay output
- 2-wire solid-state AC/DC output provides substantially longer life than conventional relays, ideally suited for intensive material handling applications
- Economical
- Small size
- Flat lenses
- Side or front mounting
- LED visible from two directions (front, top)
- 45° cable entry for ease of wiring
- Cable or connector options available ^②
- 2-wire solid-state output saves wiring time
- Universal 24–240 Vac/Vdc power supply
- Double-insulated enclosure means no grounding is required
- Programmable light/dark (DC only)
- UL Listed

Photoelectric Sensors

XUJ Analog with Background Suppression

Analog Output, DC

Features

- Distance indication independent of target color or texture
- Elimination of background influence
- Dual outputs 4–20 mA and 0–10 Vdc (selectable)
- Long range proximity (diffuse) with background suppression 20–80 cm (7.87–31.50 in.)
- FDA approved housing material—Ultem® plastic
- Rated for resistance to shock, vibration, and aggressive industrial environments (i.e. water, salts, oils, grease, alcohols and cleaning solutions)
- Seamless housing design
- LED indicator with an illumination level proportional to the output voltage
- Double-insulated enclosure means no grounding required
- UL Listed, CSA Certified, CE Marked

Applications:

- Bulk or liquid level control
- Thickness monitoring
- Winder speed control
- Position indication for feedback to drives and similar devices in web control applications
- Size sorting of objects such as fruit and vegetables

* Front mounting
(Ø 4 screws and inserts supplied)

Fiber Optics

XUFA Glass Fiber Optics

Smooth, straight

Threaded, straight

Smooth, 90°

Threaded, 90°

Window, short

The XUFA is one of the most versatile heavy-duty, glass-core fiber optic sensors in stainless steel sheeting available.

Features

- Coiled stainless steel sheathing withstands most aggressive environments while maintaining a high degree of flexibility
- Transmission of light through the fiber optics is not affected by water, gasoline, oil, sulfuric acid or other organic acids
- Most common sensing tips are standard (other tip configurations and cable lengths can be made to order—contact the factory)
- Very wide temperature range: -49 to 527 °F (-45 to 275 °C)
- Two scanning modes are recommended: thru-beam using a pair of cables (emitter-receiver)
- Proximity (diffuse) using a bifurcated cable with a triple sensing tip in which emitter and receiver fibers are mixed.

NOTE: If steps are taken to avoid the effects of proximity, the bifurcated cable can also be used in retroreflective scanning mode.

Tip	Nominal Sensing Distance * XUET	Length Maximum	Bundle Diameter	Catalog Number
Thru-beam (pair) (single emitter and receiver sold as a pair)				
Smooth, straight	11.8 in. (300 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA110213
Threaded, straight	11.8 in. (300 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA110113
Threaded, straight	11.8 in. (300 mm)	12 ft (3.66 m)	0.125 in. (3.2 mm)	XUFA1101112
Smooth, 90°	11.8 in. (300 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA110413
Threaded, 90°	11.8 in. (300 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA110313
Window, short	10 in. (255 mm)	36 in. (914 mm)	0.38 x 0.032 in. (9.65 x 0.80 mm)	XUFA110513
Proximity (bifurcated) (Y-shaped dual reflective type)				
Smooth, straight	4.33 in. (110 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA210213
Threaded, straight	5.51 in. (140 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA210113
Threaded, straight	4.53 in. (115 mm)	12 ft (3.66 m)	0.125 in. (3.2 mm)	XUFA2101112
Smooth, 90°	3.94 in. (100 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA210413
Threaded, 90°	4.72 in. (120 mm)	36 in. (914 mm)	0.125 in. (3.2 mm)	XUFA210313
Window, short	3.94 in. (100 mm)	36 in. (914 mm)	0.38 x 0.032 in. (9.65 x 0.80 mm)	XUFA210513

* Excess gain one—in normal ambient conditions, maximum usable sensing distance is 75% of normal.

Photoelectric Sensors

Fiber Optics

XUFA Glass Fiber Optics

Wiring

Light mode: the output is energized when a target is not present (the proximity output is energized when a target is detected).

Dark mode: the output is energized when a target is present (the proximity output is energized when a target is not detected).

Photoelectric Sensors

Fiber Optics

XUFN Plastic and XUFS Glass Fiber Optics

Dual Dimensions inches
mm

Features—XUFN

- The XUFN series of plastic core fiber optics provides flexibility in usage at an affordable price.
- Smooth plastic jacket (polyethylene) in straight or coiled versions, withstands most industrial environments including food processing and pharmaceuticals
- Straight cable standard
- Threaded and flexible nozzle tips
- Suitable for very small part detection
- Two scanning modes are recommended
- Thru-beam using a pair of cables (emitter-receiver); proximity diffuse using a bifurcated cable with a single sensing tip in which emitter and receiver fibers are mixed
- Standard separate emitter-receiver bundles or randomized receiver with an emitter core for very near detection are available.

NOTE: If steps are taken to avoid the effects of proximity, the bifurcated cable can also be used in retroreflective scanning mode.

Features—XUFS

- The XUFS series of glass core fiber optics provides ruggedness, higher temperature ratings and excellent withstanding in aggressive/chemical environments
- Coiled fiber cable for applications with significant movement between the amplifier and the sensing tip

Photoelectric Sensors

Fiber Optics

XUFN Fiber Optic Cables for Specific Applications

Features

Suited for specific applications that were once difficult to tackle.

XUFN•L L for lens:

- Integrated focusing lens for precise spot-sensing
- Senses longer distances
- Convergent beam types sense to three different ranges

XUFN•P P for power:

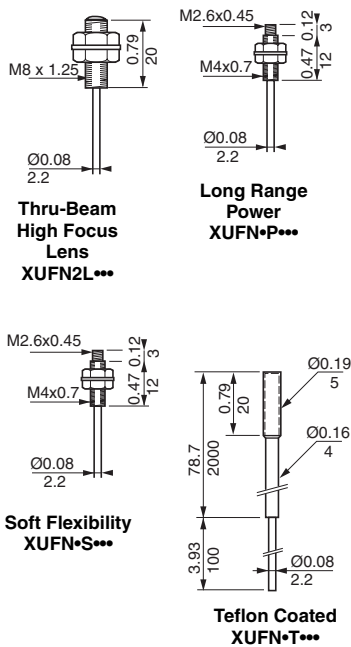

- Increases sensing distance by 40%
- Burns through pollutants for reliable detection

XUFN•S S for soft:

- Flexible enough for maneuvering tight corners
- Bend radius of 4 mm (0.16 in.)

XUFN•T T for Teflon®:

- Resists chemical aggressions
- Ideal for food and beverage, assembly and electronic, semiconductor

XUV with Separate Optical Heads

Optical Sensing Heads

The XUV series of separate optical sensing heads and amplifiers provides maximum flexibility in difficult applications.

Features

- Thru-beam, retroreflective, and proximity diffuse in several housing styles. Tubular: threaded or clip-on for easy replacement
- Extra flat for hard-to-access places, i.e. small conveyers
- Fork style for edge or mark detection
- Convergent for background suppression
- Visible red or green light for easy positioning and better contrast detection
- UL Listed ■
- CSA Certified

Photoelectric Sensors

XUV with Separate Optical Heads

Amplifiers, DC and AC

XUVH/J

XUVF

The XUV series of amplifiers designed for use with XUV optical sensing heads provide maximum flexibility in difficult applications. Features include:

- DIN rail mounting
- Light/dark programmable
- 3-LED alignment system
- 40 ms time delay programmable on beam break—selectable on/off

XUVH/J

- 2 potentiometers (coarse and fine)
- Marginal detection signal (MDS) output (alarm signals before sensor quits)
- System test input—turns off emitter; receiver follows suit if system is OK
- DC single channel, pre-wired
- Standard (1 ms) or fast (0.7 ms) response time (selectable)
- Gating (synchro) input for each channel (except XUVF)

XUVF

- AC
- Single and dual channel, relay output
- Screw terminals

DC Amplifiers

Output	Operating Frequency Maximum	Test Output	Synchro Input	Catalog Number
PNP	500 Hz/2,500 Hz	Yes	Yes	XUVH003530
NPN	500 Hz/2,500 Hz	Yes	Yes	XUVJ003530

AC Amplifiers

No. of Channels	Operating Frequency Maximum	Test Output	Synchro Input	Catalog Number
1	50 Hz	—	—	XUVF000510
2	50 Hz	—	Yes	XUVF000511

For optical heads, see page 106.

Photoelectric Sensors

XUK Subcompact

Transparent Detection with Timer—DC

Features

- Detection of PVC, PET and glass targets at a high rate of speed
- Self-teaching feature enables setup with the press of a button
- Alarm output warns of marginal signal
- Time delay (perfect for avoiding jamming on bottling line) adjustment by potentiometer
- Cable or micro-connector style available

Photoelectric Sensors

XUM Miniature, Color Mark DC

High-performance, self-contained, medium-range, miniature photoelectric sensors for color mark detection.

Features

- Very small dimensions: 1.4 x 0.87 x 0.39 in. (35.5 x 22.1 x 9.9 mm)
- Marginal detection signal (MDS) provided for alarm output and alignment help
- Test input—system checking
- Light/dark selectable
- Green and red light for difficult contrast sensing
- 2 LED alignment system
- NEMA Types 4, 6, 6P ratings
- Mounting bracket included
- UL Listed, CSA Certified

Type	Output Mode	Voltage Range	Horizontal inclination of reader, maximum [▲]	Load Current Maximum	Operating Frequency Maximum	Catalog Number

Photoelectric Sensors

XUR Rectangular Compact, Color

XURC Full Color and Fiber Optic Full Color

Features

- Ideal for applications such as sorting, label detection, and multi-color printing
- Self-teaching with adjustable sensitivity for comparing and matching similar colors
- Three channels with independent outputs
- Selectable response time
- Synchronization option available
- Selectable 40 ms time delay on beam break
- Adjustable sensing distance
- Withstands very high vibration
- Detects up to 8 mm diameter mark
- Easy-to-use programming panel under hinged, protective cover

Circuit Type	Output Type	Voltage Range	Load Current Maximum	Operating Frequency Maximum	Catalog Number
Diffuse—40 to 60 mm (1.57 to 2.36 in.) Nominal Sensing Range					
PNP	Light	12–24 Vdc	100 mA	1.2 kHz	XURC3PPML2
NPN	Light	12–24 Vdc	100 mA	1.2 kHz	XURC3NPML2
Fiber Optic—See Fiber Optic Cables for Sensing Distances					
PNP	Light	12–24 Vdc	100 mA	1.2 kHz	XURC4PPML2
NPN	Light	12–24 Vdc	100 mA	1.2 kHz	XURC4NPML2

Recommended Fiber Optics

Sensing Type	System	Sensing Distance	Diameter of Spot	Catalog Number
Convergent	Diffuse	0.39 in. (10 mm)	0.1 in. (2.5 mm)	XUFN5L01L2
Convergent	Diffuse	0.79 in. (20 mm)	0.2 in. (5 mm)	XUFN5L02L2

Standard	Diffuse	0.2 in. (5 mm)	—	XUFN05321
Standard	Diffuse	0.16 in. (4 mm)	—	XUFS05320
Standard	Thru-Beam	9.54 in. (250 mm)	—	XUFN12301 + XUFZ01
Standard	Thru-Beam	5.91 in. (150 mm)	—	XUFS2020 + XUFZ01

For additional plastic fiber optics, see p. 102.

Application Notes

Optimal installation is achieved when the sensor is approximately 15° tilted towards the object surface. One method for establishing an angle of 15° is shown in the illustration below. When the visible spot is positioned 10 mm forward of the vertical center-line to the uppermost mounting hole of the sensor, the face of the sensor is at an angle of 15° to the target object.

Since the detection is less affected by the changes in the sensing angle, moving direction of the object should be as shown in the figure to the right.

Selection of Operating Mode

- Operating Status LED**
- Learning mode button, for memorizing reference colors**
- Reference color and operating mode selector**
Selection of reference colors (Set)
Selection of operating mode
Tolerance mode (positions 1–5)
5 positions allow selection of the tolerance level to be applied to the shading of the color to be detected.
Run mode (position S)
This mode enables sorting by color
- C or C + I selector**
Mode C
This mode is used to detect different colored objects.
Mode C or C + I
In this mode, the sensor is insensitive to varying surface finishes of the object to be detected.
- Synchronization mode selector**
Internal synchronization mode (INT)
In this mode, color detection is performed continually.
External synchronization mode (EXT)
In this mode, color detection is synchronized with an external signal.

External synchronization mode

- Response time mode selector**
Fast mode (F), Normal mode (N), Slow mode (S)

- Output time delay selector (T-On/T-Off)**

Output time delay, internal synchronization mode

Output time delay, external synchronization mode

Photoelectric Sensors
XUV Fork and Frame
Advanced Label Detection Fork, DC

Features

- Detects opaque colors on transparent background
- Self teaches to memorize label for accurate detection
- Adjustable from straight to 90° connection
- Two LEDs indicate three conditions: yellow—output; green—ready; red—error
- Standard nano-style connector
- Durable zinc alloy enclosure

Circuit Type	Output Mode	Voltage Range	Load Current Maximum	Operating Frequency Maximum	Catalog Number
Thru-Beam—2 mm (0.079 in.) Nominal Sensing Range—Infrared light emission					
PNP/NPN	Light/dark	12–24 Vdc	100 mA	10K Hz	XUVK0252S
Thru-Beam—2 mm (0.079 in.) Nominal Sensing Range—Visible red/green light emission

Function table

Output state (PNP or NPN) indicator (illuminated when sensor output is On)

Mode	Thru-beam system	
	Absence of label in the beam	Presence of label in the beam
Light switching		
Dark switching		

- 1 Applications: the infrared transmission beam sensor XUVK0252S is suitable for detecting all types of opaque legends; the red/green transmission beam sensor XUVK0252VS is suitable for detecting all types of opaque legends of different colors.
- 2 The sensor incorporates self-teaching setup: the light or dark switching function is selected when performing the first stage of the self-teaching setup procedure during sensor installation (see self-teaching setup procedure, below).

Self-teaching setup procedure

- Place the label to be detected in the beam of the optical fork. Press the Set button and hold it down until the green LED (2) goes out.
- When the green LED flashes, the sensor has learned the label. Place the item to which the label is affixed in the beam of the optical fork. Press the Set button and hold down until the green LED goes out.
- When the green LED illuminates as a steady light, the self-teaching setup procedure is completed and the sensor is ready for operation.

Photoelectric Sensors

XUV Fork and Frame

XUVF Dynamic Fork Type, DC

XUVF sensors detect the dynamic flow of all types of objects (both metal and plastic, and of any color or shape)

The fork body detects moving targets, for use in applications such as

- Parts ejection, as in air compression transfer of parts
- Counting of parts traveling down a chute
- Continuous feeding of thread, to detect breakage

Features

- Detects targets falling at a minimum of 10 cm/s (3.9 in./s), maximum 15 m/s (49.2 ft/s)
- Off-delay (reset) timer function: 0 to 5 s
- Sensitivity and timing adjustment by separate potentiometers
- Green output LED and red alarm LED for clear indications
- Sturdy aluminum body and M8 (Nano) connector

Reflectors

Corner cube reflectors used with retroreflective photoelectric sensors provide a high degree of reliability, since they return the light to its source even if the reflector and the switch are significantly skewed with respect to one another. Corner cube reflectors also have the only reflective surface that works with polarized photoelectric sensors.

The nominal sensing distance for every retroreflective switch model in this catalog was established using a 3 in. (76 mm) RF30 reflector. Smaller reflectors will result in shorter sensing distances. They are used to detect smaller targets comparable with their dimension. *The standard reflectors present a blind spot at about 10% of the sensing distance. Special reflectors XUZC24/50 are designed to eliminate this inconvenience and even allow the reflector to touch the sensor lenses.*

RF30 and RF20 models can be mounted with a bolt. RF10 models can be mounted using a bezel or plate (not provided) or using its own adhesive tape.

Rectangular shaped reflectors increase sensing precision. They are also easier to mount side by side to increase the reflective surface.

Reflective tape can be used to cover unusually shaped targets; it is not a corner cube reflector. Only super-reflective tape is a corner cube reflector; it can also be used with polarized retroreflective sensors.

Reflectors

Description	Reflectivity	Temperature Range	Catalog Number
3 in. (76 mm) diameter, acrylic lens	4000X	150 °F (65 °C)	RF30
2 in. (51 mm) diameter, acrylic lens	4000X	150 °F (65 °C)	RF20
1 in. (25 mm) diameter, acrylic lens	4000X	150 °F (65 °C)	RF10
3.25 x 1.5 in. (83 x 38 mm), acrylic lens (orange)	4000X	150 °F (65 °C)	RF13
4 x 4 in. (102 x 102 mm) diameter, acrylic lens	4000X	150 °F (65 °C)	XUZC100
1.3 x 1.1 in. (33 x 28 mm) close proximity—acrylic*	6000X	150 °F (65 °C)	XUZC24
2 x 2 in. (51 x 51 mm) close proximity—acrylic*	6000X	150 °F (65 °C)	XUZC50
0.63 in. (16 mm)	4000X	150 °F (65 °C)	XUZC16
0.83 in. (21 mm)	4000X	150 °F (65 °C)	XUZC21
1.22 in. (31 mm)	4000X	150 °F (65 °C)	XUZC31
1.53 in. (39 mm)	4000X	150 °F (65 °C)	XUZC39
3.15 in. (80 mm)	4000X	150 °F (65 °C)	XUZC80

* Note: XUZC24/50 reflectors must always be mounted in the vertical plane with respect to the optical axis of the switch.

Retroreflective Tape

Description	Typical Luminance Factor ^①	Temperature	Catalog Number
Photoelectric grade sheeting with adhesive backing ^②			
3 in. (76 mm) wide, 1 ft (0.3 m) long ^③	200X	200 °F (93.4 °C)	RF7590
High intensity sheeting with adhesive backing—vinyl sealed ^②			
3 in. (76 mm) wide, 1 ft (0.3 m) long ^③	670X	150 °F (65.6 °C)	RF3870

Principles of optical detection

Composition of a photoelectric sensor

A photoelectric sensor basically comprises a light beam emitter (light emitting diode) and a light sensitive receiver (photo-transistor). A light emitting diode (LED) is an electronic semi-conductor component that emits light when an electrical current flows through it. This light can be visible or invisible, depending on the transmission wavelength. Detection occurs when an object enters the transmitted light beam and, in so doing, affects the intensity of the light at the receiver. As the light intensity at the receiver decreases, a point is reached whereby the output of the sensor changes state.

- 1 Light beam emitter
- 2 Light beam receiver
- 3 Processing stage
- 4 Output stage

Light spectrum

Depending on the model, the transmission beam is either infrared, visible red, or visible green. Visible red LEDs and photo-transistors are used for plastic fiber-optic and polarized retroreflective system sensors.

Modulation

The advantage of LEDs is their very fast response. To render the system insensitive to ambient light, the current flowing through the LED is modulated to produce a pulsed light transmission. Only the pulsed signal is used by the photo-transistor and processed to control the load.

Photoelectric Sensors Detection Systems

Thru-beam system

The thru-beam system comprises two components: an emitter and a receiver.

- long sensing distance—up to 203 ft (62 m)
- precise and reliable detection
- good resistance in polluted environments (dust, stray light beams, etc.)

But:

- the object to be detected must be opaque
- it requires two components that must be mounted facing each other (emitter and receiver)

Retroreflective system

The retroreflective system comprises an emitter/receiver unit and a reflector for returning the transmitted light beam back to the receiver.

- medium sensing distance
- precise detection
- simple installation and setup (only one component to be wired)
- detection of opaque objects (general retroreflective system) or non-reflective transparent objects (retroreflective system specifically for transparent materials)

But: recommended for use only in clean environments.

Polarized retroreflective system

The polarized retroreflective system is an extension of the retroreflective system and incorporates light beam polarization filters. These filters enable reflective objects to be detected.

Its characteristics are identical to those of the retroreflective system, but include the following features:

- reliable detection of all types of reflective objects, due to the polarization filters
- visible light beam transmission (red), which assists alignment of the system

Proximity diffuse system

The proximity diffuse system comprises one emitter/receiver unit. The object itself reflects the transmitted light beam back to the receiver.

- short sensing distance that depends on the color of the object (reflection coefficient)
- simple installation and setup (only one component to be mounted and wired)
- detection of any type of object (opaque, reflective or transparent)

But: only recommended for use in clean environments.

Proximity diffuse system with background suppression

The proximity diffuse system with background suppression is an extension of the proximity diffuse system and incorporates features that make it insensitive to background objects.

Its characteristics are identical to those of the proximity diffuse system, but include the following features:

- sensing distance not related to color of object
- insensitive to background objects, even if they are more reflective than the object to be detected

Photoelectric Sensors Detection Systems Characteristics

Thru-beam system

Aligning the emitter and receiver

A thru-beam system requires precise alignment of the emitter and receiver. The mechanical alignment tool is recommended for thru-beam systems with long sensing distances.

Retroreflective system

Function of the reflector

The reflector comprises numerous corner cube cavities that ensure total reflection of all light rays back along the same path.

Types of reflector:

- circular
- rectangular
- reflective tape

The reflector orientation angle (α) must be between 10 and 20° (see the sensing distance correction coefficient graph below).

Angle of incidence α

Correction coefficient

Choosing a reflector

Effect of the reflector size on the sensing distance of the sensor.

- XUJ, XUJ, XUL, XUM, ZUC
- XUJ, XUJ, XUL, XUM polarized retroreflective, ZUC
- XUB, XUP, XU••18
- For a surface area equivalent to the XUJC80.

The reflector must be smaller than the object to be detected.

**Photoelectric Sensors
Detection Systems
Characteristics**

Retroreflective system (cont.)

Positioning the reflector

The positioning of the reflector must be very precise to reflect the transmitted beam back to the receiver.

Incorrect orientation Incorrect centering Correct position

To avoid inadvertent operation due to stray reflections, avoid mounting the sensor-reflector optical axis at right-angles to the object to be detected, or any other reflective objects.

Using reflectors for short sensing distances

When using a reflector with small corner cubes (for example XUZC80) for short sensing distances ($D < 10\% S_n$), almost all of the beam is reflected back to the emitter and the sensor fails to operate correctly. Using a reflector with large corner cubes (for example XUZC24 and XUZC50) ensures that the light beam will be reflected back towards the receiver.

$D < 10\% S_n$

Polarized retroreflective system

Detecting highly reflective objects

In the polarized retroreflective system, the transmitted light beam is filtered so that only the rays on a vertical plane are passed through. The corner cube reflector depolarizes the beam and reflects it back to the receiver, which is designed to accept light rays on a horizontal plane only.

Applications: A reflective object sends back the light rays in the same plane on which they were received (vertical plane). The beam is blocked by the receiver filter, since only rays on a horizontal plane are accepted.

- 1 Non-polarized
- 2 Vertically polarized
- 3 Horizontally polarized
- 4 The reflector depolarizes the light beam

Photoelectric Sensors Detection Systems Characteristics

Proximity diffuse system

Influence of the object material to be detected

The sensing distance of a proximity diffuse system sensor is influenced by the object material (reflection coefficient, color, etc.).

The curve above indicates the usable sensing distance (S_n) correction factor related to the reflection coefficient of the object.

Note: If the application requires that different object materials be detected at the same distance, the choice of sensor and adjustment of the sensitivity is based on the object that has the lowest reflection coefficient.

Influence of background objects

If background objects are more reflective than the object to be detected, the proximity diffuse system is not suitable. To avoid background detection, use a proximity diffuse system with background suppression.

Proximity diffuse system with background suppression

Principle

This system enables detection of an object at a given distance regardless of its color (reflection coefficient), while ignoring any background objects.

It is a proximity diffuse system that focuses the light beam such that the luminous spot being reflected back to the photo-sensitive receiver is at a distance equal to that of the object to be detected. By relating to the distance of this spot, the sensor differentiates the object from the background.

Setup recommendations

Recommended trajectories of objects

Fiber optics

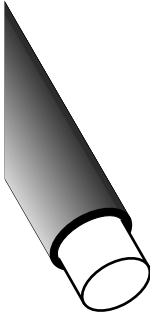

Principle

The fiber optic acts as a light conductor. Light rays entering the fiber at a certain angle are conveyed to the required place, with minimum loss.

1 core 2 sheath

Plastic fibers

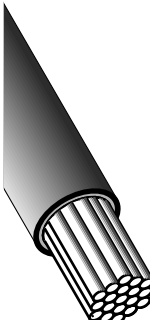

The core of the fiber is flexible plastic (PMMA). There is usually a single fiber, 0.25 to 1 mm, depending on the model. Plastic fibers are used with amplifiers transmitting red light. Minimum bend radius:

- 10 mm for fiber with 0.25 mm core,
- 25 mm for fiber with 1 mm core.

Advantage: Fibers can be cut to the required length.

Glass fibers

The core of the fiber is silica. For maximum flexibility, each fiber comprises numerous strands of approximate diameter 50 μ. Glass fibers are used with amplifiers transmitting infrared or red light. Minimum bend radius:

- 10 mm (0.39 in.) with plastic sheath
- 90 mm (3.54 in.) with stainless steel sheath

Advantages:

- suitable for use in temperatures up to 250 °C (482 °F)
- stainless steel sheathed fibers provide protection against mechanical impacts and crushing.

Specific aspects

Separate amplifier

- Compact size
- Detection of very small objects
- Precise detection

Optical heads

Specific aspects

Separate amplifier

- Very small detection head
- Extensive range of heads (fork, extra flat, convergent, etc.) for specific applications
- Detection of small objects

Proximity diffuse system for color mark reading

Detection of contrasting colors

Detection of color index mark on contrasting plain color background. Principle of operation based on the difference between the colors (contrast) of the background and index mark in green or red light. The stronger the contrast between the colors, the higher the difference between the received signal strengths and the more reliable the detection.

Photoelectric Sensors Outputs and Wiring

2-wire

2-wire AC or AC/DC

- Not protected against overload and short-circuit
- Light or dark switching output function, depending on model

3-wire

3-wire DC PNP or NPN type

- Protected against overload and short-circuit
- 4 models:
 - PNP light switching
 - NPN light switching
 - PNP dark switching
 - NPN dark switching

3-wire DC PNP or NPN type, light or dark programmable switching

- Protected against overload and short-circuit
- 2 models:
 - PNP light/dark programmable switching
 - NPN light/dark programmable switching
- Light or dark switching programming by means of connecting orange wire (OG) to either:
 - brown wire (BN) for light switching
 - blue wire (BU) for dark switching

5-wire

5-wire AC/DC output relay

- Light switching or light/dark programmable switching, depending on model
- AC or DC supply with wide voltage range
- 1 N.C./N.O. output relay, either 2 A ($\cos \varphi = 1$) or 0.5 A ($\cos \varphi = 0.4$)

Analog output

Output voltage

Output current

- Analog output sensors are based on a proximity diffuse system with background suppression and provide an output signal proportional to the distance of the object from the sensor (signal not dependent on the reflection coefficient of the object).
- 2 output configurations possible on the same unit:
 - Output voltage: The output voltage varies between 0 and 10 V, in proportion to the sensor-object distance.
 - Output current: The output current varies between 4 and 20 mA, in proportion to the sensor-object distance.

Photoelectric Sensors Outputs and Connections

Output functions

▶ **Light switching:
beam received
= output On**

▶ **Dark switching:
beam not received
(broken)
= output On**

Connection methods

▶ **Pre-cabled**

Factory-fitted molded cable—good protection against splashing liquids

▶ **Connector**

Ease of installation and maintenance

▶ **Screw terminals**

Flexibility—cable runs to required length

Photoelectric Sensors Complementary Functions

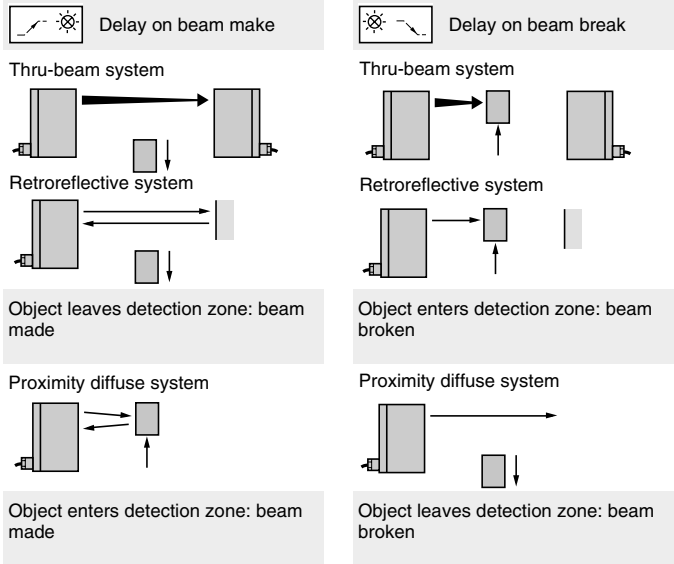

Output signal time delay

Principle

Some models of XUJ, XUX, XUV, and XUC sensors incorporate an adjustable time delay.

The following configurations are possible:

- light switching output, time delay on beam break
- dark switching output, time delay on beam break
- light switching output, time delay on beam make
- dark switching output, time delay on beam make

Time delay on beam make

The time delay is triggered as the beam is made and the output will not change state until the preset time (T) has elapsed. If the beam is broken and re-made during this period, the timer resets to zero.

Time delay on beam break

The time delay is triggered as the beam is broken and the output will not change state until the preset time (T) has elapsed. If the beam is made and re-broken during this period, the timer resets to zero.

Photoelectric Sensors Complementary Functions

One shot function

Principle

The one shot function is an extension of the time delay function and can either be on beam make or on beam break.
As the beam is made or broken, the output of the sensor immediately changes state and remains in this condition during the preset time T, regardless of further beam makes or breaks.
After the preset time T has elapsed, the output returns to its initial state until the next beam make or beam break.

Time delay and one shot function

Sensors incorporating feature

Sensor type	Time delay function	Monostable function	Time delay
XUJT.....	and/or ■		Adjustable 0.25 to 15 s
XUX..... ▲	or ★	or ★	Adjustable 0.03 to 1 s or 1 to 60 s
XUVH..... XUVJ.....		or	40 ms fixed
XUVF.....		or	40 ms fixed
XUVT..... ▲	or ★	or ★	Adjustable 0.03 to 3 s or 1 to 60 s

■ Time delay on beam make and/or beam break.
★ Switchable selection of beam make or beam break.
▲ Switchable selection of time delay or monostable.

Beam break test

To confirm the correct operation of the sensor, a test input enables the transmitted beam to be broken, verifying that the output of the sensor changes state. This function is incorporated in sensor types XUM and XUV.

Beam made

Beam broken

Photoelectric Sensors Complementary Functions

Verification of correct operation

A red LED illuminates when the intensity of the light beam at the receiver is no longer strong enough to ensure correct operation of the sensor. This can result from dirty lenses, excessively polluted atmosphere, disturbance of optical alignment, etc.

This function is incorporated in retroreflective and thru-beam system sensor types XU•B18, XU•M18 (DC), XUM, XUJ, XUD and XUV.

In addition to the red LED indicating loss of received beam strength, a warning output is available for remote signalling. The output signal is delayed by 160 ms to eliminate temporary conditions.

This function is incorporated in retroreflective and thru-beam system sensor types XUM, XUJ and XUV.

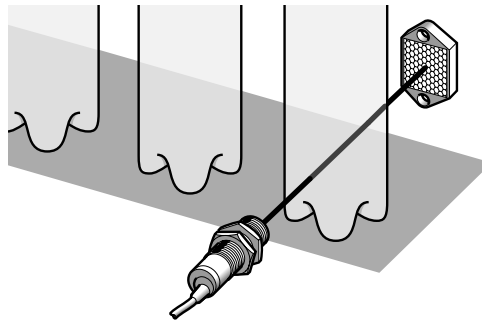

Optical alignment aid

A green LED assists setup by illuminating when optimum optical alignment of the sensor is achieved.

This function is incorporated in sensor types XUJ, XUX, XUD, and XUV.

Detecting transparent objects

These retroreflective system sensors, with low hysteresis, are specifically designed for detecting transparent object materials, such as:

- PET and PVC bottles and receptacles
- clear glass bottles, etc.
- PE (polyethylene) films

These systems use visible red beam transmission.

They are used in conjunction with a close-range reflector, type XUZC24 or XUZC50.

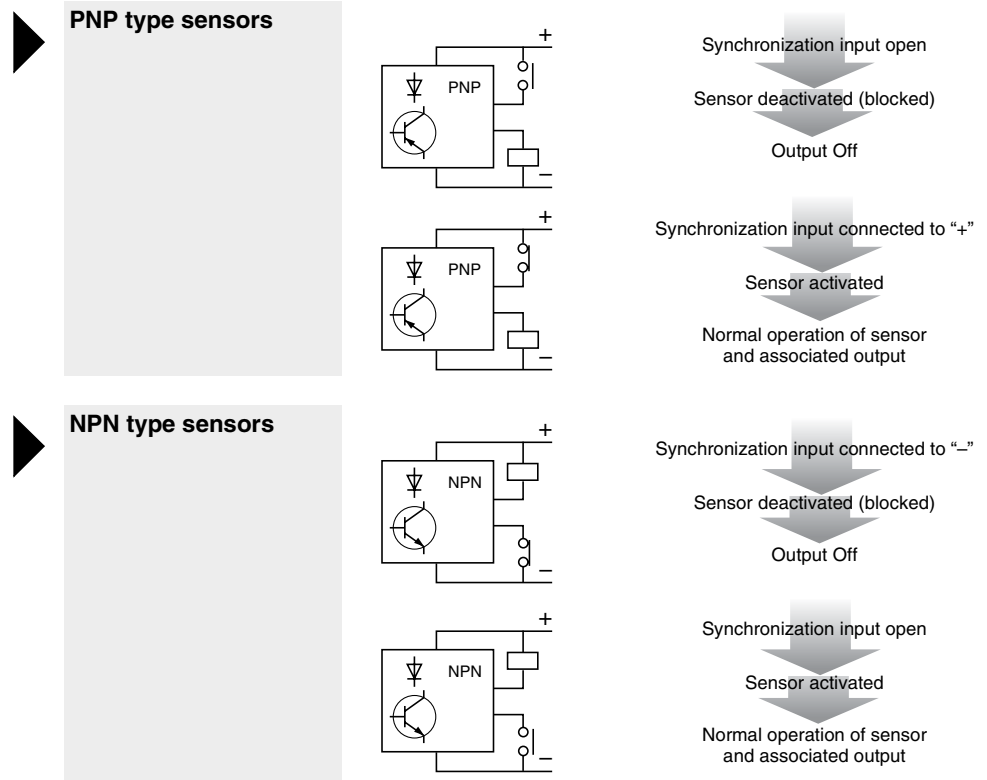

The sensing distance of the sensor depends on the reflector used.

The sensor-reflector distance depends on both the reflector used and the material to be detected.

Photoelectric Sensors Complementary Functions

Synchronization inputs

The synchronization input is an additional wire used externally to either activate or deactivate the sensor. When the sensor is deactivated (blocked) its output is Off, regardless of the presence or absence of an object. This synchronization input is incorporated in amplifiers for use with optical sensing heads (type XUV).

Application example: Verification of cork presence in bottle
 The synchronization feature makes it possible to verify the presence of a cork in a bottle and to feed this information to a PLC in the form **S** = no cork present. This is achieved by two detections: "presence of bottle" (synchronization sensor **2**) and "absence of cork" (optical sensing head **3**).
Advantages:

- Processing speed is very fast (unrelated to the cycle time of the PLC).
- Use of a PLC input is saved.
- This delocalized function can be used in an autonomous way, without a PLC, to directly control an actuator for the removal of a defective product.

- 1 Amplifier type XUV (PNP).
 - 2 Proximity diffuse system with a light-switching, PNP-type photoelectric sensor (detecting bottle presence/absence).
 - 3 Convergent optical sensing head type XUVN02428 (detecting cork presence/absence).
- BK** = output signal wires from amplifier 1 and sensor 2.
GR = synchronization input wire of amplifier 1.

Detection curves

Thru-beam system

Ideal detection

Acceptable detection

Example: detecting an object's excessive height

The  zone indicates the positioning tolerance of the receiver. The  zone represents the usable sensing zone of the system. Any opaque object entering this zone breaks the beam and causes the sensor's output to change state.

T = emitter
R = receiver

Special cases: It is possible to modify the usable beam to suit the application by masking the lenses.

- 1 Effective beam
- 2 Mask

Retroreflective and polarized retroreflective systems

Ideal detection

Acceptable detection

The  zone indicates the positioning tolerance of the reflector. The  zone represents the usable sensing zone of the system. Any opaque object entering this zone breaks the beam and causes the sensor's output to change state.

T = emitter
R = receiver

Proximity diffuse and proximity diffuse with background suppression systems

Object 20 x 20 cm

The  zone represents the sensor's sensitivity zone. All of this zone is usable: any sufficiently reflective object entering this zone, in the direction of the arrow, causes the sensor's output to change state. The black line corresponds to a white surface and the gray line to a darker surface. A test, using the object to be detected, enables calculation of the zone of sensitivity in relation to the object's reflection coefficient.

-  90% white object
-  18% gray object

Object 20 x 20 cm

Proximity diffuse systems with background suppression enable the detection of colored objects, or objects with different reflection coefficients, at virtually the same distance.

-  90% white object
-  6% black object

Gain curves

Principle

The operating distance (S_a) is the assured operating distance of the sensor, accounting for the environment (dust, etc.) and the reflector used.

$S_a < S_n$ (S_n = nominal sensing distance).

The gain curve indicates the acceptable safety margin for a thru-beam or retroreflective system sensor before jeopardizing its correct operation.

The gain is defined by the following ratio:

$$\text{gain} = \frac{\text{signal received by the photo-transistor}}{\text{signal needed for switching}}$$

Gain 1 corresponds to the minimum signal received that causes the sensor's output to change state.

The following thresholds should be used, depending on the ambient conditions:

- gain ≥ 5 : slightly dusty environment
- gain ≥ 10 : polluted environment (dusty ambient air, slight mist)
- gain ≥ 50 : very polluted environment (fog, smoke, etc.)

The measured values are generally transcribed onto a log/log graph:

- the distances are shown by the x-axis
- the gain is shown by the y-axis

NOTE: The sensing distance varies with the temperature.

The nominal sensing distances, as indicated on the reference/characteristic pages for the various types of photoelectric sensors, account for these variations within the temperature limits shown.

Examples of excess gain curves

Thru-beam system: **XUJM1000 + XUJM100314**
(measurement made at ambient temperature 25 °C / 77 °F).

Nominal sensing distance
 $S_n = 20$ m

Polluted environment
(necessary gain = 10)
 $S_a \leq 3$ m

Very polluted environment
(necessary gain = 50)
 $S_a \leq 1$ m

Retroreflective system: **XUJM06031**
(measurement made at ambient temperature 25 °C / 77 °F, with reflector XUZC80).

Nominal sensing distance
 $S_n = 12$ m

Polluted environment
(necessary gain = 10)
 $S_a \leq 5$ m

Photoelectric Sensors Standards and Certifications Parameters Related to the Environment

Influence of climatic environment

Ambient light

Standard photoelectric sensors are designed to have a high immunity to ambient light.

NOTE: Take precautions in the event of pulsed lights (such as neon signs, flashing beacons, and flash lights).

Dust, fumes, pollution, temperature, humidity

If the operating temperatures indicated on the reference/characteristic pages for the various sensors are not followed, the sensing distances will be affected, jeopardizing the correct operation of the unit.

Behavior in environments with high levels of interference:

- retroreflective system: risk of unreliable operation
- proximity diffuse system: not recommended
- thru-beam system: recommended

Correction coefficients to be applied to sensing distances indicated:

- **1.00**: clean environment
- **0.60**: lightly polluted environment
- **0.25**: moderately polluted environment
- **0.10**: heavily polluted environment (for thru-beam system).

- 1 Protective cover
- 2 Sun shade
- 3 Thermally insulated support

Outdoor mounting:

Ensure that the sensor (and reflector) are well protected. Mount the sensor (and reflector) on a thermally insulated surface to prevent frost, ice, or condensation from affecting the optical components.

Resistance to chemicals in the environment

Due to the very wide range of chemicals encountered in modern industry, it is very difficult to give general guidelines common to all sensors. To ensure lasting efficient operation, it is essential that the chemicals coming into contact with the sensors do not affect their casings and, in doing so, prevent their reliable operation. Refer to "Enclosure Materials" on the specification pages relating to the various sensor models.

Resistance to shock

The sensors are tested in accordance with the standard IEC 60068-2-27.

Resistance to vibration

The sensors are tested in accordance with the standard IEC 60068-2-6.

Degrees of protection

Refer to the reference/characteristic pages for the various sensors.

IP67: Protection against the effects of immersion, tested in accordance with the standard IEC 60529. Sensor immersed for 30 minutes in 1 m (3.28 ft) of water.

No deterioration in either operating or insulation characteristics is permitted.

Photoelectric Sensors

Specific Aspects of Electronic Sensors

Terminology

Leakage current (Ir):
The leakage current (Ir) corresponds to the current flowing through the sensor when in the open state.
Characteristic of 2-wire type photoelectric sensors.

Voltage drop (Vd):
The voltage drop (Vd) corresponds to the voltage at the sensor's terminals when in the closed state.
(Value measured at nominal current rating of sensor).
Characteristic of 2-wire type photoelectric sensors.

First-up delay:
The time (t) between the connection of the power supply to the photoelectric sensor and its fully operational state.

Other delays:

- **Response time (Ra):**
The time delay between entry of an object into the operating zone of the sensor, and the subsequent change of output state.
This parameter limits the speed and size of the object.
- **Recovery time (Rr):**
The time delay between an object leaving the operating zone, in which it is being detected, and the subsequent change of output state.
This parameter limits the interval between successive objects.

Supply

▶ **Photoelectric sensors for AC circuits**
(AC and AC/DC models)

Check that the voltage limits of the sensor are compatible with the rated voltage of the AC supply used.

▶ **Photoelectric sensors for DC circuits**

DC source: Check that the voltage limits of the sensor and the acceptable level of ripple, are compatible with the supply used.

AC source (comprising the transformer, rectifier, and smoothing capacitor):
The supply voltage must be within the operating limits specified for the sensor.
Where the voltage is derived from a single-phase AC supply, the voltage must be rectified and smoothed to ensure that:

- The peak voltage of the DC supply is lower than the maximum voltage rating of the sensor.
Peak voltage = nominal voltage $\times \sqrt{2}$
- The minimum voltage of the DC supply is greater than the minimum voltage rating of the sensor, given that:
 $\Delta V = (I \times t) / C$
 ΔV = maximum ripple: 10% (V)
I = anticipated load current (mA)
t = period of 1 cycle
(10 ms full wave rectified for a 50 Hz supply frequency voltage)
C = capacitance (μF)

As a general rule, use a transformer with a lower secondary voltage (Ve) than the required DC voltage (V).

Example:

18 Vac to obtain 24 Vdc

36 Vac to obtain 48 Vdc

Fit a smoothing capacitor of 400 μF minimum per sensor, or 2,000 μF minimum per ampere required.

Photoelectric Sensors

Specific Aspects of Electronic Sensors

Types of output

2-wire

These sensors are wired in series with the load to be switched. As a result, they are subject to:

- a leakage current (in the open state)
- a voltage drop (in the closed state)

For polarized (polarity conscious) DC sensors, the supply polarities must be observed.

For non-polarized (not polarity conscious) AC sensors, the supply polarity load connections to + or – are immaterial.

Advantages:

- The sensors can be wired in the same way as mechanical limit switches.
- For AC and AC/DC models, they can be connected to either positive (PNP) or negative (NPN) logic inputs (no risk of incorrect connections).

But:

Check the possible effects of residual current and voltage drop on the input device being controlled (pick-up and drop-out thresholds).

3-wire

These sensors comprise 2 wires for the DC supply and a third wire for transmission of the output signal.

- PNP type: switching the positive side to the load
- NPN type: switching the negative side to the load

The programmable universal sensors provide a choice of function, either: PNP/N.O., PNP/N.C., NPN/N.O., NPN/N.C.

Advantages:

- No residual current, low voltage drop
- N.O. + N.C. versions, for solid-state input coincidence control (4-wire type: XUJ, XUC, and XUX)
- Programmable models, reduced stock levels

But:

Certain models must be used only with their designated PNP or NPN type of logic input.

5-wire

Sensors incorporating output relay.

Both AC and DC sensors have electrically separate supply and output circuits.

Advantages:

- Higher output current, no voltage drop, no residual current
- Flexibility of output voltage
- Suitability for use with PLCs

But:

Reduced service life and operating rate

Example: XUJ, XUC, XUL and XUX sensors incorporating an output relay

Number of operating cycles

Service life for $\cos \varphi = 0.4$

Number of operating cycles

Service life for $\cos \varphi = 1$

Photoelectric Sensors

Electrical Installation of Electronic Sensors

Connection in series

2-wire type

Consider the following points:

- Multivoltage sensors cannot be connected in series.
- When in the open state, all sensors share the supply voltage, i.e.:

$$U_{\text{sensor}} = \frac{U_{\text{supply}}}{n \text{ sensors}}$$
 (assuming that each sensor has the same residual current value).
 U_{sensor} and U_{supply} must remain within the sensor's voltage limits.
- If only one sensor in the circuit is in the open state, it will be supplied at a voltage almost equal to the supply voltage.
- When in the closed state, a small voltage drop is present across each sensor. The resultant loss of voltage at the load will be the sum of the individual voltage drops and, therefore, the load voltage should be selected accordingly.

3-wire type

Not recommended. Prone to incorrect operation, must be pretested. Consider the following points:

- Sensor 1 carries the load current in addition to the no-load current consumption values of the other sensors connected in series. For certain models, this connection method is not possible unless a current limiting resistor is used.
- When in the closed state, each sensor produces a voltage drop and, therefore, the load voltage should be selected accordingly.
- When sensor 1 closes, sensor 2 does not operate until a certain time T has elapsed (corresponding to the first-up delay) and likewise for each sensor in the sequence.
- Flywheel diodes should be used when the load being switched is inductive.

5-wire type

For these sensors the supply and output circuits are electrically separate.

- The sensor/relay contact galvanic isolation is 1,500 to 2,500 V, depending on the model.
- The maximum voltage across each contact is 250 V.

Photoelectric Sensors

Electrical Installation of Electronic Sensors

Connection in series (continued)

Wiring sensor with mechanical contact

2- and 3-wire type sensors

Consider the following points:

- When the mechanical contact is open, the photoelectric sensor is not supplied.
- When the contact closes, the sensor does not operate until a certain time T has elapsed (corresponding to the first-up delay).

5-wire type sensors

Usage of schemes 2 or 3 is recommended. In scheme 1, as the external series contact opens, the voltage transient caused by the breaking of the inductive load will appear inside the sensor and, if greater than the recommended maximum insulation voltage, may cause a flashover within the sensor. The return path of this voltage will be back to one line of the supply, through the sensor, and should flashover occur anywhere on the printed circuit board, severe damage could occur.

Scheme 1

Scheme 2

Scheme 3

Connection in parallel

2-wire type

Using sensors wired in parallel, either between themselves or together with mechanical contacts, is not recommended.

Should one of the sensors be in the closed state, the sensor in parallel will be shorted out and no longer supplied. As the first sensor passes into the open state, the second sensor will become energized and will be subject to its first-up delay.

The configuration is only permissible where the sensors will be working alternately.

This method of connection can lead to irreversible damage of the units.

3-wire type

No restrictions.

Using flywheel diodes is recommended when an inductive load (relay) is being switched.

5-wire type

No restrictions.

For these sensors, the supply and output circuits are electrically separate.

The sensor/relay contact galvanic isolation is 1,500 to 2,500 V, depending on the model.

The maximum voltage across each contact is 250 Vac, depending on the model.

Photoelectric Sensors

Electrical Installation of Electronic Sensors

Wiring advice

Cable length

No limitation up to 200 m (656 ft) or up to a line capacitance of $\leq 0.1 \mu\text{F}$ (characteristics of the sensor remain unaffected). However, it is advisable to account for voltage drop on the line.

Separation of control and power cables

Telemecanique® photoelectric sensors are immune to electrical interference encountered in normal industrial conditions. Where extreme conditions of electrical noise could occur (large motors, spot-welders, etc.), protect against transients in the normal way:

- suppress interference at the source
- limit the cable length
- separate power and control wiring from each other
- filter the supply
- use twisted and shielded cable pairs for output signals

In cases necessitating intervention at the machine (such as arc welding), disconnect the sensors.

Dust and damp protection of cable glands

The level of dust and damp protection depends on how carefully the screws, seals, cable glands, blanking plugs, etc. are tightened. To ensure efficient dust and damp protection, use the correct diameter cable for the cable gland used.

AC supply

2-wire type sensors must not be connected directly to an AC supply. *This would result in immediate destruction of the sensor and considerable danger to the user.* An appropriate load (refer to the instruction sheet supplied with the sensor) must always be connected in series with the sensor.

Capacitive load (greater than 0.1 μF)

At switch-on, it is necessary to limit (by resistor) the charging current of the capacitive load C. The voltage drop in the sensor can also be accounted for by subtracting it from the supply voltage for calculation of R.

$$R = \frac{V \text{ (supply)}}{I \text{ max. (sensor)}}$$

Load comprising an incandescent lamp

If the load comprises an incandescent lamp, the cold state resistance can be one-tenth that of the hot state resistance. This can cause very high current levels on switching. Fit a pre-heat resistance in parallel with the photoelectric sensor.

$$R = \frac{V^2}{P} \times 10$$

V = supply voltage
P = lamp power

Photoelectric Sensors

Electrical Installation of Electronic Sensors

Troubleshooting

Problem	Possible causes	Remedy
The sensor's output does not change state when an object enters the operating zone.	Output stage faulty or complete failure of the sensor (in either case, the sensor must be replaced), or the short-circuit protection has tripped	Check that the sensor is compatible with the supply being used. Check the load current characteristics: <ul style="list-style-type: none"> If load current $I \geq$ maximum current, a relay should be interposed between the sensor and the load. If load current $I \leq$ maximum current, check for wiring faults (short circuit). In any case, a quick-blow fuse should be placed in series with the sensor.
	Wiring error	Verify that the wiring conforms to the wiring shown on the sensor label or instruction sheet.
	Supply fault	Check that the sensor is compatible with the supply (AC or DC). Check that the supply voltage is within the voltage limits of the sensor. Remember that with rectified, filtered supply: $d(U_{\text{peak}} = U_{\text{nominal}} \times \sqrt{2})$.
	With a retroreflective system: <ul style="list-style-type: none"> incorrect use of reflector poor state of reflector 	The retroreflective system must operate in conjunction with a reflector. Respect the operating distances. Clean the reflector. Replace the reflector if it has been damaged.
Operation is false or erratic, with or without the presence of an object in the operating zone	Influence of reflective background or object surface (stray reflections)	Refer to the instruction sheet supplied with the sensor. For adjustable sensors, reduce or increase the sensing distance.
	Operating distance poorly defined for the reflector or object used	Apply the correction coefficients. Realign the system. Clean the reflector or, if damaged, replace it.
	Influence of immediate environment	Clean the lenses and reflector. Fit a lens hood, where required.
	Influence of transient interference on the supply lines.	Ensure that any DC supplies, when derived from rectified AC, are correctly smoothed ($C > 400 \mu\text{F}$). Separate AC power cables and DC low level cables. Where very long distances are involved, use suitable cable: screened and twisted pairs of the correct cross-sectional area.
	Presence of equipment liable to emit electromagnetic interference	Position the sensors as far away as possible from any sources of interference.
	Response time of the sensor too slow for the particular object to be detected	Check the suitability of the sensor for the object to be detected. If necessary, select a photoelectric sensor with a higher switching frequency.
	Influence of high temperature	Eliminate sources of radiated heat, or protect the sensor casing with a heat shield. Adjust the temperature around the mounting support, and realign.
No detection following a period of service	Vibration, shock	Realign. Change the support, or protect the sensor.
	Contact deterioration	On an inductive load, use an RC suppressor connected in parallel with the load. Example: LA4D*** To eliminate contact contamination, the minimum current recommended is 15 mA. The relay output models are not recommended for rapid counting of objects, since their service life is too short. Use models with a solid-state output.
	Dusty atmosphere	Clean the lenses and reflectors with a soft cloth.

Proximity Sensors

Selection Guide

Auto-Adaptable Technology

Principle of Operation

Osiconcept technology offers simplicity through innovation.

With Osiconcept, a single product meets all metal-object detection needs. By simply pressing the Teach Mode button, the product automatically adapts to an optimum configuration for all detection, flush mountability, and environmental requirements. Other advantages of Osiconcept technology include:

- Increased Performance
 - Sensing distance is optimized regardless of the mounting configuration, the object, the environment, or the background.
 - Products are suitable for all metal environments.
- Simplified Use
 - Osiconcept technology is associated with the availability of the flattest, most compact sensors on the market, ensuring that the sensor is fully built into the machine, limiting risks of mechanical damage.
 - Using the teach mode eliminates mechanical adjustments.
- Lower Costs
 - Adjustment times and complex supports are eliminated.
 - The elimination of flush-mountable and non-flush-mountable versions halves the number of catalog numbers.
 - Product selection is easier and quicker.

Precision side-approach detection

Precision frontal-approach detection

Fine Adjustment for Precise Positioning

- Precision **side-approach** detection makes it possible to accurately define the position where the object is detected as it passes the sensor. With Osiconcept technology, the desired detection position can be stored in memory by simply pressing the teach button.
- Precision **frontal-approach** detection makes it possible to accurately define the position where the object is detected as it approaches the sensor. With Osiconcept technology, the desired detection position can be stored in memory by simply pressing the teach button.

Installation

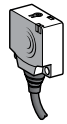

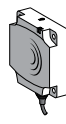

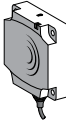

A full line of support brackets allows for simple, fast installation or maintenance. No tools are necessary; clip the sensor into place, and it is mounted and ready for operation. Brackets are available for all sizes—J, F, E, C, D—in flat and 90° styles.

Brackets are also available to substitute for existing XS•E, XS•C, and XS•D. See page 284.

XS6 Extended Range and Auto-Adaptable Inductive Sensor

Metal Tubular, DC and AC/DC

XS6 ••B1••L2

XS6 ••B1••M12

Features

Entire range of fully shielded metal body tubular inductive proximity sensors

- Increased sensing range, fully shielded
- 2-wire AC/DC and 3-wire DC
- Normally open or normally closed outputs available
- Cable and connector versions
- PNP or NPN, DC
- Self-Teach available on 12–30 mm versions

Note: Ensure a minimum of 10 V between the (+) positive and the sensor output (terminal 3).

Proximity Sensors

XS9 Application-Specific Inductive Sensor

Flat Rectangular Motion Detection, DC and AC/DC

Features

- Universal AC/DC versions
- Linear speed threshold adjustment
- Built-in fixed startup delay to overcome startup inertia
- Reverse polarity protection on DC models
- Ease of mounting (flat body style)

Principle and Applications

- Inductive proximity sensors for monitoring rotation or rolling speed operate by comparing a speed threshold preset by the operator with an instantaneous measurement of the speed of the moving part to be monitored or protected.
- These devices provide a simple and economical solution for monitoring drift, belt breakage, couplings, overloads, etc.
- They are commonly used for applications such as crushers and grinders, mixers and blenders, pumps, centrifuges and centrifugal separators, conveyor belts, bucket elevators, and archimedean screws.

Installation and Setup

Installing and Positioning the Sensor

- The sensor must be properly positioned at the outset to ensure detection of all target points on the monitored moving part. The XS9 sensor facilitates this task with its ability to operate as a standard inductive sensor (Telemecanique® patent pending).
- Using this system, positioning is 100% reliable and can be checked at any time without changing the product parameters.

Self-Teaching Speed Setup

- The normal or reference speed for the moving part (1) to be monitored can be set by simply pressing the self-teaching button (2). It is then confirmed with the display LED.
 - The product can be restarted at any time to return to the factory setting.
 - To ensure that the moving part can attain its normal speed (inertia), the product output remains closed for 9 s.
 - By default, the sensor's underspeed trip speed equals the preset speed minus 30%. For example, if the preset speed is 1000 rotations/minute, underspeed tripping occurs when the speed of the moving part falls below $1000 - (1000 \times 0.3) = 700$ rotations/minute. Thresholds of -20%, -11% and -6% can be set by pressing the self-teaching button.

Proximity Sensors

XS Tubular, Inductive Sensors

6.5 mm Diameter, DC; Economy, Short Length, Smooth Barrel

Proximity

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Features

- Faster troubleshooting aided by high-visibility, 360° indicators
- Economy of size offered by extended range model
- Reduction of relay or software logic using complementary N.O. + N.C. outputs
- Significant savings in replacement time by using the patented plastic mounting bracket (no gauging) or connectors
- Extensive protective circuitry for trouble-free operation
- Works with an unregulated DC supply powered by a 24 V secondary transformer
- Metal mounting nuts included
- Diecast zinc
- Normally closed (N.C.) output available on versions marked ★
- UL Listed, CSA Certified, and CE Marked

Proximity Sensors

XS Tubular, Inductive Sensors

12 mm Diameter, DC; Universal Standard Length

Features

- Faster troubleshooting aided by high-visibility, 360° indicators
- Rugged case designed for aggressive environments
- Worry free replacement: standard length, extended temperature and supply voltage range, improved enclosure ratings (IP68), 3-wire complementary PNP + NPN with selectable N.O./N.C. output circuit
- Significant savings in replacement time using the patented plastic mounting bracket (no gauging) or connectors
- Pigtail connector version (0.8 m / 2.6 ft cable) provides cutting oil rating (IP68) and connection for aggressive environments
- Trouble free operation ensured by extensive protective circuitry
- Works with unfiltered rectified power supply
- Metal mounting locknuts included
- Normally closed (N.C.) output available on versions marked ★
- UL Listed, CSA Certified, and CE Marked

Proximity

Features

- Faster troubleshooting aided by high-visibility, 360° indicators
- 2-wire versions simplify wiring
- High-impact stainless steel and plastic cases for aggressive environments—cutting oils, grease, solvents, etc.
- Worry free replacement: standard length, extended temperature and supply voltage range, improved enclosure ratings (IP68), 3-wire complementary PNP + NPN with selectable N.O./N.C. output circuit
- Significant savings in replacement time using the patented plastic mounting bracket (no gauging) or connectors
- Pigtail connector version (0.8 m / 2.6 ft cable) provides cutting oil rating (IP68) and connection for aggressive environments.
- Trouble free operation ensured by extensive protective circuitry
- Works with unfiltered rectified power supply
- Stainless steel locknuts for metal or plastic mounting nuts for plastic housings included
- Normally closed (N.C.) output available on versions marked ★
- UL Listed, CSA Certified, and CE Marked

Proximity Sensors

XS Tubular, Inductive Sensors

18 mm Diameter, DC; Universal Standard Length

Features

- Faster troubleshooting aided by high-visibility, 360° indicators
- Rugged case designed for aggressive industrial environments
- Worry free replacement: standard length, extended temperature and supply voltage range, improved enclosure ratings (IP68), 3-wire complementary PNP + NPN with selectable N.O./N.C. output circuit
- Significant savings in replacement time using the patented plastic mounting bracket (no gauging) or connectors
- Trouble free operation ensured by extensive protective circuitry
- Works with unfiltered rectified power supply
- Pigtail connector version (0.8 m / 2.6 ft cable) provides cutting oil ratings (IP68) and connection for aggressive environments. Screw terminals models for wiring special cables.
- Metal mounting locknuts included
- Normally closed (N.C.) output available on versions marked ★
- UL Listed, CSA Certified, and CE Marked

Proximity Sensors

XS Tubular, Inductive Sensors

30 mm Diameter, DC; Economy Short Length

Features

- 360° LED indicators
- Extended range models
- Complementary N.O. + N.C. models
- Rugged metal or plastic cases
- Patented plastic mounting bracket
- Connector options
- Extensive protective circuitry
- Works with an unregulated DC supply powered by a 24 V secondary transformer
- Metal locknuts for metal or plastic mounting nuts for plastic housing included
- Normally closed (N.C.) output available on versions mode marked ★
- UL Listed, CSA Certified, and CE Marked

Proximity Sensors

XS Tubular, Inductive Sensors

30 mm Diameter, DC; Universal Standard Length

Features

- Faster troubleshooting aided by high-visibility, 360° indicators
- Rugged case designed for aggressive industrial environments
- Worry free replacement: standard length, extended temperature and supply voltage range, improved enclosure ratings (IP68), 3-wire complementary PNP + NPN with selectable N.O./N.C. output circuit
- Pigtail connector version (0.8 m / 2.6 ft cable) provides cutting oil ratings (IP68) and connection for aggressive environments.
- Significant savings in replacement time using the patented plastic mounting bracket (no gauging) or connectors
- Trouble free operation ensured by extensive protective circuitry
- Works with unfiltered rectified power supply
- Metal mounting locknuts included
- Normally closed (N.C.) output available on versions marked ★
- UL Listed, CSA Certified, and CE Marked

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$ thread M30x1.5

Features

- 360° LED indicators
- Extended temperature range
- Extended supply voltage range
- IP68 rating
- AC/DC power supply
- Patented plastic mounting bracket
- Connector options
- Extensive protective circuitry
- Metal locknuts for metal or plastic mounting nuts for plastic housing and lockwashers included
- Normally closed (N.C.) output available on versions marked ★
- UL Listed, CSA Certified, and CE Marked

M30x1.5

Features

Entire family of proximity sensors dedicated to OEMs and “just enough” applications.

- DC tubular body style ranging from 6.5 mm to 30 mm diameter, in 3-wire, N.O. output
- AC tubular body style ranging from 12 mm to 30 mm diameter, in 2-wire, N.O. output
- Brass metal case with either 2 m cable or connector options
- Shielded and non-shielded versions available
- Mounting nuts included
- Sold in multiples of ten easy-open bags

Features

- Extended range feature available in Universal AC/DC, or DC only sensors, where previously only available in DC
- AC/DC has same extended sensing range as in DC only sensors
- Available in molded cable or connector versions
- Rugged IP68 nickel-plated brass casing
- 360° LED for complete visibility
- Metal locknuts included in carton

Proximity Sensors

XS Inductive Sensors

Ferrous/Non-Ferrous; Universal, DC

Proximity

- (1) Output LED (Yellow)
- (2) 0.5 in. (12.7 mm) NPT conduit opening
- (3) Oblong mounting hole: 0.21 x 0.28 in. (5.3 x 7 mm)

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

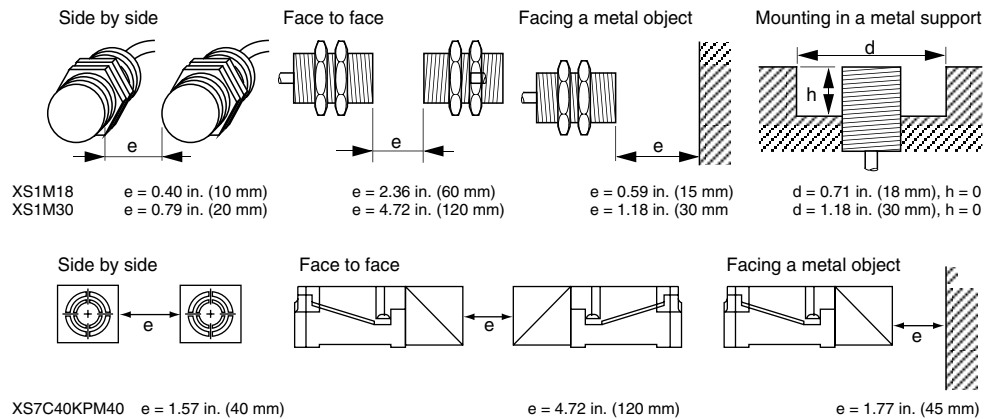

Features

- Detects all types of metals at the same sensing distance, whereas metals such as aluminum and copper require a standard sensor to be closer (see chart on next page).
- Body types include 18 mm nickel-plated brass housing, 30 mm stainless steel housing, and limit switch style in plastic housing.
- All are suitable for flush mounting in metal.
- Ideal for drop-in replacements for tubular and limit switch style standard sensors.
- Universal selectable output: PNP, NPN, N.O. and N.C.
- Available with 2 m cable, micro-style connector or 2.6 ft pigtail with micro-connector for very aggressive chemical environments.
- Tubular bodies have 360° visibility LED (four LED windows at 90° for connector version).
- Metal mounting nuts included with tubular versions.
- UL Listed, CSA Certified, and CE Marked.

Standard vs. Ferrous/NonFerrous Proximity Sensing Range (%)

Standard sensor technology requires an adjustment of up to 70% of the sensing distance to detect various metals. Because the ferrous/non-ferrous sensor detects all metals at the same distance, compensation is no longer needed. A smaller device can now perform at a range comparable to a larger sized or non-shielded device.

Proximity Sensors

XS5L8 Inductive Sensors

Miniature, Rectangular, DC

Proximity

XS5L81

XS5L81***S

XS5L82

XS5L82***S

Features

- 90° sensing for mounting in restricted spaces with face at end or center
- PNP/NPN, N.O. Output
- 360° ring or LED indicator visible from 4 quadrants
- Small, 8 x 8 x 43 mm (0.13 x 0.13 x 1.7 in.) square metal housing
- Mount side by side with no interference
- UL Listed and CSA Certified

Proximity Sensors

XS7H, XS8H Miniature Inductive Sensor

Subcompact Block Style, DC

Miniature microswitch type inductive proximity sensor for industrial applications.

Features

- Very fast response time
- Rugged plastic housing
- Extremely small for mounting in difficult-to-access locations
- Easy replacement of mechanical microswitches with matching footprint (V3)
- Longer life and substantially faster speed than mechanical switches
- High levels of radio frequency immunity (RFI): electrostatic discharge, fast transients and impulse voltage protected
- UL Listed, CSA Certified, and CE Marked

Specifications

Mechanical			
Usable sensing range ★	Shielded	0–1.6 mm (0.06 in.)	
	Non-shielded	0–3.2 mm (0.13 in.)	
Temperature range	-13° to 158° F (-25° to 70° C)		
Enclosure rating	IEC	IP67 (except connector style)	
Vibration (conforming to IED 68-2-6)	25 G, ±2 mm amplitude, 10–55 Hz		
Shock resistance	50 G for 11 ms (conforming to IEC 60068-2-7)		
Standard target size (steel)	12 x 12 mm (0.47 x 0.47 in.)		
Differential (% of Sr)	20%		
Repeatability (% of Sr)	10%		
LED indicator	Located on top of sensor		
Enclosure material	Plastic		
Wiring	22 AWG (0.34 mm ²), PvR cable		
Electrical	AC/DC models	DC models	
Voltage range	24 to 240 Vac	12–24 Vdc	
Voltage limit (including ripple)	24 to 210 Vdc	—	
Current consumption (maximum) (no load)	—	10 mA	
Maximum leakage (residual) current—open state	0.8 mA at 24 V, 1.5 mA at 120 V	0.1 mA	
Power-up delay (maximum)	40 ms	4 ms	
On delay (maximum)	1 ms	0.5 ms	
Off delay (maximum)	2 ms	1 ms	
Protective circuitry	Short circuit protection	No	Yes
	Overload protection	No	Yes
Agency listings	E 164869 CCN NRKH	CR 44087 Class 3211 03	

Options

Description	Suffix	
Extended temperature range	to +185° F (+85° C)	TT
	to -40° F (-40° C)	TF
5 m (16.4 ft) cable length	L1	
10 m (32.8) cable length	L2

Connector Cables (M8 or S suffix)

XSZCS101	Nano-style, 3-pin, 2 m, straight
XSZCS111	Nano-style, 3-pin, 2 m, 90°

Additional cable options and lengths... page 626

Proximity Sensors

XS7T/XS8T Inductive Sensors, Cubic Block Style

26 x 26 mm and 40 x 40 mm Square, DC

Features

- Compact cubic body style in rugged PBT plastic
- Flush and non-flush mountable
- Comparable sensing distance to limit switch style in half the body size
- Mounting bracket included with each sensor
- Elbow bracket provides interchangeability with limit switch style sensor, and enables multiple positioning of sensing face
- Molded cable, or molded cable with micro-connector pigtail 0.8 or 0.15 m (31.5 or 5.9 in.)

Proximity Sensors

XS7C/XS8C Limit Switch Type, Inductive Sensors

5-Position Turret Head, Plastic AC/DC, DC or AC

Sensing head turns to accommodate 5 different sensing positions

XS7/8

XSCT

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Standard limit switch housing inductive proximity sensors for industrial applications

Features

- PBT plastic body with stainless steel screws for corrosive environments
- Plug-in design for ease in replacement
- 5-position turret head for reduced inventory
- 0.5 in. (12.7 mm) NPT conduit entrance with many wiring and connecting options
- Radio frequency immunity (RFI) standard
- PLC compatible
- 2-LED system on selected models indicates on/off, power on
- DC versions work with unfiltered power supply
- Noise and transient protection
- Reverse polarity protection (DC models)
- Excellent resistance to aggressive environments (dripping corrosive fluids, submersion in water)
- Universal AC/DC 2-wire
- Longest extended range using the standard dimensions
- UL Listed, CSA Certified, and CE Marked

Proximity Sensors

XS Inductive Sensors, Limit Switch Body

5-Position Turret Head, DC IQ Prox™

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Features

Microprocessor based, self-teaching proximity switch adjusts to its environment on command, suppressing any metal background, then detecting the target it was taught to identify (see illustration).

- Can be recess mounted in metal without interfering with the sensing field
- Long range sensing 0.98 in. (25 mm)
- Plastic limit switch plug-in body style with 5-position turret head
- Two LEDs: (1) power supply and terminal mode (flashes in learning mode when sensor is learning its environment), (2) output
- 24 Vdc, complementary PNP- and NPN-type output
- UL Listed, CSA Certified, CE Marked

Illustrations:

1. The sensor can be flush mounted, non-flush mounted, or recess mounted. A metal background can be placed in immediate proximity to the sensor.

2. For setup, the teach mode is activated. When no target is present, the sensor learns the environment. Then, the target is passed in front of the sensor in the usual way.

3. The green LED flashes while the sensor is learning its environment and target, then becomes steady when the sensor is set.

4. The newly programmed sensor recognizes the target and provides output.

Activating self-teaching mode

Option 1
by external contact

Option 2
internally (repositioning of jumper)

When in the self-teaching mode, the green LED (status) flashes rapidly.

As objects pass through the detection zone, the sensor memorizes the two opposing thresholds in relation to its environment. When the self-teaching setup is complete, the green LED ceases to flash and maintains a steady light. The yellow LED indicates output.

Proximity Sensors

XSD Rectangular, Inductive Sensors

Long Range Block, AC and DC—Plug-in

Proximity

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Features

Rectangular low-profile switch, 3.5 in. square by 1.63 in. high (88.4 x 41.4 mm) designed for very demanding industrial applications.

- Housings: Plastic (thermoplastic polyester)
- LED indicators: target sensed, power on and short circuit (selected models)
- Timer model available for jamming applications
- Plug-in modular design
- Radio frequency immunity (RFI)
- Short circuit protection (SCP) (selected models)
- Alternate frequency models for side by side mounting (selected models)
- DC models: complementary outputs (PNP or NPN)
- AC models: selectable normally open (N.O.) or normally closed (N.C.)
- UL Listed, CSA Certified, and CE marked

Proximity Sensors

XSD Rectangular, Inductive Sensors

Long Range Block, AC and DC; Adjustable Sensing Range

Proximity

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Features

Rectangular, low-profile switch 3.5 in. square by 1.63 in. high (88.4 x 41.4 mm) designed for very demanding industrial applications. Especially recommended for long-sensing-range applications with metal in the background.

- Housings: plastic (thermoplastic polyester)
- Adjustable sensing range (30 to 60 mm); sensitivity can be decreased below the maximum usable sensing distance (48 mm) to cancel the metal background influence (20-turn potentiometer under the front plastic cap). For fixed long sensing distance, see page 258.
- LED indicators: target sensed, power on and short circuit (selected models)
- Plug-in modular design
- AC/DC model available
- Radio frequency immunity (RFI)
- Short circuit protection (SCP) (selected models)
- 1/2 in. NPT conduit entrance
- Protected, captive saddle-clamp terminals in ready-to-wire position
- DC models: complementary outputs PNP or NPN
- AC models: programmable output N.O./N.C.
- UL Listed and CSA Certified

NOTE: Sensors are factory adjusted for the maximum sensing distance.

Do not attempt to increase the sensing distance above the factory setting; sensor behavior becomes unpredictable.

30–60 mm (2.36 in.) Sensing Range, Non-Shielded

Proximity Sensors

XSAV Tubular, Inductive Sensors

30 mm Diameter, Motion Detection, DC or AC/DC

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

The XSAV is a self-contained device used to detect and send output alarms for machinery underspeed or zero-speed conditions, as well as early jamming detection. Early detection of an underspeed condition helps reduce downtime due to jamming or transmission failure, especially for medium and large motors.

The zero speed condition is used extensively for safety interlocking applications, including: conveyors, pumps, mixers, centrifugal separators, elevators, saws, and crushers.

As long as the speed (pulses/minute) is above the threshold level—adjustable via a 25-turn potentiometer within the threshold range—the output circuit assumes its closed state. When the actual speed falls below the threshold level, the output circuit assumes its open state. To preserve the startup delay, the switch should be reset by recycling power.

When the line voltage is initially applied, the output automatically assumes its closed state for the duration of the startup delay. This allows the mechanical assembly to overcome inertia and reach its nominal speed, greatly simplifying the interlocking circuit. After the startup delay, the switch performs as described above.

Take care to avoid exceeding the maximum frequency rating. Above this level, the sensor cannot detect the target and assumes zero-speed condition.

Features

- Universal AC/DC versions
- AC/DC models are PLC compatible
- Linear speed threshold adjustment
- Two adjustment ranges: 6–150 pulses/minute for zero-speed, 120–3000 pulses/minute for jamming detection
- Built-in fixed power-up delay to overcome startup inertia
- Radio frequency immunity (RFI)
- Reverse polarity protection on DC models
- Noise and transient protection
- Overload and short circuit protection (SCP) on DC models
- LED indicators for switch in closed state
- 25-turn potentiometer provides fine adjustment of the underspeed threshold

Steel mounting bracket, 90°	9006PA30
Plastic mounting bracket	XSZB130
0.5 in. (12.7 mm) NPT conduit adapter	7427

Application Notes:

The number of targets is determined knowing that the actual number of pulses per minute n , is $n=mN$ where m is the number of targets and N the speed in rpm.

This number (n) should be within the operating frequency range given in the selection table. For reasons of mechanical balance, even numbers are recommended (2, 4, 6 etc.).

Frequency threshold adjustment:

As long as the speed (number of pulses/minute) is above the threshold level—adjustable within the threshold range via the 25-turn potentiometer—the output circuit assumes its closed state. When the actual speed falls below the threshold level, the output circuit assumes its open state. To preserve the startup delay, the switch should be reset by removing and reapplying the power supply.

When the line voltage is initially applied, the output automatically assumes its closed state for the duration of the startup delay. This allows the mechanical assembly to overcome inertia and reach its nominal speed, greatly simplifying the interlocking circuit. After the startup delay, the switch will perform as described above.

Care should be taken not to exceed the maximum frequency rating above which the sensor cannot detect the target, therefore, assuming zero speed condition.

Accessories..... page 284

Proximity Sensors

XS Inductive Sensors, Weld Field Immune, DC Tubular

Features

Industrial welding processes create fields of electromagnetic noise that can interfere with the magnetic fields of inductive proximity sensors. Standard proximity sensors can be falsely triggered when near to these fields. WFI sensors allow uninterrupted performance when placed extremely close to the conductor carrying the welding current.

- The body styles are tubular in 12, 18, and 30 mm (0.47, 0.71, and 1.18 in.) diameters.
- Enclosure material is brass, coated in Teflon® to prevent slag (molten bits of metal) from sticking to the sensing face, reducing the possibility of false triggering.
- Micro-connector versions are available.*
- Mounting nuts are included.

Factory Mutual, 2 Wire DC

Principle of operation

2-wire Factory Mutual proximity sensors are characterized by a change in current consumption when a metal object is present within the sensing zone.

They differ from standard sensors by the absence of an output circuit. All processing is carried out by the associated amplifier or solid-state system to which they are connected.

The mode of operation is analogous to an N.C. contact:

- no object present: sensor is in the conducting state
- object present: sensor is in the non-conducting state

Factory Mutual System

Approved for Div I, II hazardous location with NY2 safe barrier relay.

Tubular type

Barrel Diameter	Barrel Type	Nominal Sensing Distance *	Operating Zone	Operating Frequency	Catalog Number
Nickel-plated brass case					
Shielded, 2 m (6.6 ft) cable					
4 mm	smooth	0.03 in. (0.8 mm)	0–0.02 in. (0–0.6 mm)	1,500 Hz	XSLN08122
5 mm	threaded	0.03 in. (0.8 mm)	0–0.02 in. (0–0.6 mm)	1,500 Hz	XSMN08122
6.5 mm	smooth	0.04 in. (1 mm)	0–0.03 in. (0–0.8 mm)	1,500 Hz	XSLN01122
8 mm	threaded	0.06 in. (1.5 mm)	0–0.03 in. (0–0.8 mm)	1,500 Hz	XSAN01122
Plastic case					
Shielded, 2 m (6.6 ft) cable					
8 mm	threaded	0.06 in. (1.5 mm)	0–0.05 in. (0–1.2 mm)	1,000 Hz	XSPN01122
12 mm	threaded	0.08 in. (2 mm)	0–0.06 in. (0–1.6 mm)	800 Hz	XSPN02122
18 mm	threaded	0.2 in. (5 mm)	0–0.16 in. (0–4.0 mm)	500 Hz	XSPN05122
30 mm	threaded	0.4 in. (10 mm)	0–0.31 in. (0–8.0 mm)	300 Hz	XSPN10122
Non-shielded, 2 m (6.6 ft) cable					
12 mm	threaded	0.16 in. (4 mm)	0–0.12 in. (0–3.2 mm)	400 Hz	XSPN04122
18 mm	threaded	0.31 in. (8 mm)	0–0.25 in. (0–6.4 mm)	300 Hz	XSPN08122
30 mm	threaded	0.6 in. (15 mm)	0–0.47 in. (0–12.0 mm)	200 Hz	XSPN15122

Plastic block type

Enclosure Style	Nominal Sensing Distance *	Operating Zone	Operating Frequency	Catalog Number
Shielded, terminal connections				
Limit switch style	0.6 in. (15 mm)	0–0.47 in. (0–12.0 mm)	100 Hz	XSCN151229

Applications

Intrinsically safe applications (hazardous area).

When used in these applications, it is imperative that (Factory Mutual) sensors be used only with an NY2 intrinsically safe relay/amplifier, or a suitably approved, compatible solid-state system. Example: Painting line in car assembly plant.

* Refer to page 327 for target material correction coefficient Km.

Dual Dimensions
inches
mm

Features

- DC output current directly proportional to the target distance
- Three body styles: tubular, limit switch style (with 5-position turret head), block style
- Both metal and plastic enclosures available
- Two types of output: 3-wire: 0–10 mA, 0–16 mA
2-wire: 4–20 mA, 4–14 mA

- (b) : main electric field

Features

Capacitive proximity sensors are ideal for sensing non-metal objects or for level control of fluids and granular material. A special wall-mounting bracket has been designed to replace thick or metal walls that the sensor cannot penetrate. The actual sensing range varies widely depending on the target material and environmental conditions (humidity, dust, etc.).

An internal compensation electrode is incorporated to suppress the effects of material deposits on the sensor's face. The threshold level is adjustable via a 20-turn potentiometer (except 12 mm) located at the rear of the switch. This adjustment can be used to zero out the presence of a plastic tube allowing the switch to sense through a bulk material or liquid level.

Other features include: metal housing (nickel-plated brass) or plastic housing (PBT); flush mountable in metal (except XT4); LED indication for output in closed state; mounting nuts included for threaded models; mounting bracket included for non-threaded versions, well-mounting brackets optional; sensitivity adjustment tool included; UL and CSA; CE mark.

* Maximum load current 150 mA when Ue=220 V.

The operating distance of the sensor is related to the dielectric constant ($\epsilon\gamma$) of the object material to be detected. The higher the value of $\epsilon\gamma$, the easier it will be for the object to be detected.

NOTE: Do not use this product in an environment with dew or condensation.

The usable sensing distance depends on the object material: $S_u = S_n \times F_c$

S_u = usable sensing distance; **S_n** = nominal sensing distance; **F_c** = correction coefficient for the object material

Example: Sensor XT1M30PA372 used to detect a rubber object: $S_n = 10 \text{ mm}$, $F_c = 0.3$
 $S_u = 10 \text{ mm} \times 0.3 = 3 \text{ mm}$

Protective fuses

For AC and AC/DC proximity sensors that do not incorporate overload and short circuit protection, using a quick-blow fuse connected in series with the sensor is recommended.

Description	Quantity	Catalog Number
0.6 A quick-blow cartridge fuse (5 x 20) (XSB proximity sensors) (Use with Class 9080 Type FB, IEC 5 x 20 fuseholder—see Digest)	Sold in lots of 10	XUZE06
0.8 A quick-blow cartridge fuse (5 x 20) (XS dia. 8, 12, 18, 30, and XSD proximity sensors) (Use with Class 9080 Type FB, IEC 5 x 20 fuseholder—see Digest)	Sold in lots of 10	XUZE08

Proximity Sensors

SG Magnet Actuated Sensors

Surface Mounted Style

Proximity

Surface-mounted, magnet-actuated sensors for industrial applications

- Sensing is independent of magnet polarity.
- Typical applications: security systems (gate interlocks), high-speed rotational counting, identification of metal bins with magnet-coded labels, sensing through non-magnetic walls.

Features

- Housing: aluminum; plastic (PBT) for SG08168 and SG28195
- Completely encapsulated in epoxy
- Very fast response time (reed output only)
- PLC-compatible AC models (triac output)
- High transients protection (AC models)
- No bouncing

SGO8026
SGO8110
SGO8141

Dual Dimensions $\frac{\text{inches}}{\text{mm}}$

Maintained contact model—A highly reliable, magnet-actuated proximity limit switch designed to maintain contact for high-speed stacker cranes, slow-down, and memory applications. Eliminates the camming required for mechanically operated limit switches.
Maintains the information even if power is down.

Features

- Diecast zinc housing
- PLC compatibility
- High transient protection
- No bouncing
- 0.5 in. (12.7 mm) NPT conduit entrance
- UL recognized and CSA certified

When the north or south pole of a magnet actuator moves past the blue-dot sensitive area within the specified range along the switch, the contact position changes from open to closed. Once latched, the movement of the same magnetic pole in the opposite direction—or the movement of the opposite magnetic pole in the same direction—unlatches the switch.

NOTE: If during this procedure the switch closes and then opens again (pulses), reverse the polarity of the magnet and repeat the above procedure. If the desired direction of operation is opposite to that established above, reverse the polarity of the magnet.

Features

- Industrial grade magnet is recommended for magnet-actuated proximity sensors.
- Alnico is used as magnet material for all rigid models.
- Kevlar is used for the flexible magnetic tape.
- The rigid models come mounted on one of several types of standard brackets for convenience (except the tubular high-power version).
- Both south and north poles are accessible and marked. *The south pole version is the standard.* North pole versions may be required in conjunction with the maintained magnetic switch (see page 294).
- For comparison, an average magnetic strength rating is listed below. Measurements were made with a Gaussmeter at 0.13 in. from the sensing surface.

Description		Magnetic Strength	Catalog Number
Tubular		700 Gauss	7046
Flat bracket, center	South pole	330 Gauss	7093
	North pole	330 Gauss	7547
Flat bracket, side	South pole	240 Gauss	7063

Proximity

Proximity Sensors

ST Grounded Probe Switch

The touch switch is a highly reliable AC solid-state presence sensor designed for precise conductivity sensing. Applications include high temperature, light conductive, aggressive mechanical, and chemical environments that target positive end-point sensing. All models have a visible neon pilot light to indicate operation of the switch.

Features

- Diecast zinc housing
- Solid state—no moving parts
- 115 Vac, completely self-contained
- Probes up to 10 ft (3 m) long
- High current output—no relay required for most applications
- Fast response—no warm-up time
- 0.5 in. (12.7 mm) NPT conduit entrance
- UL Recognized

Operation

The switch is actuated when a conductive path is established between the probe terminal and ground (1 MΩ or less). The electrical contact to ground operates the switching thyristor. Internal RC snubber and varistor provide effective protection from typical transients. Normal open models have a 10 ms (maximum) turn on time. Different off-delay times are offered to permit compensation for relay chatter when the probe is subjected to bounce from irregular contact with the grounded metal point of contact.

NOTE: For isolated circuits where the ground is not common, the ground terminal of the switch should be connected to the neutral. The metal target to be detected by the probe should also then be wired to the neutral.

Probe characteristics

The probe terminal is an 8-32 stud protruding from the center of the head. *Extensions may be any electrically conductive wire or material suitably insulated from grounded surface and limited in length to 10 ft (3 m) or less.*

- Open voltage: 12 Vdc
- Peak current: 1 mA

Face Caps for Tubular Proximity Sensors

Features

- Shielded and non-shielded caps available
- Different versions available (beveled or non-beveled)
- Provides sensor face protection with no effect on operation

Description

Protection in harsh applications, helps to prevent abrasions, cracks, and other possible damage to the sensor face. Available in several different materials: Ceramic, Delrin® acetal resin, and Teflon® material. Provides the sensor with protection and a longer life without the additional charge of a stainless steel face option.

Inductive Sensor Accessories

Plunger Screw Adapters

Features

- Accepts 8, 12, or 18 mm shielded sensor
- Heat-treated alloy steel construction
- Rugged stop with solid-state output

Description

Plunger screw adapters allow a shielded inductive proximity sensor to be used as a mechanical stop switch in applications requiring a precise end-of-travel signal or a hard stop. The spring requires a force of 252 g (9 oz) to actuate the sensor.

Proximity Sensors

Inductive Sensor Accessories

Proximity Probe Adapters

Dimensions: mm (in.)

Features

- Accepts any 8 or 12 mm shielded sensor
- Accurate and compact switching in confined areas
- Large variety of stand probe lengths and diameters

Description

Proximity probes are spring-loaded actuators designed to work with 8 mm or 12 mm tubular inductive proximity sensors. The probe and sensor combination offers increased flexibility in applications that require tight positioning.

Inductive Sensor Accessories

Quick Change Mounting Tube

Features

- Quick change mounting available for 8, 12, 18, and 30 mm sensors
- Short and long barrel lengths available
- One-time adjustment simplifies sensor replacement
- Protection to sensor from impact and damage
- Teflon® caps available for quick change mounts (shown below)

Description

The quick change mounting tube reduces sensor maintenance and helps prevent downtime. An internal shoulder stop and collet-style locknut precisely hold the sensor in place—helping maintain a precise sensing distance and simplifying sensor installation.

Spring-loaded Tubular Sensor Mount

Dimensions: mm (in.)

Features

- Accepts 8, 12, 18, and 30 mm shielded or non-shielded sensors
- Sensors become unaffected by accidental impact
- Shielded and non-shielded caps available (see page 301)

Description

Spring-loaded sensor mount for tubular body styles provides impact protection for the sensor against target overtravel. The mount is designed to be threaded onto a tubular sensor and held in place with one of the mounting nuts provided with the sensor. Caps are available to help protect the face of the sensor from lateral and axial impacts (see page 301).

Proximity Sensors

Product Overview

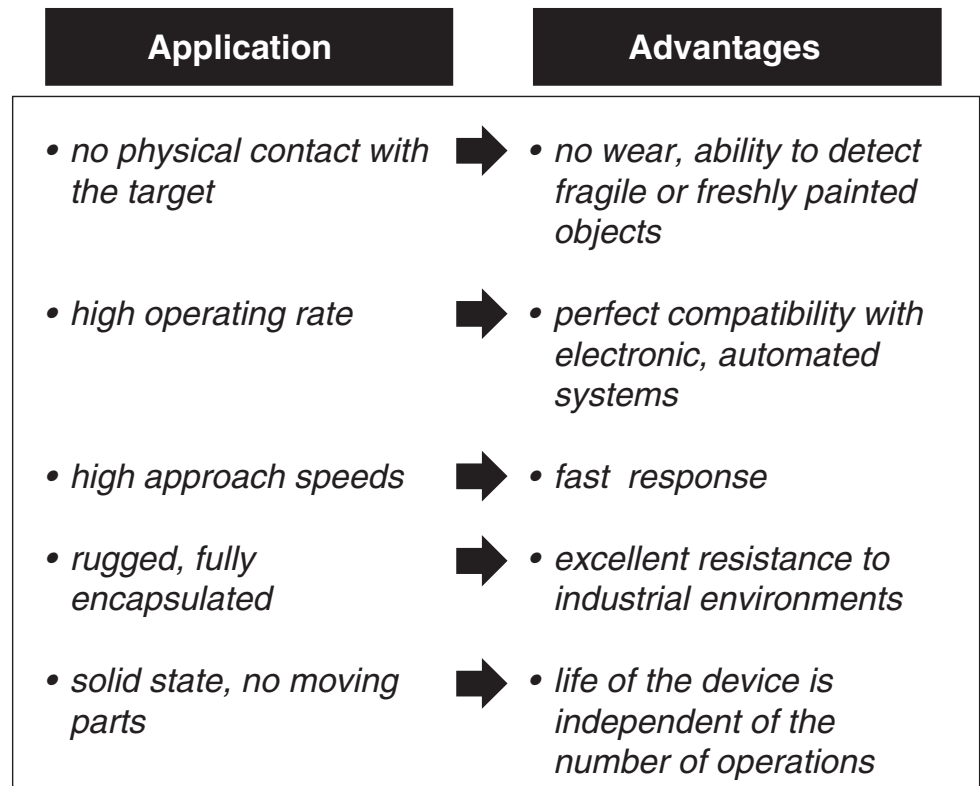

What is a Proximity Sensor?

A proximity sensor is an important component in an automation control system.

It transmits information to the logic processing system about the operating conditions of a machine:

- Presence, passage, flow of parts
- End of travel
- Rotation and counting

Essentially, it is a **non-contact part presence** sensor.

Proximity Sensors
Product Overview
Why the Different Types of Sensors?

Inductive

Suitable for the detection of metal objects

- **Identifies** only **metal** targets
- **Predictable** sensing technology—few variables
- **Reliable** industrial technology

Principle of operation

An inductive proximity sensor essentially comprises an oscillator whose windings constitute the sensing face. An electromagnetic field is generated in front of these windings.

When a metal object is placed within this field, the resulting currents induced into the target form an additional load, and the oscillations cease.

This causes the output driver to operate, producing an On or Off output signal.

Proximity Sensors
Product Overview
Why the Different Types of Sensors?

Capacitive

- Detects **any material**
- Affected by environment: humidity, dust, etc.
- Best for:
 - bulk material
 - liquids
 - targets behind a separation wall

Suitable for the detection of non-conductive targets, liquids and powders

Proximity

Principle of operation

A capacitive proximity sensor basically comprises an oscillator whose capacitors constitute the sensing face.

When a conducting or insulating material with a permittivity greater than air is placed within this field, it modifies the coupling capacitance and causes oscillations.

This actuates the output driver, and depending on the model, an On or Off output signal is produced.

Housing types

Tubular type

Advantages

- Simple installation and set-up: pre-wired or connector models
- Excellent environmental protection:
 - encapsulated
 - metal housing (plated brass)
 - plastic or stainless steel housing (food, pharmaceuticals)
- Two choices:
 - very short for restricted access areas
 - standard length (form A) for ease of replacement
- No-adjustment replacement using a patented indexing mounting bracket

Block type

Advantages

- Direct interchangeability, no need for readjustment
- Flexibility of connections: screw terminals or connector
- Long sensing distance

**Proximity Sensors
Product Overview
Sensing Parameters**

Operating zone

The targets are generally of steel, and of a size equivalent to the sensing face of the sensor. To ensure detection, the target should pass at a distance less than or equal to the usable sensing distance given in the data sheet of the sensor selected.

Proximity

Suitability for flush mounting in metal

Suitable (shielded)	Not suitable (unshielded)
Advantages	Advantages
<ul style="list-style-type: none"> • No lateral effect 	<ul style="list-style-type: none"> • Sensing distance + 50 to + 100%
But	But
<ul style="list-style-type: none"> • Reduced sensing distance 	<ul style="list-style-type: none"> • Space required around the device to eliminate the effects of the surrounding metal

Power supply

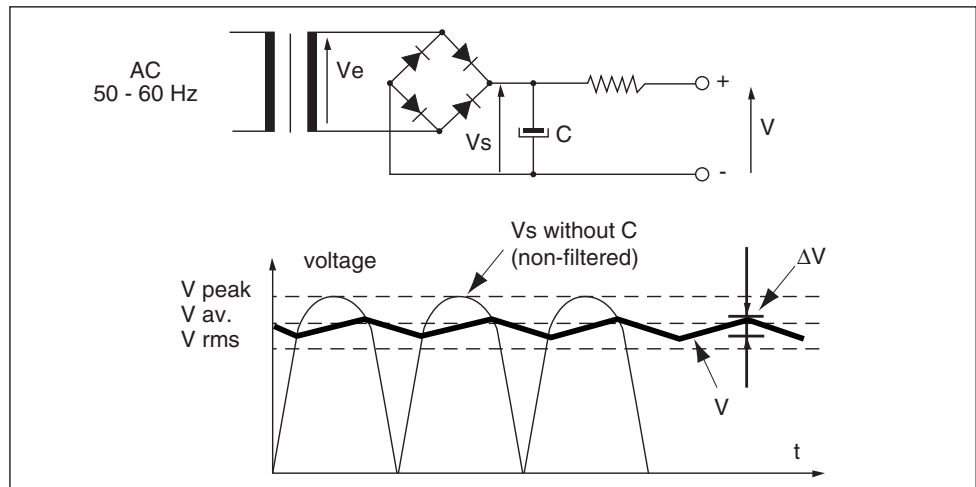

AC or AC/DC sensors
for AC circuits

Check that the power supply range limits of the proximity sensor are compatible with the nominal voltage of the AC supply used.

Sensors for DC circuits

Where a DC supply is available, check that the voltage limits of the sensor, including ripple, are compatible with the supply used.

If an AC supply is available, a suitable DC power supply must be selected. A simple one has a transformer, a rectifier, and a smoothing capacitor.

Where voltage is derived from a single-phase AC supply, it must be rectified and filtered to ensure that:

- The peak voltage of the DC supply is lower than the maximum operating voltage of the sensor, **peak voltage = rated voltage $V_e \times \sqrt{2}$.**
- The minimum voltage of the DC supply is greater than the minimum voltage rating of the sensor, given that $\Delta V = (I \times t)^3 C$, where:
 ΔV = maximum ripple: 10% (V)
 I = anticipated load current (mA)
 t = period of 1 cycle (8.8 ms full wave rectified, 60 Hz frequency voltage)
 C = capacitance (μF)

As a general rule, use a transformer with a lower secondary voltage (U_e) than the required DC voltage (U).

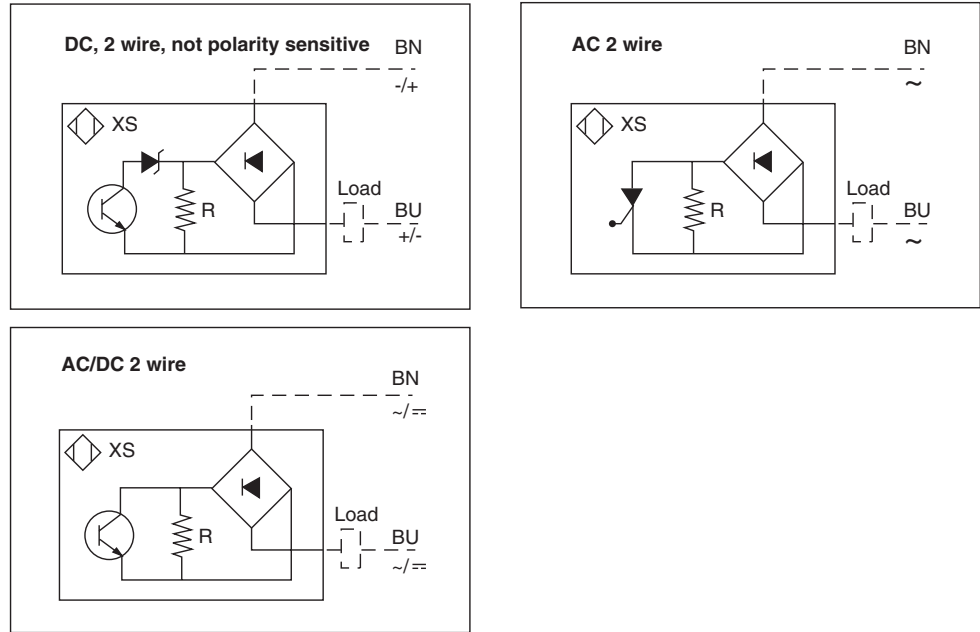

Example: 18 Vac to obtain 24 Vdc
35 Vac to obtain 48 Vdc

Mount a filtering capacitor of minimum 400 μF per sensor or 2,000 μF for each ampere of load current required.

NOTE: Tubular 3-wire DC universal models (10–58 V), 3-wire DC XSF models, and all AC/DC models can be supplied from full-wave rectified non-filtered power supplies (no capacitor C in the diagram above).

Output signal

2 Wire type

2-wire sensors are wired in series with the load to be switched.

They are subject to:

- a residual current (leakage current)—in the open state
- a voltage drop—in the closed state

For the AC and AC/DC versions, certain models are protected against short-circuits. Refer to the product characteristics.

Advantages

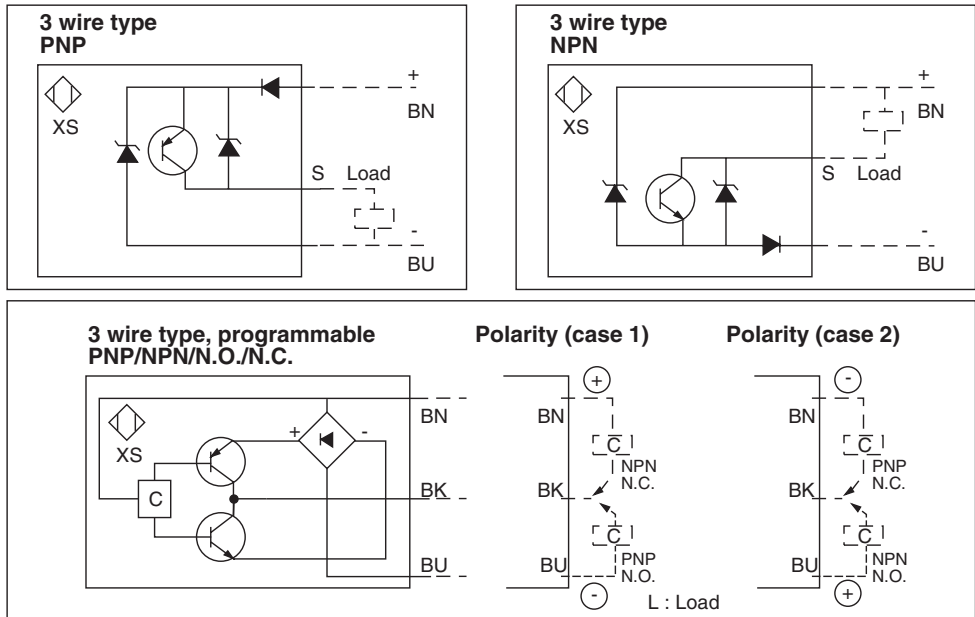

- They can be wired in the same way as mechanical limit switches.
- For the DC and AC/DC versions, they can be connected to either positive (PNP) or negative (NPN) logic inputs.
- Polarity insensitive versions, no risk of incorrect connection.
- AC/DC versions, reduces stock requirements

But

Check the possible effects of residual current and voltage drop on the input device controlled (pick-up and drop-out thresholds).

Output signal

3 Wire type

The sensors in this category have:

- 2 wires for the power supply
- 1 wire for the output signal

NOTE: Some models include an additional wire for a complementary output 4-wire type, N.O. + N.C. The technology is still 3 wire.

They are protected against reverse supply polarity and against overloads and short-circuit of the load. For the DC version, there are two types of sensor:

- Basic sensor
 - PNP model, switching the positive side to the load (sourcing)
 - NPN model, switching the negative side to the load (sinking)
- Universal DC sensors

A single universal sensor, depending on the wiring connections can perform any of the following 4 functions: PNP/N.O., PNP/N.C., NPN/N.O., NPN/N.C.

Advantages

- *Best switching characteristics: no residual current, low voltage drop, fast*
- *N.O. + N.C. versions*
- *Universal versions, reduces stock requirements*

But

Requires the use of a specialized sensor (PNP or NPN, function of the load connection to negative or positive, respectively) or a selectable universal type.

Output signal

Analog type

3-wire type

2-wire type

Proximity

These proximity sensors convert the approach of a metal target towards the sensing face into a current output signal that is proportional to the distance between the target and the sensing face.

Two models:

Dual Voltage: 24/48 Vdc
Output: 0–10 mA with 3-wire connection
4–14 mA with 2-wire connection

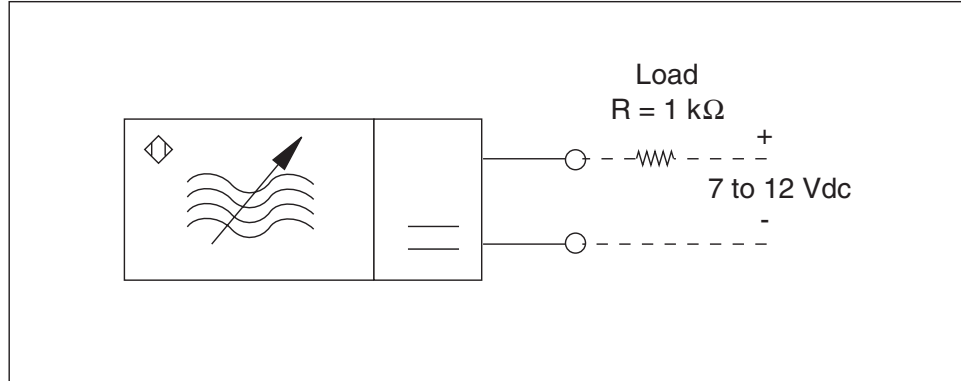

Single Voltage: 24 Vdc
Output: 0–16 mA with 3-wire connection
4–20 mA with 2-wire connection

Advantages

- Output signal proportional to the distance.
- Two- or three-wire connection using the same device.

Output signal

Namur type

Namur type proximity sensors (DIN 19234) are electronic sensors in which the current consumption varies when a metal object approaches.

Their operating principle and compact size make them suitable for a large number of applications:

- Intrinsically safe (for hazardous environments, i.e. explosive). Sensors are used with an NY2 intrinsically safe relay/amplifier, or an equivalent, approved intrinsically safe solid-state input.
- Non-intrinsically safe (for a normal, safe zone). NAMUR sensors associated with a power supply and amplifier unit, or an equivalent solid-state input.

Advantages

- *Can work in hazardous environments.*
- *Basic product, without amplifier.*
- *Compact size.*

**Connection
method**

Features

Pre-wired sealed cable, excellent resistance to splashing liquid (IP67) or cutting oils (IP68).

Features

Ease of installation and replacement.

Features

Flexibility: user selects type and length of cable.

Proximity

Note

In practice, the preceding information facilitates the selection and installation of a proximity sensor for applications having normal operating conditions. The following pages contain details for applications needing more specific information.

Proximity Sensors
Product Overview
Environmental Parameters

The XS sensors are tested according to IEC 60947.5.2 standard (similar to the proposed new NEMA ICS 5-4-2005x standard).

Electromagnetic interference

Proximity

- DC versions
- level 2 immunity (3-wire type)
 - level 3 immunity (2-wire type)
- AC/DC versions
- level 4 immunity

- DC and AC/DC versions
- level 3 immunity (RFI: radio frequency immunity)

- DC versions
- level 3 immunity
- AC/DC versions
- level 4 immunity
- Extended range DC
- level 3 immunity

- DC and AC/DC versions
- level 3 immunity (over 8 mm diameter)
 - level 2 immunity (tubular 8 mm and smaller)

Temperature and Chemicals

Temperature: where sensors are used outside the ranges shown, reliable operation cannot be assured and permanent damage could result.

Standard length tubular sensors have a very large temperature range: -25 to 80 °C (-13 to 176 °F).

NOTE: For extended temperature range, consult the factory.

Chemicals: Due to the very wide range of chemicals found in modern industry, it is very difficult to give general guidelines on sensor applications.

To ensure lasting efficient operation, it is essential that the chemicals coming in contact with the sensors will not affect their housings and, in doing so, prevent their reliable operation.

The XS1/XS2 M series is particularly well adapted to severe environments, such as machine tool applications.

NOTE: The cables used conform to standard NFC 32 206 and to recommendations CNOMO E03-40-150 N. They are UL Listed and CSA Certified.

The series XS4P plastic tubular proximity sensors and the stainless steel XS1/XS2 sensors exhibit excellent overall resistance to:

- **Chemical products** such as salts, halophytic and aromatic oils, petrols, acids, and diluted bases. For acids, ketones, and phenols, preliminary test should be made according to the nature and concentration of the liquid.
- **Agriculture and food industry products** such as animal- and vegetable-based food products (vegetable oils, animal fat, fruit juice, dairy proteins, etc.).

NOTE: For specific details, please consult the factory. Have the following information available when making the inquiry:

- *type of substance*
- *concentration*
- *maximum temperature*
- *specific sensor part numbers considered for the application*

Shock – Vibration

Shock

- The sensors are tested according to IEC 60068.2.27, 50 g, 11 ms duration.

Vibration

- The sensors are tested according to IEC 60068.2.6, ± 2 mm amplitude, 10–55 Hz, 25 g to 55 Hz.

Degrees of protection

- IP67: protection against the effects of immersion, tested according to IEC 60529. Sensor immersed for 30 minutes in 1 m of water.
- UL Listed: typical NEMA Types 4X, 6P, 12. No deterioration in either operating or insulation characteristics.
- IP68: protection against effects of prolonged immersion: the test conditions are subject to agreement between the manufacturer and user. Telemecanique® brand selected machine tool applications or other machines frequently drenched in cutting fluids. **IP68 means**, in this case, **cutting oil proof**, a degree of protection requiring a superior encapsulation technology. Extensive testing is performed—1,500 hours immersion in fluid at 70 °C.

Definition of sensing distances

Proximity

Nominal (or rated) sensing distance S_n :

The rated operating distance for which the sensor is designed. It does not account for manufacturing tolerances, or any change in supply voltage, temperature, etc. during operation. Used for selection and the base for exact calculations.

Real sensing distance S_r :

The real sensing distance is measured at rated voltage (U_n) and at the rated ambient temperature (T_n). It must be between 90% and 110% of the nominal sensing distance: $0.9S_n \leq S_r \leq 1.1S_n$.

Usable sensing distance S_u :

The usable sensing distance is measured at the limits of the permissible variations of the ambient temperature (T_a) and the supply voltage (U_b). It must be between 90% and 110% of the real sensing distance: $0.9S_r \leq S_u \leq 1.1S_r$.

Operating zone S_a (usable sensing range):

The operating zone is between **0 and 81%** of the nominal sensing distance S_n :

$$0 \leq S_a \leq 0.81S_n$$

This is the operating zone of the sensor and corresponds to the area within which detection of the *standard metal target is certain* whatever the variations in voltage or temperature.

This is the *maximum sensing distance that the designer should consider* for all applications. Correction factors should be considered only when conditions preclude using the standard target in the operating temperature and voltage range.

Proximity Sensors
Product Overview
Definition of Terms

Standard metal target

Standard metal target:

1 mm thick, square mild cold rolled steel, type FE 360. The side of the square is either equal to the diameter of the sensor or of the circle engraved on the active face of the sensing face or is 3 times the nominal sensing distance (S_n). The higher of these values is used.

Differential travel

Differential travel: (hysteresis) H:

The distance between the pick-up point as the standard metal target frontally approaches the sensor, and the drop-out point as it moves away. Expressed as a percentage of the real sensing distance S_r .

Repeat accuracy (Repeatability)

Repeat accuracy (repeatability) R:

The repeatability of the sensing distance between successive operations. Readings are taken over a period of time while the sensor is subjected to environmental extremes, e.g., an 8-hour cycle between 10 and 30 °C, with supply voltage variation $\pm 5\%$ of nominal. Expressed as a percentage of the real sensing distance S_r . Important parameter for positioning applications.

Class 2 material Double isolation

Class 2 material—Double isolation

The symbol represents electrical insulation conforming to IEC 60536 class 2. It means that all live parts are isolated inside the housing and touching any exterior exposed metal is harmless. No groundings required.

Symbol

International symbol for proximity switches.

**Proximity Sensors
Product Overview
Definition of Terms**

Leakage or Residual current (Ir)

The leakage or residual current corresponds to the current flowing through the sensor in the off or open state. Important for 2-wire proximity sensors.

Voltage drop (Ud)

The voltage drop corresponds to the voltage at the proximity sensor's terminals in the on or closed state. Especially important for 2-wire proximity sensors.

Response Time power-up delay

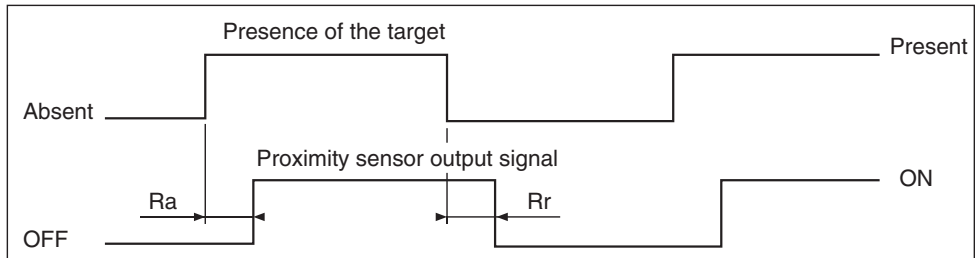

The period of time between energizing the sensor and its fully operational condition. Also known as warm-up or first-up delay.

Maximum operating frequency

The maximum number of targets a proximity sensor can detect in a second, under standard test conditions (standard EN50018, IEC 60947.5.2). Do not use for selection or design purposes unless the geometry of the application is identical with the one in the picture.

Response time

On delay Ra:

The period between the detection of the target and the subsequent change in its output state. This design parameter determines the relationship between the speed of travel and the size of the target.

Off delay Rr:

The period between the exit of the target from the sensor's operating zone and the subsequent change in its output state. This design parameter limits the interval between successive targets.

Output signal

N.O. output

N.O. (Normally open)

The output circuit turns **on** the output current when a target is present.

N.C. output

N.C. (Normally closed)

The output circuit turns **off** the output current when a target is present.

N.O. + N.C. output

N.O. + N.C.

Complementary outputs: proximity sensor with two outputs—one opens, the other closes when a target is present.

**Proximity Sensors
Product Overview
Sensing Distance Correction Factors**

Theoretical calculation

In practice, most targets are made of steel and are of a size equal to or greater than the sensing face of the sensor. Where this is the case, use the sensing distance values given in the characteristics for the particular sensor. To calculate the precise sensing distance for specific applications, consider the following parameters, which affect the sensing distance.

Apply a correction factor $K\theta$ to be determined using the curve above.

Target material correction coefficient K_m

Target Material	Stainless Steel			Mild Steel	Brass	Aluminum	Copper
	Magn.	Type 316	Type 304	A37	UZ33	AU4G	CU
K_m	1.00	0.70	0.30	1.00	0.37	0.35	0.30

Apply a correction factor K_m to be determined using the graph above.

Special case of a very thin target object made of non-ferrous material.
Application tip: Aluminum foil on a nonmetallic surface makes an excellent target.

Proximity Sensors
Product Overview
Sensing Distance Correction Factors

Apply a correction factor Kd to be determined using the curve above.

Usable sensing distance

For all situations, use the general correction factor $K_t = 0.9$ for power supply variations within the entire voltage range.

$S_a = S_n \times K_{\theta} \times K_m \times K_d \times K_t$
 Where S_a = usable sensing distance
 S_n = nominal sensing distance

Calculation example

Proximity sensor XS7C40MP230 with nominal sensing distance $S_n = 15$ mm.
 Ambient temperature variation 0 to + 20 °C.
 Target characteristics:
 material: Steel
 dimensions: 45 mm x 45 mm x 1 mm

The operating zone, S_a can be found using the formula:
 $S_a = S_n \times K_{\theta} \times K_m \times K_d \times K_t$
 $S_a = 15 \times 0.98 \times 1 \times 0.95 \times 0.9$
 $S_a = 12.5$ mm

General rule

For standard targets, the general rule is:
 $S_a = 0.8 S_n$

Note

Always test!

The above curves are typical curves only. They are given as a guide to the approximate usable sensing distance of a proximity sensor for a given application

Proximity Sensors Product Overview Mechanical Installation

- Patented design
- Replacement without re-adjustment

Mounting

Indexed mounting bracket XSZB

- Insert the sensor in the bracket until it butts against the stop.

- Secure the sensor using screw (V).

- Adjust the sensor/bracket combination to ensure detection.
- Secure the combination using two screws (F).

If for any reason adjustment or replacement is necessary:

- Unscrew screw V.
- Butt the new sensor against the stop. Once screw V has been tightened, the new sensor will be indexed in the same position as the old one. No adjustment is necessary.

Note: these functions are similar to those of a block type sensor.

Clearing distances

Tubular proximity sensor

Versions not suitable for flush mounting in metal (non-shielded)

Versions suitable for flush mounting in metal (shielded)

- Versions suitable for flush mounting in metal
e (min): 0
- Versions not suitable for flush mounting in metal
M8: e (min) = 5 mm
M12: e (min) = 8 mm
M18: e (min) = 16 mm
M30: e (min) = 30 mm

Mounting with XSZB mounting bracket

Clearing distances

Side by side
Face to face

**Block type proximity sensors
not suitable for mounting in metal**

Non-shielded

Mounting into a T section

Mounting into a U section

Proximity

NOTE: For shorter distances, alternate frequency models are required. Consult the factory for availability.

Suitable for flush mounting in metal

Shielded
Mounting with metal on one or more sides simultaneously

Any metal within the immediate vicinity of a proximity sensor distorts the magnetic field around the sensing face. The clearance distances shown above are given for a simplified installation arrangement and would result in the increase of the sensing distance of less than 5%.

Cable Protection

Protection of the cable

Do not exert a pulling force of over 4.4 lb on the sensor cable.

Consider using a protective sleeve or rigid conduit, where necessary.

Avoid repetitive flexing movement between the cable and the sensor.

Protection of the sensing face

The sensor must never be used as a mechanical stop as this may cause irreparable damage.

Use of tools for adjustment of the proximity sensor

Incorrect

Correct

Mounting

Tubular sensor

Ensure a rigid mounting
*the mounting must be sufficiently
rigid and thick to resist shock
and vibrations*

Block type sensor

Ensure a rigid mounting
*the mounting area must be large
enough to support the sensor
correctly*

**Sensor
Positioning**

Positioning

Incorrect

- possibility of debris collecting on the sensor sensing face
- possibility of liquid entry if the cable gland is mounted improperly

Correct

Mechanical protection

A proximity sensor should never be used as a footrest.

Where the possibility of this type of misuse exists, a protective cover should be fitted over the sensor.

Remember: For proper installation, the sensor must be mounted solidly to its support.

Depending on the application, the operating distance is adjusted by either:

- moving the mounting bracket
- adjusting the target

Proximity Sensors

Product Overview

PLC Compatibility

For a solid-state, 2-wire, AC sensor to be directly compatible with a PLC, two conditions must be met:

1. Leakage current: (I off) less than 1.7 mA (Off state)

2. Load current: greater than the sensor minimum load current (On state). Typical PLC input currents (load current, I load) are 12–16 mA. Typical values for PLC input resistance (Rin) are 7.5–10 kΩ.

If the sensor does not meet both requirements, a bleeder resistor (Rb) must be wired in parallel with the load. Calculate the bleeder resistor parameters as shown below. **The smaller value should be selected for the application.**

$$1. R_b = \frac{R_{in} \times V_o \text{ max.}}{I_{off} (R_{in}) - V_o \text{ max.}} \quad * \quad P_b = \frac{V_s^2}{R_b}$$

Where: $V_o \text{ max.}$ = PLC input maximum Off voltage (20–40 Vac)

R_{in} = PLC input resistance

V_s = Line voltage

P_b = Minimum bleeder resistor power rating

Example:

I_{off} = 3.5 mA

$V_o \text{ max.}$ = 20 V

R_{in} = 6.5 kΩ

Typical examples for Telemecanique® TSX DET input modules:

	TSX DET 1604	TSX DET 0804
For I_{off} = 3.5 mA	47 kΩ/0.5 W	—
For I_{off} = 7 mA	4.7 kΩ/3 W	12 kΩ/1.5 W

$$2. R_b = \frac{R_{in} \times V_o \text{ max.}}{I_{off} (R_{in}) - V_o \text{ max.}} \quad * \quad P_b = \frac{V_s^2}{R_b}$$

Example:

I_{min} = 30 mA

V_s = 120 V

R_{in} = 7 kΩ

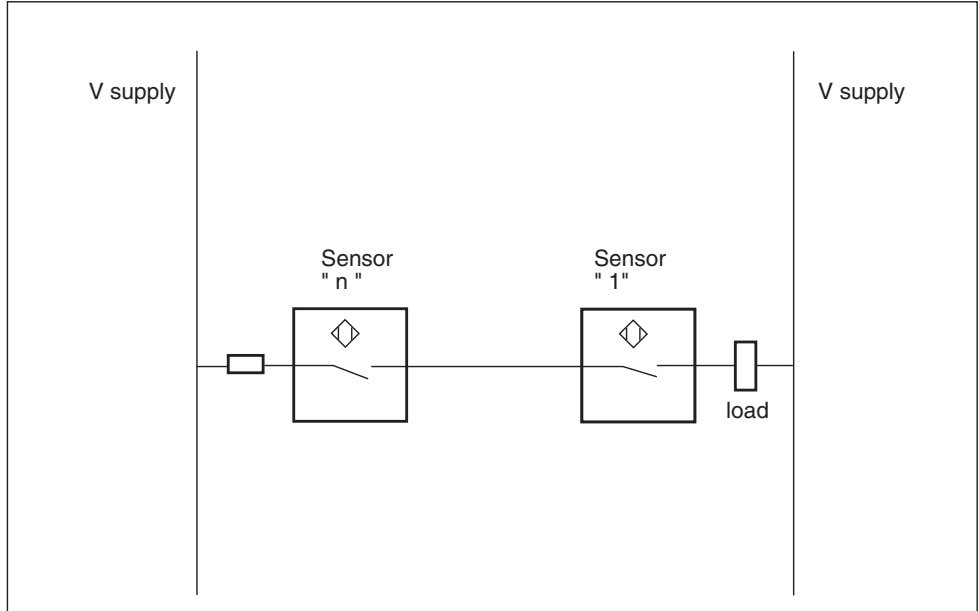

Typical examples using TSX programmable controllers:

	TSX DET 1604	TSX DET 0804
For I_{min} = 20 mA	64 kΩ/0.5 W	24 kΩ/1 W
For I_{min} = 30 mA	8.7 kΩ/2 W	8.7 kΩ/2 W

NOTE: All DC 3-wire sensors are PLC compatible.

Wiring
in series

Wiring two or more sensors in series
2 wire type

Proximity

Consider the following points:

1. When in the open state, each sensor will share the supply voltage:

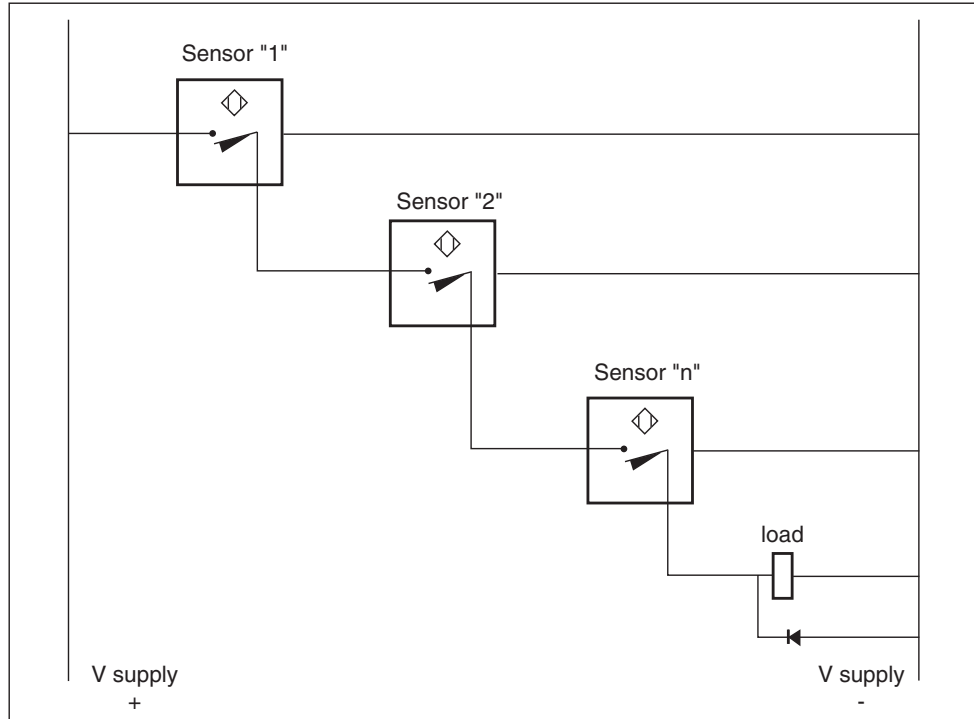

$$\text{Voltage across the sensor} = \frac{V_{\text{supply}}}{\text{number of proximity sensors}}$$

V_{sensor} and V_{supply} must fall within the sensor's voltage range.

2. If a sensor is off, it will be supplied with nearly all the supply voltage.
3. When all sensors are on, a small voltage drop is present across each sensor; the resultant loss of voltage at the load will be the sum of the individual voltage drops. Select the load voltage accordingly.
4. Series connection is only possible for sensors with a wide voltage range.

Example: Four sensors rated at 24–240 Vac can be wired in series at 120 V because even at 90%, $V_{\text{supply}} = 108 \text{ V}$. When all sensors are off, each will see $108/4 = 27 \text{ V}$, which is higher than the minimum voltage rating of the switch (24 V).

Wiring two or more sensors in series 3 wire type

Consider the following points:

1. Sensor 1, when conducting its load current, also carries the leakage currents of all other sensors.
2. Each sensor, when conducting, produces a voltage drop of 2.6 V maximum. Select the load voltage accordingly.
3. Sensor 2 is powered only when Sensor 1 turns on. Only after its power-up delay can Sensor 2 function properly. Consider this delay when speed is a factor.
4. Use of flywheel diodes is recommended where an inductive load is being switched.

Wiring
in series

Wiring proximity sensors in series with
mechanical contact devices

Consider the following points:

1. When the mechanical contact is open, the sensor is not supplied.
2. When the contact closes, the proximity sensor does not operate until a certain time T has elapsed, corresponding to the **power-up delay**. Please refer to the individual sensor characteristics.

Wiring several sensors in parallel
2 wire type

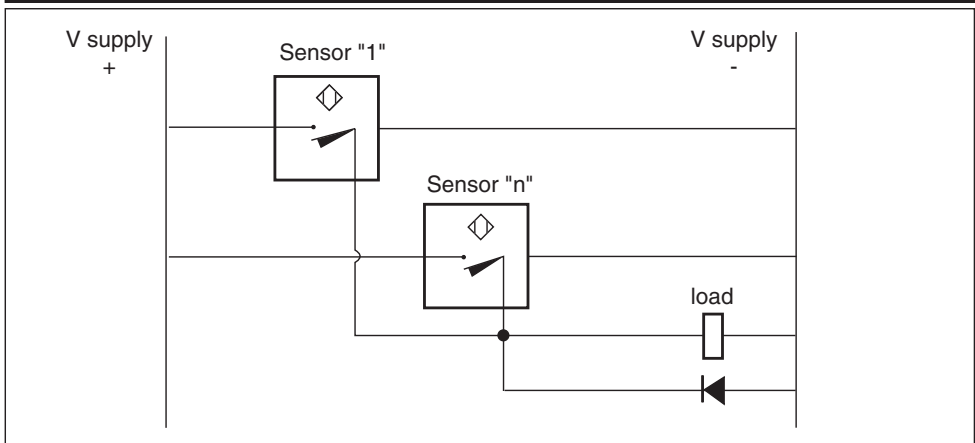

Using proximity sensors wired in parallel either to each other or to mechanical contacts is not recommended.

When one of the sensors is in the On state, the sensor in parallel is shorted out and thus no longer supplied.

As the first unit passes into the Off state, the second sensor becomes energized and is subject to its power-up delay. This configuration is used where the sensors work alternately.

When the sensors are Off, the sum of the leakage currents must be less than the holding current of the load.

3 wire type

No restriction

Proximity

Cable Routing

Cable length

No restrictions up to 660 ft (200 m) or up to a line capacitance of 0.1 μF. It is important to account for voltage drop on the line over 660 ft (200 m).

The XS models can withstand the electrical interference encountered in normal industrial conditions.

Where extreme electrical noise conditions could occur (large motors, spot welders, etc.), it is advisable to protect against transients in the following ways:

- Suppress interference at the source
- Limit the length of the cables
- Separate power and control wiring
- Ensure that the logic systems contain input transient suppression means
- Use twisted pair and shielded cables

Separation of power and control wiring

Incorrect

Correct

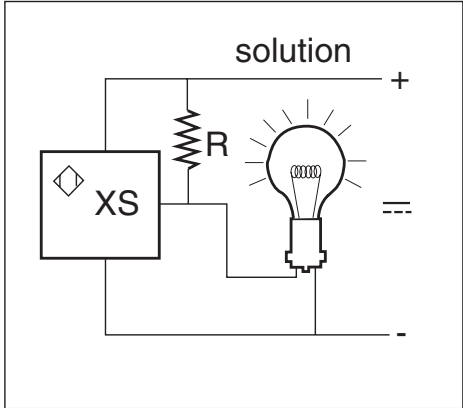

* Use of individual cables is recommended if long lengths are involved.

Proper Loads

Electrical connections

If the load consists of an incandescent lamp, the cold state resistance can be one-tenth the hot state resistance. This can cause very high current levels on switching.

Install a pre-heat resistance in parallel with the proximity sensor.

$$R = \frac{V^2}{P} \times 10$$
*V= supply voltage
P= power of lamp*

Do not connect an XS proximity sensor directly to an AC supply source.

Connect a suitable load (see product data) in series with the proximity sensor.

Proximity

Troubleshooting

The sensor's output does not change state when a metal target is moved within its operating zone.

False or erratic operation with or without the presence of the target object.

Possible cause	Remedial action
Output failure, or the short circuit protection has operated.	<ul style="list-style-type: none"> • Check that the sensor is correct for the supply being used. • Check the load current. <p>Characteristics:</p> <ul style="list-style-type: none"> - If load current is greater than the max. rated current, a relay should be interposed between the sensor and the load. - If load current is lower than the nominal rated current, check for wiring faults which could have caused a short circuit. In any case, a fast-blow fuse should be wired in series with the sensor (AC). - For a tubular sensor, if the sensor is brand new, check the mounting torque.
Wiring error Supply problems	<ul style="list-style-type: none"> • Check the wiring. • Check voltage range. • Check that the supply voltage falls within the operating limits of the sensor in question. Remember that with a rectified supply: $V_{peak} = V_{rms} \times \sqrt{2}$
Transients	<ul style="list-style-type: none"> • Install transient suppressors across potential sources (coils, arcing contactors)
Influence of surrounding metal	<ul style="list-style-type: none"> • Refer to the instruction sheet supplied with the sensor.
Effect of interference on the supply lines	<ul style="list-style-type: none"> • Ensure that any DC supplies, when derived from rectified AC, are correctly filtered ($C \geq 400 \mu f$) • Ensure that AC power cables are run separately from low level DC cables. • Where very long distances are involved, use suitable cable: <ul style="list-style-type: none"> - shielded and/or twisted pair - suitable wire gauge • Position the sensor as far as possible from any source of interference.
Response time of the sensor is too long for the particular target.	<ul style="list-style-type: none"> • Check suitability of the sensor for the target; choose a sensor with a faster response time, or use a longer target.
Effects of high temperature	<ul style="list-style-type: none"> • Eliminate sources of radiated heat, or protect the housing with a heat shield.

	EN 50032 (NFC 63-079)	<i>Definitions, classification, description</i>	
	EN 50040 (NFC 63-074)	<i>Connection identification</i>	

Series XS1N/XS2N, XS1M/XS2M, and XS4P also conform to the requirements of IEC 60947.5.2 standard. (ISO 9000 Self-Certification, NEMA project ICS 5-4-2002X)

Approvals

-  File LR46094 + LR44087 class 321103
-  File E39291 guide NKCR2
-  File E39281 guide NKCR
- Standard version approved
- pending
- ▲ Special North American version (1/2" NPT cable entry, UL label, etc.)
-  Intrinsically safe applications

Osisonic™ Ultrasonic Sensors

Technical Overview

Standards and Environment

Quality, standards, and certifications

Osisonic ultrasonic sensors are designed and manufactured to provide reliable service in the most arduous industrial environments.

- **Qualification**

A **qualification procedure** on the characteristics of Osisonic ultrasonic sensors is performed in our laboratories.

- **Production**

- The electrical characteristics and the sensing distances at ambient temperature and operating temperatures are 100% verified.
- Sensors randomly selected during production are subjected to **monitoring tests** on all qualified characteristics.

- **Customer returns**

Defective ultrasonic sensors are subjected to systematic analysis, and corrective actions are implemented to eliminate recurrence of the fault.

Compliance with standards

The Osisonic ultrasonic sensors comply with IEC 60947-5-2 standards. Refer to “Definitions” on page 356.

Resistance to chemicals in the environment

To provide reliable operation, Osisonic ultrasonic sensors are highly resistant to:

- Food products
 - Vegetable oils, animal fats
 - Fruit juices
 - Milk proteins, etc.
- Chemical agents
 - Salts
 - Aliphatic and aromatic oils
 - Petroleum, diluted bases, and acids

Depending on their nature and concentration, tests should be carried out beforehand for the following chemical agents:

- Alcohols
- Ketones
- Phenols

Resistance to the environment

- IP 67: Protection against the effects of immersion.
Tested in accordance with IEC 60529: Immersion in 1 m of water for 30 minutes, with no deterioration in either operating or insulation characteristics.

Recommendations

Ultrasonic sensors do not incorporate a redundant electrical circuit, so they are **not** suitable for use in safety applications. Refer to catalog 9007CT0201, *Preventa™ Machine Safeguarding Products*, for safety applications.

Osisonic™ Ultrasonic Sensors

Technical Overview

Principle of Detection

Principle of ultrasonic detection

Introduction

Ultrasonic sensors enable detection, without contact, of any object regardless of its:

- material (metal, plastic, wood, cardboard, etc.)
- nature (solid, liquid, powder, etc.)
- color
- degree of transparency

Uses in industrial applications include the detection of:

- the position of machine parts
- the presence of the windshield during automobile assembly
- the flow of objects on a conveyor system: glass bottles, cardboard packages, cakes, etc.
- the level of:
 - different colored paints in pots
 - plastic pellets in injection-molding machine feeders

The ultrasonic sensors are simple to install thanks to their output connectors, cabling, and mounting accessories.

Operating principle

The principle of ultrasonic detection is based on measuring the time between the transmission of an ultrasonic wave (pressure wave) and the reception of its echo (return of the transmitted wave).

Osisonic ultrasonic sensors are of the barrel and flat-profile type. They contain:

1. a high voltage generator
2. a piezo-electric transducer (transmitter and receiver)
3. a signal processing stage
4. an output stage

Excited by the high-voltage generator **1**, the transducer (transmitter-receiver) **2** generates a pulsed ultrasonic wave (200 to 500 kHz depending on the sensor) which travels through the air at the speed of sound. When it encounters an object, a reflected sound wave (echo) returns to the transducer. A microprocessor **3** analyzes the received signal and measures the elapsed time interval between the transmitted signal and the echo. By comparing this with the preset or learned times, it determines and controls the output states **4**.

The output stage **4** controls a solid-state switch (PNP or NPN transistor) corresponding to an N.O. or N.C. closing contact (detection of object).

Advantages of ultrasonic detection

- No physical contact with the detected object, eliminating wear and allowing detection of fragile or freshly painted objects, etc.
- Detection of any material, regardless of color, at the same distance, without adjustment or correction factor.
- Teach mode function, by the press of a button, defining the effective sensing range. Self-teaching of the minimum and maximum sensing distances (very precise foreground and background suppression, ± 6 mm).
- Very good resistance to industrial environments (robust sensors entirely encapsulated in resin).
- Solid-state units: no moving parts in the sensor, so the service life is independent of the number of operating cycles.

Osisonic™ Ultrasonic Sensors

Technical Overview

Principle of Detection

Definitions

The terms listed below are defined by standard IEC 60947-5-2:

- **Nominal sensing distance (S_n)**—The conventional value for indicating the sensing distance. It does not consider manufacturing tolerances or variations caused by external conditions such as voltage and temperature.
- **Sensing range (S_d)**—The zone in which the sensor is sensitive to objects.
- **Minimum sensing distance**—The lower limit of the specified sensing range.
- **Maximum sensing distance**—The upper limit of the specified sensing range.
- **Assured operating distance (S_a)**—The operating zone of the sensor (activation of outputs), included in the sensing range.

Its limits are established:

- at the factory for sensors with a fixed sensing distance
- during application setup for sensors with teach mode

- **Blind zone (Deadband)**—The zone between the sensing face of the sensor and the minimum sensing distance, where no object can be detected reliably.

Avoid passing objects through the deadband during operation of the sensor. This could lead to instability of the output states.

- **Repeat accuracy**—The repeat accuracy (R) is the precision of reproduction between two successive measurements of the sensing distance, made in identical conditions.
- **Overall beam angle**—Solid angle around the reference axis of an ultrasonic proximity sensor.
- **Standard target**—IEC 60947-5-2 defines the standard target as a square metal plate, 1 mm thick with rolled finish, placed perpendicular to the reference axis.

Its dimensions depend on the sensing range:

Sensing range (mm)	Size of target (mm)
< 300	10 x 10
300 < d < 800	20 x 20
> 800	100 x 100

- **Voltage drop (U_d)**—The voltage drop (U_d) corresponds to the voltage at the terminals of the sensor when in the closed state (value measured at the sensor's rated current).

- **First-up delay**—Time required to ensure operation of the sensor's output signal following power-up.

1. Power-up
2. Output signal state (0 or 1)

- **Response time**

— Response time (R_a): the time between an object's entry into the active zone and the changing of the output signal state. Response time limits the passing speed of the target relative to its dimensions.

— Recovery time (R_r): the time between an object's departure from the active zone and the changing of the output signal state. Recovery time limits the interval between two objects.

Osisonic™ Ultrasonic Sensors

Technical Overview

Principle of Detection

Discrete switching sensors—Output logic contacts

- **N.O.** (normally open)—The sensor's output changes to the closed state when an object is detected in the operating zone.
- **N.C.** (normally closed)—The sensor's output changes to the open state when an object is detected in the operating zone.
- **PNP**—switching a load connected to the negative side (sourcing)
- **NPN**—switching a load connected to the positive side (sinking)

4-wire technique

N.O. / PNP and NPN output

N.O. + N.C. / NPN output

N.O. + N.C. / PNP output

These sensors include two wires for the power supply and one wire for each output signal.

3-wire technique

N.O. / NPN output

N.O. / PNP output

These sensors include two wires for the power supply and one wire for the output signal.

Analog output sensors—Operation

The characteristic feature of these sensors is that the output generates a signal (in current or voltage) that is proportional to the distance of the object detected. This value increases as the object moves further away, within the detection limits. These detection limits can be adjusted using the self-teaching function.

As soon as an object is detected, an LED indicator illuminates and increases in brightness proportionally to the output signal value.

Advantages

- Availability of physical data based on the distance between the sensor and the object
- Reverse polarity protection
- Overload and short circuit protection
- No residual current, low level of voltage drop

Osisonic™ Ultrasonic Sensors

Technical Overview

Power Supply and Mounting Considerations

Power supply

DC source

Ensure that the supply used is compatible with the voltage limits of the sensor and the acceptable level of ripple.

AC source (consisting of a transformer, rectifier, and smoothing capacitor)

Ensure that the supply voltage is within the operating limits of the sensor.

If the voltage is derived from a single-phase AC supply, the voltage must be rectified and smoothed to ensure that:

- The peak voltage of the DC supply is lower than the maximum voltage rating of the sensor.
Peak voltage = rated voltage $\times \sqrt{2}$

- The minimum voltage of the DC supply is greater than the minimum voltage rating of the sensor, given that:

$$\Delta V = (I \times t) \div C$$

Where:

ΔV = maximum ripple: 10% (V),

I = anticipated load current (mA),

t = period of 1 cycle (10 ms full-wave rectified for a 50 Hz supply frequency),

C = capacitance (μF).

As a general rule, use a transformer with a lower secondary voltage (Ue) than the required DC voltage (U).

Example: 18 Vac to obtain 24 Vdc.

Mounting side by side
 $e \geq 2 S_n$

Mounting face to face
 $e \geq \text{max. } 4.5 S_n$

Mounting

Adhere to the minimum mounting distance between ultrasonic sensors. If two standard sensors are mounted too close together, the wave transmitted by one sensor can interfere with the wave transmitted by the other, causing erratic operation.

Maximum tightening torque

Sensor Diameter	Torque—all models
12 mm	0.7 N•m (6.2 lb-in)
18 mm	1.4 N•m (12.4 lb-in)
30 mm	1.4 N•m (12.4 lb-in)

Interchangeability

Using the indexed **mounting bracket**, the assembly is similar to a block type sensor.

Cabling—Electrical connection

- Connect the sensor before turning on the supply.
- Cable length
 - Use a maximum cable length of 200 m (656 ft), or a line capacitance of $< 0.1 \mu\text{F}$.
 - Consider the voltage drop on the line.
- Separation of control and power cables
 - The sensors are immune to electrical interference encountered in normal industrial conditions.
 - Where extreme conditions of electrical noise could occur (such as large motors and spot welders), take standard precautions for protecting against transients:
 - o Suppress interference at the source.
 - o Separate power wiring from control wiring.
 - o Smooth the supply.
 - o Limit the cable length.

Osisonic™ Ultrasonic Sensors

Technical Overview

Connection Considerations

Connection in series

Connection in series is **not** recommended.

- Correct operation of the sensors cannot be assured and, if this method is used, tests must be made before installation. Consider the following points:
 - Sensor 1 carries the load current in addition to the no-load current consumption values of the other sensors connected in series. For certain models, this connection method is not possible unless a current limiting resistor is used.
 - When in the closed state, each sensor will produce a voltage drop and, therefore, the load voltage should be selected accordingly.
 - As sensor 1 closes, sensor 2 will not operate until a certain time T has elapsed (corresponding to the first-up delay) and likewise for the following sensors in the sequence.
 - Flywheel diodes should be used when the load being switched is inductive.

Sensors and units in series with an external mechanical contact

- Consider the following points:
 - When the mechanical contact is open, the sensor is not supplied.
 - When the contact closes, the sensor will not operate until a certain time T has elapsed (corresponding to the first-up delay).

Connection in parallel

- There are no specific restrictions for connection in parallel. The use of flywheel diodes is recommended when an inductive load (relay) is being switched.

Capacitive load (C > 0.1 μF)

- At power-on, limit the inrush current of the capacitive load C using a resistor. The voltage drop in the sensor can also be accounted for by subtracting it from the supply voltage for the calculation of R.

$$R = \frac{U \text{ (supply)}}{I \text{ max. (sensor)}}$$

Load containing an incandescent lamp

- If the load contains an incandescent lamp, the cold state resistance can be one-tenth of the hot state resistance. This can cause very high current levels on switching. Provide for a preheat resistor in parallel with the sensor.

$$R = \frac{U^2}{P} \times 10, \text{ where } U = \text{supply voltage and } P = \text{lamp power}$$

Osisonic™ Ultrasonic Sensors

Technical Overview

Detection

Detection

- Influencing factors

The ultrasonic sensors are particularly suited to the detection of a hard object with a flat surface perpendicular to the detection axis.

However, proper operation of the ultrasonic sensor can be disrupted by:

- Air currents, which can accelerate or divert the acoustic wave transmitted by the sensor (ejection of part by air jet)
- High temperature gradients within the sensing range: an object emitting considerable heat can create zones of varying temperature that will modify the propagation time of the wave and thus prevent reliable operation
- Sound insulators: sound-absorbing materials (cotton, fabrics, rubber, etc.)
- The angle between the surface of the object to be detected and the reference axis of the sensor:
When the angle is offset from 90°, the wave is no longer reflected back along the sensor axis, and the operating distance is reduced. The greater the distance between the sensor and the target, the greater the effect. Detection is not possible when the angle exceeds $\pm 10^\circ$.
- The shape of the object to be detected: similar to the example above, an excessively angular object can be difficult to detect **(1)**.

- Detection by beam break (reflex system)

In cases requiring detection of sound-insulating materials or angular objects, or when an angle exists between the surface of the object to be detected and the reference axis of the sensor, selection of a sensor with the teach mode feature is recommended. This feature enables beam break detection using a reflector, which can be any flat, hard, stationary part of the machine **(2)**.

The sensor with the teach mode feature can also be used in confined spaces by using a 90° reflector. In the same manner as for the return reflector, the 90° reflector can be a flat part of the machine **(3)**.

It is also possible to use beam break detection (reflex system) with the 90° reflector **(4)**.

*NOTE: In reflex mode, the N.O. function **de-energizes** when an object is present, and the N.C. function **energizes** when an object is present.*

Osisonic™ Ultrasonic Sensors
Declaration of Conformity

MANUFACTURER'S DECLARATION OF CONFORMITY

The undersigned, representing the manufacturer

Document No: EW2007042401

Company:	HYDE PARK ELECTRONICS LLC
address:	1875 Founders Drive Dayton, OH 45420-4017 USA

Herewith declares that the product(s)

Product identification:	<i>SM300 Series, 12mm cylindrical ultrasonic sensor SM600 Series, 18 mm cylindrical and flat profile ultrasonic sensors SM900 Series, 30 mm cylindrical ultrasonic sensors Virtu Series, 18 mm, 30 mm cylindrical and dual mount ultrasonic sensors XX512A1KAM8, 12 mm cylindrical ultrasonic sensor XX518A1KAM12, 18 mm cylindrical ultrasonic sensor XX630A1KAM12, 30 mm cylindrical ultrasonic sensor</i>
-------------------------	--

To which this declaration refers are in conformity with the following:

Standards	<i>Low Voltage Switchgear and Controlgear,</i>
And/Or	<i>EN60947-1: General rules</i>
Normative Documents:	<i>EN60947-5-2: Proximity Switches</i>

Subject to installation, maintenance and utilization in accordance with their purpose, regulations, current standards, manufacturer's instructions and industry standards. Meet(s) the provisions of the following EC Directive(s): (Including all applicable amendments)

reference n°	title
<i>2006/95/EEC</i>	<i>Low-voltage Directive 73/23/EEC of February 19, 1973 modified by Directive 93/68/EC of July 22, 1993.</i>
<i>2004/10/EC</i>	<i>Electromagnetic Compatibility Directive of May 3, 1989 modified by Directives 92/31/CEE of April 28, 1992 and 93/68/CEE of July 22, 1993.</i>

The CE marking on the product and/or the packaging signifies that the product is in compliance with the applicable EU Directives .

Osisonic™ Ultrasonic Sensors

SM300 Series

Features

SM300

Features

- PNP or NPN output
- Plastic housing with durable glass epoxy sensing face
- 360° LED for complete visual inspection
- Mounting nuts included
- Nano (M8) connector version

The SM300 range offers two special model types:

• Windowed

An example of a windowed model is SM3•04A1600, which has a sensing window of 3–4 in. (76.2–101.6 mm). Moving the sensing window of the sensor away from the deadband allows for more discriminate sensing: objects immediately in front of the sensor are ignored, while objects further away (within the sensing range of 3–4 in.) are detected.

• Non-windowed

An example of a non-windowed model is SM3•04A46000, which has a sensing window of 0.25–4 in. (6.35–101.6 mm). This range allows detection of objects immediately in front of the sensor (minus the deadband), up to a distance of 4 in.

SM300

Windowed

Non-Windowed

Sensing Range: Example of Windowed vs. Non-Windowed

Windowed	Sensing Range, in. (mm)	Non-Windowed	Sensing Range, in. (mm)
SM3•04A1600	1–4 (25.4–101.6)	SM3•04A46000	3.75–4.0 (95.3–101.6)

Osisonic™ Ultrasonic Sensors

SM600 Series

General Specifications and Operating Profiles—SM600

General Specifications—SM600

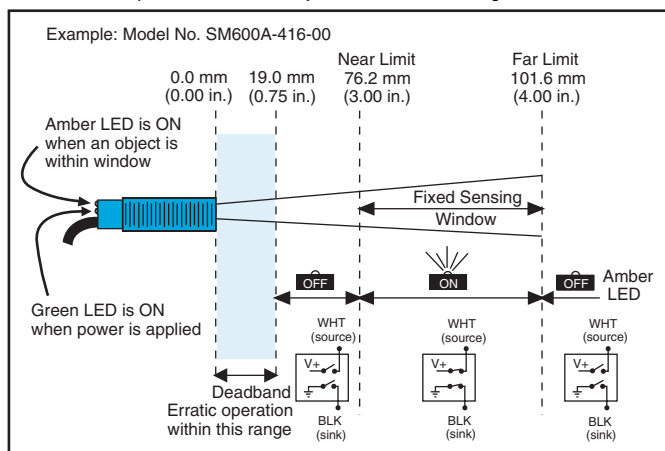

Sensing	Ranges	Up to 254 mm (10 in.)		
	Spans	From 3.18 mm (1/8 in.) to 228.6 mm (9 in.)		
	Window position, initial accuracy	± 1.59 mm (0.062 in.) max.		
	Window position repeatability	± 0.69 mm (0.027 in.) max.		
	Detection benchmarks	Models with ranges to 177.8 mm (7 in.)	1.59 mm (1/16 in.) diameter rod at a distance of 63.5 mm (2.5 in.) Max. ± 10° tilt of large flat object at a distance of 127 mm (5 in.)	
		Models with ranges from over 177.8 to 254 mm (7 to 10 in.)	1.59 mm (1/16 in.) diameter rod at a distance of 76.2 mm (3 in.) Max. ± 10° tilt of large flat object at a distance of 203.2 mm (8 in.)	
	Sonic frequency	500 kHz		
Sonic cone angle	7° (see beam plots, page 4-64)			
Power requirements	Supply voltage	12 Vdc to 24 Vdc ± 10%, regulated supply		
	Current consumption	Cable	50 mA max. (excluding load)	
		Connector	60 mA max. (excluding load)	
Power consumption	1 W max. (excluding load)			
Output	NPN Sinking	0 to 30 V Maximum on-state voltage 10.2 volts @ 100 mA		
	PNP Sourcing	100 mA @ 24 Vdc, max.		
Response time	Standard	On 3 ms, Off 3 ms		
	Optional	On 1.5 ms, Off 1.5 ms		
	Green LED	power On		
Indicators	Amber LED	On if object is detected within the window, regardless of output polarity (N.O./N.C.) style. Connector model using cable with built-in LEDs: On if NPN output is low.		
	Connections	Cable 24 AWG, foil shield, lead-free, PVC jacket, 4-conductor, 3 m (10 ft) long Connector 24 AWG, foil shield, lead-free, PVC jacket, 4-conductor, right-angle Micro style		
Protection	Power supply	current-limited over-voltage, ESD, reverse polarity		
	Outputs	current-limited over-voltage, ESD, over-current		
Environment	Operating temperature range	0 to 60 °C (32 to 140 °F) @ 12 Vdc supply 0 to 50 °C (32 to 122 °F) @ 24 Vdc supply		
	Storage temperature range	-40 to 100 °C (-40 to 212 °F)		
	Operating humidity	100%		
	Protection ratings	NEMA Type 4X, IP67		
	Chemical resistance	Resists most acids and bases, including most food products.		
Agency approvals	CE Mark	CE conformity is declared to: EN61326:1997 (annex A, industrial) including amendment A1:1998. EN55011 Group 1 Class A.		
Construction	Dimensions	Cable	18 mm dia. x 1 mm threaded housing x 65 mm (2.55 in.) long	
		Barrel	18 mm dia. x 1 mm threaded housing x 102 mm (4 in.) long, including connector/cable assembly	
		Flat-profile	Cable	30 x 16.25 x 93 mm (1.182 x 0.640 x 3.66 in.) H x W x L
			Connector	30 x 16.25 x 84.40 mm (1.182 x 0.640 x 3.322 in.) H x W x L
	Housing Shock and vibration resistant	Case	Ultem® plastic (FDA Approved) (SS303 stainless steel available only in 18 mm barrel-style)	
		Transducer Face	Silicone rubber, gray	
		Sensor Cables	Lead-free PVC jacket, black (Model AC117)	
LED	Polycarbonate			

Ultrasonic

Sensor Operating Profiles—SM600

Normally Open Output

The sensor output is On with the object in the fixed sensing window.

Normally Closed Output

The sensor output is Off with the object in the fixed sensing window.

General Specifications—SM900

General Specifications—SM900

		1 and 2 m ranges	8 m, long range
Sensing [TA = 20 °C (68 °F)]	Model Sensing Ranges	51 mm to 1 m (2.0 to 39 in.) 120 mm to 1 m (4.7 to 39 in.) ⁽¹⁾ 120 mm to 2 m (4.7 to 79 in.)	203 mm to 8 m (8.0 in. to 26 ft)
	Sonic Frequency	200 kHz	75 kHz
	Minimum Size Detection	Model SM900A1: 1.59 mm (0.0625 in.) diameter rod up to 635 mm (25 in.) distance from sensor	Model SM900A8: 50.8 mm (2.0 in.) diameter rod up to 4572 mm (15 ft) distance from the sensor
	Maximum Angular Deviation	+ 10° on 305 x 305 mm (12 x 12 in.) flat target at a distance of 305 mm (12 in.)	+ 10° on a large flat surface at a distance of 6.096 m (20 ft) + 5° on a large flat surface at a distance of 8 m (26 ft)
	Sonic Cone Profile	See Beam Plots	
	Limit Adjustment Resolution	0.08 mm (0.003 in.)	0.254 mm (0.01 in.)
	Repeatability	+ 0.8716 mm (0.03431 in.) max. Temperature Compensated	+ 2.54 mm (0.10 in.) max. Temperature Compensated
Power Requirements	Supply Voltage	12 to 24 Vdc + 10% excluding output load (regulated supply)	
	Current Consumption	100 mA max., excluding load	
	Peak Inrush Current	0.50 A	
	Power Consumption	1.2 W max., excluding load	
Outputs	Sinking Output (NPN)	Maximum on-state voltage	0.37 V @ 100 mA
		Maximum load current	100 mA
		Maximum applied voltage	35 Vdc
	Sourcing Output (PNP)	Maximum on-state voltage drop	0.50 V @ 100 mA
		Maximum load current	100 mA
Response Times	Minimum, Standard (Other response times are available)	1 m range models: 10 ms on/off, 20 ms on/off	100 ms on/off, 200 ms on/off
		2 m range models: 15 ms on/off, 30 ms on/off	
Indicators	Multicolored LED (Amber, Red, Green)	Indicates limits, setup, and operational modes	
	Amber LED	Illuminated when sensor output is in an active (on) state.	
Connection Options	Cable Model	24 AWG, foil shield, lead-free PVC jacketed, 4-conductor, 3 m (10 ft) long, standard	
	Connector Model	12 mm, 4 pole, male	
Protection	Note: This sensor is not rated explosion proof!	Power Supply	Current-limited over-voltage, ESD, reverse polarity
		Outputs	Current-limited over-voltage, ESD, over-current
Environment	Operating Temperature Range:	Silicone faced: 0 to 50 °C (32 to 122 °F) Stainless-steel faced: -20 to 50 °C (-4 to 122 °F)	-20 to 60 °C (-4 to 140 °F)
	Storage Temperature Range	Silicone faced: -20 to 80 °C (-4 to 176 °F) Stainless-steel faced: -50 to 80 °C (-58 to 176 °F)	-40 to 100 °C (-40 to 212 °F)
	Operating Humidity	100%	100%
	Protection Ratings	NEMA Type 4X, IP67	NEMA Type 4X, IP67
	Chemical Resistance	Unaffected by most acids, bases, and oils. Fluorosilicone- and stainless steel-faced transducers available for severe, corrosive-type environments.	Unaffected by most acids, bases, and oils.
Construction	Cable Model	30 mm (1.181 in.) dia. x 1.5 mm-6g threaded housing x 94.95 mm (3.738 in.) mm long, including 34.70 mm (1.365 in.) dia. x 20.10 mm (0.790 in.) long sensing head	30 mm (1.181 in.) dia. x 1.5 mm-6g threaded housing x 116.31 mm (4.579 in.) mm long, including 43.18 mm (1.700 in.) dia. x 42.09 mm (1.657 in.) long sensing head
		30 mm (1.181 in.) dia x 1.5 mm-6g threaded housing x 95.99 mm (3.779 in.) long.	30 mm (1.181 in.) dia x 1.5 mm-6g threaded housing x 117.35 mm (4.620 in.) long.
	Connector Model	With AC132 right-angle, M12 micro, connector/cable assembly: 117.15 mm (4.612 in.) long.	With AC132 right-angle, connector/cable assembly: 139.19 mm (5.480 in.) long.
		With AC130 straight, M12 micro, connector/cable assembly: 125.00 mm (4.921 in.) long. Sensing head dimension same as cable model.	With AC130 straight, connector/cable assembly: 147.04 mm (5.789 in.) long. Sensing head dimension same as cable model.
	Housing	Epoxy encapsulated to resist shock and vibration	
	Case	Ultem® plastic (FDA Approved) or SS303 stainless steel	Ultem plastic (FDA Approved)
	Transducer Face	Silicone rubber, gray SS304 stainless steel, 0.051 mm (0.002 in.) thick ⁽¹⁾	Epoxy, white
	Sensor Cables	Lead-free, black PVC jacketed	
Agency Approvals	CE Mark	CE conformity is declared to: EN61326:1997 (annex A, industrial) including amendment A1:1998. EN55011 Group 1 Class A	

¹ Available only in the stainless-steel faced, 1 m range models.

Osisonic™ Ultrasonic Sensors

SM900 Series

Output Specifications and Wire Assignments—SM906

Analog Output Electrical Specifications—SM906

	1 and 2 m ranges		8 m, long range	
	Current output (1)	Voltage output (2)	Current output (1)	Voltage output (2)
Output Range	4-20 mA	0-10 V	4-20 mA	0-10 V
Load Resistance	10 to 500 Ω	1 kΩ to ∞	10 to 500 Ω	1 kΩ to ∞
Resolution (3)	4.88 μA	2.44 mVdc	4.88 μA	2.44 mVdc
Accuracy (% of span) (4)	+ 0.50	+ 0.40	+ 0.50	+ 0.40
Linearity (% of span)	+ 0.10	+ 0.10	+ 0.15	+ 0.15
Temperature Dependence (% of span/°C)	+ 0.006	+ 0.004	+ 0.006	+ 0.004
Test conditions	24 Vdc, TA = 20 °C, large flat target, still air, @ minimum span size of 304.8 mm or 12 in.)		24 Vdc, TA = 20 °C, large flat target, still air, @ minimum span size of 3.048 m or 10 ft)	

¹ Tested with 250 Ω load.
² Tested with 1000 Ω load; a low value is recommended to minimize noise pickup.
³ Resolution = span/4096. Maximum: 0.23 mm (0.009 in.) for 1 m model, max. span; 0.459 mm (0.018 in.) for 2 m model, max. span; 1.90 mm; (0.071 in.) for 8 m, long-range model, max. span
⁴ For 1 m and 2 m models: Best accuracy may be limited to 0.794 mm (0.03125 in.) due to wave-skip phenomena.
 For 8 m models: Best accuracy may be limited to 2.117 mm (0.083 in.) due to wave-skip phenomena.

Inverse Proportional Output

The analog 0 to 10 Volt or 4 to 20 mA signal value decreases as the object moves closer to the near span limit.

Direct Proportional Output

The analog 10 to 0 Volt or 20 to 4 mA signal value increases as the object moves closer to the near span limit.

Multicolor LED Operation

- Red:** object sensed closer than the near span limit.
- Green:** object sensed at or between the near and far span limits.
- Amber:** object sensed beyond the far span limit.
- Off:** no object sensed within the full sensing range.

Amber LED Operation

The amber LED intensity varies directly with the magnitude of the analog output. The amber LED is off when the output is at the minimum and full brightness when the output is at the maximum.

Electrical Wiring

The sensor wires must be run in conduit free of any AC power or control wires.

Virtu® Series

Features and Selection

Features:

- Combination of dual-mount or barrel-style PNP or NPN output
- Plastic housing with durable glass epoxy sensing face
- Mounting nuts included
- Self-Teach removable cable offered separately
- Micro (M12) connector version

Ultrasonic

Self-Teach Connector Cable (XXZPB100)—6 in. length

Description

Connector cable, 6 in. (152 mm) long, with a male M12 connector, a female M12 connector, and a push button module for customizing performance of the Virtu VM1 and VM18 ultrasonic sensor.

Operation

With the self-teach cable connected between the sensor and the standard connector cable, push the button at each sensing point to teach the sensing range. The sensor can be set using one sensing point, or can provide foreground and background suppression to create a sensing window.

Specifications and Accessories

Wiring

Specifications

	VM1	VM18
Mechanical		
Sensing Range	2–20 in. (51–508 mm)	
Ultrasonic Cone Angle (see beam plot)	10°	
Maximum Angular Deviation	±10°	
Temperature range	+32 to 122 °F (0 to 50 °C)	
Humidity	100%	
Enclosure rating	NEMA Type	4X
	CENELEC	IP 67 conforming to IEC 60529
Hysteresis	0.013 in. (0.35 mm)	
Vibration	7 G amplitude + 1 mm (f =10 to 55 Hz)	
Shock resistance	30 G for 11 ms (conforming to 68-2-27)	
Repeat Accuracy	±0.027 in. (0.7 mm)	
Wiring	22 AWG	
Minimum size detection	0.06 in. (1.5 mm) dia. rod	2.5 in. (63.5 mm) dia. rod
Enclosure material	Case	Ultem® Plastic
	Sensing Face	PBT
Electrical		
Voltage Rating	12–24 Vdc	
Voltage Limits (including ripple)	10–28 Vdc	
Voltage Drop (across switch, closed state)	1 V (PNP or NPN)	
Max. Load Current	100 mA	
Residual Current (open state)	0.5 uA max.	
Current Consumption, No Load	60 mA	40 mA
LED Indicators	No LED	
Power-up delay (max.)	350 ms	100 ms
On delay (max.)	3 ms	10 ms
Off delay (max.)	3 ms	10 ms
Ultrasonic Frequency	500 kHz	300 kHz
Protective Circuitry	Electrostatic	Yes
	Overvoltage	Yes
	Reverse polarity	Yes
Agency Listings	IEC 60947-5-2, UL508, CSA C22-2

Virtu® Series

General Specifications—VM1 and VM18

General Specifications—Virtu VM1 and VM18

Sensing [TA = 20 °C (68 °F)]	Sensing Range:		50 to 508 mm (2 to 20 in.), large flat objects
	Sonic Frequency		300 kHz
	Minimum-size Detection		2.5 mm (0.098 in.) diameter rod or 1.0 mm (.039 in.) bar at a distance of 200 mm (8 in.) <i>NOTE: Smaller object may not be detected at closer distances</i>
	Maximum Angular Deviation		± 5° on a 100 x 100 mm (4 x 4 in.) flat target at a distance of 508 mm (20 in.)
	Sonic Cone Profile		See beam plot
	Limit Position Accuracy		± 1.6 mm (0.062 in.) max.
	Repeatability		± 0.7 mm (0.027 in.) or better
Power Requirements	Supply Voltage		12 to 24 Vdc ± 10%, regulated supply
	Current Consumption		40 mA max. (excluding load)
	Power Consumption		1.0 W max. (excluding load)
Output	Sinking Output (NPN Model VM1-NXX)	Maximum on-state voltage	0.75 V @ 100 mA
		Maximum load current	100 mA
		Maximum applied voltage	30 Vdc
	Sourcing Output (PNP Model VM1-PXX)	Maximum on-state voltage drop	1.10 V @ 100 mA
		Maximum load current	100 mA
		Output voltage	V _{Supply} - 1.10 V @ 100 mA
Input	Teach Setup		Contact Closure (push-button) to common. Internal 115KW pull-up to 5V
	Voltage Range	Setup Input Active	0 to 1 V
		Setup Input Inactive	2.5 to 5 V
		Max Voltage without Damage	-30 to 30 V
	Response Time		15.0 ms on/ 15.0 ms off max
Indicators <i>(Green and Amber LEDs are never illuminated simultaneously)</i>	Green LED		Illuminated if output is off
	Amber LED		Illuminated if output is on
Connections	Cable models		24 AWG, foil shield, lead-free, PVC jacket, 4-conductor, 3 m (10 ft) long
	Connector models		12 mm, circular 4-pole, male micro connector
Protection	Power Supply		Current-limited over-voltage, ESD, reverse polarity
	Output		Current-limited over-voltage, ESD, reverse polarity
	Input		Current-limited over-voltage, ESD, reverse polarity
Environment	Operating Temperature		-30 to 70 °C (-22 to 152 °F)
	Storage Temperature		-40 to 85 °C (-40 to 185 °F)
	Operating Humidity		100% non-condensing
	Protection Ratings		NEMA Type 4X, IP67
	Chemical Resistance		Resists most acids and bases, including most food products

Wire Assignments, Operating Profiles, and Dimensions—VM1 and VM18

Electrical Wiring

The sensor cable must be run in conduit, free of any AC power or control wires.

NPN Cable Style Wire (dual-mount model only)

PNP Cable Style Wire (dual-mount model only)

NPN Discrete Micro Connector Style

PNP Discrete Micro Connector Style

Output Type

NPN - Normally Closed Output

The sensing window is determined by a teachable near and far limit, which can be set anywhere between the deadband (50.8 mm / 2.0 in.) and the maximum sensing range (508 mm / 20 in.). The sensing window is taught using either an inline pushbutton switch or by grounding the teach wire.

PNP - Normally Open Output

The sensing window is determined by a teachable near and far limit, which can be set anywhere between the deadband (50.8 mm / 2.0 in.) and the maximum sensing range (508 mm / 20 in.). The sensing window is taught using either an inline pushbutton switch or by grounding the teach wire.

Limit Switches

Selection Guide

Osiswitch® XC Product Overview

Introduction

Electromechanical detection

Limit switches are used in all automated installations and also in a wide variety of applications, due to the numerous advantages inherent to their technology.

They transmit data to the logic processing system regarding:

- presence/absence
- passing
- positioning
- end of travel

Simplicity of installation, advantages

From an electrical viewpoint

- galvanic separation of circuits,
- models suitable for low power switching, combined with good electrical durability,
- very good short-circuit withstand in coordination with appropriate fuses,
- total immunity to electromagnetic interference,
- high rated operational voltage.

From a mechanical viewpoint

- N/C contacts with positive opening operation,
- high resistance to the different ambient conditions encountered in industry (standard tests and specific tests under laboratory conditions),
- high repeat accuracy, up to 0.01 mm on the tripping points.

Detection movements

- Linear movement (plunger)
- Rotary movement (lever)
- Multi-directional movement

Terminology

Rated value of a quantity

- This replaces the term "nominal value."
- It is the fixed value for a specific function.

Utilization categories

- AC-15 replaces AC-11: control of an electromagnet on a.c., test 10 le/le.
- AC-12: control of a resistive load on a.c. or static load isolated by opto-coupler.
- DC-13 replaces DC-11: control of an electromagnet on d.c., test le/le.
- Ithe is no longer a rated value but a conventional current used for heating tests.

Switching capacity

Example: for category A300 the corresponding operational current, I_e maximum, is 6 A-120 V or 3 A-240 V, the equivalent I_{the} being 10 A.

Positive opening travel

- Minimum travel from the initial movement of contact actuator to the position required to accomplish positive opening operation.

Positive opening force

- The force required on the contact actuator to accomplish positive opening operation.

Positive opening operation

- A limit switch complies with this specification when all the closed contact elements of the switch can be changed, with certainty, to the open position (no flexible link between the moving contacts and the operator of the switch, to which an actuating force is applied).
- All limit switches incorporating either a slow break contact block or a snap action N/C + N/O (form Zb), N/C + N/O + N/O, N/C + N/C + N/O, N/C + N/C + N/O + N/O contact block are positive opening operation, in complete conformity with standard IEC 60947-5-1 Appendix K.

Limit Switches

Selection Guide

Osiswitch® XC Product Overview

Contact blocks

Snap action contacts

- Snap action contacts are characterized by different tripping and reset points (differential travel).
- The displacement speed of the moving contacts is not related to the speed of the operator.
- This feature ensures satisfactory electrical performance in applications involving low speed actuators.

Unactuated state Approach travel Contact change of state Positive opening

Slow break contacts

- Slow break contacts are characterized by identical tripping and resetting points.
- The displacement speed of the moving contacts is equal, or proportional, to the speed of the operator—which must not be less than 0.1 m/s, or 6 m/minute (0.33 ft/s, or 19.68 ft/minute).
- The opening distance also depends on the distance traveled by the operator.

Electrical durability for normal loads

- Normally, for inductive loads, the current value is less than 0.1 A (sealed), i.e., values of 3 to 40 VA sealed and 30 to 1000 VA inrush, depending on the voltage.

For this type of application the electrical durability exceeds 10 million operating cycles.
Application example: XCKJ161 + LC1D12*** (7 VA sealed, 70 VA inrush).
 Electrical durability = 10 million operating cycles.

Switching capacity

3. Normal industrial PLC input type 1
4. Normal industrial PLC input type 2
5. Switching capacity conforming to IEC 60947-5-5, utilization category AC-15, DC-13

A300	240 V	3 A	B300	240 V	1.5 A
Q300	250 V	0.27 A	R300	250 V	0.13 A
6. Switching capacity conforming to IEC 60947-5-1, utilization category AC-15, DC-13

A300	120 V	6 A	B300	120 V	3 A
Q300	125 V	0.55 A	R300	125 V	0.27 A

Electrical durability for small loads

- The use of limit switches with programmable controllers is becoming more common.
- With small loads, limit switches offer the following levels of reliability:
- failure rate of less than 1 for 100 million operating cycles using snap action contacts (contacts XE2SP).
- failure rate of less than 1 for 20 million operating cycles using slow break contacts (contacts XE•NP and XE3SP).
- failure rate of less than 1 for 5 million operating cycles using contacts XCMD.

Range of use	
Standard contacts Continuous service (frequent switching)	XE2SP2151, P3151
	XE2NP***
	Contacts of XCMD, XE3•P***
Gold flashed contacts on resistive load	Occasional service Infrequent switching, ≤ 1 operating cycle/day and/or corrosive atmosphere

(1) Usable up to 48 V/10 mA.

Limit Switches

Selection Guide

Osiswitch® XC Product Overview

Principle

Innovation through modularity

- The Miniature design XCMD and Compact design XCKD, XCKP and XCKT product range family benefits from the **Osisconcept™** principle: **Offering simplicity through innovation.**
- A first in worldwide detection for improving productivity.
A complete offer for resolving the most commonly encountered detection problems:
 - product selection simplified,
 - product availability simplified,
 - installation and setup simplified,
 - maintenance simplified.

Heads

- A single metal operating head type for the Miniature design XCMD and Compact design XCKD, XCKP and XCKT ranges.

- Interchanging of heads achieved by simple operation of forked metal latch.
- Adjustable in 3 planes:

All the heads can be adjusted in 15° steps throughout 360°, in relation to the body.

All the levers can be adjusted in 15° steps throughout 360°, in relation to the horizontal axis of the head.

Limit Switches

Selection Guide

Osiswitch® XC Product Overview

Principle (continued)

Cable entries

The cable entries for Compact design XCKD and XCKP switches enable:

- simple cabling due to unrestricted access to contacts
- simple adaptation to the various worldwide markets

6 models are available:

- ISO M16 x 1.5
- PG 11
- ISO M20 x 1.5
- PG 13
- 1/2" NPT
- PF 1/2 (G 1/2)

Each model is available in metal or plastic, suited for compact design XCKD or XCKP, respectively. A connector version is also available.

Connection components

- The miniature XCMD range allows interchangeability of these pre-cabled connection components:
 - 1/4 turn is all that is required to remove the connection component on XCMD bodies with 2 and 3 contacts,
 - 6 alternative cable lengths are available.
- The miniature XCMD range also includes an integral or remote connector solution.

Contact block or body with contacts

- 2 and 3 snap action and slow break contact blocks, with positive opening operation, are interchangeable between the Compact design XCKD and XCKP and Classic XCKJ, XCKS, XCKM and XCKL ranges.
- For the Miniature design XCMD range, the contacts are an integral part of the body:
 - 2 and 3 snap action and slow break contacts, with positive opening operation, and interchangeable connection component,
 - 4 snap action contacts, with positive opening operation, with monolithic body and connection components.

Selection Guide

Osiswitch® XC Product Overview

Compliance with standards

The majority of Telemecanique® brand products comply to national standards (such as French NF C standards, German DIN standards), European standards (such as CENELEC), or international standards (such as IEC). These standards rigidly stipulate the characteristic requirements of the designated products (for example IEC 60947 relating to low voltage switchgear and controlgear).

These products, when correctly used, enable the production of control equipment assemblies, machine control equipment or installations conforming to their own specific standards (for example IEC 60204 for the electrical equipment of industrial machines).

IEC 60947-5-1

Insulation coordination (and dielectric strength)	<ul style="list-style-type: none"> The standard IEC 60664 defines 4 categories of prospective transient overvoltages. It is important for the user to select control circuit components which are able to withstand these overvoltages. To these ends, the manufacturer states the rated impulse withstand voltage (U_{imp}) applicable to the product. 	
Terminal connections	<ul style="list-style-type: none"> The cabling capacity, mechanical robustness and durability of the terminals, as well as the ability to resist loosening, are verified by standardized tests. Terminal reference marking conforms to standard EN 50013. 	
Switching capacity	<ul style="list-style-type: none"> With maximum electrical load. A single designation (A300 for example) enables indication of the contact block characteristics related to its utilization category. 	
Positive opening operation (IEC 60947-5-1 Appendix K)	<ul style="list-style-type: none"> For contacts used in safety applications (end of travel, emergency stop device, etc.) the assurance of positive opening is required (see IEC 60204, EN 60204) after each test, the opening of the contact being verified by testing with an impulse voltage (2500 V). 	
Electrical symbols for contacts	 <ul style="list-style-type: none"> Form Za, the 2 contacts are the same polarity. 	 <ul style="list-style-type: none"> Form Zb, the 2 contacts are electrically separate.
Symbol for positive opening	 <ul style="list-style-type: none"> Simplified version 	 <ul style="list-style-type: none"> Complete symbol

CENELEC EN 50047

The European standards organization CENELEC, which has 14 member countries, has defined in this standard the first type of limit switch.

This standard defines 4 variants of devices (forms A, B, C, E).

Limit switches XCKP, XCKD and XCKT conform to standard EN 50047.

Form A, with roller lever

Form B, with end plunger (rounded)

1. Minimum value
2. Maximum value

A: reference axis
H: differential travel

P: tripping point
E: cable entry

Form C, with end roller plunger

Form E, with roller lever for 1 direction of actuation

Limit Switches

Osiswitch® Miniature Snap Switches

XEP and XC0

Introduction

Electromechanical detection

Osiswitch miniature snap switches, featuring electromechanical technology, assure the following functions:

- detection of presence or absence
- detection of position.

Actuation of the operator (plunger or lever) on the miniature snap switch causes the electrical contact to change state. This information can then be processed by a PLC controlling the installation.

Osiswitch miniature snap switches can be used both for industrial applications and the building sector.

Features

Osiswitch miniature snap switches incorporate a C/O snap-action, single-break contact. They are characterized by:

- high electrical ratings for their very small size
- short tripping travel
- low tripping force
- high repeat accuracy on the tripping points
- long service life

Terminology

Forces

Maximum tripping force: maximum force which must be applied to the operator to move it from the rest (unactuated) position to the trip position (tripping point).

Minimum release force: value to which the force on the operator must be reduced to allow the snap action mechanism to return to its rest (unactuated) position.

Maximum permissible end of travel force: maximum force that can be applied to the operator at the end of its travel without damaging the switch.

Position / Travel

1. Tripping point: position of the operator in relation to the switch mountings (mounting hole center line) at the instant the switch contact changes state.
 - A. Differential travel: distance between the tripping point and the position at which the snap action mechanism returns to its initial state on release of the operator.
2. Overtravel limit: position of the operator when an extreme force has moved it to the effective end of its available travel.
 - B. Overtravel: distance between the tripping point and the overtravel limit.

The reference point for the figures given for forces and travel is a point F, which is situated on the plunger in the case of a basic switch or at 3 mm (0.12 in.) from the end of the plain lever in the case of a lever operated switch.

Mechanical characteristics

T1: bounce time
T: changeover time

Changeover time

This is the time taken by the moving contact when moving from one fixed contact to another until it becomes fully stable (contact bounce included).

This time is related to the inter-contact distance, the mechanical characteristics of the snap action mechanism, and the mass of the moving element. However, due to the snap action mechanisms used, the time is largely independent of the speed of operation. It is normally less than 20 ms (including bounce times of less than 5 ms).

Operating speed and maximum usable operating rate

Our miniature snap switches are suitable for a wide range of operating speeds: generally, from 1 mm/mn to 1 m/s (0.04 in/mn to 3.28 ft/s). The maximum usable operating rate on a light electrical load may be as high as 10 operations/second.

Mounting

Operating speed and rate

Mounting and operation

To conform to the leakage paths and air gaps in standards EEC 24 - EN/IEC 61058 and EN/IEC 60947:

- an insulation pad must be inserted between the snap switch and the mounting surface if the latter is metal,
- manual operation of a metal actuator must only be carried out with the aid of an intermediate actuator made of an insulating material.
- The installer must ensure adequate protection against direct contact with the output terminals.

Actuation method

Direct operation: The plunger should preferably be actuated along its axis. However, the majority of our miniature snap switches will accept skewed operation provided the angle of actuation is not more than 45°.

The travel of the actuator must not be limited to only reaching the tripping point. The actuator must always be operated in such a manner that the plunger reaches a point at least 0.5 times the stated overtravel value of the switch. Also, it should not reach its end of travel nor exceed the maximum permissible end-of-travel force.

Limit Switches

Osiswitch® Miniature Snap Switches

XEP and XC0

Mounting (continued)

Actuation method (continued)

Lever operators:

- when actuation is by a roller lever, force should preferably be applied in the direction shown in the diagrams opposite,
- where the movements involved are fast, the ramp should be so designed as to ensure that the operator is not subjected to any violent impact or abrupt release.

Mounting—Tightening torque

The tightening torque of the fixing screws must conform to the following values:

Ø of mounting screw		2	2.5	3	3.5	4
Tightening torque, N•cm (lb-in)	Maximum	25 (2.21)	35 (3.10)	60 (5.31)	100 (8.85)	150 (13.28)
	Minimum	15 (1.33)	25 (2.21)	40 (3.54)	60 (5.31)	100 (8.85)

Resistance to mechanical shock and vibration

- Resistance to shock and vibration depends on the mass of the moving parts and on the forces holding the contacts together.
- In general, for a miniature snap switch without accessory:
 - vibration > 10 gn, 10 to 500 Hz
 - shock > 50 gn 11 ms 1/2 sine wave

Electrical characteristics

Operating curves

These indicate the electrical life of the miniature snap switches under standard conditions [20°C (68 °F), 1 cycle/2 seconds], by showing the number of switching operations which can be performed with given types of load. For sealed snap switches, the operating rate is 1 cycle/6 s.

Insulation resistance

The insulation resistance of the miniature snap switches is generally greater than 50,000 MΩ, measured at 500 Vdc

Dielectric strength

The dielectric strength of our miniature snap switches is generally superior to:

- 1500 V between live parts and earth
- 1000 V between contacts
- 600 V between contacts for switches with an inter-contact distance less than 0.3 mm

1. Pre-cabled connection components: replace the "*" in the catalog number with the required cable length in meters, either: 1, 2, 3, 5, 7 or 10.
 Example: ZCMC21L* becomes ZCMC21L7 for a 7 m (23.0 ft) cable.
 Note: only cable lengths of 1, 2 and 5 m (3.3, 6.6, and 16.4 ft) are available for pre-cabled connection components ZCMC37L* and ZCMC39L*.

Special Features and Catalog Number Explanation

Interpretation of the Catalog Number

Important Note:
Use this chart for interpretation only. Some possibilities are not shown and some combinations of components are not available. Some switches are not modular. Refer to the additional information in this catalog. For interpretation of catalog numbers for heads and levers, see page 426.

- Consult your local field sales office for availability.
- ▲ Last two digits of lever catalog number occupy this position when rotary heads with levers are required.
- See page 426 for levers.
- ◆ See page 431 for available levers, specifically allowed for the ZCE05 programmable head.

Switch actuation	On end		By 30° cam		
Type of actuation					
Maximum actuation speed	0.5 m/s (1.64 ft/s)		1.5 m/s (4.92 ft/s)		
Minimum force	For tripping	15 N (3.37 lb)	12 N (2.70 lb)	8 N (1.80 lb)	0.2 N•m (1.77 lb-in)
	For positive opening	60 N (13.49 lb)	50 N (11.24 lb)	50 N (11.24 lb)	0.5 N•m (4.43 lb-in)
Cable entry	3 entries tapped ISO M20 x 1.5, clamping capacity 7 to 13 mm (0.28 to 0.51 in.); or 3 entries tapped for PG 13 conduit thread conforming to NF C 68-300 (DIN PG 13.5), clamping capacity 9 to 12 mm (0.35 to 0.47 in.) (0.35 to 0.47 in.), plus adapter for 1/2" NPT				

- Adjustable throughout 360° in 5° steps, or in 90° steps by reversing the notched washer.
- Switches available with other 2-pole slow break contact blocks: N/O + N/C make before break, N/C + N/C simultaneous (with positive opening operation, when properly mounted and using a conforming operator), N/C + N/C simultaneous, please consult your local sales office.

Replacement parts

The heads of limit switches type XCKML are the same as those for types XCKM and XCKL (see heads ZCKD10, ZCKD02, ZCKD21 and ZCKD15 on page 474).

Environmental characteristics

Conforming to standards	Products	IEC 60947-5-1, EN 60947-5-1, UL 508, CSA C22-2 n° 14
	Machine assemblies	IEC 60204-1, EN 60204-1
Product certifications		UL, CSA, CCC
Protective treatment	Version	Standard "TC", special "TH"
Ambient air temperature	Operation	-25...+70 °C (-13...+158 °F), special sub-assemblies available for extreme temperatures: -40 °C (-40 °F) or +120 °C (248 °F)
	Storage	-40...+70 °C (-40...+158 °F)
Vibration resistance	Conforming to IEC 60068-2-6	25 gn (10...500 Hz)
Shock resistance	Conforming to IEC 60068-2-27	50 gn (11 ms)
Electric shock protection		Class I conforming to IEC 61140 and NF C 20-030
Degree of protection		NEMA Types 1, 2, 4, 12; IP 66 conforming to IEC 60529; IK 07 conforming to EN 50 102
Repeat accuracy		0.01 mm on the tripping points, with 1 million operating cycles for head with end plunger
Cable entry or integral connector	Depending on model	Tapped entry for PG 13 conduit thread, or tapped ISO M20 x 1.5 or 1/2" NPT, or M12 connector
Materials		Bodies and heads in Zamak® zinc alloy

1. 1 tapped entry for PG 13 conduit thread (convertible to 1/2" NPT using adapter DE9RA1212, included); or
1 tapped entry for ISO M20 x 1.5 conduit thread (with suffix H29 added to the catalog number).
 2. Rod Ø 6 mm (0.24 in.), length 200 mm (7.87 in.)
 3. 190 max.
 4. 212 max.
- Ø: 2 elongated holes Ø 5.3 x 7.3.

Limit Switches

Osiswitch® Classic, Plastic, Conforming to CENELEC EN 50041

XCKS—Double Insulated, Modular

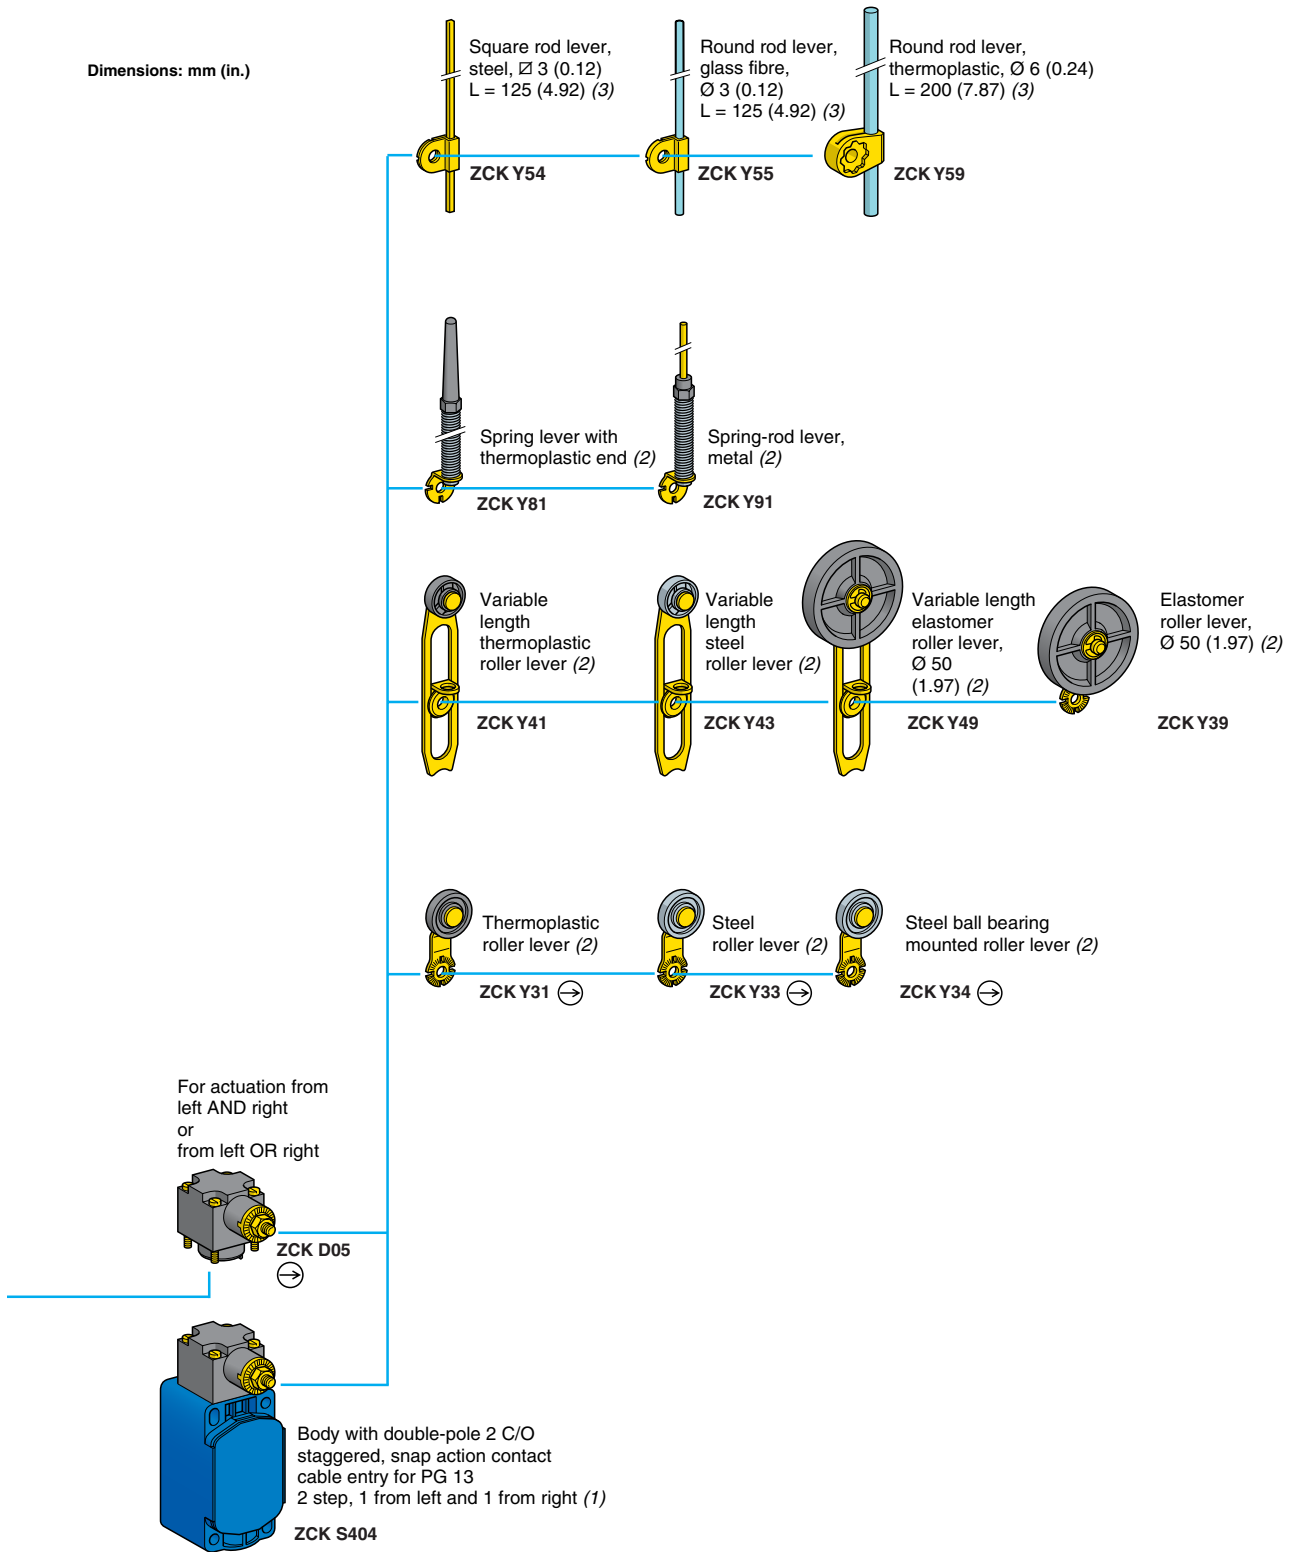

1. For further details, see page 518. For a cable entry tapped ISO M20 x 1.5, add **H29** to the catalog number. Example: ZCKS1 becomes **ZCKS1H29**. To convert PG 13 to 1/2" NPT, use adapter DE9RA1212. See page 521 for dimensional drawing.
2. Adjustable throughout 360° in 5° steps, or in 90° steps by reversing the notched washer.
3. Adjustable throughout 360° in 5° steps, or in 45° steps by reversing the lever mounting.

Limit Switches

Osiswitch® Classic, Plastic, Conforming to CENELEC EN 50041

XCKS—Double Insulated, Modular

Dimensions: mm (in.)

1. For further details, see page 518. For a cable entry tapped ISO M20 x 1.5, add **H29** to the catalog number. Example: ZCKS1 becomes **ZCKS1H29**. To convert PG 13 to 1/2" NPT, use adapter DE9RA1212.
- ⊖: N/C contact with positive opening operation or head assuring positive opening operation, when properly mounted and using a conforming operator.
2. Adjustable throughout 360° in 5° steps, or in 90° steps by reversing the notched washer.
3. Adjustable throughout 360° in 5° steps, or in 45° steps by reversing the lever mounting.

Environmental characteristics		
Conforming to standards	Products	IEC/EN 60947-5-1, VDE 0660-200 (CSA C22-2 n° 14 for XCR), CCC (for XCR)
	Machine assemblies	IEC/EN 60204-1, NF C 79-130
Product certifications	Standard version	X CRA, B, E, F, CSA A300
	Special version	X CRA, B, E, F, CSA A300, 1/2" NPT
Protective treatment	Standard version	"TC"
Ambient air temperature		Operation: -25...+70 °C (-13...+158 °F); Storage: -40...+70 °C (-40...+158 °F)
Vibration resistance		9 gn (10...500 Hz)
Shock resistance		X CRA, B, E, F: 68 gn; XCRT: 30 gn (18 ms)
Electric shock protection		Class I conforming to IEC 60536 and NF C 20-030
Degree of protection		X CRA, B, E, F: IP 54 conforming to IEC 60529; IP 54S conforming to NF C 20-010 XCRT: IP 65 conforming to IEC 60529; IP 65S conforming to NF C 20-010
Enclosure		Metal, except XCRT315: polyester
Cable entry		Tapped entry for PG 13 (PG 13.5) conduit thread

Contact block characteristics		
Rated operational characteristics		~ AC-15; A300 (Ue = 240 V, Ie = 3 A) = DC-13; Q300 (Ue = 250 V, Ie = 0.27 A), conforming to IEC 60947-5-1 Appendix A, EN 60947-5-1
Rated insulation voltage		Ui = 500 V degree of pollution 3 conforming to IEC 60947-1 and VDE 0110, group C conforming to NF C 20-040 Ui = 300 V conforming to UL 508, CSA C22-2 n° 14
Rated impulse withstand voltage		U imp = 6 kV conforming to IEC 60947-1, IEC 60664
Positive operation (depending on model)		N/C contacts with positive opening operation to IEC 60947-5-1 Section 3, EN 60947-5-1
Resistance across terminals		≤ 25 mΩ conforming to NF C 93-050 method A or IEC 60255-7 category 3
Short-circuit protection		10 A cartridge fuse type gG (gl)
Cabling	Screw clamp terminals	XE2SP2151: Clamping capacity, min: 1 x 0.34 mm ² , max: 2 x 1.5 mm ² XE2NP2151: Clamping capacity, min: 1 x 0.5 mm ² , max: 2 x 2.5 mm ² XCRT contacts: Clamping capacity, min: 1 x 0.5 mm ² , max: 2 x 2.5 mm ²
Minimum actuation speed		XE2SP2151 and XCRT contacts: 0.01 m/minute (0.03 ft/minute), XE2NP2151: 6 m/minute (19.68 ft/minute)
Electrical durability		Conforming to IEC 60947-5-1 Appendix C Utilization categories AC-15 and DC-13 Maximum operating rate: 3600 operating cycles per hour Load factor: 0.5

XCRT contacts

d.c. supply =	Voltage	24 V	48 V	120 V

Industrial Snap Switches and Limit Switches without Enclosures

Industrial Snap Switches have been incorporated in many Square D® products such as timers, specialty push buttons, foot switches, operating mechanisms, door interlocks, motor control centers, position switches, and many other control products.

- **Recommended Actuator**—An adjustable actuator is recommended. If a non-adjustable actuator is used, a resilient type or a mechanical stop should be used to prevent bottoming of button mechanism.
- **Adjustable Actuator Overtravel**—Minimum recommended overtravel in both trip and reset directions is 0.015 in. (0.38 mm).
- **Non-Adjustable Actuator Total Travel**—Maximum differential limit plus 0.030 in. (0.76 mm). Example: 0.076 in. (1.9 mm) for Type AO2.
- **Non-Adjustable Actuator Total Travel**—Fully retracted—from mounting surface, at least 0.139 in. (3.5 mm) for Type AO1 and 0.160 in. (4.0 mm) for Types AO2 and CO3. Fully engaged—from mounting surface, at least 0.061 in. (1.5 mm) but not closer than 0.045 in. (1.1 mm).

- Single-pole snap switches that contain two double-break contact elements (1 N.O. and 1 N.C.) must be used on circuits of the same polarity. Two-pole snap switches contain two electrically separated sets of contact elements allowing use on circuits of opposite polarity. Each set contains two double-break contact elements (1 N.O. and 1 N.C.) that must be used on circuits of the same polarity.
- † Roller turned 90° from standard (perpendicular to mounting holes).
- ▲ With 0.22 in. (5.6 mm) width roller.
- ◆ With 0.47 in. (12.0 mm) width roller.
- * For use with Type AO and CO basic switches.

Marking

Description

Mini-Switch (MS) miniature switches meet the need for very small, enclosed switches with environmental sealing. A full range of styles are available, including top push plunger, parallel roller plunger, cross roller plunger, rotary lever, and omnidirectional whisker. Factory pre-wiring with industrial grade cable (type SJTO) eliminates the need to remove the cover to wire the switch. Bottom- or side-entrance cable connection is available.

Housings are rugged diecast zinc construction. Excellent sealing is achieved with an epoxy compound encapsulation of the electrical cable connections and switch housing. A Viton® O-ring seal on the plunger keeps liquids from entering the switch cavity.

Features

The heavy-duty, completely encapsulated miniature MS limit switch is intended for difficult applications such as machine tools, earth moving equipment, and general transportation. Key features include:

- Symmetrical design and top mounting holes for easy gang mounting of several switches for multiple switching
- Epoxy encapsulation sealing the pre-wired heavy duty #18 AWG SJTO cable and protecting against temporary submersion
- Single-pole double-throw (SPDT) Form C or Form Z, 1 N.O. + 1 N.C. contact
- Fine rotary lever adjustment
- Compact diecast zinc housing
- NEMA Type 6P and IP67 rated
- 10 ampere continuous current rating
- Gold contacts for low level logic switching
- Stainless steel rollers
- UL Listed and CSA Certified
- CE Marking
- Standard temperature range: -40 to +220 °F (-40 to +104 °C)

Options

- Gold crosspoint contacts
- Double-break contacts (Type ML only)
- Side-entrance cable or connectors
- Low force (top plunger models only)
- Yellow or gray SJTO cable
- 4- or 5-pin micro-connectors, AC and DC
- #16 AWG SJTO cable
- Tapped 8-32 holes on top of housing

Rotary Head

Conventional rotary limit switches have mounting holes in the base or body of the switch. In our rotary design, mounting holes are located in the head also. Cycling and stress forces are transmitted from the shaft in the head directly to the mounting bolts. The strain on the joint between the body and the head is eliminated. The result is a stronger and more rigid mounting, less subject to vibration or a weakness in the joint.

Bulkhead Mounted Mini-Switches

The MS housing is designed for multiple switching by gang mounting several switches.

Two mounting holes can be tapped in the top of each switch (except rotary lever) for #8-32 thread bolts. Switches can be readily mounted to any frame or plate by drilling holes through same to accommodate #8-32 bolts and switch plungers. Both sides of the housing are counter-bored for surface mounting.

Lever Arm Selection

There are many styles of levers to accommodate most industrial applications. The levers are diecast metal. The standard roller levers are available with nylon rollers and are also available with steel rollers. See the tables below. Dimensions are given as in. (mm).

Style 7 Levers—0.75 in. (19 mm) diameter, nylon or steel roller

Cross Roller Plunger

Description and Specifications

Sealed construction keeps contaminants out of the contact area, making it the ideal choice for low voltage, low current circuits used by programmable controllers.

Type XA is designed for use in applications where contact reliability, environmental immunity, small size, or low cost are required.

NOTE:

- Because reed switches are operated by a magnet, they should not be installed in areas where strong magnetic fields may be present. The devices should always be checked for proper operation after installation.
- Type XA **cannot be used in Division 2 locations** since the National Electrical Code (NEC) requires provisions for conduit connection. The Type C reed switches have this provision for conduit but the Type XA do not.

Cable Length* ft (m)	Straight Plunger		Roller Plunger		Cross Roller Plunger	
	N.O. Type	N.C. Type	N.O. Type	N.C. Type	N.O. Type	N.C. Type
3 (0.9)	XA7303E	XA7503E	XA7303D	XA7503D	XA7303DC	XA7503DC
6 (1.8)	XA7306E	XA7506E	XA7306D	XA7506D	XA7306DC	XA7506DC
9 (2.7)	XA7309E	XA7509E	XA7309D	XA7509D	XA7309DC	XA7509DC

* Other cable lengths are available. Order by changing the last two numerical digits of the Type number to the length desired.
Example: An XA7303E with 15 ft (4.5 m) of cable would become an XA7315E.

Operating Data

Dimensions in. (mm)	Top Push Rod (Type E)	Roller Plunger (Types D, DC)
Initial position (D)	0.690 (17.5)	1.190 (30.2)
Trip position (B)	0.620 (15.7)	1.120 (28.4)
Pre-travel (E)	0.07 (1.8)	0.07 (17.8)
Reset position (C) maximum	0.655 (16.6)	1.155 (29.3)
Differential (F)	0.015 (0.38)	0.015 (0.38)
Final position (A)	0.492 (12.5)	0.992 (25.2)
Total stroke	0.198 (5.0)	0.198 (5.0)
Operating force (max.)	2.75 lb (0.31 N)	2.75 lb (0.31 N)

Contacts	The contact is a fully encapsulated, hermetically sealed reed, suitable for controlling solid-state loads as well as industrial relays. Switches can also be used as inputs to intrinsically safe systems. Use of a transient suppressor extends the life of the switch when used on heavy electrical loads.
Enclosure Construction	Diecast zinc—baked, gray enamel finish. Meets NEMA Types 2, 4, 4X, 6P, 12 and 13 requirements. Oil-tight, dust-tight, water-tight, and submersible.
Cable	SJTOWA jacketed cable with 18 gauge wire.
Ambient Temperature	-20 to +140 °F (-28.9 to +60 °C).
Agency Listings	UL: File E42259 CCN NKCR CSA: File LR 25490, Class 3211 03

NOTE: The XA switch is available with a 3 ft (0.9 m) cable and 3-pin Brad Harrison male connector No. 40904 (or equivalent), Form Y190.

* Only one of the jumpers may be used. Pilot light is On when load is energized

Special features and modifications

Special features do not apply to 9007CR unless noted. Not field installable, except where noted.

Shaft equipped with hub for mounting larger diameter lever used with 9007T/FT limit switches

Any rotary lever arm 9007C, CF or CR switch can be furnished with an optional shaft and hub combination which will accept the lever arms normally used with 9007T and FT limit switches. To order, add S9 as suffix to the device number. For example, to order a 9007C54B2 with this modification, order as a 9007C54B2S9. For details about switches and lever arms that can be furnished with this modification, see the appropriate catalog or the Digest.

Description	Suffix to add to the device catalog number	Weight kg (lb)
Optional hub for 9007T/FT levers	S9	0.018 (0.04)

Hub only: can be field installed on rotary shaft; see accessories, page 565

Addition of LED pilot light (1)

Description	Suffix to add to the device catalog number	Weight kg (lb)
Addition of LED pilot light in parallel with N.O. contact (light normally on)	P5 (2)	0.57 (1.25)
Addition of LED pilot light in parallel with N.C. contact (light normally off)	P6 (2)	0.57 (1.25)
Addition of two LED pilot lights, one in parallel with N.O. contact (light normally on), one in parallel with N.C. contact (light normally off)	P7	0.57 (1.25)
Addition of two LED pilot lights in parallel with N.O. contacts (lights normally on)	P8 (3)	0.57 (1.25)
Addition of two LED pilot lights in parallel with N.C. contacts (lights normally off)	P9 (3)	0.57 (1.25)
Addition of one isolated LED pilot light (light on when load is energized)	P10 (4)	0.57 (1.25)

LED Pilot light, 24 to 120 V AC or DC on plug-in type switch (9007C52, C54, C62, C66, C68 or (2))

1. Bleeder circuit must be added to ensure PLC compatibility.
2. 9007C84 and C86 are available with P5 or P6 pilot lights only.
3. 9007C62, C66 or C68 only.
4. 9007C54 only. Not available with prewired receptacles.

Factory Modifications (Forms)

Special features and modifications (continued)

Special features do not apply to 9007CR unless noted. Not field installable, except where noted.

Manifold mounting

Description	Suffix to add to the device catalog number	Weight kg (lb)
Manifold mounting available on standard and compact types. Replaces existing type B installations if new hole is drilled to match knockout. Supersedes type C with form Y205. Receptacle is furnished with a wiring hole and a gasket in the base.	Y2051	0.57 (1.25)
Special chemical resistant coating (includes Viton® fluorocarbon seals—Y140, and stainless steel head and body screws) (1)	L3	0.57 (1.25)
Low temperature – lever types only: limit switch will operate in an ambient temperature range of -40 to 185 °F (standard limit switch ambient temperature range is -20 to 185 °F). Minimum temperature is based on the absence of freezing moisture or water.	Y128	0.57 (1.25)

Viton fluorocarbon gaskets and seals (1)

Substitution of Viton fluorocarbon gaskets and seals on:

Lever arm type, standard box (Viton fluorocarbon shaft seals on lever arm types as standard)	Y140	0.57 (1.25)
Lever arm type, compact box (Viton fluorocarbon shaft seals on lever arm types as standard)	Y140	0.57 (1.25)
Plunger type, standard box	Y140	0.57 (1.25)
Plunger type, compact box	Y140	0.57 (1.25)
Substitution of Viton fluorocarbon boot only on plunger type switches	Y1401	0.57 (1.25)

1. Fluorocarbon (as found in Viton seals) has been shown to resist sunlight aging problems.

Mini and micro connectors, ISO M20 (Form M11)

To order 9007C with ISO M 20 thread add the suffix M11 to the device number.

Examples of complete unit catalog numbers with ISO M20 thread in standard plug-in body type

Pre-wired receptacle (1) (2)

Description	For use	Suffix to add to the device catalog number	Weight kg (lb)
Plug-in limit switch furnished with pre-wired mini 5-pin Brad Harrison male connector			
Single pole	For use with Brad Harrison female portable plug No.41306, 41307 or 41308 (or equal).	Y1901	0.60 (1.33)
	Same as Y1901 but with different wire color coding	Y1905	0.60 (1.33)
Tamper proof screws in complete switch only			
Single pole	Same as Y1901 but with tamper proof screws on head and body	Y1903	0.60 (1.33)
	Similar to Y1905 except for double pole device	Y19013	0.60 (1.33)

1. Plug and cable assemblies: see accessories page 565
2. Not available with P10 or for Hazardous location switches

Examples of complete unit catalog numbers with mini or micro connectors in standard plug-in body type

Type of head	Catalog number	Weight kg (lb)
Single pole, 5-pin mini connector (7/8"-16 UN-2A thread)		
Side plunger	9007C54FY1901	0.57 (1.25)
Top plunger	9007C54DY1901	0.57 (1.25)
	9007C54EY1901	0.57 (1.25)
Rotary	9007C54B2Y1901	0.57 (1.25)
Wobble stick	9007C54LY1901	0.57 (1.25)
	9007C54JY1901	0.57 (1.25)
Two poles, 9-pin mini connector (1-2/8"-16 UN-2A thread)		
Side plunger	9007C62FY19016	0.57 (1.25)
Top plunger	9007C62DY19016	0.57 (1.25)
	9007C62EY19016	0.57 (1.25)
Rotary	9007C62B2Y19016	0.57 (1.25)
Wobble stick	9007C62LY19016	0.57 (1.25)
	9007C62JY19016	0.57 (1.25)
Single pole, 5-pin micro single key (M12 x 1 thread)		
Side plunger	9007C62FY1912	0.57 (1.25)
Top plunger	9007C54DY1912	0.57 (1.25)
	9007C54EY1912	0.57 (1.25)
Rotary	9007C54B2Y1912	0.57 (1.25)
Wobble stick	9007C54LY1912	0.57 (1.25)
	9007C54JY1912	0.57 (1.25)
Single pole, 5-pin micro connector two keys (1/2"-20 UNF-2A thread)		
Side plunger	9007C54FY19019	0.57 (1.25)
Top plunger	9007C54DY19019	0.57 (1.25)
	9007C54EY19019	0.57 (1.25)
Rotary	9007C54B2Y19019	0.57 (1.25)
Wobble stick	9007C54LY19019	0.57 (1.25)
	9007C54JY19019	0.57 (1.25)

Potted limit (position) switch or plug-in receptacle only (1)

Description (2)			Suffix to add to the device catalog number	Weight kg (lb)
With individual wires	Single pole	With five #16 wires five ft long	Y1841	0.59 (1.30)
	Two pole	With nine #16 wires five ft long	Y1842	0.60 (1.32)
With STOWA cord	Single pole	With five conductor #16 STOWA cord eight ft long	Y1851	1.30 (2.88)
	Single pole	Same as Y1851 but with different wire color coding	Y1855	1.30 (2.88)
	Two pole	With nine conductor #16 STOWA cord eight ft long	Y1852	1.31 (2.90)
	Two pole	Same as Y1852 but with different wire color coding	Y1856	1.31 (2.90)
Tamper proof screws—complete switch only				
With individual wires	Same as Y1841 but with tamper proof screws on head and body		Y1843	0.59 (1.30)
	Same as Y1842 but with tamper proof screws on head and body		Y1844	0.60 (1.32)
With STOWA cord	Same as Y1851 but with tamper proof screws on head and body		Y1853	1.30 (2.88)
	Same as Y1852 but with tamper proof screws on head and body		Y1854	1.30 (2.88)
	Same as Y1855 but with tamper proof screws on head and body		Y1857	1.31 (2.90)
	Same as Y1856 but with tamper proof screws on head and body		Y1858	1.31 (2.90)

- Not for 9007CR Hazardous location devices
- Wire entry completely sealed with epoxy resin.

Dust boot (protects against abrasive dusts, dirt, grit and sand)

Description	Suffix to add to the device catalog number	Weight kg (lb)
Lever type limit switch furnished with a boot around the shaft	On all 9007C and 9007CR lever type switches Y33	0.01 (0.01)
Dust boot only	See accessories, page 565

Special features do not apply to 9007CR unless noted. Not field installable, except where noted.

Optional shafts

Description	Suffix to add to the device catalog number	Weight kg (lb)
Optional shaft, 7.8 mm (0.306 in.) diameter: To accommodate lever arms from the obsolete R.B.Denison® C limit switches. Available on all 9007C, CF, or CR limit switches	Y247	0.57 (1.25)
Optional shaft, 7.1 mm (0.28 in.) diameter: Available on all 9007C, CF, or CR limit switches	Y249	0.57 (1.25)

Switch with adapter plate

Description	Suffix to add to the device catalog number	Weight kg (lb)
Switch with adapter plate permitting substitution of any 9007C switch with standard body for any type T switch with style B base plate	Y147	—

Direct acting contacts / Positive opening contacts ☞ Y1561

One pole, normally closed, slow make-slow break, direct acting contact mechanism substituted for standard snap switch on 9007C52, C54 and CR53 devices.

This mechanism was designed for use in emergency overtravel applications. The movable contact of this basic switch unit is acted upon directly by the actuating mechanism of the limit switch and is not dependent upon the force exerted by a snap switch blade or spring to open the circuit. Because these contacts are slow make-slow break, they are best suited for applications where they are not actuated during normal operation, but only if abnormal overtravel is encountered.

Electrical contact ratings

AC—NEMA A600 maximum current—35% power factor						DC maximum current			
Volts	Make		Break		Continuous carrying A	Volts	Make or break		Continuous carrying A
	A	VA	A	VA			A	VA	
120	60	7200	6	720	10	125	1.1/0.55 (1)	138/69 (1)	5/2.5 (1)
240	30	7200	3	720	10	—	—	—	—
480	15	7200	1.5	720	10	250	0.27	67.5	2.5
600	12	7200	1.2	720	10	600	0.10	60	2.5

1. 9007C52 compact unit ratings at 125 Vdc—same ratings as 9007C54 and 9007CR53 at other voltages.

Description	Suffix to add to the device catalog number	Weight kg (lb)
Direct acting contact/positive opening contact block (slow break single pole only)	Y1561	0.566 (1.25)

Limit Switches

9007C Heavy Duty Industrial—Plug-in Body, Metal Accessories

Accessories		
Hub only		
Description	Catalog number	Weight kg (lb)
Hub can be field installed on any 9007C lever type switch, increasing the shaft diameter from 0.375–0.749 in. (9.53–19 mm), to accept levers normally used with 9007T/FT switches.	9007S9	0.02 (0.04)
Dust boot only		
Description	Catalog number	Weight kg (lb)
Dust boot can be field installed on any 9007C and CR lever type switch	9007BT3	0.01 (0.01)
Conduit seal insert (field instable)		
Description	Catalog number	Weight kg (lb)
Conduit seal fits in conduit entrance and excludes liquids

Application Information—Hazardous Locations

Classification of hazardous locations

Hazardous locations are those areas that **may** have flammable gases or combustible dusts present in quantities sufficient to produce an explosive or ignitable mixture. These gases, dusts, may always be present or may only be present in abnormal situations. The National Electrical Code (NEC) describes these areas in Articles 500 through 503 and divides them into three types of categories: Class, Group, Division.

- **Classes**

The *Classes* (I, II, III) differentiate between the type of hazardous materials: I is for gases, II is for dusts, and III is for fibers.

- **Groups**

The *Groups* (A, B, C, D, E, F, and G) further subdivide each class according to the relative explosive force of the materials. Group A atmosphere is acetylene which has a higher explosive force than Group B (which may contain hydrogen, for example); and Group B has a higher explosive force than Group D, etc.

- **Divisions**

The *Divisions* (1 and 2) refer to the presence of these hazardous gases and dusts. Division 1 areas can have these gases or dusts present **at all times** under **normal operating conditions** in an ignitable concentration. Division 2 areas **only** have **ignitable concentrations** of dusts or gases present during **abnormal conditions**, such as machine failures or container breakage.

The table below summarizes the classifications described above.

Summary of Classification Chart

Class	Division	Group
I. Gas	1. Hazard May Exist May Exist In Atmosphere Under Normal Operating Conditions	A. Acetylene B. Manufactured Gases Containing Hydrogen C. Petrochemicals (e.g. ethylene) D. Petrochemicals (e.g. alcohol)
	2. Potential Hazard A. May be present in atmosphere only under abnormal circumstances.	A. Acetylene B. Manufactured Gases Containing Hydrogen C. Petrochemicals (e.g. ethylene) D. Petrochemicals (e.g. alcohol)
II. Dust	1. Hazard May Exist May Exist In Atmosphere Under Normal Operating Conditions	E. Conductive and Combustible Dust (Resistivity $\leq 10^5$ ohms/cm) F. Carbonaceous Dusts (Resistivity $> 10^2$ ohm/cm but < 108 ohm/cm) G. Non-Conductive Combustible Dust (Resistivity $> = 105$ ohms/cm)
	2. Potential Hazard A. May be present in atmosphere only under abnormal circumstances.	G. Non-Conductive Combustible Dust (Resistivity $> = 105$ ohms/cm)
III. Fibers	1. Production Areas	Easily Ignitable Fibers
	2. Handling and Storage Areas	Easily Ignitable Fibers

Environmental characteristics		
Conforming to standards	Products	NEMA 250, EN 60947-1, EN 60947-5-1, IEC 60947, UL 508, C22-2-14-95, CE conformity documentation
	Machine assemblies	IEC 60204-1
Product certifications		UL, CSA, CE
Protective treatment		Epoxy powder coat
Ambient air temperature (Lever/rotary head)	Operation	-20...+185 °F (-29...+85 °C), wider range available
	Storage	-20...+185 °F (-29...+85 °C), wider range available
Vibration resistance	Conforming to IEC 60068-2-6	25 gn (10...150 Hz, 11 ms) (C86F switch good for 18.5g only)
Shock resistance	Conforming to IEC 60068-2-27	60 gn (9 ms) 40 gn (9 ms) for reed switch
Electric shock protection	Conforming to IEC 61140	Class 0
Degree of protection	Conforming to IEC 60529	IP 67
Cable entry or connector	Depending on model	1/2-14 NPT, M20 X 1.5, ISO cable entry, 5-pin mini connector, 4-pin micro connector
Materials	Bodies, heads, levers	Bodies in aluminum, heads in Zamak® zinc alloy, levers and rods in zinc, steel, stainless steel, Delrin® resin.

- Lever arm type must be ordered separately from page 574 to 577.
- These devices are factory set to operate the contacts in **both** the CW and CCW directions. **Mode of operation** is field convertible to CW only or CCW only.
To order factory converted devices: For CCW only operation, change the 2 at the end of the Type number to 1 (for example: C54B2 becomes C54B1). For CW only operation, delete the 2 at the end of the Type number (for example, C54B2 becomes C54B).
 Mode of operation of the lever arm is easily convertible to clockwise or both.
 Simply pull out and rotate the arrow to the letters representing the desired direction—CW, CCW, or CW/CCW.

Technical Information

Figure 1: Rotary lever type

Figure 2: Linear (or Plunger) type

Glossary

CCW—Counterclockwise only (for lever types).

CW—Clockwise only (for lever types).

Differential—The movement differential or differential is the distance or angle from the operating position to the releasing position.

Free or normal position—Free or normal position is the initial position of the actuator when there is no external force (other than gravity) applied on the actuator.

Neutral position—Lever operated switch with a minimum of two contacts. One contact changes state only when lever moves CW. The second contact changes state only when the lever moves CCW. (The center position is the free position.)

Operating position—Operating position is the position of the actuator at which the contacts change state.

Overtravel—Overtravel is the distance or angle through which the actuator moves when traveling from the operating position to the overtravel limit position.

Pre-travel—Pre-travel is the distance or angle through which the actuator moves from the free position to the position at which the contacts change state, the operating position.

Release position—Release position is that position of the actuator at which the contacts change state from the operated contact position to the normal contact position.

Release torque—Release torque is the value to which the torque on the actuator must be reduced to allow the contacts to change state from the operated position to the normal contact position.

Actuator-lever—An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

Maintained contact limit switch—A maintained contact limit switch is a switch which remains in a given condition until actuated to another condition, which is also maintained until further actuation.

Momentary contact limit switch—A momentary contact limit switch is a switch which returns from the operated condition to its free or normal circuit condition when the actuating force is removed.

N.C.—Normally closed contact, when the switch mechanism is at its free or normal position.

N.O.—Normally open contact, when the switch mechanism is at its free or normal position.

Operating torque—Operating torque (force) is the minimum torque (force) value which must be applied to the actuator to cause the contacts to change state.

Overtravel limit position—Overtravel limit position is that position of the actuator beyond which further overtravel would cause damage to the switch or actuator.

Repeatability—Repeatability is the ability to consistently maintain the original operating characteristics. Measured by the difference between the operating position of a new switch and of the same after 1 million operations.

Total travel—Total travel is the sum of the pre-travel and overtravel.

Travel—Movement of the actuator from its free or normal position when force is applied. (See pre-travel and over travel.)

Glossary (continued)

Definition of limit switch terms

There are many terms common to position switches that are not used with other control devices. Before proceeding further, definitions of the commonly used terms should be understood as these terms will be used throughout this document.

Limit switch—A device that converts a mechanical motion into an electrical control signal.

Actuator—The mechanism of a limit switch that operates the contacts, i.e., lever arm, plunger, wobble stick.

Cam—A machine part or component that applies force to the switch actuator causing it to move as intended. Also known as “dog”.

Cam track dimension—The distance from the switch mounting surface to some point on the roller or actuator.

Differential—The distance that the limit switch actuator moves, from the trip point to the reset point of the contacts.

Direct-acting/positive opening contacts—Normally closed contacts that are moved directly by the operating shaft. They are slow make-slow break contacts and have a shorter life than snap action contacts due to longer arcing times. In general, these should only be used where movement of actuator must break welded contacts, as in a crane safety limit switch. (Snap action positive opening contacts are available in the Telemecanique® XCKJ limit switch.)

Maintained contacts—Contacts that remain in the tripped position until the return travel of the cam moves the switch actuator back and resets the contacts.

Neutral (free or normal) position limit switch—A lever arm type switch with two sets of contacts. One set operates when the shaft is rotated clockwise; the other operates when the shaft is rotated counterclockwise.

Operating force—The force required to move limit switch actuator to cause the contacts to change state.

Overtravel—The distance that the position switch actuator may move beyond the trip point, (see figure 5) without damage to the switch.

Pole—The number of moveable contacts in a switching mechanism. A single pole device may be 1 N.O., 1 N.C. or 1 N.O. and 1 N.C. with a single set of moveable contacts is used to bridge those stationary contacts. A double or two pole switch has two moveable contacts.

Positive break contacts—Normally closed contacts with a special mechanism to ensure opening. Can be snap acting positive break or direct acting slow make, slow break type. The slow break direct acting type is not recommended for high cycle applications due to shorter life.

Pre-travel—The distance that the limit switch actuator must move to trip the contacts.

Reed contacts—A mechanism consists of a set of contacts hermetically sealed in a glass envelope and actuated by a magnet attached to the operator. This sealed construction keeps contaminants out of the contact area, making the reed switch ideal for low voltage, low current circuits such as programmable controllers.

Reset point—The position of the actuator at which the contacts return to the normal position.

Snap action contacts—Contacts that move rapidly to open or closed position and are relatively independent of cam speed. Because of shorter arcing times, snap acting contacts have longer contact life than slow make and break contacts and should be used where fast moving cams are encountered or where good repeat accuracy is required.

Spring return—Contacts that return to their original position when the actuating force is removed.

Limit Switches

9007C Heavy Duty Industrial

Technical Information

Definition

Slow break contacts—The speed of transfer of the moveable contacts depends on the speed of the operator. The amount of travel of the moveable contacts is also dependent on the amount of travel by the operator. Slow make and break contacts have the same trip and reset points, and do not have the differential travel common to snap switches.

Snap action contacts—The speed of transfer of the moveable contacts is not dependent on the speed of the operator. The amount of travel of the moveable contacts is also not dependent on the amount of travel by the operator. The movement of the moveable contacts are determined by a preset travel, after this point is reached, the contacts will trip. Snap action contacts have different trip and reset points, the difference is identified as “differential.”

Flexible operators—Flexible resilient or elastic operators, i.e., wobble sticks, do not ensure direct opening/positive opening action.

Isolated contacts—Single-pole double-throw (SPDT) contacts with four terminals which have two isolated contact bars mechanically linked. No polarity restrictions apply. Different (isolated) power supplies can also be applied.

Same polarity—Single-pole double throw (SPDT) contacts with four terminals that require the supply to be applied with the same polarity (i.e., L1 or +) on the same side of the contact bar. Two different supplies are not allowed in this configuration. (The loads should always be on the same side of the contact bar.)

Direct opening contact (also known as positive opening contacts)—A normally closed contact element coupled with the switch actuator via a non-resilient (non-elastic) member so that full contact opening is obtained when the actuator is moved through the direct opening travel by applying a direct opening force. The contact element will shear open in the event of sticking contacts or broken springs. Proper fusing of the control circuit is required. Direct opening contacts meet IEC 60947-5-1 requirements.

Direct opening travel (also known as positive opening travel)—Minimum travel from the actuator free position to the position where the direct opening operation is completed. Usually longer than the normal pre-travel.

Reed contacts—Contact mechanism consists of a set of contacts hermetically sealed in a glass envelope and actuated by a magnet attached to the operator. This sealed construction keeps contaminants out of the contact area, making the reed switch the ideal switch for low voltage, low current circuits such as programmable controllers.

NOTE: Because reed switches are operated by a magnet, they should not be installed in areas where strong magnetic fields may be present. The devices should always be checked for proper operation after installation.

Polarity

Opposite polarities should not be connected to the contacts of one limit switch unless the limit switch is specifically designed for such service (isolated contacts—no polarity). See page 593.

Power sources

Power from different sources should not be connected to the contacts of one limit switch unless the switch is specifically designed for such service (isolated contacts—no polarity).

Limit Switches

9007C Heavy Duty Industrial

Technical Information

Figure 7—Contacts connected to opposite polarities. Line to line short (bold line) can occur through arc drawn when contacts operate

Figure 8—Contacts connected to same polarity. Line to line short cannot occur when contacts operate

Overriding Cams

The cam trailing edge on overriding cams must also be considered for maximum switch life (see figure 6). Lever arm snap back causes shock loads which reduce switch life. Also, with reversing cams the trailing edge becomes a leading edge on the return stroke. The overtravel of the limit switch should not be exceeded, but 5° minimum to 15° travel past the trip point is recommended. Additional travel should only be used for set up and emergencies. Cam design procedures for limit switches with other than lever arm actuators vary from switch type to switch type and are discussed along with other limit switch application design suggestions in additional literature "Proper Application of Limit Switches" (SM444).

Contacts

- Make sure the electrical load is within limit switch contact ratings.
- The single pole, double throw contacts of a snap switch used in a limit switch should not be used on opposite polarities. When load M1 is connected between the contact and line L2, and load M2 is connected between the other contact and line L1 (figure 7), a line-to-line short (bold line) can occur through the arc, which may be drawn as the contacts operate. When contacts are connected to the same polarity (figure 8), this line-to-line short cannot occur.
- The same result can occur if different power sources are connected to the single-pole, double-throw contacts of a snap switch.
- With limit switches having reed contacts, some form of transient protection should be used. This protects the small contacts from damaging surges and increases contact life.

Coolant

- When possible, avoid mounting limit switches where they will be constantly exposed to coolant, chips, etc. Although designed for such applications, switches last longer when not exposed to these contaminants.
- Make sure cover screws are tightened to ensure a good oiltight seal.
- When possible, avoid using fire-resistant coolants of the phosphate ester type. Equipment exposed to these coolants requires special seals and gaskets. Viton® fluoroelastomer, resistant to these types of coolants, is the standard shaft seal material on Type C lever arm types. If required, all gaskets, as well as boots on plunger types, can be furnished in Viton material.

Recommendations for Conduit Installation

Limit switch leakage is often traced to the conduit system. Coolant or condensation in the conduit line can enter the switch through the conduit entry. Oil tightness depends on the condition of the conduit connection and seal. Recommendations for installing conduit to position switches are as follows:

- To ensure an oiltight seal, use thread sealant and a conduit seal or a sealing bushing around the conduit fitting. Otherwise, the fitting probably will leak.
- Limit switches should be installed with the conduit end down whenever possible.
- If condensation or moisture is present inside the conduit, a Square D® conduit seal can be inserted into the conduit entry. The conduit fitting can then be connected in the normal manner. Thread sealant and a sealing bushing must still be used.
- Often a junction box fills with coolant and/or condensation, which backs up into the position limit through the conduit. A simple solution is to drill a hole in the bottom of the junction box to allow the liquid to drain out.
- If conduit leakage is severe, pre-wired and potted position limit (Forms Y184• and Y185•) should be used. The switches are pre-wired with either individual wires or multiconductor STOWA cord, and the receptacle is sealed with a potting material.
- The Square D limit switch is available with a pre-wired male plug receptacle. The connector provides an effective oiltight seal when used with the appropriate female connector cord.

Technical Information

Terminal Identification

European (IEC) contact terminals marking

Single pole	Double pole	
	1 st pole	2 nd pole
11-12	11-12	21-22
13-14	13-14	23-24
11-12	11-12	21-22
13-14	13-14	23-24

Each terminal is marked with 2 digits: First digit indicates the pole (circuit). The second digit indicates the type of contact:

_1-_2 is N.C., _3-_4 is N.O.

i.e.: 11-12, 21-22 are N.C. 13-14, 23-24 are N.O.

Example of European Terminal Markings:

For switch elements without isolated contacts:

11-12 Is the N.C. contact of pole No. 1, 13-14 Is the N.O. contact of pole No. 2

For switch elements with isolated contacts:

13-14 Is the N.O. contact of pole No. 1, 21-22 Is the N.C. contact of pole No. 2

Example of US Terminal Markings

Single pole	Double pole	
	1 st pole	2 nd pole
1-2	1-2	5-6
3-4	3-4	7-8
1-2	1-2	5-6
3-4	3-4	7-8

Each contact terminal is marked with one digit, i.e., 1-2, 3-4, 5-6,7-8.

Example of US Terminal Markings:

For most snap switch elements (isolated contacts not usually on US manufactured switches):

1-2 is the N.C. contact of pole No. 1,

3-4 is the N.O. contact of pole No. 1

5-6 is the N.C. contact of pole No. 2,

7-8 is the N.O. contact of pole No. 2

Make-before-break (overlapping) SPDT: the normally open contact closes before the normally closed contact opens.

Break-before-make (offset) SPDT: the normally closed contact opens before the normally open contact closes.

Simultaneous make and break SPDT: the normally closed contact opens at the same time as the normally open contact closes.

A = Maximum travel of the operator in mm or degrees.

B = Tripping travel of the contact.

C = Resetting travel of contact.

D = B-C = Differential travel.

P = Point from which positive opening is assured.

NOTE: The arrows indicate direction of actuation clockwise (CW) and return for simplicity reasons. For counterclockwise (CCW) only direction of actuation is reversed.

9007C Heavy Duty Industrial Cam Design

Figure 1A cam design for speeds up to 50 fpm

Figure 1B cam design for speeds from 50 to 200 fpm (15.2 to 60.9 mpm).

Figure 1C cam design for speeds from 200 to 400 fpm (60.9 to 121.9 mpm).

Figure 2

Figure 3

Application information

Excessive impact from improperly designed actuating systems is without question the leading cause of premature failure of the electromechanical limit switch. At slow speed, impact is rarely troublesome, but as speed increases, impact applied to the switch becomes a critical problem. In today's higher speed machines, therefore, it is important to give proper consideration to correctly designed actuating systems. These recommendations are designed to assist you in obtaining greater life from your limit switches. The black sector in the roller indicates the recommended design limits of the angle of pressure shown in the illustrations as "P". Three main design and installation considerations are:

- The pressure applied by the actuating mechanism to switch operating lever should approximate direction of lever rotation with a variation not to exceed 30°.
- Since the angle of pressure changes drastically with rotation of the lever, the cam must be designed for proper pressure angles at all positions of the lever travel.
- The switch operating levers should be positioned as nearly parallel with the leading edges of the cams as possible.

Considering these three factors:

- The cam in Figure 1A is satisfactory for speeds up to 50 fpm (15.2 mpm)
- The cam in Figure 1B is suitable for speeds up to 200 fpm (60.9 mpm) (nonuniform acceleration of switch lever)
- The cam in Figure 1C is satisfactory for speeds up to 400 fpm (121.9 mpm) (uniform or other controlled acceleration)

Designing proper pressure angles for overriding cams for electromechanical limit switches

Don't underestimate the importance of adjusting the cams and operating levers in electromechanical limit switches to provide the proper pressure angles in every travel position. Without the means to control the angle of pressure or the limit of override, the operating lever may spring back with damaging results. *Lever flyback usually causes double pulsing of the contacts, and places additional stresses on the mechanical system of the limit switch.* The excessive impacts absorbed from inadequately designed actuating devices eventually leads to abnormal wear and premature failure of the limit switch.

By looking closely at the actuating angles of the cam surface, designers and engineers can obtain the maximum operating life from electromechanical limit switches. The following recommendations help provide a workable knowledge of proper lever and cam angles—and how they are applied to secure optimum conditions:

- Actuating cam on machinery or slide should provide a trailing edge so that upon overriding the operating lever will not snap back.
- During the approach phase, **the pressure angle of the cam should not vary from the lever angle more than 30°.**
- On the override phase, **the angle of the trailing edge of the cam to the lever should be no more than 60°.**

If these guidelines are followed, the switch operating levers will always be approximately parallel with the leading edges of the actuating surfaces or cams.

Figure 2 shows leading edge of cam about to depress and actuate the electromechanical limit switch. The black sector of the roller indicates the recommended design limits of the angle of pressure shown in drawings as "P".

Figure 3 shows operating lever roller following the trailing edge of the cam on the override cycle. Unless a one-way lever is used, the cam will operate the switch on the return cycle.

Limit Switches

9007C Heavy Duty Industrial

Linear/Angular Lever Travel

Application information (continued)

The table below can assist the designer of machine tools and conveyors, the plant engineer, or the maintenance personnel responsible for keeping this equipment in a satisfactory operating condition.

The design engineer will find the table useful in making trouble-free cam layouts. For example, if the recommended operating travel for a switch is between 15° and 30°, use the table to figure cam rise and travel. This aids in determining what type of cam to design, its dimensions, etc.

The plant engineer can use the table to determine where to position levers on replacement switches or revamped circuitry to operate existing cams. The engineer can also use the table to position the lever in proper relationship to the cam, and to find out whether switches and cams are installed properly to obtain maximum switch life.

All dimensions in the table are for 1 in. (25.4 mm) levers. If you use longer levers, multiply the figures by the increased lever length. For example, for a 2 in. (50.8 mm) lever, use the multiplier 2.

All limit switches have a recommended operating travel and for best performance should be installed within these limits. (1)

1. Refer to document SM444R1 for additional information regarding Cam speed and angles.

Limit Switches

9007C Heavy Duty Industrial

Installation Considerations

Lever Actuators

For limit switches with lever actuators, the actuating force should be applied as nearly perpendicular to the lever as practical and perpendicular to the shaft axis about which the lever rotates.

Lever Actuators

Correct

Incorrect

Dwelling Requirements

Where relatively fast motions are involved, the cams should be so designed that the limit switch will be held operated long enough to operate relays, valves, etc.

Correct

Incorrect

Overtravel limitations

Operating mechanisms for limit switches should be so designed that, under any operating or emergency conditions, the limit switch is not operated beyond its overtravel limit position. A limit switch should not be used as a mechanical stop.

Correct

Limit Switches

9007T and FT Severe Duty Mill and Foundry Switches

Conforming to NEMA A600 and UL508

Description

9007T Mill Switches

Use the 9007T Mill switches instead of other limit switches in the following applications:

- Where the current load exceeds the typical heavy duty limit switch contact rating of 10 A and falls within the range of up to 20 A continuous.
- Where an operating sequence is required that is not possible on other limit switches. Fifteen sequences are available. Universal type has twelve different operating sequences with CW only, CCW only and neutral position. Standard type has three operating sequences with CW and CCW operation.
- Where higher reset forces are required due to foreign material interfering with lever arm operation, or where long heavy arms must reset against gravity.

9007FT Foundry Switches

The 9007FT Foundry switches are for use in foundries or mills where the applications described above are required, and where falling foundry sand or similar material could build up and jam the operating mechanism. The shaft has a dust boot and extends from the switch case, preventing sand build up around the shaft. The devices can withstand hot falling sand up to 300° F (149° C.).

9007 (convertible sequence)

9007T Mill Switches

Page 600

9007FT Foundry Switches

Page 602

Application Information

Type T — Ideal for applications requiring extra heavy duty contact ratings, or higher operating and reset forces. Rugged mechanical construction with several different operating sequences in one basic switch.

Type FT — Designed specifically for rough foundry application. The shaft is entirely beyond the switch case to prevent jamming of the lever arm due to build up of sand. A dust boot is furnished as standard to further prevent sand packing and allow free movement of the lever arm. An extra long shaft bearing makes the switch extremely rugged and able to handle the rough applications encountered in foundries, mills, machine tool and similar industries. The switch will withstand hot falling sand up to 300° F (149° C).

Type T and FT

Enclosure — Oil-tight, dust-tight, water-tight, drip-tight meets NEMA Types 2, 4, and 13 requirements. Die cast zinc construction.

Operating Sequences — Fifteen sequences available. Universal type has 12 different operating sequences with CW only, CCW only, and neutral position operation. Standard type has three operating sequences with CW and CCW operation. Various sequences will give quick make and break, spring return with maintained contact, or slow make and break. Most sequences are convertible by removing the base plate and adjusting the positioning plate and/or latches

Ambient Temperature Range — 10° F (-12.2° C) to 185° F (85° C) ambient at full rated load, up to 220° F (104° C) ambient with single coil load.

Lever Arm — Die cast zinc construction with hardened, oil-impregnated, sintered iron rollers.

Conduit — 0.5 in. standard / 20 mm optional—Form M11

Mounting — Four baseplates provide end or side mounting holes and/or manifold mounting. All mounting holes are 0.25 in. (6.35 mm) diameter. Two tapped holes on each side of switch allows side mounting.

Contacts — SPDT¹ double break and three point double throw single break. Silver contact tips. Phenolic contact block. Nylon liner. Polarity must be the same on double throw contacts.

1. Single pole, double throw.

Weight lb (kg)	2.35 lb. (1.07 kg)	2.35 lb. (1.07 kg)	2.35 lb. (1.07 kg)

① The pre-travel listed may vary up to 5° additional for universal switches or up to 2° additional for standard switches due to free travel of lever arm at initial position.

② Linear travel of cam on 1.5 in. (38.1mm) lever arm.

③ Remove spring from the positioning plate.

④ Sequence 3, 7, and 8 devices are available but are not recommended where high speed cams or lever arm snap-back is present. The application should be checked and No. 12 sequences substituted where possible.

Note: For Type FT foundry switches, change the "T" at the beginning of the equivalent Type number above to "FT" (Example: FTUB1). See page 602.

R.B.Denison® Lox-Switch™ L Severe Duty Mill and Foundry Switches L100, L300 Mill and Foundry Switches, L140, L2153 Cable Pulls, L529 Belt Conveyor

Conforming to NEMA A600 and UL508

Description

L100W Switches ♦

Use the L100W Mill switches instead of other limit switches in the following applications:

- Where the current load exceeds the typical heavy duty limit switch contact rating of 10 A and falls within the range of up to 20 A continuous.
- Where an operating sequence is required that is not possible on other limit switches (35 choices with the L switches).
- Where higher reset forces are required due to foreign material interfering with lever arm operation, or where long heavy arms must reset against gravity.

♦ L switches are not preceded by 9007. They are known as the R.B.Denison® Loxswitch™ L, and include conveyor belt and slack cable pull switches in the product offering.

L300W Switches

The L300W Foundry switches are for use in foundries or mills where the applications described above are required, and where falling foundry sand or similar material could build up and jam the operating mechanism. The shaft has a dust boot and extends from the switch case, preventing sand buildup around the shaft. The devices can withstand hot falling sand up to 300° F (149° C).

Features L100, L300, L140, L2153, L525

- Captive cover screws.
- Heavy duty snap action mechanism prevents teasing or false contact opening.
- Positive trip action prevents the lever from slipping around the 0.5 in. (12.7 mm) shaft even if not properly tightened.
- High current capability. 20 A maximum continuous.
- Isolated (no polarity) double and triple circuits with double break (throw) action.
- Wide 0.25 in. (6.3 mm) contact gap ensures very high shock and vibration resistance.
- Easy-to-access contacts allow for easy inspection and replacement.
- Stamped contact configuration number for easy identification even if the switch is painted.
- Many contact arrangements to solve difficult applications.
- Model L300 is an extra heavy duty version for very aggressive environments.
 - The booted shaft design prevents penetration of foreign materials such as sand, dust, or grit between the shaft and the bushing.
 - Heavy duty stainless steel springs and hardened spring operators permit longer life under extreme lever fly-back and high impact.
 - Same parameters as L100 models, except that the distance between the back of the switch and the lever is increased by 0.34 in. (8.6 mm).
- Two and three circuits in CW, CCW, neutral position, spring return and maintained, snap action or slow-make slow-break, two steps (L525) are available.
- Two circuit models can be CW or CCW field converted.
- Wide range of options: high shock and vibration, with gold contact, low or very high temperature.
- 0.5 in. (12.7 mm) NPT conduit entrance standard on 2-pole models (5 wires max.).
- 0.75 in. (19 mm) NPT conduit entrance standard on 3-pole models (7 wires max.).

Belt Conveyors

L525 Mill and Foundry

Page 617

Conveyor belt limit switches are ideal for policing the lateral movement of belt conveyors. When the conveyor belt shifts, it contacts the switch roller and a 12° movement of the lever transfers the first set of contacts. This set is usually wired to initiate a warning alarm system to alert the worker that the belt is moving off the rollers. Further lateral movement of the belt, causing the lever to move another 8°, trips the second set of contacts. These contacts are normally wired to the conveyor drive system, and when actuated, stop the system—minimizing damage to the conveyor, or loss of material on the belt.

Limit Switches

R.B.Denison® Lox-Switch™ L Severe Duty Mill and Foundry Switches L100, L300 Mill and Foundry Switches, L140, L2153 Cable Pulls, L529 Belt Conveyor

Environmental characteristics	
Conforming to standards	UL508
Product certifications	UL Listed, CSA Certified, CE Marked
Protective treatment	Corrosion resistant gray paint
Ambient air temperature	-10 to +185 °F (-23 to +85 °C) With H prefix: -10 to +350 °F (-23 to +177 °C). (1)
Vibration resistance	10G (10–55 Hz)
Shock resistance	30G
Electric shock protection	Class 0
Degree of protection	NEMA Types 1, 2, 4, 12, 13, IP65, 66, 67
Cable entry or connector	1/2" NPT (metric available)
Materials	Cast zinc ◊

1. For a switch with an ambient temperature rating up to 350 °F (177 °C), add an H to the beginning of the catalog number.
For example, change catalog number L100WS2M2 to HL100WS2M2.

2 N.C. and 1 N.O.	CCW left	L149	1.54 (0.70)

1. Style K levers were designed specifically for this application; see page 619 (order separately).
2. To complete the catalog number, refer to page 623 and add the suffix for the mounting plate style and the front cover material.

L2153 Dual Pull Stop

Description	Catalog Number	Weight lb (kg)
Dual pull cord switch—maintained contacts (stop and lever included)	L2153	2.04 (0.93)

Characteristics

Pretravel	17° ± 2°
Differential travel	11° ± 2°
Overlapping travel	—
Total travel	80°
Recommended installation travel	—
Repetitive accuracy of switch	± 0.03x
Operating torque, max with return spring	13–27 lb-in (1.47–3.05 N•m)
Reset torque	7–19 lb-in (0.79–2.14 N•m)
Temperature range	-20 to 120 °F (-6.6 to 48.8 °C)
Maintained contact	—

Interpretation of Catalog Numbers

Severe Duty Mill and Foundry Switches

Interpretation of Catalog Numbers

The interpretation of catalog numbers is intended to help you understand how the catalog number is laid out. It is to be used with existing numbers only. The table below should not be used to generate new catalog numbers. If the contact sequence required is not listed, contact your local field office.

L100 and L300

Style	Housing			Function	Mounting Plate	Front Cover		Contact Arrangement	
L	1	0	0	W	S	2	P	F	
									1 to 60
Mill	100	L14" and L2153 pull cord switches			Style 1	1	M		Standard metal
Foundry	300				Style 2	2	PF		Transparent plastic
Belt Conveyor	525				Style 3	3	GF		Transparent plastic with neon light
Two circuit single operation				WS	Style 4	4			
Two circuit dual operation				WD					
Triple circuit				WT					
Neutral				WN					

The only modifications to the existing catalog numbers are:

- Base Plates: Select style 1, 2, 3 or 4
 - Front Covers: Select metal, transparent plastic, or transparent plastic with neon light.
- For special features see page 621.

Cabling

Snap-C™ Quick Connector Connector and Cables

Features

- Custom build a connector cable suiting your needs using the self-assembled connector
- Create the best wiring solution quickly with no waste of cable
- Complete the assembly without a screwdriver or solder
- Use with a 3- or 4-pin receptacle
- Eliminate errors in wiring with the color-coded sleeve
- Use with black cable only. Yellow cable diameter is too large.

Connector

Description Type	Mating Type	Contact Resistance Maximum	Wire Size	Catalog Number
Connector	Female	8 Ω	AWG 20 (4 x 0.5 mm ²)	XZCC12FDM40V

Cables

Total Length	Jacket Material	Catalog Number
25 m (82 ft)	PvR	XZCB4L0025
50 m (164 ft)	PvR	XZCB4L0050
100 m (328 ft)	PvR	XZCB4L0100
500 m (1640 ft)	PvR	XZCB4L0500
1000 m (3280 ft)	PvR	XZCB4L1000

Assembly in Five Easy Steps:

1. Trimming 22 mm of the outer sheath of the cable
2. Sliding the wire nut, grommet and rubber washer assembly over the cable
3. Sliding the plastic body over the assembly and placing the conductors in the color-coded insert
4. Attaching the metal ring and tightening counterclockwise
5. Connecting to any Snap-C™ compatible sensor from Schneider Electric

Specifications

Mechanical

4-Port Intelligent Splitter Modules for Connections to Actuators ■ or Sensors ▲

Description	Sensor Supply	Separate Supply to the Actuators	Catalog Number
Splitter module 2 inputs/ 2 solid-state outputs	Via XZSDE**** connection base, from the AS-Interface bus	Via XZSDE**** connection base	XZSDA22D32
Splitter module 4 inputs (200 mA maximum)	Via XZSDE**** connection base, from the AS-Interface bus	—	XZSDA40D3
Splitter module 4 solid-state outputs	—	Via XZSDE**** connection base	XZSDA04D32

■ Connection to outputs of low-power relays, LEDs, valves, etc.

▲ Connection to inputs of digital contacts (push buttons, limit switches) and to solid-state outputs of 2- or 3-wire type PNP sensors.

8-Port Splitter Modules

Description	Connection	Catalog Number
Splitter boxes 4 inputs/ 4 solid-state outputs	To the AS-Interface bus and to the separate supply by IDC (insulation displacement connectors) to yellow and black flat cables	XZSCA44D21
	To the AS-Interface bus and to the separate supply by 5-pin male M12 connector	XZSCA44D22

Connection Bases

Description	Cable Connection	Type and Number of Cables	Catalog Number
Connection bases for flat cable	By IDC	2 flat cables for AS-Interface bus (yellow) or 2 flat cables for separate supply (black) $I_e \leq 2$ A	XZSDE1113
	By IDC	2 flat cables: • 1 for AS-Interface bus (yellow) • 1 for separate supply (black) $I_e \leq 2$ A	XZSDE1133
Connection base for round cable ●	To the screw terminals Maximum clamping capacity: 2×16 AWG (2×1.5 mm ²)	Non-shielded	XZSDE2213
		Shielded	XZSDE2323

● Two PG 11 cable glands (clamping capacity $\varnothing 6$ – 10 mm) and three blanking plugs included with connection base. For twin-conductor cable for AS-Interface bus $I_e \leq 4$ A.

Accessories for Connection Bases

Description	Cable Type Suitable for Connection to Equipped Base	Catalog Number
Adapter for provision of separate supply from the XZSDE2*** connection base	4-core cable (2 for the AS-Interface bus, 2 for the separate supply)	XZSG10
Cover for connection base	—	XZSDP

Accessory for Splitter Modules

Description	Catalog Number
Blanking plug for M12 connector Degree of protection IP67	XZLG102

Abrasion Resistance

The ability of a material or product to resist wear when rubbed across a rough surface.

American Wire Gage (AWG)

The U.S. standard system to specify size of electrical wiring.

Appliance Wiring Material (AWM)

UL designation for cable intended for use in the appliance wiring industry.

Braid

A metal mesh or screen, usually copper, used in a cable to shield against electrical interference or to reinforce the jacket against damage.

Cable

Either a stranded conductor with or without insulation and other coverings (single conductor cable), or a combination of conductors insulated from one another (multiple conductor cable).

Color-Code

A color system for wire or circuit identification by use of solid colors, tracers, braids, surface printing, etc.

Conductor

A material capable of passing electrical current.

Connector

Used generally to describe all devices used to provide rapid connect and disconnect service for an electrical circuit.

Connector Insert

Insulating device that holds the contacts in their proper location.

Contact

The conducting members of a connecting device that are designed to provide a separable connection.

Control Cable

A term sometimes used to describe the cable that runs between the PLC and a distribution box.

Cord

A small and flexible insulated cable constructed to withstand mechanical abuse.

Crimp Termination

Connection in which a metal sleeve is secured to a conductor by mechanically crimping the sleeve with a hard crimping tool, presses, or automated crimping equipment.

CSA International (CSA)

Canadian Standards Association
Canadian electrical standards publishing organization and certification agency.

Current Carrying Capacity

The maximum current an insulated conductor can safely carry without exceeding the insulation or jacket temperature limitations.

Cut-Through Resistance

Ability of a material or product to withstand slices by a sharp object without being cut.

Dielectric Strength

The voltage that an insulator can withstand before breakdown occurs.

Fillers

A material used in multi-conductor cables to occupy large interstices formed by the assembled conductors.

FM

Factory Mutual Research.

IEC

International Electrotechnical Commission.

Insertion Force

The force required to insert a contact into the mating contact.

Insulation

A material that offers high electrical resistance.

Insulation Resistance

The resistance measured in Ohms at a designated voltage between two or more conductors separated by the insulation whose resistance is being measured.

Irradiation

The exposure of the material to high-energy emissions. In thermoplastic insulation for the purpose of cross linking the molecules to form a thermoset material.

Jacket

A rubber or synthetic covering applied over the primary insulation, braids, shields, cable components, or the cable itself.

LED

Light Emitting Diode.

Molded Plug

A connector that is molded on the end of a cable.

NEMA

National Electrical Manufacturers Association.

NPN

Option that allows switching to the negative side of the load (sinking).

Nylon

The generic name for synthetic fiber-forming polyamides.

Plug

The connector associated with being attached to a cable.

PNP

Option that allows switching to the positive side of the load (sourcing).

Polarization

The feature of a connector that prevents mismatching by allowing plugging to occur only when the connectors are properly orientated.

Polyurethane (PUR)

A thermoplastic material with good natural chemical resistance.

Polyvinyl Chloride (PVC)

A thermoplastic material with good specific properties when blended with additives.

Receptacle

The connector that is usually mounted in a fixed location and mates with a plug type connector.

Resistance (Electrical)

Property of a conductor that determines the current produced by a given electrical difference of potential (voltage). Measured in ohms.

SAE

Society of Automotive Engineers

Separator

Pertaining to the wire and cable: a layer of textile, paper, etc. that is placed between the outer jacket and core construction to enhance jacket stripability.

Shield

A conductive envelope around the primary conductors that provides an electronic barrier to electromagnetic interference.

SJOO

A UL designation for a rubber-jacketed service cord with oil-resistant conductors and jacket. Voltage rating is 300 V.

SOO

A UL designation for a rubber-insulated hard service cord with oil-resistant primaries and jacket. Voltage rating is 600 V.

SOOW-A

Same as SOO with an outdoor weather rating.

STO

A UL designation for a thermoplastic (usually PVC) insulated hard service cord with oil resistant outer jacket. Voltage rating is 600 V.

STOW-A

Same as STO with an outdoor weather rating.

Thermoplastic

A classification of plastics that can be readily softened and resoftened by repeated heating.

Thermoset

A classification of plastics that cures by chemical reaction when heated and when cured, cannot be resoftened by heating.

UL

Underwriters Laboratories Inc., U.S. electrical standards publishing organization and certification agency.

VDE

Verband Deutscher Elektrotechniker, German approval agency equivalent to U.L.

Voltage Rating

The highest voltage that may be continuously applied to a wire, cable, or connector in conformance with a standard or specification.

Wicking

Capillary absorption of a liquid along the fibers of the base material.

Withdrawal Force

The force required to separate two mated contacts or group of contacts.

Irradiated PUR 0.34 mm² (22 AWG)

90 °C, 300 V rated. Provides the excellent oil and chemical resistance of standard PUR, and is also designed for long-term, high-flex applications. Cable is also resistant to weld flash and hot objects. Available in European color-code. Designed primarily for special flexing applications.

Irradiated PVC 0.34 mm² (22 AWG)

90 °C, 300 V rated. Ideal for use in welding applications. Cable is resistant to melting for short term high heat areas such as weld flash or contact with hot objects (i.e. soldering iron). Excellent resistance to most chemicals and oils. Available in European color-code and automotive color-code. Used in smaller quantities, specifically for welding environments.

SJOOW-A★ NBR/PVC 18 AWG

105 °C 300 V rated. Same as our SOOW-A cable except rated at 300 V. Available in European (leech) color-code.

SOOW-A★ NBR/PVC 16 and 18 AWG

105 °C, 600 V rated. Used in general machine tool applications. Primarily for use in welding applications, or where hot metal chips are present. Good resistance to most chemicals and oils. Available in U.S. industry standard color-code.

STOW-A★ PVC 16 AWG

105 °C, 600 V rated. Used in general applications where environment is less severe. Good resistance to most chemicals and oils. Available in U.S. Industry standard color-code and automotive color-code. Widely accepted industry standard cable.

UL AWM 2661★ PVC Shielded 22 AWG

90 °C 300 V rated. Used in general industrial applications where electrostatic interference is a problem. Aluminized mylar shield with drain wire. Available in European (IEC) color-code.

UL AWM 2661★ PVC 18 and 22 AWG

105 °C, 300 V rated. Originally designed for the automotive industry. Used in general industrial applications. Ideal for use when constant movement or flexible cable runs are required. Good resistance to most chemicals and oils. Available in automotive color-code and European color-code.

UL AWN 20233★ PUR 18 and 22 AWG

105 °C, 300 V rated. Used in general industrial applications, and primarily for use in machining or grinding areas. Excellent resistance to most lubricating and cuffing oils. High degree of flexibility makes the cable excellent for use in rapid-constant motion applications. Available in automotive color-code and European color-code.

**MANUFACTURER'S
DECLARATION OF CONFORMITY**

INDUSTRIAL CONTROL BUSINESS UNIT
Machine Equipment Activity Management

WE : SCHNEIDER ELECTRIC INDUSTRIES SA
89,Boulevard Franklin Roosevelt
92500 Rueil Malmaison
FRANCE

declare under our own responsibility that the product(s):

TRADEMARK : TELEMECANIQUE

NAME, TYPE : *Proximity sensors*
MODELS : XS1, XS2, XS3, XS4, XS5, XS6, XS7, XS8, XS9
XSA, XSB, XSC, XSD, XSE, XT1, XT4, XT7

NAME, TYPE : *Photoelectric sensors*
MODELS : XUA, XUB, XUC, XUD, XUE, XUJ,
XUK, XUL, XUM, XUP, XUR, XUV, XUX
XU1, XU2, XU5, XU8, XU9

to which this declaration refers conform to :

STANDARDS OR NORMATIVE DOCUMENTS :
Low-voltage switchgear and controlgear,
General rules IEC 947-1 (EN60947-1)
Proximity sensors IEC 947-5-2 (EN60947-5-2)

Subject to installation, maintenance and use conforming to its (their) intended purpose, to the applicable regulations and standards, to the supplier's instructions and to standard practice,

the products conform to the requirements of the applicable European Directives :

Low-voltage Directive N° 73/23/CEE
EMC Directive N° 89/336/CEE

The CE marking on the products and/or their packaging signifies that Schneider Electric holds the reference technical file available to the European Union authorities.

Issued at Angoulême : February 10 , 2000
