Professional Affiliations

As an Owner-Member of the supplyFORCE National Accounts, Integrated Supply and Procurement Services Program, Werner Electric Supply and our valued customers have access to over 175 distributors with 2,900 stocking locations ranging in areas of expertise in Electrical, Industrial, Safety, and Pipe, Valves and Fittings with annual revenues exceeding \$18 billion. Headquartered in King of Prussia, Pennsylvania, supplyFORCE delivers process, inventory and product cost savings for large industrial businesses, with local expertise and fulfillment to meet the needs of the local plants. For more detailed information regarding supplyFORCE, please visit their website at www.supplyforce.com or contact your local Werner Electric Supply branch location.

Markets Served & Strategic Alliances

- Airports
- Automatic Meter Reading (AMR) Systems
- Television Program Production
- Remote Radio Broadcast Production
- Transportation (Bus and Railroad)
- RV Parks and Campgrounds
- Free-space Optical Link

Intercom & Sound

Background music, pre-recorded announcements, zoned paging, and emergency evacuation broadcasts can all be done easily with the help of Werner Electric Supply. We'll help you broadcast quality audio through analog, digital, wireless, or IP-based systems from a single intercom system in one building or across a network of intercoms in your building portfolio. We focus on the latest generation of audio technology, and can even integrate paging and voice evacuation systems onto one shared network.

Access Control

Werner Electric Supply provides cutting-edge, state-of-the-art access control hardware and software that delivers versatility, scalability, maximum protection, simple operation, and cost efficiency. We can determine whether traditional, IP-based, wireless, or managed access control is best for your application. The systems we use offer distributed network architecture, so they can be connected to any networked workstation or directly onto the network, saving you money on wiring and installation. To reap the most benefit, Werner Electric Supply can integrate your access control with other security components. In a holistic security environment, for example, if the access control system identifies unauthorized access, that can trigger your security cameras to zoom in, store the video on a digital recorder, and tag that segment for retrieval later. It may also activate an alarm at a security console and send an alert to necessary parties. From electric locks and door monitors to advanced biometrics, Werner Electric Supply can do it all when it comes to access control. You'll find relief in knowing your occupants are protected, and they'll feel safe knowing they're shielded from uninvited guests.

Video Surveillance

Werner Electric Supply is dedicated to supporting your business in IP and other growth areas of physical security. Werner Electric Supply offers several options from Genetec's Omnicast IP management system with live and recorded video. Our video and security experts are ready to provide knowledge and expertise to align you with further business opportunities involving analog, hybrid and IP security. Protecting city-wide surveillance, education, transportation, retail and gaming. Genetec's AutoVu license plate recognition provides parking enforcement and law enforcement in addition to industry-leading accuracy. We also offer unique security training and learning opportunities for security integrators through our extensive education programs, seminars, and demonstrations. Contact Werner Electric Supply for a complete solution from power supplies to cameras to DVR's and NVR's

Commercial & Industrial Infrastructure Cabling Solutions

Werner Electric Supply is a leading supplier of high-quality, cost effective copper and optical fiber cabling and component support systems. We partner with Industry Leaders to provide you with the products you need and when you need them. Our Project Management team and internal staging services set us apart from our competition and will save you valuable time, money and unwanted surprises. Werner is aligned with key manufacturers to supply you with products that meet or exceed applicable industry standards and insure quality installations.

Equipment Protection Solutions

Werner Electric Supply is a leading supplier of equipment designed to protect sensitive electronic equipment and cabling. We offer a complete line of enclosures, racks, cabinets, cable & wire management, power distribution & cooling solutions for Industrial & Commercial Communications, Data & Security applications.

Wireless Networking Design Services & Spectrum Analysis

Are you designing a new wireless network? Let Werner Electric Datacom services help you design it correctly the first time. It's better to spend a little money now to design your network properly rather than spend a lot of money (and time) later trying to get your network to work properly. We are also available to assist American Recovery and Reinvestment Act (ARRA) grant and loan applicants with BIP/BTOP network design services.

Werner Electric on-site spectrum analyzer services can assist in troubleshooting and remediating problem networks. Collecting data to Interpret and rectify that information to minimize the impact of interference on your network.

Wireless/Cellular Site Survey - Do it right the first time

Whether you employ GE/MDS wireless infrastructure or SureCall Cellular Distributed Antenna Systems infrastructure, Werner Electric will help optimize your wireless network. A wireless site survey is the key to planning and implementing a successful network installation. Determining the correct quantity of access points and their respective mounting locations are actually the simplest tasks accomplished during a detailed site survey. Werner specializes in performing RF site surveys and it's important to note that Werner Electric goes well beyond the "typical" site survey process.

At Werner Electric we employ unique equipment that will measure for sources of existing EMI (interference) that can cause hidden problems for a wireless LAN. Our wireless site surveys take into account both voice (VoIP) and data communications over the planned wireless LAN. Transmission rates, throughput utilization and wireless channel assignments are all key elements considered and documented during a Werner wireless site survey.

Werner Electric offering is a Differentiator

In addition to the scientific data gathered at each site, prior site survey experiences and creative techniques are used during each wireless site survey. This mix ensures that each new installation gets the best combination of antennas and related equipment that will maximize our client's investment and minimize installation effort and cost.

Once a wireless site survey is complete, a written report is provided for the client's internal use and permanent record. Any wiring installer or maintenance technician can use this report as a guide during the installation process. As a value-added service, Werner Wireless offers turnkey wiring installation from our certified network contractors, providing immediate wireless and wired network testing before the installation is considered complete.

Cellular Signal Booster Solutions

Cellular Signal Booster Solutions for large, mid-sized or small businesses:

- If a customer has a good signal outside their building but not inside, we can provide a solution to improve their cellular signal inside the building; any size: large, mid-sized, or smaller building.

Multi-Band/Multi-Carrier Solutions Available:

- Depending on requirements and the carrier services available in the area: our solutions can support 2G, 3G, 4G, PCS, Cellular, LTE, and 4G AWS Bands.
- We can provide one system that supports multiple carriers' services.

Highly Linear Design, Metal Casings, & Compartmentalized Design:

- A highly linear design provides more simultaneous calls per band than non-linear solutions. Metal casings and a compartmentalized design decreases internal oscillation or noise; they are more robust & provide better heat dissipation than plastic. These design techniques provide a cleaner signal which limits interference with carrier's networks.

Adjustable Gain:

- SureCall was the first company to manufacture cellular signal amplifiers with adjustable dB gain. There are a variety of factors that can affect cellular and data reception success. Adjustable dB gain is a feature that allows the amplifier to be "fine-tuned".

Auto Shut Down:

- If Oscillation occurs, the amplifier will automatically shut-down, limiting interference with carriers. At times, carriers reconfigured their towers requiring adjustments on the amplifier.
- Typically more cost-effective than full-blown DAS Systems. Quicker to deploy.
- Our solutions provide a modular approach that can improve the signal strength in specific areas of a building as required. Start with one area and add other areas as budgetary dollars become available. The modular approach saves time, money, and is easier to budget for.

Support/Stock/Inventory:

- Werner has factory trained technical specialists on staff to help support our Integrator Partners. We maintain a stock of SureCall products to meet the most common application requirements.

• Certified Installer Program:

- SureCall has a certification program for installation companies. Werner – DataCom can coordinate this program for the installers.

Access Control

	1006 SERIES The 1006 series is the strongest and most versatile electric strike available. The dual interlocking plunger design and heavy duty stainless steel construction, enables it to exceed every standard developed for electric strikes. With multiple faceplate options, the 1006 will fully accommodate every lock designed to work within an ANSI 4-7/8" strike plate. Tested to exceed 3,000 lbs. of static strength, 350 ft-lbs. of dynamic strength and factory tested to exceed 1,000,000 cycles of operation, the 1006 is in a class of its own.	HES	1006
	5000 SERIES The 5000 series is a compact, high performance electric strike designed for low profile openings where there is limited space behind the jamb. Its strength is derived from a unique keeper pin locking design, enabling the 5000 to exceed the ratings of the frame, door and locking hardware. This field selectable fail secure/fail safe unit is easy to install and accommodates latchbolts up to 5/8" throw.	HES	5000
	5200 SERIES The 5200 series electric strikes feature an in-frame horizontal adjustable design to simplify the installation process. This feature allows the installer to easily adjust the electric strike opening to accommodate the horizontal position of the latchbolt after the strike has been installed. This field selectable fail secure/fail safe unit is easy to install and accommodates latchbolts up to 3/4" throw. Use HES 501-630 Faceplate for the HES 5200 strike.	HES	5200
	8000 SERIES The 8000 series is a compact, high-performance electric strike featuring a unique concealed design for use with cylindrical locksets. No cutting on the frame is required. Simply remove the existing strike plate, adjust the vertical alignment feature to the latchbolt centerline, and install. Its strength is derived from a unique keeper pin locking design, enabling the 8000 to exceed the ratings of the frame, door and locking hardware. This field selectable fail secure/fail safe unit is easy to install and accommodates latchbolts up to 5/8" throw. Use HES 801-630 Faceplate for the HES 8000 series strike.	HES	8000
	9600 SERIES The 9600 series Genesis™ is a windstorm rated, surface mounted electric strike designed to accommodate rim exit devices with a 3/4" throw latchbolt. All components are completely encased within its 3/4" thick stainless steel housing, so no cutting on the frame is required for installation. Simply place the electric strike on the surface of the frame, align it with the exit latchbolt and install. It is field selectable for fail secure and fail safe operation, and for 12 or 24VDC.	HES	9600

As the demand for faster speed and increased bandwidth continues, Werner Electric Supply is here for you. Werner Electric Supply has increased stock in a variety of General Cable fiber to make it more readily available for customers. We have the cable you need, in-stock, ready to ship, and cut to length. We also offer a variety of fiber connectivity solutions for most leading manufacturers.

Werner Electric Supply can assist you with all your fiber needs. Many fiber options are available from other manufacturers as well. Please call your Werner representative for more details.

ENDOT INDUSTRIES, INC.

Endot. The source for plenum & riser raceways!

More sizes, and more flexible than any other! You can always count on Endot for the widest selection and easiest-to-use products. Whether you're looking for plenum or riser raceway, look for the Endot name to be sure you're getting the best available.

ENDOCOR/PL
Plenum raceway
&
ENDOCOR/RI
Riser raceway

- Pre-installed pull line in all sizes.
- Super flexible - never brittle and will not kink.
- Available in lengths from small hand coils to master reels.
- Plenum & riser available in orange and white. Other colors available on Special Order.
- UL Listed.
- Meets requirements of NEC 2002, Section 770 and 800.
- Both are available in sizes: 1/2", 3/4", 1", 1 1/4", 1 1/2", and 2".
- Our plenum raceway is corrugated, non-metallic, and produced from PVDF resin.
- Our riser raceway is corrugated, non-metallic and non-halogenated.

N-Tron Switches

Flir Thermal Imaging

Thermal Imaging for Electrical Contractors

Electrical contractors know the value of having the right tool available for the job. And FLIR offers the best range of solutions to help you improve the efficiency, accuracy, and safety of your work.

Thermal Imaging Helps You Detect, Troubleshoot and Fix Problems to Prevent Costly Shutdowns and Outages

Electrical equipment tends to heat up before it fails, hiding from sight until a problem becomes “self-evident”. Fortunately, thermal imaging cameras instantly make those hot spots clearly visible so you can catch them in time to investigate further, plan repairs, and get things fixed before they turn critical. Scan electrical cabinets, breaker panels, fuses, bolted connections, and switchgear with a thermal imager and get an instant picture of impending trouble that you likely would miss otherwise.

Reliable, Non-Contact Temperature Measurements

Along with showing you where heat issues have developed, infrared cameras provide a more accurate way to measure the temperature of energized components without having to touch and probe them, so you can maintain a safe working distance. Most offer on-screen spot meter and area box diagnostic tools to help you quickly quantify the problems you see in the image so you know when equipment has exceeded its temperature limit and needs to be taken offline for replacement or repair.
