Standards

General duty safety switches are manufactured in accordance with these standards:

- UL 98, Standard for Enclosed and Dead Front Switches. UL Listed under File E2875
- NEMA Standards Publication KS1, Enclosed Switches
- Federal Specifications WS-865c for Type NDS (NEMA Type 1) and Type LD (NEMA Type 3R)

UL/CSA Listed Short Circuit Current Rating (RMS Symmetrical)

Table with 3 columns: Switch Type, Fuse Class, Short Circuit Rating. Rows include Fusible (Plug, H, J, R, T) and Non-Fusible (H, J, R, T) with their respective ratings.

1 The UL Listed short-circuit current rating for Square D® general duty non-fusible switches is based on the switch being used in conjunction with fuses. Evaluation of non-fusible switches in conjunction with molded case circuit breakers has not been performed. If a UL Listed short circuit current rating is required, this non-fusible switch must be replaced with a Square D general duty fusible safety switch, equipped with the appropriate class and size fusing. The UL Listed short circuit current rating of the fusible switch is typically as follows: when used with Classes H and K fuses—10 kA, Classes J and R fuses—100 kA. Consult the wiring diagram of the switch to verify the UL Listed short circuit current rating.

2 50 kA for 60 A non-fusible switch.

Table 7: Terminal Lug Data1

Table with 4 columns: Ampere Rating, Conductors Per Phase, Wire Range Wire Bending Space Per NEC® Table 312.6 AWG/kcmil, Lug Wire Range AWG/kcmil. Rows show data for 30, 60, 100, 200, 400 NEMA Type1, 400 NEMA Type 3, 600, and 800 A switches.

1 30–100 A switches suitable for 60°C or 75°C conductors. 200–800 A switches suitable for 75°C conductors.

Product Description

The Square D® brand Heavy Duty Safety Switch is designed to be tough, reliable and provide exceptional performance in the most grueling conditions; from commercial and institutional to industrial and manufacturing facilities. Square D F Series safety switches provide significantly higher levels of mechanical endurance than NEMA KS-1 requires. The design life of a Square D F-Series switch is a minimum of three times the NEMA requirement.

An abundance of copper is used in the heaviest current carrying power paths of all Square D Heavy Duty Safety Switches. The more copper for current carrying paths, the lower the temperature rise. Managing temperatures inside the switch is the key to providing greater service life.

All heavy duty safety switches feature a quick-make, quick-break operating mechanism, a dual cover interlock and a color-coded indicator handle.

Configuration

- Two or three fusible switched poles with or without insulated, solid grounded neutral
- Four or six fusible switched poles without insulated, solid grounded neutral

Tangential Knockouts

- Dual cover interlock keeps the cover closed when switch is ON. When the cover is open, it interlocks the switch OFF, unless the interlock is bypassed.
- Factory-installed fuse pullers on 30–100 A NEMA Types 4, 4X, and 5 stainless steel, NEMA Type 4X fiberglass reinforced polyester, Krydon and NEMA Types 12 or 12K switches. Available for field installation on 30–100 A F Series switches, NEMA Types 1 and 3R switches.
- Class J fuse provisions on 30 A–600 A, 600 V switches and 100–600 A, 240 V switches. 600 A devices require a mounting kit (catalog number H600J).
- 30–600 A switches are shipped with standard Class H fuse spacing. These switches will accept Class R fuses also. A field-installable rejection kit is available, which, when installed, rejects all but Class R fuses. See pages 23 through 26 for Class R fuse kits.

Receptacle Switches

Interlocked receptacle switches are furnished with a factory-installed three-phase four-wire Appleton Powertite[®], Crouse-Hinds Style 2 Arktite[®], or Hubbellock[™] receptacle. The fourth wire is connected to the switch equipment grounding terminal and is not a solid neutral termination. Interlocking linkage between the receptacle and switch mechanism prevents insertion or removal of the plug while the switch is in the “ON” position, or insertion of any plug other than specified. The interlocking mechanism also prevents the switch from being turned “ON” if a plug has not been fully inserted into the receptacle.

Appleton Powertite[®] Receptacle

- Devices are UL Listed and CSA Certified, suitable for use as service equipment
- Receptacles are epoxy powder coated over copper-free cast aluminum
- 60 A, H362AWA and HU362AWA are stock items. All other items are non-stock and require an 8-week lead time
- Short circuit rating: 10 kA when used with or protected by Class H or K fuses; 200 kA when used in conjunction with Class R, T, or J fuses

Crouse-Hinds Arktite[®] Receptacle

- Devices are UL Listed and suitable for use as service equipment
- 60 A, H362AWC and HU362AWC are stock items. All other items are non-stock and require a 12-week lead time
- Short circuit rating: 10,000 A when used with or protected by Class H or K fuses; 200,000 A when used in conjunction with Class R, T or J fuses

Hubbellock[™] Receptacle

Motor Disconnect Switches

Square D[®], a brand of Schneider Electric[®], brings to the market a comprehensive offering of Motor Disconnect switches listed UL508 "Suitable as Motor Disconnect". The MD50 IEC60309 mechanical interlock receptacle switches address fixed and flexible process requirements.

MD50

The MD50 motor disconnect is a pin and sleeve interlocked switch receptacle listed UL 508 "Suitable As Motor Disconnect" in one compact Type 4X enclosure. It is offered in 20, 30, 60, and 100 A units compatible with IEC60309-2 plug configurations.

The MD50 UL 508 switch with receptacle interlock allows motor driven equipment and motors to be moved into and out of a given space when necessary. Plus, a key safety feature is that the interlock switch design requires an operator to turn off the load before removing the machine plug from the receptacle.

As a market leader and innovator in photovoltaic (PV) applications, we are proud to announce a catalog section dedicated to dc and PV safety switch applications. This section focuses on the Square D® brand UL approved Heavy Duty Safety Switch dc and PV wiring schemes. Additionally a UL witnessed and Square D self-certified PV wiring option is presented. This additional unlisted option provides a robust, cost effective option for PV systems.

All heavy duty safety switches with dc ratings (2-, 3- and 4-pole fusible and non-fusible) are Underwriters Laboratories (UL) Listed and CSA Certified for use on dc applications when wired as shown in Figure 1 (A, B, C, D, E, and F). UL Listed, CSA Certified (Files E2875 and E154282). Additionally:

- Heavy duty safety switches are rated for 600 Vdc maximum open circuit voltage.
- Non-fusible safety switches may carry 100 percent of the nameplate current rating.
- Fusible safety switches may carry 80 percent of nameplate current rating (continuous use).
- Heavy duty switches are dc horsepower rated as indicated on the safety switch wiring diagram.
- Heavy duty switches have a 10,000 ampere dc short-circuit rating at 600 Vdc unless otherwise stated on the switch wiring diagram. Consult factory for short circuit current ratings at 250 Vdc.
- Refer to current Square D Digest for lug wire range of heavy duty switches.

Lock-Off Guard Shown

Internal Barrier

Lock-Off Guard

Available field-installed only, the lock-off guard works by covering the lockout/tagout opening whenever the switch is in the ON position. This prevents a padlock from being inadvertently inserted into the switch lockplate. The device is designed to help prevent accidental misapplication of a lockout device. These kits are marked cURus (UL Component Recognized) for field-installation.

Internal Barrier Kits

Internal Barrier Kits provide an additional barrier that helps prevent accidental contact with live parts. Field-installed transparent barriers do not restrict visual inspection of the switch. Barriers provide IEC529 IP2X “finger safe” protection when door of enclosed disconnect switch is open. Convenient door allows use of test probes without accessing fuses and replacement of fuses without removing barrier. Barrier can also be used with the skirt kit to enclose a panel mounted Type 9422 disconnect.

¹ Rating applies to AC only. The UL Listed short circuit current rating for non-fusible switches is based on the switch being used in conjunction with the corresponding fuse type. Evaluation of non-fusible switches in conjunction with molded case circuit breakers has not been performed above 100 A.

² 30–100 A switches are also suitable for use on a circuit capable of delivering not more than (A) 18 kA, 600 Vac maximum when protected by Type FH circuit breaker rated 30–100 A maximum or (B) 14 kA, 600 Vac maximum when protected by Type FA circuit breaker rated 30–100 A maximum.

³ Any brand of circuit breaker or fuse not exceeding the ampere rating of the switch may be used ahead of a non-fusible safety switch when there is up to 10 kA short circuit current available.

⁴ 400 A 82,000 switch is only 10 kA.

Double Throw Safety Switches

¹ Refer to page 7-31 of Digest 175 for additional motor application data. The starting current of motors of more than standard horsepower may require the use of fuses with appropriate time delay characteristics.

² Std.—Using fast-acting one time fuses. Max.—Using dual element time delay fuses.

³ If used on corner grounded delta systems, install neutral and use outer switching pole for ungrounded conductors.

⁴ Use outer switching poles.

⁵ Complete rating on switch is NEMA Types 3R or 12. For 3R applications, remove drain screw from bottom endwall.

⁶ Maximum Hp is 15 for corner grounded delta systems.

⁷ Use 75°C #4 Cu or #2 Al conductors only.

⁸ Use 75°C #1 Cu conductors only.

⁹ Maximum Hp is 60 for corner grounded delta systems.

¹⁰ 480 Vac maximum only, 250 V dc.

¹¹ 250 V dc rated.

¹² Not UL Listed.

¹³ Not suitable for use as service equipment.

¹⁴ Standard Hp rating.

¹⁵ 600 Vac max.

¹ For Type 82,000 switches, neutral is available factory-installed on two- and three-pole double throw switches. Not UL Listed. To order, add suffix N to the standard catalog number and add the above price to the list price of the switch. For DTU switches, neutral is factory-installed in standard device and is UL Listed.

² Neutral assembly catalog number DT200N can be added to four-pole Type 82000 switches in the field.

Electrical Interlocks

- Not available on 92,000 Series double throw switches
- Factory- or field-installed on all 30, 60, 100, and 600 A DTU Series switches and 400 A 82,000 Series switches. UL Listed
- Factory-installed on 200 A 82,000 Series switches. Not UL Listed
- Electrical interlocks are furnished with two N.O. / N.C. contacts and are installed in both “ON” positions. To order, add suffix “EI” to standard catalog number

¹ Electrical interlock kit catalog numbers with “1” suffix indicate one normally open and normally closed contact; “2” indicates two normally open and two normally closed contacts.

² 30–100 A Type DT, DTU (Series F) switches contain two separate switching mechanisms. Each mechanism will accept an electrical interlock. Some applications may therefore require two electrical interlocks.

³ Electrical interlock EK400DTU2 can be added to four-pole Type 82000 switches in the field.
