Fire Rated
FOR MORE APPLICATIONS

Industry Exclusive Fire Rating Turns
Up the Heat on the Competition

Sound Resistant
WITHOUT ADDITIONAL MATERIALS

Sound Transmission Class Rating
Quietly Saves You Even More

Air-Sealed
FOR ENERGY EFFICIENCY

Increased Energy Savings,
Reduced Installation Costs

FIBERGLASS: THE DIFFERENCE IS ELEMENTAL

FIBERGLASS BOXES FOR RESIDENTIAL CONSTRUCTION

Like so many of the products Allied Moulded creates, our robust fiberglassBOX™ series of impact-resistant, high strength fiberglass reinforced polyester (FRP) wall boxes were specifically designed with the electrical contractor in mind. Fire-resistant, soundproof and air-sealed, these hard-working yet lightweight fiberglass boxes don't have the same installation limitations as PVC boxes. This eliminates the need for costly additional materials and labor—and provides you with the long-term savings you're looking for in your wall applications.

Cubic Inch Requirements

Allied boxes are designed for use with 14-2 through 10-3 non-metallic sheathed cable with ground.
To figure cu. in. requirements, make allowance of 2 conductors for each device and 1 for clamps, 1 for ground wire.

Number of Conductors	Cu. In. Req'd for No. 14 Wire	Cu. In. Req'd for No. 12 Wire	Cu. In. Req'd for No. 10 Wire
1	2.00	2.25	2.50
2	4.00	4.50	5.00
3	6.00	6.75	7.50
4	8.00	9.00	10.00
5	10.00	11.25	12.50
6	12.00	13.50	15.00
7	14.00	15.75	17.50
8	16.00	18.00	20.00

20	40.00	45.00	50.00

Allied Moulded switch and outlet boxes are molded of impact-resistant, high-strength fiberglass reinforced thermoset polyester material. Our fiberglassBOX™ “Premier Series” line of products was created for the electrical contractor looking for non-metallic outlet boxes with “hard box” characteristics. Allied Moulded’s fiberglassBOX line offers the following advantages.

- Non-corrosive
- Non-conductive-no ground required
- Non-distorting in high heat
- Will not melt
- Shatter resistant in cold temperatures
- Lightweight
- Heat insulator

2-Hour Wall and Ceiling Fire Classification

All Allied Moulded fiberglass boxes, including our 5305 five gang, are classified by Underwriters Laboratories for use in 2-hour rated walls or ceilings. During an actual fire test set up in a UL® laboratory, Allied boxes passed all of the test criteria outlined in UL® Standard 263 for both walls and ceilings.

Backed by even more UL® testing, the horizontal box separation requirement outlined in the Uniform Building Code™ can be reduced to as little as three inches without using any additional fire resistive protection. Allied Moulded fiberglass boxes, up to and including two three-gangs, can be mounted in the same stud cavity of fire rated walls **with absolutely no additional fire resistant protection needed**. In fact, only Allied has documentation covering all 52 U300 Series wall configurations, eliminating the need for additional putty pads, mineral wool insulation or alternate construction saving the contractor both time and money. See pages 4 and 5 for more information.

Look for our classification CEYY “Outlet Boxes and Fittings Classified for Fire Resistance” on our web site at www.alliedmoulded.com or in the UL® online certification directory at www.ul.com. Additional documentation from these testing processes is available for examination upon request.

Labor Saving Features

With innovative products designed for the electrical contractor, Allied offers the largest, most complete line of box sizes and attachment brackets in the industry for a wide variety of applications. A few of the most popular attachments are:

1. The “S” snap bracket or a “W” wing bracket for secure old work box installation.
2. “BH” and “16” adjustable bar hangers for maximum support of ceiling boxes used for fixture support.
3. “Z” brackets with metal spurs to fasten wall boxes to wood or steel studs.
4. The “B” adjustable stabilizing bar, available on 2, 3, 4 or 5 gang boxes, for more secure mounting used in conjunction with nails or “Z” brackets.

- A. Offset gauge marks on box give positive stop for the proper wall thickness.
- B. Bright common nails or pierce-point screws fit securely in specially designed supports and are angled for easy installation.
- C. Tapered and machine tapped device holes allow device screw to be started by hand and speed installation time with high torque screwdrivers.
- D. Cubic inch capacity clearly marked and easy for contractor and inspector to locate and identify.
- E. Proudly UL® listed.
- F. Knockouts on fiberglass boxes are complete, reducing drafts and easily removed with wire for no tools installation.
- G. Leveling ribs position face of box parallel to wall surface.
- H. “Z” brackets are designed to securely hold box to wood or steel studs. Brackets also provide proper 1/4” or 1/2” offset.
- I. 2-Hour Fire Rated clearly marked for easy inspector identification.
- J. Non-metallic Speed “K” Klamps™ dependably secure wire in box. Should a knockout be inadvertently opened and not used, the Speed “K” Klamp™ is considered sufficient closure of the opening per UL®.

We Can Stand the Heat:

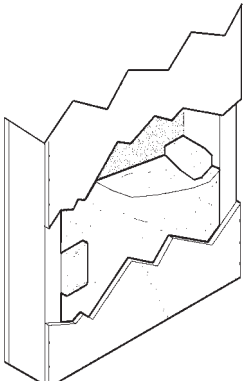

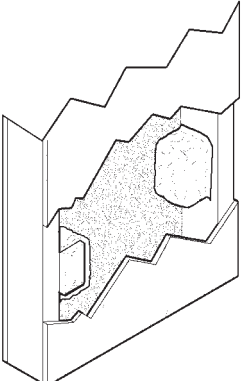

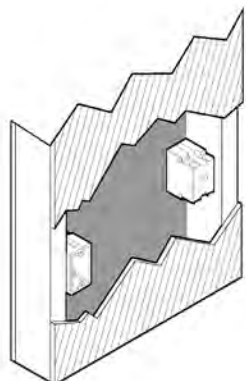

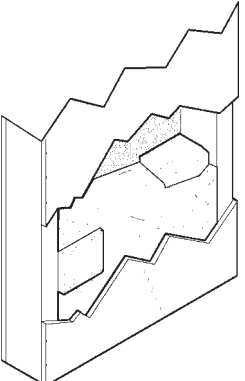

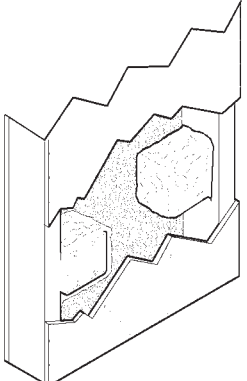

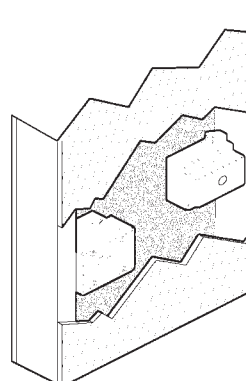

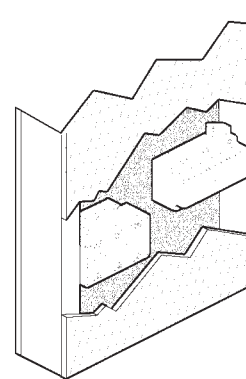

Now you can mount Allied Moulded outlet boxes* in the same stud cavity without any additional fire resistive protection!

We've been telling you for years that Allied fiberglass outlet boxes can truly take the heat. Now there's solid proof backed by Underwriters Laboratories test results. When penetrating all U300 Series fire resistive wall assemblies (including staggered stud) with Allied outlet boxes, up to and including our three gang, you can now mount two boxes in the same stud cavity on opposite sides of the wall without using any additional protection. That's right—no mineral wool batt or putty pads needed to insulate the box. **Absolutely no additional fire resistant protection required!** Prime application examples include a wall between multi-family dwellings.

In this or any other application, Allied Moulded outlet boxes are proven so reliable you can feel confident using them for all your outlet box needs. Look for our classification CEYY "Outlet Boxes and Fittings Classified for Fire Resistance" on our web site at www.alliedmoulded.com or in the UL® online certification directory at www.ul.com. Additional documentation from these testing processes is available for examination upon request.

We Can Stand the Heat

Reduction in Horizontal Box Separation in Fire Resistance Rated Walls

1. In what type of construction would this rating apply?

This rating applies where non-metallic sheathed cable is used and walls are constructed of wood and non load bearing steel studs and gypsum.

2. If the box is marked with a 2-hour wall rating, is this the same thing?

A box that is marked with 2-hour wall rating means that you can install the box in a 2-hour fire resistive wall or walls with less than 2-hour rating. To find out details of the installation, you must read the instructions found in the UL® Fire Resistive Directory or from the UL® card provided by the manufacturer.

The Directory or UL® card describes the following:

- a. Those boxes suitable for use in the wall by basic model number
- b. The maximum size opening in square inches
- c. The maximum openings in total square inches per 100 square feet
- d. The maximum clearance around the box
- e. The type construction of the wall assembly – “wood studs and gypsum”
- f. The wall designs such as “U-300 Series” meaning all wall designs found in the UL Fire Resistive Directory from U-301 through U-370, including those staggered stud designs and separated wall designs
- g. Horizontal separation when mounted on opposite sides of the wall
- h. Cover plate material (when limited)

3. What is the maximum size box that can go into the same stud cavity?

Paragraph #2 of the card states for those fire resistive wall designs with or without insulation, the maximum size box is a 3 gang 3300, 3303, 9313 (22.0 sq. in.). These boxes can be mounted in all U-300 Series walls with a horizontal separation of three inches when boxes are mounted on opposite sides of the wall. **Note: This does include staggered stud construction.**

4. Does this rating apply to staggered stud configuration?

Yes. U-300 Series walls have both staggered stud designs in addition to separated type walls.

5. Will I still need to use mineral wool or fiberglass insulation?

The wall assembly design dictates the need for insulation. The wall design does not change when penetrated by Allied Moulded outlet boxes.

6. What if I am actually putting double drywall in the middle to help with sound?

If the wall is constructed of wood studs and gypsum board and is a 2-hour or less fire resistive rated, the penetration with an Allied Moulded outlet box will not cause the wall to be derated as long as it is installed according to instructions.

7. Can I put the boxes back to back?

The Fire Resistive card says the boxes must be separated by three inches horizontal separation but not back to back.

8. Do you still have to caulk the knockouts that are penetrated by the wire?

Boxes were tested with non-metallic sheathed cable installed. No caulk is necessary where knockouts are penetrated by the non-metallic sheathed cable.

9. If I accidentally open a knockout I do not need, do I need to caulk it?

The National Electrical Code requires all unused open knockouts to be closed. Allied Moulded's Speed “K” Klamp™ is an accepted means of closing the knockout (documentation available upon request). Open unused knockouts in boxes without Speed “K” Klamps™ would need to be closed.

10. Is there a rating that relates to vertical separation?

Not to our knowledge.

11. Does this apply to ceiling configurations, as well?

The instructions for ceiling penetrations are found on the same documentation as the wall boxes; however, the instructions are different.

12. Does this apply to low voltage devices?

The fire resistive rating is for Allied Moulded boxes penetrating fire resistive walls classified at 2 hours or less. What is placed inside the box is covered by the National Electrical Code and does not affect the fire resistive rating of the box.

13. Which inspector will be enforcing this code? Electrical or Building or Fire?

Minimum horizontal box separation is a requirement of the applicable building code. Generally, the electrical inspector will view the installation first, but final compliance falls on the building inspector.

Please contact our Technical Support Department for clarification on this listing or to address any further questions.

Virtually eliminate clamp breakage during knockout • Easy “no tools” installation • Secures wires quickly and dependably

Punching through the knockouts on ordinary electrical boxes often requires a screwdriver and leads to damaged clamps that compromise a box’s safety and code compliance.* But Allied Moulded’s Speed “K” Klamps™ eliminate the risk and problem of broken clamps. Fast, easy entry knockouts can be pushed through with the wire. No tools required. No broken clamps. It’s a one-two punch that leaves the competition down for the count.

Allied offers a unique non-metallic wire clamping system featuring UL® listing, faster installation, and a no cost way of meeting National Electrical Code requirements. Should a knockout be inadvertently opened and not used, the Speed “K” Klamp™ is considered sufficient closure of the opening per UL®. Documentation is available upon request.

*Reference 2008 NEC 314.17(C)

2. Insert the conductors from the outside of the box into the appropriate knockout and **OVER THE TOP** of the Speed “K” Klamp™ until the outer jacket extends at least 1/2” past the top of the klamp.

1. Remove the knockout and prepare the conductors to enter the box per NEC.

3. Bend wire 90° over Speed “K” Klamp™.
4. Pull wire from outside of box to ensure Speed “K” Klamp™ engagement.

Component Descriptions and Ordering Information

We want it to be as easy as possible for you to locate the right outlet boxes to meet your needs. Most Allied Moulded boxes can be manufactured with these letter coded components. For example, steel stud screws may be ordered when applicable by adding the suffix "SS" to the basic catalog number, i.e., 1098-SS.

B The adjustable stabilizing bar is available on the 3, 4 and 5 gang boxes and used in conjunction with Nails or Z hangers.

G The grounding strap on outlet boxes permits the lighting fixture to be grounded when necessary. Available on round boxes.

S Snap bracket pushes through opening in wallboard, then snaps out on the back side.

Z The "Z" hanger which mounts on stud face has spurs to secure the hanger to wood and steel studs.

HL "HL" hanger which mounts on the side of the stud or joist, has spurs which hold the hanger to the joist for easier nailing.

SS Pierce point sheet metal screws are installed for easy penetration of non-load bearing steel studs 22 gauge or lighter.

2Z "Z" hangers are installed on both sides of the box.

V "V" Polyurethane seal for use in single sheet drywall applications.

E Metal ears are securely molded into the box.

N Nails are installed as fastening devices. Fetter ring nails, when offered, allow for extra strength when nailed into stud or joist.

W When wing bracket screws are tightened, the box is drawn firmly against the wall.

HF "HF" hanger which mounts flush on the side of the stud, has spurs which hold the hanger to the stud for easier nailing.

HN With the "HN" hanger, application is quick and easy because nails are installed.

BH "BH" Bar Hanger adjustable bar assembly for either 16" or 24" joist spacing.

16 "16" bar hanger is specifically designed for box location in max 16" joist spacing.

V2 "V2" Polyurethane seal for use in double 5/8" drywall applications.

Factory Installed Clamps

Catalog numbers with the suffix "K" indicates factory installed non-metallic Speed Klamps™.

Catalog numbers with the suffix "C" indicate factory installed wire clamps. The number following the "C" indicates the number of wire clamps i.e., "C4" = 4 wire clamps.

Low Voltage Partition

Catalog Number	Component Description	UPC# 85339	Std. Pkg. Qty.	Std. Pkg. Wt. (lb.)
LVP-1	Low voltage divider plate for use with 2302, 3303, 4304, 5305 Series, and 9314 only. See 8005 NEC 800.133(A)(1)(c).	80000	50 Consists of five (5) packages of 10 pieces each.	2

Non-Metallic Adjustable Wall Box for Both New & Old Work Construction

Un-like Other Adjustable Boxes, With SLIDERBOX® There's No Need To Remove Or Relocate Mounting Screws To Re-position The Box.

SLIDERBOX®
Installed with
1/2" Drywall

SLIDERBOX®
Adjusted for
Additional
Ceramic Tile

SLIDERBOX® Features

- Slots retain slider plate and guide it in a straight motion.
- Internal rails guide slider plate for smooth mounting adjustability in wall substrates from 1/2" to 1 3/8" thick, and ceiling substrates from 1/2" to 1 5/32".
- Square corner design allows easy wall cut-in (Old work applications).
- Molded spline device holes for quick device screw installation in wall boxes and machine tapped threads for ceiling fixture support in round ceiling boxes.
- Allied Moulded exclusive patented (U.S. Pat. #6365831 B1) molded in Speed Klamps™ in multi-gang and ceiling boxes.
- Molded of engineering grades of non-metallic thermoplastic.
- SB-2, SB-3 are listed for 2HR fire resistive walls
- SB-1, SB-1H, SB-CB and SB-CBFR are listed for 2HR fire resistive walls and ceilings.

- Slider plate holds screws in ready position to enable contractor to mount boxes faster.
- Patent #7,855,338 design allows for adjustments in new or old work installations.

- Heavy-duty non-slip pad to ensure box and slider assembly solidly hold mounted position.
- Tested to hold 50 lbs. hung on box to simulate power cord pull-out strength.

- Fan support product has steel bracket and mounting bolts for secure paddle fan mounting.

- Multi-gang boxes consist of internal holding slots for LVP-2 low voltage partitions and dual voltage applications.

Residential Switch or Receptacle Box

Single Gang

Slider plate in full forward position sets box for 1/2" drywall.

Slider plate retracted sets box in fully adjusted forward position for maximum wall substrate thickness of 1 3/8".

Installation Instructions:

1. Position slider plate forward so box will mount in its normal position for nominal drywall thickness.

2. Attach SLIDERBOX® to wood stud by driving screws in tight.

3. Wires should be installed and drywall hung and trimmed according to building code.

4. SLIDERBOX® will be mounted flush with drywall at this point.

Adjust Box for Additional Wall Substrate:

1. Once additional wall substrate is applied, the SLIDERBOX® will need to be adjusted flush to the new surface.
2. Make sure there is clearance around the box prior to adjustment.
3. Loosen the two mounting screws until box moves freely in the slider mechanism and will slide forward.
4. Grab box interior or the installed wire and pull forward until top edge is flush with the new surface.

5. Re-tighten the slider plate mounting screws.
6. Install wire device and cover plate.

Square Junction Boxes / Range and Receptacle Box:

Series 9339-Z+1

Vapor Seal: Air-Sealed Electrical Boxes

Material and Labor Saving Features

With innovative products designed for the electrical contractor, Allied offers a complete line of wall and ceiling boxes for use in energy efficient homes to aid in sealing up the exterior walls per construction methods outlined in 402.4 of the 2009 International Energy Conservation Code. U.S. Patent #6,908,003 B2

- A. Patented flexible polyurethane flange available for sealing box to air/vapor barrier. Flange products “V” are for single drywall and “V2” are for double drywall applications.
- B. Bright common nails fit securely in specially designed supports and are angled for easy installation.
- C. Tapered and machine tapped device holes allow device screw to be started by hand and speed installation time with high torque screwdrivers.
- D. Cubic inch capacity clearly marked and easy for contractor and inspector to locate and identify.
- E. Proudly UL® listed.
- F. Knockouts on fiberglass boxes are complete, reducing drafts and easily removed with wire for no tools installation.
- G. Leveling ribs position face of box parallel to wall surface.
- I. 2-Hour Fire Rated clearly marked for easy inspector identification.
- J. Patented non-metallic Speed “K” Klamps™ dependably secure wire in box.

Scan for more information.

Residential Units

Material Characteristics

Allied Moulded flexBOX® switch and outlet boxes are molded of engineering grades of non-metallic thermoplastic materials. Our flexBOX line of products was created for the electrical contractor looking for non-metallic outlet boxes with “soft box” characteristics. Allied Moulded’s flexBOX line offers the following material advantages:

- Non-corrosive
 - Light weight
- Non-conductive
 - No accessory clamps
- Splined thread holes – wall boxes
 - Machine tapped holes – ceiling boxes

Labor Saving Features

- A. Patented #6,365,831 B1 integral Speed Klamps™
- B. Molded thread device holes for wall boxes.
 - a. Optional Quick Thread™ device holes.
- C. Machine tapped thread holes for secure fixture installation.
- D. Proudly UL® listed
- E. 2-Hour Fire Rated clearly marked for easy inspector identification.
- F. Large cubic inch capacity clearly marked and easy for contractor and inspector to locate and identify.
- G. Stabilizing bracket for maximum support and flush face alignment of wall boxes.
- H. Molded wallboard tabs for securing multi-gang boxes on the opposite end of the framing stud.
- I. Wall box face brackets for steel or wood stud construction.
- J. Offset gauge marks on box give positive stop for the proper wall thickness.
- K. Square corner design for easy wall cut-in.
- L. Steel wing brackets for secure box mounting.
- M. 1/2" knockouts in multi-gang old work boxes for use with wire/conduit connectors.
- N. Molded flange and steel snap bracket for secure old work box installation.
- O. Round exterior for easy wall cut-in.

Flexbox® Attachment Codings

- B** – Stabilizer bracket
 - G** – Ground strap
 - R** – Reverse nail mounting option
 - BH** – Adjustable bar hanger for 16" to 24" joist spacing
- N** – Nail on mounting
 - H** – Face bracket for steel and wood stud mounting
 - QT** – Quick Thread™ device hole option
 - 16** – Bar hanger max 16" joist spacing

Installation Instructions for Single Gang Boxes

Old Work Single Gang Boxes with "E" Ears

Part Numbers: 9331-EK, 9363-EK, 9368-EK

The Allied Moulded 9331-EK, 9363-EK and 9368-EK can be mounted two ways, either through the holes in the metal plaster ears or through the hole provided in the bottom of the box.

Ear Mount Instructions

1. Cut an opening in the wall to comply with NEC 314-20. Allied Moulded Products' template #1TP is designed to provide the guide for such a hole and allows 1/16" clearance around the outside of the box.
2. Using two (2) #8 sheet metal screws at least 3/4" in length, attach the box to the substrate. One screw should be located at each end of the box. UL® has tested these boxes in 3/8" thick plywood which is the substrate used for their standard test. The strength of the substrate must be equal to 3/8" thick plywood.
3. If the wall assembly is not accessible from the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Bottom Mount Instructions

1. Cut an opening in the wall to comply with NEC 314-20. Allied Moulded Products' template #1TP is designed to provide the guide for such a hole and allows 1/16" clearance around the outside of the box.
2. Secure mounting block scab in wall.
3. Using one (1) #8 sheet metal screw at least 3/4" in length, mount box to the scab through the hole in the bottom of the box. UL® has tested these boxes in 3/8" thick plywood which is the substrate used for their standard test. The strength of the scab must be equal to 3/8" thick plywood.
4. If the wall assembly is not accessible from the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Old Work Single Gang Boxes with "W" Wing Brackets

Part Numbers: 9331-EWK, 9363-EWK, 9368-EWK, P-1220W

The Allied Moulded 9331-EWK, 9363-EWK* and 9368-EWK are mounted identically. (1a.) P-1220W (1b.)

- 1a. Cut an opening in the wall to comply with NEC 314-20. Allied Moulded Products' template #1TP is

designed to provide the guide for such a hole and allows 1/16" clearance around the outside of the box.

- 1b. Cut an opening in the wall to comply with NEC 314-20. Using the box as a template, place the box open face against the wall surface where the box is to be installed. Draw a line along each long side and each short side stopping at the molded ears. Remove the box and with a straight edge, complete the rectangle. Cut along the line of the rectangle using the appropriate tools.
2. Insert box into opening. Tighten wing screws to secure box to wall substrate. UL® has tested these boxes in 3/8" thick plywood which is the substrate used for their standard test. The strength of the substrate must be equal to 3/8" thick plywood.
3. If the wall assembly is not accessible from the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

*Allied Moulded Products has had the 9363-EW style box tested in wall assemblies that use 5/16" thick gypsum board covering. This test was conducted by a testing laboratory that has been evaluated by BOCA as an independent testing and inspection agency for manufactured buildings. This report is available upon request.

Installation Instructions for Two Gang Boxes

Old Work Two Gang with "W" Wing Brackets

Part Numbers: 9312-EWK, 9329-EWK (1a.), P-2400W (1b.)

- 1a. Cut an opening in the wall to comply with NEC 314-20. Allied Moulded Products' template #2TP is designed to provide the guide for such a hole and allows 1/16" clearance around the outside of the box.
- 1b. Cut an opening in the wall to comply with NEC 314-20. Using the box as a template, place the box open face against the wall surface where the box is to be installed. Draw a line along each long side

and each short side stopping at the molded ears. Remove the box and with a straight edge, complete the rectangle. Cut long the line of the rectangle using the appropriate tools.

2. Insert box into opening. Tighten wing screws to secure box to wall substrate. UL® has tested these boxes in 3/8" thick plywood which is the substrate used for their standard test. The strength of the substrate must be equal to 3/8" thick plywood.
3. If the wall assembly is not accessible from the back side to complete the wiring, the wires must

be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Part Numbers: 9372-NMHK

1. Locate and position leveling rib on surface of box to the framing member. This will position box at a depth of 7/16 to 1/2 inch.
2. Hold box at desired position and drive nails into stud with hammer.
3. Install non-metallic sheathed cable through knockout.

Installation Instructions for Three Gang Boxes

Old Work Three Gang Box with "W" Wing Brackets

Part Numbers: 9313-EWK (1a.), P-3520W (1b.)

- 1a. Cut an opening in the wall to comply with NEC 314-20.
- 1b. Cut an opening in the wall to comply with NEC 314-20. Using the box as a template, place the box open face against the wall surface where the

box is to be installed. Draw a line along each long side and each short side stopping at the molded ears. Remove the box and with a straight edge, complete the rectangle. Cut along the line of the rectangle using the appropriate tools.

2. Insert box into opening. Tighten wing screws to secure box to wall substrate. UL® has tested these

boxes in 3/8" thick plywood which is the substrate used for their standard test. The strength of the substrate must be equal to 3/8" thick plywood.

3. If the wall assembly is not accessible from the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Installation Instructions for 3-1/2" Round Boxes

Part Numbers: 9305-K, 9355-K, PC2230W

The Allied Moulded 9305-K and 9355-K can be mounted two ways, either through the holes in the flange or through the holes provided in the bottom of the box.

Flange Mount Instructions

1. Cut a 3-5/8" diameter circular hole in the wall or ceiling board. The box diameter is nominally 3-1/2" and the 3-5/8" diameter hole allows 1/16" clearance around the outside of the box.
2. Using two (2) #8 sheet metal screws at least 3/4" in length, attach the box to the substrate through two (2) of the holes provided diagonally across from each another. Note: Wall substance must be capable of supporting the box with the rated load.
3. If the wall assembly is not open to the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Bottom Mount Instructions

1. Cut a 3-5/8" diameter circular hole in the wall or ceiling board. The box diameter is nominally 3-1/2" and the 3-5/8" diameter hole allows 1/16" clearance around the outside of the box.
2. Secure mounting block scab in wall. For a 9305-K, the scab is to be installed 1-13/16" from the substrate surface into the wall section. A 9355-K would require the scab to be mounted in the wall section 2-13/16" from the substrate surface. A PC2230W would require the scab to be mounted 2-13/16" from the substrate surface into the wall section.
3. Using two (2) #8 sheet metal screw at least 3/4" in length, mount box to the scab through the two (2) holes in the bottom of the box. Note: Wall substance must be capable of supporting the box with the rated load.
4. If the wall assembly is not accessible from the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Old Work Round Boxes with "S" Snap Bracket (Wall applications)

Part Numbers: 9305-SK, 9338-ESK, 9355-SK, PC2230W

1. Cut a 3-5/8" diameter circular hole in the wall board. The box diameter is nominally 3-1/2" and the 3-5/8" diameter hole allows 1/16" clearance around the outside of the box.
2. Insert box into opening. Bracket will automatically compress and snap back into position. Tighten snap bracket screws until bracket is drawn snug to the back of the wallboard. Note: Wall substance must be capable of supporting the box with the rated load.
3. If the wall assembly is not accessible from the back side to complete the wiring, the wires must be secured to the box with Speed Klamps™ before installing the box in the wall assembly.

Low Voltage Partition

Cu. In. Volume	Catalog Number	Component Description	D	W	H	UPC# 85339	Std. Pkg. Qty.	Std. Pkg. Wt. (lb.)
----	LVBOW-1	Single gang, old work, structured cable box with ears and wings	3-1/16	2-5/16	3-11/16	80003	24	4
----	LVB-1	Single gang, angled mid-nails, structured cable box	2-3/4	2-1/4	3-3/4	80002	48	8
----	LVPR-1	Single gang plaster ring, 1/2" offset, structured cable bracket for steel or wood stud face mounting	1/2	4	4	80001	50	4
----	LVP-1*	Low voltage divider plate for use with 2302, 3303, 4304, 5305 Series and 9314 only.	----	----	----	80000	50*	2
----	LVP-2*	Low voltage divider plate for use with P-2400W, P-3520W, SB-2, SB-3, and SB-4	----	----	----	80005	50*	3

* Consists of 5 packages of 10 pieces each

Features and Benefits:

LVBOW-1

LVBOW-1 Features and Benefits

- Old work structured cable box
- Sturdy construction with “box like” **strength and rigidity**
- Molded thread device holes provide for secure mounting of structured cable devices and cover plates
- Eliminates the need to modify single gang outlet boxes
- Open back design for generous cable bend radius
- Holes in back section provide a **means to secure the cable** allowing cable accessibility later (fig. A)
- U.S. Patents D531,128 and 7,179,994

fig. A

LVB-1

LVB-1 Features and Benefits

- New work structured cable box
- Sturdy construction with “box like” **strength and rigidity**
- Eliminates need to modify single gang box
- Open back for generous cable bend radius
- Easy nail-on mounting design
- Holes on back provide a **means to wire tie the cable** allowing cable accessibility later (fig. A)
- Open back channel to **store and protect cable** during drywall phase (fig. B)
- US Patents D531,128 and 7,179,994

fig. A

fig. B

LVP-1, LVP-2 & LVPR-1

LVP-1

LVP-1/LVP-2 Features and Benefits

- **Separates line and low voltage** within the same electrical box
- Use LVP-1 with Allied Moulded’s deep series 2302, 3303, 4304, 5305, and 9314 fiberglass boxes
- Use LVP-2 with Allied Moulded’s Flexbox® Old Work boxes P-2400W & P-3520W and SLIDERBOX® Products
- Allows for a reduced number of wall box installations
- Fast, easy and **convenient to install**
- Complies with article 800.133(A)(1)(c) from 2008 NEC
- For low voltage **applications in fire rated walls**. Utilize the LVP-1 partition with the Allied Moulded deep series fiberglass wall boxes which carry the industry exclusive rating for reduced horizontal separation in the same stud cavity

Pull Chain with Grounded Outlet

Catalog Number	Component Description	Outside Diameter	UPC# 85339	Std. Pkg. Qty.	Std. Pkg. Wt. (lb.)
LH-13P*	Lampholder, 660W/250V, 3' pull cord, grounded outlet, (125VAC/15A)	4-9/16	87004	48	15

All models
accept various
manufacturers' bulb
protective cages.

LAMPHOLDER FEATURES:

- UL® listed file #E68415
- Mounting slots accept 3-1/2" or 4" outlet boxes
- Lamp rated 660 watts (max.)
- Made of UV and heat-resistant thermoset material
- Nickel-plated brass screw shell and includes corrosion-resistant steel hardware
- Accepts most manufacturers' bulb protective cages
- For use in commercial, industrial, residential and agricultural lighting applications as permitted by local code
- All models are individually polybagged

GU 24 Lampholders

Catalog Number	Component Description	Outside Diameter	UPC# 85339	Std. Pkg. Qty.	Std. Pkg. Wt. (lb.)

LH-22WP*	GU24 pull chain lampholder with wire leads, 75W/250V 3' pull cord	4-7/8	99584	48	13

**not intended for use with GU24/incandescent adapter designs

GU 24 LAMPHOLDER FEATURES:

- Listed per UL® 496
- Mounting slots accept 3-1/2" or 4" outlet boxes
- Lampholder rated 75 Watts, 250 Volts
- Made of UV and heat-resistant polycarbonate material
- Will accept industry standard lamps with GU 24 pin design (**see note above)
- For use in commercial, industrial, residential and agricultural lighting applications as permitted by local code
- All models are individually polybagged
- Title 24 compliant for installation of lampholders in California

* Indicates model shown

LH-CFL1

Luminaire Design Features

- For use in attics, basements, closets and garages
- Energy savings of up to 75% compared to incandescent bulbs
- 10,000 hour lamp life
- Fully assembled with GU24 - 13W lamp and polycarbonate lens
- 13W CFL lamp produces same light as 60W standard incandescent light bulb
- Lens securely locks to base with spring-loaded tabs
- Lamp Base mounts to most 3 1/2" and 4" ceiling boxes

Supplied with compact fluorescent bulb, mounting screws, and wire nuts.

Prepackaged in a blister pack with bi-lingual installation instructions.

Floor Box Assemblies: Wood Floor Cut-In Application

FLOOR BOX FEATURES:

- Designed for use in wood floor construction and can be installed with multiple floor substrate materials (ceramic, hardwood, laminate, or carpet)
- Optional cover material types: brushed brass, dark bronze, or nickel plated brass
- Cover plug screws seal water tight and allow assembly to meet UL 514C scrub-water exclusion test
- TR Tamper Resistant receptacle; 15 amp 125 volt with ground (NEMA config. 5-15R)
- Extra deep wiring capacity 24.5 cu. in.
- UL listed in accordance with the requirements for floor boxes in Article 314.27 of the NEC
- Provisions for cable entry through molded-in Speed Clamps™ or 1/2" KO's
- Steel wing brackets for secure installation
- Basic rectangular or round exterior profile for quick and easy cut-in installation

Rectangular Floor Box Specs

FB-2

- Cut-in hole size: 2.625" x 4.437"
- Box size (no flange): 3.5" (D) x 2.498" (W) x 4.312" (H)
- Flange outside dimension: 3.250" x 4.883"
- Cover dimension: 0.217" (D) x 3.5" (W) x 5.125" (H)
- Box wire capacity: 24.5 cu. in.
- (2) 1/2" KO's on bottom and (2) 1/2" KO's on the side wall
- (2) molded-in Speed Clamps™ for NM cable
- Part material types:
 - Cover: brushed brass, nickel-plated brass or dark bronze-plated
 - Threaded plug: matches cover with nitrile O-ring
 - Gasket: closed-cell rubber
 - Box screws and wings: galvanized steel
 - Dust plate: galvanized steel
 - Device: UL listed residential grade w/ copper terminals & brass ground
- Receptacle rating: 15 amp, 125V tamper resistant with ground (Article 406 of the NEC; requirements for Tamper Resistant receptacles in dwellings)
- Assembly meets UL 514C scrub-water exclusion test

Round Floor Box Specs

FB-3N

- Cut-in hole size: 4.0" Dia. (standard hole saw size)
- Box size (no flange): 3.0" (Deep) x 3.936" dia.
- Flange outside dimension: 5.0" dia.
- Cover dimension: 5.25" dia. x 0.217" thickness
- Box wire capacity: 24.5 cu. in.
- (2) 1/2" KO's on bottom
- (4) molded-in Speed Clamps™ for NM cable
- Part material types:
 - Cover: brushed brass, nickel-plated brass or dark bronze-plated
 - Threaded plug: matches cover with nitrile O-ring
 - Gasket: closed-cell rubber
 - Box screws and wings: galvanized steel
 - Dust plate: galvanized steel
 - Device: nonmetallic with copper terminals and brass ground
- Receptacle rating: 15 amp, 125V tamper resistant with ground (Article 406 of the NEC; requirements for Tamper Resistant receptacles in dwellings)
- Assembly meets UL 514C scrub-water exclusion test

Floor Box Concrete Adapter Kits:

For use in adapting FB-3, FB-3DB and FB-3N residential floor box assemblies to standard industry concrete junction boxes

Allied Moulded Products, Inc.

Floor Box Assemblies:

- FB-3 (Brass)
- FB-3DB (Dark Bronze-plated Brass)
- FB-N (Nickel-plated Brass)

Concrete Adapter Kit

Includes:

- Adapter sealing gasket
- Adapter ring
- Detailed installation instructions

UL® recognized for use with Round PVC Concrete Junction Boxes with an inside diameter of 4-1/2" - 4-9/16".

These include, but are not limited to, the following:

- Cantex, 5133758/5133760)
- Carlon, E971FB
- Iplex/Sceptor, FB 076954
- Kraloy, FB 078876
- Lew, FB/FBLEW

BENEFITS of using Concrete Adapter Kit with Allied Moulded Floor Box Assemblies:

- Installed floor box assembly meets UL514C scrub water exclusion test
- Quick and easy installation with fewer floor box and device components
- Floor box comes with a standard TR tamper resistance receptacle; 15 amp, 125 volt with ground (NEMA config. 5-15R)
- Allied Moulded floor box assemblies can be adapted to many standard PVC concrete junction boxes

12.0	AC9500	One-piece 4" dia. x 1-1/4" high round outlet box with 7" square mounting flange, construction prevents water from running behind box, "pop-in" non-metallic sheathed cable clamp included	15 lb.	09500	20	11
12.0	AC9500BULK	Same as AC9500 above	15 lb.	09503	50	28

AC9501

Cu. In. Volume	Catalog Number	Component Description	Fixture Rating	UPC# 85339	Std. Pkg. Qty.	Std. (lb.)
12.0	AC9501	One (1) AC9500 outlet box and one (1) siding installation block, outside dim.: 6-1/2" x 6-1/2", 4" dia. opening, "pop-in" non-metallic sheathed cable clamp included	15 lb.	09501	20	14

AC9502

Cu. In. Volume	Catalog Number	Component Description	Fixture Rating	UPC# 85339	Std. Pkg. Qty.	Std. (lb.)
12.0	AC9502	One (1) AC9500 outlet box and one (1) siding installation block, accommodates larger fixture base, outside dim.: 6-7/8" x 10-3/4", 4" dia. opening, "pop-in" non-metallic sheathed cable clamp included	15 lb.	09502	12	11

Mounting outside light fixtures is now as easy as one-two-three!

1. Mount electrical box to exterior wall and feed wiring through knockout prior to siding.

2. Affix mounting brackets, and caulk around box after siding is installed.

3. Fit PARA-form block to siding box and install light fixture.

The more you install, the more you save.

Electrical contractors wiring multi-family buildings save the most.

Forget putty pads. Forget mineral wool. Forget about being limited to a single electrical box in a stud cavity. Unlike their metal or PVC counterparts, Allied Moulded FiberglassBOX™ wall boxes can be placed a mere **three inches apart*** — with no additional fire protection — and still meet the fire safety standards outlined in the International Building Code. They're also suitable for use in STC rated common walls without additional sound pads. Testing has shown STC rated common walls are not negatively impacted with Allied Moulded FiberglassBOX™ products installed.

What does that mean for you? More flexibility in electrical design. Easier standardization in multi-family construction. Lower material and labor costs. And the benefits keep stacking up with every Allied Moulded FiberglassBOX™ box you use.

We've packed some big savings into a very small space. To learn more and see our UL documentation, visit www.alliedmoulded.com.

fiberglassBOX™
