

## Raceway Solutions for Healthcare Applications

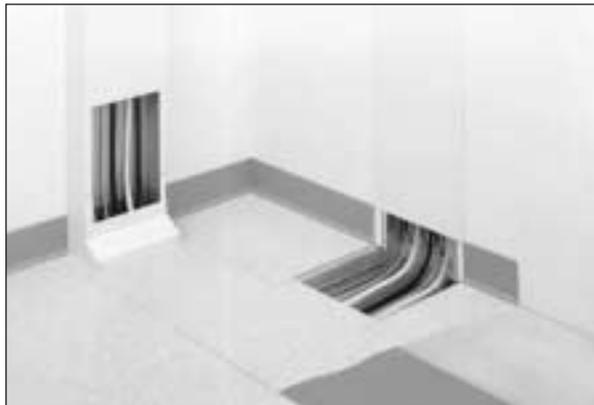

**W**alker Wallduct is a high capacity raceway for use in walls or ceilings. It can be mounted to the wall surface or flush with the wall to meet equipment layout and room designs. The lay-in feature for enclosure of wire and cable is ideal for use in healthcare rooms, under raised floors, or as a large capacity feeder for perimeter raceway. The cover plates are easily removed for wire and cable access. Wallduct can be used with Trenchduct to carry wire and cables from cabinets to egress points anywhere on the floor or wall. Aluminum Wallduct for applications requiring nonferrous metal raceways such as X-ray and MRI scan rooms is also available. Walker Wallduct is UL Listed to U.S. and Canadian safety standards.

*Wallduct is ideal for use in medical scan rooms.*

### Features & Benefits

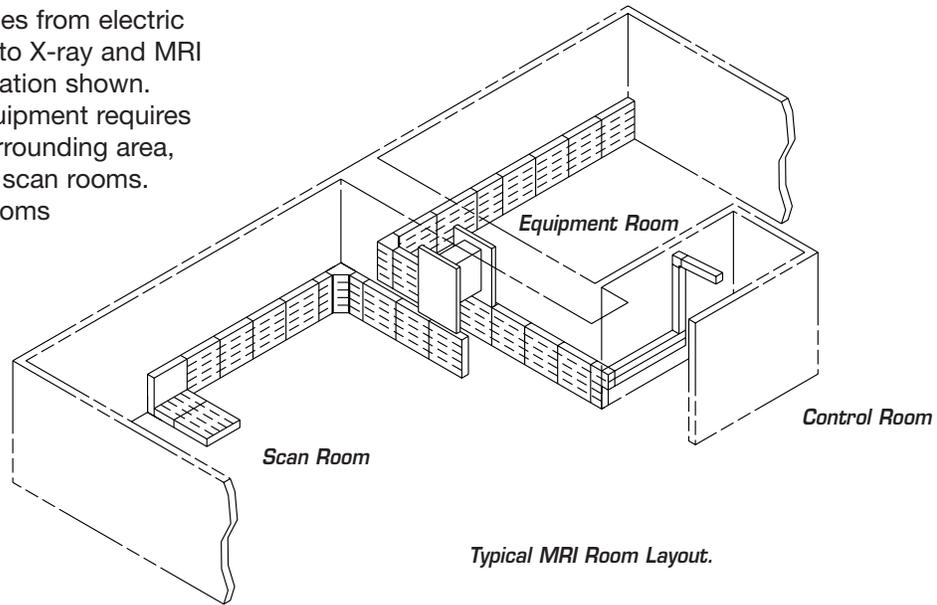

- **Constructed of galvanealed steel or aluminum.** Provides extra corrosion resistance and is easily painted to match any room interior.
- **Interior couplings.** Offer improved aesthetics when surface mounted.
- **Complete line of fittings.** Reduces field modifications by minimizing installation time and costs.
- **AutoCAD® capabilities for detailing project drawings.** Provides high quality detailing information with the option of electronic communication for a quicker, more accurate exchange of information.
- **Three standard widths.** Provide cable and wire requirements for most applications.

*Walker Wallduct Steel or Aluminum Raceway with lay-in features for enclosure of wire and cable.*

## Wallduct System Layouts

Wallduct is commonly used in the healthcare market to feed wires and cables from electric and communication cabinets to X-ray and MRI equipment. See typical application shown. Because some healthcare equipment requires nonmetallic material in the surrounding area, aluminum Wallduct is used in scan rooms. The equipment and control rooms generally use steel Wallduct.

## Wire Fill Capacity

Use these steps to determine wire fill capacity in Wallduct.

**Step 1:** Determine the internal raceway area by multiplying the overall width by the overall depth (subtract material thickness).

**Example:** Assume a raceway 10" wide by 4" deep. Subtract the material thickness from each dimension (see below). This results in internal raceway dimensions of 9.844" (10" - 0.156") wide by 3.922" (4" - 0.078"). The internal area for this raceway size would be 38.6 sq. in. (9.844" x 3.922").

Maximum Raceway Width (In.)	Deduct for Material Thickness Left & Right	Deduct for Material Thickness (Bottom)
6" – 18" Steel	0.156"	0.078"
20" – 30" Steel	0.216"	0.108"
6" – 18" Aluminum	0.200"	0.100"
20" – 30" Aluminum	0.250"	0.125"

**Step 2:** Determine the number of conductors allowed inside the raceway for a given type and size (types THHN and THWN are shown in Table 1) of the conductor by multiplying the internal area (calculated in Step 1) by the number of conductors allowed per square inch (see table 1)..

**Example:** Calculate how many No. 6 AWG (THHN) conductors you are allowed to place in the 10" x 4" raceway in Step 1 at 40% wire fill capacity. Multiply the internal area of the raceway by the maximum number of wires allowed per square inch, from table 1. This results in 304 allowable cables (38.6 sq. in. x 7.89).

A 20% fill should be used for systems utilizing fittings that have sharp 90° turns. The derating factors of NEC article 310.15(B)(2)(a) shall apply to conductors installed if the amount of current-carrying conductors exceeds 30 in number, or the sum of the cross-sectional area of all conductors exceeds 20% of the interior cross-sectional area of the raceway. When tunnels are utilized, the internal cross-sectional area must be further reduced by 50%. When partitions are utilized, the internal cross-sectional area must be calculated for each individual compartment.

**NOTE:** Wire diameters can vary depending on manufacturer. Verify diameter and adjust fill capacities as required. Values are per one square inch of Wallduct area.

## Product Notes

To attach Wallduct to Trenchduct, use vertical risers as shown in ED738. All field cut openings in Wallduct should be grommeted as needed to protect edges from cutting cables and wires. Order Catalog # 686039-100FT.

Contact factory for availability of other sizes of Wallduct.

Use this table to select replacement Wallduct hardware.

### Wallduct Replacement Hardware

Part No:	Description
1002412	<b>Hardware Bag</b> – Eight pieces 10-32 x 1/4" screws and twelve pieces of 10-32 x 7/16" screws for attaching steel Wallduct components.
1000883	<b>Hardware Bag</b> – Twelve pieces 10-32 clips for attaching steel or aluminum cover plates.
1002414	<b>Hardware Bag</b> – Eight pieces 10-32 x 1/2" stainless steel screws and eight pieces of 10-32 x 1/4" stainless steel screws for attaching aluminum Wallduct components.
