

Leviton's New Line of MiniLock™ Midget Locking Devices

Definition:

Leviton's newly-redesigned MiniLock™ Industrial Midget Locking Devices are ideal for industrial, commercial, and institutional settings where there is limited space for power connection. Leviton's new MiniLock Midget series includes all-nylon plugs and connectors, angle plugs and connectors, and flanged inlets and outlets; as well as metal flanged inlets and outlets. All versions are available in NEMA ML1, ML2 and ML3 configurations. Leviton also offers new mini Industrial Straight Blade Midget Devices for limited-space applications. The mini series (NEMA 1-15P) features an all-nylon plug and the only straight blade midget angle plug available today.

The new Industrial MiniLock devices are built with the same rugged construction features that have made Leviton's full-size Industrial Locking Devices the preferred industrial choice. The one-piece outer body on our midget plugs and connectors is made from high-impact super-tough nylon that stands up to constant punishment in any industrial or commercial environment. The unique cord clamp design provides superior strain relief that withstands every industrial pull test without causing any damage to the cable jacket. Leviton's wiring modules are designed for maximum ease of wiring while protecting wire strands from damage. The wiring module in all midget locking flanged inlets and outlets also accepts fork terminals for fast, easy wiring of equipment panels. In every detail, Leviton's Industrial MiniLock Devices provide optimum performance features for making locking connections wherever space is limited.

Application:

- Power Supply for panel-mount industrial controls
- Power connection for telecommunications equipment
- Refrigeration equipment installed in limited-space areas
- Hospital equipment specifically used where connection space is limited
- Small-scale OEM equipment such as test equipment, mixers and a variety of portable machines
- Theatrical lighting
- Any confined space where equipment must be connected using locking plugs and connectors, and flanged inlets and outlets

Features and Benefits:

- Heavy-duty, impact resistant super-tough nylon body on plugs and connectors ensures long service life in tough industrial and commercial applications.
- Plug & connector bodies designed with unique radial grip ring for a secure grip when making connections.
- Beveled edges help prevent plug and connector bodies from snagging on floors or other equipment when they're being moved.
- All devices feature combination screws (straight and Phillips) for maximum wiring versatility.
- All devices feature fast-threading assembly screws for fast, easy assembly.
- Wiring modules are built with funneled wire wells that guide conductors to terminals and provide maximum protection from loose wire strands.
- Mini Angle Plug is the only straight-blade midget angle plug available today — Ideal for equipment in limited-space settings where NEMA 1-15P plugs are required.
- Thermoplastic cord clamp on plugs and connectors seats flush with all rated cables, preventing damage to cable jacket. ML1-series cord clamps accept 18-2 SVT — 12-2SJT cord diameters; ML2, MS2 and ML3-series cord clamps accept 18-3SVT — 12-3SJT cord diameters.
- Individual funneled back wire wells on Flanged Inlets and Flanged Outlets accept Nos. 12 and 14 fork terminals for fast, easy wiring of equipment panels.
- NEMA configuration and rating molded on front of device.
- Strip gauge provided on back of front module.
- Backed by Leviton limited ten-year warranty

Agency Standards

- UL Listed:
Flanged Inlets and Plugs (File # E-13393)
Flanged Outlets (File # E-13399)
Connectors (File # E-11919)
- CSA Certified, all devices (File # LR-406)
- NOM Certified, all devices (File # NOM 057)
