Pocket Pro provides the most comprehensive information about PVC systems – from basic raw material to installation characteristics of the finished product. Written with the engineer, contractor and distributor in mind, it is based on laboratory test results and IPEX's many years of field experience.

At IPEX, we have been extruding PVC conduit and molding fittings since 1951. We formulate our own compounds, maintain strict quality control during production, and offer one of the most comprehensive lines of nonmetallic electrical products throughout North America.

More important, our commitment to customers extends beyond the sale. Quality control and thorough jobsite field reports have earned IPEX a reputation for product quality and service excellence.

Engineers, electricians, contractors, specifiers and utilities have realized for many years the advantages of PVC. Today, IPEX electrical systems include Scepter® PVC conduit and fittings, Super Duct® power and communication ducts, Cor-Line® ENT, Kwikon® ENT fittings and FiberTel® high density polyethylene innerduct. These brands are the number-one choice for power, communication and data needs. Whether exposed, concealed in walls, encased in concrete, or directly buried, IPEX electrical products are preferred *For The Long Run*.

Only when you specify IPEX branded products by name are you guaranteed our commitment to excellence.

Applications

Typical industrial/commercial and residential applications for IPEX electrical systems include:

- Utilities
- Cable
- Communications
- Street and highway lighting
- Residential applications
- Water treatment plants
- Airports
- Subways
- Sewage treatment plants
- Pulp and paper industries
- Parking garages
- Car washes
- Fish plants
- Marinas
- Agricultural, dairy, hogs, cattle, chicken, etc.
- Bridges and tunnels
- Food processing plants
- Steel mills
- Mines

Labour Savings

Compared to metal, PVC products reduce labour on a typical installation by up to two-thirds. The reason? PVC is easy to work with. It can also be cut and joined without pipe vises, cutters, threading equipment and reamers associated with metal conduit.

Lightweight Conduit

Scepter Rigid PVC Conduit is one-half the weight of aluminum and one-sixth the weight of steel. As a result, handling and installation are easier and faster, reducing labour costs.

Sunlight Resistant

The 2006 Canadian Electrical Code rule 2-130 is intended to ensure that totally enclosed nonmetallic raceways are properly protected against adverse effects from direct exposure to UV rays. Electrical nonmetallic raceways marked for such applications are suitable for installation and use in direct exposure to the rays of the sun. Scepter rigid PVC Conduit meets the criteria for sunlight resistance, is approved for the purpose, and is appropriately marked.

Easy Joining

Solvent cementing is all that is required, eliminating the need for power-threading machines, pipe vises and cutting equipment. A hacksaw or carpenter's saw is the only equipment required.

Strength

Scepter Rigid PVC Conduit offers both high impact and high tensile strength, even in cold temperatures. Scepter Rigid PVC Conduit and fittings meet and exceed all CSA and UL standards.

| Scepter Rigid PVC Conduit | | CSA Impact Test | | UL Impact Test | |
|---------------------------|-----------|-----------------|-------------|----------------|--------------|
| Size (in) | Size (mm) | @ -29°F (-34°C) | | @ 72°F (23°C) | |
| 1/2 | 12 | 8.9 ft.lbs. | (12 joules) | 50 ft.lbs. | (68 joules) |
| 3/4 | 20 | 8.9 ft.lbs. | (12 joules) | 80 ft.lbs. | (109 joules) |
| 1 | 25 | 8.9 ft.lbs. | (12 joules) | 100 ft.lbs. | (136 joules) |
| 1 1/4 | 32 | 8.9 ft.lbs. | (12 joules) | 120 ft.lbs. | (163 joules) |
| 1 1/2 | 40 | 8.9 ft.lbs. | (12 joules) | 150 ft.lbs. | (204 joules) |
| 2 | 50 | 8.9 ft.lbs. | (12 joules) | 190 ft.lbs. | (258 joules) |
| 2 1/2 | 65 | 8.9 ft.lbs. | (12 joules) | 210 ft.lbs. | (285 joules) |
| 3 – 6 | 75 – 150 | 8.9 ft.lbs. | (12 joules) | 220 ft.lbs. | (298 joules) |

Easy Wire Pulls

PVC's exceptionally smooth interior surface greatly reduces the amount of friction while pulling conductors/wires through long runs, even with 90° bends. A large pull-rope and wire-pulling compound should be used when pulling all conductors and wires.

Noncorroding

PVC is immune to damage from naturally corrosive soil conditions, as well as electrochemical and galvanic corrosion. This ensures lower maintenance costs and superior performance *For The Long Run*.

Nonconducting

Scepter Rigid PVC conduit pipe and fittings are nonsparking and nonconducting, thereby eliminating the most dangerous 'second point of contact' and 'phase to ground' faults. The use of a separate grounding conductor provides a complete and positive ground for the whole system.

Chemical Resistance

One of the greatest benefits of PVC is its excellent chemical resistance. It resists attack by acids, alkalies, salt solutions, and many other types of chemicals. For more information on PVC and chemical resistance, refer to the IPEX Chemical Resistance Guide.

Long Life

Scepter Rigid PVC Conduit pipe and fittings retain their original properties after years of exposure to heat and weather. In addition, resistance to fungi, bacterial action, rodents, termites and corrosive agents ensures a long, trouble-free life for PVC conduit installed indoors or outdoors.

Concrete Tight

Scepter Rigid PVC Conduit pipe and fittings are designed and engineered to be concrete tight in all weather conditions.

Fire Resistant

IPEX's proprietary PVC compound used to manufacture Scepter products is a self-extinguishing material and will not support combustion. Samples taken from an actual fire show the outer surface of the conduit was blistered and charred. The interior of the conduit, however, was unaffected. Additionally, the undamaged conductors were then removed and reinstalled in new conduit.

Fire-resistant characteristics when tested to CAN ULC S102.2 are as follows:

| IPEX Compound | Flame Spread | Smoke Developed | Fuel Contribution |
|-------------------------|--------------|-----------------|-------------------|
| 0.080" (2mm) thickness | 10 – 20 | 225 – 270 | 0 |
| 0.630" (16mm) thickness | 10 – 20 | 300 – 390 | 0 |

FT-4 Rating

Scepter Rigid PVC conduit is certified to meet the requirements of FT-4 allowing its use in noncombustible construction per Section 3.1.5.20 of the National Building Code, which reads:

1.) *Subject to the limits on the size of elements that penetrate fire separations as stated in Sentence 3.1.9.3.(2), within a fire compartment of a building required to be of noncombustible construction, totally enclosed nonmetallic raceways not more than 175mm in outside diameter, or of an equivalent rectangular area, are permitted to be used to enclose optical fibre cables and electrical wires and cables, provided the raceways exhibit a vertical char not more than 1.5m when tested in conformance with the Vertical Flame Test (FT - 4) Conduit or Tubing on Cable Tray in Clause 6.16 of CSA C22.2 No. 211.0, "General Requirements and Methods of Testing for Nonmetallic conduit."*

Suitable for Direct Burial

PVC is suitable for direct burial and requires no extra protection when installed in accordance with the Canadian Electrical Code and the local inspection authority guidelines. The usual care regarding trenches and backfilling should be respected.

One-Source Specification

IPEX offers a full range of PVC fittings and accessories. As a result, it is easy to specify a single source PVC system.

Quality Control

In addition to IPEX's quality control testing, all Scepter electrical products carry third-party certification by CSA, UL and NRTL.

This section covers the most comprehensive design and installation of Scepter Rigid PVC Conduit pipe and fittings. Always consult the authority having jurisdiction for specific installation procedures.

Support

Due to PVC's light weight, support spacing is different than that used with metal conduits. Supporting straps should NOT be firmly tightened, so that linear movement of the pipe is possible. The maximum allowable support spacing, as per Canadian Electrical Code (CEC), is as follows:

Support Spacing For Scepter Rigid PVC Conduit Pipe

| Nominal Conduit Diameter | | Maximum Support Spacing | |
|--------------------------|-----|-------------------------|--------|
| inches | mm | feet | metres |
| 1/2 | 12 | 2-1/2 | 0.75 |
| 3/4 | 20 | 2-1/2 | 0.75 |
| 1 | 25 | 2-1/2 | 0.75 |
| 1-1/4 | 32 | 4 | 1.2 |
| 1-1/2 | 40 | 4 | 1.2 |
| 2 | 50 | 5 | 1.5 |
| 2-1/2 | 65 | 6 | 1.8 |
| 3 | 75 | 6 | 1.8 |
| 3-1/2 | 90 | 7 | 2.1 |
| 4 | 100 | 7 | 2.1 |
| 5 | 125 | 7 | 2.1 |
| 6 | 150 | 8 | 2.5 |

Maximum Operating Temperature

The Canadian Electrical Code (CEC) allows the use of Scepter Rigid PVC Conduit up to a maximum ambient temperature of 167°F (75°C).

Cutting

Scepter Rigid PVC conduit can be easily cut on the jobsite by using a hacksaw, carpenter's saw or PVC conduit cutters. For larger sizes of conduit, the use of a mitre box is also recommended to ensure a square cut.

Solvent Cementing

After cutting Scepter Rigid PVC conduit, sharp edges or burrs from inside the conduit should be removed with a knife. Thoroughly clean the end of the pipe and inside the fitting with a pipe cleaner. Apply a generous amount of IPEX solvent cement to both surfaces; slide together and give a quarter turn to ensure the solvent is spread evenly on the material. Hold together for a few seconds until the joint is made.

Usually the solvent-cemented joint will be strong enough to install immediately. However, in climates with low temperatures or areas with high humidity, extra time may be required before moving the pipe for permanent installation. Solvent-cemented joints appear to "set up" instantly, but will take 24 hours to cure properly. After this time, the solvent-cemented joint has completely cured and is waterproof. For extreme cold weather installations, the use of IPEX PVC Primer is recommended. IPEX cements and primers are available in quarter-pint (125ml), half-pint (250ml), pint (500ml), quart (1-litre) and gallon (4-litre) containers.

Bending

PVC is a thermoplastic material that, when heated, becomes soft and pliable. As a result, its shape can be altered.

A flameless heat source is recommended to heat the pipe. AN OPEN FLAME SHOULD NOT BE USED. Either an electric unit or an infra-red propane unit is recommended.

The necessary temperature for bending pipe is 260°F (127°C). The pipe must be heated evenly over an area approximately ten times the diameter of the pipe before any attempt at bending is made. Bending the pipe when it has not been thoroughly heated will cause the pipe to "kink." With proper care and a little practice, the bend will form easily.

Cooling the pipe with cold air or water will cause "spring back." Allow a few extra degrees of overbending to compensate. Maximum bending radius shall be six times the internal diameter according to the Canadian Electrical Code.

Using Expansion Joints

It's just as important to know when to use an expansion joint as it is to know how to install it correctly. Expansion joints are required when the temperature change is greater than 25°F (14°C). Scepter Rigid PVC conduit has a coefficient of linear expansion of 3.6×10^{-4} in./ft./°F (.054mm/m/°C.) Generally, a 100 ft. (30.48m) run of PVC conduit will undergo a change in length of 3.6 inches (91.44mm) for every 100°F (56°C) temperature change.

For conduit installed indoors, the range of expansion and contraction can be calculated using the maximum air temperature plus the heat contributed by the conductors inside the conduit and minimum air temperature expected. Expansion joints are not required indoors unless there are widely varying temperatures such as the attic of a building.

Conduit installed outdoors, exposed to direct sunlight, will be considerably hotter than the air temperature. As a guideline in this case, add 27°F (15°C) to the temperature change. Expansion joints should be installed to allow for all anticipated temperature changes.

Expansion Formula

By using the following formulas and the charts below, the total expected expansion in a run can be easily determined:

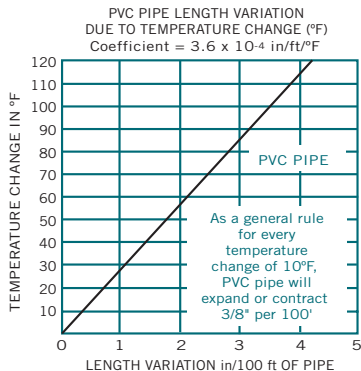

°F

Total Expansion (in.)
= length of run (ft.)
x temperature change
(°F) x 0.00036

or

°C

Total Expansion (mm)
= length of run (m)
x temperature change
(°C) x 0.054

Number of Expansion Joints Required

Use the following equation to determine the number of expansion joints needed for a Scepter Rigid PVC Conduit installation:

$$\text{Number of joints} = \frac{\text{total expansion (mm or in)}}{E}$$

E = Expansion joint travel length 101.6mm (4") or 203.2mm (8") depending on diameter.

Always round up to the next whole number.

Setting the Piston Opening

The expansion joint must be installed to allow for expansion and contraction of the conduit run. On a cold day, if an expansion joint is installed completely closed with the piston bottomed, there is no room for expansion when the conduit is warmed. If it is installed open to the maximum on a hot day, the expansion joint will pull apart when cooled.

The correct piston opening for any installation condition can be easily determined using the formula below:

Piston setting =

$$\text{Compressed length} + \left(\frac{\text{max. temp.} - \text{installation temp.}}{\text{max. temp.} - \text{min. temp.}} \right) \times E$$

Formula can be used for both metric and imperial measurements.

| Size (mm) | Size (in) | Compressed Length (mm) | Compressed Length (in) | Travel (mm) | Travel (in) |
|-----------|-----------|------------------------|------------------------|-------------|-------------|
| 13 | 1/2 | 203.2 | 8.00 | 101.6 | 4 |
| 20 | 3/4 | 203.2 | 8.00 | 101.6 | 4 |
| 25 | 1 | 215.9 | 8.50 | 101.6 | 4 |
| 32 | 1-1/4 | 228.6 | 9.00 | 101.6 | 4 |
| 38 | 1-1/2 | 228.6 | 9.00 | 101.6 | 4 |
| 51 | 2 | 235.0 | 9.25 | 101.6 | 4 |
| 64 | 2-1/2 | 235.0 | 9.25 | 101.6 | 4 |
| 76 | 3 | 362.0 | 14.25 | 203.2 | 8 |
| 89 | 3-1/2 | 362.0 | 14.25 | 203.2 | 8 |
| 102 | 4 | 362.0 | 14.25 | 203.2 | 8 |
| 127 | 5 | 362.0 | 14.25 | 203.2 | 8 |
| 152 | 6 | 362.0 | 14.25 | 203.2 | 8 |

Location of Expansion Joints

Proper functioning of an expansion joint depends on three procedures:

1. The correct placement of the expansion joint.
2. The proper installation of Scepter Rigid PVC conduit and the expansion joint.
3. The proper placement and fastening of support straps.

One Expansion Joint

Figure 1

If only one expansion joint is needed between two boxes, the barrel of the joint is rigidly fastened close to the first box. Scepter Rigid PVC conduit should then be loosely supported with straps, allowing the conduit to move freely as it expands and contracts.

Two Expansion Joints

Figure 2

If two expansion joints are needed, the joints should be firmly fastened back to back at the centre of the run. Scepter Rigid PVC conduit is loosely supported with straps, allowing the conduit to move freely as it expands and contracts.

Two Expansion Joints (Alternative)

Figure 3

Alternatively, the centre of the run and the two expansion joints (located at the boxes) should be rigidly fastened. All other support straps should be loosely fastened.

Three or More Expansion Joints

Figure 4

If more than two joints are needed in a very long run, they should be put in a series, one after the other. Each barrel must be rigidly fastened while conduit is loosely supported with straps allowing the conduit to move freely as it expands and contracts. When installed in a series, each section acts independently of the other. Spacing of conduit supports must be in accordance with Section 12-1114 of the Canadian Electrical Code (CEC).

Figure 1

Figure 2

Figure 3

Figure 4

Installation of Expansion Joints

Installation recommendations:

- Expansion joints should be mounted so the piston can travel in a straight line in the barrel. If the alignment is not straight, the piston will bind, preventing the joint from functioning correctly.
- The expansion joint barrel should be clamped tight, but the conduit mounted loose enough in its hangers to allow for movement as it expands and contracts.
- Scepter nonmetallic straps are correctly sized and designed for proper support, and must be used to secure the conduit.
- When expansion joints are used in a vertical position, the piston should be mounted in a downward position so dirt cannot deposit between the barrel and piston at the muzzle of the expansion joints.

WARNING

Common Mistakes

Three common mistakes are:

1. Forgetting to use expansion joints.
2. Not using enough expansion joints.
3. Overtightening of support straps.

It is more cost effective to use more expansion joints than needed, rather than too few. It is difficult to correct the problem after conductors are installed and in service. Failure to accommodate expansion/contraction may result in pipe fracture.

Scepter Rigid PVC Conduit Dimensions (inches)

Scepter

Industry leaders specify Scepter PVC fittings by name. For years, Scepter PVC fittings have set the standard for quality and value-added features not normally available from other suppliers. Features such as our threaded brass inserts, brass screws, and superior PVC gasketing system make a real difference.

Junction Box Adapter

Standard PVC Coupling

Nonmetallic Floor Box, Cover & Metal Cover Adapter

Installation is quick and simple with our nonmetallic floor box and covers, saving both time and money over similar metallic assemblies.

Scepter's floor box and duplex receptacle covers are constructed from high impact, noncorroding and nonconducting PVC.

The flush-mount covers are available in custom colours and are shipped with a leveling ring complete with a grounding clip. Metal cover adapter kits are also available, allowing you to adapt to metal floor plates. Our 6" deep floor box allows flexibility for various concrete floor pours, while the 4 3/4" width offers easy access and ample wire room. Scepter's FB box is molded with 2 - 1" and 2 - 3/4" hub openings.

All boxes are shipped complete with reducer plugs for added versatility.

One Kit, Four Heights, One Low Cost!

This simple yet innovative **Round Floor Box Stand** is equipped with several height brackets which accommodate the different rebar and post-tension cable heights and slab depths found from job-site to job-site. When installed together, the Floor Box and Stand can be used in 5-1/2" to 10" slab depths.

Sold as a Kit, IPEX offers the Round Floor Box and Stand conveniently packaged together as one complete product offering.

FEATURE & BENEFITS

- Four Adjustable Heights
- Withstands Tough Job Site Conditions
- Raises Entrance Hubs to Rebar
- Easy to Install
- Minimizes Footprint on Concrete Form
- Cost Effective

Conduit Repair Kit

EPR Kit for Conduit Repair

EPR Kits from IPEX are the first total repair systems for broken and damaged PVC conduit. They offer fast and easy repairs for damaged conduit caused by actions such as earth excavation, horizontal and core drilling. All sizes are 24 inches in length.

| Size (in) | Part Number | Product Code |
|-----------|-------------|--------------|
| 1-1/4 | EPR25 | 077976 |
| 1-1/2 | EPR30 | 077971 |

| 3 | EPR45 | 077974 |
| 4 | EPR55 | 077975 |
| 5 | EPR60 | 077977 |
| 6 | EPR65 | 077979 |

EPR Kit Adapters for Duct Repair

EPR Conduit Repair Kits allow contractors to repair a broken section of DB-II duct while leaving the cables inside. The Adapters are pre-cut allowing each to open around existing cabling and are then solvent cemented onto the outside diameter of the broken duct. Using standard PVC solvent cement, an EPR Kit is then easily assembled and connected to the Adapters, restoring the duct to its original form.

SCEPTALIGHT: The Light That Lasts

Sceptalight fixtures from IPEX prove themselves to be all-round performers in a variety of indoor and outdoor applications.

Sceptalight fixtures are made from a glass-reinforced thermoplastic polyester resin, which enable them to stand up better to corrosive elements than metal. This thermoplastic design marries an unrivaled balance of strength, stiffness and toughness with all the benefits users appreciate of Scepter rigid PVC conduit and fittings - long life, easy servicing and high impact-resistance.

Sceptalight's thermoplastic construction offers outstanding corrosion and chemical resistance. And its interior and exterior silicone gaskets create a watertight seal, the reason it performs equally well indoors and outside.

Features and Benefits

- Stable Construction
- Watertight seal with weather-resistant silicone gaskets
- Corrosion Resistant
- Durable and Impact Resistant

Mounting Options

CEILING MOUNT

Box with four 3/4" threaded hubs and integral mounting feet.

WALL MOUNT

Box with four 3/4" threaded hubs, 90° wall bracket and integral mounting feet.

PENDANT MOUNT

Pendant cap with 3/4" threaded hub and a locking set screw.

Globe Options

Sceptalight offers a variety of globe options to suit a wide range of applications and environments. Our standard clear glass globes are ideal for general purpose area lighting for either indoor or outdoor use. Polycarbonate globes offer impact resistance in case of accidental contact and the assurance that work areas are not contaminated by broken glass. Coloured globes - available in red, blue, green or amber - can transform the light to an indicator or warning light.

Fluorescents

Our compact fluorescent fixtures work four to five times more efficiently per watt than incandescents and provide 10-20 times the lamp life, yet use approximately 75% less energy. In this way, Sceptalight fluorescents lower energy and maintenance costs without sacrificing light levels.

Incandescents

With their low initial cost, Sceptalight incandescent fixtures make the most practical choice to meet the daily needs of commercial, industrial, marine and agricultural applications. Our incandescents are ideal for short burn times as well as flashing and dimming applications.

Cor-Line ENT – Savings for the Long Run

Noncorroding and nonconducting, Cor-Line Electrical Nonmetallic Tubing and fittings are designed *For The Long Run*. Coiled in lengths up to 1,500 feet, the Cor-Line system can span the longest run. Encased in concrete, concealed in walls or ceilings, Cor-Line offers the best alternative to the labour-intensive, 10' lengths of metal conduit with its couplings and scrap. The Cor-Line System is the right choice!

Kwikon Fittings

Our unique Kwikon couplings, transition couplings and connectors are designed with six 360° locking tabs to ensure a secure concrete-tight connection.

Time-consuming taping and solvent cementing are eliminated.

C22.2 – No. 227.1

Ease of Installation

Engineered for the rugged day-to-day challenges of the construction industry, Cor-Line has already established itself as a market leader. Requiring no special tools for bending or cutting, Cor-Line is easily installed.

Bending & Cutting

Cor-Line's corrugated construction allows it to be easily bent by hand, no longer requiring special bending equipment traditionally required with metal conduit systems. When bending, ensure the radius of the curve is at least six times the internal diameter of the tubing.

Pre-Assembly of Kwikon Slab Boxes

IPEX's Kwikon slab boxes are available with or without molded connectors. For boxes without molded connectors, pre-assembly is quick and simple using our snap-in connector or threaded male adapter with locknuts. Both provide a secure concrete-tight connection.

Pre-Assembly of Metallic Boxes

Metallic slab boxes can be quickly pre-assembled with Kwikon connectors. Secured with a locknut, Kwikon connectors provide a concrete-tight connection.

Installation in Sheer Walls, Interior Walls & Block Walls

Cor-Line's flexibility, lightweight and ease of handling in metal, wood, or block walls, combined with Kwikon connectors and couplings, substantially reduce time and labour needed to install electrical raceways.

Pulling Wire

Kwikon's interior corrugated surface greatly reduces the amount of friction while pulling conductors through long runs, even with 90° bends.

CSA Certified

Cor-Line Electrical nonmetallic tubing and Kwikon fittings are certified to CSA C22.2 No. 227.1.

FT-4 Approved

IPEX Cor-Line ENT tubing meets and exceeds the requirements of CSA's vertical char test as described in Clause 4.11.4 of CSA C22.2 No. 0.3M.

Direct Burial

The Canadian Electrical Code approves ENT for direct earth burial. Rules governing installation of Cor-Line ENT are covered in the CEC Part 1, Rule 12-1500 through 12-1516.

Installation in Noncombustible/Combustible Construction

Refer to Section 3.1.5.19 of the National Building Code for rules governing the use of combustible conduit in noncombustible and/or combustible buildings. Where provincial codes vary, please consult with the building authority having jurisdiction.

Nonmetallic Raceways for Fire Alarm System Conductors

Rule 32-102 of the CEC allows Cor-Line ENT to be used for fire alarm systems in noncombustible or combustible buildings provided: (1) the raceway is embedded in at least 50mm (2 in.) of masonry or poured concrete, and (2) where electrical nonmetallic tubing (ENT) is used, the transition from ENT to metal raceways is made in the concrete using a transition fitting or other acceptable means. (Kwikon transition fittings are specifically designed for this application.)

Reel & Coil Size

Kwikon Slab Box

Engineered to be rugged and durable, IPEX's boxes will withstand construction's harshest environments.

Designed by contractors for contractors, Kwikon slab boxes are available in two unique styles, with or without molded connectors. Now you can provide a complete, nonmetallic slab system. Priced competitively with traditional steel mud boxes, Kwikon slab boxes increase labour efficiencies, reducing costs.

Features

- Approved for use with ceiling fans up to 35 lbs. and luminaries up to 50 lbs.
- Concrete tight
- All molded connectors have 360° locking tabs that exceed CSA and UL requirements for pull-out
- Molded connectors are also approved for use with Scepter Rigid PVC Conduit
- Manufactured from high impact PVC
- Nonmetallic / Nonconducting / Noncorroding
- Threaded brass inserts

Slab Box Extension Ring

| Part Number | Product Code | Standard Packaging |
|-------------|--------------|--------------------|
| SMBR | 089494 | 20 |

Adjusts height of SMB/SMBH series slab boxes by 1"

4" Square Slab Box

| Hub Size (in) | Part Number | Product Code | Package Qty |
|-------------------|-------------|--------------|-------------|
| 8 x 1/2 | SSBH-10 | 089452 | 25 |
| 8 x 3/4 | SSBH-15 | 089453 | 25 |
| 4 x 1/2 & 4 x 3/4 | SSBH-10/15 | 089454 | 25 |

Shallow Slab Box

| Hub Size (in) | Part Number | Product Code | Package Qty |
|-------------------------|--------------|--------------|-------------|
| 8 x 1/2 | SMBS-H-10 | 089485 | 20 |
| 4 x 1/2 & 4 x 3/4 | SMBS-H-10/15 | 089486 | 20 |
| 8 x 3/4" | SMBS-H-15 | 089487 | 20 |
| 4 x 1/2, 2 x 3/4, 2 x 1 | SMBS-H-10/20 | 089488 | 20 |
| 4 x 3/4 & 4 x 1 | SMBS-H-15/20 | 089489 | 20 |

Concrete Wall Boxes

- Fully assembled and installation ready
- Perfectly suited for deep or shallow construction preferences
- Concrete-tight poly film covering the box opening
- Kwikon hubs do not protrude inside the box

Kwikon Concrete 3-1/2" Deep Concrete Wall Box

| Hub Size (in) | Part Number | Product Code |
|-------------------------|--------------|--------------|
| 4 x 1/2, 4 x 3/4 | SVDB-H-10/15 | 089496 |
| 4 x 3/4, 4 x 1 | SVDB-H-15/20 | 089049 |
| 4 x 1/2, 2 x 3/4, 2 x 1 | SVDB-H-10/20 | 089052 |
| 8 x 3/4 | SVDB-H-15 | 089065 |

Kwikon 2" Shallow Concrete Wall Box

| Hub Size (in) | Part Number | Product Code |
|---------------|-------------|--------------|
| 4 x 1/2 | SVSB-H-10 | 089054 |
| 4 x 3/4 | SVSB-H-15 | 089053 |

The NEW ENT Support Unit (ESU)

raises the tubing or conduit up off the concrete form during the concrete pour maintaining a level raceway and allows for maximum aggregate flow and concrete consolidation.

Easy to use, the ESU snaps around any size of ENT. It is perfect for use in high rise buildings constructed with post-tensioned (PT) concrete slabs.

Features

- One size fits all 1/2" - 2"
- Saves time and labour
- Easy locking mechanism
- Securable to the concrete form
- Minimal footprint reduces amount of surface contact

| Part Number | Product Code |
|-------------|--------------|
| ESU-10-35 | 089149 |

Accessories

ENT 4" Square Box Flat Cover

| Size (in) | Part Number | Product Code |
|-----------|-------------|--------------|
| 1/2 KO | KWBC-10 | 089500 |

Tapered Plugs

| Size (in) | Part Number | Product Code | Package Qty |
|-----------|-------------|--------------|-------------|
| 1/2 | TP10 | 089003 | 100 |
| 3/4 | TP15 | 089004 | 100 |

Super Duct Pipe and Fittings

Super Duct is recognized by major utilities, contractors and engineering firms as the premier ducting product available on the market.

Super Duct is manufactured with a specialized compound and engineered for high impact and crush strength specifically required by utilities for underground duct. This compound enhances the friction coefficient of Super Duct for easier pulling of conductors/wires through long runs.

Rigid Super Duct (Type DB-2) conforms to the testing requirements of CSA Standard C22.2 No. 211.1 both for encasement in concrete/masonry and for direct burial.

CSA C22.2
No. 211.1

Lightweight

Super Duct is easy to carry and install, reducing labour and costs.

Long Lengths

Super Duct is available in 10' and 20' lengths, minimizing the number of connections needed.

Bell Ends

Super Duct is bell-ended, allowing for easy assembly in the field.

High Compressive Strength

Super Duct's specially formulated compound is designed to withstand high loads.

Low Coefficient of Friction

The smooth bore of Super Duct facilitates cable pulling and eliminates costly cable damage.

Quality Control

Stringent, continuous testing ensures that Super Duct is a consistently high quality product.

Field Bending

The natural flexibility of IPEX Super Duct allows field bending, so minor changes in elevation or direction can often be accommodated without the use of special sweeps or fittings. The following table indicates typical maximum offset bends that can be achieved by "cold bending."

Allowable Offset for Super Duct

| Size | Max Allowable Offset 10' Length | | Max Allowable Offset 20' Length | | |
|-------|------------------------------------|----|------------------------------------|----|-------|
| | in. | mm | in. | mm | |
| 2 | 50 | 20 | 508 | 79 | 2 007 |
| 3 | 75 | 14 | 356 | 56 | 1 422 |
| 3-1/2 | 90 | 12 | 305 | 49 | 1 245 |
| 4 | 100 | 11 | 279 | 43 | 1 092 |
| 5 | 125 | 7 | 178 | 35 | 889 |
| 6 | 150 | 7 | 178 | 29 | 737 |

NOTES:

1. Axial deflection should not be attempted at the joints.
2. The above values were established for ambient temperatures above the freezing point. Increased radii may be desirable at below-freezing temperatures.

Super Duct (Type DB-2)

| Description | CSA Requirements | Reference |
|---------------------|---|---------------------|
| Pipe Stiffness @ 5% | 43.5 psi (300 kPa) | CSA C22.2 No. 211.1 |
| Crush Resistance | 198 lbs. @ 73°F (90 kg @ 23°C) 10% max. residual deflection | CSA C22.2 No. 211.1 |
| Impact Resistance | 45 ft. lbf @ 73°F (61J @ 23°C) 25 ft. lbf @ 0°F (34J @ -18°C) | CSA C22.2 No. 211.1 |
| Residual Stress | 149°F (65°C) for 4 hours. Allow to cool to 73°F (23°C). 0.5% shrinkage allowed. | CSA C22.2 No. 211.1 |
| Joint Tightness | 5 psi (35 kPa) internal water pressure applied for 24 hours. | CSA C22.2 No. 211.1 |

Note: Super Duct meets or exceeds all CSA requirements.

Bends

Standard 90°, 45° and 22 1/2° bends are available from sizes 2" through to 6" in 24", 36", 42" and 60" radius. All bends are supplied with 6" (15.2cm) tangents. The centre line lay length (L) can be calculated using;

$$L = \left(\pi r \times \frac{\xi}{180} \right) + 2 (\text{tangent})$$

Where: $\pi = 3.14$

L = centre line lay length

r = radius of bend

ξ = angle of bend

tangent = 6"

Example: for a 3" 90° bend with a 36" radius - calculate the lay length:

$$L = \left(3.14 \times 36 \times \frac{90^\circ}{180^\circ} \right) + 2 (6)$$

L = 69 inches

$$L (\text{metres}) = \frac{L \text{ imperial}}{12 \times 3.281} = \frac{69"}{39.37} = 1.75\text{m}$$

90°

45°

Static Friction Coefficient

Concrete Encased Duct Installation

For multipurpose power cable and communication duct banks, spacing between ducts is critical for optimum performance. IPEX has designed the Monobloc and Vertical Lok Spacer systems to accommodate all specification and field installations.

These light weight spacers provide the vertical and horizontal separation required in a trench.

With spacers in place on the trench bottom, lay the first tier of ducts. When using a concrete base, lay the bottom tier before the base has taken initial set. Place subsequent tiers of spacers on top of the tier until the required number of ducts are installed. Then tie the entire assembly together. It is not necessary to weight or brace the bank unless the concrete mix is very wet.

The Concrete Pour

Do not allow a heavy mass of concrete to fall directly onto the duct. If this is a possibility, use a plank to direct the concrete down the sides of the bank assembly to the trench bottom. The concrete will flow to the centre of the bank and rise up in the middle, uniformly filling all open spaces. Voids can be eliminated by carefully working a long, flat slicing bar or spatula up and down between the vertical rows of ducts. Concrete should then flow between and under all of the ducts.

Duct Bank Elevation

Monobloc spacers should be staggered. It is recommended that spacers be located approximately one-fifth of duct length from each end. Vertical Lok spacers should be located to a maximum of every 5.5 ft. (1.7m).

Backfilling

Backfill with regular excavated soil after the concrete has set.

Concrete Encased Tier-by-Tier Installation

The advantage of this method is the production of a solid, void-free concrete envelope. Simply pour each tier independently.

Trench Bottom

After grading the trench, place a foundation of 3" of concrete on the bottom. It should be smooth and graded.

Bank Assembly

Lay the bottom tier of ducts on the concrete base. Ducts should be spaced with wooden combs (two per duct length). Concrete the first tier level to the top of the comb. Remove combs and fill the voids. Light tamping will ensure an even surface. Repeat this sequence until the bank is built up.

Cross-section of tier-by-tier method.

Type of wood comb used.

Concreting

If the concrete is allowed to set before assembling the next tier, the concrete will be stronger and more dense and the ducts will be aligned straighter. One problem with this method is that the bank will be in a series of layers and therefore more likely to heave and separate under frost conditions. If successive tiers are laid before the concrete has set, a satisfactory bond will be achieved by tamping the dry concrete.

Backfilling

Backfill with regular excavated soil when the bank is complete.

Duct is usually laid in 100' sections once the trench is excavated. Therefore, concreting can be a continuous process.

Direct Burial Installation

Trench Bottom

The trench bottom should provide a continuous, firm and uniform support for the duct bank construction. Care should be taken to avoid lumps, ridges, depressions and stones causing "point" contacts or uneven bearing.

Rock or Shale

Excavate 3" below the desired depth and bring the trench back to grade with selected tamped soil. This will provide the duct with a uniform bedding surface.

Unstable Soils

Tests should be conducted to establish the soil strength in marshy or swampy areas. It may be necessary in these conditions to dig deeper and refill with crushed stone or gravel, or to employ mats, timbers or a concrete base.

Placement of Duct

After the first tier of ducts is installed, backfill and compact as outlined below. If wood combs are employed for spacing, remove them as the backfill is placed and tamped. Then begin the next tier.

Initial Backfilling

1. Fit side and centre to the top of the ducts. Use a hand tamper only to tamp firmly.
2. Backfill over the duct to the required thickness (see note) and tamp firmly, using only a hand tamper.

Final Backfilling

When the last tier is placed, hand-place the backfill to 4" over the duct with soil that does not contain stones larger than 3/8". Hand-tamping of this layer is optional, depending on the specifications.

From this point, backfill may be completed by hand or by pneumatic tamping in layers from 4" to 12" depending on the degree of compaction desired.

When placing backfill by machine, avoid the use of large rocks until a protective layer (minimum of 12") is established.

Note: In direct burial, no spacer should be used with Type 2; spacers provide "point" support instead of the continuous bed required. Backfill thickness between ducts is usually 2" to 3".

CSA Type II

* Do not have rebar slots or base holes

Monobloc Spacer Benefits for Telephone Duct:

- lightweight; easy to handle and install
- weatherproof
- resilient at extremely low temperatures
- flexible, yet tough
- readily available in a wide range of sizes and configurations
- economical
- immune to corrosion attack
- approved by Bell Canada
- versatile, as they can be used as both a base & intermediate spacer

Selection Table (in inches)

| Nominal Size (A) | Vertical Spacing (B) | Horizontal Spacing (C) | Ground Clearance (D) | Number of Ways (E) |
|---------------------|-------------------------|---------------------------|-------------------------|-----------------------|
| 2 | 1-1/2 | 1-1/2 | 3 | 2 |
| 3 | 1-1/2 | 1-1/2 | 3 | 2 |
| 3-1/2 | 1 | 1 | 2 | 2 - 3 - 4 |
| 4 | 1 | 1 | 2 | 1 - 2 - 3 - 4 |
| 4 | 1-1/2 | 1-1/2 | 3 | 2 - 3 - 4 |
| 4 | 2 | 2 | 3 | 1 - 2 - 3 - 4 |
| 4 | 3 | 3 | 3 | 2 - 3 - 4 |
| 4 | 3 | 3 | 4 | 2 - 3 - 4 |
| 4-1/2 | 2 | 2 | 3 | 1 - 2 - 3 |
| 5 | 1-1/2 | 2-1/8 | 3-5/8 | 1 |
| 5 | 1-1/2 | 1-1/2 | 3 | 2 - 3 - 4 |

SceptaCon™ Trenchless Raceway Systems

SceptaCon is one of the first PVC systems designed for the rigors of trenchless applications. It links seamlessly to existing PVC conduit infrastructures and allows utility companies to standardize on PVC throughout their entire electrical systems.

SceptaCon's slide-in locking system and pre-installed, pre-lubricated gaskets allow contractors to create a water-tight seal by hand in seconds - in all temperatures - without having to worry about solvents or chemicals freezing or drying too quickly.

Its unique spline-lock snaps into a recessed opening, ensuring the spline won't get snagged during pull-through. SceptaCon's rounded bell shoulders slide easily past roots, rocks and other debris in the borehole, ensuring a smooth, easy installation. And because SceptaCon is made to the same high standards as our Scepter rigid PVC conduit, contractors and electrical utilities can be assured of the same level of quality - above ground and below.

No Cementing or Lubrication

SceptaCon's slide-in locking system and pre-installed, pre-lubricated gaskets allow contractors to create a water-tight seal by hand in seconds.

Outperforms Other PVC Products

SceptaCon's unique spline-lock snaps into a recessed opening, ensuring the spline won't get snagged during pull-through. SceptaCon's rounded bell shoulders slide easily past roots, rocks and other debris in the borehole, ensuring a smooth, easy installation.

No Fusion Required

Because SceptaCon's joints can be quickly joined by hand in seconds, crews don't need large, expensive fusion equipment or special training to create water-tight joints. In addition, SceptaCon can be assembled one pipe length at a time, then pulled underground, eliminating the need for long strings of pipe on the job.

Superior Performance

SceptaCon is made from durable schedule 40 PVC that's resistant to creasing, scoring or flattening when pulled past obstructions in the borehole, yet flexible enough to bend with underground twists and turns. SceptaCon remains round, unlike HDPE which can stretch and become oval.

Easy to Handle

SceptaCon is available in convenient 10' and 20' lengths that are light-weight, easy to handle and no problem to work with in all types of weather.

SceptaCon™ Raceway

| Length | Product Code |
|----------|--------------|
| 3" x 10' | 106330 |
| 3" x 20' | 106331 |
| 4" x 10' | 106340 |
| 4" x 20' | 106341 |
| 5" x 10' | 106350 |
| 5" x 20' | 106351 |
| 6" x 10' | 106360 |
| 6" x 20' | 106361 |

Kwikpath® Optical Fibre & Communication Cable Raceway Systems

Kwikpath comes together faster and easier than other raceway systems, thanks largely to a patented "snap-on" design that ensures fittings and raceway assemble and terminate easily with no special tools or handling equipment needed. The six locking tabs keep the fitting tightly connected with tremendous pull-out resistance. All without messy cementing or screws to tighten.

With its handy coil lengths delivered in dual purpose protective packaging/pull box, Kwikpath makes home-run systems easy and economical, letting you run cable from your telecommunications box directly to a workstation outlet with fewer couplings. Being able to cut to length on the job site ensures that you don't run short or have wasted conduit left over.

Whether in narrow shafts or tight plenums, its lightweight and fast, trouble-free installation make Kwikpath the number one choice for commercial and residential cable management.

Codes & Standards

- EIA/TIA
- CEC 2002/NBC
- NFPA
- Plenum FT6
- Riser FT4
- General Purpose FT1

Compliance to Building Regulations

Kwikpath meets all building regulations and is the only fully approved raceway and fitting combination on the market.

A Fitting Choice

The Kwikpath fitting system reduces the need for pulling long runs of raceway around awkward corners and tight spaces. And the industry first Y-Coupler reduces the number of pull boxes required in your system design.

Installation Friendly Packaging

200' coils are packaged individually in corrugated boxed cartons for ease of handling and dispensing. Designed into the cartons are packaging features that assist with moving and dispensing the product. By using the dispensing method, only the necessary product amount is withdrawn from the carton with the balance being contained and easily managed.

Reduces Costs Now and Over Long Term

Kwikpath is designed to allow easier cable installation and removal than other careway systems. Simply pull cables through the raceway – no more fishing new cables blindly through walls or ceilings. Kwikpath also reduces renovation costs by eliminating the need to remove existing cabling in retrofit applications.

Protects Cable Integrity and Performance

Kwikpath prevents cables from being damaged on edges or snags as they're pulled through the raceway. Once cables are installed, Kwikpath offers flame resisting properties and its protective shell prevents damage to cables when renovations cause tradesmen to enter or change the walls or ceilings.

Kwikpath Plenum Raceway

Kwikpath Plenum is made from a UL approved compound and like Kwikpath Riser, forms nonmetallic, flexible corrugated cable raceways. Vibrant orange in colour, Kwikpath Plenum meets the UL tests on flame propagation and smoke density with values well below the standard requirements. This heat/smoke-resistance makes it an ideal raceway to run Optical Fiber Cables (OFPN) and/or Communication Cables (CMP/CMP-OF) through plenums and other spaces used for environmental air. Kwikpath Plenum comes with sequential markers every foot.

Plenum Coil with Pull Tape

| Size | Length | Part Number | Product Code |
|--------|--------|-------------|--------------|
| 3/4" | 200' | KPP075TC | 124020 |
| 1" | 200' | KPP100TC | 124011 |
| 1-1/4" | 200' | KPP125TC | 124012 |
| 1-1/2" | 200' | KPP150TC | 124013 |
| 2" | 200' | KPP200TC | 124014 |

Also available without pull tape - minimum quantity required.

Plenum Reel with Pull Tape

| Size | Length | Part Number | Product Code |
|--------|--------|-------------|--------------|
| 3/4" | 1000' | KPP075TR | 124021 |
| 1" | 1000' | KPP100TR | 124015 |
| 1" | 2500' | KPP100TR48 | 124022 |
| 1" | 5000' | KPP100TR72 | 124023 |
| 1-1/4" | 1000' | KPP125TR | 124016 |
| 1-1/4" | 4000' | KPP125TR72 | 124024 |
| 1-1/2" | 750' | KPP150TR | 124017 |
| 2" | 500' | KPP200TR | 124018 |

Also available without pull tape - minimum quantity required.

Kwikpath Plenum Fittings

Kwikpath Plenum fittings are molded from approved material to be used with Kwikpath Plenum raceway meeting all Standards requirements.

Plenum Coupling

| Size | Part Number | Product Code |
|--------|-------------|--------------|
| 3/4" | KPPC075 | 132650 |
| 1" | KPPC100 | 132651 |

| 1-1/2" | KPTA150 | 132663 |
| 2" | KPTA200 | 132664 |

Kwikpath Riser Raceway

The backbone of the structured cabling system, Kwikpath Riser is a nonmetallic, flexible PVC corrugated product manufactured and tested specifically for riser applications. Easily identified by its mandarin orange color, it's available in convenient coil or reel packaging with sequential markers every foot.

Riser Coil with Pull Tape

| Size | Length | Part Number | Product Code |
|--------|--------|-------------|--------------|
| 3/4" | 200' | KPR075TC | 125026 |
| 1" | 200' | KPR100TC | 125011 |
| 1-1/4" | 200' | KPR125TC | 125012 |

Kwikpath Resi Fittings

Kwikpath Resi couplings and terminal adapters are available in 3/4" to 2" sizes and are also Kwikpath Riser fittings.

Refer to Kwikpath Riser Part Numbers.

Kwikpath Y-Coupler

The Y-Coupler is a fitting designed to allow contractors to branch off from any size (3/4" to 2") – new or existing – corrugated communication raceway. Manufactured in traditional Kwikpath vibrant orange, the Y-Coupler is ideal for use in high-rise residential and commercial building applications.

| Size | Part Number | Product Code |
|------------|-------------|--------------|
| 3/4" to 2" | KPPY075-200 | 132011 |

Seal End Plugs

For temporary and long-term closure of raceway ends, the insertion of sealing end plugs ensures the raceway conduit remains clean and ready for future needs.

| Size | Part Number | Product Code |
|--------|-------------|--------------|
| 3/4" | SEP075 | 132000 |
| 1" | SEP100 | 132001 |
| 1-1/4" | SEP125 | 132002 |
| 1-1/2" | SEP150 | 132003 |
| 2" | SEP200 | 132004 |

Riser / Resi Straps

Manufactured of the same material as Riser/RESI raceway, Kwikpath pipe straps allow for compliance with installation requirements providing for the proper support of Riser/RESI raceways.

| Size | Part Number | Product Code |
|--------|-------------|--------------|
| 3/4" | KPS075 | 132006 |
| 1" | KPS100 | 132007 |

About the IPEX Group of Companies

As leading suppliers of thermoplastic piping systems, the IPEX Group of Companies provides our customers with some of the world's largest and most comprehensive product lines. All IPEX products are backed by more than 50 years of experience. With state-of-the-art manufacturing facilities and distribution centers across North America, we have established a reputation for product innovation, quality, end-user focus and performance.

Markets served by IPEX group products are:

- Electrical systems
- Telecommunications and utility piping systems
- PVC, PVCO, CPVC, PP, ABS, PEX, FR-PVDF & PE pipe & ftgs (1/4" to 48")
- Industrial process piping systems
- Municipal pressure and gravity piping systems
- Plumbing and mechanical piping systems
- PE Electrofusion systems for gas and water
- Industrial, plumbing and electrical cements
- Irrigation systems

Products are manufactured by IPEX Electrical Inc.

Cor-Line®, FiberTel®, Kwikon®, Kwikpath®, Monobloc®, SceptaCon™, Sceptalight™ and SuperDuct® are trademarks of IPEX Branding Inc.
