

To whom it may concern

I understand that as part of the clearance process, certain aspects of our proposed advert need to be clarified, asserted as to their validity.

As the founding owner and managing director I wish to ensure that these points and their basis is clear.

1. "if it is plastic, and you build with it, we most likely have it!".

This is in reference to our very wide and extensive (but not exhaustive) range of products we offer that are plastic in origin. To help support this is our current catalogue of many differing and varied plastic products, which is also supplemented with additional products from our website, not to mention the 'special orders' form even more unusual products we do each year. (Appendix A).

2. "doing it since 1968"

This is the year I started as a sole trader supplying plastic materials for construction, of note in particular is the PVC roofing sheets. We subsequently formed this into a limited company in 1999.

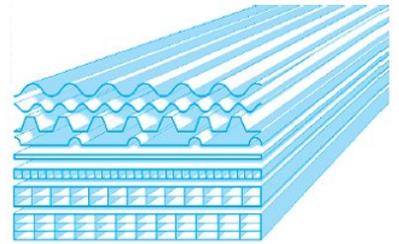

3. "Low Trade Prices"

We sell a range of products much lower than many others, although we are claiming to be low, but not necessarily the lowest. Some example are attached (Appendix B) so that you can independently check for yourself and were taken from websites on 25/09/2017.

4. "We deliver to your site nationwide, with our own vehicles, large products some just don't handle". (this is the amended statement after feedback)

This clearly has 3 elements to it and is evidenced in Appendix C

- a. The map shows the items due for delivery as of 20/09/2017 and as you can see this is covering most of the country. We do in fact cover the other regions, but at the time of this map there were currently no live orders in the other regions.
- b. This photo show one of our own vehicles that have to get a special oversized body made for it. These vehicles are much larger than a standard version, to be able to carry the very large (in dimension) products that we deliver. These have to be specially approved under type approval for use on the highway due to their size and design and are not common place.

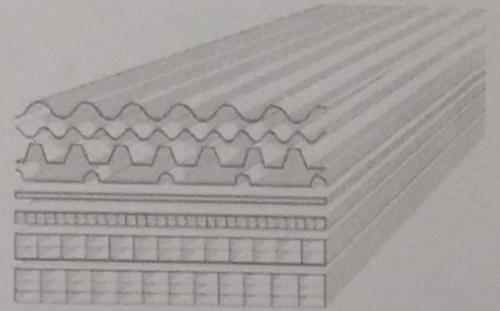

- c. This is a photo of a rack of roofing sheets, which reach up to 7M x 2.1M in size. So you understand how large this is I invite you to mark this area on the floor. You may however need to purchase an extra-large tape measure as standard tape measures are only 3m or 5m in length. Alternatively you will see a member of staff next to it so that you get an idea of the perspective and scale of the item in question, and therefore the logistical problems the cause.
- d. To help clarify the situation that “some don’t handle” the large well known material suppliers such as Screwfix, B&Q, Wickes, Selco, (and many more) only offer the smaller sheets which is primarily due to the logistics issues they pose. To help confirm this for you I have included a photograph of our catalogue page for the 10mm clear polycarbonate, where we offer 27 sizes including the extra-large lengths (6M), and extra-large widths (2M). For comparison I have included the photo of the Screwfix catalogue page where they offer the 10mm clear polycarbonate sheets in only 6 sizes with the biggest length being 4M (ours are 50% longer than this) and 1050mm wide (ours are about twice this width). I hope this helps to clarify that “some just don’t handle” these “large products”

I trust this satisfies any queries that you may have as to the validity of these statements.

C & A Building Plastics

Tel 01634 374444 www.cabp.co.uk

EST
1968

C & A were established in 1968 by the founding couple Charles and Audrey. Back then, plastics were a relatively new product for the construction industry but C & A had the vision that these were going to be important building blocks for the future. Coming from a carpentry background, it only made sense that these carpentry skills should be used in conjunction with the new emerging plastic products, and the focus was on canopies and carports. These canopies were made-to-measure, sold as either self-assembly kits or with a complete installation service provided. With their success, C & A became one of the largest distributors of PVC corrugated sheets in the UK! Then came the new kid in town — “Multiwall Polycarbonate”. Over the years, C & A have become one of the largest independent UK stock holders of polycarbonate sheeting and have continued to stay at the leading edge of this product range. We are often consulted by the manufacturers as to the product’s feasibility in the UK market before it goes into full production and is not uncommon for C & A to take part in initial production runs to help launch new product lines to the UK.

It’s never easy trying to stay at the front of the market. C & A missed the emergence of the UPVC fascia and soffit market in the 1990’s and were playing catch up for a while, therefore we now always encourage feedback and suggestions to help ensure that we do not miss these sorts of opportunities in future. Part of our continuous innovation has resulted in C & A designing our own range of glazing bars over the years, each with different attributes. For example, the Avon is 58mm wide to make for easier installation on wide fluted sheets, but the Hawk bar is 48mm wide and fits neatly on 2” timber rafters. We try to offer products to suit every project and this has resulted in the development of products that are fundamentally using the same concept, but offering varying designs to cater for most applications, to certainly try to please everyone.

C & A today is not too dissimilar to the founding beginnings - it is still a family firm, but we now have a lot more than 2 people! Plastics are still becoming ever more important to the building industry and we take pride in keeping at the cutting edge of this industry. With regular talks with industry experts, helping us to look at ways to improve products, service and value for money.

Recently, we have renewed our website to give a far better customer experience with order history lookup, plus many other benefits. The site now boasts more and ever growing product video collections, designed to help customers understand the products. These are just the improvements that are visible to you the customer, but rest assured we work just as hard behind the scenes too. Please ensure you keep your records up to date with us, so that you can be the first to hear all about our newest developments, products and special offers!

10mm TWINWALL POLYCARBONATE

C&A HOME BRAND

Offers Quality with affordability

C & A's extremely popular home brand sheeting is a high quality sheeting. Made from pure polycarbonate material and combined with a light weight structure to allow for roofing on a budget but have more rigidity than 4mm twinwall sheets. All the colours admit various levels of light to help to reduce glare. These sheets are the perfect choice for low cost installations of open sided structures, canopies and gazebos.

PEARLESCENT TRANSLUCENT

This Clear sheet offers no real shade and reduces light by a small amount and has subtle rib lines across the width of the sheet

This sheet's gentle bronzed tint gives a good level of shade, reducing the sun's glare for roofs exposed to direct sunlight.

Opal sheets transmit some translucent light, but not sight, so provides privacy for overlooked roofs. It also immediately reflects some of the sun's heat.

One of the best value Clear Multiwall sheets on the market.

This sheet has been made to have an increased rigidity and a high level of heat insulation. These qualities make this sheet ideal for wide span canopies and conservatories that are occasionally heated.

Being a handy 980mm wide sheet helps make for very easy and simple roof construction.

> Glazing bars and their roof timbers can be set exactly 1 metre apart—a simple bar centre measurement.

> Both long edges of the sheet are sealed, because they are unlikely to need cutting.

> Easy to handle as a smaller width.

> Less need to trim and cut to size, which means a quicker easier roof installation.

With **NEW** technology from one of the world's biggest brands these sheets provide increased rigidity and a level of heat insulation that was previously considered unobtainable from a 16mm sheet. These qualities make this sheet ideal for wide span canopies and conservatories that are occasionally heated.

This unique sheet is ideal for south-facing conservatories. Manufactured using a high quality dual-extrusion process resulting in two layers of polycarbonate. The metalised top layer provides shade and reflect solar heat, whilst the bottom Opal tinted layer provides evenly diffused light below and reflects artificial light.

980mm 

WIDTH	980mm (3' 2 ^{1/2} "

7.0M (22' 10")	MFQ7098CL	£128.79

With Insulation Values better than some 35mm sheets, this sheet is also extremely rigid allowing wider spans between glazing bars. It also has an anti-UV coating on BOTH sides of the sheet so it does not matter which way up the sheet is laid on the roof.

At a handy 980mm wide size these sheets make for very easy and simple roof construction.

> Glazing bars and their roof timbers can be set exactly 1 metre apart—a simple bar centre measurement.

> Both long edges of the sheet are sealed, because they are unlikely to need cutting.

> Less need to trim and cut to size, which means a quicker easier roof installation.

SOUND PROOFING

The multi-celled, braced construction of 40mm 'X' Form Sheets, not only gives the highest insulation, but also acts as an efficient barrier to intrusive exterior airborne noise, making it the ideal sheet to roof conservatories sited near Airports, Motorways and Industrial Sites.

The advanced cell structure of these 40mm polycarbonate sheets provides increased sheet rigidity and the highest Insulation Value of all our Multiwall Polycarbonate range.

THE RESULT — 40mm sheets are capable of spanning far wider distances between Glazing Bars, reducing both material costs and construction time. They also have the best sheet properties to help reduce Winter Fuel Costs, due to its superior insulation properties.

40mm STRUCTURED POLYCARBONATE

MULTIWALL POLYCARBONATE INFORMATION & KNOW-HOW

This information is a broad overview for a working knowledge on Multiwall sheeting, Each sheet will be slightly different due to its structure and resin composition and individual data sheets should be consulted if any doubt of the product's suitability for use.

Multiwall Polycarbonate sheeting is a versatile, easy to cut, lightweight, high-impact resistant, insulating and fire resistant product (most have an AA Fire Rating to BSI Standard 476 or its equivalent in the country of origin). Ideal for roofing or vertical wall cladding applications, and used in many other applications such as set design.

SHEET SPECIFICATIONS

3.1

"U" VALUE

INSULATION—The U Value is the measure of heat transfer through the sheet. The lower the number, the less heat is transferred—better insulation and lower fuel bills!

UV

PROTECTION

UV PROTECTION —The outer face of the sheet has a special coating to prevent degradation by natural UV sunlight. UV stabilised increases a product's life span.

1.5

KG/sq.m

WEIGHT—Shown per 1M²
As the weight of the sheet increases, generally the level of insulation will also increase.

MIN

SUNLIGHT

MIN

VISION

SUNLIGHT AND VISION — A summary of the sheet's amount of sunlight penetration and the amount of vision it allows through the sheet.

HEAT

SHIELD

PROTECTION

HEAT SHIELDING — Sheets with this symbol have a special coating designed to reduce heat, providing a cooler space below the sheet.

LIGHT TRANSMISSION —Manufacturer's measure the light that passes through their sheets . However, they use different tests in different laboratories and so real world comparison between them is difficult. This symbol is our own indicator as to the shading we feel they provide. Official figures can be obtained from the individual product data sheets.

Sheet Storage

> Polycarbonate sheets stored outside in the open must have sheet ends taped up to prevent insects, debris or moisture invading the cells.

> Stacks of polycarbonate sheets should be covered with a light proof sheet to prevent distortion by magnified sunlight.

Handling Sheets

> Polycarbonate sheets have temporary plastic cover films on their surface each side to protect them from marks or scratches.

> Plastic cover films also indicate which face is the upper side with the UV protection—this will normally be the film printed with writing.

> As it is almost impossible to otherwise tell the two sides apart, **DO NOT REMOVE** the cover film until the sheet is being laid on the roof.

Cutting Sheets

> Polycarbonate sheets can be easily trimmed using a fine bladed/ toothed handsaw. Power saws should be used with caution and are generally not recommended unless experienced in working with plastics.

> When cutting, support both sides of the cut and saw at a shallow angle with light pressure.

> For long cuts, overlay the approximate cut line with masking tape so an accurate line can be marked.

> Sheet debris from cutting can be removed from the cells with compressed air or a quality vacuum cleaner.

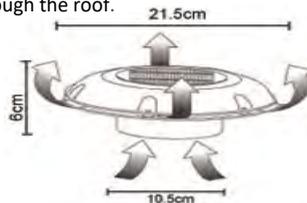

ROOF VENTILATION FOR POLYCARBONATE ROOFS

Without roof ventilation many conservatories, especially south-facing, can build up such high levels of solar heat that they can become uninhabitable. It is recommended that roofs in direct sunlight have a roof vent for every 6M² of roof area, and shaded roofs have a roof vent for every 12M² of roof area.

SOLAR POWERED VENTS

BASIC 100 MODEL	MODEL	PART	PRICE
	BASIC 100 Simple On/Off button only.	SV100	£49.95
	BOOST 300 Includes Directional fan button & Boost button to turn on without sunlight using an in-built rechargeable battery.	SV300	£69.10
	INSTALLATION KIT Includes Hole saw & Arbour Saw to cut a neat circular hole in the roof sheet & Clear Stixall.	SVKIT	£25.00

Ideal for conservatories: These fans work efficiently as they can be permanently switched on. This means that when the sun shines the fan will automatically extract hot air without the concern that a room will overheat (which could cause damage or worry that a window may have been left open accidentally). In full sunlight these vents will disperse 25M³ of hot air per hour through the roof.

UPVC ROOF VENT WINDOWS

White UPVC Frames With Chrome Worm Screw
W. 550mm x L. 750mm (1' 9^{1/2}" x 2' 5^{1/2}")

These complete kits are designed for retrofitting existing roofs or new installations.

A rectangular hole is cut out of the sheet, using the window frame as a template. Pre-welded Roof Vent Windows come ready to install.

Simply cut out the polycarbonate, using the templates supplied with the vent. The section of sheet that has been removed is used to glaze the window, ensuring a perfect match on the sheet every time.

Then using the sealant and gaskets supplied, fit to your existing roof sheet.

VALE GLAZING BAR

THE SIMPLE SOLUTION FOR ALL FLAT SHEET ROOFING

- ▶ C&A 's own design
- ▶ One-Size-Fits-All design
- ▶ Use with ALL flat sheet glazing roofing materials
- ▶ In WHITE or BROWN

The **VALE** Glazing Bar is a simple yet hugely popular product allowing users to join ANY glazing sheet material of ANY thickness, with a strong Aluminium Core and plastic capping. Initially designed for joining Glass panels on lean-to roofs, this bar has also proven very popular with the use of polycarbonate sheeting.

VALE GLAZING BARS

COMPRISING:

1x PVC Cover Cap, 1x Aluminium Core, 2x Primary Top Seals and 1x Base Seal

USE WITH ANY THICKNESS

The **VALE** Bar can accept any thickness sheet— all that is needed is a long enough screw! The **draw back** to this is care needs to be taken to ensure that the **VALE** Bar is not over-tightened which may cause damage to the glazing sheets. Once secured the PVC Cover Cap clips on ensuring that water can not enter the fixing channel or leak through the roof.

FIXING VALE BARS DOWN

Frames should be flat and stable, made of timber or metal and be at least 45mm wide. The Aluminium Core is screwed on top of the Base Seal every 400mm. At the lower (gutter) end of the roof, bars can overhang the Support Beam by 50mm.

RUBBER SEALS/ GASKETS

The **VALE** Bar is C&A's only Frame Supported Bar which uses rubber Gaskets. The bar consists of a Base Seal which is glued to the supporting beam/ timber, then the screwed down Aluminium Core which houses a further two Primary Seals.

ROOF EDGES/ END BARS

Due to the **VALE** Bar's ability to accept any thickness sheet, we do not supply an End Bar Infill as with our other Glazing Bar Systems. Instead, a packing piece (normally made of timber) is required on the open side of the end bar the same thickness as the glazing material to ensure the end bar is stable and rigid (Fig 1). If polycarbonate is being used the sheet can span across the entire bar, which can be fastened through the sheet itself (Fig 2).

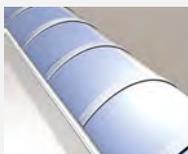

Figure 1. End Bar when using glass sheet

Figure 2. End Bar when using polycarbonate sheet

BARREL VAULTED ROOFS

The **VALE** bar is ideal for use in Barrel Vaulted roofs where the structural frame is shaped to a curve. This is because the bar can be pulled to the correct curvature using the fixing screws to a minimum 3 metre radius curve.

GLEN GLAZING BAR

ALL UPVC

The base section of our bars should be fixed every 400mm along its length. We recommend that only stainless steel screws should be used.

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 10mm Polycarbonate sheets

Our Budget Frame Supported Glazing Bar System for Multiwall Polycarbonate sheets, the GLEN Bar is specially designed to be a **LOW COST** choice.

Manufactured entirely of UPVC, the GLEN bar has an oversized end cap and includes drainage channels and a separate fixing cavity that other competitors' systems fail to provide.

Easy to assemble and install, this system push fits together and is simply secured to supporting timbers with screws.

GLEN Bars are 58mm wide providing greater sheet cutting tolerance.

Hawk GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 10mm, 16mm, 25mm Polycarbonate sheets

The Glazing Bar aimed for the Trade, the **HAWK Bar's design is simple yet strong with an Aluminium Base section.**

The **HAWK Bar** is easy to install and visually unobtrusive with a slim 48mm wide base section and low profile PVC top cap.

C&A's well proven design of drainage channels and sealed centre sections for leak-proof fixings within the Aluminium Core are great features of the **HAWK Bar**.

HAWK GLAZING BAR

AVON ALUMINIUM CORED

GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 16mm, 25mm, 35mm and 40mm Sheets
- ▶ In WHITE or BROWN

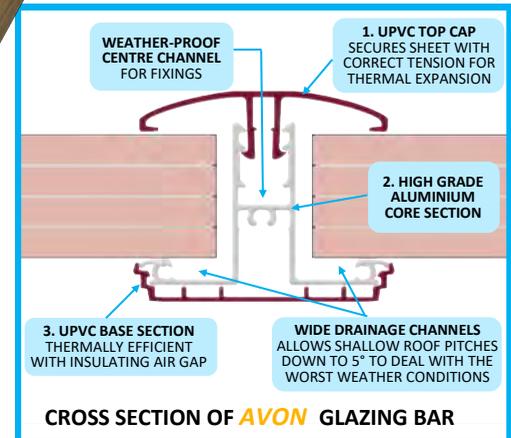

Our best Glazing Bar System for Frame Supported roofs. The Avon bar is a 3-piece construction:

1. **Easy-fit UPVC Top Cap** to secure sheet
2. **Strong High-grade Aluminium Core** with dedicated central channel for fixings.
3. **UPVC Base Section** to fully clad bar and add insulation.

The AVON Glazing Bar is thermally efficient due to the full UPVC capping that includes an insulating air gap in the base section. The bar also has wide side channels to drain moisture away, making this bar a top choice for roofing projects such as conservatories.

The AVON Bar is 58mm wide to ensure wide fluted sheets are correctly secured and are available with two different cores for a range of sheet acceptance:

16mm & 25mm and **35mm & 40mm** sheets.

PEAK¹⁰⁰ GLAZING BAR

C&A's proven own design
 Self Supporting up to 4M*
 For 16mm and 25mm
 Polycarbonate sheets

The **PEAK 100** Self-Supporting Glazing Bar System is capable of spanning an impressive 4 metres and is also one of C&A's most complete designs with full UPVC capping, plus additional trims, flashing and structural components.

PEAK 100 Bars have a load-bearing high quality Aluminium Core, allowing the length of mono-pitch roofs to extend up to approximately 4 metres (*see spanning table on Page 29 for details). Other Aluminium components of this system, such as the Wall Plate and Beams/ Posts, also aid to its strength and durability and are concealed behind UPVC capping, which not only improves thermal insulation but that also make this roofing system visually attractive. Using the **PEAK 130** Wall Plate, the bars are connected to the host building with Pivot Mounts, whilst fixed at the other end to the **PEAK 60** Beam/Post.

YORK GLAZING BAR

**SELF-SUPPORTS
UP TO 4 METRE SPANS***

- ▶ **C&A**'s own proven design
- ▶ Self Supporting up to 4M*
- ▶ For 16/25/35/40mm Polycarbonate sheets

Designed to satisfy a recent demand for thicker polycarbonate roof sheets that have the highest insulation standards.

These Self Supporting bars are strong enough to hold their own weight without any timbers underneath each bar, using the Pivot Mounts to attach the Glazing Bars to a Wall Plate fitted on to the host wall, and fix the other (gutter) end to the front beam.

YORK Glazing Bars are available up to 6M in length for better optimisation when cutting to size, these are not self supporting. The YORK system has been designed to cater for a wide variety of demands, from small span roofs where a lighter aluminium can be used to reduce cost, to large heavy duty aluminium for larger spans and thicker sheets.

> The System 7

Suitable for roofs with spans of up to 3M with 70mm high Aluminium Core.

> The System 8

Suitable for roofs with spans of up to 4M with 84mm high Aluminium Core.

*See spanning tables on Page 29.

SANCTUARY COMPONENTS

- ▶ Make customised configurations
- ▶ Buy spare/ replacement parts
- ▶ Gloss White or Plain Aluminium
You can leave it plain or paint it yourself

The Sanctuary System can be configured to suit your needs. This can include changing the glazing sheet options, extending to make larger widths, fixing back to back to make double pitched roofs (tie bars/wire may be required), pitching towards each other into a valley formation, or even used vertically in a fencing application.

SANCTUARY

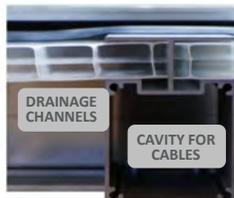

CANOPY SYSTEM

LEAN TO KIT

- ▶ Verandas
- ▶ Carports
- ▶ Walkways
- ▶ Smoking shelters
- ▶ And more!

C & A's GUTTER-INTEGRATED CANOPY

- ✓ Strong All-Aluminium framework construction.
- ✓ Durable 16mm HAZE Polycarbonate sheets giving weather protection and shade.
- ✓ Hidden integral gutter within beams and support posts that:
 - minimise the space required for the structure.
 - cut costs - no need for additional guttering.
 - reduce risk of damage - no pipes to knock.
- ✓ Beams can be used both as support structures and as box gutters against a wall.
- ✓ Cavities in the bar, to allow for electrics to be concealed inside.
- ✓ Bars have greater torsional strength than similar systems.
- ✓ Simple fixing system for speed and ease of installation.
- ✓ Wall plates that can be bolted together to create a ridge section, ideal for freestanding structures.
- ✓ Eaves Beams that can be bolted together to form valley gutters, ideal for freestanding structures.

Sanctuary kits come with 16mm HAZE polycarbonate sheets as standard.

All kits come complete with Bolt, Screws, Rivets, Drill bits, Installation guide and Rivet gun.

Installation Guide & Assembly Video Online

GLAZING BAR KNOW-HOW

Securing Frame-Supported Glazing Bars

GLÉN, HAWK & AVON Glazing Bars utilise Snap-down Top Caps. The Base Section should be screwed down every 600mm along the length through the sealed Centre Channel provided for fixings. This allows any water that may ingress under the Top Cap to run down the Drainage Channels on the sides of the bars.

The **GLÉN & HAWK** bars must have structural support under their entire length, whilst the **AVON** with stronger aluminium core can span across purlins that are no greater than 600mm (approx. 2ft) apart. This makes them ideal as a replacement to corrugated roofs as the structure should not need changing if originally built correct and in good order.

Once the Base Sections are fastened to the support structure, the sheets are placed in position, ensuring the expansion gaps are included and that a vertical rib of the sheet will be encapsulated by the bar. The Top Cap is then pushed down into the Base Section and a set of retaining hooks holds the top cap in place. This can be done with a firm hand or by gently tapping with a rubber mallet. To ensure a seal, the Top Cap must have pressure on both sides to stop it from toppling over. Therefore if there is no sheet on one side, then a Bar End Infill must be used in its place.

VALE Glazing Bars have a screw down Top Cap that is intended for the sealing (but not retaining) of glass units or solid polycarbonate. These consist of a rubber base gasket that need to be secured to the structural supports. The glazing is then placed on the Base Gasket and secured with a Retainer. The Aluminium Core Section with rubber seals is then placed along the joint and fastened through the middle into the supporting structure every 300mm with the appropriate length stainless steel screw.

This should only be tightened until the gaskets are under a small amount of compression. Once fastened the PVC Top Cover can be snapped onto the Aluminium Core, providing a thermal break and seal over the fixings. These Bars can also be fastened to pre-rolled steel box section for the fabrication of barrel vaults.

Timbers for Frame Supported Glazing Bars

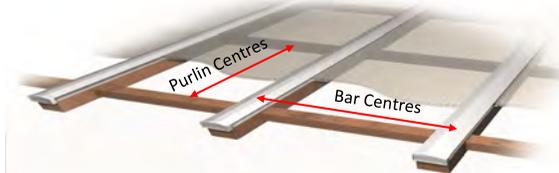

The size of the timbers will depend on many factors, including the weather conditions the roof is going to be subjected to and the quality of the timber used. **TABLE A** is a guide only. You must ensure that the support provided is suitable for your application.

TABLE A Timber rafter size guide (when at 1M centres)	LENGTH OF BAR ▼	SIZE OF TIMBER SUPPORT ▼	
		WIDTH	DEPTH
	2.0M (6' 6")	50mm (2")	100mm (4")
	3.0M (9' 10")	50mm (2")	125mm (5")
	4.0M (13' 1")	50mm (2")	150mm (6")
	5.0M (16' 4")	50mm (2")	200mm (8")

Sheet Width & Glazing Bar Spacing

The Polycarbonate sheet widths available (up to 2.1M) are much wider than they can span unsupported, but are available for better sheet optimisation when cutting. The distance between the timber supports for the sheets will depend on the sheet thickness, sheet structure, and the sheet's typical environment (this information can be found in the manufacturer's data sheets). **TABLE B** is a guide only for normal operating environments.

TABLE B Sheet spanning guide for Frame Supported Bars	SHEET THICKNESS ▶	6mm	10mm	16mm	25mm+
	MAX SPAN ▼				
	Without Purlins	600mm	700mm	1000mm	1200mm
	Purlins at 600mm	1000mm	1000mm	1500mm	1500mm

Cutting Bars & Securing Capping/ Beading

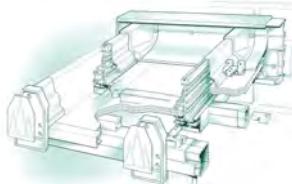

It is recommend to use hand tools when cutting our Glazing bars. The Aluminium and PVC sections can both be cut with a fine tooth hacksaw.

When installing secure the PVC glazing caps/ beads by hand wherever possible. A rubber mallet can be used, but should be used with caution as to not cause damage.

Self Supporting Bars

PEAK 100 Bars for 16mm &, 25mm polycarbonate sheets on spans of up to 4M.

Designed for mono-pitch roofs with spans up to 4M, this very well proven Glazing Bar system has PVC capping on both the inside and outside for an attractive appearance and thermal insulation. An Aluminium reinforced Wall Plate is used to secure the roof to the host building, whilst a PVC clad Aluminium **PEAK 60** Beam with optional posts support the roof at the lower end. All fixings are Stainless Steel and where these are exposed to view, the fixings have colour matched plastic heads.

YORK Bars for 16, 25, 35 & 40mm polycarbonate sheets on spans of up to 4M.

Designed for mono-pitched roofs, **YORK** Glazing Bars are available in two grades – The System 7 bar will carry 16, 25 and 40mm polycarbonate roof sheets up to spans of 3 metres, whilst the heavier gauge System 8 bar will carry 25, 35 and 40mm polycarbonate roof sheets up to spans of 4 metres. Designed to be quick to install with fewer components needed for each bar.

SANCTUARY Bars for 16mm polycarbonate sheets on spans up to 4M.

All-Aluminium construction, these bars are designed to be used with the dedicated Wall Plate and Front Beam of the system. These are then all riveted together to create a substantial framework.

TABLE C

Bar spanning guide for Self Supporting Bars

PROJECTION ▼	MAXIMUM BAR SPACING			
	YORK 7	YORK 8	PEAK 100	Sanctuary
2.0M	1200mm	1200mm	1200mm	1200mm
2.5M	1100mm	1100mm	1100mm	1200mm
3.0M	1000mm	1000mm	1000mm	1100mm
3.5M	N/A	900mm	900mm	1050mm
4.0M	N/A	700mm	700mm	1050mm

Bar Drainage Channels

C&A bar systems specifically for polycarbonate sheets have a sheet retention system that secures the roof sheets and prevents the ingress of water without restricting the essential thermal expansion. Apart from the **VALE** Bar, all our Glazing Bars do not need rubber seals/ gaskets, which can weather over time and restrict sheet expansion. In extreme weather conditions strong winds may force small amounts of rainwater into the joint between the sheet and the bar's Top Cap which is why these bars have drainage channels immediately behind the joint leading down to the gutter.

Pivot fixings for Self Supporting Bars

Because of the Drainage system designed in all of C&A's Glazing Bars, the **PEAK** and **YORK** Bars have dedicated Pivot Mounting systems to secure the bars without compromising the drainage.

The head of the Pivot Mount is slid up the bar and secured from underneath, ensuring the channels are unaffected. The base is fastened to the Wall Plate or front beam, through the designated holes, and the two parts are linked together with a stainless steel pin.

By being assembled round the pivoting action of the pin, the bars can be set at any angle up to 45°. It should be noted that low pitch roofs can suffer from standing water and the water blow back, increasing the chance of water penetration. It is recommended that roofs should try to be set with a minimum 15° pitch wherever possible to minimise this.

Stainless Steel Fixings

When fixing to Aluminium it is important that the correct type of fixing is chosen. Stainless Steel has high strength and is very resistant to corrosion making it an ideal choice for any screws, nuts, bolts or pins - C&A mostly supply these.

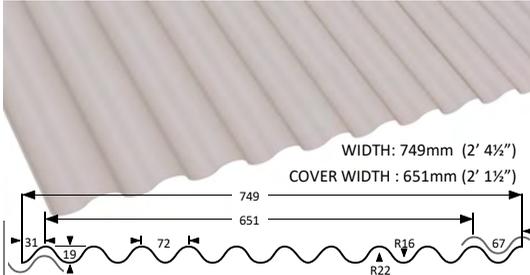

Untreated Steel will rust and weaken over time and although Zinc-plated Steel has a protective coating to help protect it from rusting, it unfortunately also reacts with Aluminium, causing weakness. Aluminium fixings do not suffer corrosion or reaction, but are not as strong as Stainless Steel.

CLEAR 3" CEMENT PROFILE PVC

3" profile sheeting is commonly used for a wide variety of roles in modern DIY. Uses include carports, greenhouses, chicken coops & garden covering - the list can go on.

Available in 2 thicknesses **0.8mm** Economy Grade and **1.3mm** Thickness Trade Grade. The thicker Trade Grade has increased strength and durability. This should allow the trade grade sheets to out live their thinner economy counterparts. All corrugated sheets are available from stock with a full range of accessories.

LENGTH	ECONOMY GRADE 0.8mm Thick		TRADE GRADE 1.3mm Thick	
	PART	PRICE	PART	PRICE
1.82M (6ft)	R56CL	£6.10	R106CL	£9.99

3" CEMENT PROFILE GRP FIBRE GLASS

Fibreglass roof sheets have great strength and durability. They are commonly used as roof lights in agricultural and commercial buildings. Class 3, 1.83kg Grade is designed for domestic or light commercial use. These sheets admit light but not sight and are easily trimmed to size with a fine-toothed saw. Higher grade sheeting is available for use on industrial or commercial areas.

N.B. Class 1 & Class 0 sheets can be supplied to order.

CLASS 3 (1.83Kg/M²)

LENGTH	PART	PRICE
1.82 (6ft)	RF336	£24.99
2.44 (8ft)	RF338	£32.99
3.04 (10ft)	RF3310	£40.99

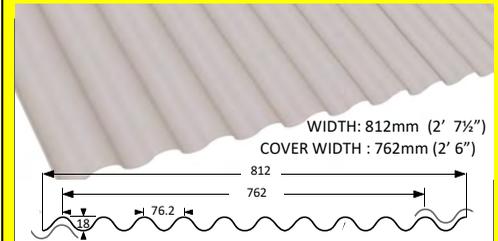

CLEAR 3" IRON PROFILE POLYCARBONATE

One of the first stockists in the UK

Manufactured using Polycarbonate Resin giving an extremely tough durable corrugated sheet. The ideal choice for residential, commercial, industrial and agricultural projects.

ADVANTAGES OVER PVC:

- Vastly stronger than standard PVC sheets
- UV Coated, Blocking up to 99% of harmful UV
- Withstands higher temperatures up to 130°C (PVC: 60°C)
- Improved lifespan compared to PVC sheets
- Easier to install than standard PVC sheets
- Wider cover width
- Profile matched to our Galvanised sheets - see page 38 for more information

ACCESSORIES & KNOW HOW

Know How

Recommended Purlin

Profile	Fixing Centre	Economy	Trade/Super Grade	Cover Width
3" Profile	180mm	610mm	914mm	651mm

How many fixing do I need?

Step 1 Divide the overall roof width by fixing centre (eg $4860\text{mm} / 180\text{mm} = 27$)

Step 2 Divide the roof length by the Purlin centres and add 1 (eg $2440\text{mm} / 610\text{mm} = 4 + 1 = 5$)

Step 3 Multiply these two numbers together ($27 \times 5 = 135$): Approx. number of fixings needed.

The actual amount may vary depending on overlaps and purlin centres

TYPE	PART	PRICE	PACKS OF 10
Zinc Plated Steel	RFS	£0.99	
Stainless Steel	RFX	£1.49	Inc spacers 

Do I Need Foam Fillers? Fillers should be used under the sheets at all support positions to prevent roof 'chatter' and to support the sheets when fixed.

3" Profile Foam Eaves Filler

Pack of 10

PROFILE	LENGTH	PART	PRICE
3" CEMENT	As sheet width	REF3	£4.95
3" IRON	As sheet width	RGEF3	£4.95

How to Cut Sheets:

Sheets should overhang the roof by 60mm to allow water run-off. When cutting, use an angle grinder with a metal slitting blade or a fine tooth saw at a shallow angle applying light pressure. **A good tip** when cutting, is to sandwich the sheet between other sheets with the part to be cut off protruding.

Pre-drill sheets before fixing. Holes for fixings must be drilled typically 4mm larger than the fixing diameter to allow for expansion. Drill sheets singularly with a masonry bit on a low speed and use light pressure. Support the sheet securely under each hole position when drilling. There should be at least 5 fixings across the width of each sheet which are to be fixed into the purlins and rafters.

PROFILE	LENGTH	PART	PRICE
1¼"	As sheet width	REFM	£3.85

SUPERBOX 70/18 GRECCA PROFILE SOLID COLOUR PVC CORRUGATED

1.1mm thick sheets are lightweight and surprisingly strong. Ideal for use in many areas.

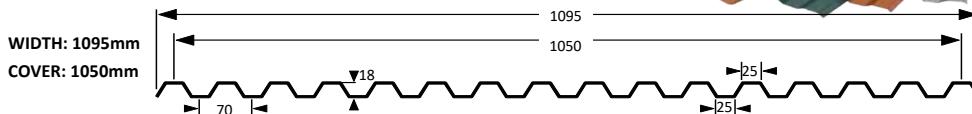

- Roofing
- Garden Pavilions
- Carports
- Sheds
- Chicken runs
- Bin sheds

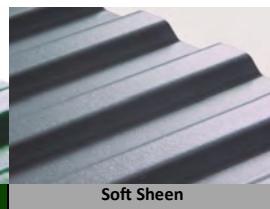

Each sheet provides a full metre width of coverage, resulting in less sheets to handle and fix and a faster project completion time.

N.B. These sheets are not suitable for over-roofing substrates, such as plywood or chipboard.

Dark colours are not suitable for use in locations where temperatures over 40°C can occur.

Box profile coloured sheets are a solid colour which means no light will pass through.

BIG 6 CORRUGATED SHEETS

This traditional high top corrugated sheet can be used for a wide variety of projects from:

- Porches
- Carports
- Roof lights
- Greenhouses
- Cloches and cold frames
- Side cladding
- Sheds
- Walkways

With its glass clear clarity this sheeting can provide up to 3 times more natural light than vertical glazing, creating a bright environment below. This sheeting is strong but light-weight making them easy to handle and install. The size of these sheets gives a larger cover area resulting in a faster installation time.

BIG 6 PROFILE GRP CLASS 3 1.83Kg/M²

Manufactured from Glass Reinforced Polyester resin (GRP) with unique light diffusing additives which scatter light passing through. These sheets provide effective daylight without hot spots or excessive glare. Can be used in single skin and double skin site assembled applications. Can also be used for insulating intermediate layers to provide improved insulation levels for compliance with current legislation. With excellent impact resistance and a highly durable UV resistant polyester film on the weather face which extends the durable working life of the sheet and helps to prevent the sheets from discolouring under normal conditions. Sheet life should exceed **30 years!**

Did You Know?

This type of sheeting is also available in over 900 different profiles, to match all current and most discontinued asbestos cement and metal roofing profiles. If you require a non standard profile, please contact us for a quote.

Available in various weights including 1.83kg/m², 2.44kg/m² & 3.06kg/m² to order

ONDULINE Classic®

Onduline is an extremely tough, lightweight, corrugated roofing and wall cladding material, manufactured utilising a base board produced from recycled cellulose fibres which is saturated with bitumen under intense pressure and heat. Onduline sheets are finished with a colour pigment and resin impregnation process which "stains" the colour into the sheet to provide excellent colour retention properties and enhanced U.V. resistance. Onduline Classic sheets are ideal for a wide range of applications reflecting the materials unrivalled versatility for use on agricultural, industrial, DIY and environmental projects.

- ✓ Professional grade roofing
- ✓ Proven durability
- ✓ Easy to handle

(for more details see the product PDF downloads@ www.cabp.co.uk)

Follow these simple steps to design and construct a durable, long lasting roof.

1 Select roof slope: 15° degrees and over (Gradient: 1 in 4 or higher)

2 To support sheet: Fix to purlins at 610mm (24") Centres (max).

3 To fix sheet: Sheet side lap: 170mm

Sheet side lap: 1 Corrugation

Nails per sheet: 20

1 Select roof slope: 10° to 15° to degrees (Gradient: 1 in 4 to 1 in 6)

2 To support sheet: Fix to purlins at 450mm (18") Centres (max).

3 To fix sheet: Sheet side lap: 200mm

Sheet side lap: 1 Corrugation

Nails per sheet: 25

1 Select roof slope: 5° to 10° degrees (Gradient: 1 in 6 to 1 in 10)

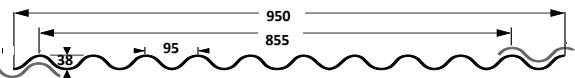

2 To support sheet: Fix to decked or close boarding roof.

3 To fix sheet: Sheet side lap: 300mm

Sheet side lap: 2 Corrugation

Nails per sheet: 20

Note: At the eaves allow a 50 to 70mm sheet overhang.

ONDUVILLA by Onduline

The **Onduvilla** range has been designed at Onduline's Italian design studio with a unique three tone colour shaded finish in Red and Green, creating warm natural colours normally only associated with expensive and heavy clay roofing products. This attractive colour finish combined with the Mediterranean bold roll profile results in an exciting and exclusive roof covering that bestows an attractive aesthetic roof finish to any structure.

The practical design aspects of the **Onduvilla** tile strip range have not been overlooked with an innovative tile lapping system utilising a grooved lap joint to provide enhanced weathering performance. The tiles form an attractive, durable and light-weight roof covering that can either be laid on a roof decking or close boarding. The system is ideal for a wide variety of applications. A full installation PDF guide can be downloaded from www.cabp.co.uk

GALVANISED STEEL SHEETS TRADITIONAL LOW COST SHEET

Galvanised steel sheets have been around for a very long time and are a very strong and secure roofing and cladding material. These are often used by emergency repair companies to temporarily secure properties before permanent repairs are made.

The steel sheet is coated in zinc, which is more reactive to oxygen than the iron and causes a white oxidation coating to take place. Once all the zinc has been used up in this type of reaction then the iron in the steel will react and this is when the sheets will rust. These sheets are primarily used as a temporary covering, but to increase their lifespan they should be coated / painted to provide a barrier between the steel and the oxygen, to prevent rusting.

NEW SOLVENT WASTE 32mm 40mm & 50mm

Stocked At Our
Gillingham Branch
National Delivery
Available

At **C&A** we are always adding products to our ever growing range and in this latest catalogue edition we

are excited to bring you 32mm 40mm & 50mm Solvent waste pipe and fittings.

This easy to assemble product range that requires only the most basic of tools gives you a bond in seconds. The end result is a perfect seal and professional finish to every job.

Solvent Cement waste systems give that solid connection avoiding the problem of moving pipes and joints that can come apart resulting in unwanted floods.

CAST IRON EFFECT GUTTER & PIPE

NEW!

CAST IRON EFFECT GUTTERING

This unique Cast Iron effect guttering system has been designed to provide you with the authentic look and feel of traditional gutters, using long-lasting uPVC. The mottled effect finish helps to maintain the look and feel of period properties while allowing you to benefit from the low maintenance, fitter-friendly materials available today.

Whilst there is a continuing emphasis on building energy efficient homes, the external design and detailing of many new build developments remains traditional. Cast iron style guttering offers specifiers and property developers the ideal solution for a stylish traditional look giving homeowners a low maintenance long lasting system. The range also allows builders and renovators of period properties the option to update with modern materials without losing the charm and appeal of authentic features.

The Freeflow rainwater system is co-extruded with a white interior to reduce heat absorption and expansion of gutters and features long-life advanced red compressible seals for ease of fitting and water-tight joints to ensure a leak-free performance.

This high quality product is also available in high capacity 116mm Full-Flo, Please contact us to request a quotation and lead times.

FASCIA & SOFFIT THE BASICS

Freefoam

CAP-OVER or FULL REPLACEMENT?

10mm Thick boards are for capping over existing timber boards

These must be in good condition and any mild damage or rot should be treated first with a very high grade wood preservative. Before capping, check the Roof Felt has a sufficient overhang to reach the top of the new UPVC board as well as the existing timber one. Over Felt Replacement sections should be fitted to cover the gap.

18mm Thick boards are for use on New builds and for full replacement on existing buildings

Timber sub-structures should first be examined for damage and rot, which should be treated with a high grade wood preservative or in severe cases cut out and new timber sections scarfed in.

FASCIA & SOFFIT FIXINGS

FIXINGS Use colour-matching plastic headed pins and nails to fix boards into place.

CENTRES Fixing Centers vary, but should never exceed 600mm for white boards, 300mm for black boards and 400mm for other colour and wood grain boards.

For more detailed information please visit the product page and click on the specifications tab on our website www.cabp.co.uk

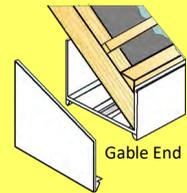

FURTHER INFORMATION ON FASCIA & SOFFIT

Roof Ventilation should be considered, either by using Vented Soffit boards, Vent Disks or Over Fascia Vents. *See pages 48, 49 and 58.*

Plastic headed pins and nails should be used to fix the boards in place fixing centers vary, but should not exceed 600mm for white boards-

we supply colour-matching heads *See page 58 for all colours.*

Gable end covers can be made by cutting a wide Capping board to size. Use a 400mm or 600mm board, and fix into position. *See page 48*

CLADDING THE BASICS

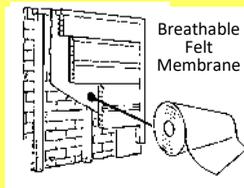

Freefoam

PREPARING WALLS FOR CLADDING

Cladding boards should be fixed horizontally over timber battens,

CENTRES set at a maximum of **400mm apart** upon the host wall.

To protect the battens, a breathable membrane must be lightly tacked over the entire area before the cladding is fitted on top.

For more detailed information please visit the product page and click on the specifications tab on our website www.cabp.co.uk

FIXING CLADDING BOARDS

Begin at the bottom of the host wall by fixing Starter Trims with Barb Nails through the back of the trim, ensuring the cladding board is located inside the Starter Trim so the fixings will be hidden by the overlap of boards.

At the sides and corners, fix Edge Trims/ Corner Trims as required. Fix any External Corners as you progress upwards, to allow for some movement when fitting the boards into place.

Allow a 5mm gap at each end of the board as they are designed to expand and contract with weather changes so it is important they are cut with some space allowance, which will be covered by the finishing trims.

When fitting the last board, it is likely its depth will need to be altered to fit into the available space, and depending on how much board is trimmed away it may be necessary to fix an additional batten behind to ensure it sits correctly. The last board must fit so it pushes up inside the trim's top edge and also sits correctly on the cladding board below.

COLOURED FASCIA & SOFFIT

The Ultimate universal, high speed, high quality easy install dry verge. Left and right handed units are no longer required as Easy Verge U is truly universal. The unique design is quick and easy to install on any tile type and has exceptional holding qualities. A tight secure fit is easily achieved ensuring roof tiles are held firmly in place and not vulnerable to wind dislodgement.

The unique starter unit includes a verge-end closure and a blanking cap to ensure a secure, infestation free and aesthetically pleasing finish. For use in both new build and refurbishment application. UV stable in a choice of Brown, Grey or Terracotta

WHITE GLOSS CLADDING BOARDS

Gloss White 100mm V-Groove & 150mm Shiplap Cladding

uPVC Cladding is the best alternative to traditional wood cladding. This maintenance free product is perfect for today's busy lifestyles. No more rubbing down and painting. Freefoam's durable cladding products provide not only a decorative but also a protective facing on building exteriors, and act as an additional thermal insulation agent. We offer standard 'V' Groove and traditional Shiplap styles in white. The popular Fortex® textured cladding in a choice of styles, sizes and colours *can be seen*

uPVC A GREAT CHOICE

Our uPVC products are the best option for replacing old wooden cladding or new installations. They will remain fresh, clean and hard wearing for years, with a **Lifetime Guarantee**.

EXTERIOR WALL CLADDING

FORTEX™

FreeFoam
**10 YEAR
GUARANTEE**

FORTEX is a range of innovative cladding products that merge the benefits of low-maintenance and long life PVC with an authentic look and feel of real timber. These abstract, textured wood-grain effect boards are available in a choice of colours.

- ✓ UV & weather resistant
- ✓ Easy to maintain & keep clean
- ✓ 10 Year Guarantee
- ✓ Attractive timber-effect finish in a range of shades to revitalize your home
- ✓ Help to protect your house from cracks, leaks and damp, increasing the insulation
- ✓ Reduce household energy bills & help lower CO² emissions for the environment.

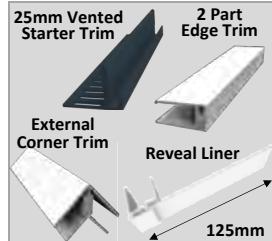

Typical Installation Sequence

1. Fix a Suitable Breather Membrane to surface.
2. Fix 25mm x 50mm vertical battens at 400mm. Start 200mm from the ground and allow 10mm gap at the top.
3. Fix starter/trims along the base and top of area to be clad.
4. Fix first part of 2 part Edge, Corner and Reveal trims as needed. Do not cut second parts of trims yet.
5. Fit first cladding plank into starter trims and screw top of cladding to batten. If needed join the ends of boards with Butt joints.
6. Interlock next cladding plank to the first plank and screw into batten. Repeat until area is cladded.
7. Finally cut the second part of 2 part trim to size and clip into place.

VENTILATION

Ventilation of the roof space is a requirement to ensure a healthy home. There are various ways to improve ventilation in the roof space. The easiest way for new installations is to use vented soffit boards, plain boards and a ventilation strip or over fascia vents. For existing installations the use of ventilation disks is the easiest method.

- Made from **DURABLE** Extruded Polystyrene.
- All the benefits of wood such as its **CUTS and JOINS** just like wood.
- None of the disadvantages of wood such as **SPLITTING, WARPING** or **WOODWORM**.
- There are **NO IMPERFECTIONS**.
- High **QUALITY** and **CONSISTENT** finish on every length due to foil finish.
- **MOISTURE RESISTANT** and can be used in areas of high humidity.
- **COMPETITIVELY** priced when compared to the equivalent quality and finish of natural wooden products.
- Paintable
- Light weight and easy to handle
- Made in the **UK**

FIXING KNOW HOW:

- All surfaces should be clean and dry.
- Mitre the moulding the same way as if it were wood for a perfect cut. Cuts the same as wood, so why treat it any differently?
- Most customers are unaware that this product does not normally require gluing. But may be fixed this way.

5mm SMALL INTERNAL DECORATIVE PVC

IDEAL FOR: Bathrooms, Food preparation areas, Clean Rooms & Easy to clean areas

WHITE PVC PANELS

POPULAR HYGIENE LINER

Chemically resistant with **Class 1 Fire Rating**. These 2440mm x 1220mm (8' x 4') panels are impervious to water and when installed correctly are compliant with statutory regulations for wall coverings in areas of food preparation and packaging. If the area you wish to apply the sheets to isn't smooth and flat then the 3mm should be used for it's increased rigidity.

APPROX DIMENSIONS		2mm Thick	
Millimetres	Inches	PART	PRICE

HIGHLY VERSATILE SOLID CLEAR POLYCARBONATE

IDEAL FOR:
 > Greenhouses.
 > Secondary Glazing.
 > Security Glazing.

+ Solid Polycarbonate is 200 times stronger than glass and can be used in many everyday applications. Common uses include re-glazing sheds, greenhouse glazing, secondary glazing, plus 1000's of other uses around home and work.

CLEAR SOLID POLYCARB

UV Protected both sides

This highly versatile product is totally glass clear, with an impact resistance 200 times greater than that of glass. All of our sheets have a UV coating on both sides to stop UV deterioration, ensure longer life and eliminate the chance of installing the wrong way around. These sheets are extremely easy to cut and drill making them an ideal DIY friendly glazing alternative.

SECONDARY GLAZING STRIP

2.44M (8ft) WHITE

Easy to install, 2.4M long strips will accept 2mm or 3mm panels. The strip is in 2 sections, the inner section is pushed around the edge of the sheeting and then screwed into the frame, then the top screw cover is pushed into place to hide the fixings.

PART	PRICE
FT24WH	£5.99

SECONDARY MAGNET GLAZING

5M (16' 4") Per Roll

Two self-adhesive strips, one part is magnetised, the other steel. Applied by sticking one part to the framework and the other to the sheeting. Once installed it will be magnetically held into position making it easy to remove for cleaning or access.

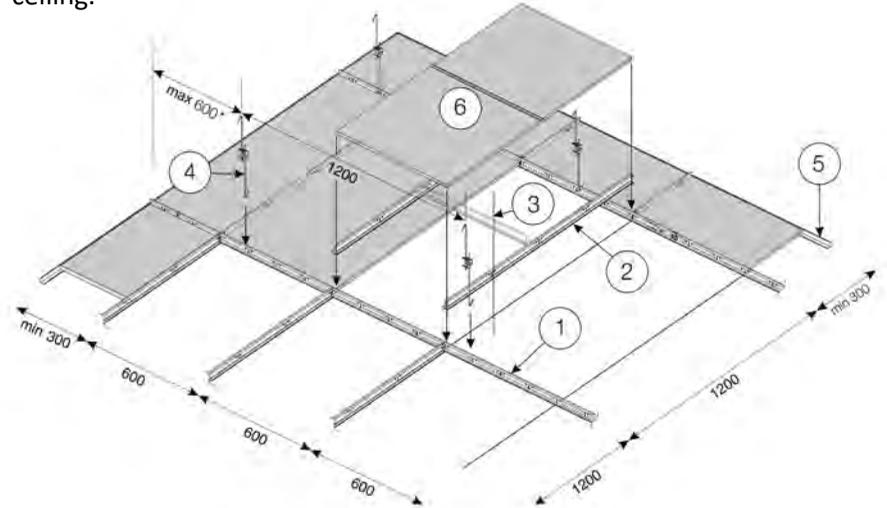

PART	PRICE
MG5	£23.90

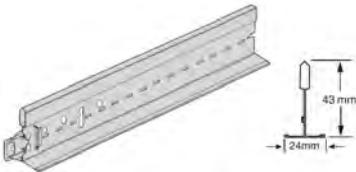

SUSPENDED CEILINGS

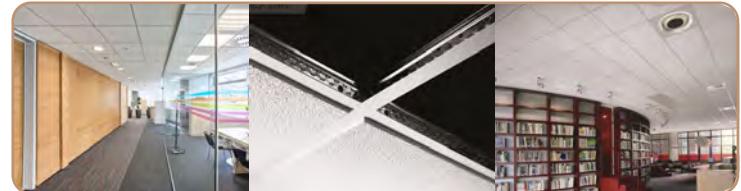

Armstrong suspended ceilings are designed for maximum effect with modest cost and fast installation times. The professional steel framing interlocks for rigidity and is fully Fire Rated for areas with public access. An easy to assemble system that gives you a neat and clean finish to any ceiling.

ITEM NO	DESCRIPTION	PART NO	PRICE
1	Main "T" 3.6M (11' 9")	CFT36	£6.84
2	Spacer "T" 1.2M (3' 11¼")	CFT12	£2.28
3	Spacer "T" 0.6M (1' 11 ½")	CFT06	£1.14
4	Suspension Wire 10M	CW10	£1.99
4	Suspension Wire 100M	CW100	£16.99
5	Wall Angle 3M (9' 10")	CWF3	£5.10

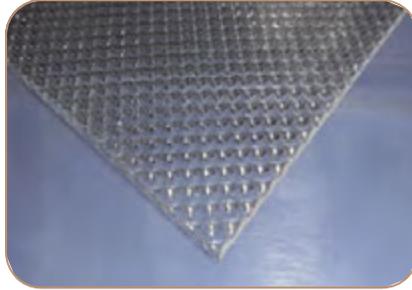

The white-faced, galvanised, steel interlocking frame is fast and easy to install. An angle section is fitted around the walls, then the main 'T' sections rest on these and reach across the room. The spacer 'T's are then fitted to create the desired tile space.

CEILING TILES Prismatic Fissured & Sandgrain

PRISMATIC Panels

Prismatic panels are translucent allowing light to pass through them into the space below, two versions are available in both the Oblong and Square sizes. Clear panels have a diamond pattern on the lower surface and transmit the most light, whilst the Opal panels diffuse the light to reduce shadows.

PANEL TYPE		595mm X 595mm		1195mm X 595mm	
DESCRIPTION	COLOUR	PART NO	PRICE	PART NO	PRICE

FISSURED	WHITE	CF66	£3.29	CF126	£5.99
DUNE SANDGRAIN	WHITE	CSF66	£5.49	N/A	N/A

All our ceiling tiles are designed to fit standard ceiling systems that accept 595mm x 595mm or 595mm x 1195mm tiles.

For our online guides and parts list calculator please see our website www.cabp.co.uk

HAVING TROUBLE?

We can help calculate the materials required

FISSURED Tiles

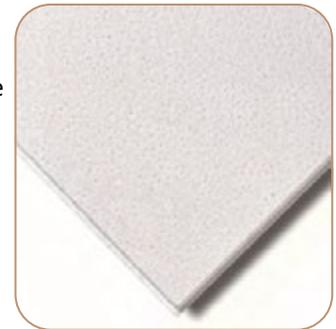

The non-directional FINE FISSURED surface is easy to install and effective for sound absorption. Ideal for use in circulation areas, meeting rooms, cinemas etc.

Fissured face tiles meet the EEA Euro class A2-S1 Fire Rating standard. With excellent sound and heat insulation properties, they have a pale surface that reflects 75% of ambient light and are easy to cut and fit.

DUNE SANDGRAIN Tiles

The non-directional Dune tile has a fine sand grain finish with a lipped edge so the tile sits below the framework rather than on it, to create a 3 dimensional ceiling. Ideal for use in schools and offices. Meeting the EEA Euro class A2-S1 Fire Rating standard, it has high sound and heat insulation properties with the further advantages of being highly resistant to humidity and water with a surface that reflects 85% of ambient light.

Combo Canopy

Easy-fit Door Canopies are ideal to cover doorways, balconies, walkways and waiting areas, to give just a few suggestions. Our canopies are sold as kits and are quick to install and only require a small amount of assembly.

The support brackets on each side are made from weather-proof engineering-grade plastic and each one requires only two wall fixings (supplied in kit). These canopies can be installed individually, or back-to-back and side-to-side to give cover over a larger area. We have a range of sizes available, with Grey, Off White or Black brackets, and a choice of Bronze, Opal or Clear Multiwall polycarbonate, or Solid Clear Polycarbonate glazing.

DOMES WITHOUT UPSTAND or KERB

Question & Answer:

Q: What is a roof dome?

A: Roof domes are basically windows in flat roofs.

Q: Where do I use a roof dome?

A: On any flat or low pitched roofs that do not exceed 15 degrees

Q: What size do I need?

A: This depends on the size of the hole you have or wish to make. See tables for guide.

A range of glazing only units designed specifically for refurbishment projects where the glazing only needs to be replaced. These units are supplied with a fixing kit including weathertight washers and cover plugs. Manufactured from Marlon FSX Longlife polycarbonate, these glazing units are up to 200 times stronger than glass. The high resistance to breakage and adverse weather conditions means Mardome Reflex is very safe and reliable.

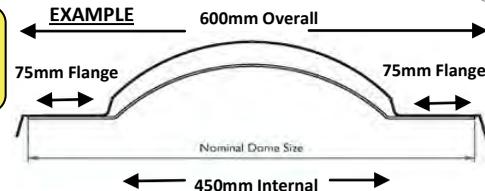

AVAILABLE COLOURS
BRONZE, OPAL & PRIVACY TEXTURED GLAZED DOMES

- Dome or pyramid option
- Can be mechanically fixed to existing kerbs
- Single, double and triple skin units available
- Available with standard 70mm or 100mm wide flange options to accommodate varying upstand sizes
- 20 Year Manufacturer's weather failure guarantee

Non-Stock Items

DOMES COMPLETE WITH UPSTANDS

Mardome Trade a standard specification dome. These units come complete with a host of features and benefits as standard to satisfy a range of projects and budgets.

Maximum daylight

- Side walls of the kerb are designed with a steep slope to allow a larger glazing unit to be fitted for maximum daylight area

Easy to install

- Delivered to site complete and ready to fit
- A large kerb foot radius makes for easier application of roof covering to the termination point without the need for timber fillets

Available Options:

- Electric Opening
- High Security
- Smoke Clearance
- Access Opening
- Other sizes also available

ADD ONS:

Vented Upgrade option for all Trade kerbs:

Simply pick the dome size you need then add this item to have your domes kerb include 2 Hit & Miss trickle vents. **Please Note:** This option can only be added at time of order

ClassicBond EPDM flat roofing system has been awarded the British Board of Agreement certificate, No. 11/4853, with a service life in excess of 35 years. The BBA carries out assessment, testing, approval and certification of products and systems for the construction industry against national requirements, internationally recognised standards

- ◆ Standard 1.2mm membrane is nearly 10% thicker than leading competitors
- ◆ Only EPDM with 50 year history
- ◆ Large sizes no or few joints
- ◆ Excellent resistance to extremes of temperature, UV & ageing
- ◆ High puncture resistance - will not tear, split or crack
- ◆ Quick & clean to install • Choice of 1.2mm or Premium 1.5mm thicknesses
- ◆ Maintenance free
- ◆ Environmentally friendly
- ◆ Perfect for refurbishments and new build projects

ClassicBond EPDM Membranes Professional grade EPDM membranes are all BBA approved Available in 3.0M, 4.5M, 6.0M, 7.6M & 9.1M widths and up to 30M long. A choice of 1.2mm & 1.5mm thick sheets.

Deck Adhesive is a high strength, low odour water based acrylic adhesive is specifically designed for use with ClassicBond EPDM roofing membrane and timber deck surfaces. Designed to be roller applied to flat roof surfaces. Available in 2.5L, 5L and 15L.

152mm Pressure Sensitive Overlayment Strip is used for butt jointing of membrane, seaming in metal edging, drip edges and fastening plates. This EPDM tape has a semi cured top surface with a Pressure Sensitive underside. Resists tearing, cracking and abrasion in all weather conditions. Must be used with ClassicBond EPDM Primer 150mm by 30M long rolls.

Sure Edge PVC Perimeter Trim is a high quality, durable roof edge trim ready to install straight out of the box. Providing a neat, simple and fast finishing detail for the edge of any flat roof. Supplied in 2.5m lengths and finished with internal and external corner trims, with a water seal and pre-drilled fixing holes Available Black or White

Gillingham
Kent ME8 0EZ

Registered in England under no 3895992
VAT Registration no. GB 248096048

To contact us by telephone, please ring 01634 374444

Please see the website for

- > Trade counters opening times
- > Updated Terms and Conditions
- > Delivery Information

You can always contact us using the Contact Us Form online or emailing cs@cabp.co.uk.

Privacy - C & A Supplies Ltd are committed to protecting your privacy, we will only use your information lawfully in accordance with the data protection act 1998. The information we collect about you enables us to service your needs, but in order to do so we may pass your contact details on to a third party for delivery purposes, and by placing an order with us you are consenting to this.

Your Order—You will have an opportunity to check and correct any errors on your order up until the point at which you submit and pay for your order. All orders made by you through cabp.co.uk are subject to acceptance by us. We may choose not to accept your order for any reason and will not be liable to you or to anyone else in those circumstances. After submitting an order to us we will send you an order acknowledgement email with your order number and details of the goods that you have ordered. Please note this email is an acknowledgement and is not an acceptance of your order. Stock availability information is not available on cabp.co.uk. If you order goods which are not available from stock, we will contact you by email or by telephone to discuss how you wish to proceed. You will have the option to wait until the goods are available from stock or cancel your order in accordance with our returns policy. Unless we have notified

you that we do not accept your order or you have cancelled it in accordance with our returns policy, we accept your order 7 days after the date of order or when the goods are delivered, whichever is earlier.

Liability—We shall not be liable to you where performance of any of our obligations to you is prevented, frustrated or impeded by reason of acts of God, war and other hostilities, civil commotion, strikes, accident, lock outs, trade disputes, acts or restraints of Government, imposition or restrictions of imports or exports or any other cause not within the reasonable control of C & A Supplies Ltd. If any part of these Terms and Conditions is found to be unenforceable as a matter of law, all other parts of these Terms and Conditions shall not be affected and shall remain in force. All sizes quoted are approximate. Where C & A Supplies Ltd agrees to provide a specifically designed plan, the Customer agrees to check the accuracy and suitability of the plan. C & A Supplies Ltd cannot advise on planning permission or building regulation issues. Asbestos may be found in some older properties. If you have any concerns about the presence of asbestos you should seek advice from a licensed asbestos company. The Customer is responsible for obtaining all necessary planning permission and local authority consents and permissions for any work to be carried out. Any plan drawn by C & A Supplies Ltd is, and remains, its property and may not be reproduced in whole or in part without its previous written consent. To the extent permitted by law, C & A Supplies Ltd accepts no liability for any loss, damage or injury arising as a consequence of the advice provided.

Law - These Terms and Conditions and any contract between us shall be governed by and construed in accordance with English law and the English Courts shall have jurisdiction over any disputes.

Prices – The prices of the product are clearly shown with and without VAT online and without VAT in our catalogue. Prices do not include delivery charges. On occasion, the prices payable in respect of goods advertised on cabp.co.uk may differ from those prices payable at the same time in C & A Supplies Ltd branches. We are under no obligation to honour any cabp.co.uk prices in the event that they differ from those in branch. Similarly, we are under no obligation to honour in-branch prices in the event that they differ from those on cabp.co.uk. Prices that are reduced for sales and promotions are only valid for the specified period and that branch offering those items. We reserve the right to adjust prices, offers, goods and specifications of goods on cabp.co.uk at our discretion at any time before (but not after) we accept your order. Although we endeavour to ensure that all pricing information on cabp.co.uk is accurate, occasionally an error may

occur and goods may be mispriced. If we discover a pricing error we will, at our discretion, either contact you or ask you whether you wish to continue with the order at the correct price or notify you that we have cancelled your order. We will not be obliged to supply goods at the incorrect price.

Discounts – May be withdrawn at any time and are subject to change and are given at C & A Supplies Ltd.'s discretion.

Product availability - C&A reserves the right to alter published prices and specifications and withdraw products and services without notice. We will not be held responsible for any costs incurred by a customer when a price, specification, product or service is withdrawn. Where a customer has placed an order based on an obsolete price, specification or service, C&A will inform the customer and wait for further instruction. If payment has already been made for such goods or service, the customer shall be entitled to a full refund for all items that are not then required.

Property – Property of the goods shall not pass to the customer until payment is made in full. If the customer defaults in punctual payment of any sum due we shall be entitled to repossess any goods that remain our property.

Payment - The total cost of your order is the price of the goods and delivery charges as set out in our delivery information. Payment can be made by most major credit or debit cards, PayPal, bank transfer or cash. You must confirm that the credit/debit card being used is yours, all credit/debit card holders are subject to validation checks and authorisation by the card issuer. If the issuer of your card refuses to authorise payment we will not accept your order and we will not be liable for any delay or non-delivery and we are not obliged to inform you of the reason for the refusal. We are not responsible for your card issuer or bank charging you as a result of our processing of your credit/ debit card payment in accordance with your order. PayPal payment orders will only be accepted for orders that are for delivery and are subject to PayPal's confirmation of funds. This can in some circumstances take several days. Bank transfers are manually checked and verified, and although you can have instant transfers this does not mean that we are able to instantly check and validate the payment. This process can take a few minutes or a couple of days and no agent should be sent to collect an order until after you receive your order acknowledgment. Cash will be checked to verify its legitimacy and legality, cash will not be accepted if it is not legal tender or if we have any suspicion as to its legitimacy.

CONTINUED ON PAGE 91

TERMS & CONDITIONS

CONTINUED FROM PAGE 90

Colour – Due to batch production C&A cannot guarantee a colour match between materials ordered and supplied on separate orders or products of different dimensions.

Fitness of goods - No goods are sold as fit for any particular purpose. All hints, tips and work practice advice published by C&A in its catalogue, web site and advertising are given without detailed knowledge of the customer's application and cannot be relied upon. Customers must satisfy themselves that materials ordered meet the building regulations and codes relevant to the purpose for the intended use.

Faulty Products – If the product you purchase is faulty we may offer a repair, exchange or refund as appropriate in accordance with your consumer rights. Please call us on 0845 165 165 8 or emailing cs@cabp.co.uk

Delivery - The products that C & A deliver are often large in dimension, and so careful routing of specialist vehicles is often undertaken to perform the deliveries. This often means that accurate dates are not available at the time of placing the order and often an estimated timeframe is given. It is suggested that in extreme circumstances you allow up to 30 days. For this reason, delivery time is not considered of essence of the contract unless specifically set out in writing with special delivery charges and acceptance. C & A will do all that it reasonably can to meet the date given for delivery. In the case of unforeseen circumstances beyond the reasonable control of C & A, we cannot be held responsible. In such circumstances C & A will contact the Customer and agree an alternative date. The Customer will also do all that he/she reasonably can to enable the delivery to take place on the given date. In the case of unforeseen circumstances beyond the reasonable control of the Customer they must contact C & A and agree an alternative date. The delivery service is for delivery to the sites kerb side only, C & A are not responsible for placement into gardens, and building sites etc. and the customer should ensure that suitable labour is provided for this at the time of delivery. As soon as C & A has delivered the goods, the Customer will be responsible for their safekeeping and C & A will not be responsible for any damage or fault arising from incorrect storage. If the Customer delays a delivery, C & A's responsibility for everything other than damage due to its negligence will end on the date C & A agreed to deliver the order as set out in the contract. Ownership of the goods shall remain with C & A and shall not pass to the Customer until the agreed price for them, together with all other sums due from the Customer to C & A, have been paid in full.

Damaged or missing items collected - It is the customer's

responsibility when collecting goods from our premises to check they have all the items ordered and that they are in good condition. C&A cannot accept responsibility for damage or shortages once collected goods have left our premises. Where a customer has arranged for a third party to collect goods on their behalf, the same conditions apply as it is your responsibility that your agent undertakes this.

Damaged or missing items delivered - You must contact us within 72 hours with details of the damage, we may ask you to send photos to better understand which items are damaged. Notification after this time will result in claims being rejected. Deliveries by our own transport must be checked with our driver at the time of delivery and any damage must be clearly noted on the paperwork before you sign. Deliveries by carrier that have arrived damaged should not be accepted unless the carrier accepts the damage and can provide written confirmation to that effect. Signing "unchecked" or similar is agreeing to accept the delivery damaged or otherwise. C&A will not be liable for any costs or compensation for missing or incorrectly delivered items.

Returns Policy - C & A Building Plastics are proud of the products we supply and want our customers to be happy with the products they purchase. To this end we offer a 14 calendar day returns period where we will accept return of our standard products that are in resalable condition, even if it's just because you would prefer a different colour, you can return to either branch. This is for standard products and excludes nonstandard products that are customised to your requirements; for examples domes are manufactured to your requirements from specific specification criteria and so are custom made to your requirements. The entire product that you purchased must be returned, we cannot accept a component of the product on its own. Simply contact us within 14 days and inform us in writing that you wish to return the product and then return the item with a copy of your acknowledgment / invoice that includes the products being returned within 30 days from your request to return. Upon return we will inspect the items to ensure they are in acceptable condition. Those that are damaged, dirty or otherwise deemed to be in an unsalable condition will not be accepted for refund. If the returned items are part of an order with multiple items on it and not all items are returned then the delivery charge will not be refunded as it will be associated with the items not returned. If the entire order is returned then the standard delivery charge that would be applicable to the items will be refunded. The additional value for premium service will not be refunded for example express services. It is your responsibility to return the items to us, you are responsible for their safe transit and the costs incurred in their transportation. If you are returning the product to a branch we must be notified which branch this is when you notify us in writing.

If you are unable to return the items yourself, we can arrange for the return transportation. Due to the various different products we supply and their varying degrees of difficulty in transportation we are unable to give the exact costs here for the products return, however we will estimate these costs at the time of applying for the return of the items and these do not normally exceed £100. Delivery charges are normally subsidised by the products and do not reflect the true economic costs involved in their dispatch, to this extent, the cost of return deliveries are therefore not subsidised and can be higher than those charged for dispatch. Goods can only be collected from the site at which we made delivery. We will attempt to make the collection within 30 days from the agreement. The driver is not responsible for checking the condition of the materials. Checking the returned materials takes place when received back at the depot and their condition is assessed. If your order qualified for a bulk discount then it is deemed that all the items within this order were discounted proportionally to achieve this discount, your returned item will be refunded at the value that you paid for them. For example an order of £750 with a bulk discount of 10% has a product returned of the value of £100 list price, proportionally this item was discounted by £10 to achieve the bulk discount and so the price paid for the item was in fact £90. Refunds are made in the same format as the payment was made unless otherwise specifically agreed and will be made within 14 days of receiving the returned items.

Legislation - These terms and conditions are in accordance with current business and consumer legislation and do not affect your statutory rights, you can find more from the Citizen's Advice Bureau on the following link: http://www.adviceguide.org.uk/england/consumer_e.htm

OUR DELIVERY SERVICE

The sheer size of many of the products dictates that special care with handling and transportation is required. For these, C & A deliver most products directly to the customer using our custom-built vehicles operated by our own employees. The route planning for these vehicles is dependent on the areas from which new orders are received and is calculated on a daily basis, but we aim to visit all areas of the UK at least once every 10 working days. Please note that whilst we try to maintain a 10 day rota, there are many factors beyond our control that prevent us offering any guarantee of any delivery dates

(Floods, Snow, Road Closures etc) We will always try our best to make every delivery but should we ever have to abort then we will always contact you. When your order has been dispatched we will send an email and a text message. Please note this message is only to advise you that your order is on its way. We always ring the customers the day before delivery, this is normally the driver and they will provide you with an expected delivery time scale. If there are any unforeseen delays whilst on route we will contact you with an update.

SMALL ITEMS—Orders for small items will normally be sent by carrier or post as this maybe the fastest method of delivery, customers will need to sign for these deliveries. Customers with very specific build dates are advised to order at least 28 days in advance and should be prepared to store the materials on site. Urgent orders can sometimes be sent by carrier on a next day delivery service but you will need to contact us directly to ascertain the feasibility of the products you require and the cost of doing so.

DIRECT TO CUSTOMER— Some products are delivered “Direct-To-Customer” as they are shipped from the manufacturer. These deliveries are normally an AM or PM delivery time and date and we will always advise the customer of this as soon as we have the information. This is normally the day before the delivery.

SPECIAL / URGENT GOODS— It may be possible to load special or urgent deliveries onto a C & A vehicle that is scheduled to cover a different area or arrange for another driver to make the special delivery. Customers wishing to enquire about Special / Urgent delivery should contact us for availability and cost, but should bear in mind that vehicle running costs are £275 a day and our delivery schedules deal with a volume of customers all over the UK, therefore we cannot delay a vehicle that already has a full load of orders and which is ready to depart. For both C&A transportation and carrier, remote areas of the UK may incur a higher delivery cost than those listed, in which case the customer will be advised of the delivery cost before order acceptance.

STANDARD DELIVERY CHARGES

White & Grey Zones

Here at C & A Building Plastics we supply a wide range of materials of all different shapes and sizes, many of which are very large and require extra-large vehicles for the transportation. We only charge one set delivery charge regardless to the quantity or mix of materials ordered, and these delivery charges often do not cover the cost involved. We welcome customers who wish to organise their own transport to collect materials; but we understand this is not possible for everyone and so offer this delivery service.

These charges are for deliver to the site kerb side, or nearest permitted available parking position, on our standard delivery service (you need to ensure that suitable labour is available on site for the handling of the materials purchased.). Additional service are available such as two man delivery, express delivery, specific date delivery, but these are subject to availability and are by quotation only, if you are interested in these services you should call 01634 374444 for a quote.

With the wide variety of products, some materials are more difficult to transport than others; so we have colour coded the products to help represent this and charge different delivery prices accordingly. Below is our delivery charge table detailing the standard delivery prices:

DELIVERY CHARGE GRID for Standard Delivery		
Product Colour Code:		Price:
S	GREEN	£4.95
M	TURQUOISE	£9.95
M/L	YELLOW	£19.95
L	PURPLE	£24.95
X/L	BROWN	£39.95

Black Zones: Due to the locations of these zones and the specific logistic issues they represent, delivery charges and timescales are by quotation only. Please call us on 01634 374444 for a personalised quote.

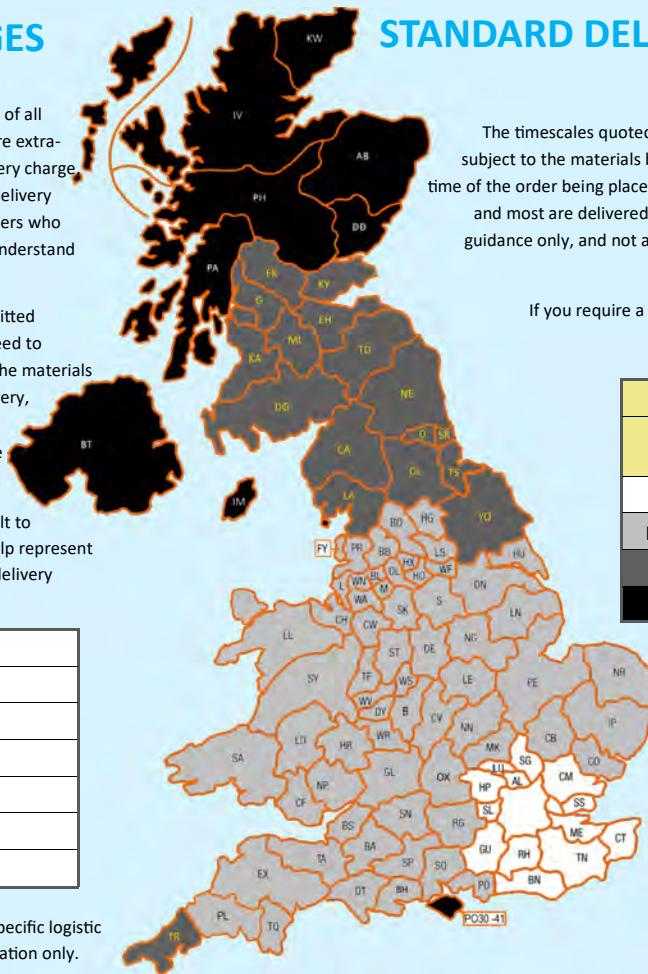

STANDARD DELIVERY TIMESCALES

White & Grey Zones

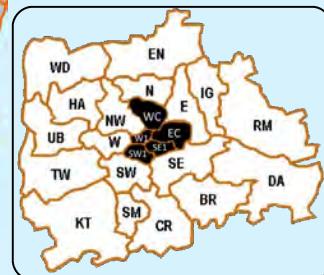

The timescales quoted here are for our standard delivery and are subject to the materials being in stock at the delivering depot at the time of the order being placed. These are what 95% are delivered within and most are delivered within only a few days. They are meant for guidance only, and not as a guarantee, you will be notified they day before delivery takes place.

If you require a specific date delivery you should call us on: 01634 374444 for a quote.

STANDARD DELIVERY TIMESCALE	
Postcode	Working days normally

LONDON & SURROUNDING

HOW TO ORDER

> ONLINE – Go to www.cabp.co.uk

Our Online Shop is open all day, everyday, 365 days of the year. You will find all our products listed online, plus any special offers we currently have running. With our fast and secure servers you can be confident that all of your information is securely encrypted. Our automated shopping cart calculates your bulk order discounts for you so getting quotes and placing orders are fast and easy.

> BY PHONE – Call 0845 165 165 8 - 01634 374444 - 0207 474 0474

Our sales team are on hand to provide advice on materials and to put together quotes and orders for you based on your requirements. With payment by card, orders will be processed immediately with a detailed Order Acknowledgement sent immediately for confirmation. For cheque payment, your order will be prepared and processed as soon as the cheque has cleared. **By phone our sales team are available 7:30am – 4:40pm Mon – Fri, 8.30am – 12 noon Saturdays.**

> BY POST – C & A Building Plastics, Courteney Road Gillingham Kent ME8 0EZ or Bidder Street, 4ST

Use the Order Form at the back of this catalogue should you wish to order by post. If ordering on your own stationery, please list your requirements in the following order; PRODUCT/ PART No/ UNIT PRICE /QUANTITY/ TOTAL COST. Total the cost of your materials, subtract any bulk order discount applicable, add the delivery cost, and then add VAT. Send your order with payment in full by cheque, made out to *C&A Supplies Ltd*.

> BY FAX – Fax 0845 165 165 9 - 01634 366644 - 0207 474 5055

Please see the “By Post” section for details of how to list your requirements and calculate costs and discounts. Where payment is made by card, orders will be processed immediately. Where payment is made by cheque, the order will be prepared and processed as soon as payment is received.

> OVER THE SALES COUNTER— See website for branch opening times www.cabp.co.uk

Cash and card payments are accepted we do not accept cheques for trade counter orders. **PLEASE NOTE:** Payment over the phone for collection and cash on delivery facilities are NOT available. Ledger accounts will be considered for regular customers.

DISCOUNTS

If you are working on any form of building project then you want to save as much money as you can. At **C&A** we recognise that money does not grow on trees and to keep costs as low as possible we have a simple discount structure that gives generous discounts based on your order value.

Goods Value
DISCOUNT

Excluding VAT

Over **£1000.00** **10%**

*example :- £1000 nett will get
£100 discount*

TRANSPORT & STORAGE

All plastic building materials should be kept flat during transport and storage. If stacked, materials must then be covered with a light-proof sheet to prevent direct sunlight overheating the interior of the stack, with all products flat and level without excessive weight on the bottom layers.

C&A Building Plastics FEATURED PRODUCTS!
