Heating

Heating products are very important for successfully keeping reptiles in captivity as these animals require certain temperatures. It is not only important that it is warm but it is also important which place inside the terrarium is warm. As reptiles are poikilothermal, they need different areas in the terrarium where they can heat themselves up or can cool down.

When choosing a heating product you should consider offering the animals a point inside the terrarium where the temperature is above the ambient temperature. The existence of a cooler hideaway which the reptile can use to regulate its body temperature, is also important.

Heating Cables

Lucky Reptile HEAT Thermo Loop

Lucky Reptile HEAT Thermo Loops are thin, two wire silicon heater cables with euro plug. They are available in a large number of sizes and wattages. The thin cable is easy to install and is excellent for placement below the terrarium.

Thermo Loop 16W, 3m	20081
Thermo Loop 20 W, 2,5m	20082
Thermo Loop 30W, 4m	20084
Thermo Loop 40W, 9m	20085
Thermo Loop 50W, 7m	20086
Thermo Loop 80W, 7m	20087
Thermo Loop 100W, 17m	20088

Lucky Reptile Thermo Cable

The Lucky Reptile Thermo Cable is a single wired heating silicon cable with attractive pricing. The cable is relatively thick, but an excellent heater. The cable can be easily installed inside the vivarium and may also be covered with appropriate substrate and cage furniture. ONLY with Euro plug!

Thermo Cable 15W, 3,8m	61401
Thermo Cable 25W, 4,8m	61402
Thermo Cable 50W, 6,5m	61403
Thermo Cable 80 W, 6,5m	61404
Thermo Cable 100 W, 10m	61405

Lucky Reptile HEAT Thermo Cable Safe

The Lucky Reptile HEAT Thermo Cable Safe is a single wire silicon heater cable with transformer. The voltage is only 12V making it much safer than common heater cables with 230 Volts, where a damage to the cable can cause a life endangering shock. It is excellent for use in terrariums and can also be used under water, e.g. in turtle tanks and aquariums. ONLY with Euro plug!

Thermo Cable Safe 10 W, 3,5m	20071
Thermo Cable Safe 15W, 3,5m	20072
Thermo Cable Safe 20W, 3,5m	20073

Heat Mats

Lucky Reptile Thermo Mat

Like ceramic heat emitters the Lucky Reptile Thermo Mat emits infrared radiation which heats objects and also the animals from within.

The heat mats have two advantages for the animals; first they heat objects, e.g. stones and create warm spots for the animals to heat up and second they heat the animals directly. The infrared radiation of the heat mat penetrates the skin of the animals and creates a cosy warmth. Your animals will love to be in the effective range of your heat mat.

Thanks to the infrared radiation the Lucky Reptile Thermo Mat only has little influence on the air temperature inside your terrarium. These heat mats create warm spots and allow to achieve heat gradients inside the terrarium.

As our Thermo Mats emit infrared radiation, you can also attach them to the side walls or the ceiling of the terrarium and not only the bottom. Installation is easy thanks to the adhesive tape on the back of the heat mat. The special design of the Thermo Mat allows for optimal heat transfer and reduces the risk of overheating and cracking the terrarium bottom which is a common problem with normal heat mats.

Thermo Mat 3W	10x12,5 cm	61300
Thermo Mat 7W	15x28 cm	61301
Thermo Mat 14W	28x28 cm	61302
Thermo Mat 20W	42x28 cm	61303
Thermo Mat 28W	53x28 cm	61304
Thermo Mat 35W	65x28 cm	61305
Thermo Mat 45W	80x28 cm	61306
Thermo Mat 62W	115x28 cm	61307

Lucky Reptile Thermo Mat Strip

The Thermo Mat Strips are perfect for rack systems or small vivariums. They function like the regular Thermo Mat but are just a narrow stripe.

Thermo Mat Strip 10W	42x15 cm	61321
Thermo Mat Strip 15W	58x15 cm	61322
Thermo Mat Strip 22W	88x15 cm	61323
Thermo Mat Strip 30W	120x15 cm	61324

Tympanocryptis tetraplophora

Lucky Reptile Thermo Mat PRO

These heat mats fulfill all wishes of reptile keepers. They are waterproof and have an extra insulation for protection, making the Thermo Mat PRO is excellent for use in wet surroundings.

A special heat conductor ensures an even surface heat. In addition the heat mat has a special overheat protector which switches off the heat mat in case of too high temperatures (e.g. local overheating because of unsuitable substrate). This minimizes the danger of fire and the risk of damage to the terrarium floor. However, it is essential to use the right substrate and have a correct installation, as the heat mat cannot heat properly otherwise.

The oval shape prevents substrate from getting under the heat mat.

Thermo MAT PRO 10W 25x15 cm	61201
Thermo MAT PRO 20W approx. 35x20 cm	61202
Thermo MAT PRO 30W approx. 50x30 cm	61203

Thermo MAT PRO 40W "Australia" approx. 60x40 cm	61204AU

Ceramic Heat Emitters

Lucky Reptile Dark Spot Ceramic Heat Emitter

The Lucky Reptile Dark Spot emit infrared radiation which heat animals and cage furniture from within. These ceramic heat emitters are excellent for creating hot spots in parts of the terrarium. Like in nature the heat is coming from the ceiling and creates natural conditions for the animals inside the terrarium. For this reason we also recommend to combine the Dark Spot heat emitters with normal spot lamps, as animals normally associate light with heat.

Dark Spot ceramic heat emitters can be used in standard E27 porcelain sockets (e.g. Lucky Reptile Thermo Socket) and last up to 8000 hours. Ceramic heat emitters are ideal for heating larger terrariums thanks to their economic efficiency and their flexible application. It is recommended to maintain a minimum distance of 40cm to the animals.

As a special feature this heat emitter will turn from yellow to orange-red when it is heating to allow an easy control of its function.

Dark Spot 60W Ceramic Heat Emitter E27 Socket	61101
Dark Spot 100W Ceramic Heat Emitter E27 Socket	61102
Dark Spot 150W Ceramic Heat Emitter E27 Socket	61103
Dark Spot 250W Ceramic Heat Emitter E27 Socket	61104

Measurement and Environment Control

Thermometer & Hygrometer

Temperature and humidity are critical factors for a successful maintenance of vivarium animals. As they are so important it is essential that they are monitored constantly. Reliable thermometers and hygrometers therefore are a basic equipment for every terrarium.

Lucky Reptile Thermometer & Hygrometer

These analogue measuring devices are perfect for environments with high humidity. They have to be installed inside the terrariums as the temperature/humidity is measured directly at the device. Adhesive tape at the back of the device allows for quick and easy installation. Available are a single thermometer, a single hygrometer and a thermo-/hygrometer combination.

Lucky Reptile Thermometer	62020
Lucky Reptile Hygrometer	62021
Lucky Reptile Thermometer-Hygrometer	62022

New

Lucky Reptile Glass Thermometer

This analogue thermometer has its scale on the side with the glue which allows for easier positioning inside the vivarium. It can be glued from the inside to the front of the terrarium and is easily readable from the outside. The transparent case makes it less conspicuous.

Lucky Reptile Glass Thermometer	62025
---------------------------------	-------

New

Lucky Reptile Thermo-Hygrometer Min/Max

This high-quality, analogue thermo-hygrometer is accurate and displays reliable values .
Due to its size of 10 cm diameter and large numerics, it is very easy to read and also shows the highest and lowest temperature in the measurement period. Ideal for use in a terrarium in which the values must be determined more accurately.

Lucky Reptile Thermo-Hygrometer Min/Max	62023
---	-------

Dendobates auratus Campana

Lucky Reptile Thermometer Deluxe

Our most popular thermometer!

This electronic thermometer has two external sensors which allow measuring the temperature in two different spots. The sensors can also be used for measurements in water. The device has a large display for easy readouts and a clock function.

Thermometer Deluxe with external sensor

62031

Lucky Reptile Thermo-Hygrometer PRO

This slim thermo-hygrometer has a combo sensor for measuring the temperature and humidity. The device can be placed outside the vivarium, where it is protected from humidity and is easy to read, while the combo sensor is placed inside the vivarium.

A Min/Max-function is available to store the highest and lowest measured humidity and temperature values.

The device can be switched between Celsius and Fahrenheit.

Thermometer-Hygrometer PRO Min/Max. external temp and humidity sensor

62032

Lucky Reptile Thermo-Hygrometer Deluxe PRO

The Thermo-Hygrometer Deluxe PRO model offers a combo sensor for humidity and temperature plus a second temperature sensor allowing to measure the temperature in two places.

The device can be placed outside the vivarium while all measurements are made over the external sensors.

A Min/Max function saves minimum and maximum values for all three sensors.

The device can be switched between Celsius and Fahrenheit.

Thermometer-Hygrometer Deluxe PRO
with Min/Max. function + 3 external sensors

62034

Lucky Reptile Infrared Thermometer

The Lucky Reptile Infrared Thermometer measures the temperature of objects without the need for direct contact. Simply target the object to be measured and press the button. It is perfect for measuring the temperature in different areas of the terrarium to create optimal conditions for the inhabitants.

Infrared Thermometers can only measure the temperature of objects, not the air temperature.

The device can be switched between Celsius and Fahrenheit.

Infrared Thermometer

62040

Bradypodion tenue

Thermostats, Hygrostats and other Controls

The temperature is a critical factor in every terrarium and needs to be adjusted to meet the needs of the animals. However, it is not so easy to adjust the proper temperature with all the different heating products available and the heat being produced by the terrarium lighting. A thermostat helps to maintain the desired temperature and prevents the terrarium from overheating.

Additional functions like a night time temperature decrease are available in some thermostat models and help to provide optimal conditions to the animals.

A little less common are humidity controls for monitoring and maintaining the humidity inside the terrarium. A lot of animals like the Green Tree Python have very specific humidity requirements which make the use of humidity controls recommendable.

Lucky Reptile Thermo Control II

The successor of the popular Thermo Control thermostats shows only with its price that it is an entry model.

The Thermo Control II is a digital thermostat with a temperature range of 0-50°C. The permanent temperature display also allows its use as thermometer. Heaters of up to 1000W can be connected through a coupling. A second coupling is controlled through an integrated timer. It can be used to set operating hours for lighting or ventilators. The external sensor can measure in water and air.

In addition the Thermo Control II has an alarm function which warns optically and acoustically if the measured temperature is too high or too low (value can be set).

Overall a device that should not be missing in any terrarium!

Thermo Control II Digital Thermostat with Timer	62121
Thermo Control II "UK Version" Digital Thermostat with Timer	62131
Thermo Control II "Australia" Digital Thermostat with Timer	62121AU

Lucky Reptile Thermo Control PRO II

The Thermo Control PRO II is a modified Thermo Control II. The main difference is the realtime clock and two temperature time zones which make it possible to set different temperatures for day and night. The switching between Day/Night mode is realized through the clock.

Contrary to the Thermo Control II the smallest time unit of the timer is one minute. Two possible ON/OFF times can be set like with a normal timer.

In addition the device can be switched from Heating to Cooling mode, e.g. for using fans.

The maximum load is 1000W and the temperature area is 0°-50°C.

Note: In the past one batch produced an error under certain conditions in a larger scale. This problem has been resolved and all current batches work without fault. We apologize for any inconvenience caused.

Thermo Control PRO II Digital Thermostat with 2 circuits & Timer	62122
Thermo Contro PRO II "UK Version" Digital Thermostat with 2 circuits & Timer	62132
Thermo Contro PRO II "CH Version" Digital Thermostat with 2 circuits & Timer	62122CH
Thermo Contro PRO II "Australia" Digital Thermostat with 2 circuits & Timer	62122AU

Lucky Reptile Humidity Control II

The Humidity Control II is a digital device which fulfills all wishes and that at a price not seen before.

It has two time zones which enable to make different settings for day and night. A realtime clock is included which allows switching between day and night mode by time which can be defined as desired. In addition a timer is integrated which can have two ON/OFF settings by realtime clock. The minimum time period for the timer is one minute.

Other features are an alarm function (visual and sound), switching between humidifying and de-humidifying e.g. for use with fans and the possibility to influence the switching of the humidity control. E.g. you can set a value of 15 which means that the humidifier will only start working if the measured humidity is at least 15% below the desired setting (if the setting is 70%, it will not start before reaching 55%). This can make sense to prevent the humidifier to turn on and off in quick cycles. The humidity also varies in nature after all.

Devices to be controlled are installed through a coupling with two sockets. The maximum load is 1000W. The display constantly shows the measured humidity. The humidity setting can be chosen between 1% and 99%.

Humidity Control II Digital Hygrostat with Timer	62211
Humidity Control II "UK Version"	62221
Humidity Control II "Australia" Digital Hygrostat with Timer	62211AU

Data-Loggers

Lucky Reptile Thermo Recorder

The Thermo Recorder is a useful temperature data logger. It records the temperature together with the clock in adjustable intervals. Up to 16000 data points can be saved by the logger. Via USB the data can be uploaded into the included software which allows to display or print the data as list or graph, export it to Microsoft Word or save it into an internal database of the software. The software also enables an easy configuration of the Thermo Recorder. The smallest adjustable temperature interval is 2 seconds which allows for a very accurate and detailed overview of the temperature development inside the terrarium.

The Thermo Recorder works with a battery and only needs to be connected to a PC for configuration or uploading data. The rest of the time it can be used with great flexibility independently from the computer. The temperature is measured through an external sensor in order that the Thermo Recorder itself can be placed outside the vivarium. By pressing the button the display will show current, min and max temperature and the battery state.

With the Lucky Reptile Thermo Recorder you always have a detailed overview of the temperature development without the need to take notes. The device is perfect for everyone who wants to get a better feeling and control of the climate in his terrarium. Naturally the Thermo Recorder can also be used for other temperature-sensitive applications, e.g. green houses, incubators, cooling and freezing rooms.

Thermo Recorder Temperature Data Logger	62091
--	--------------

Timer

Lucky Reptile Easy Timer

The Easy Timer is a simple to use interval control. It is designed to allow the use of a device for certain time periods in intervals, e.g. a fogger can be used for 5 minutes every 2 hours with this device.

Possible Working Times are: 15 s, 30 s, 1 min, 2 min, 5 min and 10 min.
Time Periods are: every 15 min, 30 min, 1 h, 2 h, 4 h, 6 h, 12 h and 24 h.

The Easy Timer is very easy to use and compared to a normal timer is can also work with settings in the second area.

Memory function: after a power loss the device will restart at the beginning of the remaining time (e.g. if 56 min were left, the device will start again at 1h after power has been restored).

Excellent for use with foggers, humidifiers and rain systems.

Easy Timer - Intervall Control	62191
--------------------------------	-------

Improved

Lucky Reptile PRO Timer

The PRO Timer is a digital timer and has a minimum time setting of one second! This makes it excellent for controlling rain systems. Over the time frame of a week up to 8 ON/OFF time settings can be programmed, e.g. a programm can be repeated daily or there is the possibility to programm the device to work only on a special week day. This gives you the highest possible flexibility for controlling your vivarium equipment.

The maximum wattage is 3500W.

PRO Timer - Digital Timer	62192
PRO Timer "French Model"	62196
PRO Timer "UK Model"	62194
PRO Timer - Digital Timer "Swiss Model"	62192CH

Improved

Lucky Reptile ECO Timer

The ECO Timer is a mechanical timer for wattages up to 3500W. The special construction of the dial prevents the accidental change of settings, which is a common problem with other timers. The smallest period is 15 minutes.

The timer is perfect for controlling the vivarium lighting. Note that for this type of timer deviations of a few minutes are normal. For applications demanding high precision we recommend the use of the PRO Timer.

ECO Timer - Mechanical Timer	62193
ECO Timer "UK Model"	62195
ECO Timer "French Model"	62197

Phelsuma laticauda

Humidifiers, Fans, Filters and Pumps

Humidity increasing devices

Lucky Reptile Super Rain - Mist System

Lucky Reptile Super Rain is a high performance mist system. It has a powerful low voltage pump that achieves up to 120 L/h and 6,5 bar. The system can be used with over 15 spray nozzles and is suitable for more than one terrarium at once.

The system is shipped complete with 3 spray nozzles, 1 dripping valve, water filter, water container and all necessary connectors.

The spray nozzles have an angle of 50° and can be pointed into any desired direction thanks to the special attachment system. With the supplied suction cups installation in glass terrariums is easy and flexible. The nozzles can be positioned as desired without the need for holes.

In addition a dripping valve is supplied that can be used for watering the plants inside the terrarium. Often plants will not get enough water simply by spraying. Thanks to the filter the water can be pumped out directly of the water part of your terrarium/paludarium creating a closed circuit. A overflow valve prevents that the pump can be damaged in case of blocked nozzles.

Super Rain - Mist System	62311
Super Rain - Mist System "UK Version"	623111
Super Rain - Mist System "Australia Version"	62311AU

Lucky Reptile Super Rain Accessories

The new Super Rain extension parts are more compact and it is now possible to change the nozzle head, e.g. if it has limescale.

Suction Cups (5 pcs.) for Super Rain	62319
Water filter for Super Rain	62320
Tube 5m, 6mm for Super Rain	62321
Replacement Spray Nozzle (without holder)	62330

L-Connector (2 way) new attachment for Super Rain	62335
X-Connector (4 way) new attachment for Super Rain	62336
End Cap for Super Rain	62337
Bulkhead (glass lead through) L-form for Super Rain	62338
Attachment plate for suction cups for Super Rain	62339

Lucky Reptile Mini Fogger

The Lucky Reptile Mini Fogger creates moist fog which increases the humidity and the attractiveness of the terrarium.

For creating the fog, this ultrasonic fogging device only needs water and power. Simply place the device in a deep container with water and connect the supplied A/C adaptor with a wall socket. The fog is created by ultrasonic vibration of a ceramic plate inside the device. The vibrations vaporize the water which rises out of the container as wet fog. ONLY available with Euro plug!

Mini Fogger	62381
Replacement Membrans for Mini Diffuser	62382

Lucky Reptile Fogger Cave

The Lucky Reptile Fogger Cave is a useful accessory for the Lucky Reptile Mini Fogger. It resembles a spray protection in the form of a resin cave into which the fogger is placed. Compared to regular spray protection for ultrasonic foggers, the Fogger Cave also has the advantage that it prevents the animals from getting in contact with the fogger.

Fogger Cave - Spray Protection for Mini Diffuser	22002
--	-------

Lucky Reptile Super Fog - Humidifier

The Lucky Reptile Super Fog is a high performance humidifier for installation outside of the terrarium. The device has an integrated 2L water tank and over the included tube the humidity is channelled into the terrarium. The humidity output can be adjusted through a knob on the device. The Super Fog is excellent for humidifying large terrariums and even whole terarium units but can also be used for smaller terrariums. The new version has a flexible tube and together with the separately available Multi Outlet it can humidify up to 6 vivariums at once. The Super Fog is perfect in combination with the Lucky Reptile Humidity Control II and allows a perfect maintenance of the humidity inside the vivarium.

Super Fog - Humidifier	62301

Super Fog - Humidifier "Australia Version" + Power Cable Australia Plug	62301AU

Super Fog Multi Outlet

The Super Fog Multi Outlet has 6 small outlets that allow to humidify up to 6 vivariums with one Super Fog. This makes it excellent for small poison arrow frog vivarias, whole terrarium shelves with several small vivariums, etc. It is also possible to channel fog into the vivarium at more than one spot and distribute the humidity more evenly. The Super Fog Multi Outlet includes one manifold and two tubes. The tubes can be extended to 100 cm length and bend as needed, allowing for a flexible installation. For using the Multi Outlet the new flexible tubes of the Super Fog are a prerequisite! It is possible to upgrade older Super Fogs with the new flexible tube but it has to be purchased separately.

Super Fog Multi Outlet	62310
Tube 100 cm for Multi Outlet	62308

Basiliscus vittatus

New

Lucky Reptile Super Fog Nano

The Super Fog Nano is a miniature of the popular Super Fog and perfect for smaller terrariums.

It is characterized by its small size, attractive appearance and easy operation. With the provided, extendable flexible tube the mist can be passed into the terrarium. Because of the adjustable output you can moisten different terrarium sizes perfectly meeting the requirements of the animals. The humidity output is up to 100 ml/h.

Super Fog Nano - Humidifier	62371
Super Fog Nano - Humidifier "UK Version" ETA End of 2011	62371UK

Lucky Reptile Terra-Tec H2O

Terra-Tec H2O is demineralized water as to VDE 0510 and perfect for use with humidifiers and rain systems. It can also be used for aquariums.

Normal water has the problem that the minerals contained in it namely limescale among others, can damage pumps and other units. Also the limestains on glass frames are not nice. Some regions have such hard water that a Super Fog membran can be ruined within a few days. With Terra-Tec H2O you can prevent this problem achieving a long life and longer maintenance intervals for you humidifiers and other devices.

By the way: the claims that demineralized/distilled water is dangerous for humans and animals is wrong. In nature dew is an important water source for animals and it only contains very little minerals. It is simply false that demineralised water deprives the animals of nutrients. Demineralised water is even sold as premium drinking water for human consumption.

Terra-Tec H2O 5000ml	62361
----------------------	-------

Lucky Reptile Sprayer

This high quality manual pump sprayer has an adjustable metal spray head creating fine mist. The Lucky Reptile Sprayer is excellent for the daily moisturing of smaller terrariums.

Lucky Reptile Sprayer	62351
-----------------------	-------

Lucky Reptile Maxi Sprayer

This 5L pump sprayer is perfect if you have to water a larger vivarium or a setup with multiple vivariums. The long spray bar and the flexible tube allow you to reach into every vivarium corner. The adjustable plastic spray head and a pressure of up to 2,5 bar ensure excellent spray results. High quality with carrying strap.

Lucky Reptile Sprayer 5L	62352
--------------------------	-------

Fans

Lucky Reptile Terra Fan

This low voltage mini fan system has temperature controlled fans; depending on the temperature the fan speed will decrease or increase to allow for optimal conditions inside the terrarium. The base set consists of a transformer and two fans in order that one fan can be used to blow fresh air into the terrarium while the other pulls out the old air. This way an optimal circulation is ensured. The fans are excellent for animals that need high air circulation like chameleons. One transformer can be used with up to 4 fans. Extension fans are available separately.

Terra Fan Set AC Adaptor and 2 fans	62401
Terra Fan Set "UK version" AC Adaptor and 2 fans	62411
Terra Fan - Extension Fan	62402

Pumps & Filters

Lucky Reptile Thermo Clean

The Lucky Reptile Thermo Clean is the perfect external filter for turtle tanks but can be used as well for all other types of aquariums.

The filter includes a 100W heater which ensures the reliable heating of the aquarium without the risk that turtles will play ping pong with the heater and damage it. This is a common and very serious problem as the risk of electrical shocks exists if the typical aquarium heater is damaged. The heater of the Thermo Clean is safely installed inside the filter itself and therefore well protected.

In addition the filter excels with high user-friendliness, low power consumption and high quietness of the pump. Three filter stages ensure effective cleaning and make the filter suitable for aquariums up to 150 litres. Filter media is included as well as plenty of accessories for easy installation inside aquariums and turtle tanks.

The Thermo Clean Filter is suitable for Lucky Reptile Turtle-Tarriums small, medium and large.

ONLY available with Euro plug!

Lighting

The proper lighting of your terrarium is a very complex issue as the different animals have quite different requirements and there is no standard lighting suitable for all kinds of reptiles.

By now it is well known that UV light is important. However, this is only half the truth. People often concentrate on UV lighting and forget about the other aspects of lighting, e.g. the light intensity. This is a mistake as the light intensity is as important if not even more important for the well-being of the animals than UV light. In nature animals enjoy a light intensity of 100.000 lux and more. In normal terrariums the light intensity is much lower and most terrariums will probably not even reach 10.000 lux, not enough to allow the animals to show their natural behaviour and nicest colours.

It is therefore important that you do not only concentrate on UV and heat lamps but also install a proper daylight lighting as basic lighting for all terrariums. The more light you offer to day active reptiles the better. That is why we have developed the Lucky Reptile Bright Sun which does not only provide UV and heat to the animals but also a lot of light. The difference can be seen right away!

Most of the time a combination of different lamps is necessary to achieve the best results. To help identifying the right lamps we have marked them accordingly: "Daylight", "UV lamp" and "Spot lamp". In the product description you will find for which animals and terrarium types/sizes the lamp is useful.

Fluorescent tubes are the perfect basic lighting as they distribute the light over a wide area. For snakes, amphibians and invertebrates normally one or two tubes are sufficient to simulate the day/night cycle. However, tubes are also a must-have for animals that need a high light intensity. Tubes will not be able to create bright basking areas but they light the shadowy parts left over by punctual spot lamps.

For creating bright and warm sun spots not only the Bright Sun with its outstanding light output is suitable but also the Halogen Sun heat lamps with their outstanding heat performance.

To find out the specific lighting needs of certain species please refer to the animal care sheets on www.lucky-reptile.com.

Examples for Vivarium Lighting

Here you can see a few pictures of the same terrarium lighted by different types of lamps.

The pictures have been made without flash in a dark room to allow comparison of the lamps in regards to brightness and light colour.

In addition the light intensity in lux was measured at the branching in the middle, to give hard data as the human eye can be confused easily.

As you can see tubes evenly light the terrarium while the smaller bulbs all leave shadows in the upper parts of the terrarium.

Consequently the best terrarium lighting is a combination of tubes and spot lamps as seen in the last picture.

Metal Halide Lighting

Lucky Reptile is the first to market metal halide lamps that are especially developed for reptiles.

The revolutionary Bright Sun lamps offer all what reptiles need: heat, UV and a lot of light. In their characteristics Bright Sun lamps come very close to the sun.

In nature a light intensity of 100.000 lux and more exists on a sunny day. Especially with desert species a high light intensity is beneficial for the well-being and will influence activity and colours of the animals.

With the Lucky Reptile Bright Sun lamps it is possible to achieve light intensities like in nature also inside the vivarium. No other reptile lamp achieves higher light intensities or can only roughly match the sun. Mercury vapour UV lamps with 160W that can be often found on the market, only achieve a mere 10.000 lux at 30 cm distance. A Bright Sun UV Desert 70W reaches 60.000 lux and offers with its mere 70W a heat and UV output comparable to the 160W mercury vapour lamp! The base for this high light output is the energy efficiency of the Bright Sun. Most of the energy is converted into light while with incandescent lamps 95% of the input power are turned into heat. With the Bright Sun an effective reflector construction ensures that almost all created heat is concentrated inside the light focus. The lamp is therefore able to create warm basking areas comparable to regular spot lamps of the same wattage.

Thanks to a big selection of wattages and different reflector types the Bright Sun family is suitable for all vivariums from 30x30x30 cm an up.

For operating the Bright Sun lamps special ballasts as well as suitable cables and lampholders are necessary. Lucky Reptile offers well thought of Plug and Play systems that are easy to use and install.

The average life is 6000h, however, the UV performance and the general light output degrade over time. After 2000 hours the UV performance is reduced by approximately 50%. We therefore recommend changing lamps every 6 months to provide always the optimum UV levels to your animals. This recommendation is based on a daily use of 10-12 hours. Shorter daily operating hours will increase the usage time.

A 6 months warranty applies on the Bright Sun lamps.

Please note that the ballast has a significant influence on lamp life and also the lamp spectrum. It is possible that the spectrum and therefore also the UV output varies greatly between different brands of ballasts. Lucky Reptile can only guarantee the proper function and sufficient UV provision for its own products that have been designed to match each other perfectly and are under continuous quality control.

Lucky Reptile Bright Sun UV Desert

Research and tests by Lucky Reptile have shown that reptiles from desert regions prefer a daylight spectrum with a colour temperature of about 6000K. Consequently this has been considered when developing the Bright Sun UV Desert.

The bright white light is readily accepted by the animals and the lamp offers everything desert reptiles need.

Heat, UV output and the light intensity have been balanced in a way that optimal results for the different terrarium types can be achieved with the available wattages. Our distance graphs help you to choose the right model for your terrarium.

Bright Sun UV Desert 35W	Metal Halide lamp for E27 sockets	63600
Bright Sun UV Desert 50W	Metal Halide lamp for E27 sockets	63601
Bright Sun UV Desert 70W	Metal Halide lamp for E27 sockets	63602

Bright Sun UV Desert 35W

Bright Sun UV Desert 50W

Bright Sun UV Desert 70W

Lucky Reptile Bright Sun FLOOD Desert

The Bright Sun FLOOD ensures a large scale illumination of the terrarium thanks to a 60° reflector. The lamp offers UVA and UVB radiation as well as a certain heat output.

For best illumination of your terrarium we recommend a combination with a Bright Sun UV Desert to create local sun spots.

For animals with low UV requirements like geckos the Bright Sun FLOOD Desert may be used as sole lighting.

Bright Sun FLOOD Desert 70W Metal Halide lamp for E27 sockets

63641

Bright Sun FLOOD Desert 70W

Bright Sun ULTRA Desert 150W

Lucky Reptile Bright Sun ULTRA Desert

The Bright Sun ULTRA is a high performance lamp which was developed for use in large terrariums.

It is necessary to keep a minimum distance of 50 cm to the animals. At this distance temperatures of over 50°C can be achieved.

Thanks to a special reflector construction a part of the light output is bundled in the middle of the light cone achieving a good UV and heat performance. The rest of the light is widely distributed to achieve a good illumination of the terrarium. The Bright Sun ULTRA Desert is a unique hybrid lamp that perfectly fits to the requirements in large vivariums.

Bright Sun ULTRA Desert 150W Metal Halide lamp for E27 sockets

63631

Lucky Reptile Bright Sun UV Jungle

The Bright Sun UV Jungle was developed especially for reptiles from tropical and forest regions. It has a slightly lower UV performance than the Bright Sun UV Desert taking the different conditions in the natural habitat of these animals into account. Branches and leaves filter quite a lot of UV, so the animals do not experience the full intensity of the sun. In addition it has to be considered that arboreal animals will usually be able to get quite close to a lamp inside a vivarium. Since UV radiation is potentially dangerous and the UV intensity is at 10 cm distance 5 times higher than at 30 cm, we have consciously reduced the UV output.

The spectrum was adapted to the natural conditions of forest regions. With 4000K the colour temperature is warmer than the daylight of the Bright Sun UV Desert. Tests have shown that tropical lizards like water dragons prefer the warmer light of the Bright Sun UV Jungle over the daylight of the Bright Sun UV Desert.

The warmer light of the Bright Sun UV Jungle will also promote the colours of plants causing a nice forest ambiance inside the vivarium.

Bright Sun UV Jungle 35W Metal Halide lamp for E27 sockets

63610

Bright Sun UV Jungle 50W Metal Halide lamp for E27 sockets

63611

Bright Sun UV Jungle 70W Metal Halide lamp for E27 sockets

63612

Bright Sun UV Jungle 35W

Bright Sun UV Jungle 50W

Bright Sun UV Jungle 70W

Lucky Reptile Bright Sun FLOOD Jungle

Thanks to its wide reflector the Bright Sun FLOOD Jungle ensures a large scale illumination of the terrarium and has a lower UV and light output than a Bright Sun UV.

For a lot of forest dwelling reptiles this is an advantage as many avoid direct sunlight. Most chameleons for example belong to this group. For these animals the Bright Sun FLOOD Jungle is the perfect lighting and can be used as a sole lamp as these species do also have lower UV requirements.

For sun loving animals like Green Iguanas we recommend the combination with the Bright Sun UV Jungle to create local basking sites.

Bright Sun FLOOD Jungle 70W

Bright Sun FLOOD Jungle 150W

Lucky Reptile Bright Control

The Bright Control is necessary for operating Bright Sun UV lamps. It contains ballasts, ignitor and a capacitor inside a gear box and is ready for use with a connector. A suitable lampholder has to be purchased separately. We recommend the Lucky Reptile Thermo Socket PRO with silicone wire as its connector is compatible to the Bright Control devices creating a Plug and Play solution. Note that the cable length between gear box and lamp should not exceed 2,5m to ensure correct operation of the lamp. The shorter the cable length the smoother operation can be expected.

If you rewire existing setups, make sure that you only use suitable wires and lampholders as metal halide lamps need high voltages during the ignition phase. The Bright Control therefore has a wire with silicon insulation and the connector was also designed for the high voltages of metal halide lighting.

Oecryptophis porcoxi

Lucky Reptile Bright Control PRO

The Bright Control PRO is an electronic ballast designed for optimal use with the Bright Sun UV lamps.

An electronic ballast should be preferred over an electromagnetic ballast as it is more efficient and increases the lamp life. It ensures a smoother operation and increases the effectiveness of the lamp. The spectrum of metal halide lamps will stay fairly constant during its life cycle when using electronic ballasts. Metal halide lamps that are used with an electromagnetic ballasts normally show significant changes in their spectrum especially at their end of life. Only an electronic ballast like the Bright Control PRO can ensure the best light quality.

In addition the Bright Control PRO will automatically shut off broken or not igniting lamps for safety reasons.

For the Bright Sun UV lamp we recommend the use of the electronic Bright Control PRO over the conventional Bright Control gear box to ensure best possible operation. Apart from the technical advantages it is also much smaller.

New

Lucky Reptile Flex Light

The Lucky Reptile Flex Light is a new innovative luminaire for the Bright Sun designed for mounting on a wall behind the vivarium. It is ready for use with a power lead for wall sockets already being installed. No special electrical skills are necessary as long as the luminaire should not be installed directly to a hidden power circuit like the regular ceiling lighting. The ballast is integrated into the wall part of the luminaire. Over a flexible arm the lamp can be directed as desired and adjusted in angle and height.

A special feature of the lamp is the possibility to change its reflector quickly and without tools. Different reflector types and materials will be available so that everybody can put together a combination to his own tastes. It is also possible to change the reflector later to bring new colours into play.

The Flex Light is a new stylistic device for terrariums and very flexible in use. New ways are open for herp keepers and the ugly glass box with a mess of wires can belong to the past.

Instead you can make the tank itself to a design object and highlight in your domicile by mounting a Flex Light at the wall behind a turtle tank or vivarium.

The picture shows an early sample and not the final product.

ETA 2012.

Cyclura cornuta

Low Voltage Halogens

Low voltage halogen technology offers interesting opportunities for the future of herp keeping.

For one it is possible to develop safe lamps like the Jungle Lamp which can be used under extreme conditions like in a rainforest vivarium. And the development of compact luminaires is possible that allow terrarium constructions like the Lucky Reptile Designer Terrarium without a mess of wires in the lid or lamps and sockets pointing deep down inside the cage.

Low voltage halogen lamps match the light and heat performance of their 230V relatives but usually achieve longer lifes.

New

Lucky Reptile Thermo Socket LV Halogen

The Thermo Socket LV is an extendable low voltage lamp system which has been developed for low voltage halogen lamps like the Lucky Reptile Halogen Sun LV. For the operation a transformer is necessary which is already included in the Thermo Socket LV Set. Up to 6 lamps can be attached to one transformer over a plug and socket connection. Using the transformer of the Lucky Reptile Jungle Lamp or a mixed operation of Jungle Lamp and Thermo Socket LV on one transformer is possible as well.

The Thermo Socket LV can be placed on top of the terrarium or installed into the terrarium lid with its attachment parts. Lamp and socket are fully covered by a reflector and protected from contact by animals through a wiremesh.

The Thermo Socket LV Set is equipped with a halogen transformer suitable for 20-105W. The minimum load is one 20W lamp or two 10W Halogen Sun LV. The allowed maximum wattage is 105W which can be achieved e.g. by 3x 35W but also 3x 20W plus 1x 35W and 1x 10W. A lot of other lamp combinations are possible. The system is extremely flexible and capable.

Thermo Socket LV Mini Set contains 1x Thermo Socket LV Mini + Transformer	63246
Thermo Socket LV Mini Extension Lamp	63247
Thermo Socket LV Mini Set "UK Version" contains 1x Thermo Socket LV Mini + Transformer	63246UK

Lucky Reptile Jungle Lamp

This special low voltage lamp is waterproof as to the IP68 standard, making it perfect for rainforest vivariums and turtle tanks where the use of normal, not humidity protected porcelain lampholders is risky or even not allowed.

The Jungle Lamp is a 12V luminaire which requires a halogen transformer for operation. The installation inside the vivarium can be done with the supplied holding arms allowing to point the lamp in the desired direction.

Available is a set which contains one Jungle Lamp and a transformer (20-105W). Additional Jungle Lamps can be purchased separately and attached to the transformer. A mixed operation with Thermo Socket LV lamps is also possible. With its wattage range of 20W to 105W the transformer can operate a single 20W lamp but also multiple lamps with a maximum of 105W. E.g. you can attach two Jungle Lamps with 50W halogen lamps ($2 \times 50W = 100W$) or three luminaires with 35W lamps ($3 \times 35W = 105W$). The theoretical maximum is 5 luminaires with 20W lamps.

The Jungle Lamp is designed for use with the Lucky Reptile Halogen Sun LV. The use of standard halogen lamps which project the heat to the back or side is not allowed.

Lucky Reptile Halogen Sun LV "Spotstrahler"

The Lucky Reptile Halogen Sun LV lamps may be small but they offer a lot of light and heat.

The special reflector effectively focusses light and heat and projects it all to the front. This ensures an excellent light and heat output inside the light sphere which is higher than that of 230V spot lamps of comparable wattage.

These lamps cannot be compared to standard low voltage lamps found in DIY stores, which have so called "cold light" reflectors that project the heat to the back where it is not beneficial for reptiles.

"Cold light" halogen lamps are also not suitable for the Lucky Reptile Thermo Socket LV and Jungle Lamp as they project heat to the back and can cause the luminaires to overheat. Use only Halogen Sun LV for these luminaires.

The Halogen Sun LV lamps have a G5.3 socket and will not only fit the Jungle Lamp and Thermo Socket LV but all other luminaires suitable for MR16 halogen lamps, e.g. the recessed luminaires of the Lucky Reptile Designer Terrariums.

Lamp Fixtures with E27 socket

Lucky Reptile Thermo Socket

The Thermo Socket lampholder sets include a high quality porcelain socket, an On/Off power cord with Euro plug and - depending on the model - the necessary screws and fixtures for mounting it to the terrarium, The Thermo Socket lampholder sets are a cost effective, easy and flexible way to equip your terrarium with the necessary light sources. Thermo Sockets are suitable for lamps up to 150W and are available in different variations.

Pay attention to the manual! We recommend to have the installation made by a professional.

Thermo Socket - straight lamp holder 2m Power chord with ON/OFF Switch	63101
Thermo Socket - angular lamp holder 2m Power chord with ON/OFF Switch	63102
Thermo Socket - Suspension lamp holder 2m Power chord with ON/OFF Switch	63103
Thermo Socket - Lamp holder with thread 2m chord On/Off Switch, nipple and pull relief	63104

Lucky Reptile Thermo Socket PRO

Contrary to the simple Thermo Socket lampholder sets the Thermo Socket PRO are completely wired and ready for use. There are no electrical installations necessary.

Special mounting accessories and a connector allow the terrarium installation without the need to take the lampholder apart.

The Thermo Socket PRO are also excellent for use with the Lucky Reptile Bright Sun UV lamps as their connector are compatible to the Bright Control ballasts which can simply be attached between lampholder and wall socket.

The power lead has a silicon insulation allowing the use of lamps up to 300W including the Osram Vitalux.

Of course the Thermo Socket PRO are also compatible to the Lucky Reptile Reflector Sets.

The Plug and Play solution!

Most Popular Model: with hinge! Lampholder can be directed as desired!

Thermo Socket PRO - with hinge "Australia" with connector	63125AU

Lucky Reptile Thermo Socket plus Reflector

These high quality reflector lamps have an E27 porcelain lampholder, a high quality steel reflector, wire mesh protector and a silicon power lead.

The steel reflector focusses the light and acts as sight protection, preventing from being blinded by the light. The wire mesh protector is placed on the bottom of the reflector and prevents that the animals can get in contact with the bulb.

The lamps are shipped ready for use. Mounting accessories for installation inside a terrarium are included but the lamp has to be taken apart for that. For a more convenient installation inside the vivarium versions with connector are available. These can be attached to a surface without having to be taken apart. In addition the connector plugs directly into the Bright Control ballasts. Plug and Play!

A clamp for use as clamp lamp is available separately.

Suitable for light bulbs up to 300W. Two different reflector sizes are available:

Thermo Socket plus Reflector small: for all Halogen Sun and Bright Sun UV lamps as well as the Compact UV Sun.

Thermo Socket plus Reflector large: for straight energy saving bulbs and mercury vapour UV lamps

All versions are suitable for use with 300W lamps!

Thermo Socket + Reflector small	63202
Thermo Socket + Reflector large	63203
Thermo Socket + Reflector small "Connector"	63222
Thermo Socket + Reflector large "Connector"	63223

Lucky Reptile Clamp for Thermo Socket

All Thermo Socket models with conical lampholder can be fitted with this clamp allowing for easy attachment to the edge of a terrarium.

The pivot allows to align a lampholder (with M10 thread) as desired.

Clamp for Thermo Socket	63303
-------------------------	-------

New

Lucky Reptile Thermo Socket Cap

The Lucky Reptile Thermo Socket Cap consists of flexible black silicone and is simply pulled over the porcelain socket. It is not necessary to take apart the lamp to install the Thermo Socket Cap.

The cap recommend when using high wattage lamps at it will insulate the hot lampholder. Also it will improve the optical appearance of most luminaires.

The Thermo Socket Cap is suitable for all Thermo Socket plus Reflector with external lampholder as well as the Thermo Socket /PRO models 63104, 63124, 63125, 63134 and 63135.

Thermo Socket Cap Silicone Cap for Thermo Socket	63311
--	-------

Lucky Reptile Reflector Set

The Reflector Sets consist of a high quality steel reflector and a wire mesh. They are made as add-on to the Thermo Socket lampholder sets.

The mini type is placed over the lampholder and fully covers it. A prerequisite for this are lampholders with threaded pipe like the Thermo Socket models 63104 and 63124.

The two larger reflectors are placed between socket and ring of two-part lampholders. This allows for an easy retrofitting.

Available in two sizes. Small for all Halogen Sun and Bright Sun UV lamps and large as extra long reflector for compact fluorescent and mercury vapour lamps.

Reflector Set small for Thermo Socket	63304
Reflector Set long for Thermo Socket	63305
Reflector Set mini for Thermo Socket	63306

Lucky Reptile Thermo Socket plus Reflector Mini

The popular Thermo Socket plus Reflector is also available as MINI Version, fitting for all Halogen Sun Mini, Amphib Sun Mini and the Moon Lamp.

The porcelain lampholder is completely covered by the reflector, ensuring a nice optical appearance. The luminaire can be used for lamps up to 60W but regular spot lamps can stand out of the reflector so that the wire mesh guard cannot be fitted anymore.

Halogen Sun Mini and Co. are fitting perfectly!

Thermo Socket + Reflector Mini	63204
Thermo Socket + Reflector Mini "UK Plug"	63204UK

New

Lucky Reptile Thermo Socket Expert Line

The Lucky Reptile Thermo Socket Expert is an pivoting recessed lamp with E27 socket for PAR lamps like Lucky Reptile Bright Sun and Halogen Sun. It is specially designed for installation in the terrarium lid and ideal in conjunction with the Lucky Reptile Furni-Top as well as all vivariums with inserted ceiling and display units. The pivoting angle is 12°.

Available as 230V version for Halogen Sun 75W and other PAR30 lamps and fully wired with Bright Control PRO for Bright Sun UV 50W + 70W.

Thermo Socket Expert + Controller 50W including Bright Control PRO 50W	63281
Thermo Socket Expert + Controller 70W including Bright Control PRO 70W	63282
Thermo Socket Expert - only fixture for PAR30 lamps	63280

Lucky Reptile Thermo Protect Lamp Cage

These lamp protector cages have a very fine wire mesh in order to prevent even very small animals from getting through to the lamp.

They are suitable for all Lucky Reptile luminaires with E27 sockets. The large Thermo Protect Lamp Cage can even be put over the Thermo Socket plus Reflector luminaires.

A bracket with a cut-out for the lampholder is attached to the terrarium ceiling with screws or even silicon. The lamp cage is then attached to the bracket and can be completely removed for a lamp change.

The Thermo Protect lamp cages also include a removable glare shield which is mounted on the inside in order that the animals cannot reach it and get burned.

Thermo Protect - Lamp Protector small approx. 120x120x160 mm	63321
Thermo Protect - Lamp Protector large approx. 160x160x260 mm	63322

Fluorescent Lighting Fixtures

Lucky Reptile Light Strip T5 Power

This nicely shaped lamp was developed specifically for high-output T5 tubes and has a robust metal body with internal reflector.

Since today UV tubes are playing a small roll in most vivariums and T5 tubes are primarily used as daylight lighting, it is not necessary to place the lamp inside the terrarium. You can simply place the Light Strip T5 on top of the terrarium and have it light through the glass or mesh top. Fixtures on the backside also enable an installation to a wall or a ceiling.

The Light Strip are excellent for use with the Lucky Reptile Daylight Sun T5 and UV Sun T5 fluorescent tubes.

Tubes not included.

ATTENTION! When using the UV Sun T5 the front glass has to be removed, in order not to filter out the UV.

Light Strip T5 Power 24W for T5 High Output tubes - 61x9x3 cm (LxWxH)	63251
Light Strip T5 Power 39W for T5 High Output tubes - 91x9x3 cm (LxWxH)	63252

Light Strip T5 Power 54W "UK Version" for T5 High Output tubes - 121x9x3 cm (LxWxH)	63253UK
Light Strip T5 Power 24W "Australasia Version" for T5 High Output tubes - 61x9x3 cm (LxWxH)	63251AU
Light Strip T5 Power 39W "Australia Version" for T5 High Output tubes - 91x9x3 cm (LxWxH)	63252AU
Light Strip T5 Power 54W "Australia Version" for T5 High Output tubes - 121x9x3 cm (LxWxH)	63253AU

Lucky Reptile Light Strip T5 ECO

The Light Strip T5 ECO has the same size and shape as the Light Strip T5 Power. However, it is using energy saving T5 High Efficient tubes. These tubes achieve the same light output as regular T8 tubes but use over 25% less energy. Fitting tubes are the Lucky Reptile Daylight Sun T5 ECO high efficiency tubes with biolight spectrum.

The combination of Light Strip T5 ECO and Daylight Sun T5 ECO is excellent for amphibians, snakes and invertebrates as well as for simulating the day/night cycle.

Tubes not included!

ATTENTION! When using the UV Sun T5 8W the front glass has to be removed, in order not to filter out the UV.

Light Strip T5 Eco 8W	63255
Light Strip T5 Eco 14W for T5 High Efficiency tubes - 61x9x3 cm (LxWxH)	63256

Light Strip T5 Eco 28W for T5 High Efficiency tubes - 121x9x3 cm (LxWxH)	63258

Pogona vitticeps

Fluorescent Lighting

Fluorescent tubes are excellent to illuminate large parts of a vivarium and ensure an even illumination. However, they do not reach a high light intensity as the light is distributed over a large area. Therefore it is recommended to combine tubes with spot lamps for creating hotspots with high light intensity.

Fluorescent tubes can also produce UV light and are suitable for full day operation providing animals all the time with sufficient amounts of UVB. However, the UVB radiation is only effective up to 30-40 cm distance from the lamp. The animals therefore must be able to get close enough to the lamp to benefit from the UV radiation.

Daylight tubes should not be missing in a vivarium as they guarantee the basic illumination. They are supplemented - if necessary - by UV and heat lamps.

Lucky Reptile is the only manufacturer who solely employs modern T5 technology as this offers great advantages. T5 tubes require less space and achieve much higher brightness levels than T8 tubes. For animals that do not need the highest light intensity levels it is also possible to use special earth friendly and energy efficient versions which still offer more light than T8 tubes.

Since light performance and quality degrade over time, daylight tubes should be replaced every 2 year, UV tubes on a yearly basis.

Lucky Reptile UV Sun T5 "UV Lamp"

After long research we have succeeded and developed a T5 tube with stable UV performance. The UV Sun T5 excels with its well balanced UV spectrum which is very close to that of the sun. This in particular applies to the wavelengths from 290-305 nm which are important for the Vitamin D3 synthesis but often missing in UV lamps. The UV Sun T5 therefore ensures optimal Vitamin D3 provision to the animals.

In addition to the good UV performance with a range of 20-50 cm, the lamp also stands out with its 6500K daylight spectrum and excellent colour rendition of over 90 Ra.

The UV Sun T5 is perfect for aboreal and montane reptiles as well as raising juveniles.

UV Sun T5 8W	300mm, 16 mm	63720
UV Sun T5 24W	563mm, 16 mm	63721

UV Sun T5 54W	1163mm, 16 mm	63723

Lucky Reptile Daylight Sun T5 ECO

The Daylight Sun T5 ECO was developed for use with the Light Strip T5 ECO. It is a T5 high efficiency tube which achieves the same lumen output but saves over 25% of energy compared to a standard T8 tube.

The biolight spectrum of the Daylight Sun T5 ECO offers the best possible light quality to the animals. Biolight stands out with its excellent colour rendition and very natural spectrum close to natural sunlight which also contains small amounts of UVA and UVB.

Note that the Daylight Sun T5 ECO is not suitable as sole UV source. We recommend it for snakes, amphibians and invertebrates while for sun loving animals like bearded dragons that need a high light intensity you should use the Daylight Sun T5 high output lamps for maximum light performance.

Daylight Sun T5 ECO 8W	300mm, 16 mm	63710
Daylight Sun T5 ECO 14W	563mm, 16 mm	63711
Daylight Sun T5 ECO 21W	863mm, 16 mm	63712
Daylight Sun T5 ECO 28W	1163mm, 16 mm	63713

Lucky Reptile Daylight Sun T5

The Daylight Sun T5 is a fluorescent tube which was developed as general lighting for terrariums. Significant UV radiation is not provided by the tube by intent as other lamps like the Lucky Reptile Bright Sun UV and mercury vapour based UV lamps are better suited to provide UV. Instead the Daylight Sun T5 was designed to achieve a high light output and a visible spectrum suitable for all terrarium animals.

For day active reptiles a high light intensity and a spectrum close to the natural sun is important. The Daylight Sun T5 achieves 40% more light output than comparable T8 tubes. In addition the slim T5 tubes can be grouped closer together, enabling the user to use more tubes on the same area and therefore maximising the light output. For bearded dragons and other sun loving lizards it simply cannot be too bright.

The Daylight Sun T5 has a biolight spectrum which is simulating natural sunlight very closely and guarantees best possible light quality and well-being. It is excellent for all reptiles and also promotes the plant growth with its well balanced light and luscious colours.

The Daylight Sun T5 is the perfect basic lighting for all types of terrarium.

Perfect for use with the Lucky Reptile Light Strip T5 Power.

Daylight Sun T5 24W 563mm, 16 mm	63701
Daylight Sun T5 39W 863mm, 16 mm	63702
Daylight Sun T5 54W 1163mm, 16 mm	63703

Compact Lamps

UV compact lamps have an effective range of 30-40 cm. Due their low heat emissions these lamps are perfect for small vivariums. However, an additional heat lamp might be necessary.

The performance of compact lamps is greatly depending on the use of reflectors. Without reflector most of the light output cannot be put to use.

Since light performance and quality degrade over time, daylight lamps should be replaced every 2 year, UV lamps on a yearly basis.

New

Lucky Reptile Compact UV Sun "UV Lamp"

With the new generation of the Compact UV Sun we could maintain the lamp performance while decreasing the wattage compared to the old 15W and 23W models.

For the development we could win a German factory which is also making the UV Sun T5 and can guarantee a well balanced UV spectrum.

Special attention was paid to a natural spectrum and not to increase the UVB output unproportionally which would lead to a bad light quality but only about 20% more of UVB. A good reflector will bring more than 200% of UVB to the animal. Therefore we recommend the use in the Lucky Reptile Thermo Socket plus Reflector lamps models 63202/63222 for best UV and light output.

Compact UV Sun 11W for E27 sockets	63505
Compact UV Sun 20W for E27 sockets	63507

New

Lucky Reptile Daylight Sun Compact "Daylight Lamp"

The Daylight Sun Compact has a "biolight" spectrum which is very similar to natural sunlight and beneficial for the well-being of the animals. The lamp is suitable as sole light source in small vivariums for snakes, amphibians and invertebrates as it only emits little heat.

We recommend the use of the Daylight Sun Compact in our Lucky Reptile Thermo Socket plus Reflector models 63202/63222 which maximise the light output and prevent that animals and humans are blinded by the light.

Daylight Sun Compact 20W for E27 sockets	63511
--	-------

Spot Lamps

Spot lamps are excellent for providing hot spots inside a vivarium where the animals can bask.

Please consider that halogen and incandescent cannot produce UVB and only little UVA for technical reasons. Additional UV lamps are therefore necessary.

Lucky Reptile solely employs halogen technology which is more efficient than normal incandescent lamps and produces more light and heat at lower wattages. This helps to save a lot of energy and preserves the environment.

Lucky Reptile Halogen Sun "Spot Lamp"

The Lucky Reptile Halogen Sun spot lamp brings more light and heat on the spot and does lead to a lesser increase of the ambient air temperature than regular reptile spot lamps with the same wattage. As result it is easier to set up the proper heat gradients in the terrarium and greater distances between animal and the spot lamp can be realized.

Further advantages are the higher average life, the higher resistance against spray water and much lower power consumption compared to incandescent spot lamps. A 75W Halogen Sun is suitable to replace a 100W incandescent spot in regards to heat output and offers even more light output, allowing you to save 20 Euro and more in power cost per year.

Halogen Sun 50W	Halogen Spot Lamp for E27 sockets	63401
Halogen Sun 75W	Halogen Spot Lamp for E27 sockets	63402
Halogen Sun 100W	Halogen Spot Lamp for E27 sockets	63403

Halogen Sun 50W

Halogen Sun 75W

Halogen Sun 100W

Lucky Reptile Halogen Sun Mini "Spot Lamp"

The Lucky Reptile Halogen Sun Mini is the smallest available lamp for E27 sockets. Its reflector rises only 2,5 cm out of the E27 lampholder which makes the Halogen Sun Mini excellent for use with small vivariums where normal spot lamps are too noticeable due to their size and also too close to the floor.

Thanks to the halogen technology and the extremely efficient reflector they also produce more heat and light than normal spot lamps.

Halogen Sun Mini 20W Double Pack	Halogen Spot Lamp for E27 sockets	63421
Halogen Sun Mini 35W Double Pack	Halogen Spot Lamp for E27 sockets	63422

Halogen Sun Mini 35W

Halogen Sun Mini 50W

Lucky Reptile Amphib Sun

The Lucky Reptile Amphib Sun is especially suitable for amphibians. It uses modern LED technology and produces little heat which is important when keeping amphibians. Another advantage of the LED technology is the low power consumption. At 3W the large Amphib Sun saves over 25 Euro per year compared to a 60W incandescent lamp.

Light Colour: Daylight White

Amphib Sun small, 20 LED	63451
Amphib Sun large, 50 LED	63452

Nighttime Lighting

Lucky Reptile Moon Lamp

The Moon Lamp is a small mini moon for the terrarium. The lamp only consumes about 1W! As the Moon Lamp works with efficient LED technology, it produces just the right amount of light for illuminating the terrarium at night without disturbing the animals. Terrarium parts in the lamps focus (e.g. branches or parts of the terrarium floor) are stronger illuminated than the border parts of the terrarium. This creates a nice moonshine effect.

The Moon Lamp fits into all E27 sockets and produces only little heat in order not to disturb the nighttime temperature drop inside the terrarium. As local light source the Moon Lamp is primarily recommended for higher vivariums. For small vivariums or for illuminating the whole vivarium we recommend using the Lucky Reptile Night Sky LED sets.

Moon Lamp E27 lamp with moonlight LED	63801
---------------------------------------	-------

Lucky Reptile Night Sky LED Set

The Night Sky LED set imitates the light of the moon and makes nocturnal observations of reptiles and amphibians possible, without disturbing the animals. Advantages of the LED technology are low energy consumption, low heat emission and a long life of the light emitting diodes. Therefore, illuminating terrariums all night long is possible, without hindering the natural nocturnal drop of temperature as with other light sources. Especially nightlight incandescent lamps consume a lot of energy and consequently produce a lot of unwanted heat as well. In addition their ability to illuminate the terrarium properly and allow nighttime viewing is limited.

The energy consumption of the LEDs in the Night Sky LED set is merely 0,2W per LED. This is the most energy efficient way to illuminate a terrarium at night.

The Night Sky LED set contains 3 moonlight LEDs and an electric transformer, with which up to 6 LEDs can be powered. Additional LEDs are available separately. The LEDs are connected to the transformer by a connector, which makes them easy to install. Mounted on the ceiling of a terrarium, they enable a well-balanced nocturnal illumination of the whole terrarium.

Night Sky LED - Moonlight Set "UK Model" Contains Transformer and 3 LED	63815
Night Sky LED - "Australia" Contains Transformer and 3 LED	63811AU

Other Lighting devices

Lucky Reptile Mini Light Strip LED

The Mini Light Strip LED is a 22,5 cm long, slim luminaire with modern LED technology. It only creates little excess heat and is very thin making it perfect for small terrariums as well as small plastic transport boxes like the Lucky Reptile Herp Haven. The Mini Light Strip LED are low voltage and protected against spray water and therefore can be safely installed inside terrariums.

A transformer is necessary for operation and already included in the Mini Light Strip LED Set. One transformer can operate up to 5 Mini Light Strip LED. Additional Mini Light Strips for extension purposes are available.

Installation is easy thanks to connectors. Each single Mini Light Strip has an On/Off switch.

Each Mini Light Strip LED only consumes 2W. The daylight spectrum is perfect for amphibians, invertebrates and snakes.

Pogona vitticeps

Food

Food for plant eating animals

Lucky Reptile Herp Diner - Herb Mix

Herb Mix consist of dried dandoleon, clover, ribwort, nettle and peppermint. Dried herbs belong to the natural diet of most herbivorous reptiles and acceptance as food is therefore no problem. In addition the dried herbs have a higher amount of crude fibers than fresh food which is beneficial for the digestion. Veterinarians recommend that the amount of crude fibers should be at least 15% which cannot be accomplished with fresh greens only. Include Herb Mix in your diet to satisfy the reptiles needs.

Excellent for tortoises, bearded dragons, iguanas, uromastyx and other plant eaters.

Crude fibers 21,1%, crude protein 19,5%, fat content 3,4%

Lucky Reptile Herp Diner - Herb Cobs

Herb Cobs consist of many herbs from the hayfield and are rich in natural minerals and crude fiber. They are excellent as food supplement for tortoises, bearded dragons, iguanas, uromastyx and other herbivorous reptiles and are fed whole or mixed with water. Herb Cobs are excellent to provide the necessary amount of crude fiber to the animals.

Crude fibers 23,8%, crude protein 11,5%, fat content 3,4%

Herb Cobs 250g	67231
Herb Cobs 750g	67232

**New**

Lucky Reptile Herb Garden Seed Mix

With Herb Garden you can grow your own herbs and flowers, no matter if in a corner of your garden, a flower pot or the window sill. This way you always have fresh and tasty food available for your animals - also in winter time.

The seed mix contains selected wild and garden herbs. Different germinating times guarantee offset growth and fresh food over a longer time. The herbs are rich in raw fibers.

Excellent for tortoises, bearded dragons, spinytail agamas and all other herbivorous reptiles.

Due soon!

Herb Garden - Wild herb mixture

67171

Food for insect eating animals

Please also pay attention to the Lucky Reptile Herp Diner products in the aquatic turtle food section which are excellent for a lot of reptiles like bearded and water dragons, monitors and skinks.

Our Bearded Dragon food is also a treat for a lot of other animals.

Lucky Reptile Herp Diner Insect Blend

The Herp Diner Insect Blend contains large crickets, medium locusts and bamboo worms, offering a nutritious and varied food to the animals. The addition of cuttlefish bone powder ensures an increased calcium content and a positive calcium-phosphorus ratio which is not given in living insects.

The special cooking process preserves the nutrients and ensures a good acceptance. Herp Diner Insect Blend is suitable for all insect eating reptiles and birds. It is perfect for bearded dragons and also larger turtles.

Moisture content 72,8%, crude protein 14,6%, fat content 9%, crude fibers 2,8%, calcium/phosphorus ratio 6:1,5

Herp Diner - Insect Blend 35g Crickets, Grasshoppers & Bamboo Worms

67301

Lucky Reptile Herp Diner Crickets

Herp Diner Crickets are canned crickets. The special thing about Lucky Reptile canned food is that cuttlefish bone powder as a source of calcium has been added to most kinds including Herp Diner Crickets. Consequently these crickets have an optimal Calcium/Phosphorous ratio and are especially formulated to satisfy the reptiles need. The special cooking process ensures good acceptance by the animals. A positive side effect of the can is that it makes feeding very easy: open can and spoon out some crickets, that is it.

Herp Diner Crickets are readily accepted by most insect eating lizards (especially Bearded Dragons) and birds and provide the animals with beneficial calcium. They are also a great addition to the diet of turtles.

Moisture content 68%, crude protein 16,5%, fat content 8,5%, crude fibers 3,5%, calcium/phosphorus ratio 4:1,5

Herp Diner - Crickets 35g approx. 60 large crickets, cooked

67311

Herp Diner - Crickets small 35g approx. 120 small crickets, cooked

67312

Lucky Reptile Herp Diner Grasshoppers

The Herp Diner Grasshoppers are cooked in the can locusts. This special process creates flavour and taste that makes this food also interesting to animals that normally only eat live food.

There are no artificial flavours or preservatives contained. However, cuttlefish bone powder has been added for an increased calcium content.

The locusts are a little larger than crickets making them an excellent food for insect eating lizards (especially bearded dragons and monitors) and birds but also water and box turtles. Especially for turtles Herp Diner Grasshoppers are an excellent addition to the normal diet.

Moisture content 71,9%, crude protein 21,6%, fat content 2,4%, crude fibers 3,3%, calcium/phosphor ratio 3:1

Herp Diner - Grasshoppers medium 35g approx. 60 medium locusts, cooked	67321
--	-------

Lucky Reptile Herp Diner Bamboo Worms

Maggots and worms have a special attraction for reptiles as they are nutritious and have a high fat content. Lucky Reptile Herp Diner Bamboo Worms are preserved in the can with added cuttlefish bone powder for increased calcium content. There are no added artificial flavours or preservatives.

The large bamboo worms are an especially attractive food. There is no insect eating reptile or bird that can withstand this food. It is especially excellent for coddling up weak or gravid animals. Also bearded dragons and water turtles will love it as a treat. Due to the high amount of fat Herp Diner Bamboo Worms should only be fed occasionally.

Moisture content 70%, crude protein 9,2%, fat content 20%, crude fibers 1,7%, calcium/phosphor ratio 9:1

Herp Diner - Bamboo Worms 35g cooked bamboo worms	67331
---	-------

Lucky Reptile Herp Diner Mealworms

Mealworms are the larvae of the flour beetle and a treat for insectivorous reptiles and birds as well as fish. Turtles are also quite fond of mealworms. To improve the nutritional value Lucky Reptile Herp Diner Mealworms have been cooked together with cuttlefish bone powder. This ensures a high level of calcium which is a very critical part of the diet of reptiles, birds and fish.

Moisture content 68%, crude protein 15%, fat content 5,6%, crude fibers 2,3%, calcium/phosphor ratio 2:1

Bearded Dragon Food

New

Lucky Reptile Herp Diner Bearded Dragon Blend

Bearded Dragons love insects but it is important that you are offering them a good variety. Bearded Dragon Blend contains a mixture of large locusts, super worms and mole crickets, which are not available as live food. The cooked insects are readily accepted from a feeding dish or tweezers. Compared to live food they have the advantage that parasites are killed during the cooking process. The nutritional values are comparable to live food but Bearded Dragon Blend has a better calcium-phosphor ratio due to the addition of cuttlefish bone powder during the cooking process.

Moisture content 65,1%, crude protein 19,1%, fat content 7,1%, crude fibers 3,3%, calcium/phosphor ratio 6:1,5

Aquatic Turtle Food

Even though some manufacturers advertise that their food is suitable as sole diet, we can only strongly recommend to provide a great variety of food to your turtles. Only with a well balanced diet the animals will get all nutrients they need. It is also exciting to watch the different feeding behaviours for the different foods.

Lucky Reptile Herp Diner Shrimps

These cooked in the can freshwater shrimps are an excellent food for all turtles but also bearded and water dragons, monitors and other insect eating animals. Shrimps belong to the natural diet of a lot of animals and are greedily eaten. The "fresh" Herp Diner Shrimps are more readily accepted than sun- or freeze-dried crustaceans.

It should be avoided to feed saltwater shrimps which normally do not belong to the natural diet of most reptiles and have other nutritional values. With Herp Diner Shrimps your turtles will get a healthy and tasty food.

Available in two sizes.

Moisture content 73%, crude protein 18,1%, fat content 0,2%, crude fibers 5,3%, calcium/phosphor ratio 1:4

Lucky Reptile Iso Drink Electrolytes

Reptiles and amphibians lose water and dissolved substances by urination and defecation. Many of the lost substances are different salts, known as electrolytes. This effect is especially strong in cases of stress, diarrheal diseases or in extreme heat influences. External signs are often poor appetite, dry skin or apathy. It can also quickly lead to death of the animals.

If this happens it is necessary to fill up the daily lost water gently and to bring the electrolytes back into balance. With the Lucky Reptile Iso Drink electrolytes, the body doesn't need to work a lot for bringing back the balance of the electrolytes and all the needed vital salts are fed to the organism in an optimal dosage.

In addition, the Lucky Reptile Iso Drink also contains glucose which is absorbed by the body very quickly and provides direct energy immediately. This way Lucky Reptile Iso Drink Electrolytes help weak and stressed animals to regenerate. Lucky Reptile Iso Drink also enhances the general well-being of the terrarium inhabitants.

For optimal care of the animals you should give the Lucky Reptile Iso Drink regularly every 1-2 weeks. Iso Drink should also be provided in case of transport, as well as hibernation, illness and to support a medical treatment and of course to very dehydrated animals.

Vitamins and Minerals

Vitamins

Lucky Reptile Herbivit

Herbivit is a vitamin and mineral supplement specially formulated for herbivorous reptiles considering the newest scientific research. It was developed together with a renowned institute for animal diets and offers high quality ingredients with all necessary vitamins, minerals, trace elements and essential amino acids. The drawbacks of existing vitamin products on the market have been eliminated making Herbivit supposedly the best reptile vitamin product on the market. Important improvements have been the amounts of Vitamin D3 and A which are based on latest research. A calcium : phosphorous ratio of 4:1 corrects the higher phosphorous amounts in herbivorous food.

Herbivit is a well sticking powder and should be added 2-3 times a week to the animals diet to ensure proper supply with vitamins and minerals.

Herbivit 60g Vitamins for herbivorous reptiles

67051

Lucky Reptile Carnivit

Like Herbivit Carnivit was developed together with a renowned institute for animal diets and formulated to meet the needs of carnivorous and insectivorous reptiles. High quality ingredients guarantee a fast bio availability and good utilisation by the animals.

Carnivit is milled super fine and contains special carrier substances to ensure perfect sticking to feeding insects.

Dust the feeding insects 2-3 times a week to ensure proper supply with vitamins and minerals.

Carnivit 60g Vitamins for insecti-/carnivorous reptiles

67061

Lucky Reptile Multivit + D3

Multivit is a high quality and flexible to use liquid multivitamin product. It contains all important vitamins including vitamin D3.

The big advantage lies in its flexible application forms. The packaging includes a dripper and a spray head. With the spray head you can spray the vitamins over food but also on branches and leaves where the animals can lick it off. With the dripper you can add it to the drinking water or apply it directly into the animals mouth. With Multivit any application is possible and it can be ensured that the animals really take up the vital vitamins while there is never a guarantee with vitamin powder.

Who is looking for a easy and comfortably to use vitamin product or has to fight concrete deficiency symptome best uses Lucky Reptile Multivit D3. We recommend the combination with Lucky Reptile PRO Mineral D3.

Lucky Reptile PRO Mineral + D3

Pro Mineral D3 is a mineral supplement which contains vitamin D3 and organic bound calcium, which is easier for the body to absorb. Thanks to its good adhesion it sticks for a long time all over feeding insects body.

Especially during the time of egg deposition and the growth it is reasonable to feed vitamin D3 and calcium, because the demand is higher than usual and there is the risk of a rachitis. PRO Mineral D3 also can be used to counteract deficiency symptoms.

Of course PRO Mineral D3 also contains all other minerals and trace elements that have important functions in the animal's body.

PRO Mineral +D3 - 60g minerals + vitamin D3	67041

Lucky Reptile Bio Calcium Sepia Bone

Cuttlefish bone is a natural source of calcium and other minerals. Bio Calcium Sepia Bone are full bones which are not only excellent for birds; lizards, tortoises and turtles will also actively chew on the cuttlefish bone.

As with birds the "beak" of tortoises will be worn away while chewing on the bone. This prevents the beak from developing itself to unnatural sizes which is unfortunately fairly common with captive tortoises.

Bulk package also includes broken bones.

Bio Calcium Sepia Bone Double Blister with 2 cuttlefish bones	67011
Bio Calcium Sepia Bone 1kg bulk can contain broken bones	67015

Lucky Reptile Bio Calcium Sepia Crushed pieces

These small cuttlefish bone pieces are a natural source of calcium and other minerals. They can be offered to the animals in a dish so that they can actively satisfy their calcium requirements as needed and prevent calcium deficiencies.

In general cuttlefish bone contains a high value of calcium and is therefore readily accepted by the animals.

Bio Calcium Sepia Crushed 100g crushed cuttlefish bone pieces	67021
Bio Calcium Sepia Crushed 1kg bulk	67025

Lucky Reptile Bio Calcium Sepia Powder

Bio Calcium Sepia Powder is made of milled cuttlefish bone and ensures the calcium supply for reptiles. You can dust crickets and other food with Sepia Powder or offer separately in a dish.

The advantage of cuttlefish powder over other calcium products is its animal origin. This ensures a calcium of higher biological value compared to normal calcium carbonate.

Bio Calcium Sepia Powder 50g Cuttlefish Bone Powder	67031

General care and Healthcare Products

Analysis Sets

Lucky Reptile Health Scan - Parasite Test

With the Lucky Reptile Health Scan - Parasite Test you are getting a voucher for a fecal analysis at the famous German reptile specialist laboratory EXOMED. Included are also the necessary equipment and detailed instructions on when and how a fecal sample should be taken for analysis.

Since more or less all animals have parasites it is important to have regular fecal analyses done to be able to react quickly if required. Especially before introducing new animals to a group, before hibernation or in general with every new arrival it is recommended to do a parasite test.

We are proud to cooperate with the leading reptile specialists from EXOMED. You will have to send the samples to them for the analysis and will receive the results within one week either by fax, email or mail. It is no problem to send in samples from outside of Germany, the results will be provided in English language. In addition to the standard tests covered by the voucher of the Health Scan set, it is also possible to order special cryptosporides tests directly from EXOMED. Cryptosporides are a big problem with leopard geckos but are also known from bearded dragons and corn snakes.

Health Scan - Parasite Test

Products against Mites & Ticks

Lucky Reptile Miti-X

With products against mites a balancing act between effectiveness and animals health has to be done. A lot of insecticides that can be used directly on the animals often only show little effect. Miti-X is using a different but very effective way. It is used not on the animal but on its surrounding and the whole vivarium. The animal is removed and cage furniture and vivarium generously sprayed. Thanks to its longterm effect Miti-X will also fight the mites on the animals once it is put back into the vivarium. It is highly effective even against persistent pests like wandering mites (e.g. snake mites) and ticks.

The mode of effective is quite gentle to the animals and is tolerated well by most species. However, please read the instructions carefully as all insecticides have an increased damage potential if used incorrectly.

Miti-X is a biocide and only registered in Germany and Austria at the moment. Other countries please consult your local laws!

Miti-X 250ml

Geochelone chilensis

Cleaners and Disinfectants

Lucky Reptile BIODOR Terra

BIODOR Terra is a multiuse terrarium cleaner with microbiological action against bad odours. The product is earth friendly and safe for use with animals. BIODOR is supplied as concentrate and water has to be added before use. For easy handling a spray bottle with marking is already supplied in the package. Depending on the desired use the product can be easily diluted. For cleaning glass fronts a dilution of 1:15 (BIODOR : water) is sufficient whereas for cage furniture a dilution of 1:5 is recommended. One bottle of BIODOR concentrate is sufficient for up to 7,5L working solution.

Thanks to its special working agents BIODOR not only removes dirt and odours but also lime stains. When used regularly (weekly use recommended) it can prevent lime stains and odours from occurring.

Biodor Terra 500ml

66131

New

Lucky Reptile Dirt X Nano Sponge

The Dirt X Nano Sponge is a practical cleaning sponge "Made in Germany", which is using modern nanotechnology to give you excellent cleaning results. Especially limestains are difficult to remove with conventional cleaning agents. Dirt-X is excellent against resisting dirt and also removes limestains better as chemical cleaners.

ETA 4th quarter 2011

Lucky Reptile Dirt-X Nano Sponge

66151

Lucky Reptile Kovi-X Disinfectant

Kovi-X is an effective disinfectant with a wide application range. It is not only effective against the usual suspects like fungus, viruses and bacteria but also against coccidia-oocysts, worm eggs and other parasites. Especially coccidia and worms are a big problem for herp keepers and are difficult to be eliminated effectively. Kovi-X is excellent for use in addition to a veterinary treatment to remove the pests inside the terrarium and minimize the risk of re-infection. With a normal disinfectant there is no chance to remove coccidia from the terrarium and a re-infection is more or less guaranteed. For Germany, veterinarians estimate that 85% of all bearded dragons are infected with coccidia!

Before using Kovi-X the animals have to be removed from the terrarium. Attention! Kovi-X is fatal for invertebrates including spiders, scorpions and mites. Make sure that no residues are left when using in invertebrate terrariums.

Use biocides safely! Consult markings and product information before use! Only registered in Germany and Austria. Special versions for the UK and Switzerland are available. Other countries please consult your local laws!

Kovi-X 500ml Terrarium Disinfectant

Brachydactylus or similar

Cage Substrate

Substrate

Lucky Reptile Snake Bedding

Lucky Reptile Snake Bedding is made of hemp which is adsorbent and acts odour-inhibiting. The hemp is cultured biologically and without chemicals. It is compostable ensuring an environment friendly substrate from regenerative sources.

Snake Bedding is perfect for most snakes but also for tortoises and lizards from dry regions. As the substrate is light and fluffy, animals love burrowing themselves inside it. Contrary to beech wood chafing the hemp pieces are harmless when accidentally ingested.

Like most substrates Snake Bedding is not suitable for use with floor heating.

Snake Bedding 10L	65215
Snake Bedding 20L	65216

Lucky Reptile Cannabis Bedding

The Lucky Reptile Cannabis Bedding is a concentrate on hemp basis. If water is added the concentrate swells up to about 5 times its volume, resulting in a loose substrate that absorbs bad odours and waste. It is excellent for all tortoises and desert type reptiles like collared lizards, bearded dragons and uromastix. Burrowing reptiles like scincs will love this substrate as well. Thanks to its good water retaining abilities, it can also be used for reptiles from more humid regions. Contrary to sand or beech wood litter, Reptile Cannabis Bedding can be digested and is therefore safe if accidentally eaten by the animals. A 100% natural and regenerative product free of chemicals or pesticides. Bio degradable.

Like most substrates Cannabis Bedding is not suitable for use with floor heating.

Reptile Cannabis Bedding 4L	65212
Reptile Cannabis Bedding 12L for up to 50L substrate	65211

Lucky Reptile Eco Bark

This attractive pine bark substrate has characteristics that make it excellent for use in terrariums. It absorbs humidity and binds waste inside the terrarium. In addition it covers bad odors.

The multistep manufacturing process ensures uniform and fine grains and minimizes dust and "dirt" inside the substrate. The pine park has a slightly red coloring, rots only slowly and will not get mouldy in properly ventilated cages. Consequently it will keep its attractive appearance for a long time. Note that it is not made from French pine as most vivariums substrates that has high amounts of etherical oils but from German pine trees.

Eco Bark is excellent for reptiles from tropical regions and most snakes and tortoises.

Like most substrates Eco Bark is not suitable for use with floor heating.

Eco Bark 10L	65221
Eco Bark 20L	65222

Lucky Reptile Coconut Bark Chips

Lucky Reptile Coconut Bark Chips are coco chips pressed together to a brick. When placed in warm water the brick will swell up to about 8 litres of attractive coco chip substrate. This substrate is a very hygroscopic material, it absorbs water and raises humidity inside the terrarium. The Coconut Bark Chips maintains its attractive appearance and absorbing abilities for a long time. The coco chips are an excellent substrate for snakes, tropical lizards and large tortoises.

Lucky Reptile Coconut Bark Chips are a natural product (100% bio degradable) and free of chemicals, pesticides or fertilizers.

Like most substrates Coconut Bark Chips is not suitable for use with floor heating.

Coconut Bark Chips for 8L coco substrate

65201

Lucky Reptile Terrarium Humus

The Lucky Reptile terrarium humus consist of natural coco peat which has been pressed to a tight brick. If placed in water, this terrarium humus will swell up to about 8-10 times its volume. The humus is excellent for burrowing animals and can be used either dry or humid. It is an excellent substrate for tarantulas and tortoises as well as tropical amphibians and reptiles.

The Lucky Reptile terrarium humus is a natural product (100% bio degradable) and free of chemicals, pesticides or fertilizers.

Terrarium humus is suitable for use with floor heating if not too dry.

Mini Brick 150g produces approx. 2,5L humus

65102

Humus Brick 1000g produces approx. 15L humus

65101

Humus Block 4,5 kg produces approx. 70L humus

65103

Lucky Reptile Desert Bedding

Desert Bedding is a soil mixture developed in particular for desert and savannah type terrariums.

In nature only few animals are living on sand, most are actually avoiding sand. Therefore it is better to use more natural substrates. Desert Bedding is recreating the soil in arid regions and has a high clay content which allows the animals to dig burrows. In the lower regions of the substrate the humidity can be kept higher which is important since a lot of desert reptiles like uromastix can take up humidity over their skin.

New: Our favorite Desert Bedding is now available as Desert Bedding Outback with red colour!

Desert Bedding is suitable for use with floor heaters.

Desert Bedding 7 L

65121

Desert Bedding 20 L

65122

Desert Bedding "Outback Red" 7 L

65123

Desert Bedding "Outback Red" 20 L

65124

Lucky Reptile Jungle Bedding

Jungle Bedding is a special substrate mixture with sand which was specifically formulated for tropical terrariums. High quality materials and well considered formulation ensure a high structural stability and excellent water storage abilities. Even dried out substrate will quickly take up water again. The pH value (approx. 5,5 - 6,5) is simulating the leaf-humus layers of the tropical rainforest. Neither surfactants nor fertilizers have been added.

We recommend the use of Lucky Reptile Hydro Drain and Hydro Fleece as drainage layer below the Lucky Reptile Jungle Bedding, to prevent the substrate from getting swampy, a typical problem in tropical terrariums.

Jungle Bedding is suitable for use with floor heaters.

Jungle Bedding 10 L	65111
Jungle Bedding 20 L	65112

Lucky Reptile Hydro Drain

For tropical terrariums Hydro Drain ist essential. It is a special clay substrate which is excellent for water storage.

Hydro Drain acts as drainage layer below the normal substrate. The water seeps through the substrate and is stored in the Hydro Drain clay pieces. Once the storage capability is surpassed , you can still have water standing at the vivarium floor. As long as the fill height of Hydro Drain is not surpassed the regular substrate will not get swampy.

Thanks to its water storage abilities Hydro Drain increases the humidity inside the vivarium and is excellent to supply plants with water. We recommend to add a minimum layer of 3 cm Hydro Drain and cover it with our special Hydro Fleece. On top of this the normal substrate is placed, e.g. terrarium humus or Jungle Bedding. The Hydro Fleece prevents substrate from seeping into the drainage layer but lets through the water.

Hydro Drain in wet stage stage is suitable for use with floor heaters.

Hydro Drain 10L	65241
-----------------	-------

Lucky Reptile Hydro Fleece

The Hydro Fleece was developed for use with the Lucky Reptile Hydro Drain clay substrate. It prevents substrate from seeping into the drainage layer while letting hrough water without problems.

Compared to solutions with nets or meshes the main advantage of the Hydro Fleece is that it also stops fine materials like humus from getting into the drainage layer. The fleece does not rot and can be easily cut to the desired size. To cover the floor in larger terrariums several pieces of Hydro Fleece can be arranged with a small overlapping area to achieve the desired layer separation effect.

Hydro Fleece 100x50 cm	65245
------------------------	-------

Sand

Lucky Reptile Desert Sand

We offer real desert sand in high quality and the brightest colours from deserts all over the world. It is ensured that the sand is also suitable for the animals and has the necessary characteristics. The sand is free of dust and allows the animals to create burrows.

No artificial colouring or sharp edges!

The variant Namibia Yellow will get very hard if water is added. It is excellent for animals that love to dig their own caves. Especially attractive is the bright red Namibia Red sand.

Sand is suitable for use with floor heaters.

"Namibia Red" Desert Sand 5 kg	65501
"Sahara Gold" Desert Sand golden brown	65503
"Sahara White" Desert Sand 5 kg	65504
"Sahara Yellow" Desert Sand 5 kg	65507
"Namibia Red" Desert Sand 25 kg BULK, no retail packaging!	65521
"Sahara Gold" Desert Sand 25 kg BULK, no retail packaging!	65523
"Sahara White" Desert Sand 25 kg BULK, no retail packaging!	65524
"Namibia Yellow" Desert Sand 25 kg BULK, no retail packaging!	65527

Lucky Reptile Sand Bedding

Contrary to the real Lucky Reptile Desert Sand this sand is from Europe but still natural sand. High attention has been paid to ensure round edges, as sand with sharp edges can injure the animals.

Available are different natural colours and a red clay sand which can be shaped as desired in wet state and allows the animals to create their own burrows.

Sand Bedding is suitable for use with floor heaters.

Sand Bedding yellow 7,5L	65551
Sand Bedding grey 7,5L	65552
Sand Bedding Clay Sand red 7,5L	65553
Mixed Sand Pallet contains: 20x yellow, 20x grey, 40x clay-red	65550

Lucky Reptile Herp Pottery

Mixing sand and humus with clay increases the stability of the resulting substrate and allows the animals to create burrows like in nature.

Lucky Reptile Herp Pottery is a clay granulate. Its advantage over clay powder is that there is less dust during the mixing process. It can be mixed dry or dissolved in water. In the latter case the result is more homogenous. The more Herp Pottery you mix under the substrate the harder the result will be.

Perfect for active and attractive terrarium sculpturing including the background.

Herp Pottery 2,5 kg	65611
---------------------	-------

Phelsuma klemmeri

Moss

Lucky Reptile Vivarium Moss

Lucky Reptile Vivarium Moss is perfect for decorating your vivarium and creating places inside your vivarium with high humidity. Soak the moss in water to allow it to take up lots of humidity. It will also look green and fresh.

Vivarium Moss 150g

65811

Lucky Reptile Sphagnum Moss

Lucky Reptile Sphagnum Moss comes from controlled cultivation and is from highest quality. It is shipped dried and pressed to a brick which allows for long-term storage. If water is added this moss brick will swell up to about 5 litres of fresh and moist sphagnum moss. This moss is excellent for providing humid places inside the terrarium (e.g. hiding boxes for snakes) and it increases the overall humidity). Excellent for tropical terrariums and most amphibians Sphagnum Moos is perfect for use with the Multi Box and as subsoil for orchids and other plants.

Sphagnum Moss brick 100g for approx. 5 L moss

65801

Breeding Substrate

Lucky Reptile HatchRite

HatchRite is a specially formulated breeding substrate for reptile eggs which already has the right substrate humidity. It is ready to use and no water has to be added.

HatchRite is being used by professionell American breeders since years and lead to increased hatch rates and successes.

Normally it is not necessary to add water during the breeding process. When using HatchRite you simply open the bag and pour it into a closed breeding box. HatchRite has been used with great success incubating amongst a lot of other species: bearded dragons, leopard geckos, corn snakes, ball pythons, green tree pythons, etc.

HatchRite 2L

65911

Lucky Reptile Vermiculite

Vermiculite is a breeding substrate for reptile eggs. It is a good heat insulator and pulls humidity away from the eggs while ensuring a high humidity in the air.

It also can be used as cage substrate. But caution: dry vermiculite is absorbing lots of humidity, therefore make sure that your animals and eggs do not dry out.

Lucky Reptile Vermiculit 1 Liter

65901

Lucky Reptile Vermiculit 5 Liter

Terrarium Furniture and Deco Products

Backgrounds

Backgrounds are not only an attractive addition to a vivarium, they are also useful as they offer protection from sight and climbing space. Combine different background types, e.g. the Coco Backgrounds and the Flora Mat and you will achieve an especially attractive result.

Lucky Reptile Cork Backgrounds

Lucky Reptile Cork Backgrounds consist of pressed natural cork, covered with a decorative layer made from bark of the oak tree. The rough bark offers plenty climbing and hiding space.

Apart from the standard model "Rough" made of the outer bark, the models "Desert" and "Dark" are available. "Desert" is made from the inner bark and has an auburn colour. The model "dark" is made of a special dark bark which has its own flair and is excellent for forest type vivariums.

Lucky Reptile Cork Backgrounds are available two standard sizes plus several sizes fitting the Lucky Reptile Herp-Tarrias and several other standard sizes vivariums. They can be cut and installed easily thanks to their smooth back.

Natural Cork Background "Rough" 60x30 cm	65363

Lucky Reptile Black Cork Backgrounds

Black cork backgrounds are made of pressed cork material and have good insulating abilities. Cover the sides of the vivarium with black cork and you will not only save a lot of energy but also offer the animals protection from sight and a lot of additional climbing space. Thanks to the flat back the cork backgrounds are easy to install with silicone. Not for aquarium use!

Black Cork Background 100x50x2cm	65311
Black Cork Background 50x20x2cm	65312

Lucky Reptile Coco Background

Lucky Reptile Coco Backgrounds are 100% natural backgrounds made from coco fibres. They are free of chemicals, pesticides and fertilizers. Natural rubber is used as glue which is completely safe for the animals. The material can be cut easily and quickly adapted to any terrarium size. Our Coco Backgrounds are also an excellent subsoil for plants. Tillandsias, vines and tendril plants can be planted on the background and quickly adhere to the coco fibres. With our Coco Backgrounds you can easily create an attractive surrounding in your terrarium.

Coco Background 30cm 4x coco fibre mat	65301
Coco Background 50cm 4x coco fibre mat	65302
Coco Background 100x50x2cm	65303

Lucky Reptile Background Altamira

These competitively priced, artificial "Rock Backgrounds" in slate design offer an easy way to make the terrarium more attractive. They are made of a robust foam material that can be cut easily. The installation inside terrariums is easy. Also suitable for aquarium use.

Background "Bamboo" 78x48 cm	65382
Background "Bamboo" 98x48 cm	65383
Background "Bamboo" 118x58 cm	65384

Natural branches, wood and stones

Lucky Reptile Cork Rustica

Cork Rustica are collected bark pieces of the southern European oak tree. These are not pieces that have been peeled from the trees but have been collected from fallen off branches. Consequently the pieces vary significantly in shape, length and diameter and can have several branches. Some may also have a decorative moss or lichen layer. For this product no living tree has been damaged deliberately. The cork pieces are good climbing and hiding spaces for your animals.

Cork "Rustica" Cork Tubes (natural), mixed sizes	64131
--	-------

Lucky Reptile Cork harvested

For harvested cork the cork is cut and peeled off the tree. Harvesting is only allowed at certain times to allow the trees to regenerate. Therefore we cannot guarantee availability over the full year. In general the quality is better than those of the collected pieces. It looks "cleaner" but less natural. Also diameters are thicker and normally there are no branches.

Cork flat	64133
-----------	-------

Lucky Reptile Tronchos - Cork Branches

Tronchos are collected branches from the oak tree. They still have the wood core and are available in a huge variety of lengths and diameters. Most of the branches have several branch outs and moss and lichens layers on them which makes them look very attractive. Tronchos are excellent to provide your animals with a lot of climbing space.

"Tronchos" Cork Branches different sizes, price per kg	64132
"Tronchos" Cork Branch 30-40 cm	64134
"Tronchos" Cork Branch 40-60 cm	64136
"Tronchos" Cork Branch 60-90 cm	64137
"Tronchos" Cork Branch 90-120 cm	64138

Tropicolotes tripolitanus

Lucky Reptile Grapevine

Lucky Reptile Grapevine is sandblasted and looks very attractive. Compared to the Premium Grapevine it has a brighter colouration and is quite thin. The pieces have unique branching creating a special charm.

Sandblasted Grapevine "S" approx.30-45 cm	64100
Sandblasted Grapevine "M" approx.40-60 cm	64101
Sandblasted Grapevine "L" approx.50-70 cm	64102
Sandblasted Grapevine "XL" approx.60-90 cm	64103
Sandblasted Grapevine "Show" approx.80-110 cm	64104

Lucky Reptile Grapevine "dark"

The same wood as the normale grapevine but not sandblasted to the core. A layer of dark brown colour is left which makes the wood look quite different.

Grapevine dark "S" approx.30-45 cm	64170
Grapevine dark "M" approx.40-60 cm	64171
Grapevine dark "L" approx.50-70 cm	64172
Grapevine dark "XL" approx.60-90 cm	64173
Grapevine dark "Show" approx.80-110 cm	64174

Lucky Reptile Premium Grapevine

Premium Grapevine is sand basted and has a darker colouration. Normally the trunk is thick and has several branches which makes it excellent for arbicol reptiles. Compared to the normal grapevine it is heavier and the branches are thicker.

Premium Grapevine "M" approx.40-70 cm	64181
Premium Grapevine "L" approx.60-80 cm	64182
Premium Grapevine "XL" approx. 60-100 cm	64183
Premium Grapevine "Show" > 100 cm	64184

Lucky Reptile Grapevine Tree

The Grapevine Tree has four wooden feet allowing it to stand on its own offering a robust climbing place reptiles but also rodents and birds.

Grapevine Tree Dark, approx. 50 cm	64176
------------------------------------	-------

Lucky Reptile Grapevine Root

These grapevine roots are excellent for decorating the floor area of your terrarium and provide a lot of climbing and hiding space.

Sandblasted Grapevine Root "S" approx.30-40 cm	64109
Sandblasted Grapevine Root "M" approx.40-50 cm	64110

Lucky Reptile Terrarium Roots bleached

These attractive roots are perfect as climbing and hiding spot for all types of terrariums. They are bleached and have an almost whitish colour. The medium and XL models are roots from one piece while large and Show roots are put together from several small roots giving them an especially attractive look.

Terrarium Root bleached medium approx. 40-60 cm	64122
Terrarium Root bleached large approx. 50x50x20 cm	64123
Terrarium Root bleached XL approx. 80x20x60 cm	64124
Terrarium Root bleached Show approx. 100x25x25 cm	64125

Lucky Reptile Terrarium Roots natural

Contrary to the bleached the Lucky Reptile Terrarium Roots these roots have their natural colour. They are made from the same wood and consists of one piece.

Terrarium Root Natural small approx. 30-40 cm	64126
Terrarium Root Natural medium approx. 40-60 cm	64127

Lucky Reptile Mopani Wood

Mopani Wood is a relatively heavy and robust wood type which is perfect for aquariums and vivariums, offering the animals plenty of climbing and hiding space. It is sandblasted and has an attractive coloring: light beige on the top and a very dark brown on the bottom.

This makes it an attractive addition to desert type vivariums.

The different pieces vary greatly in size and shape. Very large pieces are available as well.

Available with barcode label and sold by piece OR in mixed sizes chargeable by the weight!

Mopani Wood mixed sizes, charged per kg	64112
Mopani Wood small approx. 15-30 cm	64113
Mopani Wood medium approx. 20-40 cm	64114
Mopani Wood large approx. 40-60 cm	64115

Lucky Reptile Savannah Wood

Savannah wood is a dark brown and robust wood. It is sandblasted and has several branches with hollows and caves, making it an excellent decoration item for terrariums and aquariums.

The pieces are sandblasted and can vary greatly in size and shape. Very large pieces are available as well.

Available with barcode label and sold by piece OR in mixed sizes chargeable by the weight!

Savannah Wood mixed sizes, charged per kg	64111
Savannah Wood small approx. 15-30 cm	64116
Savannah Wood medium approx. 20-40 cm	64117
Savannah Wood large approx. 40-60 cm	64118
Savannah Wood XL > 60 cm, show pieces	64119

Lucky Reptile Savannah Bush

The Savannah Bush consists of several thin branches and is a great stylistic element for desert type terrariums. They also offer a lot of climbing space to the animals.

Savannah Bush approx. 70 cm

64191

New

Lucky Reptile Cactus Wood

Lucky Reptile Cactus wood provides many benefits for your animals. Because of its rough and pitted surface, it is perfect for climbing and a welcome help for the skinning of reptiles. By the extraordinary appearance, it is a natural enrichment in any desert terrarium. Our cactus wood is only sand blasted and not chemically treated.

Cactus Wood small approx. 20 cm long, 4-5 cm thick

64011

Cactus Wood medium approx. 40 cm long, 2-3,5 cm thick

64012

Cactus Wood large approx. 80 cm long, 4-5 cm thick

64013

Cactus Wood decoration sample

Lucky Reptile Amazon Lianas

Amazon lianas can reach lengths of several meters and reach up 10 cm in diameter. They are light and have several hollows which are excellent water containers or planters. Amazon Lianas are excellent for tropical terrariums with lizards, snakes and amphibians and provide the animals with hiding and climbing places. Available in mixed sizes charges by the meter or as 80-120 cm piece with barcode. Large pieces of 150 cm an up have to be sent on pallet!

Corkscrew Liana small, approx. 80-120 cm approx. 4-7 cm thick

64053

Corkscrew Liana small, approx. 200 cm approx. 4-7 cm thick

64054

Lucky Reptile Asia Lianas

The Asia Lianas are relatively thin, round lianas which are nicely twisted like a corkscrew. They are about 100 cm long and perfect stylistic elements in tropical setups, offering the animals plenty of natural climbing space.

Asia Liana small, ca. 100 cm	64155
Asia Liana medium, ca. 100 cm	64156
Asia Liana large, ca. 100 cm	64157

Lucky Reptile Bamboo

These natural bamboo sticks are excellent for decorating terrariums. They are good for climbing and offer hiding space to the animals. Especially day geckos but also crested geckos love bamboo.

Bamboo Stick 1m approx. 3 cm thick	64163
Bamboo Stick 1m approx. 5 cm thick	64164
Bamboo Stick 1m approx 10 cm thick	64161

Rainbow Rocks

These nicely colored stones are excellent for decorating aquariums and terrariums.

Acanthosaura armata

Natural Decoration

Lucky Reptile Xaxim Panel

Xaxim is obtained from tree fern. Under optimal climate conditions and watering this dark material can show new plant growth on its surface. It is also an excellent soil for plants like bromeliads and tillandsias. This makes Xaxim an excellent addition for tropical terrariums to increase the attractiveness. Xaxim panels can be glued with silicone and are excellent for use as background or substrate. There are panels available which are cut straight on all sides but also one that has an uneven front (Panel "nature"). This version usually has better abilities for plant growth.

"Xaxim" Tree Fern Panel "natural", ca. 40x20 cm Dicksonia	64313
"Soft" Xaxim Panel, ca. 50x20x2 cm	64315
"Xaxim" Tree Fern Panel, ca. 30x20x2,5cm	64314

New

Lucky Reptile Xaxim Cave

With this cave, you can create an especially authentic retreat for your animals in your rain forest terrarium. With enough moisture and light included mosses and ferns will soon sprout, creating a wonderful tropical atmosphere

New

Lucky Reptile "Rose of Jericho"

This incredible desert plant often is referred to as "Rose of Jericho". In its dried state it is already a great decoration of desert type terrariums. The showstopper however is, when it is getting wet. The twigs unfold and the whole plants opens up and looks green again. After drying-out it closes back to its original form, just to unfold again when water is coming into play.

A great effect in every terrarium!

ETA 4th quarter 2011

Rose of Jericho	64210
-----------------	-------

New

Lucky Reptile Desert Bushes

These little, filigree bushes are an excellent decoration for small desert type vivariums. They offer shelter and hiding places to the animals and greatly increase the attractiveness of the vivarium with their wonderful appearance.

Available with natural colour and bleached in a very light tone.

ETA 4th quarter 2011

Lucky Reptile Terra Tube - Coco Planting Sticks

Lucky Reptile Terra Tubes are tubes made from coco fibre and filled with coco humus substrate. They offer hiding and climbing places to the animals and are also an excellent soil for plants. By simply cutting into the coco fibre tube plants can be placed into the substrate inside the Terra Tube. Thanks to the water absorbing capabilities of the coco substrate, Terra Tubes are also excellent to increase the humidity inside the terrarium. Prior to installation it is recommended to soak the Terra Tubes in warm water, the tube will loose most of its elasticity as a result.

Terra Tubes are a 100% natural product without chemical or fertilizers.

Terra Tube 30cm, Ø 5cm	Cocofiber stick with coco substrate	64301
Terra Tube 40cm, Ø 5cm	Cocofiber stick with coco substrate	64302
Terra Tube 40cm, Ø 10cm	Cocofiber stick with coco substrate	64303
Terra Tube 50cm, Ø 10cm	Cocofiber stick with coco substrate	64304
Terra Tube 60cm, Ø 10cm	Cocofiber stick with coco substrate	64305

Lucky Reptile Coco Planter

Lucky Reptile Coco Planters are a 100% natural products without chemicals or pesticides. The planters are made of coco fibres, natural gum is used as adhesive. The advantage of these coco fibre planters is, that the roots of the plants can grow together with the fibres. If the planter finally gets too small for the plant, both plant and coco fibre planter can be transferred into a larger planter.

Lucky Reptile Coco Planter can be used for terrariums, aquariums, ponds and also as a regular planter for your home and garden.

Coco Planter, small	coco fiber planter 0.7l	65401
Coco Planter, medium	coco fiber planter 1.5l	65402

Lucky Reptile Coco Dish

The Lucky Reptile Coco Dish is a natural water dish made of a coconut. It is excellent for natural vivariums.

Coco Dish	64208
------------------	--------------

Lucky Reptile Coco Cave

Lucky Reptile Coco Cave are hiding caves made from natural coconuts. They are excellent natural hiding spots for aquariums and terrariums and are well accepted by the animals. Available are whole nuts, halved nuts and three quarter coconuts. The coconuts are about 10-15 cm in size.

Coco Cave	whole coconut, approx. 10-14 cm	64201
Coco Cave 3/4	3/4 coconut, approx. 10-14 cm	64202
Coco Cave 1/2	1/2 coconut, approx. 10-14 cm	64203

Lucky Reptile Coco Box

The Lucky Reptile Coco Box is made from a whole coconut. The hard interior of the coconut is hollowed out and acts as hide-out for the animals. The fiber hull of the coconut is still existent and ensures a natural and attractive look.

The Coco Box is perfect as wet box if you fill it with Sphagnum Moss.

Coco Hide Box	64205
----------------------	--------------

Artificial Decoration

The advantage of artificial decoration is its imperishability and the better hygienic conditions. Most artificial decoration items are easier to clean and to disinfect and last a lifetime.

When it comes to the optical appearance a lot of items are difficult to distinguish from the natural antetypes. Since it is also possible to design artificial decoration for specific requirements and applications they often have a high functionality.

Lucky Reptile Terra Vine

These artificial lianas have a wire core, so they can be bend easily. This allows decorating the terrarium as desired and with great flexibility. With our Terra Vines you have no problems with the mood of nature: while natural branches and lianas will not always fit like you want them to, you can just bend the Terra Vines like you desire. The soft rubber coating minimizes the risk of injury for the animals. With the Terra Vines you can maximise the usable space and can design the climbing areas in full accordance with the animals needs. They are especially excellent for chameleons.

Terra Vine S	180cm, Ø 6mm	30301
Terra Vine M	180cm, Ø 12mm	30302
Terra Vine L	180cm, Ø 18mm	30303

Lucky Reptile Terra Branch

Lucky Reptile Terra Branches are artificial but natural looking branches. Thanks to the wire core they can be bend easily and allow decorating your terrarium like you desire. The plastic coating prevents injuries of the animals. Contrary to natural branches, grapevine and lianas Lucky Reptile Terra Branches can be bend to fit. The space available in your terrarium can be used best and the Terra Branches can be easily arranged according to the animals need.

Lucky Reptile Terra Branches are excellent for providing your lizards, chameleons and snakes with a lot of climbing space.

Terra Branch	40 cm	30403
Terra Branch	70 cm	30402

Lucky Reptile Terra Cliff

Lucky Reptile Terra Cliff is an artificial terrarium rock system. It offers climbing and hiding space to the animals and has the advantage of a much lower weight compared to natural stone, reducing the risk of injury for the animals. The system can be easily and flexibly expanded, allowing the herp keeper to create large "rock stacks" as to his requirements with plenty of hiding and climbing spaces as well as basking areas. The starter sets contain two "socket" and one top plate as well as the necessary connectors and silicone. Various extensions are available separately.

Terra Cliff Set small	contains 2x TC-02, 1x TC-04 + accessories	64221
Terra Cliff Set large	contains 2x TC-02, 1x TC-05 + accessories	64222
Terra Cliff Socket small	approx. 9x5x2 cm	64231
Terra Cliff Socket medium		64232
Terra Cliff Socket large	approx. 21x11x4 cm	64233
Terra Cliff Top Plate medium	approx. 29x10x4 cm	64234
Terra Cliff Top Plate large	approx. 39x13x4 cm	64235
Terra Cliff Connectors (10 pcs.)		64242
Terra Cliff Plugs (10 pcs.)		64241

Lucky Reptile Tree Planter

Tree Planter are made of resin and look like a natural tree trunk with an opening to add a plant. An excellent product to add live plants to your terrarium without destroying its natural looks with plastic or clay pots.

The Tree Planter can also be fitted with normal planters with standard diameters, e.g. for use on the side board.

Tree Planter small	approx. 12x14x6,5 cm	64341
Tree Planter medium	approx. 19x22x9,5 cm	64342
Tree Planter large	approx. 30x27x13 cm	64343

Lucky Reptile Water and Food Dishes

These new Lucky Reptile dishes are made of a special material. It does not only look like stone but also feels like it when touched. While the bowls look from the outside like a rough stone, they have a smooth interior for easy cleaning and hygiene.

Our Water Dishes are available in three colours: Sandstone, Granite and Lava.

Water Dish Sandstone - mini	approx. 8x6x2 cm	64410
Water Dish Sandstone - small	approx. 11x8x2,5 cm	64411

Turtle Dish Lava	approx. 17x15x2 cm	64439

Dendrobates pumillo Bastimentos

Lucky Reptile Dripper

Drippers are very practical and good for the well-being of the animals, however most available models are not looking very attractive. The Lucky Reptile Dripper changes this fact; it is looking like a tree trunk but is a fully usable dripping system with internal 1L water reservoir. It looks very natural adding a certain attractiveness to the terrarium. It also presents additional climbing and hiding spaces to the animals. The Dripper is mounted on a special support which is fixed to the vivarium wall with silicone (included).

DRIPPER small 1L Water Tank

64491

Lucky Reptile Multi Box

The Multi Box is no normal hiding place but a specially designed system. If you add Lucky Reptile Sphagnum Moss you can create a humid retreat which is readily accepted by the animals. Such a hiding place helps to prevent skin problems and promotes easy shedding of the animals. It is perfect for Ball Pythons!

In addition the Multi Box is an excellent egg laying place for lots of snakes and lizards. When designing this product, the characteristics of the natural egg laying places were considered which leads to a high acceptance of this product for egg laying and reduces the risk of the animals being eggbound.

The cave consists of two pieces and has a special sliding system which allows for easy control of the interior.

Available in "Stone" and "Bark" design.

Mulit Box "Bark" small approx. 20x11x9,5 cm

Hide Cave large approx. 45x25x20 cm

64263

Plants

Keeping living plants in your terrarium is not an easy task, most die quickly or are eaten or destroyed by the animals. Lucky Reptile plants are the perfect alternative to living plants making your terrarium look more attractive and alive. They do not need water, do not rot and cannot be eaten. They are also very robust, so that even large lizards cannot damage them.

New

Lucky Reptile Jungle Plants

Lucky Reptile Jungle Plants are natural looking copies of attractive tropical plants like bromelias and orchids. Your animals won't discover a difference to a natural plant. The plants are an everlasting and attractive addition to your terrarium.

Waterfalls

Lucky Reptile Waterfall

The Lucky Reptile Waterfall is made of robust resin with stone appearance. It has a safe stand, a flat back and no openings through which animals could enter the interior of the waterfall.

The whole waterfall is a well thought off, practical system. The water part which is accessible to the animals, is kept shallow for intent. The animals can drink out of the reservoir but will not defecate into it, because it is too shallow. Also no feeding insects can drown. Waterfalls with larger reservoir quickly can be full of germs and bacterias as reptiles defecate into the water and there is a high risk of drowning.

The front part of the waterfall is removable for servicing the pump. A compartment for adding a fogger (not included) is available.

Lucky Reptile Waterfall small	approx. 18x18x22 cm	64481
Lucky Reptile Waterfall medium	approx. 23x22x29 cm	64482
Lucky Reptile Waterfall small "UK Model"	approx. 18x18x22 cm	64485
Lucky Reptile Waterfall medium "UK Model"	approx. 23x22x29 cm	64486

Turtle Islands

Lucky Reptile Turtle Island

Lucky Reptile Turtle Islands are floating islands for turtles. They are made of a robust foam material that looks like natural stone material. With the supplied suction cups they can be attached to the aquarium walls preventing them from floating around and to easing the turtles exiting from the water. Lucky Reptile Turtle Islands offer a resting and basking place to the turtles, while below the island all space is available for diving.

Also available are Corner Turtle Islands which have suction cups on two sides adding to a firm hold, making these islands suitable for large turtles.

Hint: Also use plastic plants, e.g. Lucky Reptile Turtle Plant or Jungle Vine to decorate your turtle tank. These plants do not only look attractive but also offer additional resting and basking places to the turtles.

Turtle Island small	ca. 18 x 13 cm	4850
Turtle Island medium	ca. 28 x 17 cm	4851
Turtle Island large	ca. 39 x 21 cm	4852

Vivariums, Cabinets, other Cages and Incubators

Display Vivariums

Under the definition "show vivarium" we are offering fully equipped and ready to use vivariums.

Each vivarium is decorated individually with Lucky Reptile products and is ready for immediate use. The technical equipment is highlighted in the item descriptions below.

We will gladly install options like a rain system or a humidifier.

For those who want to have something special, a premium decoration can be ordered. In this case we will use special vivarium sculpturing techniques making the vivarium one of a kind.

Our show vivariums can be obtained through the pet trade who can discuss special wishes with us.

Examples for our show vivariums can be found in the galleries on www.lucky-reptile.com.

New

Wooden Display Vivariums

Wooden vivariums are perfect for desert type reptiles, snakes and chameleons. They blend in nicely with the living environment and offer protection from sight on 3 of 4 sides reducing the stress for the inhabitants. The wood has good insulating abilities reducing the energy costs.

Glass Display Vivariums

Show vivariums made off glass are recommended for all types of tropical herps. Each vivarium has an integrated background. There is the choice between an artificial stone background or a natural cork background. In case of the cork background parts of the terrarium sides will be clad with the cork and covered with a black foil from the outside.

Technical Equipment of the vivariums:

60x50x60 cm "Poison Arrow Frog":

1x Bright Sun Jungle 50W with Bright Control PRO

80x50x100 cm "Tropical":

1x Bright Sun with Bright Control PRO, 1x UV Sun T5 with Light Strip 24W

120x60x100 cm "Tropical":

3x Bright Sun with Bright Control PRO

100x50x60 cm "with view window":

1x Bright Sun with Bright Control PRO

Viewable hide-out integrated into the soil!

No matter if plastic plants, live plants, artificial or natural decoration, we will consider your wishes for decoration. Please advise when ordering.

Plug and Play Terrariums & Terrarium Sets

To ease the entry into the great hobby of herp keeping, we are offering specially tailored vivariums for an attractive selection of vivarium animals. These vivariums have been designed with the requirements of the animals in mind and have proven themselves in long-term tests.

For most types we are offering Plug and Play Terrariums as well as sets. The Plug and Play Terrariums are ready to use with full equipment and decoration, often including live plants. They only have to be plugged into the wall socket and are ready to use.

The sets contain the same components except the live plants but have to be assembled by you. This includes glueing in the background, adding the decoration and in case of a wooden vivarium also putting together the vivarium.

In addition we are also offering with the so called Terrarium Basis Sets a flexible solution which can be quickly adapted to the requirements of your favorite animal. Your pet retailer will offer advise.

New

Lucky Reptile AquaTarrium

The core of this attractive paludarium is the big waterfall with gadgets for plants and a Mini Fogger. The waterfall sports dry resting and basking places where the animals can remain if they are not inside the water.

Around the waterfall there is a big swimming area with a water level of up to 20 cm.

The AquaTarrium is perfect for a great selection of animals living in and around the water, e.g. fire bellied toads, frogs, newts, juvenile garter snakes and turtles, crabs and fish. Also keeping several species together like e.g. fish and amphibians is possible.

The AquaTarrium not only offers an attractive biotope in your living room but also has a calming and relaxing effect.

New

Lucky Reptile Terrarium Basis Set

Our Terrarium Basis Sets are fully assembled Furni-Tarriums that already have the lighting sockets pre-installed.

Apart from a Lucky Reptile Light Strip T5 one or two E27 lampholders are installed.

You only have to select your favorite animals and get the right lamps for them. Thanks to the installed Thermo Socket PRO lampholder every E27 lamp can be used, including the Lucky Reptile Bright Sun. Simply attach the ballast to the Thermo Socket PRO and screw the Bright Sun into the socket.

We guarantee the correct electrical installations by our technicians and seal the terrarium hems on the inside with silicone.

No matter if you want a snake, a lizard or a tortoise the Terrarium Basis Sets are the perfect and easy entry into the hobby. Take the vivarium, add the lamps and now you just have to decorate it as desired.

Other sizes on request!

Lucky Reptile Designer Terrarium

A long wish comes true: a vivarium which blends in like piece of furniture into your living room. The Lucky Reptile Designer Terrarium has a modern two colour design with dark Wenge decor mixed with light colour. It is also made unique by the wave form of its sliding doors.

The generous dimensions make it excellent for popular species like Corn Snakes, Veiled Chameleons and Lawson's Bearded Dragons.

The Designer Terrarium is supplied complete with cabinet and integrated lighting hood. It includes three halogen luminaires (low voltage) and two luminaires with Bright Control PRO 70W for the Lucky Reptile Bright Sun (lamps not included).

Dimension with cabinet: 115x72x183 cm

Inner Dimensions Terrarium: approx. 112x69x90 cm

Designer Terrarium 115x72x115 cm complete with cabinet + luminaires	69501

Glass Vivariums

Lucky Reptile Herp-Tarrium

The Lucky Reptile Herp-Tarrium is an especially developed glass terrarium with black plastic frame acting as edge protection. They have a removable lid with robust metal mesh that has an excellent light penetrability. This makes it possible to place lamps on top of the terrarium and still ensures that sufficient light and UV is reaching the animal. For the easy installation of lamps and other technical equipment like spray nozzles from rain systems there are sealable holes in the lid. The front ventilation is installed vertically. This reduces the risk from animals getting stuck in the mesh which is quite high with terrariums that have horizontal ventilation. The sliding doors do not go over the full front but end in side profiles leaving a small glass frame to the side (50x40x50 cm and up). This reduces the escape risk of quick animals like day geckos when opening the door. For increased operation comfort the lid can be removed which eases cleaning significantly. In addition cable lead throughs can be openend in the lid to add heat mats or rock heaters to the cage interior.

The Herp-Tarriums are available in generous sizes and offer a design and function which makes them stand out compared to standard vivariums.

New

Lucky Reptile Herp-Tarrium SD

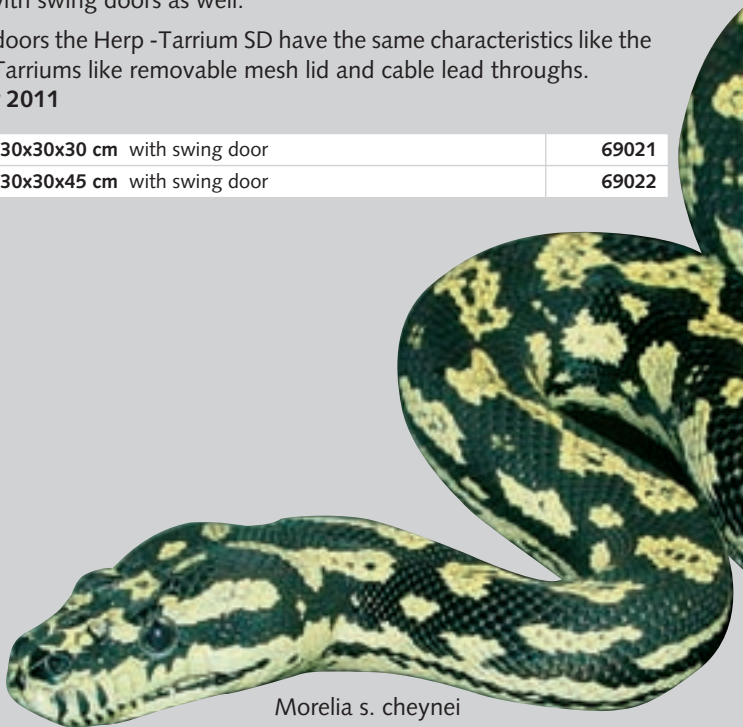

The popular Lucky Reptile Herp-Tarriums are now also available in a version with swing door. This eases handling in small vivariums. However, the escape risk in larger vivariums is bigger compared to sliding doors which is why we are not offering these with swing doors as well.

Apart from the doors the Herp -Tarrium SD have the same characteristics like the standard Herp-Tarriums like removable mesh lid and cable lead throughs.

Wooden Vivariums

Lucky Reptile Furni-Tarrium

Why do terrariums have to be made of glass? Wood is also an excellent material to build practical and nicely designed terrariums. The Lucky Reptile Furni-Tarriums are made of high quality, coated MDF boards and are like a piece of furniture. Compared to glass vivariums they have several advantages. The wood construction with Maple or Beech coating blends in nicely in the living room and can be chosen optically fitting to the rest of the furniture. In addition, wood is a much better insulation material than glass helping to reduce the required energy for running a terrarium. Something to be considered when looking at today's rising energy costs. In addition to the lower operating costs there are further advantages. It is for example no problem to drill additional holes where desired to install lighting or other things and you can stack several terrariums on top each other without the need for a shelf. Also the animals will feel safer and well protected inside a wooden terrarium compared to a glass tank. The wooden terrarium offers protection of sight everywhere except the front while in glass vivariums the animal has to pay attention to all sides which causes a lot of stress. An animal will feel home much quicker inside a wooden terrarium and will show a more natural behaviour thanks to the reduced stress.

The front screens are made of tempered glass for maximum safety. These glass screens will not break when dropped to the floor. There are included stick-on plastic handles.

For ensuring optimal ventilation large ventilation areas have been installed to the front and backside. A cable leadthrough can be found in the back and will also accommodate big Schuko or UK plugs.

The Furni-Tarriums are shipped flat-packed. This ensures easy, safe and inexpensive transport. In case of a move you can also simply take apart your terrarium again for easier transport. For a waterproof sealing on the inside a tube of silicone is included.

Lucky Reptile Furni-Tarrium "2 colours"

The popular Lucky Reptile Furni-Tarrium is also available in a two colour design. The light coloured interior sets accents and highlights the animals. The dark colour on the outside is modern and creates a great contrast. In combination with a Furni-Top and maybe even a cabinet the terrarium will be a great eye catcher in any living room.

FurniTarrum 150x80x100 cm "dark 2 colours"	69647

Lucky Reptile Furni-Top

The Furni-Top hood is designed as add-on to the Lucky Reptile Furni-Tarrium. It contains a mesh lid which makes it possible to mount the lamps outside the terrarium while hiding them from view at the same time.

Assembly is very easy and installing a Furni-Top in the aftermath when the Furni-Tarrium is already in use, is also relatively easy. Instead of the regular terrarium lid the mesh lid is installed. On top you then add the side pieces of the hood and the original lid goes on top of the hood part.

The front panel is attached over magnets and can be easily removed for servicing the lamp and other electrical items inside the hood. It is also possible to install the panel further back in the hood in order to get shelf space e.g. for books, food, etc. on the front side.

Nicely decorated such a shelf gives a refreshing new appearance and makes the terrarium combination a multifunctional piece of furniture.

Available colours: Maple, Beech

FurniTop 60x40 "Maple" 60x40x23 cm	69671

Lucky Reptile Vivarium Cabinets

These high quality cabinets have been developed fitting the Furni-Tariums but of course can be used for all other fitting terarium sizes as well.

The 60 cm wide cabinets have one compartment with one shelf. The larger cabinets have two compartments. On the backside there is a lead-through for wires.

Instead of cheap woodchip boards high quality MDF boards are used.

Sold as DIY kit for assembly.

Mesh Cages

Lucky Reptile OpenAir Vivarium

The OpenAir Vivarium is made from robust nylon mesh which cannot be eaten by crickets unlike other products on the market. It is excellent for animals that require proper ventilation like chameleons. The OpenAir Vivarium is also perfect for enabling your animals a stay outdoors; the nylon mesh allows UV to penetrate the cage and minimizes the risk of overheating.

The terrarium is easy and quick to assemble and disassemble and very light and handy if disassembled. This makes it also excellent for field trips and research. The cage has eyelets for hanging or attaching carrying straps.

Watertight plastic trays are available as accessories and can be added to the bottom.

Plastic Boxes and Terrariums

New

Lucky Reptile Insect Tarrium

Our Insect Tarrium is ideal for explorers and those who want to be one. It can house mantids, stick insects, beetles, spiders and many other small invertebrates and even aquatic species. For most animals like insects and snails that children find outside on their excursions the InsectTarrium is the perfect container to watch them for a while before releasing them again into the wild. And for adults the attractive cylinder shaped tank with its LED lighting offers diversion on the desk.

The InsectTarrium is made of robust PET plastic. The removable LED lid contains a fine ventilation mesh, feeding door and an LED light unit with two daylight and one moonlight LED. A light sensor automatically switches over to moonlight when it is getting dark.

InsectTarrium 5L ca. 15x15x25 cm	69131

Varanus acanthurus

Incubators

Lucky Reptile Herp Nursery II - Incubator

Now with more space for up to 24 cricket boxes!

The Herp-Nursery II is a multifunctional device equipped with an innovative peltier-system. This allows the device to cool and to heat, making it suitable for use as an incubator but also for hibernating animals.

It can switch automatically between heating and cooling to keep the desired temperature. Contrary to other incubators the Lucky Reptile Herp Nursery II will automatically enter cooling mode if the breeding temperature is surpassed and bring it back to optimum preventing the loss of eggs due to overheating. A very useful function on hot summer days!

The temperature area is approximately 5° to 60°C but depends on the surrounding temperature. The digital thermostat allows setting the temperature in 1°C steps. Please note that there is temperature gradient of 4°C between upper and lower area inside the device. Thanks to the plenty of space the Herp Nursery offer, this is a big advantage as you can incubate different species with different temperature requirements or breed for specific sexes and all in one device!

Due to the temperature gradient, the displayed temperature is only a guideline and we recommend monitoring the temperature in the different parts with a separate thermometer.

The Herp Nursery II is very energy efficient and only needs 10 W/h on average. A large front window enables a good and easy monitoring of the inside. Interior lighting can be turned on if necessary.

Dimensions (WxDxH): 42 x 34 x 48 cm, interior 27 x 24 x 37 cm

New

Lucky Reptile Egg-O-Bator

One of the most interesting aspects of herp keeping is breeding the animals. The Lucky Reptile Egg-O-Bator is the perfect incubator for the first breeding success and offers everything necessary for the beginning.

It has a capacity of approximately 4L suitable for three breeding tubs. Operating is as easy as it can be: Plug it into the wall socket and choose one of three possible temperatures: 26°C, 29°C and 32°C. These temperatures are perfect for most popular reptiles, such as leopard geckos, bearded dragons or corn snakes. Breeding recommendations and hints for these and other popular species can be found in the extensive manual.

The casing of the incubator has very good insulation capabilities, minimizing the influence of the outside temperature and also guaranteeing a low energy consumption of just 5 W/h on average.

The Egg-O-Bator brings a lot of fun because of its innovative egg form and blends in well into children's rooms. Three stickers with different funny motives - chameleon, snake and tortoise - are included, so young herp keepers can decorate their first incubator by themselves as desired.

Dimensions (WxDxH): 28x26x32 cm, interior: 11,5x14,5x22 cm

Tools

Tools for sexing

Sexing Probes

These probes are used for sexing reptiles and especially snakes. This method usually supplies accurate results and is often the best way to sex the animals properly as a lot of species cannot be sexed from external characteristics. Attention! You can injure the animals when using probes for sexing. The risk is especially high with small and juvenile animals.

Probe Set, 5 probes	68142
Professional Sex Probe Set contains 6 probes	68141

Tweezers & Forceps

Lucky Reptile Tweezers

Tweezers are excellent for feeding reptiles and for handling scorpions, tarantulas and smaller lizards and snakes. They are made of stainless steel and are very robust. Excellent for all these people that like to keep a distance to the animals. There is a big advantage from offering the food over tweezers as you know exactly how much the animal eats and can directly influence what it eats.

Tweezers 14 cm straight	20320
Tweezers 20 cm straight	20321
Tweezers 30 cm straight	20322
Tweezers 40 cm straight	20323
Tweezers 20 cm angular	20326
Tweezers 45 cm angular	20327

Lucky Reptile Forceps

Thanks to the practical handle you have a more secure grip on forceps than on tweezers. They are therefore excellent for handling dangerous animals where a safe grip is a prerequisite. Especially scorpions can be handled very well with forceps. Generally forceps can be put to the same use as tweezers. They are made of high quality stainless steel.

Feeding Tongs 25cm angular	20329
Feeding Tongs 40cm angular	20330

Leiolepis guttata

Hooks and Tongs

Lucky Reptile Snake Hooks

Snake Hooks are a must when handling snakes. You can keep the snakes at a safe distance and the handling with a hook is less stressful for the animals. Lucky Reptile Snake Hooks are made of aluminium, have a good grip and are robust. They are being made in German in a workshop for handicapped people.

Snake Hook 50cm	68101
Snake Hook 75cm	68102
Snake Hook 100cm	68103

Lucky Reptile Deluxe Snake Hooks

These professional snake hooks have an excellent manufacturing quality. They have a rubber grip for best handling. Also optically attractive!

Snake Hook Deluxe 60cm	68105
Snake Hook Deluxe 100cm	68104

Lucky Reptile Collapsible Hook

Collapsible Hooks can be adjusted to the desired length and therefore offer the best possible flexibility.

The Pocket Hook is small and handy and excellent for small snakes. It can be adjusted from 18 to 50 cm. The large collapsible hook is robust, adjustable from 40 to 100 cm and can be arrested at the desired position. An excellent hook for handling most snakes.

Pocket Hook, collapsible approx. 18-50 cm	68111
Collapsible Hook 40-100 cm	68109

Lucky Reptile Snake Pin Hook

With the snake pin hook snakes can be pinned down behind the head, so that they cannot bite and can be safely grabbed with the hands afterwards. The flexible rubber piece at the end minimizes the risk of injury and makes the pin hook suitable for most snakes sizes. Perfect for handling venomous snakes.

Snake Pin Hook 60cm	68151
Snake Pin Hook 100cm	68152

Lucky Reptile Snakes Tongs

Snake tongs are perfect for handling dangerous snakes (i.e. poisonous snakes). They have pistol grip and the tongs can be used to secure the snake safely behind the head without hurting it. Also available in a foldable version.

Snake Tongs, 66 cm	68121
Snake Tongs, 100 cm	68122
Snake Tongs, 130 cm	68123
Snake Tongs, 110 cm collapsible	68124
Snake Tongs, 130 cm collapsible	68125

Tools for Feeding and Drinking

Lucky Reptile Pinky Press

The Pinky Press is used for force feeding snakes and other reptiles. It is basically a metal syringe into which the food is given and then injected as mash into the mouth of the animal.

Pinkie Press	68131
Replacement Glass Tube for Pinky Press	68132

Lucky Reptile Pipettes

These plastic pipettes are excellent for providing drinking water to chameleons and other lizards. For juveniles it is especially important that they drink enough and this can be ensured by offering them water through pipettes. The pipettes can also be used for dosing and providing vitamins and medicines. The soft plastic tube minimizes the risk of injury for the animals. Biting into the pipette will not end in accidental injuries.

Plastic Pipettes, 3 pcs.	68133
--------------------------	-------

Protection Wear

Lucky Reptile Protection Gloves

These robust protection gloves combine movement flexibility and good protection. They are perfect for handling snakes and especially large lizards like monitors, green iguanas or water dragons whose claws can cause serious injuries if unprotected.

Protection Glove grey "right hand"	68161
Protection Glove grey "left hand"	68162

Other Tools

Lucky Reptile Bug Stop

The Bug Stop is a trap for crickets, cockroaches and several other insects. It has a glue surface which has a bait included that attracts the insects which then get stuck in the glue. The trap should be placed in the proximity of areas known to be inhabited or frequented by the insects as well as strategical areas like the kitchen.

Bug Stop - Cricket Trap

68201

Lucky Reptile Cable Organiser

The Cable Organiser is a useful accessory to tidy up your cables around the terrarium. It contains a 50 cm cable lead profile that can be glued to the back of the terrarium/aquarium. In addition a 75 cm flexible cable tube and four cable clips are included, giving you all means to organise and hide the cables. Of course it is possible to cut the cable leads to the required length.

In order that the cables can be identified easily, labels are included.

Cable Organiser 50 cm

68401

Lucky Reptile Sand Cleaner

The Sand Cleaner is a convenient tool for cleaning vivarium sand. It is very robust and has a special design which offers several advantages over original sand sifters. The flat underside allows easy handling inside the vivarium. The perfectly sized holes ensure a quick and thorough cleaning result. In order that no dirt and sand is distributed outside the vivarium, the Sand Cleaner has a part with no holes at the back. By holding the Sand Cleaner in an angle the dirt is collected in this area and can be safely brought to the trash bin.

Lucky Reptile Snake bags

The Lucky Reptile bags are the ideal packaging and protect the animals from possible injury during transport.

Snake Bag 200x150 mm with string	68811
Snake Bag 420x300 mm with string	68812

Transport Boxes for Lizards

The transport boxes have been especially designed for transporting lizards. The shape makes the animals feel secure and prevents larger lizards from turning around and hurting themselves. A much better option than a bag or plastic box. Available in two sizes.

Transport Box for lizards	29200
Animal Box small 165x50x60 mm, 400g/m2	29202

Lucky Reptile Heat Pack

The heat packs will start to warm when they get contact with oxygen. This makes them an excellent heat source during the transport of reptiles and other animals. Attention! For proper function sufficient oxygen is necessary. Inside a closed styrofoam box heat packs will not work properly. The special design of the Lucky Reptile Heat Packs ensure a long warming period and steady temperatures.
