## **1 System Requirements**

Please pay attention to the following system requirements.

### **1.1 Operating System Requirements**

Any Windows operating system, which supports MetaQuotes MetaTrader version 4.0 platform, also known as MT4.

### **1.2 Hardware Requirements**

The minimum Random Access Memory (RAM) requirement is 384MB, however 512MB RAM is recommended to avoid extended virtual memory usage. Note that this memory requirement is for MetaTrader application only, excluding other applications running at the same time (e.g. MS Office). If other applications are running parallel with MetaTrader application please increase the RAM requirement accordingly.

### **1.3 MetaTrader (MT4) Requirements and Settings**

The MagicMA EA is compatible with MetaQuotes MetaTrader platform version 4.0 build 600 or higher. In general this is referred to as MT4 terminal, build 600 or newer.

### **1.4 Forex Broker Requirements**

The MagicMA EA is compatible with both 4 and 5-digit data feeds based brokers. The MagicMA EA automatically detects the type of the feed and adjusts the EA parameter pip values where necessary, e.g. the parameter 'TakeProfit1' value of 100 pips is to be entered as 100 regardless of 4 or 5-digit feed.

The selected MetaTrader based broker should allow keeping open orders on the account for long period of time, i.e. the broker should not close and re-open orders over night for swap calculation, or should not merge open orders for any reason.

In certain cases, when the MagicMA EA is configured to maintain multiple buy as well as sell trades at the same time across charts of the same market, hedging must be supported by the broker on the account. Buy and sell open positions at the same time must be allowed on the same market, e.g. multiple buy and sell orders on the EURUSD market at the same time should be possible, without any dependency amongst or impact to the orders.

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

Both fixed and variable spread broker platforms are supported.

**IMPORTANT:** For smooth trade management the MetaTrader application and the EA should be on-line, up and running during all market open hours (usually Sunday to Friday).

## **1.5 ECN/STP Broker Accounts**

Many brokers offer Electronic Communications Network (ECN) or Straight Through Processing (STP) accounts. Common behaviour for these accounts is the variable spread and market orders where no initial stop loss and take profit targets can be specified. In this case the market order must be submitted with no SL and TP values, and these values are to be set in the second step using an additional order to the opened ticket.

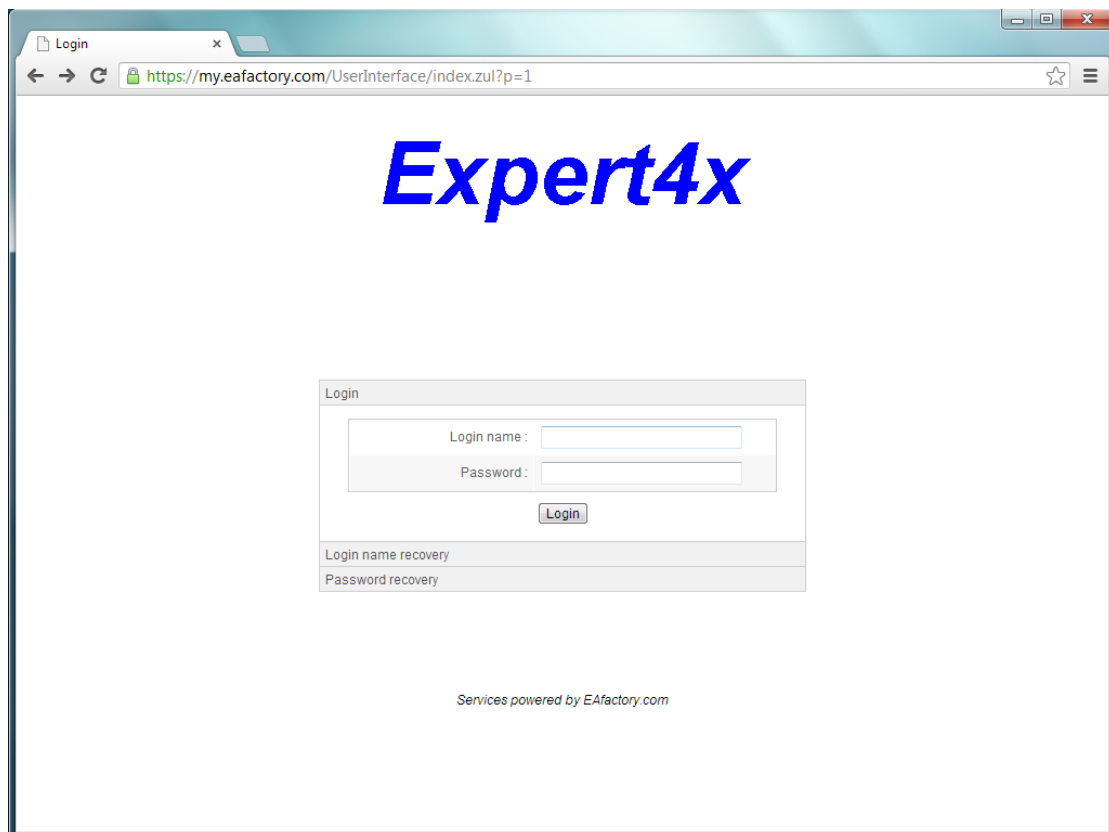

### **IMPORTANT**

For ECN/STP broker accounts please set the MagicMA EA parameter 'ECNorSTPAccount' to true. This way the EA will submit the initial market order with no SL and TP values and will set those using a follow up order in the second step. This is mandatory behaviour, forced by the nature of the ECN/STP broker accounts and is applicable to any EA.

## 2 MagicMA EA Installation Instructions

Please follow these steps to get the MagicMA EA installed on your system:

1. Exit MT4 if it was running (File/Exit)
2. Log in to web support area at <https://my.eafactory.com/expert4x>

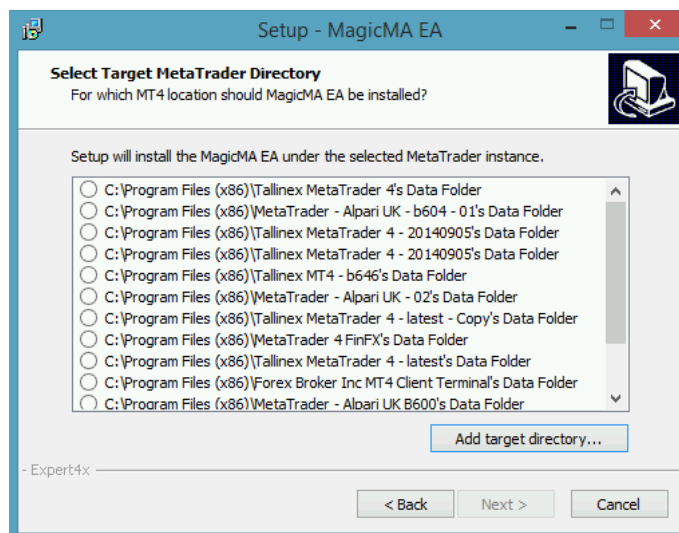

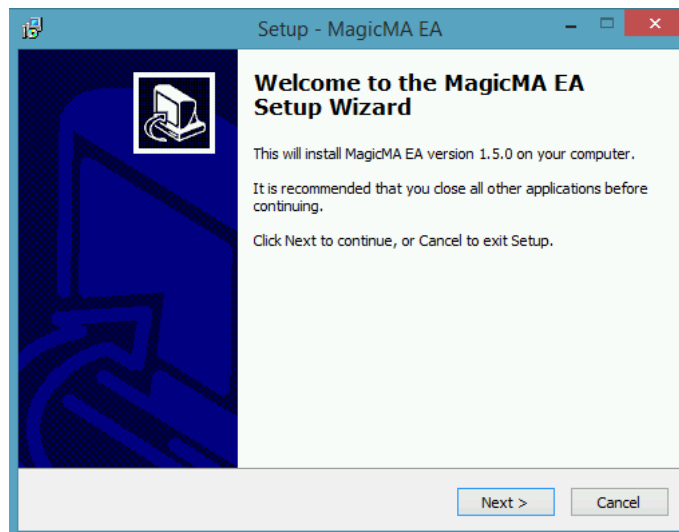

3. Select the desired service and download the latest version's setup application.
4. Run the setup application. Select the MT4 folder during setup to where you want the service installed.
5. When setup completes start up MT4. 'MagicMA' entry should appear under the 'Expert Advisors' node in the Navigator window (View/Navigator)

These pictures highlight the steps how to install the Expert Advisor.

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

The setup application lists the available MT4 instances. Select one of them for installation target and click Next.

Note: For some earlier Windows versions the list may not contain all the MT4 instances. In this case use the 'Add target directory...' button to navigate to and pick up the desired folder. For earlier Windows versions the typical MetaTrader installation location could be

C:\Program Files\<<BrokerSpecificName>\

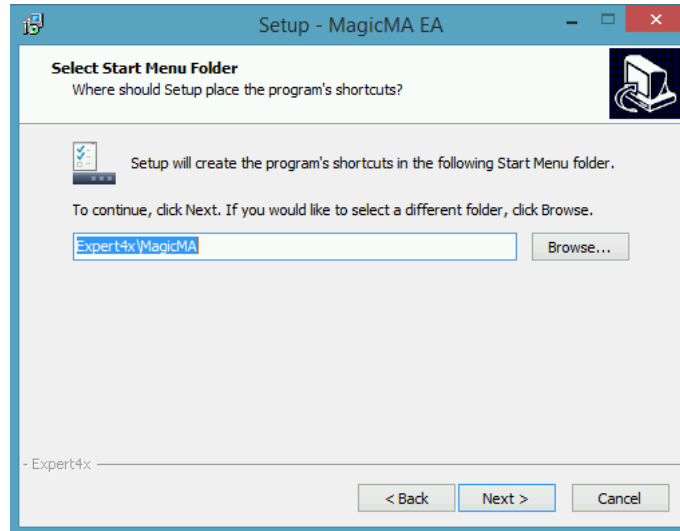

but you may have selected something else while performing the MetaTrader installation. As a hint, the following shows you the default path to the main MT4 directory for some brokers:

IBFX broker: C:\Program Files\Interbank FX Trader\experts  
Alpari UK broker: C:\Program Files\MetaTrader - Alpari UK\experts  
ODL UK broker: C:\Program Files\ODL MetaTrader 4\experts

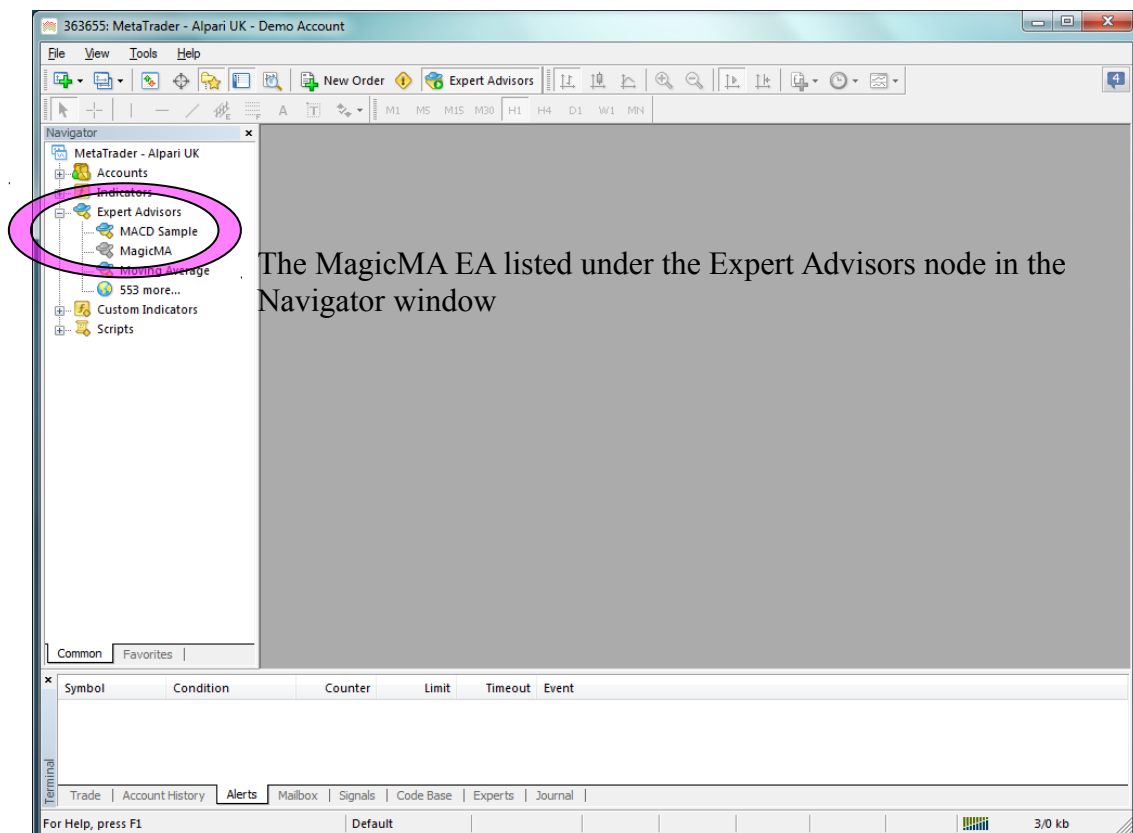

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

Always select the main MT4 folder itself for installation target, not any of its sub-directories.

When the installation is complete, start up MT4 and check that the Expert Advisor appears in the Navigator window:

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

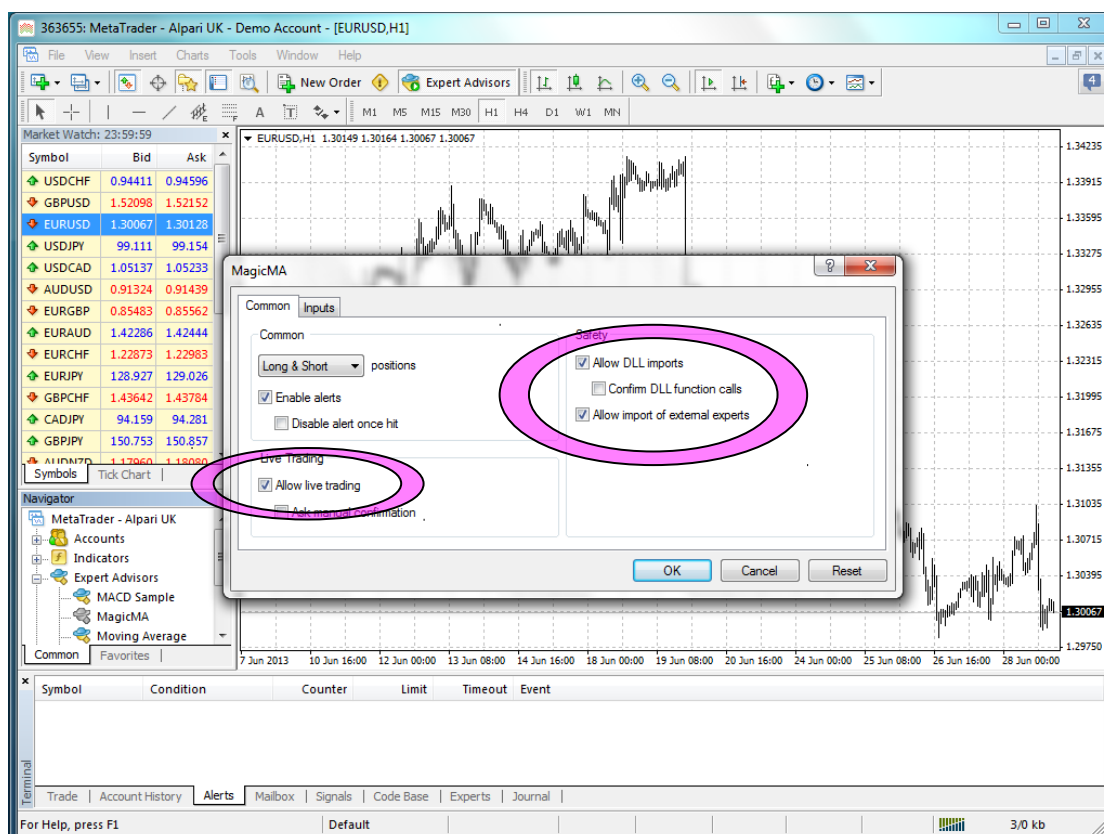

So everything is set up for the first activation of the MagicMA Expert Advisor.

## 3 MagicMA EA First Time Activation

The following pictures demonstrate the first time activation of the MagicMA EA in a few steps.

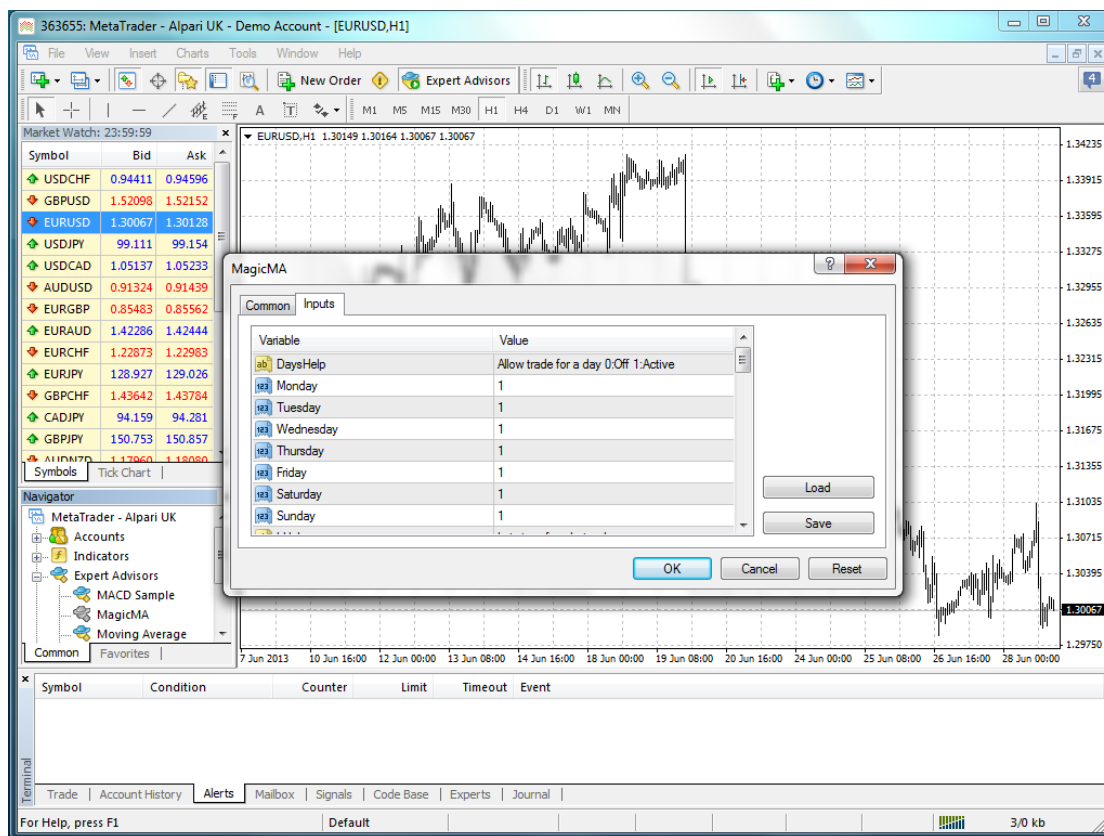

Drag & drop the MagicMA Expert Advisor from the Navigator window (View/Navigator) to a chart window and select the 'Common' tab:

Ensure that the 'Allow live trading', 'Allow DLL import' and 'Allow import of external experts' are checked and 'Confirm DLL function calls' is unchecked. Select the 'Inputs' tab:

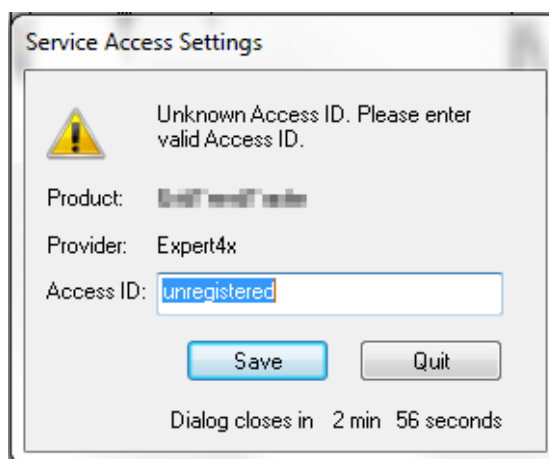

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

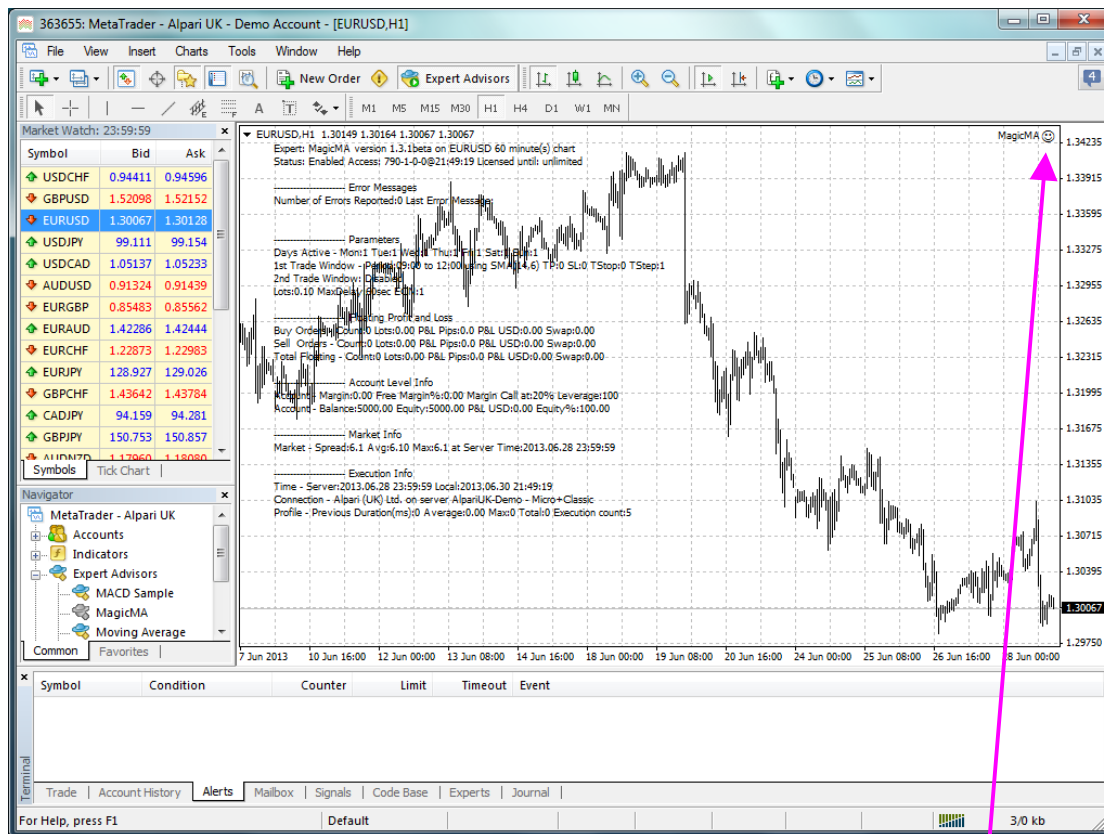

This lists the parameters of the EA where the operational aspect of the MagicMA can be set up. For more details see MagicMA EA Configuration Guide below – for now click OK and let the EA start up with default settings.

At the very first time the EA prompts for the Access ID to verify that the usage of product is licensed. The Access ID can be edited on the web support site at <https://my.eafactory.com/login>. The Access ID is pre-configured and the same as the login name to the web support site. Enter the Access ID and click 'Save':

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

The MagicMA EA has been attached to the chart. The smiley face in the top-right corner shows that the initialisation of the MagicMA EA was successful and the EA is now looking for trading opportunities.

See the smiley face in the corner:

In case of a problem getting the expert advisor up and running please refer to the Troubleshooting section below.

## 4 MagicMA EA Configuration Guide

In order to activate the MagicMA EA attach it to a chart window – for more details see section MagicMA EA First Time Activation above.

### 4.1 Configuration and Operation Principles

The MagicMA EA manages only those tickets (a.k.a positions) on the account which belong to the MagicMA EA: every order submitted to the account is marked with the 'MagicNumber' and, in return, only those tickets on the account will be considered by the MagicMA EA which are marked with this 'MagicNumber'.

In general it is recommended to run on an account one EA product at a time. This helps understanding the ongoing trades and troubleshoot situation if and when needed. While this maybe feasible for demo accounts this may not be feasible for live accounts where there could be the need to execute multiple expert advisors types on the same account at the same time. Using multiple expert advisors on the same account is only viable if each and all expert advisor will follow the above MagicNumber principle and they manage only their own tickets on the account.

**IMPORTANT: If you plan to use multiple expert advisor products (other than the MagicMA EA) on the same account please ensure upfront with the expert advisor providers that their EA's are suitable for that as per the above.**

If you plan to use multiple MagicMA EA on the same account at the same time please ensure that

- The 'MagicNumber' is set to different and unique number for each chart period – see below the table, and
- Only one MagicMA EA is attached to the same chart and period, e.g. only up to one EURUSD,M15 chart is open which has the MagicMA EA attached to it.

Here is a sample:

Period	MagicNumber
M1	6000
M5	6010
M15	6020
M30	6030
H1	6040
H4	6050
D1	6060

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

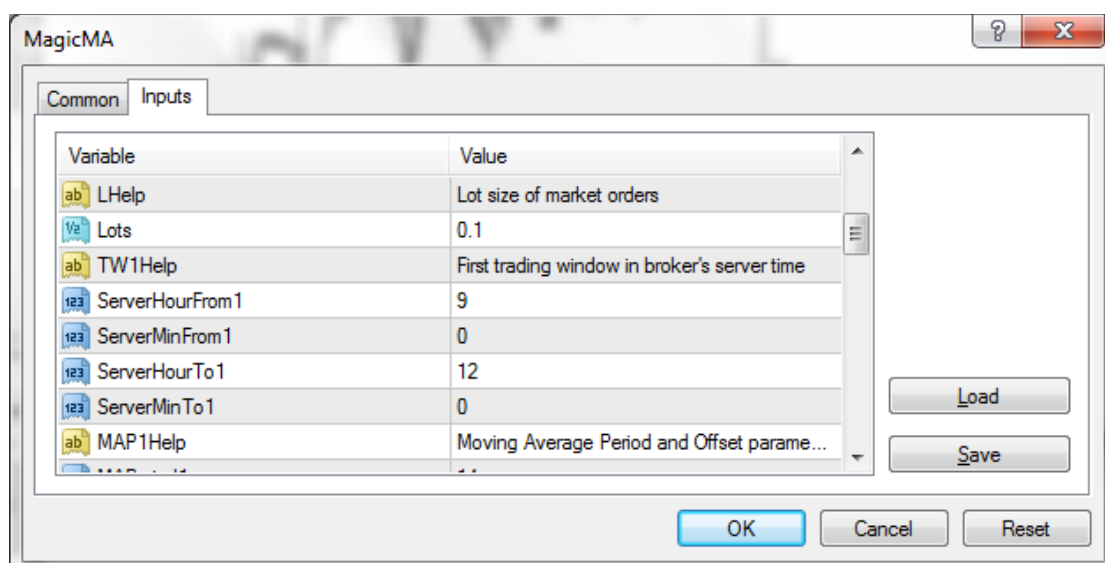

Period	MagicNumber
W1	6070
M1	6080

## 4.2 MagicMA EA Parameter Descriptions

Below is the description of the MagicMA EA parameters.

**Monday to Sunday** – enable (value 1) or disable (value 0) new trades on the referred day. Trading windows are active for a day only if the day itself is enabled by this setting.

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

**Lots** – lot size for new orders placed by the MagicMA EA. This lot size is used for orders submitted in either of the trading windows.

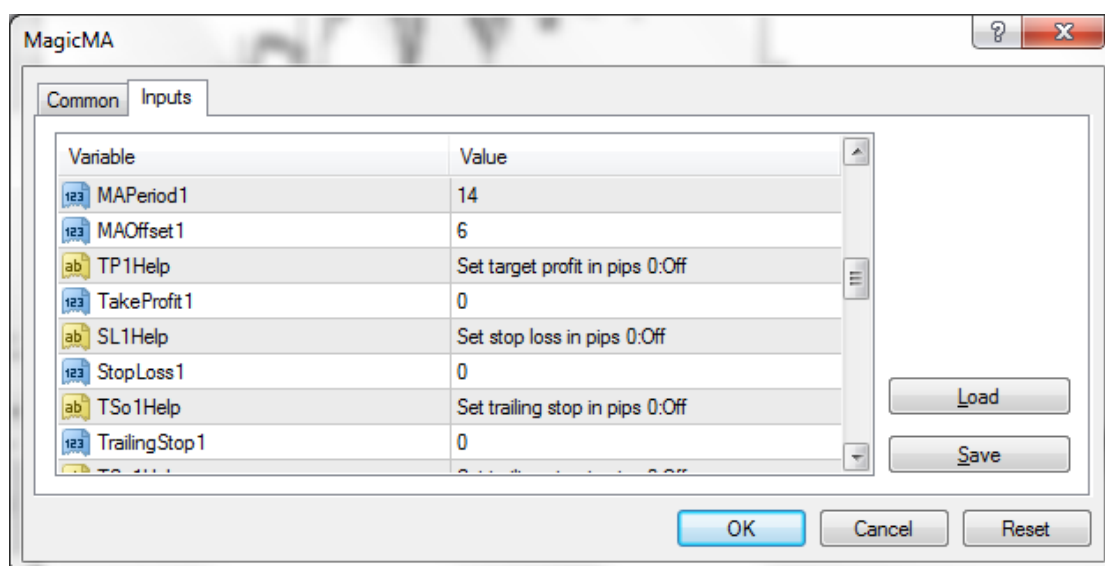

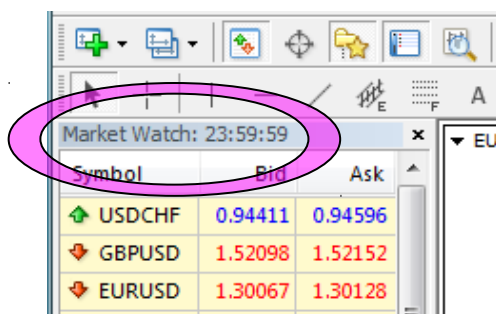

**ServerHourFrom1, ServerMinFrom1, ServerHourTo1, ServerMinTo1** – defines the first trading window the MagicEA EA is looking for new trades. Trade can only be triggered when the broker server's time falls within this period:

HourFrom:MinFrom <= server time < HourTo:MinTo

Sample settings:

Search for new trade triggers	ServerHourFrom1	ServerMinFrom1	ServerHourTo1	ServerMinTo1
Between 9am and 12pm	9	0	12	0
Between 9:30am and 11:45am	9	30	11	45
All day	0	0	24	0

Note: the broker's server time is displayed at the header of the Market Watch window.

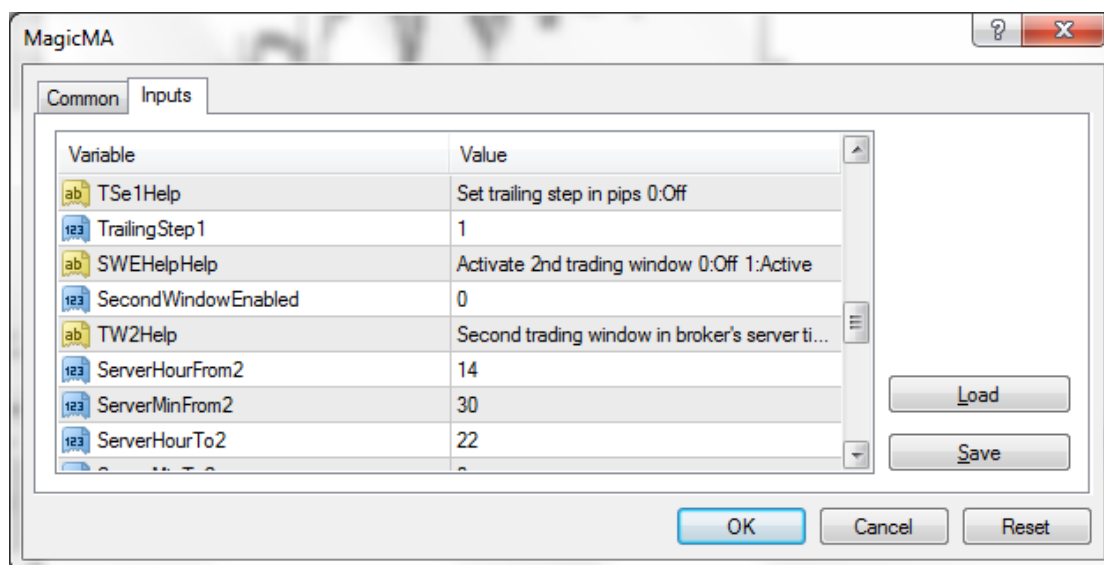

## Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

**MAPeriod1, MAOffset1** – the period and offset parameters of the simple moving average indicator the MagicMA EA uses to identify trading triggers during the first trading window.

**TakeProfit1, StopLoss1** – take profit and stop loss in pips for new orders submitted during the first trading window. When set to value 0 (zero) then no take profit or stop loss is set for orders. No fractional pip value to be entered, e.g. for 100 pips take profit or stop loss the parameter value should be set to 100 regardless of 4 or 5-digit broker feed.

**TrailingStop1** – trailing stop loss in pips for orders submitted during the first trading window. When set to value 0 (zero) then stop loss will not be adjusted, otherwise stop loss will be adjusted by the MagicMA EA to trail the new price and profit peaks. No fractional pip value to be entered, e.g. for 50 pips trailing stop loss this parameter value should be set to 50 regardless of 4 or 5-digit broker feed.

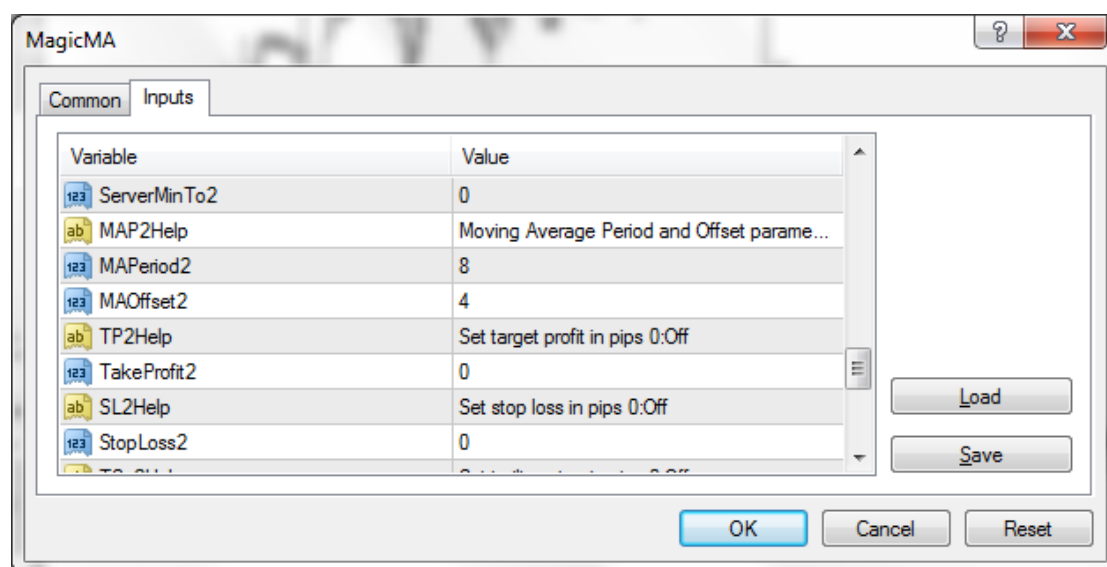

**TrailingStep1** – trailing step in pips for orders submitted during the first trading window. Only relevant if trailing stop feature is turned on ( $\text{TrailingStop1} > 0$ ). When set to value 0 (zero) then trailing in steps feature is turned off, otherwise the trailing stop will be adjusted every time when the ticket profit reached  $\text{TrailingStop1} + \text{TrailingStep1}$  pips. In other words trailing of price happens in user-defined steps rather than at every small gain into further profit. No fractional pip value to be entered, e.g. for 5 pips

## Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

step this parameter value should be set to 5 regardless of 4 or 5-digit broker feed.

**SecondWindowEnabled** – enable (value 1) or disable (value 0) the second trading window for a day. The MagicMA EA is looking for new trades during the second window only if this parameter enables to do so.

**ServerHourFrom2, ServerMinFrom2, ServerHourTo2, ServerMinTo2** – defines the second trading window the MagicEA EA is looking for new trades. Trade can only be triggered when the broker server's time falls within this period:

HourFrom:MinFrom <= server time < HourTo:MinTo

Sample settings:

Search for new trade triggers	ServerHourFrom2	ServerMinFrom2	ServerHourTo2	ServerMinTo2
Between 2pm and 5pm	14	0	17	0
Between 4:30pm and 9:45pm	16	30	21	45

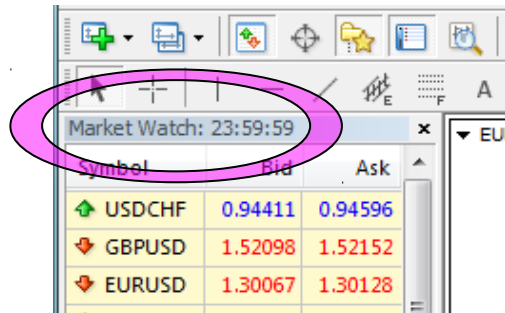

Overlap of first and second trading windows is not recommended. Even though in case of overlap of the trading windows, where both at the same time triggers a new trade, the trigger of the second trading window will be activated and the trigger of the first window will be skipped.

Note: the broker's server time is displayed at the header of the Market Watch window.

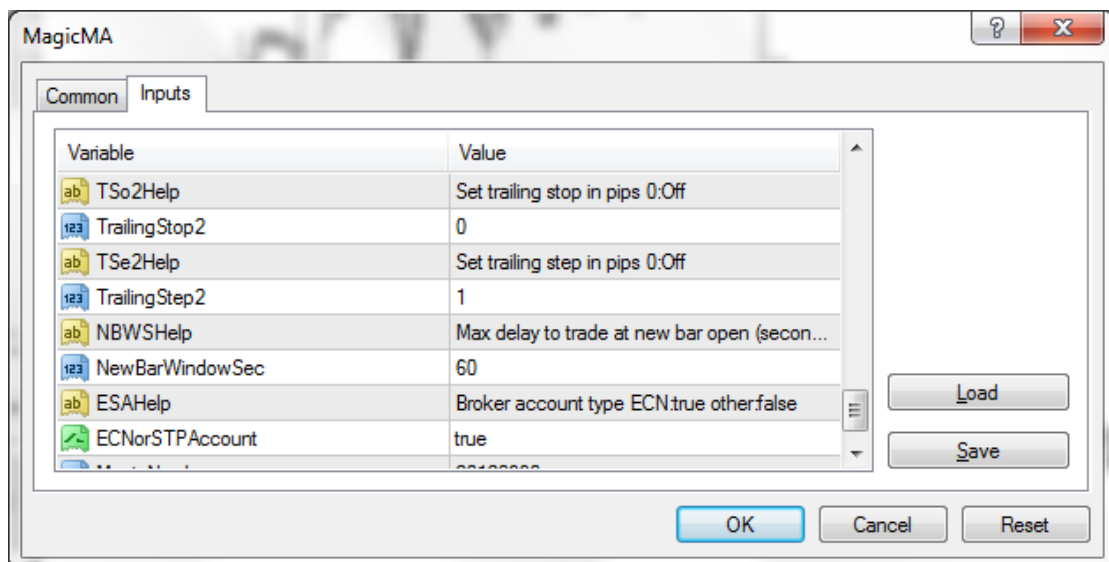

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

**MAPeriod2, MAOffset2** – the period and offset parameters of the simple moving average indicator the MagicMA EA uses to identify trading triggers during the second trading window.

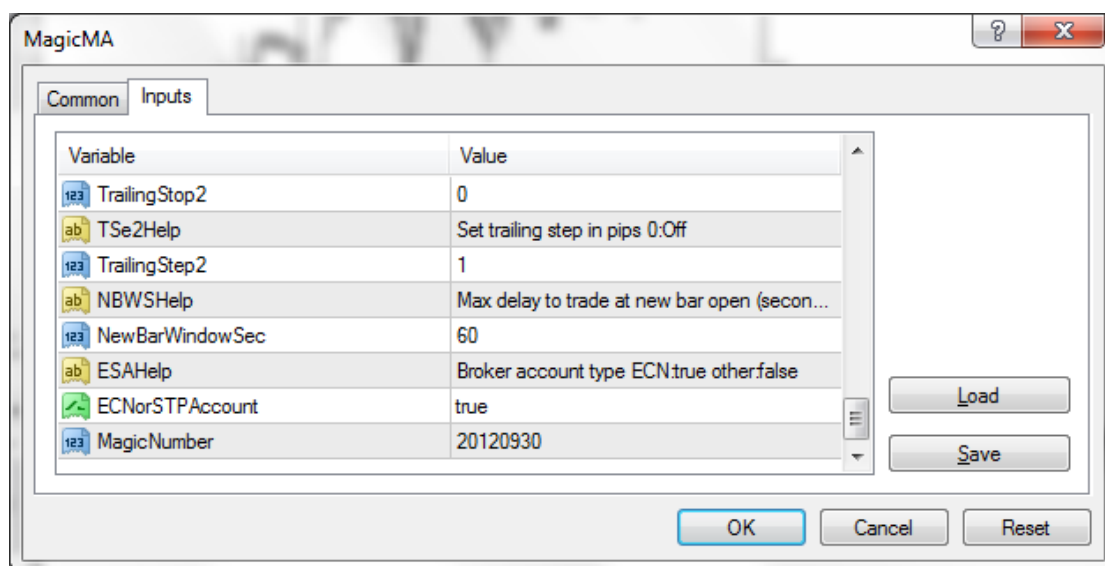

**TakeProfit2, StopLoss2** – take profit and stop loss in pips for new orders submitted during the second trading window. When set to value 0 (zero) then no take profit or stop loss is set for orders. No fractional pip value to be entered, e.g. for 100 pips take profit or stop loss the parameter value should be set to 100 regardless of 4 or 5-digit broker feed.

**TrailingStop2** – trailing stop loss in pips for orders submitted during the second trading window. When set to value 0 (zero) then stop loss will not be adjusted, otherwise stop loss will be adjusted by the MagicMA EA to trail the new price and profit peaks. No fractional pip value to be entered, e.g. for 50 pips trailing stop loss this parameter value should be set to 50 regardless of 4 or 5-digit broker feed.

## Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

**TrailingStep2** – trailing step in pips for orders submitted during the second trading window. Only relevant if trailing stop feature is turned on ( $\text{TrailingStop2} > 0$ ). When set to value 0 (zero) then trailing in steps feature is turned off, otherwise the trailing stop will be adjusted every time when the ticket profit reached  $\text{TrailingStop2} + \text{TrailingStep2}$  pips. In other words trailing of price happens in user-defined steps rather than at every small gain into further profit. No fractional pip value to be entered, e.g. for 5 pips step this parameter value should be set to 5 regardless of 4 or 5-digit broker feed.

**NewBarWindowSec** – the maximum number of seconds, after the opening of a new bar, the MagicMA EA can place a new order. This is to avoid submitting a new order when the MagicMA EA gets attached to chart half-way through of a bar.

**ECNorSTPAccount** – allowing for some brokers where the buy and sell market orders cannot have take profit and stop loss values. When this parameters is set to true the take profit and stop loss values are set once the initial order has been successfully submitted. When this parameter is set to false the take profit and stop loss values are submitted with the initial order.

For more details see section 1.5 ECN/STP Broker Accounts.

Note: take profit and stop loss values are only submitted when the TakeProfit1&2 or the StopLoss1&2 features are in use, i.e. those are set to value other than zero.

**MagicNumber** – ensure this parameter gets a unique value on each chart period the MagicMA EA gets attached to, i.e. MagicMA EA

## Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

on different EURUSD, M15 charts shall have different MagicNumber values. See section 4.1 for more explanation.

## 5 Troubleshooting

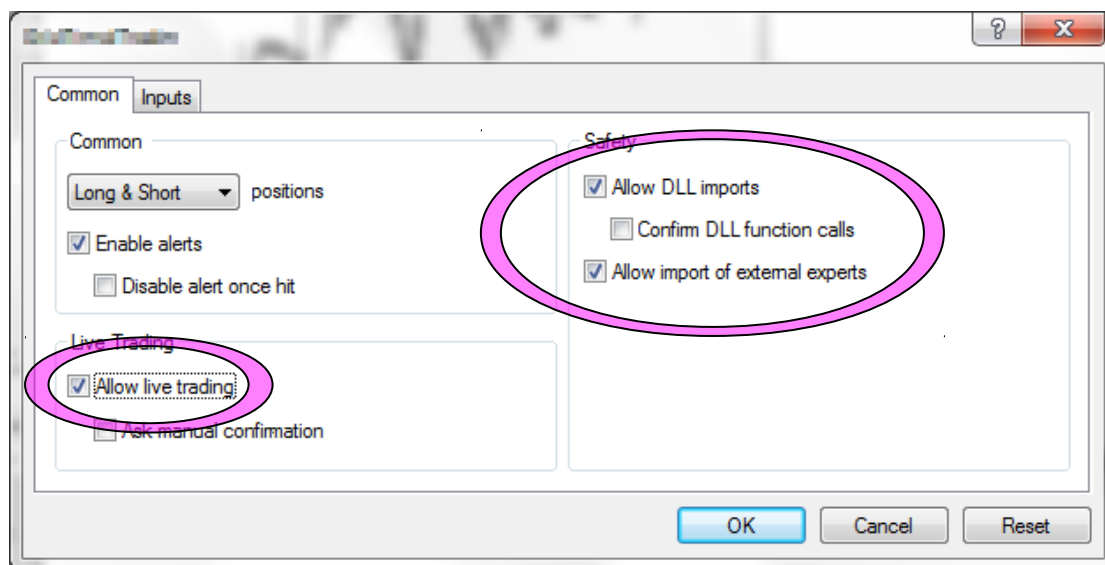

### 5.1 Sad Face Instead of Smiley After Attach

Issue: After attaching to chart the EA is not managing trades, a 'sad' face appears in the top right corner of the chart.

Checklist:

- Verify that the 'Allow live trading', 'Allow DLL imports' and 'Allow import of external experts' are checked and 'Confirm DLL function calls' is unchecked in the EA property dialog (F7)

### 5.2 EA Is Not Starting Up After Attach to Chart

Issue: The MagicMA EA reports successful initialisation and advises about disabled Expert Advisors; a "x" sign appears in the top right corner of the chart.

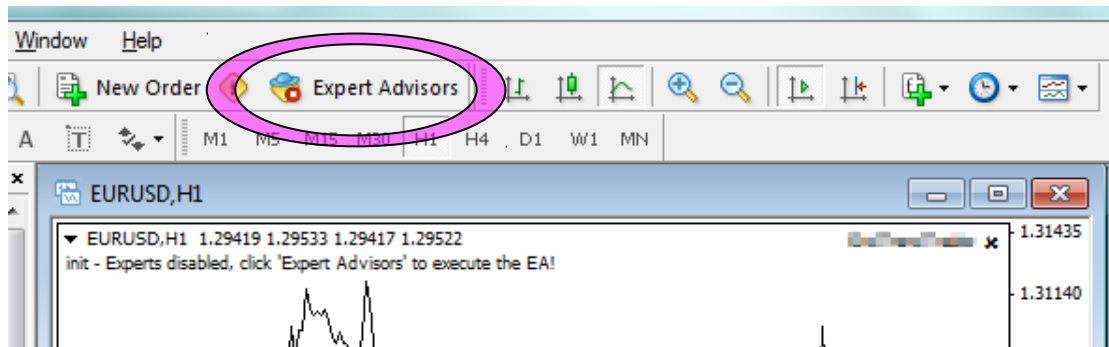

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

Checklist:

- Verify that the toolbar button 'Expert Advisors' is pressed.

Toolbar button when Expert Advisors disabled:

Click to enable:

## 5.3 No Updates to Chart

Issue: The MagicMA EA does not update information on the chart for several minutes.

Checklist:

- MetaTrader should be connected to the broker's server. Check the bottom right corner of MetaTrader, this is when it has lost connection to the server:

If connection is lost then login again or restart MT to force reconnection. Try again activating the MagicMA EA when connection is back.

- MT4 will not be able to connect to the demo account if it's expired. In this case MT4 will keep asking for the login details and fail all login attempt. When this happens open a new demo account (right click Accounts in Navigator window and select 'Open an Account').

# Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

- New tick information and updates to chart happens when markets are open. Double check that markets are meant to be open currently.
- There should be at least 50MB free disk space available on the drive MetaTrader is installed on. If the free disk space is lower then free up space.

## 5.4 Order Submit Failed Messages

The MagicMA EA may report error messages like

SubmitOrder – order submit failed (MT code: 130 Desc: invalid stops) ...

If this error message is permanent and occurs for every trade attempt then the broker account may not support initial stop loss and take profit targets submitted with a market order. In this case the SL and TP values must be set in a separate order following the initial market order. Please refer to section 1.5 ECN/STP Broker Accounts, and the description of 'ECNorSTPAccount' parameter at the end of section 4 MagicMA EA Configuration Guide as how to configure the EA for this broker account.

## 5.5 Access ID at Service Access Settings

The MagicMA EA checks that the usage of product is appropriately licensed. After product purchase a user profile is created on our web support site and the product can be downloaded from that web site. The support site allows to set up an Access ID which is required by the EA to validate the product licence. By default this Access ID is configured to be the same as your selected login name to the web support site.

When prompted, please enter your Access ID to the window and click 'Save':

## Expert4x:- MagicMA Expert Advisor Users Guide

October 4, 2014

Please do not share out to others your Access ID. That is against the licence agreement terms and conditions and also all 3<sup>rd</sup> party usages will count when checking the number of EA copies being used. Sharing out your Access ID can result in licence check failure and the EA may stop functioning.

Keep your Access ID secure, change it away from the its default value at any time on the web support site at:

<https://my.eafactory.com/login>

## **6 Support**

Please contact [easupport@expert4x.com](mailto:easupport@expert4x.com) if you require any further assistance. Please copy [info@expert4x.com](mailto:info@expert4x.com) on your email.
