

MAYTAG[®] SERIES 12

Electric Water Heaters

Choose the best... Maytag hot water.

If you're looking for the best water heater, you can't go wrong with the name millions of homeowners trust and depend on: Maytag. The Maytag[®] Series 12 water heater is fully-loaded with energy-saving features and packed with maximum water heating power, so you can count on all the hot water you'll ever need. And a 12-year warranty on the tank and parts delivers the peace of mind you expect from every Maytag appliance!

Energy-saving Silencer[™] fittings on cold inlet and hot outlet.

Temperature & Pressure Safety Valve installed at factory.

3800-watt upper element operates when needed to give water in top of tank a quick temperature boost.

Superglass[™] Plus porcelain lining with higher levels of zircon, for extra longer tank life.

Lower fuel bills. 3-inches of thick energy-saving foam insulation keeps heat in tank where it belongs.

Dual heavy-duty Anode Rods protect against corrosion, prolong tank life.

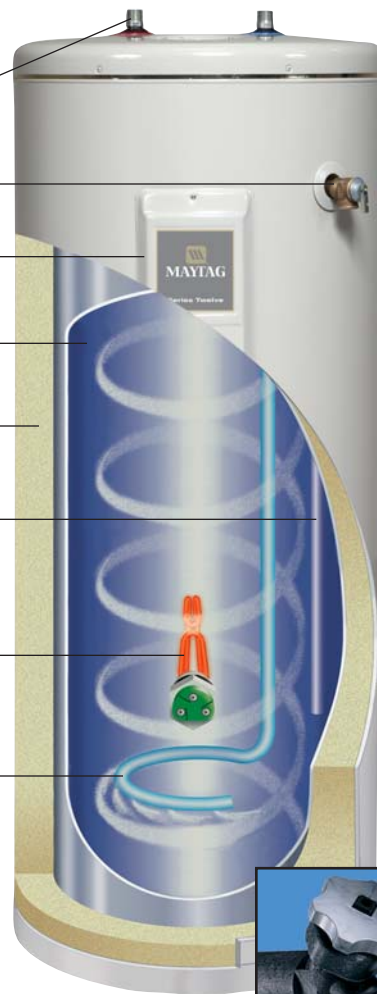

Lower element easily converts from 3800 to 5500 watts of power, to suit your wiring.

Self-Cleaning Jetforce[™] cold water inlet virtually eliminates harmful sediment buildup. Made of longer lasting PEX (Cross-Linked Polyethylene) polymer.

In an ordinary electric water heater without self-cleaning feature, sediment coats the surface of the heating element, blocking effective heat transfer.

Amodel[®] Drain Valve, cannot rust, covered to help prevent accidental damage.

*An additional 3" of clearance is required at the front of the water heater to accommodate the access panel.

Model numbers shown indicate 2-wire leads. For 3-wire leads, change "1" to "4" after "HRE" in model number (Example: HRE412 50T).

Electric models are shipped wired for 3800 watt operation, which requires 20-amp fusing, minimum 12-gauge wire. Conversion to higher-output 5500 watt operation is easily accomplished with a part that is supplied with heater. 5500 watt operation requires 30-amp fusing, minimum 10 gauge wire.

All models available in Canada, add "CAN" to end of model number (Example: HRE112 40S **CAN**).

SELECTION GUIDE

Selecting the right Maytag Water Heater for you depends on the size of your family, and your use of hot water.

These minimum recommendations are based on a typical home with 2 full bathrooms, a clothes washer, and a dishwasher. If you have more than 2 bathrooms, teenagers in the family, or if you just feel your family uses a lot of hot water, you should select the next largest size. In warm climates, however, the next smallest size may be right for you, because the cold water supply is probably warmer than the national average. If you have a whirlpool bath, capacity should be at least ⅔ of that tub. For example, for a 75-gallon tub, select a 50-gallon or larger Maytag Water Heater.

40 GALLON 3800 watt operation – family size up to two
5500 watt operation – family size up to three

50 GALLON 3800 watt operation – family size up to three
5500 watt operation – family size up to four

80 GALLON 3800 watt operation – family size up to five
5500 watt operation – family size up to seven
