The Right Environment

- Key components include relative humidity, temperature, CO₂, and air circulation/exchange
- Ideal humidity is between 40%-60%
- Some plants like higher humidity, but that can lead to problems with fungus and disease
- Ideal temperature is between 68°-75° F
- Plants need CO₂ to grow - with good air circulation and exchange, a room will naturally have between 300-400 PPM without supplemental CO₂

Choose A Method

- Ebb & Flow gardens flood and drain a tray of plants with a nutrient solution at regular intervals
- Drip gardens provide a nutrient solution to each plant through tubes & emitters (drip stakes)
- Aeroponic gardens mist an oxygenated nutrient solution directly to the roots of its plants
- NFT (Nutrient Film Technique) gardens flow a slow moving nutrient solution over the plants roots
- Organics are possible using many methods, and are often grown in container gardens

Nutrients/Fertilizers

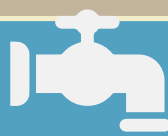

- Liquid/Dry nutrients can be organic or synthetic
- Over or under fertilizing can cause burning, curling or yellowing of plants
- Most nutrient bottles are labeled with N-P-K (Nitrogen, Phosphorus, and Potassium)
- Additives/supplements can bolster microbial activity at the root zone, strengthen plant cell walls, increase flower sites, shorten length to harvest, increase size, flavor and aroma of fruits and flowers and more
- When used together, nutrients and supplements will help you achieve maximum results

Testing Equipment

- There are many meters available for testing solution pH, PPM, and EC
- Environmental controllers and meters are available to automate and more accurately control and maintain the temperature, humidity, CO₂ and lights
- Testing equipment for the water-nutrient solution, light, room temperature and humidity, CO₂, and air circulation is the key to a providing optimal conditions for a bountiful garden

Start With Good Water

- Water quality is essential to plant growth
- PPM (parts per million) or EC (electrical conductivity) measure salts in a solution
- Start off with a low PPM or EC and add nutrients specific to your plant variety requirements
- A Reverse Osmosis system can reduce PPM/EC
- pH (potential hydrogen) measures acidity or alkalinity in a solution on a scale of 0-14
- pH should range 5.8-6.2 in hydro and 6.0-6.8 in soil
- Nutrient "lockout" occurs in too high or low pH levels

Choose A Media

- Growing mediums act as the root anchor system
- Coco is made from the husks of a coconut, is pH stable, and provides moisture retention and aeration
- Expanded Clay pebbles provide moisture retention and aeration and are reusable if sterilized
- Rockwool stone is heated and spun into fibers then compressed, provides an excellent oxygen to water ratio, though flushing/conditioning is recommended
- Silica helps slow transpiration, provides moisture retention and aeration, and is reusable if sterilized
- Peat mixes can be altered to varying air/water ratios

Grow Lighting

- MH (Metal Halide) and HPS (High Pressure Sodium) are types of HID lights used in grow rooms
- MH lamps = Blue spectrum for vegetative
- HPS lamps = Orange/Red spectrum for flowering
- TS lamps are high-output fluorescents with low heat/energy consumption ideal for cuttings, mother plants, and short growth cycles
- DE (Double-Ended) lighting is an improved spectrum HID lamp with a higher par reading than a single ended
- Plants in vegetative stage need 15-18 hrs. of light
- Plants in bloom stage need 10-12 hrs. of light

Optional Accessories

- Grow/Garden room accessories are essential for optimized growth and harvest
- Atmosphere drive devices such as fans, blowers, CO₂ emitters, and integrated timers are a grow rooms greatest accessory
- Trellising, stakes, supports, shears, and labels are useful when growing fruiting/flowering crops
- Pest and disease control may be needed and there are many organic options available

HYDRO 101

AN 8 STEP GUIDE TO SUCCESSFUL INDOOR HYDRO GARDENING

hydroponics

noun: the science of growing or the production of plants in nutrient rich solutions or moist inert material, instead of soil.

Hydroponic crops can use up to 90% less water than soil grown crops, when in a recirculating system.

1/4

You can plant 4 times the amount of hydroponic crops in the same area that soil crops need to grow.

x2

Hydroponic crops can grow twice as fast.

Hydroponically grown crops can be grown organically and without the use of herbicides & pesticides.

Choose a Potting Mix/Mix Your Own

- Potting Mixes are typically peat-based mixes with perlite and other materials that unlike soil, are light weight and have great air/water holding properties
- Sphagnum Peat Moss is naturally acidic and often used with dolomite lime to raise pH
- Perlite is a coarse substrate derived from volcanic rock and used to improve drainage and aeration
- Coco is made from the husks of a coconut, is pH stable, and provides moisture retention and aeration
- Worm Castings and Composted Waste add beneficial biology that help plants access nutrients in the soil

Organic Certifications

Products bearing this seal are registered with the California Department of Food & Agriculture Organic Input Material Program. The Organic Input Material (OIM) Program registers fertilizing materials to be used in organic crop and food production. The program is mandated by the Legislature and supported by the industry. Products claiming to be appropriate for use in organic production are verified to comply with the California Fertilizing Law and Regulations and USDA National Organic Program Standards.

Pro-Cert Organic Systems Ltd. (Pro-Cert) is one of North America's foremost national certifier's of organic products. Pro-Cert's certification program is recognized globally providing international access to the products and brands they certify. Their program is accredited under the USDA National Organic Program (NOP), the CFIA's Canada Organic Regime (COR), the Japanese Agricultural Standards (JAS) and Quebec's Committee on Accreditation for Evaluation of Quality (CAEQ). Pro-Cert's certification program is ISO 17065 compliant and accredited by the Standards Council of Canada – a globally recognized accreditor and member of the International Accreditation Forum (IAF).

Organic agriculture produces products using methods that preserve the environment and avoid most synthetic materials, such as pesticides and antibiotics. USDA organic standards describe how farmers grow crops and raise livestock and which materials they may use. Organic farmers, ranchers, and food processors follow a defined set of standards to produce organic food and fiber. Congress described general organic principles in the Organic Foods Production Act, and the USDA defines specific organic standards. These standards cover the product from farm to table, including soil and water quality, pest control, livestock practices, and rules for food additives.

The Organic Materials Review Institute is a national nonprofit organization that determines which input products are allowed for use in organic production and processing. OMRI Listed® products are allowed for use in certified organic operations under the USDA National Organic Program.

RHP What is it?

Since 1963, RHP has been the European knowledge & certification center for potting soil, substrates and growing media used by Dutch and European growers, professional horticulturists and consumers. If you are a grower and consider the quality of your finished product of paramount importance, you have found the right certification entity at RHP. The RHP quality mark applies for substrate producers, substrate suppliers, extraction and production sites of raw materials.

Registrations

EPA Registration

Federal law requires that before selling or distributing a pesticide in the United States, a person or company must obtain registration, or license, from EPA. The EPA must first ensure that the pesticide, when used according to label directions, can be used with a reasonable certainty of no harm to human health and without posing unreasonable risks to the environment. To make such determinations, EPA requires more than 100 different scientific studies and tests from applicants. Where pesticides may be used on food or feed crops, EPA also sets tolerances (maximum pesticide residue levels) for the amount of the pesticide that can legally remain in or on foods. Most states conduct a review of the pesticide label to ensure that it complies with federal labeling requirements and any additional state restrictions of use.

Criteria for FIFRA 25(b) Exemption

Minimum risk pesticides that meet certain criteria are exempt from federal registration under section 25(b) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). The U.S. Environmental Protection Agency (EPA) does not review or register pesticides that satisfy the 25(b) criteria, though registration is required by most states. For more detailed information go to www.epa.gov.

Certification Marks

Sunlight Supply is committed to safety by investing in our own Satellite Laboratory. This Level 4 (the highest level on a 1 to 4 scale) accredited facility is the only one of its kind on the west coast certified for testing lighting fixtures. (Agreement No. L4-US-11-4012). This investment secures that we are a Nationally Recognized Testing Laboratory (NRTL) and the only one in the industry. Sunlight Supply is accredited by ETL, OSHA, and ISO/IEC 17025. We have invested in the space, top of the line testing equipment, and resources including hiring an ETL Compliance Manager with years of experience in safety certification. With this investment we not only provide the maximum safety possible to anyone who uses our products but also provides liability protection to our Indoor Garden Retail Stores. This is the benchmark that Sunlight Supply has set for the continued product safety excellence we strive to achieve with each and every product we sell.

Intertek Testing Services

ETL is a mark provided by Intertek Testing Services. Intertek (www.intertek.com) is a global leader in testing inspection and certification services. They are a Nationally Recognized Testing Laboratory and tests products to UL, CSA, IEC and CE standards. A product bearing the ETL Listed Mark is determined to have met the requirements of prescribed product safety standards. Moreover, the mark indicates that the manufacturer's production site conforms to a range of compliance measures and is subject to periodic follow-up inspections to verify continued conformance.

Canadian Standards Association

The Canadian Standards Association (CSA) is a nonprofit association serving business, industry, government and consumers in Canada and the global marketplace. Among many other activities, CSA (www.csa.ca) develops standards that enhance public safety. A Nationally Recognized Testing Laboratory, CSA is very familiar with U.S. requirements.

Underwriters Laboratories Inc.

Underwriters Laboratories Inc. (www.ul.com) is an organization that writes safety standards, tests products and certifies them. UL has developed over a thousand safety standards, and millions of products and their components are listed to these standards.

Underwriters Laboratories Inc. Recognized Component Mark

These are Marks consumers rarely see because they are specifically used on component parts that are part of a larger product or system. These components may have restrictions on their performance or may be incomplete in construction. The component recognition marking is found on a wide range of products, including some switches, power supplies, printed wiring boards, some kinds of industrial control equipment and thousands of other products.

Conformance European

The CE Mark is a requirement for products sold to the European Market. The CE Mark identifies a product as complying with the health and safety requirements spelled out in European legislation (Directives) and is mandatory for equipment operating in the European Union (EU). Once the product has received the CE Mark it can circulate freely throughout the European Union countries.

FCC is a mark provided by the Federal Communications Commission. The FCC limits the amount of radiated EMI that lighting systems may produce at certain frequencies.

A Listed mark with both "US" and "C" identifiers signifies that the product bearing the mark complies with both US and Canada product safety standards. If it bears just the "us" identifier, it has been tested and deemed compliant to the United States. A Listed mark with a "C" identifier means the product bearing it complies with Canada product safety standards only.

Shipping Restrictions

This logo represents No UPS for products due to size, material content or weight restrictions. This means the product cannot be shipped via UPS. These products are only available for truck orders.

DOUBLE-ENDED

Reflectors made specifically for double-ended horticultural lamps.

Unique double-ended construction allows for maximum optical efficiency and uniformity. Improved spectrum DE lamps used in this fixture focus on the red component for increased photosynthetic response. They offer improved PAR values and increased PAR/lumen maintenance (up to 90% PAR at 10,000 hours of operation).

DOUBLE-ENDED

USA MANUFACTURED AIR-COOLED - DE

AC/DE® Air-Cooled Double-Ended Reflector 8 in

The patented sealed optic technology allows removal of heat generated by the lamp without cooling the lamp. Features German made, UL listed double-ended sockets. 95% reflective textured German aluminum interior with 98% reflective corner inserts offer excellent uniformity, output and diffusion. Galvanized steel housing with durable powder coated finish. Includes built in level. Double neoprene gaskets for an air tight seal. Hinged glass makes changing lamps and cleaning glass easy. US patents: D698,987, D698,628, D737,498, D726,116, 9,016,907. US Patent Pending: 29/500,428, 29/520,168, 14/662,706, 13/533,189, PCTUS2014014959. - ① Commercial grade! Galvanized steel housing with a durable, corrosion resistant powder-coated finish.
- ② Most Sun System® Reflectors include tempered glass, a built-in socket and lamp cord. Some even feature a patented detachable lamp cord.
- ③ All USA made Sun System® reflectors use HortiBright™, a five layer coating system that maintains it's high (95%-98%) reflectivity. Uncoated finishes begin to dull immediately, quickly losing their reflective properties which, even when new, are substantially less reflective (about 70%) than HortiBright™. Less reflectivity means poorer performance - a difference you'll see in the performance of your plants.
- ④ Our air-cooled reflectors are completely sealed with double gaskets! Swing Stop® retention cable keeps glass from abruptly swinging down. Captured thumb screws & closure mechanism for ease of use and excellent sealing.
- ⑤ Integrated air-cooled fittings allow for extremely efficient cooling. A bead ring helps to hold ducting firmly in place!

Sun System® Harvest Pro® Ballasts

Exclusive EZ Cap® Door for easy capacitor replacement

Dual Universal Lamp Cord Receptacle

400/600/1000 Watt 120V/240V

1000 Watt 277 & 480 Volt

Our Harvest Pro® ballast with dual input voltage easily switches from 120 to 240 volt power! Simply unplug detachable 8 foot 120 volt power cord (included), turn power plate around for 240 volt power and plug in a 240 volt power cord. (240 volt power cord sold separately, Part #903082). Dual universal lamp cord receptacle is compatible with all Sun System® brand reflectors as well as other branded reflectors. Louvered end plates and heat slots help cool the ballast for years of trouble-free use! Aluminum ballast enclosure is engineered to dissipate heat and keep components cool. Heavy duty handle for easy carrying or wall hanging. A barrier wall between ballast and the capacitor/ignitor helps keep the critical components cool. The capacitor and ignitor temperatures are greatly reduced by being separate from the ballast core. Lower temperatures mean better reliability & longer life. Uses high quality capacitor using German sourced film to ensure long lasting durability. EZ Cap® Door offers easy access to the capacitor in

the event it needs to be replaced. 902449 and 902452 have a 2 year warranty, 5 Year Warranty.

Gavita Pro 270e LEP

The Gavita Pro 270e LEP utilizes a new emitter design that allows for a more compact fixture design, making it lighter and smaller than the Pro 300 LEP model. The Pro 270e LEP is equipped with a Master Controller input to be able to switch the fixture on and off together with your HPS e-series fixtures. Unlike the Pro Line and DigiStar e-series ballasts does not dim: When autodim occurs due to a high temperature the LEP will stay at 100%, because it does not emit so much heat to your crop (4% compared to the >60% by HPS). This is an advantage when high temperatures force the controller to dim your lighting: though your crop will get less light, the quality of your light actually improves. You can also use this

feature to dim your HPS lights in veg while maintaining full plasma light output, improving the spectrum for the vegetative crop. Suitable for 120 - 240 Volt. Supplied with 240 V 8 ft cord with NEMA 6-15 plug, 120 V Nema 5-15 available separately. 3 Year Warranty.

DigiMax® Lamps set a high standard for the modern HPS lamp. Engineered to operate specifically with today's high frequency HID ballasts, the DigiMax® lamp is constructed with thicker component welds and stainless steel materials designed to withstand the higher acoustic resonance and harmonic distortion emitted by electronic HID ballasts.

DigiMax's robust lamp construction, coupled with a light spectrum that is geared toward photosynthetic response, delivers a superior product for the high end horticulture market.

www.digimaxlamps.com

Ultra Sun® brand lamps are high output, full spectrum lamps that have been specifically engineered for horticultural applications. They are ideal for plant growth - especially for growing fruits, vegetables, flowers and herbs.

We understand the importance of a good quality horticultural lamp. Our standards are high and you can rest assured that Ultra Sun® lamps boast robust construction and superior reliability. We also know that it is important to be able to create a customized lighting regimen for your plants. That is why we offer a complete line of lamps for versatility and variety. We offer Metal Halide, High Pressure Sodium, Conversion and Dual Arc Tube Lamps.

DigiMax® Double-Ended Lamp

Specifically designed for high frequency electronic ballasts. It has a connection at each side of the lamp, removing the need for frame wire inside the lamp. The absence of frame wire eliminates any shadows in the beam. For horizontal burning only. The jacket of this double ended lamp is made from quartz glass. Do not handle with bare hands. Oil from your hands can damage the lamp. 1 Year Warranty.

Cultured Solutions™ Bloom A 3.7 - 0 - 3 & B 0.9 - 4.8 - 6.2

NEW Cultured Solutions™ Bloom A & B is a full spectrum, mineral salt based nutrient which contains all the elements necessary to produce prolific blooms and fruit. Cultured Solutions™ Bloom A & B combines all the macro and micro nutrients in their proper proportions, in a pH stable, chelated form which is ideal for high performance water culture applications. Cultured Solutions™ Bloom A & B provides the optimal Nitrate to Ammoniacal Nitrogen ratio. This ensures healthy growth without promoting excessive vegetative growth, which can hinder and in many cases deter bud set and maturation in flowering plants. **EXCLUSIVE**

Novozyme Met52® EC

NEW Met52® EC Bioinsecticide is composed of spores of the insect pathogenic fungus *Metarhizium anisopliae* strain F52. Once the product is sprayed onto the foliage or applied as a soil drench, insects that come into contact with the fungus will become infected. The spores of *Metarhizium anisopliae* attach to the surface of the insect, germinate and begin to grow. It will penetrate the exoskeleton of the insect and grow inside the insect, causing the insect to die. Under moderate temperatures it usually takes 3 to 7 days, once the insect is exposed, for death to occur.

Mother Earth® Perlite & Coarse Perlite

Mother Earth® Perlite is naturally occurring siliceous rock that when heated to 1600° F expands up to 20 times its original volume. This kilning process is very similar to popping popcorn and produces a growing media that is sterile and has a neutral pH of 7.0. The exceptional physical properties of this perlite make it tops in the perlite world for adding porosity to soil and soilless mixes. This perlite has numerous hydroponic applications as well. The #4 is the largest perlite on the market and averages a whopping size of around 1 inch. The #3 measures around 1/2 inch and the Coarse is about 1/8 to 1/4 inch.

Hydro Flow®/Netafim Disc Filters

NEW Disc Filter technology has grooves in the disc rings that criss-cross to form a network that traps debris between and on the outside of the discs. As dirty water is pumped into the filter and pressure increases, the water compresses the disc rings together tightly. Hydro Flow®/Netafim Pressure Compensating Standard Spray Stakes

NEW Netafim PC (Pressure Compensating) Spray Stakes ensure every pot in the entire system receives exactly the same amount of water, from the first to the last. The spray pattern angles downward - just enough - to keep the spray on the soil and not flying into or over the wall of the pot. For simplicity, some growers place the spray stake near the edge of the pot, making the single-sided spray stake the best selection. Other growers

Ideal H2O™ Professional Series RO Systems with Catalytic Carbon Pre Filter - 2000 & 4000 GPD

NEW Ideal H2O™ Professional Series Reverse Osmosis Systems are state-of-the-art, versatile systems for treating tap and well water supplies and with flow rates ranging from 2,000 to 4,000 gallons per day. Minimal energy consumption, low maintenance and operation costs makes them the ideal choice for a variety of applications. A C23 switch controller with feed flush comes standard to reliably operate the system. HF5-Series Extra Low Energy membranes are standard on all systems and offer high rejection and flow rates for quality system performance. Recycle valve pushes waste water back into the feed line, allowing a four part clean water to a one part waste water ratio. Systems also feature a heavy duty 1/2 HP stainless steel multistage booster pump. Size: 18 x 18 x 45 inches. 120 volt 1 phase 60 Hz. #738400 has 1 membrane and weighs 100 lb. #738402 has 2 membranes and weighs 120 lb. 1 Year Warranty.

Agrowtek GrowControl™ Wind Sensor Kit with Weather Transmitter SNS-W

NEW GrowControl™ precision wind anemometer and direction vane precisely monitor wind speed and direction. Connect to Agrowtek's GrowControl™ controllers to monitor weather and control equipment. Wind Speed Anemometer: Wind speed anemometer with 3 cup rotor measures wind speeds from 1 to 125 MPH. Two-wire connection to transmitter. Wind Direction Vane: Wind vane uses German

Hall effect sensor for precision and durability. Agrowtek's wind vanes have zero dead band, are near-zero friction and have a theoretical infinite life. Weather Transmitter: Connect the wind anemometer and direction vanes to Agrowtek's Weather Transmitter. The weather transmitter is then connected to a GrowControl™ controller to display the readings and control equipment. Agrowtek's outdoor temperature sensor and sunlight sensor may be connected to the weather transmitter to complete the weather station. Anemometer and direction vane include mounting brackets and 25 ft of outdoor rated cable. Extend sensor wires up to 100 ft from transmitter. Mount transmitter indoors up to 2,000 ft from controller. 1 Year Warranty.

Agrowtek IR Digital Rain Sensor SNS-RAIN

NEW GrowControl™ Rain Sensor is a high quality optical type rain sensor with no moving parts. The rain gauge senses water hitting its outside surface using beams of infrared light. Connect to GC-Pro or GC-Extreme controllers' digital inputs to close vents and windows down to a weather set-point at the first sign of rain. Equipped with arm for mounting to structure or weather station. Includes a

built-in heater to allow use in temperatures down to 32°F (0°C). Smart logic prevents false triggers from dust and other slow build-up of accumulation. Adjustable sensitivity allows for four different settings which activate the sensor from the slightest amount of rain to heavy rainfall. Operates on 24Vdc from controller and connects directly to any digital input. 1 Year Warranty. **EXCLUSIVE**

Agrowtek Sensor Cable Break-Out Board - Sensor Cable to Terminal Block SNS-BOB

NEW Sensor break-out board enables connection of hard-wired analog sensors such as Agrowtek's: outdoor temperature sensor, outdoor light sensor, power monitoring sensor, liquid level sensor and standard Industrial 4-20mA sensors. Typical applications include utilizing the fourth channel that is un-used by the hydro transmitter or a basic climate sensor (without CO2.) The hydro transmitter and basic climate sensor only use channels 1-3 of the four available. The SNS-BOB break out board allows access to

the un-used channels for other sensors. Can also be used to extend sensor cables using custom wire over long distances (up to 2000 ft) Includes a 6 ft cable for connection. 2 Year Warranty.

Sentinel GPS CHHC-4i

NEW The Sentinel CHHC-4i is the most advanced CO2 controller available on the market today. It incorporates the proprietary S.I.C.E. communication and control components and programming that are unique to Sentinel. It allows for communications between Sentinel S.I.C.E. series products, providing a level of control never before seen in your greenhouse, garden or grow room. The system works

by a Sentinel S.I.C.E. series controller, such as the Sentinel CHHC-4i, measuring and monitoring your growing environment. As the atmospheric CO2 levels change, the controller will tell the Sentinel ICG series generator to increase output, decrease output or go into idle mode...all computer controlled. As the optimal conditions are reached, the S.I.C.E. system can decrease CO2 output, making sure that the user defined optimal level is not overshoot. 2 Year Warranty.

EXCLUSIVE **5 YEAR WARRANTY** **FRESH**

Hyper Fan® Features:

- Laminar Flow Fan Blade & Stator Technology creates optimal airflow similar in technology to an airplane propeller. The result is very high CFMs and exceptional static pressure performance.
- Hyper Fans® deliver the highest CFM's per watt of any fan in the industry.
- State-of-the-art digitally controlled DC powered Electronically Commutated Motor (ECM) is extremely quiet, long lasting and very reliable. Best of all, this unique technology uses about half the power as traditional fans.
- The included speed controller can adjust fan speed from 30% to 100%. It is detachable from the fan and independent from the power cord.
- Lightweight aluminum housing is one-third the weight of comparable steel bodied fans. They are compact and easy to install.
- Universal mounting positions – can be mounted in any position allowing maximum flexibility during installation.
- Heavy-duty 6/8/10 mm bearings, versus commonly used 4 mm bearings, ensure smoother operation and increased longevity of the fan.

Supplied with double junction Bluelab® pH probe, 20 ml solution sachets and batteries. Range: 0.0 – 14.0 pH. Resolution: 0.1 pH. Accuracy @ 25°C: ± 0.1 pH. Power Source: 2 x AAA batteries included. Features: auto turn off, low battery indicator, over range and under range indicators, portable. 5 Year Warranty.

Item No.	Description	MSRP
716340	Bluelab pH Meter	\$210.00

Bluelab® Soil pH Meter

Measures the pH level of soil, media or substrates. Comes with a Soil pH Probe, Dibber/Auger, pH 4.0 and pH 7.0 calibration solutions, plus a helpful Quick Start guide. Features: simple push button calibration, auto turn off function, large easy to read LCD, low battery indicator, lightweight and portable. 5 Year Warranty.

Item No.	Description	MSRP
716190	Bluelab Soil pH Meter	\$240.00
716192	Bluelab Soil pH Replacement Probe	\$110.00

Bluelab® Soil pH Pen

This clever Soil pH Pen will help you manage the success of soil grown crops. The soil pH pen provides a pH and temperature reading of soils and media, so you know that the right nutrients will be made available to your plants. It will also measure solutions too. 1 Year Warranty.

Item No.	Description	MSRP
716438	Bluelab Soil pH Pen	\$185.00

Bluelab® pH Pen

Measures pH and temperature. Selectable units for temperature in °C & °F. It has a backlit LCD display with double junction probe (not replaceable). Successful calibration indicator. It has a hold function & low battery warning. Fully waterproof with auto off function. 1 Year Warranty.

Item No.	Description	MSRP
716480	Bluelab pH Pen	\$112.50

Bluelab® ppm Pen

Measures conductivity and temperature. Selectable units for conductivity and temperature. It has a backlit LCD display with low battery warning. This pen is fully waterproof that has a successful calibration indicator. Auto off function and hold function. 1 Year Warranty.

Item No.	Description	MSRP
716482	Bluelab PPM Pen	\$94.00

Bluelab® pH Controller

Our pH controller automatically monitors and fine-tunes the pH levels for you. For use with reservoirs up to 200 US gal/760 L. Green back lit large LCD with adjustable brightness. Push button navigate menu to program, adjust settings and calibration. Flashing high/low alarm with control lockouts to protect from over-dosing. Auto resume dosing on restart after power loss.

Includes: water resistant housing, 13 foot acid/alkali resistant dosing tube, power supply, replaceable double junction pH probe and Temperature Probe (for pH ATC). 6 month guarantee for Bluelab pH Probe. 2 Year Warranty.

Item No.	Description	MSRP
716342	Bluelab pH Controller	\$569.00

Bluelab® pH Controller Connect

Our pH controller connect constantly monitors and fine-tunes the pH levels for you. It wirelessly data logs to your computer too. You can also change the settings from your PC. One Bluelab Connect Stick is required, sold separately. Local and cloud data logging capability (download free Bluelab Connect Software). Option to view data and current status remotely via Google Docs™. For

use with reservoirs up to 200 US gal/760 L. Green back lit large LCD with adjustable brightness. Push button navigate menu to program, adjust settings and calibration. Flashing high/low alarm with control lockouts to protect from over-dosing. Auto resume dosing on restart after power loss. Includes: water resistant housing, 13 foot acid/alkali resistant dosing tube, power supply, replaceable double junction pH probe and Temperature Probe (for pH ATC). 6 month guarantee for Bluelab pH Probe. 2 Year Warranty.

Smart Pot® Tray Liner

Gardeners can see all the benefits of growing with a Smart Pot® even if they grow in trays, thanks to the Smart Pot® Tray Liner! This soft material allows more air to reach the growing medium and roots, improving drainage and keeping the root system from overheating on hot days. Plant roots also benefit from their natural tendency to grow into soft surfaces like the Smart Pot® Tray Liner, becoming thick and healthy instead of circling the inside of the pot and becoming root bound.

IF YOU START CLEAN, WHY GET DIRTY LATER?

Pro growers start plants in GRODAN media because it is hygienic, thus reducing the risk of pathogens and harmful insects that can pose a serious threat to the plants.

Pro growers also grow mature plants in GRODAN media because the grower can more precisely control the nutrients and water resulting in healthy, larger plants.

It is true that GRODAN media can be easily transplanted into other media. But why would you want to?

GRODAN...for the entire life of your plant.

RHIZO GEL™

RHIZO BLAST™

Rhizo Gel promotes root growth on herbaceous and woody cuttings, allowing easy absorption of the rooting hormone Indole-3-Butyric Acid. The addition of Vitamin B1 and a light, Botanicare nutrient charge will strengthen your delicate cuttings while antiseptic components ensure a sterile and clean wound for quick healing.

- 0.20% Indole-3-Butyric Acid.
- Vitamin B1.
- Antiseptic and Chelating Agents.

Rhizo Blast is a proprietary synthesis of seaweed, vitamins, minerals, amino acids, sugars, trace minerals, saponins, and the single celled algae, Chlorella. This particular form of Chlorella, the key ingredient in Rhizo Blast, is cultivated specifically for Botanicare and acts as a natural delivery system for plant growth hormones.

- Explosive root growth.
- Increased nutrient uptake which increases root and plant biomass.
- Ideal for use in transplanting.
- Promotes root branching and fine root hairs.
- Enhances plant vigor in fast flowering plants.

The Recipe For Success

10 Exceptional products for everything you grow.

Mixing Chart RECIPE for SUCCESS
Grow to Master Harvest!

CUTTING STAGE
For each the medium (soil, peat, perlite, vermiculite, etc.) with a solution of **Thrive Alive B-1 Root**. Mix 10 ml (2 tsp) of **Thrive Alive B-1 Root** for every 1 liter (1 quart) of water to prepare the solution. Increase the rest of each watering into **Research Cleaning Gel** for a few seconds, and immediately insert into the prepared medium.

TRANSPLANTING STAGE
While setting up initial a strong root system, keep the frequency with **Thrive Alive B-1 Green** solution. Mix 10 ml (2 tsp) of **Thrive Alive B-1 Green** for every 1 liter (1 quart) of water to water the container. Immediately after transplanting, apply a measure of both **SugarDaddy** and **NOCT 66** to produce both vegetative growth, to reduce aggressive root development, and to reduce the light related stress. Mix the following nutrients for water 1 liter (1 quart) of water to produce the solution:
SugarDaddy - 10 ml (2 tsp)
NOCT 66 - 10 ml (2 tsp)

VEGETATIVE STAGE
SHORT CYCLE: 100% - 100%
Once your plants have established root systems, they are ready to begin vegetative growth at an 18-hour light cycle. Change your medium and weekly. Apply the following **MIXTURE** formula with 10 ml (2 tsp) of each component to the water. Mix the following nutrients for water 1 liter (1 quart) of water to water dry **100% 100%** formula:
B-1 Root - 11 ml (2 tsp)
B-1 Green - 11 ml (2 tsp)
Thrive Alive B-1 Root - 11 ml (2 tsp)

ALWAYS 100% PURE EARTHWORM CASTINGS

ALWAYS PURE:

UNCO INDUSTRIES weighs a set number of worms per sq. ft. of bedding twice a month. Knowing this set amount of worms will turn all the bedding into **PURE** Earthworm Castings. 😊

OTHERS using the bed or windrow system, leave worms in beds for months without reweighing them. Therefore, only guessing at how many worms they have per sq. ft. So **NOT** enough worms in the bedding to make Pure Earthworm Castings. 😞

PLANT GROWTH HORMONES:

Castings contain "Auxins and Cytokinins", which are growth hormones for bigger and more fibrous plant roots. **ROOTS CAN EASILY GROW FAST, FULL AND FIBROUS.**

HIGH AVAILABILITY OF NUTRIENTS:

The TRACE ELEMENTS combined with its structure and high MICROBIAL ACTIVITY allow it to outperform what is expected of a low analysis (NPK) fertilizer.

The key facts mentioned above are what allows **Wiggle Worm Soil Builder™** to **DRAMATICALLY EXCEED EXPECTATIONS.**
