# The Genesis of the New MG Mixers

We got the heads of the new MG mixer design, product planning, and marketing divisions together to hear what they had to say about the genesis of this remarkable series.

## The Yamaha Advantage

**Mr. Tashiro:**  
For us the new MG series had to be more than just “new.” It had to deliver meaningful features and performance that actually meet or exceed the customer’s needs and, as always, that turned out to be a difficult process.

**Mr. Tanaka (Iggy):**  
We started by researching the ways that the previous models were being used throughout the world, and ended up with 10 models that comprehensively satisfied the real-world use requirements.

**Mr. Nonaka:**  
This applies to all of our products, but the size of the Yamaha organization contributes to high product quality in a number of ways. There’s the direct legacy from the PM series analog mixers, as well as technology developed for our digital products ranging from synthesizers to digital mixing consoles. And there’s a healthy atmosphere of competition in each department that contributes to continued technological growth. This is all part of our strength as a general sound-related manufacturer.

**Mr. Tashiro:**  
We maintain the same quality standards from PM-series consoles costing tens or even hundreds of thousands of dollars right down to mixers like the MG series models that cost only a few hundred dollars.

They’re all made at the same factory. We built one of the largest and most advanced electromagnetic emission testing facilities in the industry in the same area as the design department, and that has resulted in a huge improvement in our quality control capabilities.

## Parts Selection

**Mr. Nonaka:**  
Every operational amplifier, transistor, and capacitor we use is chosen for high sound quality and reliability. In analog mixers like the MG series, we’re able to take advantage of the expertise we’ve acquired through many years as leaders in the field, while applying the most advanced circuit design tools available today.

While other manufacturers use outsourced, general purpose DSP chips, we develop our own DSP chip the most suitable for our needs. That translates into unbeatable cost versus performance.

**Mr. Tashiro:**  
I’m sure that there are always difficulties, but what were some of the obstacles encountered in creating the new MG series?

**Mr. Nonaka:**  
As always, achieving the required standard of quality was the main issue. We use the same quality testing standards that apply to consoles costing tens of thousands of dollars,

and that’s a tough challenge for models that will sell for just a few hundred dollars. The pressure is on us, designers and hardware engineers. But unless we can overcome the quality issues without compromise, the product cannot be released.

**Mr. Nishizawa:**  
For example, some manufacturers promote the fact that they use a high-quality microphone preamp, but then they use cheap circuitry in the following stages that negates any sonic benefits the preamp might offer. In the MG series we’ve made sure that parts and circuitry are optimally selected and matched throughout. Just the fact that a design uses high-quality parts doesn’t guarantee that the overall performance will be correspondingly high. An appropriate balance must be found through trial and error and actual listening tests.

**Mr. Tanaka (Iggy):**  
Another advantage of being a world-wide organization is that parts can be sourced from the many branches we maintain in various locations around the world, plus the fact that we have access to parts acquired for other products such as electronic musical instruments. This means that for the same cost Yamaha can use parts that are a rank above those available to other manufacturers.

**Mr. Nishizawa:**  
That’s very true. Our motto is to make affordable products, but never “cheap” products. And since we have access to such high-quality parts we are able to maintain the same level of quality that the pros expect in our most expensive console in affordable mixers like the new MG models.

We’re using Neutrik™ connectors in the new models, and have completely redesigned the faders as well. We used CT scans for non-destructive structural analysis, and as a result have even employed a new type of grease for super-smooth operation.

## New Environmentally Safe Finish

**Mr. Tashiro:**  
It looks as though the new models had a different type of finish.

**Mr. Nishizawa:**  
That’s right. This time we used a powder finish that significantly cuts VOC usage.

**Mr. Tashiro:**  
“VOC” stands for “Volatile Organic Compounds,” right? Come to think of it, we’ve always tried to be easy on the environment. Of course we’ve cleared the very strict new European standards.

**Mr. Nishizawa:**  
The special metallic blue finish used on the new MG models was developed in cooperation with specialist powder finish manufacturer. This powder finish is extremely durable compared to standard liquid finishes. It will last for a long time. Whereas with liquid coating equipment about 70 percent of the material evaporates into the air as volatile organic compounds, powder coating equipment produces essentially no VOC pollution. The panel of a mixer is subject to constant handling, and the extra durability of the power coating prevents wear and damage from sweat, cosmetics, and a range of other common causes of damage.

## Design

**Mr. Tanaka:**  
At that point there were continuous product design requests. Every time a strength issue was found, the design had to be revised. It was a very tiring period. I remember re-drawing the rack ear screw contact area many, many times.

**Mr. Tashiro:**  
I seem to remember people running up and down the corridors quite frequently at that particular time.

**Mr. Tanaka:**  
We ended up with four, and added reinforcement at that point that resulted in a sleek look while making the unit easy to carry. The latest analysis tools have enabled us to see that although it provides more contact area with the rack, the normal straight configuration is actually weaker in several ways. The rack-mount models having 16 or more channels were particularly challenging, and we were delighted when all the elements finally fell into place and we had a good-looking design that was also easy to carry.

## Control Layout and Feel

**Mr. Tashiro:**  
We also redesigned the knobs, and significantly improved readability and feel.

**Mr. Tanaka:**  
Right. The powder finish made it necessary to increase the size of the lettering, which resulted in better readability.

**Mr. Nishizawa:**  
The meters are brighter, too. We used high-output LEDs that are easy to read even outdoors on a bright day. There are no other mixers in this class that offer separate multi-colored meters for different functions.

**Mr. Tanaka (Iggy):**  
Yes, I remember everyone crowding around one of the new mixers to check out the meters in a bright section of the corridor.

## Weight, Strength and Durability

**Mr. Tashiro:**  
This is just about the right weight for hand carrying.

**Mr. Tanaka (Iggy):**  
That’s a very important point in a utility mixer.

**Mr. Nagai:**  
It’s easy to achieve sufficient strength if you use steel or other heavy metals, but since the MG mixers were intended for utility use, we had to consider the portability and handling aspects. What’s more, if you give priority to rack mounting in the rack-mountable models that have 16 or more channels, you end up with strength problems. But if you add reinforcing ribs you’re faced with manufacturing problems. So we went back to the design and repeated structural analysis until we had a body with the ideal combination of design and strength.

**Mr. Tashiro:**  
In many cases other manufacturers claim “heavy duty” or “high-reliability” as an excuse for the fact that they went with manufacture-friendly heavy-gauge steel and readily available oversized parts. But here at Yamaha we have access to the latest analysis tools that allow us to achieve superior strength in more refined designs, as well as source smaller parts of higher quality from all over the world. The trend towards smaller and lighter products is obvious in the latest computers and personal music players. This points to a fundamental growth in technology that reflects the needs of the market, and does not require any compromises in sound quality. Our small, lightweight mixers deliver the same sonic quality as our professional PM-series consoles. People want utility mixers to be small and light while sounding great, and that’s just what the MG mixers provide.

**Mr. Tanaka (Iggy):**  
So these are products that strike a perfect balance between cost and performance. There’s absolutely nothing “cheap” about them in any way. By the way, what kind of durability testing do the mixers undergo?

**Mr. Nagai:**  
We begin with number crunching on the computers, comparing different metals and manufacturing methods, and end up with the inevitable durability testing of the actual product. There are many tests we employ, but the main process involves an impact test, a secondary transportation test, a drop test (we drop the packaged product from a height of 74 centimeters), a vibration test, and finally another impact test. The current one-piece rack-mount chassis design has passed all of these tests, and patents are pending.

Although each member of the MG design team clearly has individual goals within the project, the team is thoroughly united in terms of motivation and “Yamaha Vision.” The confidence they convey is a good indication that the new MG-series mixers offer something special to users who are serious about sound and quality.

# An Impressive Lineup with a Common Theme—Unmatched Quality and Performance

Whether you have a mixing applications that involves only a few channels, or up to 32 inputs with substantial signal routing versatility, Yamaha's MG-series offers a console that will give you the capacity, control, and performance you deserve. All models are remarkably compact and lightweight for superior handling and portability, but absolutely no compromises have been made in terms of features, performance, or durability. The MG mixers offer an extraordinary blend of technology: some inherited from professional Yamaha mixing consoles you're likely to see in distinguished halls throughout the world, and some developed specifically to deliver optimum performance in the MG-console format. In either case these performance-packed mixers are founded on a world-spanning network of human and technological resources that crystallize to deliver features that really matter, and sound that is undeniably superior.

### Lightweight, Portable Designs

Designing a lightweight mixer is not too difficult, but designing a lightweight, compact mixer that delivers serious performance is another matter. The Yamaha design team went to extraordinary lengths in the MG series, including in-depth material and structural analysis, to bring you maximum manageability and maximum performance in the same packages. The result is that you can easily pop the smallest models into your briefcase or shoulder bag and take with you anywhere. Even the larger models can be tucked under an arm and carried around quite easily. But the performance you'll get at the studio, club, hall, or anywhere you choose to use these fine mixers is far from lightweight. Every one of the MG-series mixers provides significant space savings along with huge performance benefits.

### Versatile Connectivity and Pro-class Connectors

Top-mounted input and output connectors make setting up and re-patching your system quick and easy. All models feature high-quality Neutrik™ balanced XLR connectors on mono microphone/line channels and XLR-equipped stereo channels. These professional-class connectors were subjected to extensive testing by the Yamaha design team, and were chosen for the MG mixers for their superior reliability and sonic qualities. The XLR-equipped stereo channels can accept mono microphone input either via the XLR or phone jack connectors. The remaining stereo channels provide phone jack and pin jack connectors for compatibility with a wide range of sources. Mono input channels also feature insert I/O connectors that let you patch external signal processing gear into those channels as required. Separate pin-jack 2TR inputs are provided to accept the output from a CD player or similar stereo source.

### Built-in Channel Compressors

This advanced feature can be a tremendous advantage in achieving great vocal sound, as well as to refine the sound of bass, guitar, and other sources. You won't find built-in channel compression on too many other mixers in this class, but in the new MG mixers you have Yamaha's innovative one-knob compression feature on several of the mono input channels. Conventional audio compressors with their threshold, ratio, knee, makeup gain and other controls can be complex and time-consuming to set appropriately for a given source. Yamaha's one-knob compressor eliminates the need for an engineering degree with a single control that lets you simply dial in the amount of compression you want.

### High-performance Microphone Preampers with Switchable Phantom Power

Microphone preamplifiers are critical in any mixer, and a performance bottleneck in many. That's why pros often spend thousands of dollars on just a single channel of microphone pre-amplification. The microphone preamps built into the MG mixers inherit technology from Yamaha's top-line professional consoles, and have been painstakingly designed to deliver superior sonic performance with any dynamic or condenser microphone. Gain trim covers a wide -60dB ~ -16dB range for microphones (-34dB ~ +10dB for line input), so you'll be able to achieve optimum level matching with just about any source. All microphone preamps also feature switchable phantom power so you can take advantage of the natural, extended response of high-quality condenser microphones.

### 3-band Channel EQ and High-pass Filters

Building a truly useful, musical-sounding channel equalizer is no easy task, but Yamaha has decades of experience in building pro consoles to draw on. You reap the benefits in the MG-series mixers: all mono channels feature 3-band equalizers with LOW, MID, and HIGH controls. Depending on the model some of all of the stereo channels have 2-band EQ for smooth equalization of stereo sources.

Although not directly related to the equalizer circuitry, all inputs also feature 80 Hz low-pass filters that can be used to eliminate subsonic noise that is outside the equalizers' range.

### Built-in Digital Effects ("CX" Models)

There's an astonishing amount of signal processing power packed into the compact chassis of the MG "CX" mixers. They incorporate a versatile digital multi-effect processor that provides a range of reverb, delay, modulation, and distortion programs you can use to refine and define your sound. Each of the 16 effect programs has a number of editable parameters as well as effect on/off switching capability and return level control. You can even blend the effects into the aux sends for "wet" monitoring, so the performers can hear the effects too. If you need to keep both hands free to play an instrument or perform other operations, an optional footswitch can be connected to the mixer's effect footswitch jack for convenient on/off switching.

### Aux/Effect Sends

All models except the MG82CX have from one to three AUX sends for convenient to processing and monitor systems. Master send controls are also provided, as are RETURN level controls for the AUX and STEREO busses. "CX" models have EFFECT send controls on all channels that adjust the level of the signal sent from the corresponding channel to the mixer's internal multi-effect system. The same signal can also be sent to external effect processors via the mixer's EFFECT SEND jack.

### Two, Four or Six Buses (Stereo and Group)

The smallest models in the lineup—the MG82CX and MG102C—have a single stereo bus (i.e. two mono buses). All other models additionally feature one or two stereo group buses and outputs that can be used for convenient channel grouping. Assign switches for the stereo and group buses are located next to each channel fader.

### Smooth 60-millimeter Faders & Illuminated Channel ON Switches

While the MG82CX and MG102C feature rotary faders, channel and master level control on all other models is accomplished via reliable, high-performance 60-millimeter linear faders that provide smooth, noise-free operation. When you have more than a few channels the direct visual indication of relative level settings can be an important advantage. Models with linear faders also feature illuminated channel ON switches that can be used to individually add or remove channels from the mix without having to change the positions of the channel faders.

### Bright Meters for Visual Level Monitoring

Accurate visual level monitoring can help you achieve maximum signal-to-noise ratio without distortion. The MG mixer's bright, easy-to-read multi-segment LED meters make it easy to control system levels for optimum overall performance.

### Optional Mic Stand Mount for the MG82CX and MG102C

Both the MG82CX and MG102C can be mounted on a microphone stand for optimal positioning and easy access using the optional BMS-10A Mic Stand Adaptor. This can be particularly handy when using one of them as a sub-mixer for drums or as a cue box in recording situations.

### Easy Operation

All switches, controls, and displays have been designed and laid out for intuitive access and smooth, reliable operation with positive tactile and visual feedback.

### P.T. Yamaha Music manufacturing Asia —Manufacturing the electronic instruments and PA products

From the initial design to final manufacturing, all production processes for the Yamaha MG series mixing console are performed entirely inside the company.

Moreover, every product that comes off our production line must pass strict quality controls using the sophisticated test instruments. Thus, all of this enables us to deliver the highest quality products to you.

C models with improved utility

MIXING CONSOLE  
MG102c

Extraordinary sonic quality plus channel compressors in a small-but-powerful utility mixer.

MIXING CONSOLE  
MG124c

Stunning MG-series sound plus and extra margin of input and signal-routing capacity.

MIXING CONSOLE  
MG166c

A six-bus format offers extra options for monitoring and live recording.

MIXING CONSOLE  
MG206c

Extended capacity, versatility and control for stage with sixteen microphone inputs.

- 3 band Mid-sweep EQ (Ch 1-12)
- 3 band EQ (Ch 13/14-19/20)
- 6 busses (Stereo + 4 groups)
- 4 Aux sends
- 2 Stereo Aux return
- Neutrik™ XLR Connectors
- Input gain trim
- High Quality mic preamp
- HPF
- 8 Compressors
- Illuminated CH ON switches
- 60 mm Super smooth fader
- Monitor mix
- Light weight (6.0 kg)
- 12-seg LED level meter
- Rack Mountable
- USB Connector
- CUBASE AI4 Included

## CUBASE AI4

Cubase AI4 harnesses the power of the Steinberg Cubase 4 digital audio workstation for use with Yamaha MG "USB" mixers, providing a powerful set of advanced software tools that are easy to use while significantly expanding the mixers' recording and production capabilities.

Cubase AI4 offers direct digital connectivity to the stereo buses of MG "USB" models for audio recording and editing. It also features a range of MIDI sequencing capabilities, an entire suite of VST effect plug-ins, and a HALion One sample player featuring selected waves from the famed Yamaha Motif synthesizers.

- Cubase AI4 Features**
- Cubase 4 audio engine.
  - 48 audio tracks and up to 64 MIDI tracks.
  - 25 VST effect plug-ins, including 15 new VST3 plug-in effects.
  - HALion One software sample player with selected Motif waves.
  - Plug and Play VST/MIDI setup.
  - Studio Connections Integration.
  - File Interchange between Steinberg software and Yamaha hardware.
  - 20 MIDI music styles and 480 audio drum loops included.

## Positioning Chart

## Application

### Live Recording

This live-sound system uses an MG206C-USB to handle a main vocal microphone plus three chorus microphones, plus a synthesizer and electronic piano. A pair of MSR400 powered speakers are used for main output, while an MSR100 powered speaker serves as a monitor for the performers. The built-in channel compressors and effects eliminate the need for any outboard signal processing gear.

# Serious Capacity for Live Sound & Installations

If your application is live sound reinforcement you'll want all the channel capacity you can get—just in case. With 24 and 32 input channels, respectively, the MG24/14FX and MG32/14FX are ready to handle all but the most ambitious sound-reinforcement setups. And with dual SPX digital effect systems on-board you won't need racks of outboard gear to get the sound you need. There's also a comprehensive range of group and auxiliary busses to make even complex mixes easy.

MIXING CONSOLE  
**MG24/14FX**

MIXING CONSOLE  
**MG32/14FX**

### A Variety of Input Connectors Plus Insert I/O

Balanced XLR and phone-jack connectors are provided on all mono inputs (channels 1 ~ 16 on the MG24/14FX, and channels 1 ~ 24 on the MG32/14FX). The remaining eight channels on both mixers are configured as four stereo channels, two of which feature both pin-jack and phone jack connectors. A separate stereo ZTR input with pin-jack connectors is provided for independent input of signals from CD players or similar sources. All mono input channels feature insert I/O patch points so you can insert compressors, EQ, or other extra signal-processing gear into the channel signal path as required. Insert patch points are also provided on the stereo and group busses for effective output processing.

### Low-noise, High-precision Mic Preamps

All 16 mic preamps in the MG24/14FX and all 24 mic preamps in the MG32/14FX are of exemplary quality. They offer low-noise, transparent amplification with the widest possible range of dynamic and condenser microphones, which adds up to cleaner, better-sounding mixes. All mic preamps feature switchable +48V phantom power for phantom-powered studio condenser microphones. Phantom power is switchable in 8-channel groups.

### Versatile EQ for Effective Sound Shaping

Mono channels feature 3-band equalizers with HIGH (10 kHz), LOW (100 Hz), and MID (250 Hz ~ 5 kHz sweep) bands. High-pass filters are also provided on all microphone inputs. Stereo channels have 4-band equalizers with HIGH (10 kHz shelving), HI MID (3 kHz peaking), LOW MID (800 Hz peaking), and LOW (100 Hz shelving) bands.

### Dual SPX Digital Effects

In the MG24/14FX and MG32/14FX you have not one, but two high-performance digital signal processing stages, fed by separate effect buses, so you can enhance your mix with two separate effects at the same time. And the effects are provided by the very latest Yamaha DSP technology—you know you're getting the best. Each stage provides a selection of 16 professional-quality SPX digital effects, including reverb, delay, pitch change, chorus, phasing, vocal doubling, distortion, and more. Parameter controls that can be adjusted to tailor the effects to your sonic requirement are also provided and Tap delay makes it easy to produce tempo-synchronized delays.

### 14 Buses In All For Flexible Signal Routing

In addition to lots of input channels, live sound reinforcement applications usually demand a number of additional mixes—usually in the form of group sub-mixes and aux sends for external signal processing and monitor mixes. In both the MG24/14FX and MG32/14FX you have a total of 14 mix buses: the main stereo program bus, four stereo group bus pairs for convenient channel grouping, six auxiliary busses (four configurable for pre- or post-fader operation and two set up as effect sends), and two internal effect busses that feed the dual high-performance built-in effect processors. You can use the bus select switches and controls on each channel to assign the channel signal to the stereo, group, internal effect, and AUX buses as required.

### Six Aux Sends & Two Stereo Aux Returns

All input channels feature six AUX send controls. AUX sends 1 through 4 are pre/post switchable while AUX 5 and 6 are post-fader sends. Two effect sends are also provided. You choose you have plenty of flexibility for external signal processing and monitoring in live sound-reinforcement applications. Two stereo auxiliary returns are included, as well as return facilities for the internal effect stages.

### Balanced XLR Stereo and Mono Outputs Plus Comprehensive Output Connectors

Professional connectivity is provided by reliable XLR-type balanced stereo and mono outputs. In addition to the main L and R XLR and phone-jack stereo outputs, these versatile mixers also offer L and R phone-jack sub-stereo, pin-jack recording, XLR mono, and stereo phone-jack headphone outputs. Phone-jack group outputs are also provided to allow independent output of the group bus mixes.

### Other Important Features

- -60dB ~ -16dB gain trim for microphone input, and -34dB ~ +10dB for line input.  
\* Peak indicators for accurate input gain setup.
- Reliable 60-millimeter faders and illuminated switches.
- 80 ~ 120 Hz sweepable Mono Out LPF for convenient subwoofer feed.
- 12-segment meters for accurate visual monitoring.
- Talkback input.

## MG166C-USB, MG166CX-USB, MG206C-USB

### DIGITAL INPUT/OUTPUT CHARACTERISTICS

Terminal	Format	Data length	Connector
USB	USB AUDIO 1.1	16 bit	USB B type

- \*1 0 dBu is referenced to 0.775 Vrms. 0 dBV is referenced to 1 Vrms.  
 \*2 Sensitivity is the lowest level that will produce an output of +4 dB (1.23 V), or the nominal output level when the unit is set to maximum level. (all faders and level controls are at maximum position.)  
 \*3 XLR-3-31 type connectors are balanced. (1=GND, 2=HOT, 3=COLD)  
 \*4 Phone Jacks are balanced. (Tip=HOT, Ring=COLD, Sleeve=GND)  
 \*5 Phone Jacks are unbalanced.  
 \*6 Phone Jacks are unbalanced. (Tip=Out, Ring=In, Sleeve=GND)  
 \*7 ST CH IN 9/10 exists only in MG102C  
 \*8 Phone Jacks are impedance balanced.  
 (Tip=HOT, Ring=COLD, Sleeve=GND)  
 \*9 EFFECT SEND exists only in MG82CX

## System Requirements

- Visit the web address below for the latest information on supplied software and operating system requirements.  
http://www.yamahaproaudio.com/

### MG Series (USB Model)

#### Windows® Vista

- Computer OS** Windows-based computer with built-in USB interface  
**OS** Windows Vista  
**CPU** 1 GHz or better Intel Core / Pentium / Celeron processor  
**Memory** More than 1 GB

#### Windows® XP

- Computer OS** Windows-based computer with built-in USB interface  
**OS** Windows XP Professional / XP Home Edition  
**CPU** 750 MHz or better Intel Core / Pentium / Celeron processor  
**Memory** More than 128 MB

#### Macintosh®

- Computer OS** Macintosh computer with built-in USB interface  
**OS** Mac OS X 10.3.3 or higher  
**CPU** Macintosh G3 processor 300 MHz or better  
**Memory** More than 128 MB

### Cubase A14

#### Windows®

- OS** Windows XP Professional / XP Home Edition  
**CPU** Intel Pentium 1.4 GHz or better  
**Available Memory** More than 512 MB  
**Hard Disk** Free disk space of 400 MB or more; high-speed hard disk  
**Audio Interface** Windows DirectX / ASIO compatible

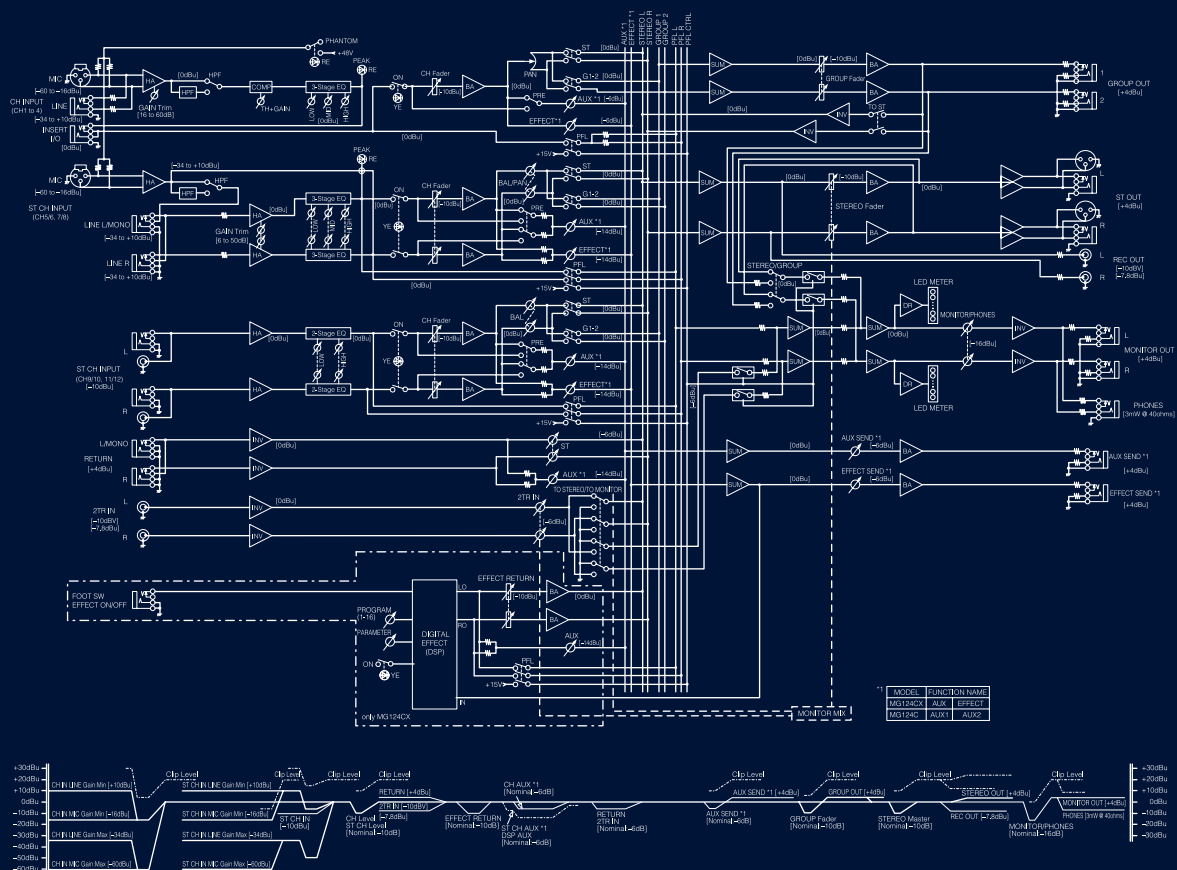

#### Macintosh®

- OS** Mac OS X 10.4 or higher  
**CPU** Power Mac G4 1 GHz or Core Solo 1.5 GHz or better  
**Available Memory** More than 512 MB  
**Hard Disk** Free disk space of 400 MB or more; high-speed hard disk
