Hello Dear Kreditech Data Science applicant,

The task at hand is a binary classification problem, for which both a training and a validation set are provided as csv files.

What we ask is that you work on this classification task by building a classifier only with the training data, with the goal of achieving the best performance possible on the validation data. We also request that you solve this problem using R.

To show your work, we expect to receive a short writeup with your observations about the problem, your thought process throughout your work with it, any interesting findings you have and, finally, a descriptions of the results you have obtained. This report should be in no case longer than 2 pages.

We would also like to get any code you write for this project, and would appreciate it if it was informally commented so that its easier to read for us.

Best of luck,
The Kreditech Data Science Team
