

Environmental Product Declaration

Pemko S773 SiliconSeal Adhesive Smoke/Fire Gasket

Adhesive Gasket

The Pemko S773 Adhesive Gasket is a silicone triple fin seal designed to seal a gap between a door and frame or between meeting edges of a pair of doors for energy efficiency, sound attenuation, and smoke inhibition.

ASSA ABLOY

ASSA ABLOY is committed to providing products and services that are environmentally sound throughout the entire production process and the product lifecycle. Our unconditional aim is to make sustainability a central part of our business philosophy and culture, but even more important is the job of integrating sustainability into our business strategy. The employment of EPDs will help architects, designers and LEED-APs select environmentally preferable door openings.

ASSA ABLOY will continue our efforts to protect the environment and health of our customers/end users and will utilize the EPD as one means to document those efforts.

Environmental Product Declaration

Pemko S773 SiliconSeal Adhesive Smoke/Fire Gasket

Door Hardware

ASSA ABLOY

According to
ISO 14025

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

Product Definition and Information

Product Description

Product name: Pemko S773 SiliconSeal Adhesive Smoke/Fire Gasket

Product characteristic: Adhesive Gasket

The Pemko S773 SiliconSeal Adhesive Smoke/Fire Gaskets is an adhesive-backed, triple fin, silicone gasketing product installed on the perimeter of a door opening or at the meeting edges of a pair of doors to slow/prohibit the passage of smoke, fire, weather, sound, and dirt. It is rigorously tested and offered in many colors (finishes) guaranteed to blend unobtrusively into any structure. Additional features include:

- Effective temperature range of -58 to +450 degrees Fahrenheit
- Manufactured using high quality cross linked silicon polymer
- Includes high quality acrylic adhesive for secure application
- Exceeds air infiltration ratings by a factor of 7 or better
- Is 93% efficient for sound control when applied in a double row
- Self-extinguishing, non-toxic
- Unaffected by sunlight, ozone, and ultraviolet rays
- Impervious to fungus and mildew
- Product is packaged with an alcohol towelette for frame cleaning and a mylar label. Otherwise, no other accessory materials are required for installation or use

Application

The Pemko Silicone Gasketing is ideal for a wide range of applications, including but not limited to high traffic areas, hotels, offices, public buildings, hospitals, institutions, educational facilities, and retail spaces.

Technical Data

For the declared product, the following technical data in the delivery status must be provided with reference to the test standard:

Technical Data	
Length	17' (Multiple Lengths Available)
Width	0.5"
Height	0.375"

Environmental Product Declaration

Pemko S773 SiliconSeal Adhesive Smoke/Fire Gasket

Door Hardware

ASSA ABLOY

According
to
ISO 14025

Placing on the Market / Application Rules

The standards that can be applied for Pemko Silicone Adhesive Gasketing are:

- FAR 25.853 Airworthiness Standards for Compartment Interiors
- NFPA 105 Smoke Tested
- ASTM E-90 Sound Rated
- ASTM E 283 Air Infiltration Tested
- BHMA A156.21, Thresholds
- UL 10b and 10c Fire Rated
- UL 1784 Smoke Tested
- UL 2818, GREENGUARD Gold

Delivery Status

Shipments of Pemko products are delivered in a cardboard box with each product individually shrinkwrapped.

Base Materials / Ancillary Materials

Material	Percentage in mass (%)
Brass	0.00%
Stainless Steel	0.00%
Steel	0.00%
Aluminum	0.00%
Electronics/Mechanics	0.00%
Silicone	99.00%
Other	1.00%
Total	100.00%

Manufacture

The primary manufacturing processes are made by Tier 1 suppliers and the final manufacturing processes occur in Memphis, TN and Ventura, CA. The components come from processes like stamped steel, turning, and aluminum extrusion.

Environmental and Health During Manufacturing

ASSA ABLOY is committed to producing and distributing door opening solutions with minimal environmental impact, where health & safety is the primary focus for all employees and associates.

- Environmental operations, GHG, energy, water, waste, VOC, surface treatment and H&S are being routinely monitored. Inspections, audits, and reviews are conducted periodically to ensure that applicable standards are met and environment management program effectiveness is evaluated.
- Code of Conduct covers human rights, labor practices and decent work. Management of ASSA ABLOY is aware of their environmental roles and responsibilities, providing appropriate training, supporting accountability and recognizing outstanding performance.
- Any waste metals during machining are separated and recycled. The waste from the water-based painting process is delivered to waste treatment plant.
- The factories in Memphis, TN and Ventura, CA have certification of Environmental Management to ISO 14001:2004 and Occupational Health and Safety to OHSAS 18001:2007.

Pemko S773 SiliconSeal Adhesive Smoke/Fire Gasket

Door Hardware

ASSA ABLOY

According to
ISO 14025

Product Processing / Installation

Pemko Silicone Adhesive Gasketing is distributed through and installed by trained installation technicians, such as locksmiths, carpenters etc. adhering to local/national standards and requirements.

Packaging

Shipments of Pemko products are delivered in a cardboard box with each product individually shrinkwrapped.

Material	Quantity (% By Weight)
Cardboard	96%
Other	4%
Total	100%

Conditions of Use

It may be desired to periodically wipe the product with warm soapy water using mild detergent to clear any dirt or grime that has accumulated from normal traffic.

Environmental and Health During Use

There is no harmful emissive potential. No damage to health or impairment is expected under normal use corresponding to the intended use of the product.

Reference Service Life

The reference service life is 2 years.

Extraordinary Effects

Fire

No negative environmental impact will result from exposure to fire.

Water

Contains no substances that have any impact on water in case of flood.

Mechanical Destruction

No danger to the environment can be anticipated during mechanical destruction.

Re-use Phase

This product is not typically reused.

Disposal

This product is not typically recycled.

Life Cycle Assessment

Declared Unit

The declaration refers to the functional unit of 1 unit (or piece) of Pemko S773 SiliconSeal Adhesive Smoke/Fire Gasket, as specified in the Builders Hardware PCR

Name	Value	Unit
Declared unit	17	feet of gasketing
Mass	0.180	kg
Conversion factor to 1 kg	5.568	-

System Boundary

This is a cradle to gate with options Environmental Product Declaration. The following life cycle phases were considered:

Product Stage			Construction Process Stage		Use Stage							End of Life Stage*				Benefits and Loads Beyond the System Boundaries
Raw material supply	Transport	Manufacturing	Transport from gate to the site	Construction/ installation process	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstruction /demolition	Transport	Waste processing	Disposal	Reuse- Recovery- Recycling potential
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	MND	MND	MND	MND	MND	MND	MND	MND	X	X	X	X

Description of the System Boundary Stages Corresponding to the PCR

(X = Included; MND = Module Not Declared)

*This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of waste state or disposal of final residues.

Estimates and Assumptions

End of Life

In the End of Life phase, for all the materials which can be recycled, a recycling scenario with 100% collection rate was assumed.

Cut-off Criteria

In the assessment, all available data from the production process are considered, i.e. all raw materials used, auxiliary materials (e.g. lubricants), thermal energy consumption and electric power consumption - including material and energy flows contributing less than 1% of mass or energy (if available). In case a specific flow contributing less than 1% in mass or energy is not available, worst case assumption proxies are selected to represent the respective environmental impacts. Impacts relating to the production of machines and facilities required during production are out of the scope of this assessment.

Background data

For life cycle modeling of the considered products, the GaBi 6 Software System for Life Cycle Engineering, developed by thinkstep, is used GaBi 6 2013. The GaBi-database contains consistent and documented datasets which are documented in the online GaBi-documentation GaBi 6 2013D. To ensure comparability of results in the LCA, the basic data of GaBi database were used for energy, transportation and auxiliary materials.

Environmental Product Declaration

Door Hardware

ASSA ABLOY

According to
ISO 14025

Data Quality

The data sources used are complete and representative of North America in terms of the geographic and technological coverage and are a recent vintage (i.e. less than ten years old). The data used for primary data are based on direct information sources of the manufacturer. Secondary data sets were used for raw materials extraction and processing, end of life, transportation, and energy production flows. Wherever secondary data is used, the study adopts critically reviewed data for consistency, precision, and reproducibility to limit uncertainty.

Period Under Review

The period under review is the full calendar year of 2015. Where data was incomplete, annual 2014 data was used and was deemed representative for the product.

Allocation

Allocation was determined on a per unit basis.

Comparability

A comparison or an evaluation of EPD data is only possible if all data sets to be compared were created according to EN 15804 and the building context, respectively the product-specific characteristics of performance, are taken into account. Environmental declarations from different programs may not be comparable. Full conformance with the PCR for North American Builders Hardware products allows EPD comparability only when all stages of a Builders Hardware product's life cycle have been considered. However, variations and deviations are possible.

LCA: Modeling Scenarios and Additional Technical Information

The following technical information is a basis for the declared modules or can be used for developing specific scenarios in the context of a building assessment if modules are not declared.

Installation into the building (A5)		
Name	Value	Unit
Auxiliary	-	kg
Water consumption	-	m ³
Other resources	-	kg
Electricity consumption	-	kWh
Other energy carriers	-	MJ
Material loss	-	kg
Output substance following waste treatment on-site	0.13	kg
Dust in the air	-	kg
VOC in the air	-	kg

Reference Service Life		
Name	Value	Unit
Reference Service Life	2	years

End of life (C1-C4)		
Name	Value	Unit
Collected separately	0.0000	kg
Collected as mixed construction waste	0.1796	kg
Reuse	0.1778	kg
Recycling	0.0000	kg
Energy recovery	-	kg
Landfilling	0.1778	kg

MER	Materials for energy recovery	kg	0.0E+00	0.0E+00	0.0E+00	0.0E+00	0.0E+00	0.0E+00	0.0E+00
EEE	Exported electrical energy	MJ	0.0E+00	0.0E+00	0.0E+00	0.0E+00	0.0E+00	0.0E+00	0.0E+00
EEE	Exported thermal energy	MJ	0.0E+00	0.0E+00	1.2E-01	0.0E+00	0.0E+00	7.8E-03	0.0E+00

The production life cycle stage (A1-A3) dominates the impacts across all impact categories. This is due to the upstream production of materials used in the product, along with electricity use in the manufacturing of the product. Potential benefits in the global warming, acidification, eutrophication, smog, and fossil fuel depletion impact categories are due to the potential avoided burden of recycled materials after disposal.
