Simplicity and versatility

Respiration Trilogy 202 portable ventilator

PHILIPS

The Trilogy 202 is both a volume-control and pressure-control ventilator for invasive and noninvasive ventilation. The versatile breath delivery and setup options free you from burdensome equipment exchanges, providing greater continuity of care for your patients. Because the Trilogy 202 has the unique ability to compensate for leaks in both pressure and volume control modes, using simpler passive circuits may support significant time and cost savings. With one simple setting change, the Trilogy 202 supports either active or passive exhalation breathing circuits to accommodate changes in circuit preference.

Support many needs with a single ventilator

Intra-hospital transport

The Trilogy 202 allows freedom of movement. With a 3-hour internal battery and optional 3-hour detachable battery, you'll have sufficient power for intra-hospital transports – with plenty of time for any delays or detours. It weighs only 5.6 kg and has an integrated carrying handle for safe and convenient handling during intra-hospital transports.

Hospital to home transition

In addition to sharing a common user interface, all home and hospital Trilogy ventilators offer identical ventilation modes and breathing circuit configurations. Now your home-bound patients will receive the same finely tuned ventilatory support they received in the hospital. Furthermore, stored data from the home or the hospital can be downloaded for review and evaluated for meaningful trends.

Simply versatile

Synchrony

The Auto-Trak algorithm improves patient-ventilator synchrony by adjusting to changing breathing patterns and dynamic leaks. The auto-adaptive triggering, cycling, and leak adjustments may help reduce the time clinicians spend adjusting thresholds and re-fitting masks.

Leak compensated volume modes

Trilogy 202 offers all the conventional volume-control modes: AC, SIMV (with or without PS), and CV. The Trilogy 202 has the unique ability to compensate for leaks in a volume control mode. This means more consistent tidal volume delivery even during NIV or when cuff leaks are present.

Setup

Whether you are in a sub-acute or chronic care environment, setup is simple with the Trilogy 202. The color screen and intuitive menu navigation allow rapid settings and changes for a wide range of patients. The integrated blender provides oxygen administration from 21 – 100%. And for patients who may wean during the day and rest at night, Trilogy 202 supports two different treatment prescriptions.

Trilogy 202 intra-hospital transport flexibility

Trilogy 100 ventilator for home-bound patients

Detailed data and remote settings

A secure digital (SD) card stores historical ventilatory data so that you can review treatment trends using our DirectView software.
