1 Introduction and Scope

Our AP Series of enterprise-grade 802.11b/g/n Wi-Fi access points is engineered to provide fast, dependable, and flexible operation in a variety of environments, all controlled by an easy-to-use centralized management system. From the small but powerful AP One AC mini to the top-of-the-line AP One 300M our AP Series offers wireless networking solutions to suit any business need, and every access point is loaded with essential features such as multiple SSIDs, VLAN, WDS, and Guest Protect.

A single access point provides as many as 32 virtual access points (16 on single-radio models), each with its own security policy (WPA, WPA2, etc.) and authentication mechanism (802.1x, open, captive portal, etc.), allowing faster, easier, and more cost-effective network builds. Each member of the AP Series family also features a high-powered Wi-Fi transmitter that greatly enhances coverage and performance while reducing equipment costs and maintenance.

2 Product Features and Benefits

Key features and benefits of AP Series access points:

- High-powered Wi-Fi transmitter enhances coverage and lowers cost of ownership.
- Independent security policies and encryption mechanisms for each virtual access point allow fast, flexible, cost-effective network builds.
- Centralized management via InControl reduces maintenance expense and time.
- WDS support allows secure and fast network expansion.
- Guest Protect support guards sensitive business data and subnetworks.
- WMM (Wi-Fi Multimedia) and QoS (Quality of Service) support keeps video and other bandwidth-intensive data flowing fast and lag-free.

3 Package Contents

3.1 AP One Enterprise

- 1x AP One Enterprise
- 1 x Power supply
- 1 x Instruction sheet

3.2 AP One AC mini

- 1 x AP One mini
- 1 x Omni-directional antenna
- 1 x Power supply
- 1 x Instruction sheet

3.3 AP One In-Wall

- 1 x AP One In-Wall
- 1 x Mounting kit
- 1 x Instruction sheet

3.4 AP One 300M

- 1 x AP One 300M
- 2 x Omni-directional antennas
- 1 x Power supply
- 1 x Instruction sheet

3.5 AP One Flex 300M

- 1 x AP One Flex 300M
- 1 x Instruction sheet

3.6 AP Pro / AP Pro 300M / AP Pro Duo

- 1 x AP Pro / AP Pro 300M / AP Pro Duo
- 1 x Instruction sheet
- 1 x Installation guide

5 Installation

Your access point acts as a bridge between wireless and wired Ethernet interfaces. A typical setup follows:

5.1 Installation Procedures

1. Connect the Ethernet port on the unit to the backbone network using an Ethernet cable. The port should auto sense whether the cable is straight-through or crossover.
2. Connect the power adapter to the power connector of the unit. Plug the power adapter into a power source.
3. Wait for the status LED to turn green.
4. Connect a PC to the backbone network. Configure the IP address of the PC to be any IP address between 192.168.0.4 and 192.168.0.254, with a subnet mask of 255.255.255.0.
5. Using Microsoft Internet Explorer 6 or above, Mozilla Firefox 2.0 or above, or Google Chrome 2.0 or above, connect to <https://192.168.0.3>.
6. Enter the default admin login ID and password, **admin** and **public** respectively.

7. After logging in, the Dashboard appears. Click the **System** tab to begin setting up your access point.

6 Using the Dashboard

The **Dashboard** section contains a number of displays to keep you up-to-date on your access point's status and operation. Remote assistance can also be enabled here.

The screenshot shows the PEPWAVE dashboard interface. At the top, there is a navigation bar with tabs for 'Dashboard', 'Network', 'AP', 'System', and 'Status'. The 'Dashboard' tab is selected. Below the navigation bar, there is a sidebar on the left with 'General' and 'AP' sections. The 'AP' section has a 'Logout' button. The main content area displays the following information:

- WAN**: IP Address: 10.10.12.156 [Details...](#) Status: ● Connected
- Device Information**:
 - Model: AP One AC
 - Firmware: 3.5.2 build 1538
 - Uptime: 8 hours 39 minutes
- Remote Assistance Status**: ● [Turn off](#)

Copyright © Pepwave. All rights reserved.

6.1 General

This section contains WAN status and general device information.

WAN
IP Address: 10.10.12.156 [Details...](#) Status: ● Connected

WAN

When your access point is connected to a WAN, this field displays the WAN IP address. For more information, click the **Details...** link, which displays the following:

Details of WAN Close	
Connection Type	DHCP
IP Address	10.10.12.156
Subnet Mask	255.255.0.0
Default Gateway	10.10.10.1
DNS Servers	10.10.10.1

IP Address

Status This field displays the current WAN connection status.

User Manual

PEPWAVE AP Series

Device Information

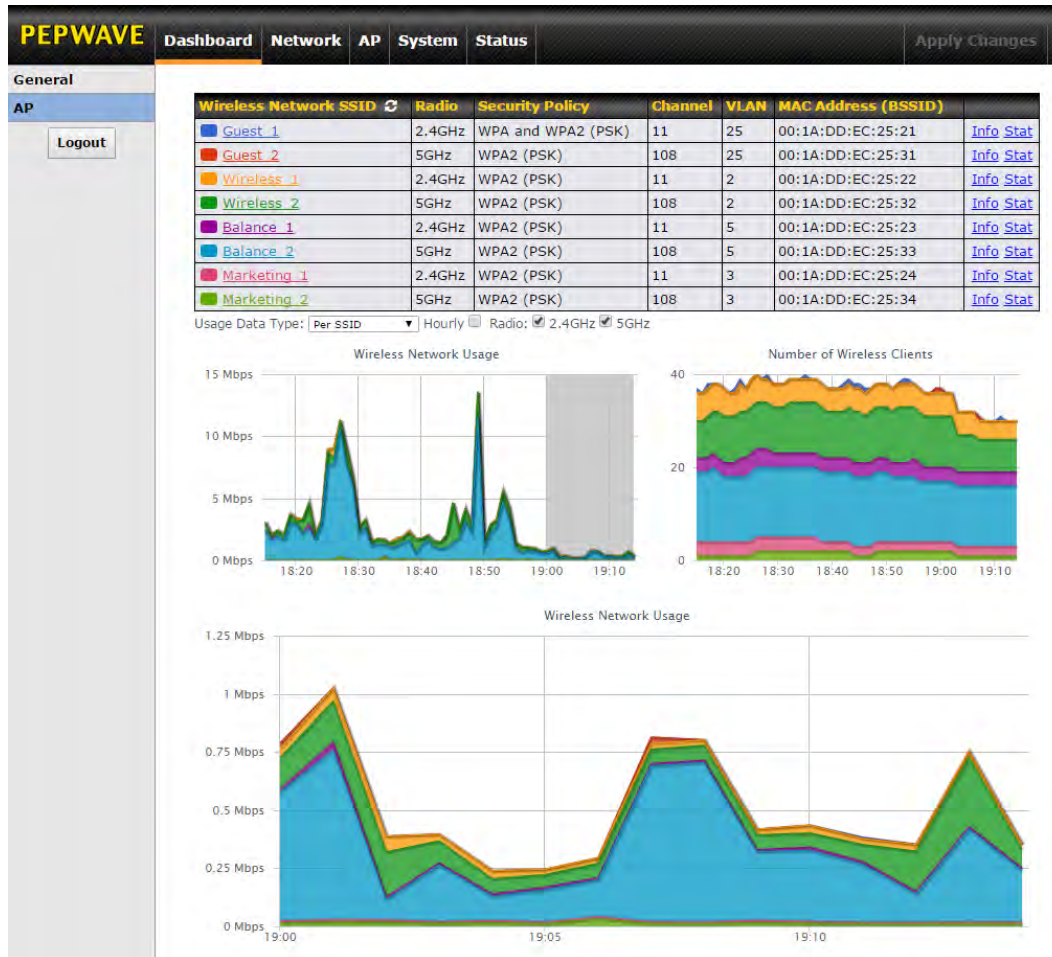

Model:	AP One AC
Firmware:	3.5.2 build 1538
Uptime:	8 hours 49 minutes

Device Information

Model	This field displays your access point's model number.
Firmware	The firmware version currently running on your access point appears here.
Uptime	This field displays your access point's uptime since the last reboot or shutdown.

6.2 AP

This section displays a variety of information about your wireless network.

AP Status	
Wireless Network SSID	This field displays your access point's SSID.
Radio	The radio frequency currently used by your access point appears here. If you're using the AP One AC mini or the AP One In-Wall and have configured both radios, this displays both radios in use.
Security Policy	This field displays the security policy your access point is currently using. If you're using the AP One AC mini and have configured both radios, this displays channels in use for the 2.4GHz and 5GHz bands.
Channel	The channel currently used by your access point is displayed in this field.

User Manual

PEPWAVE AP Series

VLAN	If your access point is using a VLAN ID for management traffic, it will appear here. A value of 0 indicates that a VLAN ID is not being used.												
MAC Address (BSSID)	Your access point's MAC address appears here. If you're using the AP One AC mini and have configured both radios, this displays a MAC address for both the 2.4GHz and 5GHz radio.												
Info	<p>Click this link to display the following information panel:</p> <div data-bbox="623 489 1292 722"><table border="1"><thead><tr><th colspan="2">INFO Close</th></tr></thead><tbody><tr><td>Broadcast SSID</td><td>Enable</td></tr><tr><td>Web Portal Login</td><td>Disable</td></tr><tr><td>MAC Filter</td><td>None</td></tr><tr><td>Bandwidth Control</td><td>Disable</td></tr><tr><td>Layer 2 Isolation</td><td>Disable</td></tr></tbody></table></div>	INFO Close		Broadcast SSID	Enable	Web Portal Login	Disable	MAC Filter	None	Bandwidth Control	Disable	Layer 2 Isolation	Disable

Layer 2 Isolation	Disable												
Stat	<p>Click this link to display the following statistics panel:</p> <div data-bbox="623 863 1292 1058"><table border="1"><thead><tr><th colspan="2">STAT Close</th></tr></thead><tbody><tr><td>Packets Sent</td><td>0</td></tr><tr><td>Bytes Sent</td><td>0</td></tr><tr><td>Packets Received</td><td>0</td></tr><tr><td>Bytes Received</td><td>0</td></tr></tbody></table></div>	STAT Close		Packets Sent	0	Bytes Sent	0	Packets Received	0	Bytes Received	0		
STAT Close													
Packets Sent	0												
Bytes Sent	0												
Packets Received	0												
Bytes Received	0												
Usage Data Type	Select Per SSID or AP Send / Recv to determine the data displayed in the graphs below.												
Hourly	Check this box to graph wireless network usage on an hourly basis.												
Wireless Network Usage/Number of Wireless Clients	These graphs detail recent wireless network usage.												

7 Configuration

7.1 System

The options on the **System** tab control login and security settings, firmware upgrades, SNMP settings, and other settings.

Admin Settings	
AP Name	AP One <small>hostname: ap-one</small>
Location	site1
Admin User Name	admin
Admin Password
Confirm Admin Password
Web Admin Interface	<input checked="" type="checkbox"/>
Security	HTTPS <input checked="" type="checkbox"/> HTTP to HTTPS Redirection
Web Admin Port	443
Allowed Source IP Subnets	<input checked="" type="radio"/> Any <input type="radio"/> Allow access from the following IP subnets only
Language	English

7.1.1 Admin Security

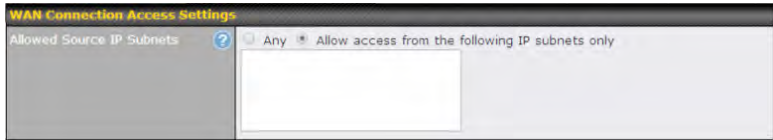

The **Admin Security** section allows you to set up your access point's name, password, security settings, and other options.

Admin Settings	
AP Name	AP One <small>hostname: ap-one</small>
Location	site1
Admin User Name	admin
Admin Password
Confirm Admin Password
Web Admin Interface	<input checked="" type="checkbox"/>
Security	HTTPS <input checked="" type="checkbox"/> HTTP to HTTPS Redirection
Web Admin Port	443
Allowed Source IP Subnets	<input checked="" type="radio"/> Any <input type="radio"/> Allow access from the following IP subnets only
Language	English

Admin Security	
AP Name	Enter a name to identify your access point. This name can be retrieved via SNMP.
Location	Enter a name to identify the location of your access point. This name can be retrieved via SNMP.
Admin User Name	This field specifies the administrator username of the web admin. It is set as <i>admin</i> by default.

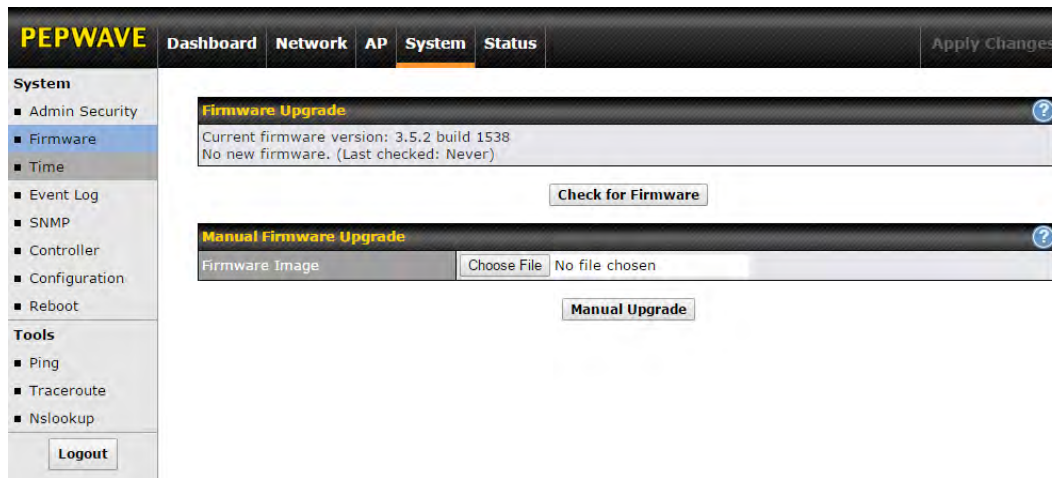

User Manual

PEPWAVE AP Series

Admin Password	This field allows you to specify a new administrator password. The default password is <i>public</i> .
Confirm Admin Password	Re-enter the admin password.
Web Admin Interface	Check this box to turn on the web administration interface, which allows remote AP management.
Security	Choose HTTP or HTTPS as the protocol to use when accessing the web admin interface. To automatically redirect HTTP access to HTTPS, check HTTP to HTTPS Redirection .
Web Admin Port	Specify the port number on which the web admin interface can be accessed.
Allowed Source IP Subnets	<p>This field allows you to restrict access to the web admin to only defined IP subnets.</p> <ul style="list-style-type: none">• Any - Allow web admin accesses from anywhere, without IP address restrictions.• Allow access from the following IP subnets only – Restricts the ability to access web admin to only defined IP subnets. When this option is chosen, a text input area will appear:  <p>Enter your allowed IP subnet addresses into this text area. Each IP subnet must be in the form of <i>w.x.y.z/m</i>. <i>w.x.y.z</i> represents an IP address (e.g., <i>192.168.0.0</i>), and <i>m</i> represents the subnet mask in CIDR format, which is between 0 and 32 inclusively. For example: <i>192.168.0.0/24</i>. To define multiple subnets, separate each IP subnet, one per line. For example:</p> <pre>192.168.0.0/24 10.8.0.0/16</pre>
Language	Choose a language for the administration interface.

7.1.2 Firmware

The **Firmware** section lets you check the firmware version currently used by your access point, as well as check for and install new firmware via online download. You can also upgrade your firmware using a firmware file stored locally.

To check for new firmware, click the **Check for Firmware** button. If new firmware is available, your access point will automatically download and install it.

To upgrade your access point using a firmware file on your network, click **Choose File** to select the firmware file. Then click **Manual Upgrade** to initiate the firmware upgrade process using the selected file.

Note that your access point can store two different firmware versions in two different partitions. A firmware upgrade will always replace the inactive partition. If you want to keep the inactive firmware, simply reboot your device with the inactive firmware and then perform the firmware upgrade.

7.1.3 Time

The settings in this section govern the access point's system time zone and allow you to specify a custom timeserver.

Time	
Time Zone	Time region used by the system. All choices are based on UTC.
Time Server	To choose a time server other than the default, enter the URL here. To restore the default time server, click the Default button.

7.1.4 Event Log

The section allows you to turn on event logging at a specified remote syslog server.

The screenshot shows the PEPWAVE web interface. The top navigation bar includes 'PEPWAVE', 'Dashboard', 'Network', 'AP', 'System' (highlighted), and 'Status'. An 'Apply Changes' button is on the right. A left sidebar menu lists 'System' (with sub-items: Admin Security, Firmware, Time, Event Log, SNMP, Controller, Configuration, Reboot) and 'Tools' (with sub-items: Ping, Traceroute, Nslookup). A 'Logout' button is at the bottom of the sidebar. The main content area is titled 'Send Events to Remote Syslog Server' and contains a form with two rows: 'Remote Syslog' with a checkbox, and 'Remote Syslog Host' with a text input field and a 'Port: 514' label. A 'Save' button is located below the form.

Event Log	
Remote Syslog	Check this box to turn on remote system logging.
Remote Syslog Host	Enter the IP address or hostname of the remote syslog server, as well as the port number.

7.1.5 SNMP

SNMP, or simple network management protocol, is an open standard that can be used to collect information about your access point. The **SNMP** section offers a range of settings to control simple network management protocol access.

The screenshot shows the PEPWAVE web interface with the 'System' tab selected. The left sidebar contains a menu with 'SNMP' highlighted. The main content area displays the 'SNMP Settings' configuration page. It includes a 'Save' button and a table for 'Community Name' with columns for 'Community Name', 'Allowed Source Network', and 'Access Mode'. The first row shows 'public', '0.0.0.0', and 'Read Only'. Below the table is an 'Add SNMP Community' button. At the bottom, there is a section for 'SNMPv3 User Name' with columns for 'SNMPv3 User Name', 'Authentication / Privacy', and 'Access Mode'. The text 'No SNMPv3 Users Defined' is displayed, along with an 'Add SNMP User' button.

SNMP Settings	
SNMP Device Name	This field shows the AP name defined at System>Admin Security .
SNMP Port	This option specifies the port which SNMP will use. The default port is 161 .
SNMPv1	This option allows you to enable SNMP version 1.
SNMPv2c	This option allows you to enable SNMP version 2c.
SNMPv3	This option allows you to enable SNMP version 3.

User Manual

PEPWAVE AP Series

To add a community for either SNMPv1 or SNMPv2c, click the **Add SNMP Community** button in the **Community Name** table, which displays the following screen:

Settings	
Community Name	<input type="text"/>
IP Address	0.0.0.0
IP Mask	0.0.0.0 (/0) ▾
Access Mode	Read Only ▾
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

SNMP Community Settings	
Community Name	Enter a name for the SNMP community.
IP Address/IP Mask	These settings specify a subnet from which access to the SNMP server is allowed. Enter the subnet address here (e.g., 192.168.1.0) and select the appropriate subnet mask.
Access Mode	Select Read Only or Read and Write as the SNMP community access mode.
Status	Use these controls to enable or disable SNMP community access.

To define a user name for SNMPv3, click **Add SNMP User** in the **SNMPv3 User Name** table, which displays the following screen:

Settings	
SNMPv3 User Name	<input type="text"/>
Authentication Protocol	HMAC-MD5 ▾
Authentication Password	<input type="text"/>
Confirm Authentication Password	<input type="text"/>
Privacy Protocol	None ▾
Access Mode	Read Only ▾
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

SNMPv3 User Settings	
SNMPv3 User Name	Enter a user name to be used in SNMPv3.
Authentication Protocol	Select one of the following valid authentication protocols: <ul style="list-style-type: none">• NONE• HMAC-MD5• HMAC-SHA When HMAC-MD5 or HMAC-SHA is selected, an entry field will appear for the password.
Authentication Password	Enter a password to use with the selected authentication protocol.

Confirm Authentication Password	Re-enter the authentication password.
Privacy Protocol	Select None or CBC-DES as the SNMPv3 privacy protocol. When CBC-DES is selected, an entry field will appear for the password.
Access Mode	Select Read Only or Read and Write as the SNMPv3 access mode.
Status	Use these controls to enable or disable SNMPv3 access.

7.1.6 Controller

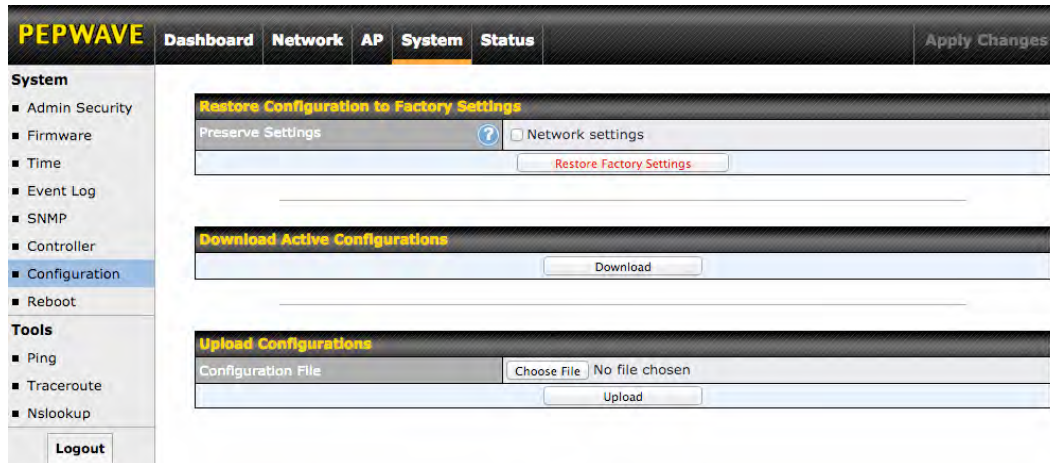

In the **Controller** section, you can set up Peplink InControl or AP Controller remote management.

The screenshot shows the PEPWAVE web interface. The top navigation bar includes 'Dashboard', 'Network', 'AP', 'System', and 'Status'. The left sidebar menu is expanded to 'System', with 'Controller' selected. The main content area displays the 'Controller Management Settings' page. It features a table with two rows: 'Controller Management' with a checked checkbox, and 'Controller Type' with a dropdown menu set to 'Auto'. A 'Save' button is located below the table.

Controller Management Settings	
Controller Management	Check this box to enable remote management.
Controller Type	Select Auto , InControl , or AP Controller as your remote AP management method. When Auto is selected, your access point will automatically choose the appropriate mode.

7.1.7 Configuration

In section, you can manage and backup access point configurations, as well as reset your access point to its factory configuration. Backing up your access point's settings immediately after successful initial setup is strongly recommended.

Configuration	
Restore Configuration to Factory Settings	The Restore Factory Settings button resets the configuration to factory default settings. After clicking the button, click the Apply Changes button on the top right corner to make the settings effective. To save existing network settings when restoring factory settings, check the Network Settings box before clicking Restore Factory Settings .
Download Active Configurations	Click Download to backup the current active settings.
Upload Configurations	To restore or change settings based on a configuration file, click Choose File to locate the configuration file on the local computer, and then click Upload . The new settings can then be applied by clicking the Apply Changes button on the page header, or you can cancel the procedure by pressing discard on the main page of the web admin interface.

7.1.8 Reboot

This section provides a reboot button for restarting the system. For maximum reliability, your access point can equip with two copies of firmware, and each copy can be a different version. You can select the firmware version you would like to reboot the device with. The firmware marked with **(Running)** is the current system boot up firmware.

Please note that a firmware upgrade will always replace the inactive firmware partition.

7.2 AP

Use the controls on the **AP** tab to set the wireless SSID and AP settings, as well as wireless distribution system (WDS) settings.

7.2.1 Wireless SSID

Wireless network settings, including the name of the network (SSID) and security policy, can be defined and managed in this section.

User Manual

PEPWAVE AP Series

Click **New SSID** to create a new network profile, or click the existing network profile to modify its settings.

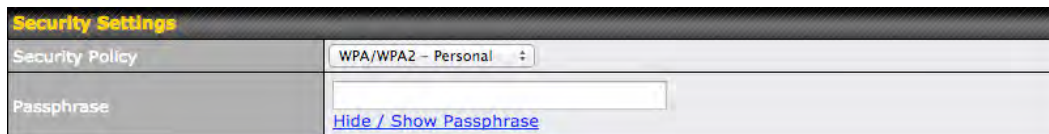

SSID Settings	
Enable	<input checked="" type="checkbox"/>
SSID	PEPWAVE_BCC0
Broadcast SSID	<input checked="" type="checkbox"/>
Data Rate	<input checked="" type="radio"/> Auto <input type="radio"/> Fixed MCS0/6M MCS Index
Multicast Filter	<input type="checkbox"/>
Multicast Rate	MCS0/6M MCS Index
IGMP Snooping (Multicast Enhancement)	<input type="checkbox"/>
DHCP Setting	None +
DHCP Option 82	<input type="checkbox"/>
Default VLAN ID	0
VLAN Pooling	<input type="checkbox"/>
VLAN Pool	<input type="text"/> (CSV: e.g. 1,3,9-11,15)
Network Priority (QoS)	Gold +
Layer 2 Isolation	<input type="checkbox"/>
Maximum Number of Clients	0 (0: Unlimited)

SSID Settings	
Enable	Check this box to enable wireless SSID.
Radio Selection	Available only on the AP One AC mini, this setting, shown below, allows you to enable or disable either of the two on-board radios. 
SSID	This setting specifies the AP SSID that Wi-Fi clients will see when scanning.
Broadcast SSID	This setting specifies whether or not Wi-Fi clients can scan the SSID of this wireless network. Broadcast SSID is enabled by default.
Data Rate	Select Auto to allow your access point to set the data rate automatically, or select Fixed and choose a rate from the drop-down menu. Click the MCS Index link to display a reference table containing MCS and matching HT20 and HT40 values.
Multicast Filter	This setting enables the filtering of multicast network traffic to the wireless SSID.
Multicast Rate	This setting specifies the transmit rate to be used for sending multicast network traffic.
IGMP Snooping	To allow your access point to convert multicast traffic to unicast traffic for associated clients, select this option.
DHCP Setting	To set your access point as a DHCP server or relay, select Server or Relay . Otherwise, select None .
DHCP Option 82	If you use a distributed DHCP server/relay environment, you can enable this option to provide additional information on the manner in which clients are physically

User Manual

PEPWAVE AP Series

	connected to the network.
Default VLAN ID	This setting specifies the VLAN ID to be tagged on all outgoing packets generated from this wireless network (i.e., packets that travel from the Wi-Fi segment through your access point to the Ethernet segment via the LAN port). If 802.1x is enabled and a per-user VLAN ID is specified in authentication reply from the RADIUS server , then the value specified by Default VLAN ID will be overridden. The default value of this setting is 0 , which means VLAN tagging is disabled (instead of tagged with zero).
VLAN Pooling	Check this box to enable VLAN pooling using the values specified in VLAN Pool .
VLAN Pool	If VLAN pooling is enabled, enter VLAN pool values separated by commas.
Network Priority (QoS)	Select from Gold , Silver , and Bronze to control the QoS priority of this wireless network's traffic.
Layer 2 Isolation	Layer 2 refers to the second layer in the ISO Open System Interconnect model. When this option is enabled, clients on the same VLAN, SSID, or subnet are isolated to that VLAN, SSID, or subnet, which can enhance security. Traffic is passed to upper communication layer(s). By default, the setting is disabled.
Maximum Number of Clients	Enter the maximum number of clients that can simultaneously connect to your access point, or enter 0 to allow unlimited Wi-Fi clients.

The screenshot shows a web interface for Security Settings. At the top, there is a header 'Security Settings' in yellow. Below it, there are two main sections: 'Security Policy' and 'Passphrase'. The 'Security Policy' section has a dropdown menu currently set to 'WPA/WPA2 - Personal'. The 'Passphrase' section has a text input field and a link that says 'Hide / Show Passphrase'.

Security Settings	
Security Policy	This setting configures the wireless authentication and encryption methods. Available options are Open (No Encryption) , WEP , 802.1X , WPA2 - Personal , WPA2 - Enterprise , WPA/WPA2 - Personal , and WPA/WPA2 - Enterprise . To allow any Wi-Fi client to access your AP without authentication, select Open (No Encryption) . Details on each of the available authentication methods follow.

User Manual

PEPWAVE AP Series

Security Settings	
Security Policy	WEP
Key Size	40 bits (64-bit WEP)
Key Format	ASCII
Passphrase	<input type="text"/> <input type="button" value="Generate Key"/>
Encryption Key	<input type="text"/> Hide / Show Passphrase
Shared Key Authentication	<input type="checkbox"/>

WEP	
Key Size	Select 40 bits (64-bit WEP) or 104 bits (128-bit WEP) .
Key Format	Choose ASCII or Hex format for the WEP key. ASCII can be applied only to encryption keys that are manually entered. Hex can be applied to encryption keys that are manually entered or automatically generated.
Passphrase	Enter a series of alphanumeric characters, and then click Generate Key to create a WEP key using the passphrase.
Encryption Key	The generated WEP key appears here. Click Hide / Show Passphrase to toggle visibility.
Shared Key Authentication	Check to enable shared key authentication. The default is disabled, meaning open authentication is used.

Security Settings	
Security Policy	802.1X
802.1X Version	<input type="radio"/> V1 <input checked="" type="radio"/> V2
WEP Key Size	40 bits (64-bit WEP)
Re-keying Period	14400 seconds (0: Disable)

802.1X	
802.1X Version	Choose v1 or v2 of the 802.1x EAPOL. When v1 is selected, both v1 and v2 clients can associate with the access point. When v2 is selected, only v2 clients can associate with the access point. Most modern wireless clients support v2. For stations that do not support v2, select v1 . The default is v2 .
WEP Key Size	Select 40 bits (64-bit WEP) or 104 bits (128-bit WEP) .
Re-keying Period	This option specifies the length of time throughout which the broadcast key remains valid. When the re-keying period expires, the broadcast key is no longer valid and broadcast key renewal is required. The default is 14400 seconds (four hours). 0 disables re-keying.

Firewall Mode

Choose **Flexible – Allow all except...** or **Lockdown – Block all except...** to turn on the firewall, then create rules for the firewall exceptions by clicking . See the discussion below for details on creating a firewall rule. To delete a rule, click the associated button. To turn off the firewall, select **Disable**.

Firewall Rule	
Name	<input type="text"/>
Type	Port ▼
Protocol	TCP ▼
Port	Any Port ▼

Firewall Rule

Name

Enter a descriptive name for the firewall rule in this field.

Type

Choose **Port**, **Domain**, **IP Address**, or **MAC Address** to allow or deny traffic from any of those identifiers. Depending on the option chosen, the following fields will vary.

Protocol / Port

Choose **TCP** or **UDP** from the **Protocol** drop-down menu to allow or deny traffic using either of those protocols. From the **Port** drop-down menu, choose **Any Port** to allow or deny TCP or UDP traffic on any port. Choose **Single Port** and then enter a port number in the provided field to allow or block TCP or UDP traffic from that port only. You can also choose **Port Range** and enter a range of ports in the provided fields to allow or deny TCP or UDP traffic from the specified port range.

IP Address / Subnet Mask

If you have chosen **IP Address** as your firewall rule type, enter the IP address and subnet mask identifying the subnet to allow or deny.

MAC Address

If you have chosen **MAC Address** as your firewall rule type, enter the MAC address identifying the machine to allow or deny.

User Manual

PEPWAVE AP Series

7.2.2 Settings

Basic access point operation settings, such as the protocol and channels used, as well as scanning interval and other advanced settings, can be defined and managed in this section.

AP Settings	5GHz
Protocol	802.11na
Operating Country	United States
Channel Bonding	20 MHz
Channel	Auto Edit
Output Power	Max <input type="checkbox"/> Boost
Beacon Rate	6Mbps
Beacon Interval	100ms
DTIM	1
RTS Threshold	0
Fragmentation Threshold	0
Distance / Time Convertor	4050 m (input distance for recommended values)
Slot Time	<input type="radio"/> Auto <input checked="" type="radio"/> Custom 9 μ s Default
ACK Timeout	48 μ s Default
Frame Aggregation	<input checked="" type="checkbox"/>
Aggregation Length	50000
Maximum Number of Clients	0 (0: Unlimited)
Client Signal Strength Threshold	0 (0: Unlimited)

AP Settings								
Protocol	Choose 802.11ng or 802.11na as your access point's Wi-Fi protocol. The AP One AC mini provides the 802.11ng protocol for the 2.4 GHz band and the 802.11ac protocol for the 5GHz band, as shown below.							
	<table border="1"><thead><tr><th>AP Settings</th><th>2.4GHz</th><th>5GHz</th></tr></thead><tbody><tr><td>Protocol</td><td>802.11ng</td><td>802.11ac</td></tr></tbody></table>	AP Settings	2.4GHz	5GHz	Protocol	802.11ng	802.11ac	
AP Settings	2.4GHz	5GHz						
Protocol	802.11ng	802.11ac						
Operating Country	This drop-down menu specifies the national / regional regulations the AP should follow. If a North American region is selected, RF channels 1 to 11 will be available and the maximum transmission power will be 26 dBm (400 mW). If European region is selected, RF channels 1 to 13 will be available. The maximum transmission power will be 20 dBm (100 mW). NOTE: Users are required to choose an option suitable to local laws and regulations. Per FCC regulation, the country selection is not available on all models marketed in the US. All US models are fixed to US channels only.							
Channel Bonding	There are three options: 20 MHz , 40 MHz , and 20/40 MHz . With this feature enabled, the Wi-Fi system can use two channels at once. Using two channels improves the performance of the Wi-Fi connection. The AP One AC mini offers channel bonding options for the 2.4GHz and 5GHz bands, as shown below. In addition to 20 MHz , 40 MHz , and 20/40 MHz , the 5Ghz band offers 80Mhz , which is the default setting.							

User Manual

PEPWAVE AP Series

	
Channel	<p>This drop-down menu selects the 5GHz 802.11 channel to be used. If Auto is set, the system will perform channel scanning based on the scheduled time set and choose the most suitable channel automatically.</p> <p>The AP One AC mini allows setting channels on the 2.4GHz and 5GHz bands, as shown below.</p> 
Output Power	<p>This drop-down menu determines the power at which your access point will broadcast. When fixed settings are selected, the AP will broadcast at the specified power level, regardless of context. When Auto is selected, the AP will adjust its power level based on surrounding APs to maximize performance.</p> <p>While single-radio models allow setting power output levels for one frequency band only, the AP One AC mini provide output power settings for both the 2.4GHz and 5GHz bands, as shown below.</p> 
Beacon Rate	<p>This drop-down menu provides the option to send beacons in different transmit bit rates. The bit rates are 1Mbps, 2Mbps, 5.5Mbps, 6Mbps, and 11Mbps.</p>
Beacon Interval	<p>Set the time between each beacon send. Available options are 100ms, 250ms, and 500ms.</p>
DTIM	<p>Set the frequency for the beacon to include delivery traffic indication messages (DTIM). The interval unit is measured in milliseconds.</p>
RTS Threshold	<p>Set the minimum packet size for your access point to send an RTS using the RTS/CTS handshake. Setting 0 disables this feature.</p>
Fragmentation Threshold	<p>Enter a value to limit the maximum frame size, which can improve performance.</p>
Distance / Time Convertor	<p>This slider and text entry field can be used to interactively set slot time.</p>
Slot Time	<p>This field provides the option to modify the unit wait time before your access point transmits. The default value is 9µs.</p>
ACK Timeout	<p>Set the wait time to receive an acknowledgement packet before retransmitting. The default value is 48µs.</p>
Frame Aggregation	<p>With this feature enabled, throughput will be increased by sending two or more data frames in a single transmission.</p>
Aggregation Length	<p>This field is only available when Frame Aggregation is enabled. It specifies the frame length for frame aggregation. By default, it is set to 50000.</p>
Max number of Clients	<p>Enter the maximum clients that can simultaneously connect to your access point or set the value to 0 to allow unlimited clients.</p>

User Manual

PEPWAVE AP Series

Client Signal Strength Threshold

This field determines the minimum acceptable client signal strength, specified in megawatts. If client signal strength does not meet this minimum, the client will not be allowed to connect.

Advanced Features		
Discover Nearby Networks	<input checked="" type="checkbox"/> * Discover Nearby Networks will be enabled if Channel is set to Auto	
Scanning Interval	10 s	
Scanning Time	50 ms	
Scheduled Radio Availability	<input type="radio"/> Always On <input checked="" type="radio"/> Custom Schedule	
	On <input type="checkbox"/> Off <input checked="" type="checkbox"/>	
WMM	<input checked="" type="checkbox"/>	

Advanced Features	
Discover Nearby Networks	Check this box to enable network discovery. Note that setting Channel to Auto will activate this feature automatically.
Scanning Interval	This setting controls the interval, in seconds, that your access point scans for nearby networks.
Scanning Time	This setting specifies the time, in milliseconds, that your access point scans any particular channel while searching for nearby networks.
Scheduled Radio Availability	Click Custom Schedule to specify radio availability schedule options or select Always On to make the radio continuously available.
WMM	This checkbox enables Wi-Fi Multimedia (WMM), also known as Wireless Multimedia Extensions (WME), on your access point. The default is enabled .

7.2.3 WDS

A wireless distribution system (WDS) provides a way to link access points when wires are not feasible or desirable. A WDS can also extend wireless network coverage for wireless clients. Note that your access point's channel setting should not be set to **Auto** when using WDS.

The screenshot shows the PEPWAVE web interface. The top navigation bar includes 'Dashboard', 'Network', 'AP', 'System', and 'Status'. The 'AP' tab is selected. On the left, a sidebar menu has 'Wireless SSID', 'Settings', and 'WDS' (highlighted). Below the menu is a 'Logout' button. The main content area is divided into two sections. The top section is for channel configuration, with columns for '2.4GHz' and '5GHz'. It shows 'Local MAC Address' as 00:1A:DD:DA:E7:40 for 2.4GHz and 00:1A:DD:DA:E7:50 for 5GHz, and 'Current Channel' as 1 for 2.4GHz and 36 for 5GHz. The bottom section is a table for WDS links with columns for 'MAC Address', 'Manufacturer', 'Status', and 'Encryption'. It currently shows 'No WDS' and an 'Add' button.

To create a new WDS, click **Add**.

WDS	
Enable	Check this box to enable WDS.
MAC Address	Enter the MAC address of the access point with which to form a WDS link.
Encryption	Select AES to enable encryption for WDS peer connections. Selecting None disables encryption.

7.3 Network

The settings on the **AP** tab control WAN and LAN settings, as well as allow you to set up PepVPN profiles.

7.3.1 WAN

This section provides basic and advanced WAN settings.

Basic			
Keep Default IP	<input checked="" type="checkbox"/>		
IP Address Mode	Manual		
Static IP Address			
Subnet Mask	255.255.255.0 (/24)		
Default Gateway			
DNS Server			

Advanced			
Management VLAN ID	0		
Spanning Tree Protocol	<input type="checkbox"/>		
Scheduled Reboot	<input type="checkbox"/>		
	Schedule	Day	Time
	Weekly	Sunday	00 : 00 : 00
Ethernet Speed/Duplex	100Mbps Full Duplex <input checked="" type="checkbox"/> Advertise Speed		
AP Mode	Router NAT		

Save

Basic	
Keep Default IP	When enabled, this option maintains 192.168.0.3 as your access point's IP address.
IP Address Mode	IP Address Mode options are Automatic and Manual . In Automatic mode, the IP address of your access point is acquired from a DHCP server on the Ethernet segment. In Manual mode, a user-specified IP address is used for your access point, as described below.
Static IP Address / Subnet Mask	You can use these fields to specify a unique IP address that your access point will use to communicate on the Ethernet segment. This IP address is distinct from the admin IP address (192.168.0.3) on the Ethernet segment.
Default Gateway	Enter the IP address of the default gateway to the internet.
DNS Server	Enter the DNS server address that your access point will use to resolve host names.

User Manual

PEPWAVE AP Series

Advanced			
Management VLAN ID	0		
Spanning Tree Protocol	<input type="checkbox"/>		
Scheduled Reboot	<input checked="" type="checkbox"/>		
	Schedule	Day	Time
	Weekly	Sunday	00 : 00
Ethernet Speed/Duplex	100Mbps Full Duplex <input checked="" type="checkbox"/> Advertise Speed		
AP Mode	Router NAT		

Advanced	
Management VLAN ID	This field specifies the VLAN ID to tag to management traffic, such as AP-to-AP controller communication traffic. The value is 0 by default, meaning that no VLAN tagging will be applied. NOTE: change this value with caution as alterations may result in loss of connection to the AP controller.
Spanning Tree Protocol	Checking this box enables spanning tree protocol, used to prevent loops in bridged Ethernet LANs
Scheduled Reboot	When this box is checked, your access point can be scheduled to reboot automatically on a recurring basis, as indicated by the values under the Schedule , Day , and Time headings.
Ethernet Speed/Duplex	Select a speed and duplex setting for sending and receiving. When selecting a speed manually, you can also control whether the access point's speed will be advertised on the network by checking or unchecking the Advertise Speed box. When Auto is selected, your access point will automatically negotiate speeds.
AP Mode	Your access point can act as a bridge or as a router, depending on your selection here. When Router is selected, you can additionally select whether the access point will function in NAT or IP Forwarding mode.

7.3.2 LAN

This section offers a variety of settings that affect your access point's operation on the LAN, such as settings for DHCP, DMZ, and port forwarding. Note that the following settings will be available only when your access point is operating in router mode.

PEPWAVE Dashboard **Network** AP System Status Apply Changes

DHCP Server Settings			
DHCP Server	<input checked="" type="checkbox"/>		
IP Range	192.168.1.100	-	192.168.1.200 255.255.255.0 (/24) ±
Broadcast Address	192.168.1.255		
Gateway	192.168.1.1		
DNS 1	192.168.1.1		
DNS 2	<input type="text"/> (optional)		
DNS 3	<input type="text"/> (optional)		
Lease Time	1	Days 0	Hours 0 Mins
DHCP Reservation	MAC Address	Static IP	<input type="button" value="+"/>
	<input type="text"/>	<input type="text"/>	<input type="button" value="x"/>

DHCP Server Settings	
DHCP Server	Check to enable the DHCP server feature of your access point. Enabling DHCP is the best option for most users. The following options will be enabled once you have checked and enabled the DHCP server.
IP Range	Enter the first and last IP addresses of the range of addresses that your access point will make available to DHCP clients. The default range is from 192.168.1.100 to 192.168.1.200 , with 24-bit subnet mask.
Broadcast Address	Enter the broadcast address that DHCP clients will use when communicating with the entire LAN segment. The default value is 192.168.1.255 .
Gateway	Enter the default gateway address that DHCP clients will use to access the internet. By default, this address will be the same as your access point's IP address on the LAN.
DNS 1/2/3	In DNS 1 , enter the IP address of the primary DNS server offered to DNS clients or accept the default of 192.168.1.1 , which is your access point's address on the LAN. You can also specify up to two additional DNS servers to use when the primary server is busy or down.
Lease Time	Specify the length of time that an IP address of a DHCP client remains valid. When an address lease time has expired, the assigned IP address is no longer valid, and renewal of the IP address assignment is required. By default, this value is set to one day.
DHCP Reservation	To reserve certain addresses for specific clients, such as network printers, enter the device's MAC Address and a static IP to be assigned to the device. Click <input type="button" value="+"/> to add the DHCP reservation. To delete a DHCP reservation, click <input type="button" value="x"/> .

DMZ	
DMZ	<input type="checkbox"/>
DMZ IP	<input type="text"/>

DMZ	
DMZ	Check this box to forward traffic sent to the WAN IP address to the DMZ IP address.
DMZ IP	Enter an IP address clients will use to connect to the DMZ.

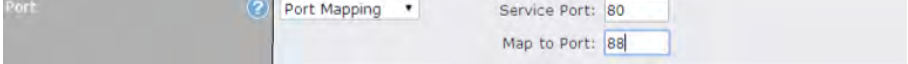

Port Forwarding	Server	Protocol
No Services Defined		
<input type="button" value="Add Service"/>		

To create a port forwarding rule, first click the **Add Service** button, located in the **Port Forwarding** section.

Port Forwarding ✕

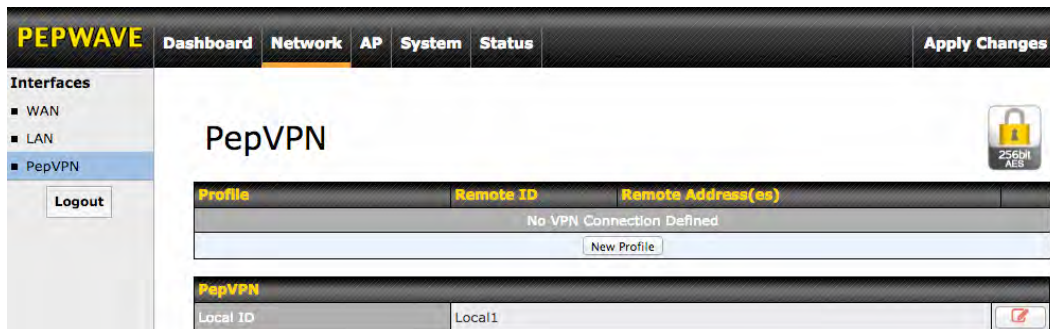

Service Name	<input type="text"/>
IP Protocol	TCP <input type="button" value="← -- Selection Tool -- →"/>
Port	Single Port <input type="button" value="↑"/> Service Port: <input type="text"/>
Server IP Address	<input type="text"/>

Port Forwarding	
Service Name	Enter a name for the new port forwarding rule. Valid values for this setting consist of alphanumeric and underscore “_” characters only.
IP Protocol	The IP Protocol setting, along with the Port setting, specifies the protocol of the service as TCP, UDP, ICMP, or IP. Traffic that is received by your access point via the specified protocol at the specified port(s) is forwarded to the LAN hosts specified by the Servers setting. Please see below for details on the Port and Servers settings. Alternatively, the Protocol Selection Tool drop-down menu can be used to automatically fill in the protocol and a single port number of common Internet services (e.g., HTTP, HTTPS, etc.). After selecting an item from the Protocol Selection Tool drop-down menu, the protocol and port number remain manually modifiable.
Port	The Port setting specifies the port(s) that correspond to the service, and can be configured to behave in one of the following manners: Single Port, Port Range, Port Mapping

 <p>Single Port: Traffic that is received by your access point via the specified protocol at the specified port is forwarded via the same port to the servers specified by the Server IP Address setting. For example, with IP Protocol set to TCP, and Port set to Single Port and Service Port 80, TCP traffic received on port 80 is forwarded to the configured servers via port 80.</p>	
 <p>Port Range: Traffic that is received by your access point via the specified protocol at the specified port range is forwarded via the same respective ports to the LAN hosts specified by the Server IP Address setting. For example, with IP Protocol set to TCP, and Port set to Port Range and Service Ports 80-88, TCP traffic received on ports 80 through 88 is forwarded to the configured servers via the respective ports.</p>	
 <p>Port Mapping: Traffic that is received by your access point via the specified protocol at the specified port is forwarded via a different port to the servers specified by the Server IP Address setting.</p> <p>For example, with IP Protocol set to TCP, and Port set to Port Mapping, Service Port 80, and Map to Port 88, TCP traffic on Port 80 is forwarded to the configured server via Port 88.</p>	
Server IP Address	Enter the LAN IP address of the server that handles requests for the forwarded service.

7.3.3 PepVPN

PepVPN securely connects one or more remote sites to the site running your access point.

Profile	Remote ID	Remote Address(es)
No VPN Connection Defined		
New Profile		

PepVPN	
Local ID	Local1

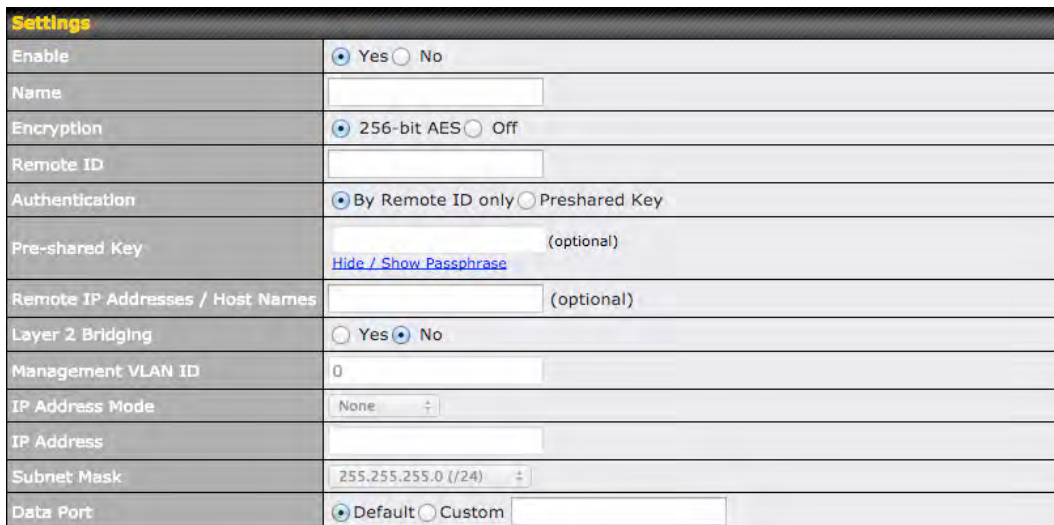

User Manual

PEPWAVE AP Series

To set up PepVPN, first give your site a local PepVPN ID. To modify an existing local ID, click 

Once you've specified a local ID, click the **New Profile** button to configure PepVPN.

Settings	
Enable	<input checked="" type="radio"/> Yes <input type="radio"/> No
Name	<input type="text"/>
Encryption	<input checked="" type="radio"/> 256-bit AES <input type="radio"/> Off
Remote ID	<input type="text"/>
Authentication	<input checked="" type="radio"/> By Remote ID only <input type="radio"/> Preshared Key
Pre-shared Key	<input type="text"/> (optional) Hide / Show Passphrase
Remote IP Addresses / Host Names	<input type="text"/> (optional)
Layer 2 Bridging	<input type="radio"/> Yes <input checked="" type="radio"/> No
Management VLAN ID	<input type="text" value="0"/>
IP Address Mode	None ▾
IP Address	<input type="text"/>
Subnet Mask	255.255.255.0 (/24) ▾
Data Port	<input checked="" type="radio"/> Default <input type="radio"/> Custom <input type="text"/>

PepVPN Profile Settings	
Enable	Check this box to enable PepVPN.
Name	Enter a name to represent this profile. The name can be any combination of alphanumeric characters (0-9, A-Z, a-z), underscores (_), dashes (-), and/or non-leading/trailing spaces ().
Encryption	By default, VPN traffic is encrypted with 256-bit AES . If Off is selected on both sides of a VPN connection, no encryption will be applied.
Remote ID	To allow your access point to establish a VPN connection with a specific remote peer using a unique identifying number, enter the peer's ID or serial number here.
Authentication	Select By Remote ID Only or Preshared Key to specify the method your access point will use to authenticate peers. When selecting By Remote ID Only , be sure to enter a

User Manual

PEPWAVE AP Series

	unique peer ID number in the Remote ID field.
Pre-shared Key	This optional field becomes available when Pre-shared Key is selected as the VPN Authentication method, as explained above. Pre-shared Key defines the pre-shared key used for this particular VPN connection. The VPN connection's session key will be further protected by the pre-shared key. The connection will be up only if the pre-shared keys on each side match. Click Hide / Show Passphrase to toggle passphrase visibility.
Remote IP Address / Host Names (Optional)	Optionally, you can enter a remote peer's WAN IP address or hostname(s) here. If the remote client uses more than one address, enter only one of them here. Multiple hostnames are allowed and can be separated by a space character or carriage return. Dynamic-DNS host names are also accepted. With this field filled, your access point will initiate connection to each of the remote IP addresses until it succeeds in making a connection. If the field is empty, your access point will wait for connection from the remote peer. Therefore, at least one of the two VPN peers must specify this value. Otherwise, VPN connections cannot be established.
Layer 2 Bridging	When this check box is unchecked, traffic between local and remote networks will be IP forwarded. To bridge the Ethernet network of an Ethernet port on a local and remote network, select Layer 2 Bridging . When this check box is selected, the two networks will become a single LAN, and any broadcast (e.g., ARP requests) or multicast traffic (e.g., Bonjour) will be sent over the VPN.
Management VLAN ID	This field specifies the VLAN ID that will be tagged to management traffic, such as AP-to-AP controller communication traffic. A value of 0 indicates that no VLAN tagging will be applied.
IP Address Mode	Choose Automatic or Manual . In automatic mode, your access point acquires an IP from a DHCP server on the Ethernet segment. In manual mode, your access point uses a user-specified IP address.
IP Address/Subnet Mask	When using manual IP addressing (above), enter an IP address and subnet mask in these fields.
Data Port	This field specifies the outgoing UDP port number for transporting VPN data. If Default is selected, port 4500 will be used by default. Port 32015 will be used if port 4500 is unavailable. If Custom is selected, you can input a custom outgoing port number between 1 and 65535.

8 Tools

8.1 Ping

The ping test tool tests connectivity pinging the specified destination IP address. The ping utility is located at **System>Tools>Ping**.

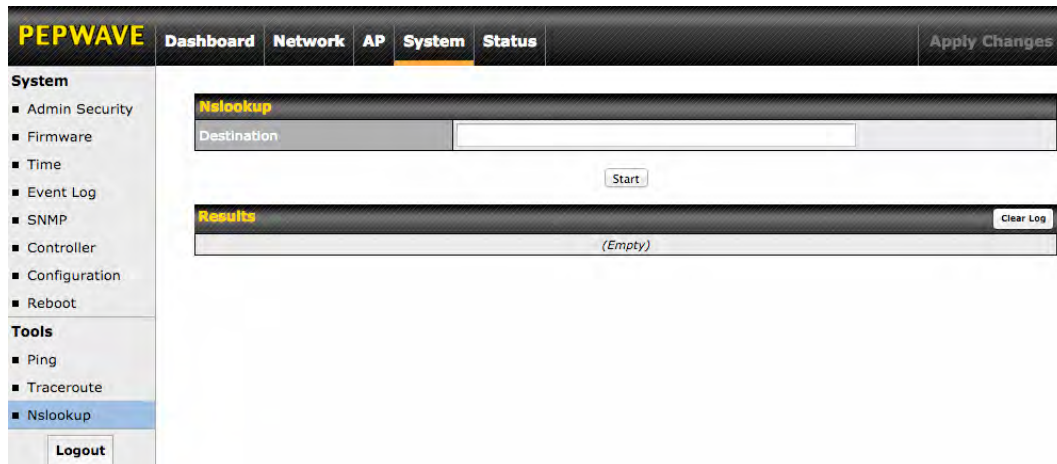

8.2 Traceroute

The traceroute test tool traces the routing path to the specified IP address. The traceroute test utility is located at **System>Tools>Traceroute**.

8.3 Nslookup

The nslookup tool is used to test DNS name servers. The nslookup utility can be found at **System>Tools>Nslookup**.

9 Monitoring Device Status

The displays available on the **Status** tab help you monitor device data, client activity, rogue device access, and more.

9.1 Device

Here you can access a variety of data about your access point, download a diagnostic report, and check MAC addresses. To download a diagnostic report, click the **Download** link.

The screenshot shows the PEPWAVE web interface. The top navigation bar includes 'Dashboard', 'Network', 'AP', 'System', and 'Status' (which is highlighted). A 'Logout' button is visible in the top right. The left sidebar shows a menu with 'Device' selected, and sub-items: 'Client List', 'WDS Info', 'Portal', 'Rogue AP', and 'Event Log'. The main content area is titled 'Status' and contains two tables:

System Information	
AP Name	AP One
Model	AP One AC
Location	site1
Serial Number	2438-3B91-493A
Firmware	3.5.2 build 1538
Host Name	ap--a6
Uptime	9 hours 34 minutes
System Time	Mon Jun 22 19:58:27 HKT 2015
Diagnostic Report	Download

Interface	MAC Address
WAN	00:1A:DD:EC:25:20
Radio 2.4GHz	00:1A:DD:EC:25:20
Radio 5GHz	00:1A:DD:EC:25:30

9.2 Client List

The **Client List** displays all currently connected clients. Use the **Expand** and **Collapse** buttons to control the amount of data displayed.

The screenshot shows the PEPWAVE web interface with the 'Status' tab selected. The left sidebar is the same as in the previous screenshot. The main content area is titled 'Status' and contains a table titled 'Connected Clients' with 'Expand' and 'Collapse' buttons in the top right corner. The table has the following columns: 'MAC Address', 'IP Address', 'Type', 'Signal', 'Duration', 'TX/RX Rate', and 'TX/RX Bytes (Packets)'. The table currently displays 'No Connected Clients'.

MAC Address	IP Address	Type	Signal	Duration	TX/RX Rate	TX/RX Bytes (Packets)
No Connected Clients						

9.3 WDS Info

Here you can monitor the status of your wireless distribution system (WDS) and track activity by MAC address. If you're using the AP One AC mini, this section will display information for both the 2.4GHz and 5GHz radios.

The screenshot shows the PEPWAVE web interface. The top navigation bar includes 'Dashboard', 'Network', 'AP', 'System', and 'Status' (which is highlighted). A 'Logout' button is visible in the left sidebar. The main content area is titled 'WDS Info' and contains two tables. The first table compares 2.4GHz and 5GHz radio settings. The second table, titled 'WDS Clients', shows no active clients.

	2.4GHz	5GHz
Local MAC Address	00:1A:DD:DA:E7:40	00:1A:DD:DA:E7:50
Current Channel	1	36

WDS Clients				
Peer MAC Address	Encryption	Type	Signal	TX/RX Bytes (Packets)
No WDS				

9.4 Portal

If you've turned on your access point's captive portal, client connection data will appear here. Use the **Expand** and **Collapse** buttons to control the amount of data displayed.

The screenshot shows the PEPWAVE web interface with the 'Portal' menu item selected in the sidebar. The main content area is titled 'Portal Users' and features a table with columns for MAC Address, IP Address, User Name, Status, Last Login Time, and Remaining Quota. The table currently displays 'No Portal Users'. 'Expand' and 'Collapse' buttons are located at the top right of the table.

MAC Address	IP Address	User Name	Status	Last Login Time	Remaining Quota
No Portal Users					

9.5 Rogue AP

This section displays a list of nearby suspected rogue access points.

The screenshot shows the PEPWAVE web interface with the 'Status' tab selected. The 'Suspected Rogue APs' table lists various access points with their BSSIDs, SSIDs, channels, signal strengths, encryption types, and last seen times.

BSSID	SSID	Channel	Signal	Encryption	Last Seen

9.6 Event Log

The Event Log displays a list of all events associated with your access point. Check **Auto Refresh** to refresh log entries automatically. Click the **Clear Log** button to clear the log.

The screenshot shows the PEPWAVE web interface with the 'Status' tab selected. The 'Device Event Log' section is active, displaying a list of system events with timestamps and descriptions. The 'Auto Refresh' checkbox is checked.

10 Restoring Factory Defaults

The following procedure restores the settings of your access point to factory defaults:

- Power on the unit and wait for one minute.
- Press and hold the reset button for at least five seconds, then release.
- The unit will automatically reboot.
- Wait for one minute or until the status LED turns green, upon which the settings of the device will have been restored to the factory defaults.

By default, the unit will acquire an IP address from a DHCP server.

11 Appendix

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IEEE 802.11b or 802.11g operation of this product in the U.S.A. is firmware-limited to channels 1 through 11.

IMPORTANT NOTE

FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands is country dependent and is firmware programmed at the factory to match the intended destination.

AP One

PEPWAVE
Broadband Possibilities

Fast, Secure and Manageable Enterprise Wireless for Every Environment

Pepwave AP One access points deliver enterprise-grade performance, the flexibility to deploy anywhere, and easy setup and management. From the tiny but mighty AP One AC Mini to the super tough AP One Flex 300M, the AP One series offers fast, secure, long-range Wi-Fi that goes wherever you do.

AP One AC mini

Setup. Manage. Report.
InControl 2 Cloud Management

AP Controller

AP Controller with
Peplink Balance Multi-WAN Routers

Go the Distance.

Our exclusive signal-boosting technology virtually eliminates dead spots and dropouts. You get full transmit power across all channels, unmatched range and reliability with less equipment and less management effort.

Go for Easier AP Management.

It's simple to configure AP One series access points wherever you work. For onsite management, you have complete control and comprehensive reporting from any Peplink Balance/MAX# router. And with InControl 2, our cloud management solution, you get real-time client lists and bandwidth activity, plus a handy device snapshot, all from any device running a supported web browser.

Go Wireless Anywhere.

Indoors or outdoors, there's an AP One access point for any job.

AP One Flex 300M

The AP One Flex features an IP55 all-weather enclosure and provides seamless coverage over large areas.

AP One 300M

Housed in tough metal enclosures and easy to integrate with the rest of your network, the AP One 300M set the standard for high-performance, low-maintenance indoor Wi-Fi.

AP One In-Wall

The AP One In-Wall mounts on a standard electrical outlet box for installations without big boxes or nests of wires.

AP One AC mini

Compact and capable, the AP One AC mini delivers true AP One power in a palm-sized package that fits in your pocket.

AP One Enterprise

Powered by PoE, the AP One Enterprise has 3x3 MIMO dual-radio Wi-Fi transmits wireless data at up to 1750Mbps. You can mount it directly to the ceiling at office.

*MAX routers include MAX 700 & HD series only.

For Education – Setup, Manage, and Monitor Campus Wi-Fi from Your Peplink Balance/MAX#

- 4 AP One Flex 300M can deliver guest Wi-Fi while connecting and powering up to two 802.3af/48V Pepwave passive PoE-enabled devices, such as surveillance cameras
- 5 Web blocking keeps your students and staff out of unwanted websites and help them stay away from distraction
- 6 Get detailed access point usage reports anytime, right from your Balance 2500

1 Provision campus-wide Wi-Fi with the Balance 2500's built-in **AP Controller**

2 Mountable in standard US or EU/worldwide single-gang wall jacks, AP One In-Wall is a perfect fit for lecture halls and classrooms

3 Featuring a rugged metallic enclosure that is both desktop- and wall-mount friendly, the AP One 300M are ideal for large indoor areas requiring multiple access points

* Requires 48V Pepwave passive PoE input, available separately.

AP Controller is a software-based AP management tool for Balance and selected MAX routers. It lets you manage your entire wireless network, with AP One and AP Pro, from your Balance or MAX router. Visit peplink.com/ap-controller for details.

Applications

For SMBs – Setup, Manage, and Monitor Office Wi-Fi from Your Peplink Balance/MAX#

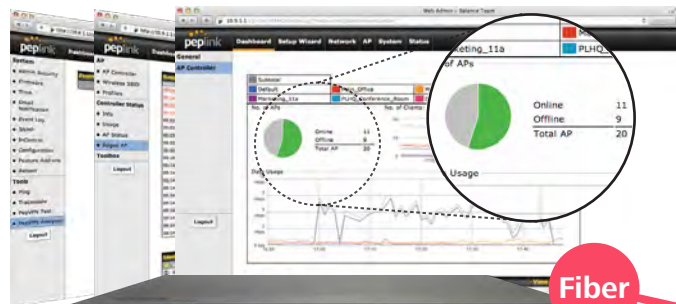

2 Power-on AP One access points and connect them to your office LAN with Ethernet cables

3 Sit back while your Balance One automatically configures your access points

4 Web blocking keeps your staff out of unwanted websites and help them stay productive

5 Get detailed access point usage reports anytime, right from your Balance One

Balance One

1 Provision AP One access points with the Balance One's built-in **AP Controller**

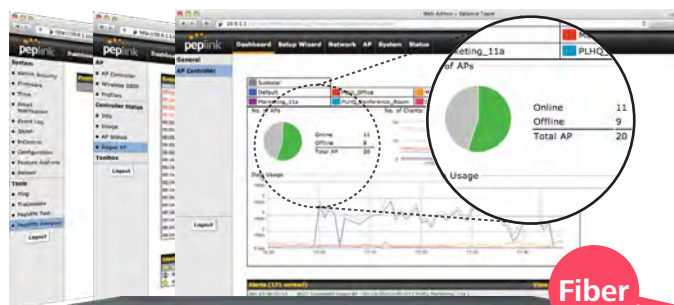

For Hospitality – Offer Guest Hotspots Complete with Captive Portals

3 AP One Flex 300M can deliver guest Wi-Fi while connecting and powering up to two 802.3af/48V Pepwave passive PoE-enabled devices, such as surveillance cameras

4 Web blocking keeps your guests out of unwanted websites

5 View detailed usage reports right from your Balance 380

Balance 380

1 Setup custom portal and T&C pages, as well as optional time- or usage-based quotas you can monitor using the Balance 380's intuitive interface

2 Guests connect to your Wi-Fi hotspot, accept T&C on your captive portal, and start surfing

* Requires 48V Pepwave passive PoE input, available separately.
