

OPERATING INSTRUCTIONS SPA9325-30

Note: These operating instructions describe the procedure for turning on and off the amplifier output power using signal generators. This amplifier will be used with transmitters which have been or will be certified separately. The specific transmitter instruction book should be consulted for the correct method to use this amplifier with transmitters.

1. The input voltage range, applied to pin A1 of the DC input connector, should be between –36VDC and –57 VDC. Pin A2 and A3 of the connector should be grounded.
2. Pin 5 of the Data I/O connector should be grounded to enable operation of the amplifier without the data interface. Pins 1, 2, 11, and 12 on the Data I/O connector are connected to ground. Operation with the Data I/O interface can only be performed using the transmitter software. See the transmitter manual for instructions.
3. Connect the RF signal generator to the RF input port.
4. Connect the RF output port to the measurement equipment. Make sure the measurement equipment is capable of handling 30 watts, or use a power attenuator or directional coupler to attenuate the signal to a level the equipment can handle.
5. To turn on the amplifier, first apply the DC voltage with the specified range (-48 VDC nominal).
6. Apply RF power from the signal generator. Adjust the RF input power until the desired RF output power is achieved. The amplifier's maximum RF output power rating is 30 watts (+44.8 dBm)
7. The gain may change up to 0.5 dB as the amplifier temperature stabilizes after turn-on. Let the amplifier warm up for 10-30 minutes, then re-adjust the power to compensate for the gain change.
8. The amplifier is now operational.

SPECIFICATIONS

<u>Parameter</u>	<u>Specification</u>
Operating Frequency	1930 to 1990 MHz
Rated Output Power	+44.8 dBm (30 Watts)
Gain at Full Power	48 +/- 1 dB
Input Voltage Range	-36 to –57 VDC
Maximum DC Power Consumption	220 Watts
Channeling	Controlled by transmitter
Modes of Transmission	GSM (Gaussian Minimum Shift Keying)
Type of Modulation	Not applicable (performed by transmitter)

Occupied Bandwidth and Emissions Designators

<u>Emissions Type</u>	<u>Amplitude</u>	<u>Frequency Removed from Carrier</u>
GSM (300KGXW)	-30 dBc	200 kHz
	-33 dBc	250 kHz
	-60 dBc	400 kHz
	-70 dBc	600 kHz
	-73 dBc	1200 kHz
	-75 dBc	1800 kHz
	-80 dBc	6000 kHz
