## HOW TO USE THE EXERCISE BIKE

#### HOW TO ADJUST THE SEAT POST

For effective exercise, the seat should be at the proper height. As you pedal, there should be a slight bend in your knees when the pedals are in the lowest position.

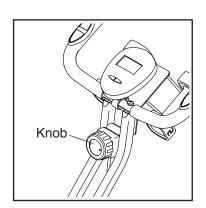

To adjust the height of the seat, first loosen and remove the seat knob. Next, slide the seat post upward or downward and align one of the adjustment holes in the seat post with the hole in the frame. Insert the seat knob into the frame and the seat post, and then tighten the seat knob. Make

sure that the seat knob is inserted into one of the adjustment holes in the seat post.

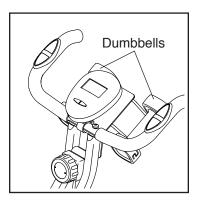

#### HOW TO ADJUST THE PEDALING RESISTANCE

To increase the resistance of the pedals, turn the resistance knob clockwise; to decrease the resistance, turn the knob counterclockwise. IMPORTANT: Stop turning the knob when turning becomes difficult, or you may damage the exercise bike.

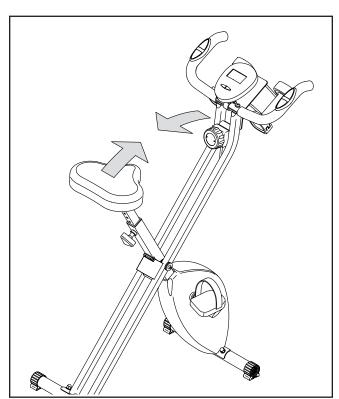

#### **HOW TO USE THE DUMBBELLS**

To add upper body exercise to your workouts, use the dumbbells while you pedal. When you are not using the dumbbells, store them on the dumbbell rack.

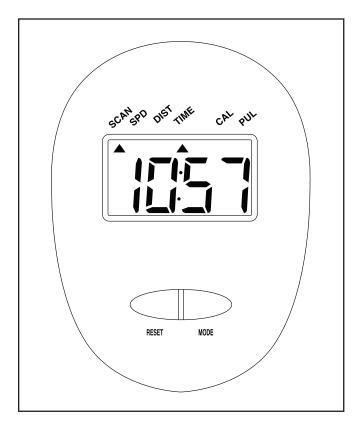

#### HOW TO FOLD THE EXERCISE BIKE

When the exercise bike is not in use, it can be folded to a compact position. First, remove the dumbbells from the dumbbell rack. Then, hold the handlebar with one hand, hold the seat with the other hand, and push the handlebar and the seat towards each other.

#### **FEATURES OF THE CONSOLE**

The easy-to-use console features six modes that provide instant exercise feedback during your workouts. The modes are described below.

**Scan**—This mode displays the time, speed, distance, calories, and pulse modes, for a few seconds each, in a repeating cycle.

**Time**—This mode displays the elapsed time that you have pedaled during your workout.

**Speed (SPD)**—This mode displays your pedaling speed, in kilometers per hour.

**Distance (DIST)**—This mode displays the distance that you have pedaled during your workout, in kilometers.

**Calories (CAL)**—This mode displays the approximate number of calories that you have burned during your workout.

**Pulse (PUL)**—This mode displays your heart rate in beats per minute when you are using the heart rate monitor (see step 3 on page 13). When your pulse is not detected, a P will appear in the display.

#### **HOW TO USE THE CONSOLE**

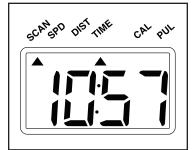

Make sure that there are batteries (not included) in the console (see assembly step 8 on page 9). If there is a sheet of clear plastic on the display, remove the plastic.

#### 1. Turn on the console.

To turn on the console, press either button on the console or simply begin pedaling.

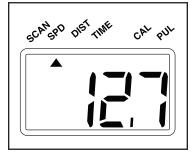

#### 2. Select one of the six modes:

Scan mode—
When the
console is
turned on, the
scan mode will
automatically be
selected. One
mode arrow will
point to the word
SCAN, and a
second mode

arrow will show which mode is currently displayed. Note: If a different mode is selected, select the scan mode again by repeatedly pressing the Mode button.

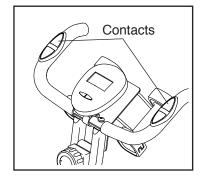

Time, speed, distance, calories, or pulse mode—To select one of these modes for continuous display, press the Mode button repeatedly. The mode arrows

will show which mode is selected. Make sure that there is not a mode arrow pointing to the word SCAN.

#### 3. Measure your heart rate, if desired.

If there are sheets of plastic on the metal contacts of the handgrip heart rate monitor, remove the plastic. Place your hands on the handgrip heart rate monitor, with your

palms on the contacts. Avoid moving your hands. When your pulse is detected, your heart rate will be shown when the pulse mode is displayed. For the most accurate heart rate reading, continue to hold the handgrips for about 15 seconds.

If your heart rate is not shown, make sure that the pulse mode is displayed. In addition, make sure that your hands are positioned as described and that you are not moving your hands excessively or squeezing the contacts tightly. For optimal performance, periodically clean the contacts using a soft cloth; never use alcohol, abrasives, or chemicals to clean the contacts.

#### 4. Reset the console, if desired.

To reset the console, hold down the Reset button for a few seconds. After the console is reset, the scan mode will be selected.

# 5. When you are finished exercising, the console will turn off automatically.

If the pedals are not moved for a few seconds, the console will pause.

The console has an auto-off feature. If the pedals are not moved and the console buttons are not pressed for a few minutes, the console will turn off automatically to save the batteries.

## MAINTENANCE AND TROUBLESHOOTING

#### **MAINTENANCE**

Inspect and tighten all parts of the exercise bike regularly. Replace any worn parts immediately.

To clean the exercise bike, use a damp cloth and a small amount of mild detergent. **IMPORTANT: To** avoid damage to the console, keep liquids away from the console and keep the console out of direct sunlight.

#### **CONSOLE TROUBLESHOOTING**

If the console display becomes dim, replace the batteries (see assembly step 8 on page 9); most console problems are the result of low batteries.

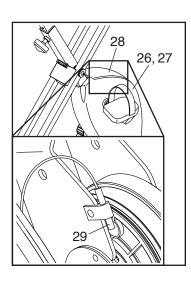

If the heart rate monitor does not function properly, see step 3 on page 13.

#### HOW TO ADJUST THE REED SWITCH

If the console does not display correct feedback, the reed switch should be adjusted. Before adjusting the reed switch, turn the resistance knob to the lowest setting.

Next, loosen the screws (not shown) in the Shields (26, 27), and carefully remove the Shield Cover (28).

Locate the Reed
Switch (29), and slide
it upward or downward slightly. Then,
turn the pedals for
a moment and see
whether the console
displays correct feedback. Repeat this
step until the console
displays correct feedback.

When the console displays correct feedback, reattach the Shield Cover (28).

## **EXERCISE GUIDELINES**

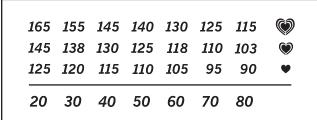

WARNING: Before beginning this or any exercise program, consult your physician. This is especially important for persons over age 35 or persons with pre-existing health problems.

The heart rate monitor is not a medical device. Various factors may affect the accuracy of heart rate readings. The heart rate monitor is intended only as an exercise aid in determining heart rate trends in general.

These guidelines will help you to plan your exercise program. For detailed exercise information, obtain a reputable book or consult your physician. Remember, proper nutrition and adequate rest are essential for successful results.

#### **EXERCISE INTENSITY**

Whether your goal is to burn fat or to strengthen your cardiovascular system, exercising at the proper intensity is the key to achieving results. You can use your heart rate as a guide to find the proper intensity level. The chart below shows recommended heart rates for fat burning and aerobic exercise.

To find the proper intensity level, find your age at the bottom of the chart (ages are rounded off to the nearest ten years). The three numbers listed above your age define your "training zone." The lowest number is the heart rate for fat burning, the middle number is the heart rate for maximum fat burning, and the highest number is the heart rate for aerobic exercise.

Burning Fat—To burn fat effectively, you must exercise at a low intensity level for a sustained period of time. During the first few minutes of exercise, your body uses carbohydrate calories for energy. Only after the first few minutes of exercise does your body begin to use stored fat calories for energy. If your goal is to burn fat, adjust the intensity of your exercise until your heart rate is near the lowest number in your training zone. For maximum fat burning, exercise with your heart rate near the middle number in your training zone.

Aerobic Exercise—If your goal is to strengthen your cardiovascular system, you must perform aerobic exercise, which is activity that requires large amounts of oxygen for prolonged periods of time. For aerobic exercise, adjust the intensity of your exercise until your heart rate is near the highest number in your training zone.

#### **WORKOUT GUIDELINES**

**Warming Up**—Start with 5 to 10 minutes of stretching and light exercise. A warm-up increases your body temperature, heart rate, and circulation in preparation for exercise.

Training Zone Exercise—Exercise for 20 to 30 minutes with your heart rate in your training zone. (During the first few weeks of your exercise program, do not keep your heart rate in your training zone for longer than 20 minutes.) Breathe regularly and deeply as you exercise; never hold your breath.

**Cooling Down**—Finish with 5 to 10 minutes of stretching. Stretching increases the flexibility of your muscles and helps to prevent post-exercise problems.

#### **EXERCISE FREQUENCY**

To maintain or improve your condition, complete three workouts each week, with at least one day of rest between workouts. After a few months of regular exercise, you may complete up to five workouts each week, if desired. Remember, the key to success is to make exercise a regular and enjoyable part of your everyday life.
