1. INTRODUCTION

1.1 Description

Overview

This document describes all the functions, features, and interfaces of the HSDPA PCI Express Mini Card Module – H18T from Qisda. Qisda H18T HSDPA module supports tri-band WCDMA/HSDPA and quad-band GSM/GPRS/EDGE network connection capability.

Qisda H18T HSDPA card can provides high speed data connection, the data speed of downlink and uplink path is up to 3.6Mbps and 384Kbps respectively. Furthermore, users can ease to use this module by using the “HSPA Modem” application software that we provide for Windows XP and Vista system.

With the Qisda H18T HSDPA module, devices are enhanced in both functionality and usability based on state of the art wireless technology.

1.2 Application Device

Scope

Qisda H18T module is a high speed modem card with PCI Express minicard form factor and is focusing on the E-Book, Wireless Router and other portable device marketing.

- **E-Book**

- **Wireless Router**

2. FEATURES

2.1 General Characteristics

- Bands:

Tri Band WCDMA and Quad Band GSM

Band	TX	RX
GSM850	824~849 MHz	869~894MHz
EGSM900	880~915 MHz	925~960MHz
DCS1800	1710~1785MHz	1805~1880MHz
PCS1900	1850~1910MHz	1930~1990MHz
WCDMA850	824~849 MHz	869~894MHz
WCDMA1900	1850~1910MHz	1930~1990MHz
WCDMA2100	1920~1980MHz	2110~2170MHz

- Support SIM Interface: 1.8V/3V
- Form factor
 - Dimension: 50.95 x 30 x 3.6 mm
 - Weight: 10g
- Power
Operation Voltage: 3.3V ~ 3.6V

- Power Consumption:

Data Mode:

Band	Typ	Max	Unit
GSM850 / PCL=5	360	390	mA
EGSM900 / PCL=5	360	390	mA
DCS / PCL=0	310	340	mA
PCS / PCL=0	310	340	mA
WCDMA (all band)	750	820	mA

EDGE & GPRS Multislot:

Power Supply:

Symbol	Parameter	Min	Typ	Max	Unit
+3.3Vaux	Power Supply Voltage	3.2	3.3	3.6	V
I _{sys(peak)}	System Max Current Consumption		2.0	2.2	A
I _{sys(avg.)}	System Max Current Consumption		0.8	1.0	A

※ The module draws under more than 2.2A peak current while transmitting. Use wide traces for power supply line and compliant with the PCB layout rule.

The current rating of component related with the power supply line must be taken into consideration

※ Definitions:

Peak current – The highest averaged current value over any 100-microsecond period

Normal current – The highest averaged current value over any 1-second period

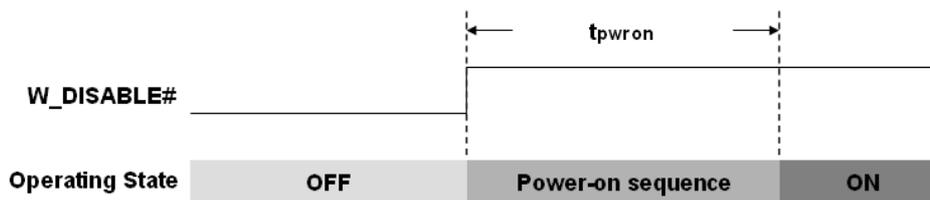

Control Interface:

`W_DISABLE#` :

Symbol	Parameter	Min	Max	Unit
V _{IH}	High Level Input Voltage	0.7V _{CC}		V
V _{IL}	Low Level Input Voltage		0.3V _{CC}	V
t _{pwron}	Power-on sequence interval	1.5		sec

High Level: Device Power on

Low Level: Device Power off

※ `W_DISABLE#` must stay high at least `tpwron` to power on the Device.

USB Transceiver DC characteristics

The USB interface is powered from 3.3V power source.

Parameter	Symbol	Min	Max	Unit
Input Levels for Low/Full Speed				
High	V _{IH}	2.0		V

Low	VIL		0.8	V
Differential Input Sensitivity	VDI	0.2		V

High	VOH	2.85	3.3	V
Output Levels for High Speed				
High Speed Idle Level	VHSOI	-10.0	10.0	mV
High Speed Data Signaling High	VHSOH	360	440	mV
High Speed Data Signaling Low	VHSOL	-10.0	10.0	mV

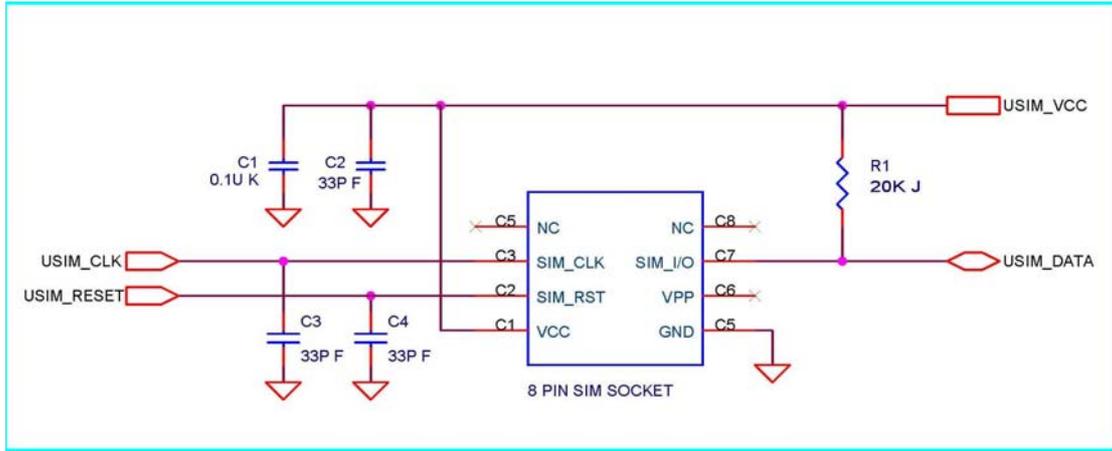

USIM Interface

The USIM signals are defined on system connector to provide the interface between the removable User Identity Module. USIM interface usually run off either 1.8V or 3.0V.

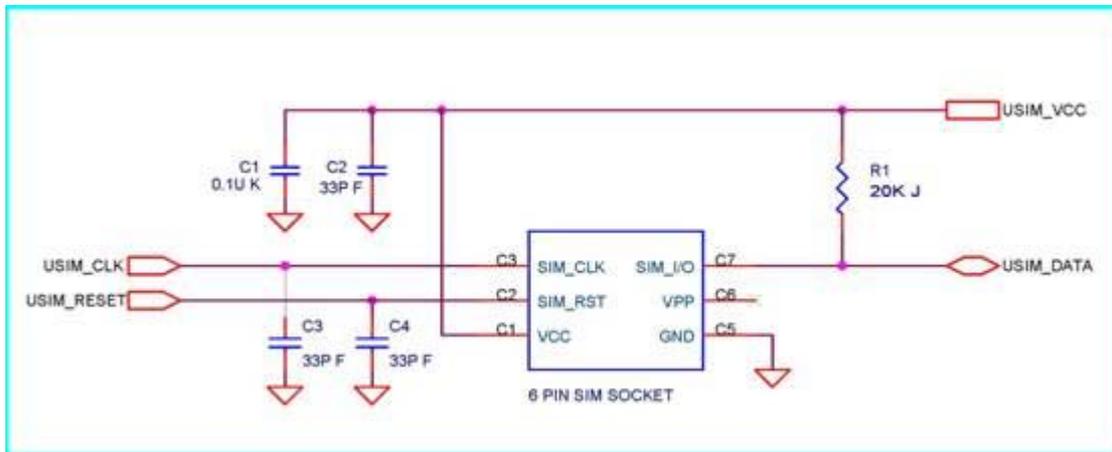

Pin	Name	Direction	Description
8	UIM_PWR	Output	Power source for the USIM
10	UIM_DATA	Input / Output	USIM data signal
12	UIM_CLK	Output	USIM clock signal
14	UIM_RESET	Output	USIM reset signal

Parameter	Symbol	Min	Max	Unit
Logic High Input Voltage	VIH	$0.65 \cdot VSIM$	$VSIM + 0.3$	V
Logic Low Input Voltage	VIL	-0.3	$0.35 \cdot VSIM$	V

3.6 Environmental

Operational temperature: -20 ~ +60 °C

Functional temperature: -20 ~ +70 °C

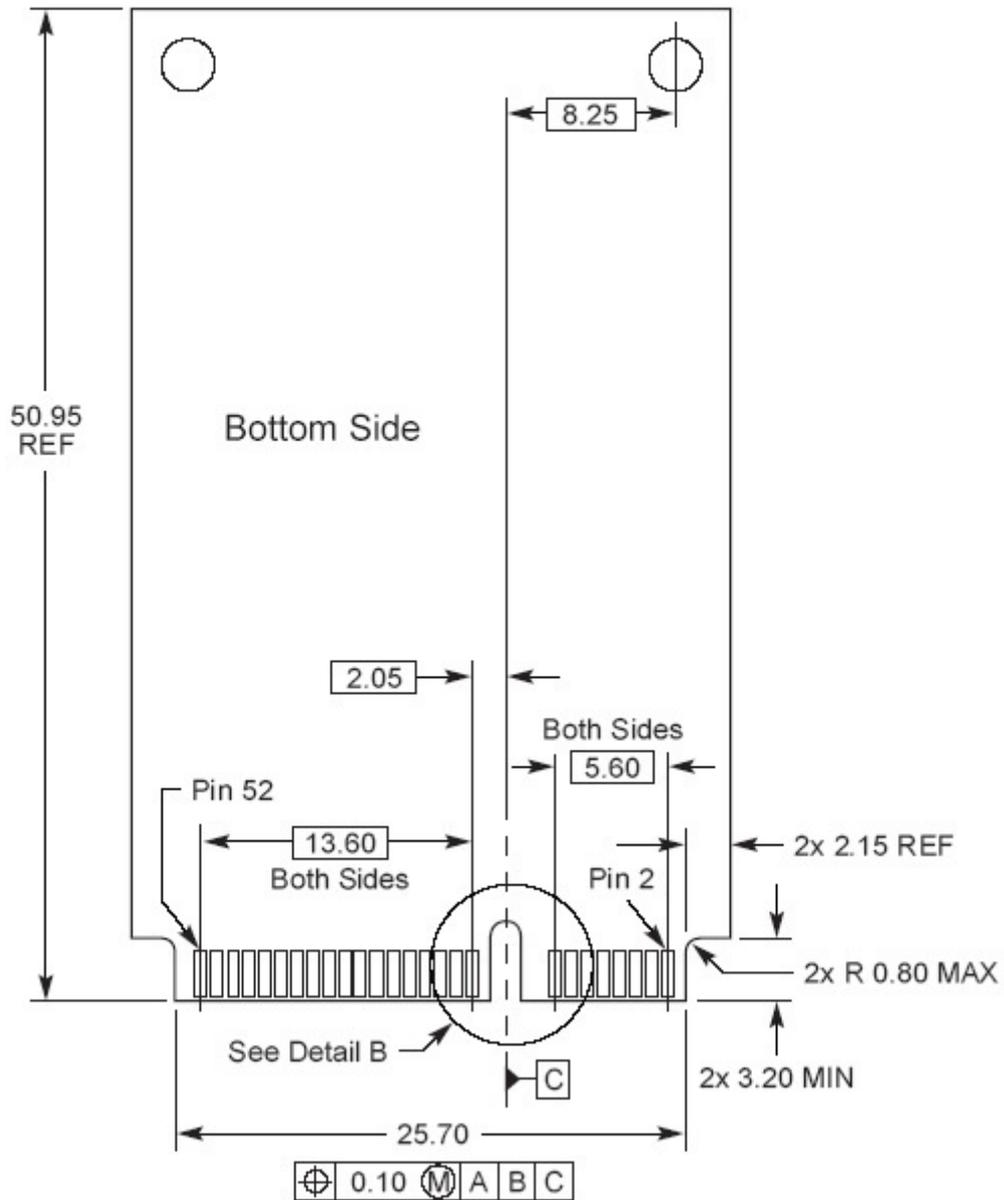

Storage temperature: -40 ~ +85 °C

Note:

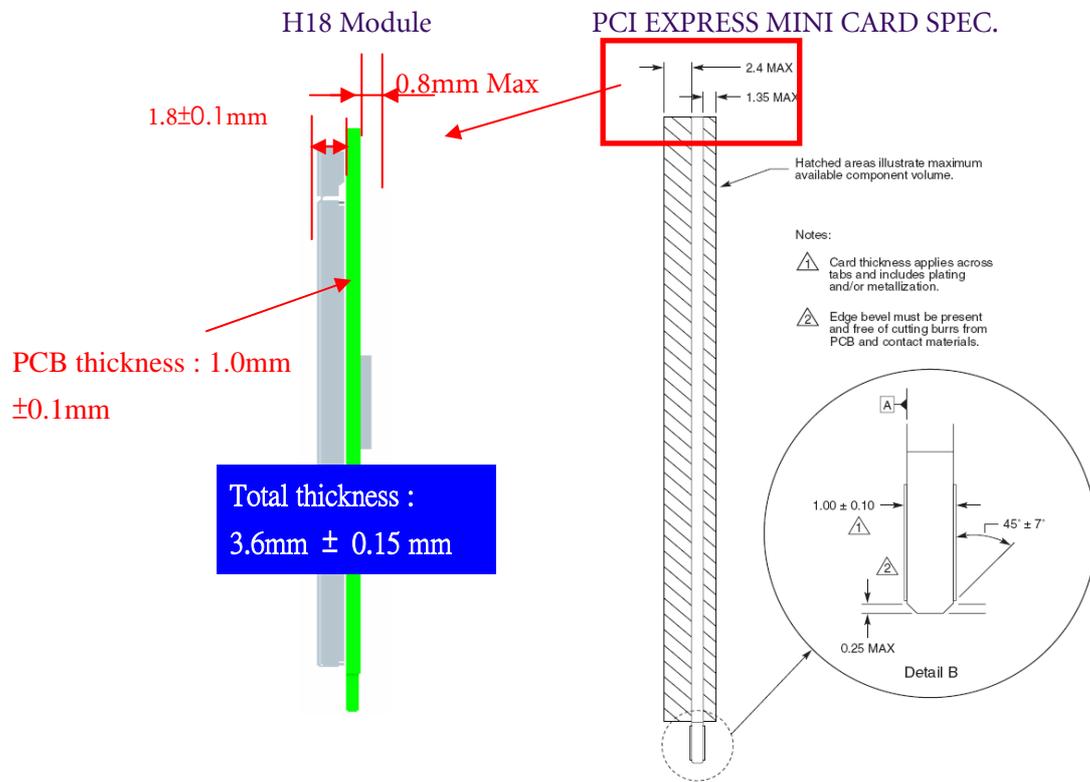

The maximum case temperature (Tc) of shielding case cover should be under 90 °C (@RF TX power = 24dBm) for ensure all of the characteristics of H18T module can be fulfilled the ETSI specification.

4. SOFTWARE CHARACTERISTICS

4.1 Introduction

H18T uses the cutting edge technique of Qualcomm 3.5G (HSDPA) wireless communication. It is a wireless data card product embedded in any host device which has mini-PCI Express interface. The software platform is Qualcomm QSC6270. It uses USB interfaces to communicate with PC/NB. The USB interfaces are composed of three parts "NDIS interface", "Customized AT command Interface" and "GPS command Interface". "Network app" use NDIS interface to transmit Internet data between H18T device and Host device. Dashboard ("SMS, phone book, query network mode, and network status") can send the AT commands to drive H18T device by "AT command Serial COM port", and H18T provides dual com port. Factory test app also uses AT command interface to test H18T functionality in the factory.

4.2 Software Architecture

The H18T product high-level software architecture is represented in the following figure:

(High Level Software Architecture)

4.3 Supported OS

- a. Windows XP/Vista/7 32bit and 64bit
- b. MAC OS 10.4/10.5/10.6
- c. Linux 2.6.x
- d. WIN CE 5.0

Federal Communications Commission (FCC) Statement

You are cautioned that changes or modifications not expressly approved by the part responsible for compliance could void the user's authority to operate the equipment.

15.105(b) for **Class B Device (usual)**

Federal Communications Commission (FCC) Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

15.19(a)(1) licensed project

This device complies with part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference.

End Product Labeling:

The final end product must be labeled in a visible area with the following: “Contains FCC ID: VRSH18T”.

Manual Information That Must be Included:

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove. This RF module in the user’s manual of the end product which integrates this module. The user’s manual for OEM Integrators must include the following information in a prominent location

FCC RF Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
