#### **General Notes**

Queclink offers this information as a service to its customers, to support application and engineering efforts that use the products designed by Queclink. The information provided is based upon requirements specifically provided to Queclink by the customers. Queclink has not undertaken any independent search for additional relevant information, including any information that may be in the customer's possession. Furthermore, system validation of this product designed by Queclink within a larger electronic system remains the responsibility of the customer or the customer's system integrator. All specifications supplied herein are subject to change.

#### Copyright

This document contains proprietary technical information which is the property of Queclink Wireless Solutions Co., Ltd. The copying of this document and giving it to others and the using or communication of the contents thereof, are forbidden without express authority. Offenders are liable to the payment of damages. All rights reserved in the event of grant of a patent or the registration of a utility model or design. All specification supplied herein are subject to change without notice at any time.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. To satisfy FCC RF Exposure requirements for this transmission devices, a separation distance of 20cm or more should be maintained between the antenna of this device and persons during operation.

To ensure compliance, operation at closer than this distance is not recommended.

The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## 1 Introduction

GD100 is a powerful GPS tracker designed for fixed asset tracking applications. It works with three CR123A lithium-batteries and will operate for 60days with reading date and reporting four(4) times per day. With built-in temperature sensor, GD100 will detect the outside temperature and trigger warning messages when outside temperature is out of operating temperature ranges -20°C-85°C. And also, GD100 supports light detection and can trigger even messages by light sensor. Based integrated @track protocol, the GD100 can communicate with a backend server through the GPRS/GSM network to transfer reports of emergency, geo-fence boundary crossings, low battery or scheduled GPS position along with many other useful functions. System Integrators can easily setup their tracking systems based on the full-featured @Track protocol.

## 1.1. Reference

# 2.2. Button/Switch/USB Interface Description

USB Port/Power Switch Description				
START/STOP Button	Start: When START button is pressed			
	after received real time command			
	'ACT', the device enters start			
	countdown mode.			
	• Stop: When STOP button is pressed,			
	the device will not monitor temperature			
	anymore. At this stage, DATA light and			
	TEMP light will turn green and be solid			
	on, and other lights will work normally.			
	After all the recorded messages are			
	sent out to server, DATA green light			
	and TEMP Green light will be solid on			
	and the other lights will be off, which			
	means the recording has stopped			
	working.			

TRACGD100UM001 - 8 -

USB Port	<ul> <li>If the battery switch is on, it will work as a serial port for configuration.</li> </ul>		
	If battery switch is off, it will work as a		
	mass storage.		
	Note:		
	If you want to change work mode of USB,		
	you need to reboot the device.		
Toggle Switch	<ul> <li>Turn on GD100 when switch to "ON".</li> </ul>		
	Turn off GD100 when switch to "OFF".		

## 2.3. **LED Description**

There are five LEDs on GD100, the description as follows.

Table 2. GD100 LED Description Table

LED		Device status	LED status
CELL		Device is searching GSM network.	Fast flashing
(Green)		Device has registered to GSM network.	Slow flashing
		SIM card needs pin code to unlock.	ON
		Receive a valid protocol command.	Keep on for 3 seconds
GPS		GPS chip is powered off.	OFF
(Green)		GPS sends no data or data format error.	Slow flashing
		GPS chip is searching GPS info.	Fast flashing
		GPS chip has gotten GPS info.	ON
PWR		Power on and normal.	ON
(Green)		USB is connected for configuration.	Fast flashing
		Power low alert	Slow flashing
TEMP		Temperature is in the normal band.	Green light slow flashing
(Green	&	Temperature bands alarm event is triggered	Red light slow flashing
Red)		Temperature bands alarm function haven't	OFF
		been activated.	
DATA		All the messages are sent to server	Green light slow flashing
(Green	&	successfully.	
Red)		Some messages are blocked for sending.	Red light slow flashing
		Before getting the send result of the first	OFF
		message.	
		USB is connected as a mass stroage.	ON

- 1 Fast flashing is about 60ms ON/ 780ms OFF
- 2 Slow flashing is about 60ms ON/ 1940ms OFF

## **SPECIAL STATUS**

- 1. GD100 received RTO command 'ACT' from server: TEMP & DATA GREEN lights flash two times together and TEMP & DATA RED lights flash one time together in turn.
- 2. GD100 received 'ACT' command, and user pressed START Button: All LEDs work

TRACGD100UM001 - 9 -

- normally, and temperature bands alarm monitoring start delay countdown starts.
- 3. GD100 is in activation state, and STOP Button has been pressed: PWR light will flash fast and TEMP & DATA GREEN will be long on.
- 4. GD100 enters STOP mode: PWR & GPS & CELL lights will be off, and TEMP & DATA GREEN lights will stay long on. If temperature bands alarm has been triggered, TEMP RED light stays flash slowly.

#### Note:

1. In Battery mode (USB is not connected), all LEDs are only enabled at the first 5 minutes after power on the device, and then will be shut down. If you click Start/Stop Button, LEDs will work another 5 minutes.2. TEMP lights' status depends on Temperature Bands Alarm. When temperature bands alarm event is triggered, TEMP Red light will flash slowly and stay flash slowly, even other LEDs are off because 5 minutes expires.

## 2.4. UDISK Buffer File

GD100 can save messages as buffer data, and the buffer data file will be stored on the mass storage device, which is ready to be downloaded. And also, the data file will be encrypted by AES. The key is the device IMEI.

## 4.2. Safety Info

- Please do not disassemble the device by yourself.
- Please do not put the device on overheating or too humid place, and avoid exposure to direct sunlight. Too high temperature will damage the device or even cause battery

TRACGD100UM001 - 12 -

explosion.

• Please do not use GD100 on the airplane or near medical equipment.
