Note

- Before using the product, be sure to read *Lenovo Safety and General Information Guide* first.
- Some instructions in this guide may assume that you are using Windows® 7. If you are using other Windows operating system, some operations may be slightly different. If you are using other operating systems, some operations may not apply to you.
- The features described in this guide are common to most models. Some features may not be available on your computer and/or your computer may include features that are not described in this user guide.
- The illustrations in this manual may differ from the product you are using.

Regulatory Notice

- To refer to it, go to <http://consumersupport.lenovo.com/> and click **User guides and manuals**.

Chapter 1. Getting to know your computer

■ ■ Top view

ⓘ Attention:

- Do NOT open the display panel beyond 130 degrees. When closing the display panel, be careful NOT to leave pens or any other objects in between the display panel and the keyboard. Otherwise, the display panel may be damaged.

Chapter 1. Getting to know your computer

- 1 Integrated camera** Use the camera for video communication.
- 2 Built-in microphone** The built-in microphone (with noise reduction) can be used for video conferencing, voice narration, or simple audio recordings.
- 3 Computer display** The computer display with LED backlight provides brilliant visual output.
- 4 QS (Quick Start) button** When the computer is powered off, press this button to start Lenovo Quick Start.
- 5 OneKey Rescue system button** When the computer is powered off, press this button to start Lenovo OneKey Rescue system.

Note: For details, see “OneKey Rescue system” on page 25.

- 6 Power button** Press this button to turn on the computer.
- 7 System status indicators** For details, see “System status indicators” on page 17.
- 8 Touchpad** The touchpad functions as a conventional mouse.
- 9 Wireless module antennas** The built-in antennas ensure optimal reception of wireless radio.

■ ■ Left-side view

- 1 AC power adapter jack** Connect the AC adapter here.
- 2 VGA port** Connects to external display devices.
- 3 Fan louvers** Dissipate internal heat.
- 4 USB port** Connects to USB devices.
- 5 Combo audio jack** Connects to headsets or headphones.

Note: For details, see “Connecting USB devices” on page 15.

Note: The combo audio jack does not support a conventional microphone.

⦿ **Attention:**

- Listening to music at high volume over extended periods of time may damage your hearing.

Chapter 1. Getting to know your computer

■ ■ Right-side view

- 1** **USB port** Connects to USB devices.

Note: For details, see “Connecting USB devices” on page 15.

- 2** **RJ-45 port** This port connects the computer to an Ethernet network.

Note: For details, see “Wired connections” on page 21.

- 3** **Lanyard hole** Used for attaching a lanyard (not supplied).

■ ■ Front view

- 1** **Memory card slot** Insert memory cards (not supplied) here.

Note: For details, see “Using memory cards (not supplied)” on page 13.

■ ■ Bottom view

1 Battery latch - manual

The manual battery latch is used to keep the battery pack secured in place.

2 Battery pack

For details, see “Using AC adapter and battery” on page 8.

3 Battery latch - spring loaded

The spring-loaded battery latch keeps the battery pack secured in place.

4 Speakers

The stereo speakers provide rich and powerful sound.

Chapter 2. Learning the basics

■ ■ First use

■ Reading the manuals

Read the supplied manuals before using your computer.

■ Connecting to the power

The supplied battery pack is not fully charged at purchase.

To charge the battery and begin using your computer, insert the battery pack and connect the computer to an electrical outlet. The battery is automatically charged while the computer is running on AC power.

Installing the battery pack

Refer to the supplied *Setup Poster* to install the battery pack.

Connecting the computer to an electrical outlet

- ➊ Connect the power cord to the AC adapter.
- ➋ Connect the AC adapter to the AC power adapter jack of the computer firmly.
- ➌ Plug the power cord into an electrical outlet.

■ Turning on the computer

Press the power button to turn on the computer.

■ Configuring the operating system

You may need to configure the operating system when it is first used. The configuration process may include the procedures below.

- Accepting the end user license agreement
- Configuring the Internet connection
- Registering the operating system
- Creating a user account

■ Putting your computer into sleep state or shutting it down

When you finish working with your computer, you can put it into sleep state or shut it down.

Putting your computer into sleep state

If you will be away from your computer for only a short time, put the computer into sleep state.

When the computer is in sleep state, you can quickly wake it to resume use, and bypass the startup process.

To put the computer into sleep state, do one of the following.

- Click  and select **Sleep** from the Start menu.
- Press **Fn + F1**.

Note: Wait until the power indicator light starts blinking (indicating that the computer is in sleep state) before you move your computer. Moving your computer while the hard disk is spinning can damage the hard disk, causing loss of data.

To wake the computer, do one of the following.

- Press the power button.
- Press any key on the keyboard.

■ Shutting down your computer

If you are not going to use your computer for a day or two, shut it down.

To shut down your computer, click  and select **Shut down** from the Start menu.

Chapter 2. Learning the basics

■ ■ Using AC adapter and battery

■ Checking battery status

You can determine the percentage of battery power remaining by checking the battery icon in the notification area.

Note: As each computer user has different habits and needs, it is difficult to predict how long a battery charge will last. There are two main factors:

- The amount of energy stored in the battery when you commence work.
- The way you use your computer: for example, how often you access the hard disk drive and how bright you make the computer display.

■ Charging the battery

When you find that the battery power is low, you need to charge the battery or replace it with a fully charged one.

You need to charge the battery in any of the following situations:

- When you purchase a new battery
- If the battery status indicator starts blinking
- If the battery has not been used for a long time

Note:

- You are advised to insert the battery pack when using your computer to prevent small particles from entering the inside of your computer.
- To increase the life of the battery pack, the computer does not start recharging the battery immediately after it drops from fully charged.
- Charge the battery at a temperature between 50 °F and 86 °F (10 °C-30 °C).
- Full charge or discharge is not required.

■ Removing the battery pack

If you are not going to use the computer for an extended period of time, or if you need to send your computer to Lenovo for service, etc. remove the battery pack from the computer. Before removing the battery pack, make sure the computer has been shut down.

■ Handling the battery

If the rechargeable battery pack is replaced with an incorrect type, there may be danger of an explosion. The battery pack contains a small amount of harmful substances. To avoid possible injury and detriment to the environment, pay attention to the following points:

- Replace only with a battery of the type recommended by Lenovo.
- Keep the battery pack away from fire.
- Do not expose the battery pack to water or rain.
- Do not attempt to disassemble the battery pack.
- Do not short-circuit the battery pack.
- Keep the battery pack away from children.
- Do not put the battery pack in trash that is disposed of in landfills. When disposing of the battery, comply with local ordinances or regulations and your company's safety standards.

Chapter 2. Learning the basics

■ ■ Using the touchpad

1 Touchpad

To move the cursor on the screen, slide your fingertip on the touchpad in the direction in which you want the cursor to move.

2 Left-/Right-click area

The function of the left-/right-click area corresponds to that of the left/right mouse button on a conventional mouse.

Note: You can enable/disable the touchpad using **Fn + F6**. When the touchpad indicator is lit, the touchpad is disabled.

■ ■ Using function keys

Through the use of the function keys, you can change operational features instantly. To use this function, press and hold **Fn 1**; then press one of the function keys **2**.

Chapter 2. Learning the basics

The following describes the features of each function key.

Fn + Esc:	Turn on/off the integrated camera.
Fn + F1:	Enter sleep mode.
Fn + F2:	Turn on/off the backlight of the LCD screen.
Fn + F3:	Open the interface for the display device switch to select this notebook or an external display.
Fn + F5:	Open the interface for integrated wireless devices settings (On/Off).
Fn + F6:	Enable/Disable the touchpad.
Fn + F7:	Start/Pause playback of Windows Media Player.
Fn + F8:	Stop playback of Windows Media Player.
Fn + F9:	Skip to the previous track.
Fn + F10:	Skip to the next track.
Fn + F11:	F12 key
Fn + PrtSc:	Activate the system request.
Fn + Pause:	Activate the break function.
Fn + Delete:	Enable/Disable the scroll lock.
Fn + PgUp	Home key
Fn + PgDn	End key
Fn + ↑ / ↓:	Increase/Decrease display brightness.
Fn + → / ←:	Increase/Decrease sound volume.

■ ■ Connecting external devices

Your computer has a wide range of built-in features and connection capabilities.

■ Using memory cards (not supplied)

A memory card is a data storage device used for storing digital information that is commonly used in many electronic devices. Your computer is equipped with a memory card reader compatible with the following types of memory cards:

- Secure Digital (SD) card
- MultiMediaCard (MMC)

Your computer can be used to read data from and write data to these types of memory cards.

Inserting a memory card

You must insert a memory card before you can read data from or write data to it with your computer. To insert a memory card:

- 1 Align the memory card with the card slot, with the metal contacts facing downwards.

- 2 Gently slide the memory card into the card slot until it reaches the end.

Note: Insert only one card at a time into the slot.

Chapter 2. Learning the basics

Removing a memory card

After reading data from and/or writing data to the memory card, you can remove it from your computer. To remove a memory card:

- ❶ Use the Windows **Safely Remove Hardware** utility to make sure the card is not in use.
- ❷ Gently pull the memory card out of the card slot.

■ Connecting USB devices

You can connect a USB device to your computer by inserting its USB plug (Type A) into the USB port on your computer.

The first time you plug a USB device into a particular USB port on your computer, Windows automatically installs a driver for that device. After the driver is installed, you can disconnect and reconnect the device without performing any additional steps.

Note: Typically, Windows detects a new device after connecting it, and then installs the driver automatically. However, some devices may require you to install the driver before connecting. Check the documentation provided by the device's manufacturer before connecting the device.

Before disconnecting a USB storage device, make sure your computer has finished transferring data by that device. Click the **Safely Remove Hardware** icon in the notification area of Windows to remove the device before disconnecting.

Note: If your USB device uses a power cord, connect the device to a power source before connecting it. Otherwise, the device may not be recognized.

Chapter 2. Learning the basics

■ Connecting *Bluetooth*-enabled devices (on select models)

If your computer has an integrated *Bluetooth*(R) adapter, it can connect to other *Bluetooth*-enabled devices, such as notebook computers, PDAs, and mobile phones, and transfer data wirelessly to and from them over a range of up to 10 meters in open areas.

Note: The actual maximum range may vary due to interference and transmission barriers. For the best possible connection speed, place the device as near to your computer as possible.

Enabling *Bluetooth* communication on your computer

You must enable *Bluetooth* communication on your computer before pairing your computer with other *Bluetooth*-enabled devices.

To enable *Bluetooth* communication on your computer:

- 1 Press **Fn+F5**; a list of wireless features will be displayed.
- 2 Enable *Bluetooth* communication with a single click.

Note: When you do not need *Bluetooth* communication, disable it to save battery power.

Pairing your computer with other *Bluetooth*-enabled devices

The first time you connect your computer to another *Bluetooth*-enabled device, you must pair the device with your computer as follows:

- 1 Enable *Bluetooth* communication on the device and set it to discoverable mode.

Note: Read the documentation supplied with the device for details.

- 2 Enable *Bluetooth* communication on your computer.
- 3 On your computer, go to **Control Panel** and click **Add a device**. The device you want to connect to should appear on the device list. Click the device and then click **Next**. Your computer will generate a pairing code and display it on the screen.
- 4 On your device, accept the pairing invitation and enter the pairing code displayed on your computer screen. The connection will be established and Windows will automatically install drivers for the device if necessary.

Once the connection is established, you can exchange data between your computer and the *Bluetooth*-enabled device.

■ ■ System status indicators

The system status indicators show the current computer status. The following diagram shows the location of the indicators and the table lists their statuses and meanings.

No.	Symbol	Indicator	Indicator status	Meaning
1	⏻	Power	On (solid white)	The computer is powered on.
			Blinking	The computer is in sleep mode.
			Off	The computer is powered off.

Chapter 2. Learning the basics

2		Battery	On (solid white)	The battery has more than 20% charge.
			Solid amber	The battery has between 5% and 20% charge.
			Fast blinking amber	The battery has less than 5% charge.
			Slow blinking amber	The battery is being charged. When battery charge reaches 20%, the blinking color changes to white.
			Slow blinking white	The battery has between 20% and 80% charge and is still charging. When the battery reaches 80% charge the light will stop blinking, but charging will continue until the battery is fully charged.
			Off	The battery is detached.
3		Device access	Blinking	Data is being read from or written to the hard disk drive or other external storage devices.
4		Wireless	On	Wireless (Bluetooth or wireless network card) is enabled.
			Off	Wireless is disabled.

Note: Do not power off the computer or put the computer into sleep (hibernation) mode when the device access indicator is blinking.

Chapter 2. Learning the basics

■ ■ Using Lenovo Quick Start

With a boot time of just a few seconds, Lenovo Quick Start offers a handy environment that allows you to enjoy instant access to functions such as Web browsing, instant messaging and other entertainment functions without entering the traditional operating system.

Note: If Lenovo Quick Start is not installed, a prompt will appear on the screen when you start it.

■ Starting Lenovo Quick Start

To start Lenovo Quick Start:

- ❶ Power off the computer.
- ❷ Press the QS button; Lenovo Quick Start will start and be ready to use within a few seconds.

■ Exiting Lenovo Quick Start

When you finish using Lenovo Quick Start, you can either power off the computer or start the Windows operating system.

To power off the computer, click the **Power off** button in the lower left hand corner of the screen.

To enter Windows, click the **Enter OS** button in the lower left hand corner of the screen; the computer will restart using the Windows operating system.

Chapter 2. Learning the basics

Chapter 3. Connecting to the Internet

As a global network, the Internet connects computers worldwide, providing services such as sending and receiving e-mail information searching, electronic commerce, Web browsing and entertainment.

You can connect the computer to the Internet in the following ways:

Wired connections: use physical wiring to connect.

Wireless connections: connect through a wireless router.

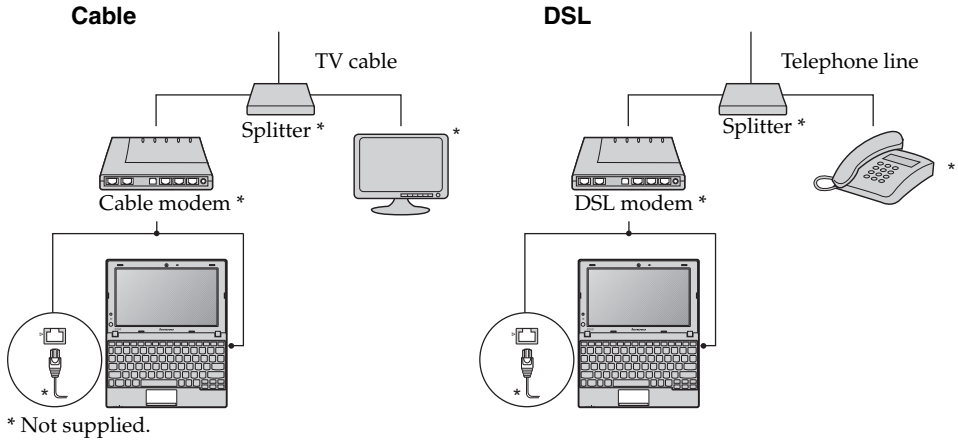

■ ■ Wired connections

Wired connections are a reliable and safe way to connect the computer to the Internet.

Cable	Cable Internet services use a cable modem connected to the residential cable TV line.
DSL	DSL is a family of related technologies that bring highspeed network access to homes and small businesses over ordinary telephone lines.

Chapter 3. Connecting to the Internet

■ Hardware for wired connections

Note: The above diagrams are for reference only. Actual connection method may vary.

■ Software configuration

Consult your Internet Service Provider (ISP) or network administrator for details on how to configure your computer.

■ ■ Wireless connections

Your computer comes with a built-in wireless network card. This allows you to connect to the Internet wirelessly through a wireless network.

Note: A wireless network is a computer network which uses wireless routers as access points.

■ Enabling the wireless network card

You must enable the wireless network card before connecting to a wireless network. To enable the wireless network card:

- 1 Press **Fn+F5**; a list of wireless features will be displayed.
- 2 Enable wireless network card with a single click.

■ Hardware for wireless connections

* Not supplied

■ Connecting to a wireless network

Before connecting to a wireless network, obtain the following information from the network administrator:

- The network name (SSID)
- The security key

Once you get the network name and the security key, you can connect your computer to the wireless network. To connect to the wireless network:

- 1 Make sure the wireless network card is enabled and the computer is placed within the coverage range of the wireless network.
- 2 Go to **Control Panel** on your computer and click **Network and Sharing Center**; click **Connect to a network** to display all wireless networks within range.

Chapter 3. Connecting to the Internet

- 3 Select the name of your wireless network and click **Connect**; enter your security key when prompted.

Chapter 4. OneKey Rescue system

■ ■ OneKey Rescue system

■ Introduction

The Lenovo OneKey Rescue system is an easy-to-use application that can be used to back up the data on your system partition (C drive) for easy restore when required. You can run Lenovo OneKey Recovery under the Windows operating system, and the OneKey Rescue system without starting the Windows operating system.

◎ **Attention:**

In order to utilize the features of the OneKey Rescue system, your hard disk already includes a hidden partition by default to store the system image file and OneKey Rescue system program files. This default partition is hidden for security reasons and is the reason the available disk space is less than it claims. The exact available hard disk space depends on the file size of the mirror image file (based on the size of operating system and pre-installed software).

■ Using Lenovo OneKey Recovery (within Windows operating system)

In Windows operating system, double click the OneKey Recovery system Icon on the desktop to launch Lenovo OneKey Recovery.

Within the program, you can back up the system partition on the hard disk drive, other storage devices, or by creating recovery discs.

Note:

- The backup process and creation of recovery discs may take some time, connect the AC adapter and battery pack to your computer.
- After the recovery discs are burned, please number them so that you can use them in the correct order.
- Computers without an integrated optical drive support the creation of recovery discs; however an appropriate external optical drive is needed to physically create the recovery discs.

For more instructions, see the Help file of Lenovo OneKey Recovery.

Chapter 4. OneKey Rescue system

■ Using Lenovo OneKey Rescue system (without Windows operating system)

In the event that the operating system cannot be loaded, follow the steps below to start OneKey Rescue system.

- Shut down your computer.
- Press the OneKey Rescue system button to start OneKey Rescue system.

Within the program, you can choose to restore your system partition to the original factory status, or to a previously generated backup.

Note:

- The recovery process is irreversible. Make sure to back up any critical data before using the recovery feature.
- You can use the tip of an unfolded paper clip (or similar object without a sharp tip) to gently press the OneKey Rescue system button.

■ Creating a recovery disc(s)

Your computer does not ship with a recovery disc. You can use Lenovo OneKey Recovery system to create a recovery disc(s), which can be used to start and restore your computer in case of a system failure.

To create a recovery disc(s):

- Insert a recordable disc into the optical drive on your computer.

Note: If your computer does not come with an integrated optical drive or if the integrated optical drive does not support disc creating, connect an appropriate external optical drive to your computer.

- In Windows, press the OneKey Rescue system button to launch Lenovo OneKey Recovery system.

Chapter 4. OneKey Rescue system

- On the main screen, click **Create Recovery Disc**.
- Choose the type of recovery disc(s). You can create three types of recovery disc(s): recovery disc(s) with existing backup image, recovery disc(s) from the current system partition, and factory default recovery disc(s). Select the type of recovery disc you want to create and follow the on-screen instructions.
- Insert additional recordable disc(s) when prompted.

Note:

- The estimated number of discs needed will be displayed before the process of creating the recovery disc(s) begins. To minimize the number of discs needed, use recordable DVDs as the media. Also make sure your optical drive is compatible with the disc intended for use.
- After recovery disc creation, number the discs appropriately for use in their correct order. The first disc created will be used to start the computer in the case of a system failure.

Chapter 5. Troubleshooting

■ ■ Frequently asked questions

This section lists frequently asked questions and tells where you can find detailed answers.

What safety precautions should I follow when using my computer?

See “Chapter 1. Important safety information” of *Lenovo Safety and General Information Guide*.

How can I prevent problems with my computer?

See “Chapter 2. Use and care Information” of *Lenovo Safety and General Information Guide*.

What are the main hardware features of my computer?

More information can be found in Chapter 1 and 2.

Where can I find the detailed specifications for my computer?

See <http://consumersupport.lenovo.com>.

Where are the recovery discs?

Your computer did not come with a recovery disc. For an explanation of the alternative recovery methods offered by Lenovo, see “Chapter 4. OneKey Rescue system” on page 25.

Where are the installation discs for preinstalled programs?

Installation discs for preinstalled programs are not supplied with Windows preinstalled computers. You can visit the Lenovo consumer support Web site to find all preinstalled software downloads.

By default, you can find some installation backups for certain preinstalled software in the APP folder under the D driver.

How can I contact the customer support center?

See “Chapter 3. Getting help and service” of *Lenovo Safety and General Information Guide*.

Where can I find warranty information?

For the warranty applicable to your computer, including the warranty period and type of warranty service, see the Lenovo limited warranty flyer that came with your computer.

How can I install the device drivers?

A compatible device driver is a requirement to ensure correct operation and performance of each component in your computer. If your computer is pre-installed with an operating system, Lenovo provides all drivers that you need in your hard disk.

What can I do if the backup process fails?

If you can start the backup feature without a problem, but it fails during the backup process, please try the following steps:

- ❶ Close other programs, then restart the backup process.
- ❷ Check if the destination media is damaged, try to select another path and then try again.

When do I need to restore the system to the factory status?

You can use this recovery feature when your system fails or you need to re-install your operating system. This will restore your computer back to the initial status when you first booted up your computer after receiving it from the store. If there is critical data on your current partition, back it up before you run this recovery feature.

Chapter 5. Troubleshooting

■ ■ Troubleshooting

If you do not find your problem here, see Chapter 2. The following section only describes problems that might negate the need to refer to the more comprehensive information in Chapter 2.

Display problems

When I turn on the computer, nothing appears on the screen.

- If the screen is blank, make sure that:
 - The battery is installed correctly.
 - The AC adapter is connected to the computer and the power cord is plugged into a working electrical outlet.
 - The computer power is on. (Press the power button again for confirmation.)
 - The memory is installed correctly.
- If these items are properly set, and the screen remains blank, have the computer serviced.

When I turn on the computer, only a white cursor appears on a blank screen.

- Restore backed-up files to your Windows environment or the entire contents of your hard disk to the original factory contents using OneKey Rescue system. If you still see only the cursor on the screen, have the computer serviced.

My screen goes blank while the computer is on.

- Your screen saver or power management may be enabled. Do one of the following to exit from the screen saver or to resume from sleep or hibernation mode:
 - Touch the touchpad.
 - Press any key on the keyboard.
 - Press the power button.
 - Press **Fn + F2** to confirm whether the backlight for the LCD screen has been turned off.

Password problems

I forgot my password.

- If you forget your user password, you must take your computer to a Lenovo authorized servicer or a marketing representative to have the password changed.
- If you forget your HDD password, a Lenovo authorized servicer cannot reset your password or recover data from the hard disk. You must take your computer to a Lenovo authorized servicer or a marketing representative to have the hard disk drive replaced. Proof of purchase is required, and a fee will be charged for parts and service.
- If you forget your supervisor password, a Lenovo authorized servicer cannot reset your password. You must take your computer to a Lenovo authorized servicer or a marketing representative to have the system board replaced. Proof of purchase is required, and a fee will be charged for parts and service.

Sleep or hibernation problems

The critical low-battery error message appears, and the computer immediately turns off.

- The battery power is getting low. Connect the AC adapter to the computer, or replace the battery with a fully charged one.

The computer enters sleep mode immediately after Power-on self-test (POST).

- Make sure that:
 - The battery is charged.
 - The operating temperature is within the acceptable range. See “Chapter 2. Use and care Information” of *Lenovo Safety and General Information Guide*.

Note: If the battery is charged and the temperature is within range, have the computer serviced.

Chapter 5. Troubleshooting

The computer does not return from sleep mode and the computer does not work.

- If the computer does not return from sleep mode, it may have entered hibernation mode automatically because the battery is depleted. Check the power indicator.
- If your computer is in sleep mode, connect the AC adapter to the computer, then press any key or the power button.
- If your computer is in hibernation mode or power-off state, connect the AC adapter to the computer, then press the power button to resume operation.

Note: If the system still does not return from sleep mode, your system has stopped responding, and you cannot turn off the computer; reset the computer. Unsaved data may be lost. To reset the computer, press and hold the power button for 4 seconds or more. If the computer is still not reset, remove the AC adapter and the battery.

Computer screen problems

The screen is blank.

- Do the following:
 - If you are using the AC adapter, or using the battery, and the battery status indicator is on, press **Fn + ↑** to make the screen brighter.
 - If the power indicator is in blinking, press the power button to resume from the sleep mode.
 - If the problem persists, follow the solution in the following problem "The screen is unreadable or distorted."
 - Press **Fn + F2** to confirm whether the LCD screen has been turned off.

The screen is unreadable or distorted.

- Make sure that:
 - The display device driver is installed correctly.
 - The screen resolution and color quality are correctly set.
 - The monitor type is correct.

Incorrect characters appear on the screen.

- Did you install the operating system or programs correctly? If they are installed and configured correctly, have the computer serviced.

Sound problems

No sound can be heard from the speaker even when the volume is turned up.

- Make sure that:
 - The Mute function is off.
 - The headphone jack is not used.
 - Speakers are selected as the playback device.

Battery problems

Your computer shuts down before the battery status indicator shows empty.

-or-

Your computer operates after the battery status indicator shows empty.

The computer does not operate with a fully charged battery.

- Discharge and recharge the battery.
- The surge protector in the battery might be active. Turn off the computer for one minute to reset the protector; then turn on the computer again.

A hard disk drive problem

The hard disk drive does not work.

- In the **Boot** menu in BIOS setup utility, make sure that the hard disk drive is included in the **Boot priority order** correctly.

A startup problem

The Microsoft® Windows operating system does not start.

- Use the OneKey Rescue system to help solve or identify your problem. For details about OneKey Rescue system, see “Chapter 4. OneKey Rescue system” on page 25.

OneKey Rescue system problems

Backup cannot be made.

- You are not currently using a Windows operating system.
- There is not enough space to store the backed up data. You will need to free more hard disk space on your system partition (C drive).

Fail to restore system partition to factory default.

- The system partition, such as the partition size or the drive capacity of C, has been modified.

Chapter 5. Troubleshooting

Other problems

Your computer does not respond.

- To turn off your computer, press and hold the power button for 4 seconds or more. If the computer still does not respond, remove the AC adapter and the battery.
- Your computer might lock when it enters sleep mode during a communication operation. Disable the sleep timer when you are working on the network.

The computer does not start from a device you want.

- See the **Boot** menu of the BIOS setup utility. Make sure that the **Boot priority order** in the BIOS setup utility is set so that the computer starts from the device you want.
- Also make sure that the device from which the computer starts is enabled. In the **Boot** menu in the BIOS setup utility, make sure that the device is included in the **Boot priority order** list.
- Press **F12** when the Lenovo logo appears on the screen while the computer is starting up to select the device you want the computer starts from.

The connected external device does not work.

- Do not connect or disconnect any external device cables other than USB while the computer power is on; otherwise, you might damage your computer.
- When using a high power consumption external devices such as an external USB optical disk drive, use external device power adapter. Otherwise, the device may not be recognized, or system shut down may result.

Federal Communications Commission Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.
-

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the Federal Communications Commission (FCC) rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The use of a shielded-type power cord is required in order to meet FCC emission limits and to prevent interference to the nearby radio and television reception. It is essential that only the supplied power cord be used. Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void your authority to operate the equipment.

Note:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. "The manufacture declares that this device is limited to Channels 1 through 11 in the 2.4GHz frequency by specified firmware controlled in the USA."

RF exposure warning

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. The equipment must not be co-located or operating in conjunction with any other antenna or transmitter. The measured SAR levels evaluated are in compliance with the FCC RF exposure guidelines.

YEELOONG 8089_*(* can be A-Z, 0-9 or blank) Series Max. SAR Measurement (1g)
802.11b SAR Value: 0.014W/kg; 802.11g SAR Value: 0.024 W/kg
