Federal Communications Commission (FCC) Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Warning: Changes or modifications made to this device not expressly approved by **Shenzhen Roadrover Technology Co., Ltd.** may void the FCC authorization to operate this device.

Note: The manufacturer is not responsible for any radio or tv interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

3G USB adapter is not in package of this device.
The distance between user and this product shall be no less than 20cm during the operations.

Search all the stations available.

Do the region setting here.

RDS

Local Setting
Select the radio frequency channel standard by clicking "**Region setting**" in interface.

AF(Alternative Frequencies)

Alternative frequency (or AF) is a function that allows the system to re-tune to a different frequency that provides the same station, when the first signal becomes too weak (e.g. when moving out of range).

To use the AF function, tap to activate AF after the RDS information is received from the radio station. This process is required each time when you switch to a new radio station.
