Siedle Scope
One for all

A new freedom
Siedle Scope is a **video indoor station** and a **landline telephone** in one device. And it's cordless. That means that wherever you are, whether in the kitchen, the bathroom, the garden or the cellar … Scope gives you a live update of who is standing at the door. Scope thus offers all the functions of a video indoor station, including a hands-free function and a door release button. At the same time, Scope is a fully-fledged landline telephone with excellent voice quality and countless Comfort functions. One for all. New freedom.

Scope, the **mobile video indoor station**
• Large colour display
• Video monitoring with zoom and swivel function
• Hands-free function
• In-house function control, such as lighting, garage door or blinds
• Can be extended: up to 8 handsets can be used in parallel

Scope, the **cordless landline telephone**
• High range and excellent voice quality thanks to the DECT standard
• Hands-free function
• Ergonomically optimized design and user guidance
• ECO mode with reduced transmission power
• Telephone book, call log and numerous other telephone functions
• Compatible with telephones from other manufacturers using the GAP profile, manufacturer-specific features only partially possible.

Scope of delivery
Siedle Scope cordless DECT telephone with door video function for the In-Home bus. Comprising a **base station, cordless handset and charging tray.** Scope unites the worlds of **door communication and public network telephony,** it is a comfort video in-house telephone and DECT telephone in one. You will also find the necessary connecting cables:
• 2 power supply units
• 1 public network cable
• 1 patch cable

Performance features
• Exclusive design with high-grade materials and fine workmanship
• High range and excellent speech quality thanks to DECT standard
• ECO mode with reduced transmission output
• Energy-saving line rectifiers (max. 0.5 W no load)
• Range outdoors up to 300 m, indoors up to 50 m
• Video surveillance with digital zoom
• Door call forwarding, e.g. to a mobile phone, also for door calls including door release (PIN-protected)
• Control of house functions such as light, garage door or roller shutters
• Communication between Scope and all other In-Home devices in the same line
• Doormatic
• Upgradable: Up to 8 cordless handsets in parallel
• Compatible with DECT telephones of other makes in compliance with GAP profile
• Operation possible with and without telephone system

Cordless handset performance features
• Individual design concept with six design variants
• Large 5.5 cm colour display, 240 x 320 pixel, illuminated
• Illuminated keypad
• Hands-free function
• Charging cradle with illuminated control buttons (call acceptance and door release)
• 8 ringtones
• Phonebook for 50 entries
• Caller list including date and time
• Last number redial
• Optional menu language setting
• Date and time display
• Signal strength display
• Caller display (clip)
• Li polymer battery
• Battery life on standby up to 100 h

Note
The Scope cordless handset must be kept with the same care and security awareness as a house key, as it can also open your front door from the outside. Ensure that it does not fall into unauthorized hands!

Safety remarks

Danger

Mounting, installation and servicing work on electrical devices may only be performed by a suitably qualified electrician. Failure to observe this regulation could result in the risk of serious damage to health or fatal injury due to electric shocks.

Danger

• Keep the charger away from sources of heat and naked flames!
• Never immerse the battery in water or salt water!
• Never dismantle or modify the battery or expose it to heat!
• Avoid dropping the battery if at all possible!
• Protect the battery from knocks or impacts, as these can damage the housing!
• Otherwise there is a risk of explosion or battery leakage, which could result in fire, injury or damage to the surroundings.
• If a battery leaks and the emerging substances come into contact with the eyes, mouth, skin or clothing, rinse the affected area immediately using water and consult a doctor.
• Only charge the battery in the cordless handset using the provided charging cradle and the original power supply unit.
• The charging cradle and the power supply unit were developed exclusively for use with the Siedle Scope cordless handset.
• Never use in conjunction with other products or batteries!
• A risk of overheating and deformation exists which could cause fires or initiate electric shocks.
• Do not expose the device to overheating or excessive pressure!

Warning

• Operating the device not in accordance with its intended purpose can cause injury.
• Do not drop or throw the devices!
• Do not use the devices if they are damaged, for example if the device housing has been damaged (sharp edges or exposed parts)!

Warning

• Install the base station in a dry and dust-free location away from direct sunlight.
• Siedle Scope is not suitable for use in wet rooms or in areas with an explosion risk.
• The cordless handset and the base station must be set up at least one metre away from other electrical devices.
• When used close to medical devices, functional disturbances can occur. In such cases, contact your specialist dealer or electrical installer!
• Only ever use original Siedle power supply units which form a part of the scope of supply.
• Only use the original Siedle rechargeable battery in the cordless handset.
• Do not hold the back of the cordless handset against your ear when it rings or when using the handsfree function! This can result in serious damage to your hearing.
• When using in conjunction with a hearing aid, it is possible for humming or feedback noises to occur.
• If the device requires servicing, contact your specialist dealer or electrical installer!
• Modern furniture is coated with an enormous variety of different lacquer and plastic finishes. Constituents of these materials can result in softening of the plastic feet in table-top devices and so impair the surface of the furniture. Please appreciate that the manufacturer is unable to accept any liability.

Disposal

• All electrical and electronic devices must be disposed of separately from the general house waste at the specially provided municipal waste facility.
• If a product bears the symbol of a waste bin with a line through it, then it falls under the regulations of European Directive 2002/96/EC.
• Responsible disposal and separate collection of end-of-life devices help to prevent potential environmental and health hazards, and form the basis for the recycling of used electrical and electronic devices.
• Rechargeable batteries should also not be disposed of with the general household waste.
• When disposing of your end-of-life devices and batteries, please observe the local waste disposal regulations. Details can be obtained from your local authority, waste disposal service or the specialist dealer from which you purchased the product.
• Before disposing of rechargeable batteries, cover over the contacts with sticky tape or other insulating material to ensure they do not come into direct contact with other objects. Direct contact with other metal objects in waste containers can result in fire and explosions.

Getting started

Registering the cordless handset at the base station

Your cordless handset is already registered in the set: The left-hand signal strength symbol indicates the strength of the connection in the status bar at the top.
Charging the cordless handset battery

After unpacking the cordless handset, the battery charge status must be checked. This is delivered fully charged, but discharge may have occurred during storage and transport.

```
14:34
Monday 21/03/2011
Base not found
```

Procedure:
• If the display of the cordless handset shows the following message highlighted in yellow: **Base not found,** then connect the base station to the mains power.
• Also connect the charging cradle with the cordless handset to the mains power.
• As soon as the base station has been located, you can begin to use the cordless handset.
• If the registration has failed, contact your specialist dealer or electrical installer.

Note

Please observe the safety and disposal instructions relating to the rechargeable battery.

This is a li-polymer battery with the following performance capability:
• Standby: appr. 100 hours
• Video link: appr. 3 hours
• Audio link only: up to appr. 10 hours

Registering additional cordless handsets at the base station

Up to 8 cordless handsets can be operated in parallel at the base station. The cordless handset supplied as standard in the set is designated handset 1. Other cordless handsets are numbered through in the order in which they are registered.
The prescribed designations for handsets 1 to 8 cannot be edited.

```
Registration

Would you like to register
the handset?

OK
```

Procedure:
• To register an additional cordless handset, disconnect the base station from the mains power.
• Reconnect the base station to the mains power.
• The base station now has a 3-minute window in which an additional cordless handset can be registered. This is indicated by a green flashing LED at the top.
• Also connect the charging cradle with the cordless handset to the mains power.
• The following message appears on the display on the additionally registered cordless handset:
• Would you like to register the handset?
• Confirm by pressing the left-hand display button OK.

Getting started

Registering additional cordless handsets at the base station

The following display appears during the registration process:
Searching base
Please wait
After selecting the base, the following display appears:
Registering handset
Please wait
• As soon as the base station has been found, confirm the located base with the left-hand display button OK.

The cordless handset is now in the ready status.

After successful registration, the base station is locked again for new registrations. This is indicated by a continuous green LED light.
• To register additional cordless handsets, disconnect the base station from the mains power again and proceed as described above.

Note
The additionally registered cordless handsets are synchronized to the correct date and time and the same intercom settings as cordless handset 1.

```
14:34
Monday 21/03/2011

Light          Door call
```

Switching the cordless handset on and off
During the switching on process, a progress bar appears on the display.

Procedure:
• In order to switch on the handset, press the red End call button for around 1 second.
• The handset automatically activates the power save mode if it is in the idle status for more than 2 minutes.
• The display switches off.
• A hibernating handset switches back on automatically as soon as it is placed in the charging cradle.
• The display terminates the power saving mode automatically after around 1 second as soon as it is removed from the charging cradle.

Switching the cordless handset on and off

• If a display is in the power saving mode, the first time a button is pressed this only reactivates the display and has no other function.

Incoming calls

The call number is visible in the display, provided the caller has not withheld their number. If you have stored the call number with a name in the Scope phonebook, the name of the caller can be read in the display.
or

Procedure:
• Incoming calls are picked up using the green Pick up button.
• If you pick up the call by pressing the Mouth button, the call will be held in the handsfree mode.
• If the cordless handset is in the charging cradle, the call can also be picked up using the Mouth button on the charging cradle.

Keypad lock

The keypad lock prevents unintentional operation of the telephone.

The keypad lock switches off automatically when you receive an incoming call. At the end of the call, it switches back on again.

Procedure:
• To lock and unlock the keypad, hold down the Hash button until the Key symbol in the status bar at the top of the display appears / disappears.
Note
If the keypad lock is switched on, it is also not possible to call emergency numbers.

Dial the required number

1 +	2 ABC	3 DEF
4 GHI	5 JKL	6 MNO
7 PQRS	8 TUV	9 WXYZ
	0	

Procedure:
• Enter the required call number using the numerical keypad.
• After entering the first numbers, these are indicated by the display.
• Corrections can be made using the display button <C.

Holding a call

Procedure:
• To establish a call, press the green Pick up button.

Handsfree

If the handsfree mode is active, the mouth symbol is highlighted in yellow.

Procedure:
• To establish a call in the handsfree mode, press the left-hand display button with the mouth symbol.
If the handsfree mode is active, the mouth symbol is highlighted in yellow.

Call silencing
If required, all ringtones can be muted.
Incoming calls are then only signalled optically at the display.
Procedure:
• To switch the muting function on and off, hold down the Star button until the bell symbol in the status bar at the top of the display appears / disappears.

Volume
Using the symbols + and - it is possible to increase and decrease the volume of the current call; Depending on the call mode, this affects either the receiver or the handsfree speaker volume.

The volume can be set in 8 stages.
Procedure:
• Using the left-hand control button, select the *minus symbol,* or with the right-hand control button select the *plus symbol.*

Microphone silencing
Using the microphone silencing function, you can mute the cordless handset in the middle of a call should you wish to speak privately to a person in the room. The person at the other end is unable to listen in. The microphone symbol is highlighted in yellow when the microphone silencing function is active, and the cordless handset gives off a warning signal tone.

Procedure:
When using the telephone, select the *microphone symbol* with the line through it on the display using the upper control button.

Call parking
The dot button is the so-called "Flash" button. The function initiated by the "Flash" button depends on the telephone system to which the Scope is connected.
Depending on the configuration, for example, it can be used to park the call to confer with a third party user, to whom the call is then forwarded. Any telephone connected to a PBX extension of the telephone system can be a third party user.
Forwarding to a different Scope cordless handset registered at the same base station is carried out using the *Transfer* display button.

Procedure:
• Select the dot symbol using the lower control button.
• Select the telephone number of the user to which you wish to forward the call.
• To establish a call, press the green Pick up button.
• For successful call forwarding, terminate the conference by pressing the red End call button.
• If, alternatively, you wish to return to the waiting call, press the Dot button again.

Call forwarding

Any incoming calls, whether from public network telephones or door calls, as well as calls from other bus telephones, can be forwarded to other Scope cordless handsets.

Call transfer

Microphone

On   Off

Transfer

OK   Close
• If you have picked up a door call, to forward the call activate the *Options* display button.
• The submenu *Options* opens up.
• Select the menu item *Forwarding* using the lower control button.
• Now use the control buttons to select the handset to which you wish to forward the call.
• Confirm by pressing the left-hand display button OK.
• The call to the selected handset is established.
• As soon as the call to the selected handset is established, confirm the completed call forwarding process by pressing the red End call button.

Note
Forwarding is not possible if there is no active call (blind transfer).

Ending a call
Calls are ended using the red End call button.

Procedure:
• To end the call, press the red End call button.
• If you are speaking in the hands-free mode with the handset in the charging cradle, end the call by pressing the Mouth button on the charging cradle.

Brokering

Brokering is used to describe the process of switching backwards and forwards between a door call and a public network call.

• Accept the door or public network call with the green Pick up button.
• By pressing the green Pick up button again, you can accept the second incoming call.
• The green Pick up button can be used to switch backwards and forwards between the 2 active calls.
• By actuating the red End call button, you can refuse the incoming second call.

Cordless handset
Idle status

In order to save power and to extend the life of the battery, the display is switched off in the idle status. The display switches off automatically around two minutes after the last action.
As soon as a call is received or information is transferred, the display is automatically activated to the ready status.

Note

If a display is in the power saving mode, the first time a button is pressed this only reactivates the display and has no other function.

Charging cradle

The charging cradle of your Scope cordless handset is used to charge the battery and offers two additional control buttons.
The control buttons are only operational and alight when the cordless handset is placed in the charging cradle and the charging cradle is supplied with power through the power supply unit.
Procedure:
• Without picking up the cordless handset, accept the incoming call using the **Handsfree button** on the charging cradle.
• End the call by pressing the **Handsfree butto**n again.
• Open the door using the **Door release button.**

Door release

The front door or storey door is opened, depending on where the door call comes from, using the Door release button with the key symbol.
The front door can be opened using the white Door release button even if there is no incoming door call. There is an additional Door release button on the charging cradle. However, this only works if the cordless handset is located in the charging cradle.

Getting started
Setting the date and time

Setting the date and time
The date and time are required in order to show the correct time against incoming calls in the call list.

Procedure:
• Using the right-hand control button, select the Main menu.
• In the Main menu, select the settings by pressing the right and then the lower control button.
• Confirm by pressing the left-hand display button OK.

• Confirm by pressing the left-hand display button **Save**.
• The display confirms your entry with the message: **Date set**, and shows the entered date setting.
• Confirm by pressing the left-hand display button OK.

Video

When a call arrives, the Scope cordless handset rings and shows the video image. After pressing the green Pick up button or the Handsfree button with the mouth symbol, the speech connection is established.

If another door call is received from a different door, the existing call is ended and the process begins again.
Digital zoom

When you have accepted the video link from the door station, the Digital zoom function allows you to enlarge excerpts of the display image.

The zoomed image excerpt can be defined as the standard setting. In this case, when the next door call is received, the video image starts with precisely this image excerpt.

Procedure:

• Using the central control button, zoom into the video image.

• Select the required image excerpt using the upper, lower, left and right control buttons.

• Actuating the control button again disables the zoom function.

• You can define the activated digital zoom as the default setting.

• Open the menu using the *Options* display button.

• Select Set as default and confirm your selection with OK.

• To delete the default image excerpt, open the Options menu.

• Select *Disable zoom.*

• Confirm by pressing the left-hand display button OK.

Phone volume

Using the upper control button,
select the submenu Phone volume.

```

• The *Doormatic* entry is selected.
• Confirm by pressing the left-hand display button OK.
• Using the right or left control button, select Yes or No. Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button OK.
• The following message appears in the display: *Doormatic enabled/ disabled.*
• Confirm by pressing the left-hand display button OK.

Note
Despite the Doormatic function being enabled, the door call continues for around 40 secs.
If you wish to switch off the call, then set the front door volume to 0. This is done in the *Main menu > Settings > Audio settings > Front door,* or
alternatively mute your Scope cordless handset using the Star button. However, please note that this will also mute all other incoming calls.

Door call forwarding

In the Door call forwarding menu, the door call is automatically forwarded to the public network telephone. This function exists exclusively for door calls; a door call can only be forwarded to a public network telephone.

If you also wish to use the Door release function from your public network telephone, you will have to enter your individual PIN.

Note

If door call forwarding is activated, your Scope cordless handset will no longer ring.

Intercom settings

Doormatic

Door call forwarding

Functions

OK   Back

Door call forwarding

Enable door call
forwarding?
Yes   No

OK   Back

Procedure:
• In the *Intercom settings* menu, select the entry *Door call forwarding* using the control button.
• Confirm by pressing the left-hand display button OK.

• Using the right or left control button, select *Yes* or *No*. Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button OK.
The *Door call forwarding menu* shows the forwarding addresses from your phonebook.
• Select an *entry* using the lower and upper control button.
or
• By selecting *New entry*, you can create a new forwarding address with a name and telephone number.
• Confirm by pressing the left-hand display button OK.
The following message appears in the display: *Door call forwarding enabled*, accompanied by the relevant name to which you wish to forward the calls, or *disabled.*
• Confirm by pressing the left-hand display button OK.

Door call forwarding to the public network telephone

If the Door call forwarding function is activated, your front door can be opened from your public network telephone.

For security reasons, this is only possible using an individual PIN.

• Pick up the door call at your public network telephone.
• For door release, enter your *4-digit pin* using the numerical keypad.
• Press the *Hash button.*
• Your front door will be opened from your public network phone.

• End the door call with the button combination * 0 # before replacing the receiver with the red hang up button, as otherwise the public network engaged tone will be audible at the door until timeout.

Main menu
Intercom settings

Functions

The Functions menu lists the control functions and the internal call functions which have been set up by your electrical installer. It also provides information about function numbers which are still unassigned and can therefore still be used. It is also possible here to delete functions you no longer require.

Functions 1 and 2 are preset with a default assignment. Both these functions can, however, be edited by your electrical installer if you require.

```
Functions

1 Light
2 Last door
3
4
5
6
7

OK                    Back
```

Procedure:
• In the Intercom settings menu, select the entry **Functions** using the lower control button.
• Confirm by pressing the left-hand display button OK.
• Select an unassigned function number in the Functions menu.
• Up to 15 functions are possible.
• Confirm by pressing the left-hand display button OK.

Name

When selecting, only choose unassigned functions. Take care not to overwrite previously set functions by mistake.

```
New entry

Name

Type

Function
3

OK                      <C
```

• In the **New entry** menu, the Name entry is selected.
• Using the letter buttons, enter an unambiguous name for the required function, such as Open garage or Front door light.
• The name must not begin with a space or a special symbol.

Type

In the Type submenu, assign the function to the relevant function type. On principle, any function can be linked to any function type. By selecting the right type, you ensure that the cordless handset displays the correct user interface when executing the function.

There are 3 possibilities to choose from.
• Wired
• Door
• Control Device

```
Type

Wired
Door
Control Device

OK                    Back
```

• Select **Type** entry using the control buttons.
• Access the possible function types using the OK display button.

Wired

Select this function type if you wish to call a different bus telephone using the function.

• Select **Wired** entry using the control buttons.
• Confirm by pressing the left-hand display button OK.

20

Door
Select this function type if the function is to be used to dial a door.

• Confirm by pressing the left-hand display button OK.
• Select the required Speed dialling number using the control button.
• Access the Assign speed dial menu using the display button Assign.
• Speed dialling entries can be assigned from the Phonebook or Intercom.
• Using the right and left control button, choose between Phonebook or Intercom.
.

• Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button OK.
• Now select the required *Speed dialling assignment* using the lower control button.
• Confirm by pressing the left-hand display button OK.

• Pressing the red End call button takes you back to the higher-level menu.

Making a speed dialling call

• When the Scope mobile handset is in the ready status, press the assigned number for around 3 seconds. The user is dialled directly.

Frequently used functions
Two frequently used functions or user numbers (so-called softkeys) can be indicated in the display for super-fast access using the two display buttons. For this, buttons I and II are reserved in the speed dialling menu. These two buttons are assigned a name from the phonebook or an intercom function in the speed dialling menu.
In the ready mode, you can use the two buttons at the bottom of the display to access frequently used functions such as light switching or opening the garage, or alternatively favourite telephone numbers.
Frequently used functions:
Light
Door call

• In the Settings menu, select the *Speed dialling* submenu using the lower control button.
• Confirm by pressing the left-hand display button OK.

ECO mode

In the ECO mode, the transmission output is reduced to a fixed value. This reduction of the radio output is intended to reduce electro smog. The value depends on the distance from the base station.
This reduces the range of your Scope cordless handset.
In the ECO mode menu, the ECO mode is switched on and off.

```
ECO mode

ECO mode

**Resetting the base station**

When the base station is RESET, it returns to the as-delivered status, in other words:

• The PIN is rest to 0000

• All registered cordless handsets are deleted

• The door forwarding function is deleted

• The Doormatic function is deleted

• All the In-Home functions are deleted

(Print out the settings from the BPS or make a note of the functions activated prior to the RESET and enter the same settings when repeating the registration process.)

Procedure:

• Unplug the patch cable for the In-Home bus at the base station.

• The base station can continue to be supplied with power during this process.

• Then press the PROG button (using a paper clip or similar) and hold it in place.

• While you continue to hold down the PROG button, plug the patch cable back into the In-Home bus.

• When the Prog LED flashes twice, you can release the PROG button.

The status LED on the front of the base station flashes to indicate that the RESET is in progress.

• As soon as the status LED flashes green, the RESET process is completed.

• You can now reregister the cordless handsets which you had previously deregistered.

If you did not deregister your cordless handsets before, the following display appears:

Base not found

• Then select the entry *Deregister handset* in the main menu under system settings.

• In answer to the question *Do you want to deregister the handset?* confirm with *Yes*.

• Confirm by pressing the left-hand display button OK.

The following question appears in the display:

Deregistration failed. Register to different base?

• Confirm by pressing the display button OK.

The registration process is started. As soon as the base station has been located, you can begin to use the cordless handset.

Door call

If there are several cordless handsets registered to one base station, it is possible to activate call silencing at any of the cordless handsets in order to ensure that you are not disturbed.

```
┌─────────────────────────────┐
│  Door call                  │
│                             │
│  ┌────────────────────────┐ │
│  │ Allow door call?       │ │
│  │ Yes    No              │ │
│  └────────────────────────┘ │
│                             │
│                             │
│  OK                  Back   │
└─────────────────────────────┘
```

Procedure:
• Select **Door call** in the System menu using the lower control button.
• Confirm by pressing the left-hand display button OK.
• Using the right and left control buttons, select **Yes** or **No**.
• Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button OK.
The following message appears in the display: **Door call enabled/ disabled.**

Deregistering / registering a handset

In the Deactivate / Activate handset menu, it is possible to register or deregister cordless handsets at the base station.
Registration is secured by the default PIN 0000. If you have changed this PIN, your own personal PIN must be used to register.

```
┌─────────────────────────────┐
│  Deregister handset         │
│                             │
│  ┌────────────────────────┐ │
│  │ Do you want to deregister│
│  │ the handset?           │ │
│  │ Yes    No              │ │
│  └────────────────────────┘ │
│                             │
│  OK                  Back   │
└─────────────────────────────┘
```

• Select **Deregister/register handset** in the System menu using the lower control button.
• Confirm by pressing the left-hand display button OK.
• Using the right and left control buttons, select **Yes** or **No.**
• Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button OK.
Depending on the selection, the display shows the following message:
**Registration succeeded
Deregistration aborted**
and:
Would you like to register the handset?
• Confirm by pressing the left-hand display button OK.

Dialling pause

If you are operating the Siedle Scope at a telephone system, you may require an external line digit.
It may be necessary to leave a short pause between dialling the prefix and continuing with the call number. The required pause is determined by the customer's own telephone system. There are three dial pause times to choose from: 800 ms, 1600 ms and 3200 ms, or alternatively no pause 0 ms.
Enter the dial pause individually at all the cordless handsets.

```
┌─────────────────────────────┐
│  Dialling pause             │
│                             │
│  0 ms                       │
│  ┌────────────────────────┐ │
│  │ 800 ms                 │ │
│  └────────────────────────┘ │
│  1600 ms                    │
│  3200 ms                    │
│                             │
│                             │
│  Save                Back   │
└─────────────────────────────┘
```

Select **Dialling pause** in the System menu using the lower control button.
• Confirm by pressing the left-hand display button OK.
• Now select the required length of the dialling pause using the control button.
• Your selection is highlighted by a yellow frame.
• Confirm by pressing the left-hand display button **Save.**

External line digit

Depending on the telephone system, Scope may have to automatically dial the external line digit before the call number.

Enter the external line digit individually at all the cordless handsets.

External line digit

External line digit
0

Automatically add
Yes   No

Save   Back

• Select *External line digit* in the System menu using the lower control button.
• Confirm by pressing the left-hand display button OK.
• The E*xternal line digit* entry is selected. Using the numerical keypad, enter the external line digit you wish to use. Generally this is the external line digit: 0.
• Select the *Automatically add* entry using the lower control button.
• Using the right and left control buttons, select *Yes* or *No*.
• Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button *Save*.

Phonebook
In the Phonebook menu, you enter your preferred users and have direct access to these users. Up to 50 entries are possible in the phonebook of each of the cordless handsets registered to the base station.
New entry
The customary special symbols for the set language can also be found by multiple pressing of a numerical button.

Sequence of phonebook entries
The phonebook entries are generally alphabetically listed.
Special symbols and numbers have top priority.
If you wish to circumvent the alphabetical sequence of entries, precede the name with a symbol or number. These entries are listed at the top of the phonebook.

Phonebook

• Your selection is highlighted in yellow.
• Confirm by pressing the left-hand display button OK.

Intercom menu

Using the Intercom menu, it is possible to execute functions in the building communication mode. Examples include:
Switching on the light
Dialling last door
Calling an in-house telephone
Calling another Siedle Scope cordless handset
Viewing the video image at the door station
A maximum of 15 different functions plus a maximum of five additional Scope cordless handsets are possible. The latter are automatically entered by the system.
Your electrical installer programs these functions. Please refer to the separate In-Home Video system manual for the intercom functions.
Procedure:
When your cordless handset is in the ready status, select the **Intercom menu** directly using the left-hand control button.

The display in the status bar shows the **Intercom settings** for the different areas.

• Use the right or left control buttons to switch between the different areas.

• The relevant Intercom symbol precedes each entry in the list.

• If your list contains a large number of entries, use the lower control button to scroll to the next page.

The individual symbols in the Intercom menu

	All intercom functions
	Selectable doors
	Bus telephones: Calls to wired In-Home users
	Scope cordless handsets
	Switching and control functions in the In-Home bus

Frequently asked questions

There is nothing showing in the display.
1 The cordless handset is hibernating.
• Briefly press any optional button.
2 The cordless handset is not switched on.
• Press the red End call button and hold down for a while.
3 The battery is empty.
• Charge the battery or exchange it.

The cordless handset does not ring.
1 The ring tone has been switched off
• Hold down the Star key for 3 seconds.
2 The call volume is set to minimum
• Increase the call volume.
3 Door calls are switched off
• Switch the door calls on.
4 Door call forwarding is enabled
• Disable door call forwarding.

The cordless handset does not respond when buttons are pressed.
1 The keypad lock is activated
• Hold down the Hash key for 3 seconds.

The person at the other end cannot hear you.
1 You have set the cordless handset to mute using the microphone symbol
• Press the microphone symbol again.

The number of the caller is not displayed.
1 The caller has withheld their call number.
or
2 The number display function has not been enabled.
• The caller should arrange for number display function to be enabled by their provider.

The display says Base not found
1 The cordless handset is out of range of the base station
• Reduce the distance between the cordless handset and the base station.
2 The cordless handset has been deregistered
• Register the cordless handset.
3 The base station has not been switched on
• Check the power supply unit to the base station.

Error tone after PIN enquiry / forgotten PIN
1 You have entered the wrong PIN.
• Reset the system PIN to the default setting (0000).

You cannot hear a ring tone / dialling tone from the landline.
1 You are not using the supplied telephone cable.
• Please use the supplied telephone cable.
2 The telephone cable is not correctly connected to the base station / the telephone network.
• Check for correct connection.
3 Your telephone system requires a (different) external line digit / a (different) dialling pause than the one which is set.
• When you call your cordless handset from a public network telephone, the display of your cordless handset tells you whether the TC system automatically adds the external line digit for incoming calls or not.
• Try the various dialling pauses in the Settings > System menu.
• Take into account the default settings of your telephone system in your Scope cordless handset settings.

It is not possible to call back the numbers entered in the call list
1 Your telephone system automatically adds a 0 as a prefix for incoming calls. For this, you have preselected the external line digit 0 in the system settings. Your telephone system saves incoming calls in the call lists with the zero automatically added. This means that you phone the entries in the call list back with a double 0.
• You can find out the presettings of your phone system using the following process:
• Call your cordless handset from a public network telephone.
• The display on your cordless handset will tell you about the presettings of your telephone system, for instance the prefixed 0.
• If there is a 0 already entered, select the option No in the system settings under External line digit.
• Take into account the general default settings of your telephone system in your Scope cordless handset settings.

You receive a call from a public network telephone during a door call.
If you wish to accept the public network call:
• Reject the door call with the red End call button.
• Then accept the public network call with the green Pick up button.

If a door call is forwarded, after hanging up only the public network engaged tone is audible at the door.
• Before hanging up, press the button combination * 0 #
• and then end the call by pressing the red hang up button.

Index
