1. The Basics

1.1 Introduction

Dear users,

Thank you for choosing this full keyboard mobile phone.

In the first installation and use of this product, please be sure to carefully read all the information description, which will help you make better use of the product, get a comprehensive understanding of the use of mobile phones and enjoy its perfect functions and simple method of operation.

The full keyboard phone is designed for GSM / GPRS network environment. In addition to the basic function of communication, it also includes Chinese and English input, Bluetooth, JAVA,WIFI, FM radio, Mp3, Mp4 player,Kingr Move, polyphonic ringtones, calendar management, Entertainment, calculators, etc., a variety of practical

functions, to facilitate your work and leisure activities. In addition, it uses individual man-machine interface, the perfect functional design to meet your needs.

Note: If the content described in this manual does not match with your phone, please phone prevail.

Our Company reserves the right to make changes without any prior notice the contents of this manual.

1.2 Safety

- If your phone is lost or defective, please immediately notify the telecommunication sector or its outlet, to disable the phone and SIM card. It will help you avoid the economic losses if someone makes a call pretend to be you.
- When you contact with the telecommunications sector or its outlet, they need to know your phone's IMEI number (which is printed on the label on the back of the phone; remove the battery and you can find it), please take good care of this number for future needs.
- To make your phone avoid misuse, please take precautionary measures, such as:
 - Set PIN number in the SIM card of your phone, and change it before others know.
 - You'd better take along your phone or lock it in the trunk when you

leave your car; please do not put the phone in the place easy to be seen.—

—Set calls restrictions

1.3 General considerations

- Only use your cell phone batteries and chargers designated. Using other products may cause battery leakage, overheating, bursting and fire.
- Do not crash, shake or throw the mobile phone to avoid error and fire.
- Do not leave the battery, the phone, the charger in a microwave or a high-pressure device, or it may cause circuit damage and fire and other accidents
- Do not use mobile phone near the place with flammable or explosive gases, or it may cause malfunction and a fire.
- Do not put the phone near the place with high temperatures or excessive dust or it may cause malfunction.
- Please keep the phone be out of children's reach, for avoiding injury may be caused when they play with it as a toy.
- Do not place the phone on the table which is uneven or unstable, to prevent from malfunction or damage caused by falling.

1.4 Notes on use of mobile phones

- Please turn off your phone on the plane, in hospitals or in the areas

where using it is prohibited. The phone will affect electronic equipment and medical devices, please follow the relevant provisions of the place, The phone has a timer automatic start function, please check your timer switch settings to make sure your cell phone won't automatically turn on during the flight.

- Do not use your phone near weak signal or high-precision electronic devices. Interference from radio wave may cause malfunction of electronic devices and other problems. Especially pay attention when near the following devices: hearing aids, pacemakers and other medical electronic equipment, fire detectors, automatic doors and other automatic device. If you meet with the impact of a pacemaker and other medical electronic equipment caused by mobile phone, please contact with the manufacturer of the device or local distributor.
- Do not press on the LCD screen or use it to knock something else, otherwise it will cause breakage of the LCD panels and LCD liquid leakage. If the LCD fluid enters your eyes, it will be in danger of blind. Then immediately wash the eye (do not rub your eyes) and go to hospital.
- Do not disassemble or modify the phone, or it may cause damage, leakage and circuit failure.
- In rare cases, using the phone in some models of cars may adversely affect the electronic equipment inside. Do not use your phone in this

case to avoid loss of security guarantees.

- Do not use needles and other sharp things to press the keys, otherwise it will damage the phone or produce misuse.
- If the antenna is damaged, please do not use the phone, or it may cause personal injury.
- Avoid putting the phone too close to the magnetic cards and other magnetic objects; mobile phone radiation may remove the information stored in the floppy disk, the savings card, and the credit card.
- Please keep thumbtacks and other small metal objects away from the handset of mobile phone. The magnetic made by speaker will attract the small metal objects, which may cause personal injury or damage to the mobile phone.
- Avoid wetting the phone. If water or other liquids enter the mobile phone, it will cause overheating, leakage and failure.

1.5 Notes on batteries

- Do not leave batteries in the fire, otherwise it will cause the battery catch fire and burst.
- Do not use wires, needles and other metal objects to short-circuit the battery; or put the battery with metal objects such as necklaces together, otherwise. It will result in battery leakage, overheating,

bursting and fire.

- Do not solder the battery ends; otherwise it will lead to leakage, overheating, bursting and fire.
- If the battery fluid into the eye, it would be the risk of blindness. Then please do not rub the eyes; you should rinse it with water, and then immediately go to hospital.
- Do not disassemble or modify the battery, or it will cause battery leakage, overheating, bursting and fire.
- Do not use put the battery near fire or other high-temperature heater, it will cause battery leakage, overheating, bursting and fire.
- If there are charging temperature, discoloration, distortion and other anomalies when the battery is in use, charging or store, please stop using and replace it with a new battery.
- If the battery liquid touches the skin or clothing, which may burn skin, please rinse with water immediately, and go to hospital if necessary.
- If the battery has fluid leakage or gives off a strange odor, please take it away from the flame immediately to avoid fire and burst.
- Do not wet the battery, or it will lead the battery to overheat, smoke and corrosion.
- Do not leave the battery under the sunlight directly or near a car with high temperature, otherwise it will result in fluid leakage and overheating, which may reduce the skills and shorten life.

- Do not charge for more than 24 hours.
- Please throw the waste battery into the specified recycling bins, so as not to pollute the environment.

Do not place the battery in fire ; follow local laws and ordinances in Disposing used battery.

Check the model number of the charger before using it to charge the mobile.

Only use approved battery , charger and accessories applicable to the specific mobile model . Using other types of battery , charger and accessories may violate the certification or warranty terms of the accessories may violate the certification or warranty terms of the equipment and may result in danger .

Return waste and used batteries to the supplier or specified recovery site .

CAUTION!

Risk of explosion if battery is replaced by an incorrect type .

Dispose of used batteries according to the instructions .

1.6 Notes on using the charger

- Use the 220V AC. Use other voltage may cause leakage, fire and damage to the cell phone and charger.
- Do not short-circuit the charger, otherwise it will cause electric shock,

smoke and damage the charger.

- Please do not use the charger if the power line is damaged, otherwise it will cause a fire and electric shock.
- Please clean the dust on the power outlet in time.
- Please do not put water containers next to the charger to prevent overheating, leakage and failure caused by water spills.
- If the Chargers come into contact with water or other liquids, pull the power from the outlet down immediately to prevent overheating, fire, electric shock and charger failure.
- Do not disassemble or modify the charger, otherwise it will result in personal injury, electric shock, fire and damage the charger.
- Please do not use the charger in bathroom where has high temperatures, otherwise it will cause electric shock, fire and damage the charger.
- Please do not touch the charger, wires and electrical outlets with wet hands, otherwise it will cause electric shock.
- Do not put heavy objects on the power cord or modified the wires, otherwise it will cause electric shock and fire.
- Before you clean and maintain the power plug, unplug it out of the socket set.
- Seize the charge when you unplug the plug. Pulling the power cord may damage the wires, electric shock and fire.

Note: This manual is in Chinese Simplified operation mode instructions, and it is slightly different from the English mode of operation.

If the content described in this manual does not match with your phone, please phone prevail.

1.7 Cleaning and maintenance

- Do not use the phone in bathroom where has high temperature, for battery and charger is not waterproof, and it should also avoid the rain.
- Use a soft, dry cloth to clean the phone, battery and charger.
- Do not use alcohol, thinner or benzene solution to wipe the phone.
- Dirt outlet will lead to poor contact, power-down, which can cause no longer charge. Please do regular cleaning.

1.8 General precautions

Mobiles:

- Use the phone between the $5^{\circ}\text{C}\sim 40^{\circ}\text{C}$ temperature and under the 35% to 85% humidity environment.
- If possible, use your phone away from the ordinary telephone, television, radio and office automation equipment in order not to affect the effect of these devices and the mobile phone.

Battery:

- Keep the battery in cool ventilated place and out of the sunlight.
- Phone battery's life is limited. Battery's working time is reduced gradually during the frequent charging. Invalid charging for many times means the battery's life is over, and it should be replaced by a new battery of specified type.

Waste battery handling instructions:

- For your safety and taking care of the environment, do not throw the waste batteries into general garbage. The battery waste shall be expressly provided by the local sites for disposal of batteries recycled.

Charger:

- Do not charge in the following areas: direct sunlight; outside with temperature below 50C or above 400C; humid, dusty place or vibration (it may cause failure); near television, radio and other electrical appliances (it will affect the image and sound effects).

2. Before Using

2.1 Technical parameters

Host i9

Dimensions (length × width × thickness) (L) 109× (W) 57× (H)13.5 mm

Lithium Battery

Rated voltage	3.7V
Charge limit voltage	4.2V
rated capacity	1200mAh

批注 [U1]: Customers fill out

2.2 SIM card

You must insert a valid SIM card before using the phone. SIM card is the key to the digital GSM network.

All the relevant information and your call established of a network connection are recorded in the SIM card initialization of the metal surface area; meanwhile the names, phone number and SMS stored and received are also recorded in the phone book of your SIM card. SIM cards can be removed from your phone and put it into any GSM phone to use (a new mobile phone automatically read the SIM card).

In order to prevent loss and damage from the card information, you should avoid touching the metal surface area, and keep SIM card away from electricity and magnetism place. Once the SIM card is damaged, you can not enter the GSM network.

Note: Be sure to remove SIM card after the phone off. There is absolutely prohibited in the case of an external power supply connected to insert or remove a SIM card, or SIM card may be damaged.

2.2.1 SIM Card insertion and removal

- Off the phone, and remove the other external power supply.
- Insert the SIM card into the SIM card connector, and ensure that the SIM card is properly inserted and the card's metal contacts well.
- When you need to remove the SIM card, first off it then removes the SIM card.

2.3 Battery

The initial state of battery charge has about 50% of the electricity. The first time to charge you should completely exhausted it (depleted battery will not turn on it) and then completely filled it; have it completely run out before the second charging; so after three consecutive cycles, the battery will be easier to achieve the best condition.

Note: The battery is welded one. Do not arbitrarily remove it under normal circumstances.

2.3.1 Battery charging

- Plug the charger.
- Plug the charger connector into the bottom of the phone, "charging / data transfer interface."
- At this time, the screen upper right corner of the charge level indicator will flash in cycle: If the charge is turned off, charging

indicator will appear on the screen, which means the battery is charging. If the phone is still excessive used when the power is low, the charging indicator may take some time after the start to appear on the screen.

- When the indicator in the upper right corner of the screen indicator shows full and no longer flashes, it means that the charge has been completed. This process usually takes 3 to 4 hours. During charging, batteries, cell phone and charger may become hot, which is normal.
- After charging, disconnect the AC power outlet with phone and charger.

➤ Note:

—It must be placed in temperature $+5^{\circ}\text{C}\sim+40^{\circ}\text{C}$ for ventilation while charging and be sure to use the charger provided by the manufacturer. Using an unapproved charger may be dangerous and it violate the recognition of the mobile phone and warranty.

—When the phone is automatically shut down or show low battery warning "battery low", it is timely to charge the battery. If you do not run out it before charging the battery, the phone will automatically reduce the charging time.

—The standby and talk time provide by Mobile phone manufacturers are based on the ideal working environment. In actual use, the battery working time may be changed as the network status, work environment

and the way of use.

—After charging, please disconnect the charger with the phone and power.

If you do not have the charger with power and phone off, then after a fairly long time (about 5-8 hours), battery power consumption to a certain extent, the phone began to charge again. We suggest that you do not do it like this, because it will have some impact on your battery performance and life.

2.4 Power

- To turn on the phone, please press the switch button for a while.
- When you open the phone and insert SIM card, your phone will automatically verify whether the SIM card is available. Then the screen will display the following order:

—Enter the phone password (if you set the phone lock password)

- Mobile decryption is decrypt; the phone will search for available networks automatically.

Once contacted, the network provider's name will appear in the upper left corner of the screen. It means cell phone is in the normal standby mode, you can engage in normal use.

Note: If the screen says "no service" means that you hare out of the normal network coverage (service area), but you can still send an

emergency call as the signal strength.

2.5 USB data cable to use

The way of using USB data cable: one end of the USB data cable is inserted into the PC (personal computer) on the USB port, then connect the other end to the bottom of the phone, "Charge / Data Interface" on.

The phone supports USB, USB data cable you can connect your phone to your computer, mobile phone and the computer to copy, move files, etc, T can also browse the photos stored on the card, audio, video and other documents.

Note: This phone only supports the power-state data transmission.

2.6 T-flash card to install/ remove

T-flash card, which is a multimedia memory card to increase memory, is built into the fuselage of the phone. This relatively small card should be installed or removed carefully to avoid damage. non-professional personnel had better do not open the fuselage T-flash card extraction.

Note: This phone does not support T-flash card hot swap.

3. Basic Instructions

3.1 Keyboard introduction

5. Common problems

5.1 USB Mode

When your phone's USB data cable is connected, the phone can be used as U-disk, modem, and network cameras through the menu option

U disk function: You can use your computer to access, manage files on the phone.

Modem: You can set the phone modem.

Network Camera: You can use the phone as a webcam.

Note: This phone does not support the USB function when shutdown

No additional program except the modem feature needs to be installed. It can be used when you want to.

You can find the settings in the modem card software. Please use the transmission line to connect the phone and computer, and choose to do the modem, then use the recommendations of the computer operating system, the installation wizard, select the software on a storage card, complete the installation. You can be the computer's Device Manager, see the Modem project, and view whether its driver software has been installed.

Note:

When the mobile phone is used like that, the phone feature will not be

used.

If there are not setting when connected with USB data cable, the phone will enter the state of charge.

5.2 Appendix

5.2.1 Common problems

- The phone can't be powered on.

When the battery voltage is too low, it may cause the phone can't be powered on. Please charge the battery.

- Some callings are limited.

Please confirm whether you have call limit, if you set the call limit, you can't call or only can call the specific number.

My phone was answered by other persons.

- Please confirm whether you set the call forwarding, if you have set it, the call will be transferred to a specific setting.

5.2.2 Display information

During the operation, the following error information may be displayed:

- Please insert the SIM card

Please confirm whether you have inserted SIM card. If your card has been inserted but can not be used, please try to use a dry cloth to wipe the

gold part of SIM card, then insert SIM card again, if it still can't be used, please contact your system supplier.

➤ No network

If you locate in the area that has no network coverage, or there is a physical obstruction between the transmitter and you, such as the hermetic space, the standby screen will show no network, you can't dial or answer the phone. You can try to close the window where there is network coverage.

➤ Emergency calls only

When you locate out of the coverage range of your service network but can receive another network signal, you can only dial the emergency call and can't call normally.

➤ Invalid SIM card

When your SIM card is locked or the SIM card is in error, please insert correct SIM card or contact your system supplier.

➤ Input PUK code

When your SIM card is locked because of three times of error PIN code input, the phone will ask you to input PUK code for unlocking. You should contact your system supplier to obtain the 8 digit PUK code.

Warning: if you input an incorrect PUK code for seven times, your SIM card will be permanently locked. You should obtain a new SIM card from your system supplier.

5.2.3 Accessory

Fast charger

It can charge the lithium battery fast; the full charged time is different for batteries of different capacities.

➤ Lithium battery (one)

Note:

- ✧ Specific standby time and calling time are based on actual use condition.
- ✧ You can only use the battery, charger and other accessories approved by the phone manufacturer, using other types of accessories will breach the authorization and the warranty of this phone and may cause the danger.

A set of headset

5.2.4 Maintenance manual

Thank you for using this mobile phone. If your phone has any problem when you use it, please contact the dealer or service center.

If your phone needs the maintenance, you can send it to the local maintenance station. If there is no local maintenance station, please send your phone and the copy of purchase invoice to the dealer for mailing.

Your phone is a product of superior design and technology, please use it carefully. The following suggestions will help you to fulfill the obligation in the warranty terms and to extend the life of the phone.

Please put the phone and its components and accessories in the location out of the touch of children.

Keep the phone dry. Rain, humidity and all types of liquid or moisture may contain minerals which can corrode electronic circuit.

Don't use and place the phone in the dusty area, this will damage its moving parts.

Don't place the phone in the hot area. High temperatures will shorten the life of electronic components and damage battery and warp or melt certain plastic parts.

Don't place the phone in the cold area. Otherwise, when the phone temperature rises (to the room temperature), there will be moisture in the phone, this will damage electronic circuit board.

Don't try to disassemble the phone. The non-professional treatment will damage the phone.

Don't drop, knock or shake the phone, otherwise the internal circuit board will be damaged.

Don't use potent chemical, cleaning solvent or strong detergent to clean the phone.

Don't use paint to coat the phone; the paint will block sundries in the moving parts to affect the normal operation.

When replacing the antenna, you can only use the matched or approved antenna. Unapproved antenna or the refit accessories will damage the phone and breach the related regulation of the wireless device.

All the above suggestions apply equally to your phone, battery, charger and accessories. If they can't work normally, please send it to the nearest qualified maintenance station.

FCC Warning:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Specific Absorption Rate (SAR) information:

This wireless phone meets the government's requirements for exposure to radio waves. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all

persons regardless of age or health.

FCC RF Exposure Information and Statement The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types: i9 (FCC ID: AODZKTXIPROI9) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.230W/kg and when properly worn on the body is 0.681W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 1.5 cm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
