**Step ④ Activation / configuration**

The activation of the station on the cloud (referred as commissioning) is done by the local Sigfox Operator.

If the station has been registered, the station is ready and operational as soon as the boot up is done and the LED is solid green.

1 minute

Check with your local Sigfox Operator for activation or if any change in the configuration is required.

Understanding the LED of your station

Light is	Meaning	Then ...
Off	No power	Your Access Station Micro is not powered. Please check the PoE power supply is firmly attached.
Red (for a few secs)	Power on	Your Access Station Micro is powering on.
Green – Flashing	Booting up (20 – 60 sec)	If flashing continue for more than 1 minute contact your support.
Green – Solid	In Operation	Your Access Station Micro is up and running.
Orange – Flashing	No connectivity	The Ethernet cable or USB dongle may be disconnected. Make sure that the cable or dongle is firmly attached.
Orange – Solid	No VPN connection	Your Access Station Micro may not be registered correctly. Contact your support.
Purple – Solid	Warming up (temp < 0°) Cooling down (temp > 55°C)	External temperature is too extreme. While your station is in cooling/warming mode, it is not in service.
Red – Solid	No Boot	If the light remains red after 1 minute your Access Station Micro may need replacement. Contact the support at your point of purchase.

- Internet connection: either by Ethernet port or compatible 3G/4G USB dongle
- Indoor 220 / 110 V AC power outlet

Getting to know your station

LED

USB port (Cellular)

Ethernet port (Data+Power)

## Installing your station

Step ① Place your station
Place or fix the Access Station Micro at the desired location. Make sure you leave enough space to access the ports and you can see the side to check the LED color.

Step ② Connect your station to the Internet
Connect the ethernet cable to the Ethernet port and / or the cellular dongle (if used). For sealing cover addition see instruction in sealing cover pack.

Option : Cellular (back up connectivity)

Connect the other end of the Ethernet cable to the PoE injector, and the latter to the wall socket or router.

Step ③ Power on your station
Connect the PoE injector to the power adapter and plug the adapter to a power outlet.

Your station will boot up automatically.
