performance. It may also cause the batteries to malfunction of

Do not use the device for anything other than its intended

Your device may malfunction

Avoid disturbing others when using the device in public

Allow only qualified personnel to service your device Allowing unqualified personnel to service your device may result in damage to your device and will void your manufacturer's warranty.

Handle SIM cards, memory cards, or cables with care

- When inserting a card or connecting a cable to your device, make sure that the card is inserted or the cable is connected to the proper
- Do not remove a card while the device is transferring or accessing information, as this could result in loss of data and/or damage to the card or device
- Protect cards from strong shocks, static electricity, and electrical noise from other devices
- Do not touch gold-coloured contacts or terminals with your fingers or netal objects. If dirty, wipe the card with a soft cloth.
- Inserting a card or connecting a cable by force or improperly may result in damage to the multipurpose jack or other parts of the device

Ensure access to emergency services

Emergency calls from your device may not be possible in some areas or circumstances. Before travelling in remote or undeveloped areas, plan an alternative method of contacting emergency services personnel

Protect your personal data and prevent leakage or misuse of sensitive information

- While using your device, be sure to back up important data amsung is not responsible for the loss of any data
- When disposing of your device, back up all data and then reset your device to prevent misuse of your personal information
- Carefully read the permissions screen when downloading applications. Be particularly cautious with applications that have access to many functions or to a significant amount of your personal information

- · Check your accounts regularly for unapproved or suspicious use. If you find any sign of misuse of your personal information, contact your
- service provider to delete or change your account information.
 In the event your device is lost or stolen, change the passwords on your accounts to protect your personal information
- · Avoid using applications from unknown sources and lock your device with a pattern, password, or PIN.

Do not distribute copyright-protected material

Do not distribute copyright-protected material without the permission of the content owners. Doing this may violate copyright laws. The manufacturer is not liable for any legal issues caused by the user's illegal use of copyrighted material

Malware and viruses

To protect your device from malware and viruses, follow these usage tips. Failure to do so may result in damages or loss of data that may not be covered by the warranty service

- Do not download unknown applications.
- · Do not visit untrusted websites
- Delete suspicious messages or email from unknown senders.
- · Set a password and change it regularly.
- · Deactivate wireless features, such as Bluetooth, when not in use.
- · If the device behaves abnormally, run an antivirus program to check for infection
- · Run an antivirus program on your device before you launch newly downloaded applications and files.
- Install antivirus programs on your computer and run them regularly to check for infection.
- · Do not edit registry settings or modify the device's operating system.

Specific Absorption Rate (SAR) certification information

THIS DEVICE MEETS INTERNATIONAL GUIDELINES FOR EXPOSURE TO RADIO WAVES

Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) recommended by international guidelines. The guidelines were developed by an independent scientific organisation (ICNIRP) and include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The radio wave exposure guidelines use a unit of meas irement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile es is 2.0 W/kg.

Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The highest SAR values under the ICNIRP guidelines for this device model are:

Maximum SAR for this model and conditions under which it was recorded	
Head SAR	0.225 W/kg
Body-worn SAR	0.355 W/kg

During use, the actual SAR values for this device are usually well being been the values stated above. This is because, for purposes of system efficiency and to minimise interference on the network, the operating power of your mobile device is automatically decreased when full power is not needed for the call. The lower the power output of the device, the survey the odd for the set. lower its SAR value.

A body-worn SAR test has been performed on this device at a separation distance of 1.5 cm. To meet RF exposure guidelines dur body-worn operation, the device must be positioned at least 1.5 cm es during away from the body.

Organisation such as the World Health Organisation and the US Food and Drug Administration have suggested that if people are concerned and want to reduce their exposure, they could use a hands-free accessory to keep the wireless device away from the head and body during use, or reduce the amount of time spent using the device
