INFORMATION YOU NEED TO KNOW

ABOUT YOUR OVEN

This Operation Manual is valuable: read it carefully and always save it for reference.

A good microwave cookbook is a valuable asset. Check it for microwave cooking principles, techniques, hints and recipes. See pages 21 and 22 for ordering the Ultimate Accessory, the SHARP CAROUSEL MICROWAVE COOKBOOK.

NEVER use the oven without the turntable and support nor turn the turntable over so that a large dish could be placed in the oven. The turntable will turn both clockwise and counterclockwise.

ALWAYS have food in the oven when it is on to absorb the microwave energy.

When using the oven at power levels below 100%, you may hear the magnetron cycling on and off.

Condensation is a normal part of microwave cooking. Room humidity and the moisture in food will influence the amount of moisture that condenses in the oven. Generally, covered foods will not

cause as much condensation as uncovered ones. Vents on the oven back must not be blocked.

After using **convection, grill, roast, Compu Bake, Compu Pizza, Compu Grill or Compu Roast**, you will hear the sound of the cooling fan. The fan may operate depending on the oven temperature.

Be aware that, unlike microwave-only ovens, convection microwave ovens have a tendency to become hot.

The oven is hot whenever the top grill, both grill or convection symbols are lighted in the display (☰☿).

The oven is for food preparation only. It should not be used to dry clothes or newspapers.

Your oven is rated 900 watts by using the IEC-705-1988 method. In using recipes or package directions, check food a minute or two before the minimum time and add time accordingly.

INFORMATION YOU NEED TO KNOW

ABOUT CHILDREN AND THE MICROWAVE

Children below the age of 7 should use the microwave oven with a supervising person very near to them. Between the ages of 7 and 12, the supervising person should be in the same room.

The child must be able to reach the oven comfortably; if not, he/she should stand on a sturdy stool.

At no time should anyone be allowed to lean or swing on the oven door.

Children should be taught all safety precautions: use potholders, remove coverings carefully, pay special attention to packages that crisp food because they may be extra hot.

Don't assume that because a child has mastered one cooking skill he/she can cook everything.

Children need to learn that the microwave oven is not a toy.

ABOUT MICROWAVE COOKING

- Arrange food carefully. Place thickest areas towards outside of dish.
- Watch cooking time. Cook for the shortest amount of time indicated and add more as needed. Food severely overcooked can smoke or ignite.
- Cover foods while cooking. Check recipe or cookbook for suggestions: paper towels, wax paper, microwave plastic wrap or a lid. Covers prevent spattering and help foods to cook evenly.
- Shield with small flat pieces of aluminum foil any thin areas of meat or poultry to prevent overcooking before dense, thick areas are cooked thoroughly.
- Stir foods from outside to center of dish once or twice during cooking, if possible.
- Turn foods over once during microwaving to speed cooking of such foods as chicken and hamburgers. Large items like roasts must be turned over at least once.

- Rearrange foods such as meatballs halfway through cooking both from top to bottom and from the center of the dish to the outside.
- Add standing time. Remove food from oven and stir, if possible. Cover for standing time which allows the food to finish cooking without overcooking.
- Check for doneness. Look for signs indicating that cooking temperatures have been reached.

Doneness signs include:

- Food steams throughout, not just at edge.
- Center bottom of dish is very hot to the touch.
- Poultry thigh joints move easily.
- Meat and poultry show no pinkness.
- Fish is opaque and flakes easily with a fork.

ABOUT SAFETY

- Check foods to see that they are cooked to the United States Department of Agriculture's recommended temperatures.

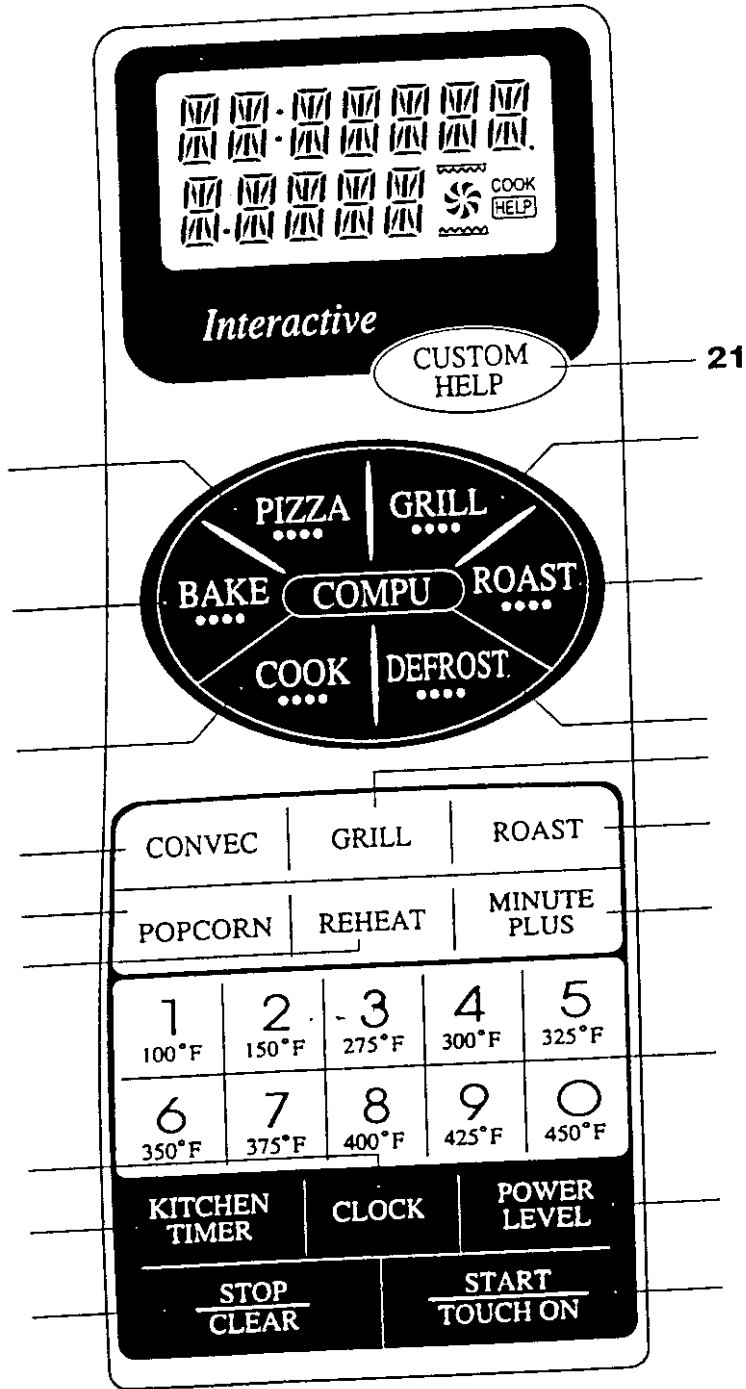

TEMP	FOOD
160°F	... for fresh pork, ground meat, boneless white poultry, fish, seafood, egg dishes and frozen prepared food.
165°F	... for leftover, ready-to-reheat refrigerated, and deli and carry-out "fresh" food.
170°F	... white meat of poultry.
180°F	... dark meat of poultry.

To test for doneness, insert a meat thermometer in a thick or dense area away from fat or bone. NEVER leave the thermometer in the food during cooking, unless it is approved for microwave oven use.

- ALWAYS use potholders to prevent burns when handling utensils that are in contact with hot food. Enough heat from the food can transfer through utensils to cause skin burns.

- Avoid steam burns by directing steam away from the face and hands. Slowly lift the farthest edge of a dish's covering and carefully open popcorn and oven cooking bags away from the face.
- Stay near the oven while it's in use and check cooking progress frequently so that there is no chance of overcooking food.
- NEVER use the cavity for storing cookbooks or other items.
- Select, store and handle food carefully to preserve its high quality and minimize the spread of foodborne bacteria.
- Keep waveguide cover clean. Food residue can cause arcing and/or fires.
- Use care when removing items from the oven so that the utensil, your clothes or accessories do not touch the safety door latches.
- Keep aluminum foil used for shielding at least 1 inch away from walls, ceiling and door.
- Use potholders and be careful when using convection, grill, roast, compu bake, compu pizza, compu grill or compu roast cooking as cabinet, interior and door may be too hot to touch.

MANUAL OPERATION

CONVECTION COOKING

During convection heating, hot air is circulated throughout the oven cavity to brown and crisp foods quickly and evenly. This oven can be programmed for ten different convection cooking temperatures for up to 99 minutes, 99 seconds.

The oven should not be used without the turntable in place, and it should never be restricted so that it cannot rotate. You may remove the turntable when preheating the oven and when preparing food to be cooked directly on the turntable.

Warning: All of the oven parts, including the heater below the turntable, as well as the rack and cooking containers may become very hot. Use caution when removing any item from the oven. Use heavy potholders or oven mitts to PREVENT BURNS.

Combine onion, garlic and olive oil in medium bowl. Microwave at HIGH (100%) until vegetables are tender, 4 to 6 minutes. Stir in crushed tomatoes in puree, spices, 1/2 teaspoon salt and the pepper.

Microwave at HIGH (100%) until bubbly, about 3 minutes. Stir. Reduce power to MEDIUM (50%). Microwave until thickened, 6 to 8 minutes.

Sprinkle yeast on water in large bowl. Stir to dissolve. Add 1/2 teaspoon salt, milk, oil and flour to make a pliable dough. Knead until smooth, about 2 minutes. Place in well-greased large bowl; turn greased side up. Cover with clean, moist towel. Place in oven at 100°F. until double in size, about 40 minutes. (Dough is ready if an indentation remains when touched.)

Remove dough and turntable from oven. Preheat oven to 425°F. Punch dough down. Divide dough in half. With well-greased fingers, pat dough onto 2 greased 12 x 1/2-inch metal pizza pans, which have been sprinkled with cornmeal. Pinch dough to form edge. Prick crust. Place one pan on turntable and return to oven. Bake 14 to 16 minutes or until crust is golden brown. Top crust with pizza sauce, 1/2 of ground beef or pepperoni and 1/2 cheese. Bake at 425°F, 6 to 10 minutes or until cheese is melted and beginning to brown. Repeat baking procedure for second crust.

INTRODUCTION

The convection microwave oven is the ultimate cooking team. This state-of-the-art system brings together the best of both worlds. Enjoy the browning and crisping capabilities of convection plus the speed of microwave cooking. Microwaving brings out the natural flavor of foods and keeps them moist and juicy. Convection cooking adds the advantage of browning and crisping food beautifully. Combination settings Roast use convection heat to seal and brown the outside while using microwave energy to make sure the interior is cooked.

What is CONVECTION Cooking?

With convection cooking, a high speed fan circulates air past the heat source and around the food. The superheated air browns and crisps the food beautifully. See page 39 for Convection Baking Chart.

- Use the CONVEC settings for baking most items. Note that there are 3 special settings for baking cakes, angel food cake and yeast breads. These settings are specially designed to provide optimum baking of these foods.
- The interactive Display provides specific directions for using all of the setting.

What is GRILL Cooking?

When using GRILL, most food is elevated on the rack, allowing cooking to occur on all sides simultaneously. It is not necessary to turn foods over during cooking. Fats drip away from the food, providing for great flavor without all the fat. See page 36 for Convection Broiling Chart.

- Use the GRILL setting for everything you'd broil in a conventional oven—steaks, chops, burgers, chicken and fish.
- Place rack on the turntable and use for roasting or broiling to allow juices to drain away from food.
- Use the GRILL top only setting to brown and crisp just the tops of such foods as casseroles.

What is ROAST?

ROAST combines convection heat with microwave power to provide crisp brown exteriors and superior juiciness for meats and poultry. ROAST is preprogrammed to provide 30 percent microwave energy and 300°F. The temperature can be changed by simply selecting another after touching ROAST when programming. See page 13.

- Use ROAST for meats, poultry and casseroles. See page 31 for times.
- Place foods on the rack so that the air passes all around the food sealing in the juices.
- Place a oven-glass dish or disposable pizza pan below the broiling trivet to catch juices if gravy is desired. Also helps speed cleaning.
- NO PREHEATING IS NECESSARY.

CONVECTION MICROWAVE UTENSILS

A wide variety of utensils may be used in convection and combination cooking. Remember that there is heat when cooking with convection, broil, LOW MIX or HIGH MIX; therefore utensils must be able to withstand the cooking temperature you are using.

You may use:

- the Carousel turntable as a baking sheet for cookies
- the rack for either convection or combination cooking
- traditional metal bakeware
- round pizza pans work well for baking. Choose those that do not have extended handles.
- oven-glass baking dishes
- plastics if indicated for use with heat; usually states temperature limit on the bottom. CHECK.

CLEANING AND CARE

IMPORTANT: Use the thick cloth for cleaning the oven to avoid burns. Before cleaning, make sure the oven door, outer cabinet, oven cavity, air vent openings, turntable, turntable support and racks are not hot.

Exterior

Clean the outside with mild soap and water; wipe with a soft cloth. Do not use any type of household or abrasive cleaner.

Door

Wipe the window on both sides with a damp cloth to remove any spills or spatters. Metal parts will be easier to maintain if wiped frequently with a damp cloth. Avoid the use of spray and other harsh cleaners as they may stain, streak or dull the door surface.

Touch Control Panel

Care should be taken in cleaning the touch control panel. Open the oven door before cleaning to inactivate the control panel. Wipe the panel with a cloth dampened slightly with water only. Dry with a soft cloth. Do not scrub or use any sort of chemical cleaners. Close door and touch Stop/Clear.

Interior

Wipe spatters and spills with a little dishwashing liquid on a soft damp cloth. For heavier stains inside the oven cavity only, use a mild stainless steel cleaner applied with a soft damp cloth. Do not apply to the inside of the door. Wipe clean ensuring all cleaner is removed. You can hold the bottom heater up by hand for cleaning only. After cleaning, sit the bottom heater down in the lowest position (see page ?? and Figure 1).

DO NOT USE CAUSTIC CLEANERS, ABRASIVE OR HARSH CLEANERS OR SCOURING PADS ON YOUR OVEN. NEVER SPRAY OVEN CLEANERS DIRECTLY ONTO ANY PART OF YOUR OVEN. After cleaning the interior thoroughly, residual grease may be removed from the interior ducts and heaters by simply operating the oven on Grill using the top and bottom heaters for 20 minutes without food. Ventilate the room if necessary.

Exterior

Figure 1

Turntable

Waveguide Cover

The waveguide cover is made from mica so requires special care. Keep the waveguide cover clean to assure good oven performance. Carefully wipe with a damp cloth any food spatters from the surface of the cover immediately after they occur. Built-up splashes may overheat and cause smoke or possibly catch fire. Do not remove the waveguide cover.

Odor Removal

Occasionally, a cooking odor may remain in the oven. To remove, combine 1 cup water, grated peel and juice of 1 lemon and several whole cloves in a 2-cup glass measuring cup. Boil for several minutes using 100% power. Allow to set in oven until cool. Wipe interior with a soft cloth.

Turntable/Turntable Support

The turntable and turntable support can be removed for easy cleaning. Wash them in mild, sudsy water; for stubborn stains use a mild cleanser and scouring sponge as described above. They are also dishwasher-proof. Use upper rack of dishwasher. The turntable motor shaft is not sealed, so excess water or spills should be wiped up immediately.

MANUAL DEFROST

If the food that you wish to defrost is not listed on the CompuDefrost Chart or is above or below the limits in the "Amount" column on the CompuDefrost Chart, you need to defrost manually.

You can defrost any frozen food, either raw or previously cooked, by using Power Level 3. Follow the exact 3-step procedure found under Time Cooking on page 9. Estimate defrosting time and press 3 for 30% when you select the power level.

For either raw or previously cooked frozen food the rule of thumb is approximately 5 minutes per pound. For example, defrost 5 minutes for 1 pound of frozen spaghetti sauce.

Always stop the oven periodically to remove or separate the portions that are defrosted. If food is not defrosted at the end of the estimated defrosting time, program the oven in 1 minute increments on Power Level 3 until totally defrosted.

When using plastic containers from the freezer, defrost only long enough to remove from the plastic in order to place in a microwave-safe dish.

MULTIPLE SEQUENCE COOKING

Your oven can be programmed for up to 4 automatic cooking sequences, switching from one power level setting to another automatically.

Sometimes cooking directions tell you to start on one power level and then change to a different power level. Your oven can do this automatically.

- Suppose you want to cook roast beef for 5 minutes at 100% and then continue to cook for 30 minutes at 50%.

PROCEDURE

NOTE:

1. If Power Level pad is touched twice, HIGH POWER will be displayed.
2. If 100% is selected as the final sequence, it is not necessary to touch the Power Level pad.
3. If you wish to know power level, simply touch the Power Level pad. As long as your finger is touching the Power Level pad, the power level will be displayed.

DEMONSTRATION MODE

To demonstrate, touch Clock, the number 0 and touch Start/Touch On and hold for 3 seconds. DEMO ON will appear in the display. Cooking operations and specific special features can now be demonstrated with no power in the oven. For example, touch Minute Plus and the display will show 1:00 and count down quickly to END. To cancel, touch Clock, then the number 0 and Stop/Clear. If easier, unplug the oven from the electrical outlet and replug.

MORE OR LESS TIME ADJUSTMENT

Should you discover that you like any of Special Features settings slightly more done, touch the Power Level pad once after touching your choice of pads and before touching the Start/Touch On pad. The display will show MORE.

Should you discover that you like any of Special Features settings slightly less done, touch the Power Level pad twice after touching your choice of pads and before touching the Start/Touch On pad. The display will show LESS.

Helpful Hints for Convection and Automatic Mix Cooking

Your Sharp Double Grill Microwave Oven can cook any food perfectly because of the number of ways it can cook: microwave only, ROAST (convection with microwave cooking), convection only or GRILL. The COOKING GUIDES (P25-) that comes with your oven has excellent instructions, guidelines, hints, charts and recipes to help you get the best use of your oven. Consult it often until you are familiar with it.

The oven cannot be used without the turntable in place. Never restrict the movement of the turntable.

Convection Cooking:

1. When preheating, the turntable can be left in or removed.
2. Do not cover turntable, rack with aluminum foil. It interferes with air flow that cooks food.
3. Round pizza pans are excellent cooking utensils for many convection-only items. Choose pans that do not have extended handles.
4. Using a preheated rack can give a grilled appearance to steaks, hot dogs etc.

Roast (Convection with microwave cooking)

1. Meats are best when roasted directly on the rack. A dish can be placed below the meat if gravy is to be made from the drippings.
2. Less tender cuts of meat can be roasted and tenderized using oven cooking bags.
3. When baking, check for doneness after time has elapsed. If not completely done, let stand in oven a few minutes to complete cooking.

NOTE: During ROAST, some metal baking utensils may cause arcing when they come in contact with the turntable, oven walls or accessory racks. Arcing is a discharge of electricity that occurs when microwaves come in contact with metal. If arcing occurs, place a heat resistant dish (Pyrex® pie plate, glass pizza dish or dinner plate) between the pan and the turntable or rack. If arcing occurs with other metal baking utensils, discontinue their use for ROAST.

GRILL COOKING

ROASTING

The ROAST setting roasts perfectly. Preheating the oven is not necessary for roasting meat and poultry. Place foods on the rack which holds meat out of its juices. Never cover the rack with aluminum foil. You don't need a pan because the turntable will catch the drippings.

HELPFUL TIPS:

- Shield thin or bony areas of roasts or breast, wing tips and legs of poultry to prevent overbrowning. Use small smooth strips of aluminum foil.
- Should you wish to have gravy, place a shallow oven-glass baking dish below the meat on the rack to collect any juices. When food is done, simply make gravy in the baking dish and cook using HIGH power.
- Roast less-tender cuts of beef in heat-resistant and microwave safe covered casserole or in oven cooking bag set in baking dish. Covering helps tenderize meat.
- Check doneness after minimum time using a meat thermometer. Add additional time, if necessary.
- After cooking, cover roasts with "tent" of foil and let stand 5 to 10 minutes before carving.

1. all packing materials from inside the oven cavity; however, DO NOT REMOVE THE WAVEGUIDE COVER, which is located on the right cavity wall. Read enclosures and SAVE the Operation Manual.
2. the feature sticker, if there is one, from the outside of the door.

Check the oven for any damage, such as misaligned or bent door, damaged door seals and sealing surfaces, broken or loose door hinges and latches and dents inside the cavity or on the door. If there is any damage, do not operate the oven and contact your dealer or SHARP AUTHORIZED SERVICER.

Choosing a Location for Your Oven

You will use your oven frequently so plan its location for ease of use. The oven must be placed on a countertop which is a minimum of 36 inches from the floor. Allow at least 2 inches on the sides, top and at the rear of the oven for air circulation. Be sure to position oven so that the rear cannot be touched inadvertently.

Built-in Kit

Your oven can be built into a cabinet or wall—near or above a heat source—using Sharp's Built-in Kit, Model RK-82K(black). If your dealer does not stock the kit, order directly by calling 1-800-642-2122 to have it sent to your address. The kit includes ducts and finish trim strips and easy-to-follow instructions for installation as well as the location of the power supply.

GROUNDING INSTRUCTIONS

This appliance must be grounded. This oven is equipped with a cord having a grounding wire with a grounding plug. It must be plugged into a wall receptacle that is properly installed and grounded in accordance with the National Electrical Code and local codes and ordinances. In the event of an electrical short circuit, grounding reduces risk of electric shock by providing an escape wire for the electric current. Improper use of the grounding plug can result in a risk of electric shock.

Electrical Requirements

The electrical requirements are a 120 volt 60 Hz, AC only, 15 amp, or more protected electrical supply. It is recommended that a separate circuit serving only this appliance be provided.

The oven is equipped with a 3-prong grounding plug. It must be plugged into a wall receptacle that is properly installed and grounded. Should you only have a 2-prong outlet, have a qualified electrician install a correct wall receptacle.

A 3-prong adapter may be purchased and used temporarily if local codes allow. Follow package directions. A short power-supply cord is provided to reduce risk of becoming entangled in or tripping over a longer cord.

Extension Cord

If it is necessary to use an extension cord, use only a 3-wire extension cord that has a 3-blade grounding plug and a 3-slot receptacle that will accept the plug on the microwave oven. The marked rating of the extension cord should be AC 115-120 volt, 15 amp, or more. Be careful not to drape the cord over the countertop or table where it can be pulled on by children or tripped over accidentally.

Notes: 1. If you have any questions about the grounding or electrical instructions, consult a qualified electrician or service person. 2. Neither Sharp nor the dealer can accept any liability for damage to the oven or personal injury resulting from failure to observe the correct electrical connection procedures.

Radio or TV Interference

Should there be any interference caused by the microwave oven to your radio or TV, check that the microwave oven is on a different electrical circuit, relocate the radio or TV as far away from the oven as feasible or check position and signal of receiving antenna.
