

Bio Energiser™

C L A S S I C

OPERATOR INSTRUCTIONS

Assembly

1. Remove the bowl and accessories from carry case.

2. Place a liner in the bowl. Fill the bowl with warm water. The level of the water should be approximately $\frac{3}{4}$ " from the top of the cartridge when immersed in the water.

3. Now add one scoop of low sodium salt with the supplied measuring spoon. Make sure that the salt is completely dissolved before treatment begins.

4. Fix the timer/control unit to the bowl.

5. Connect the cartridge to the timer/control unit.

6. Plug the power supply into a suitable power outlet.

Operations:

1. Now gently place your feet in the warm water. Make sure that the water level is just below the top of the last coil on the cartridge.

2. You can now begin treatment – push the start button on the control panel. After you have started the treatment the first green light will stay on.

3. If the control unit buzzes or turns off prematurely start the process again by using less low sodium salt in the water. Add more salt if there is no water color change at all.

4. The amount of low sodium salt required for the treatment is dependent on the “hardness” of the water in your area. The amount of salt can vary depending on the chemical make up of your water.

5. The series of light around the perimeter of the control panel illuminates as the treatment progresses. Each light illuminates for 5 minutes, the entire process will last for 30 minutes. When the treatment is finished the buzzer will sound intermittently and the system will automatically flash and turn off after the procedure is complete.

6. You will notice the water will change color throughout the treatment. This is perfectly normal. Various color changes can occur. Most of this color change is due to the reaction of the cartridge with the water. You may, however, also see deposits floating on top of the water.

7. The appliance will not function if the sodium content of the water is too high.

8. The cartridge will last approximately 30 treatments. When the cartridge stops working there will be no color change to the water. It is time to change the cartridge.

precautions

1. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of appliances by a person responsible for their safety.
2. Children should be supervised to ensure that they do not play with the appliance.
3. Keep away from children at all times and store in a safe place.
4. Use only the approved supplied power supply. This device must only be used with the supplied cartridge. Do not use alternative manufactured cartridges.
5. The cartridge should not be changed or removed from the foot bowl during treatment. Any of the approved, supplied parts must not be tampered with or altered in any way from their original form of compliance.
6. Do not immerse the instrument in water or any other liquid substance.
7. To avoid any effects of electromagnetic interference, do not use the appliance near a cellular phone or any other powerful radio interference equipment.
8. During the 30 minute treatment, the appliance will begin to rebalance the positive and negative ions in your body. It is important to drink at least 16oz of water during the treatment.

9. Static electricity may damage this appliance. Only an authorized and certified technician, recognized by the manufacturer, can undertake repairs of the appliance.

10. Bioenergiser or it's partners accepts no responsibility what so ever for any damages or injury caused by misuse of the appliance product or failure to follow the guidelines set out in this document or any other subsequent documents to this product.

11. Do not sue the unit for any other purposes than described above

Restrictions to use:

1. Anyone who suffers from epilepsy, has a pacemaker fitted, has metal organ implants fitted below the knee, if you are pregnant, if you are under the age of 10, if you have any open wounds or abrasions on your feet.
2. The unit should only be used for the purpose which is described in this booklet.

care and maintenance

After completing a session, drain the foot bath bowl and discard the plastic liner.

Timer/control unit:

Wipe plastic case with a damp cloth after use. Do not use cleaning sprays, alcohol based cleaners or abrasive cloths.

Bowl:

Clean with a damp cloth before and after each use. Do not use cleaning sprays, alcohol based cleaners or abrasive cloths.

Cartridge:

Examine the cartridge connector before each treatment for loose connections. Avoid stretching of the cable. Clean the cartridge after every use with warm water, dry thoroughly to prevent damage.
