## SELF-DIAGNOSIS FUNCTION

The self-diagnosis function consists of error codes for customers, which are displayed automatically when errors occur, and error codes, which show the error history in the test mode during servicing. For details on how to view error codes for the customer, refer to the following box in the instruction manual. For details on how to check error codes during servicing, refer to the following “Procedure for using the Self-Diagnosis Function (Error History Display Mode)”.

### Self-diagnosis display

This system has a Self-diagnosis display function to let you know if there is a system malfunction. The display shows a code made up of 3 or 5 letters and a message alternately to show you the problem. To solve the problem refer to the following list. If any problem persists, consult your nearest Sony dealer.

#### C11/Protected

The MD is protected against erasure.

- Remove the MD and slide the tab to close the slot (see page 18).

#### C12/Cannot Copy

You tried to record a CD or MD with a format that the system does not support, such as a CD-ROM.

- Remove the disc and turn off the system once, then turn it on again.

#### C13/REC Error

Recording could not be performed properly.

- Move the system to a stable place, and start recording over from the beginning.

The MD is dirty or scratched, or the MD does not meet the standards.

- Replace the MD and start recording over from the beginning.

#### C13/Read Error

The MD deck cannot read the disc information properly.

- Remove the MD once, then load it again.

#### C14/Toc Error

The MD deck cannot read the disc information properly.

- Replace the MD.  
Erase all the recorded contents of the MD using All Erase Function (see page 29).

#### C41/Cannot Copy

The sound source is a copy of a commercially available music software, or you tried to record a CD-R (Recordable CD).

- The Serial Copy Management System prevents making a digital copy (see page 48). You cannot record a CD-R.

#### C71/Check OPT-IN

This appears momentarily because of the signal of the digital broadcast during recording.

- There is no affect on the recorded contents.  
No component is connected to the DIGITAL OPTICAL IN jack, or a digital component is not connected properly.
- Connect a digital component to the DIGITAL OPTICAL IN jack properly using a digital connecting cable (not supplied, see page 43).

The connected digital component is not turned on.

- See the operating instructions supplied with the connected component and confirm whether the component is turned on.

The digital connecting cable connected to the DIGITAL OPTICAL IN jack is pulled out, or the connected digital component is turned off during digital recording.

- Connect the cable, or turn on the digital component.

#### E0001/MEMORY NG

There is an error in the internal data that the system needs in order to operate.

- Consult your nearest Sony dealer.

#### E0101/LASER NG

There is a problem with the optical pickup.

- The optical pickup may have failed. Consult your nearest Sony dealer.

**SECTION 1  
SERVICING NOTE****NOTES ON HANDLING THE OPTICAL PICK-UP  
BLOCK OR BASE UNIT**

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

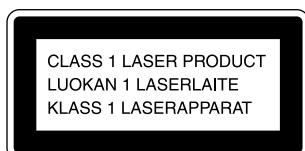

**FOR CD****NOTES ON LASER DIODE EMISSION CHECK**

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

**FOR MD****NOTES ON LASER DIODE EMISSION CHECK**

Never look into the laser diode emission from right above when checking it for adjustment. It is feared that you will lose your sight.

Laser component in this product is capable of emitting radiation exceeding the limit for Class 1.

This appliance is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT MARKING is located on the bottom exterior.

This caution label is located inside the unit.

**CAUTION**

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

**Notes on chip component replacement**

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

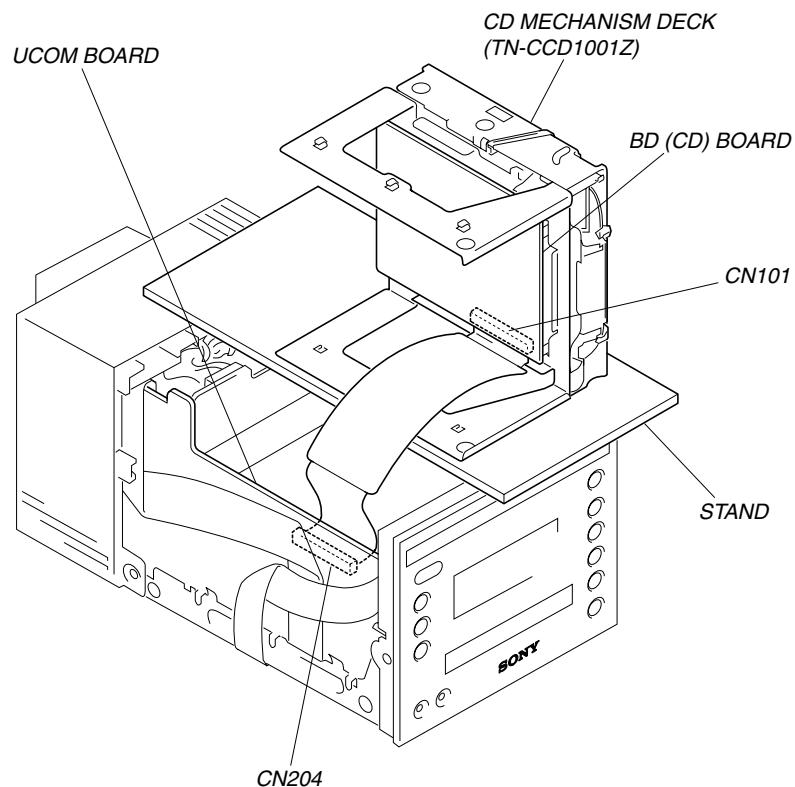

**Flexible Circuit Board Repairing**

- Keep the temperature of soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

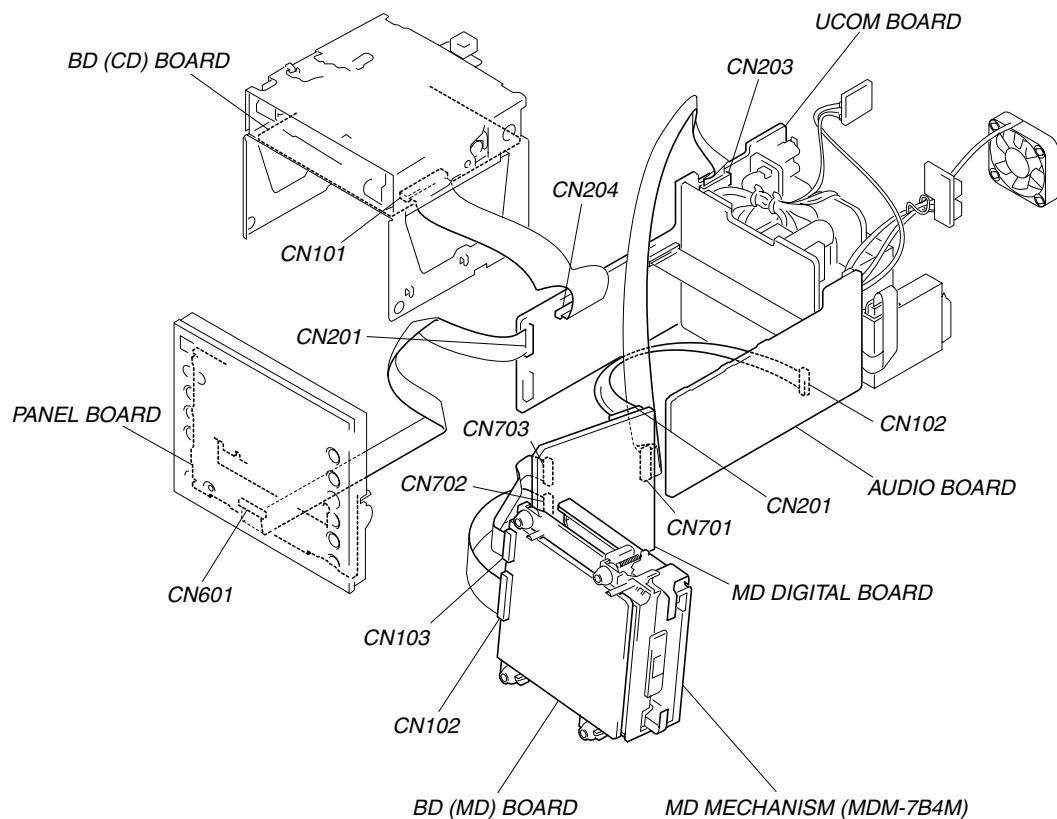

**SAFETY-RELATED COMPONENT WARNING!!**

COMPONENTS IDENTIFIED BY MARK ▲ OR DOTTED LINE WITH MARK ▲ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

### Reading the Retry Cause Display

	Higher Bits				Lower Bits				Hexadecimal	Cause of Retry	Occurring conditions
Hexadecimal	8	4	2	1	8	4	2	1			
Bit	b7	b6	b5	b4	b3	b2	b1	b0			
Binary	0	0	0	0	0	0	0	1	01	shock	When track jump (shock) is detected
	0	0	0	0	0	0	1	0	02	ader5	When ADER was counted more than five times continuously
	0	0	0	0	0	1	0	0	04	Discontinuous address	When ADIP address is not continuous
	0	0	0	0	1	0	0	0	08	DIN unlock	When DIN unlock is detected
	0	0	0	1	0	0	0	0	10	FCS incorrect	When not in focus
	0	0	1	0	0	0	0	0	20	IVR rec erraor	When ABCD signal level exceeds the specified range
	0	1	0	0	0	0	0	0	40	CLV unlock	When CLV is unlocked
	1	0	0	0	0	0	0	0	80	Access fault	When access operation is not performed normally

### Reading the Display:

Convert the hexadecimal display into binary display. If more than two causes, they will be added.

#### Example

When 42 is displayed:

Higher bit: 4 = 0100 → b6

Lower bit : 2 = 0010 → b1

In this case, the retry cause is combined of “CLV unlock” and “ader5”.

When A2 is displayed:

Higher bit: A = 1010 → b7 + b5

Lower bit : 2 = 0010 → b1

The retry cause in this case is combined of “Access fault”, “IVR rec error”, and “ader5”.

## Reading the Retry Cause Display

Hexadecimal	Higher Bit				Lower Bits				Hexadecimal	Details	
	8	4	2	1	8	4	2	1		When 0	When 1
Bit	b7	b6	b5	b4	b3	b2	b1	b0			
Binary	0	0	0	0	0	0	0	1	01	Emphasis OFF	Emphasis ON
	0	0	0	0	0	0	1	0	02	Monaural	Stereo
	0	0	0	0	0	1	0	0	04	This is 2-bit display. Normally 01. 01:Normal audio. Others:Invalid	
	0	0	0	0	1	0	0	0	08		
	0	0	0	1	0	0	0	0	10	Audio (Normal)	Invalid
	0	0	1	0	0	0	0	0	20	Original	Digital copy
	0	1	0	0	0	0	0	0	40	Copyright	No copyright
	1	0	0	0	0	0	0	0	80	Write prohibited	Write allowed

### Reading the Display:

Convert the hexadecimal display into binary display. If more than two causes, they will be added.

#### Example When 84 is displayed:

Higher bit: 8 = 1000 → b7

Lower bit : 4 = 0100 → b2

In this case, as b2 and b7 are 1 and others are 0, it can be determined that the retry cause is combined of “Emphasis OFF”, “Monaural”, “Original”, “Copyright”, and “Write allowed”.

#### Example When 07 is displayed:

Higher bit: 0 = 0000 → All 0

Lower bit : 7 = 0111 → b0 + b1 + b2

In this case, as b0, b1, and b2 are 1 and others are 0, it can be determined that the retry cause is combined of “Emphasis ON”, “Stereo”, “Original”, “Copyright”, and “Write prohibited”.

**Hexadecimal → Binary Conversion Table**

Hexadecimal	Binary	Hexadecimal	Binary
0	0000	8	1000
1	0001	9	1001

## SECTION 5 ELECTRICAL ADJUSTMENTS

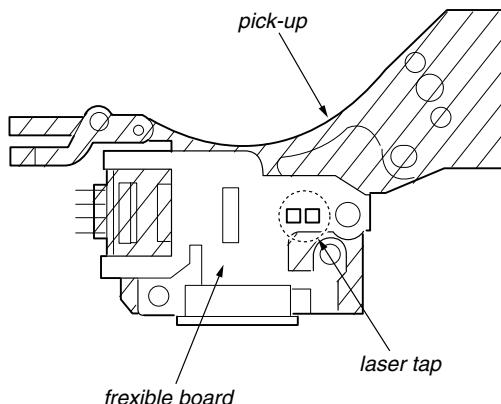

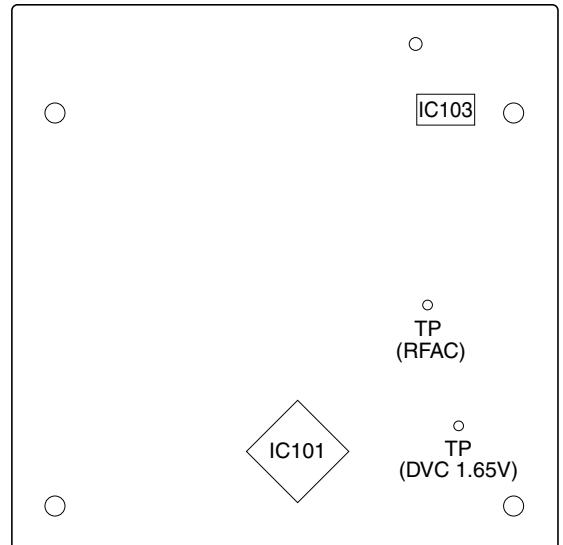

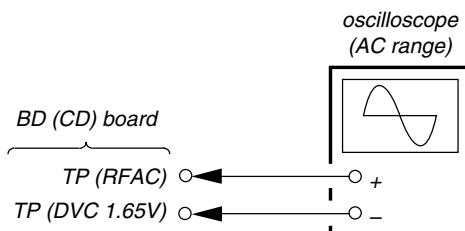

### CD SECTION

**Note 1:**

1. CD Block is basically designed to operate without adjustment. Therefore, check each item in order given.
2. Use YEDS-18 disc (3-702-101-01) unless otherwise indicated.
3. Use an oscilloscope with more than  $10M\Omega$  impedance.
4. Clean the object lens by an applicator with neutral detergent when the signal level is low than specified value with the following checks.

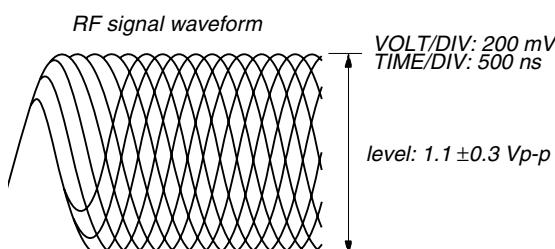

**Note 2:**

As the laser diode in the optical pick-up (OPTIMA-720L1E) is easily damaged by static electricity, solder the laser tap of the flexible board when handling it. Before disconnecting the connector, solder first. Before connecting the connector, be careful not to remove the solder. Also take adequate measures to prevent damage by static electricity. Handle the flexible board with care as it breaks easily.

**Checking Location:**
**- BD (CD) BOARD -**

**RF Level Check**
**Connection:**

**Procedure:**

1. Connect an oscilloscope to test point TP (RFAC) and TP (DVC 1.65V) on the BD (CD) board.
2. Turn the power on.
3. Put the disc (YEDS-18) in to playback the number five track.
4. Confirm that oscilloscope waveform is clear and check RF signal level is correct or not.

**Note:** A clear RF signal waveform means that the shape “◊” can be clearly distinguished at the center of the waveform.

**Checking Location:** BD (CD) board

## MD SECTION

**Note 1:** About "R"

As this unit has only a few buttons, some operations require the use of remote commander (RM-SC5BEN/provided with unit: 1-476-649-11) buttons. These operations are indicated as "R" in this manual.

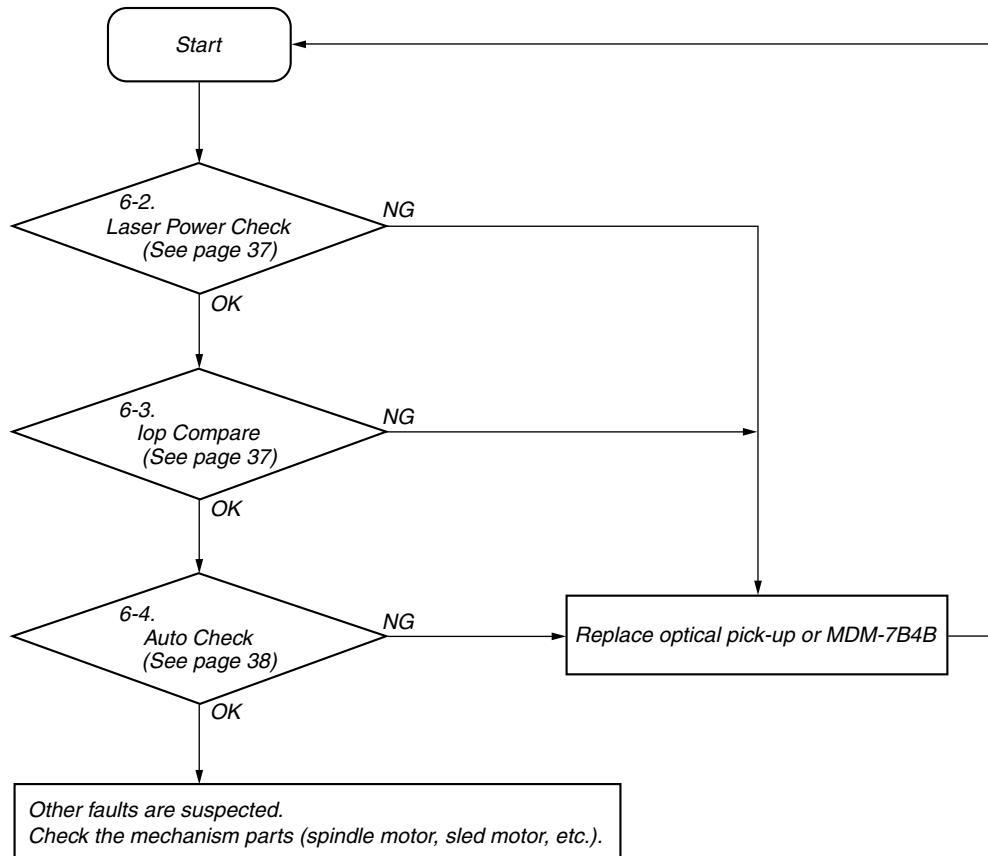

Example: [MENU/NO "R"] ...Press the [MENU/NO] button of the remote commander.

**Note 2:** Incorrect operations may be performed if the MD test mode is not entered properly.

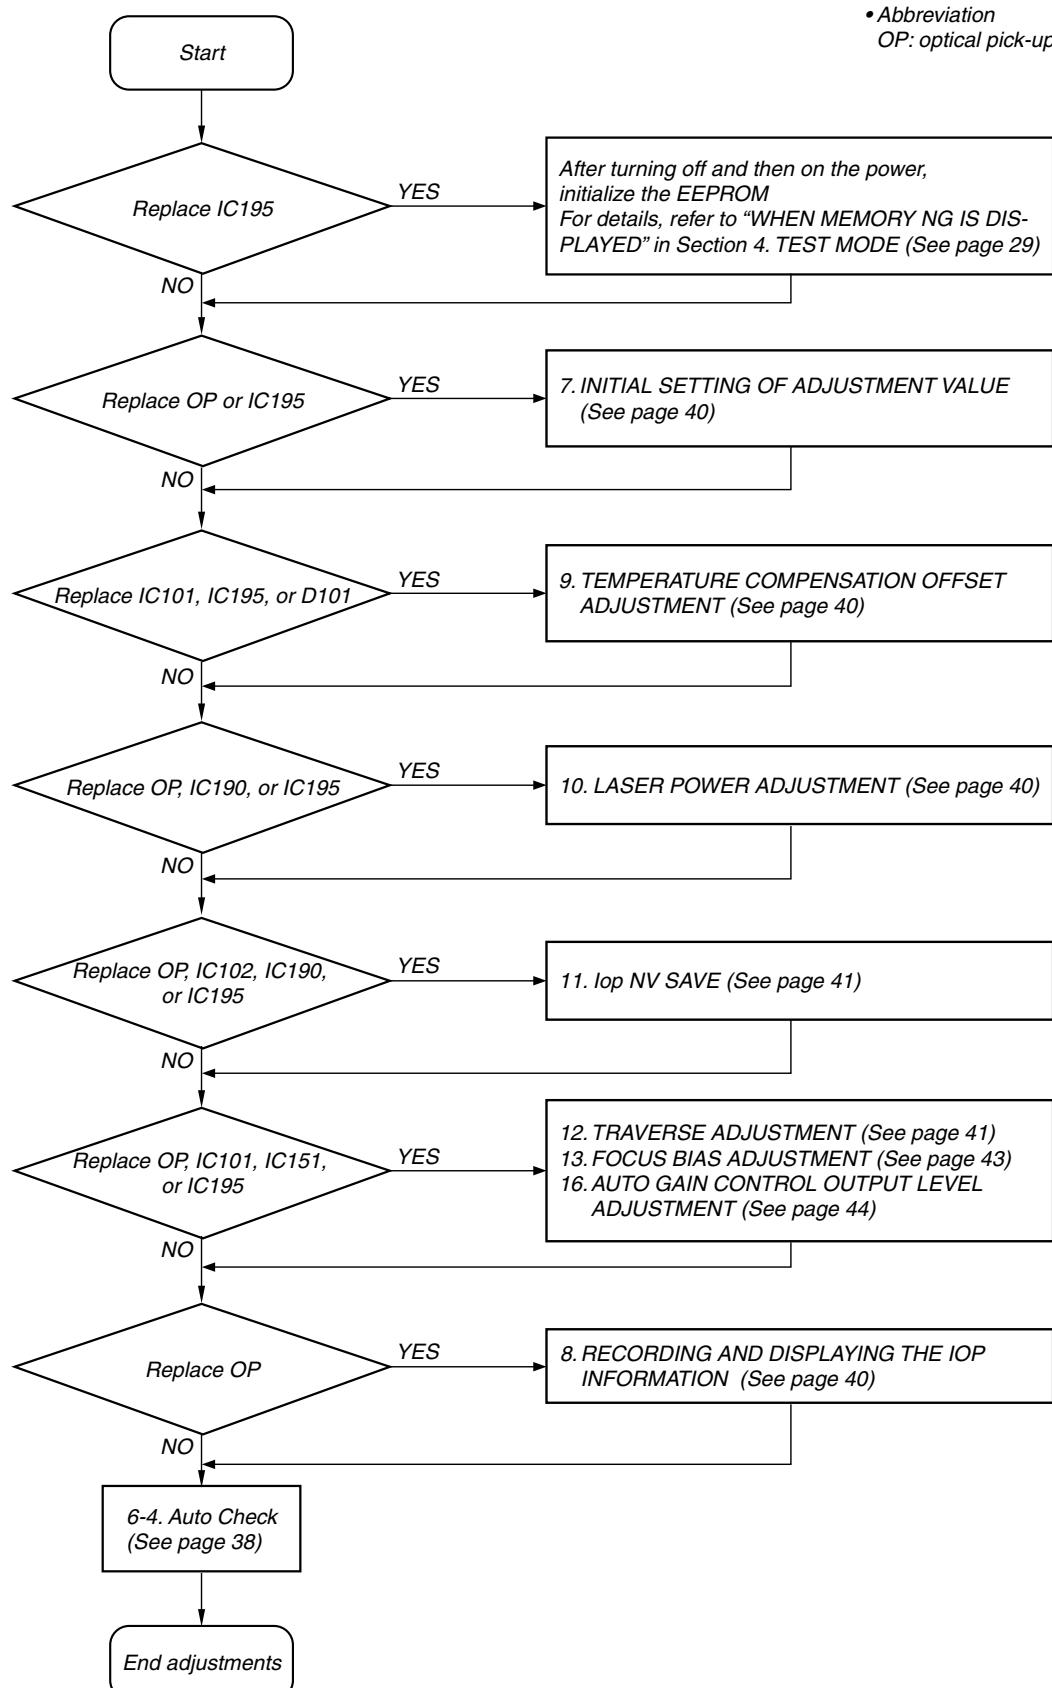

In this case, press the [I/O] button to turn the power off, and retry to enter the MD test mode.

## 1. PARTS REPLACEMENT AND ADJUSTMENT

If malfunctions caused by optical pick-up such as sound skipping are suspected, follow the following check.

**Check before replacement**

## Adjustment flow

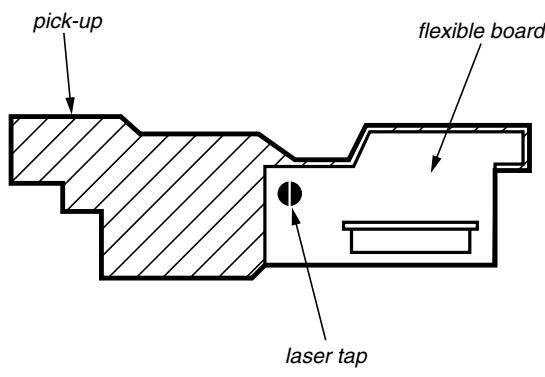

## 2. PRECAUTIONS FOR CHECKING LASER DIODE EMISSION

To check the emission of the laser diode during adjustments, never view directly from the top as this may lose your eye-sight.

## 3. PRECAUTIONS FOR USE OF OPTICAL PICK-UP (KMS-260B/260E)

As the laser diode in the optical pick-up is easily damaged by static electricity, solder the laser tap of the flexible board when handling it.

Before disconnecting the connector, solder first. Before connecting the connector, be careful not to remove the solder. Also take adequate measures to prevent damage by static electricity. Handle the flexible board with care as it breaks easily.

**Optical pick-up flexible board**

## 4. PRECAUTIONS FOR ADJUSTMENTS

- When replacing the following parts, perform the adjustments and checks with  in the order shown in the following table.
- Set the MD test mode when performing adjustments.  
After completing the adjustments, exit the MD test mode.  
Perform the adjustments and checks in "Group Service" of the MD test mode.
- Perform the adjustments to be needed in the order shown.
- Use the following tools and measuring devices.
  - Check Disc (TDYS-1) (Part No. : 4-963-646-01)
  - Test Disk (MDW-74/GA-1) (Part No. : 4-229-747-01)
  - Laser power meter LPM-8001 (Part No. : J-2501-046-A) or MD Laser power meter 8010S (Part No. : J-2501-145-A)\*<sup>1</sup>
  - Oscilloscope (Measure after performing CAL of prove.)
  - Digital voltmeter
  - Thermometer
  - Jig for checking BD (MD) board waveform (Part No. : J-2501-196-A)
- When observing several signals on the oscilloscope, etc., make sure that VC and ground do not connect inside the oscilloscope.  
(VC and ground will become short-circuited.)
- Using the above jig enables the waveform to be checked without the need to solder.  
(Refer to Servicing Notes on page 6.)
- As the disc used will affect the adjustment results, make sure that no dusts nor fingerprints are attached to it.

\*<sup>1</sup> **Laser power meter**

When performing laser power checks and adjustment (electrical adjustment), use of the new MD laser power meter 8010S (Part No. J-2501-145-A) instead of the conventional laser power meter is convenient.

It sharply reduces the time and trouble to set the laser power meter sensor onto the objective lens of optical pick-up.

These checks are performed before replacing parts according to “approximate specifications” to determine the faulty locations. For details, refer to “Checks Prior to Parts Replacement and Adjustments in MD” (see page 30).

### 6-1. Temperature Compensation Offset Check

When performing adjustments, set the internal temperature and room temperature to 22 to 28°C.

#### Procedure:

1. Press the **[◀◀ "R"]** or **[▶▶ "R"]** button to display “TEMP CHECK” (C12).
2. Press the **[ENTER/YES "R"]** button.
3. “T=@@(##) [OK]” should be displayed. If “T=@@ (##) [NG]” is displayed, it means that the results are bad. (@@ indicates the current value set, and ## indicates the value written in the non-volatile memory.)

### 6-2. Laser Power Check

Before starting adjustment;

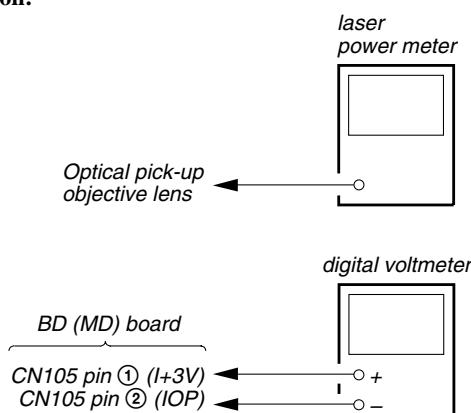

The laser power adjustment value changes depending upon the types of the optical pick-up (KMS-260B or KMS-260E).

Check the type of the optical pick-up before starting adjustment. (See the illustrations “The method of identifying the optical pick-up” on page 41)

Before checking, check the Iop value of the optical pick-up.

(Refer to 8. Recording and Displaying the Iop Information (see page 40))

#### Connection:

#### Procedure:

1. Set the laser power meter on the objective lens of the optical pick-up. (When it cannot be set properly, press the **[◀◀ "R"]** button or **[▶▶ "R"]** button to move the optical pick-up.) Connect the digital volt meter to CN105 pin ① (I+3V) and CN105 pin ② (IOP).
2. Then, press the **[◀◀ "R"]** or **[▶▶ "R"]** button and display “LDPWR CHECK” (C13).
3. Press the **[ENTER/YES "R"]** button once and display “LD 0.9mW\$ 00”. Check that the reading of the laser power meter becomes specified value.

SPECIFIED VALUE	KMS-260B	0.85 to 0.91 mW
	KMS-260E	0.90 to 0.96 mW

4. Press the **[ENTER/YES "R"]** button once more and display “LD 7.0mW\$ 00”. Check that the reading of the laser power meter and digital volt meter satisfy the specified value.

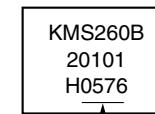

#### Specified Value:

Laser power meter reading :

KMS-260B	7.0 to 0.2 mW
KMS-260E	7.25 to 0.25 mW

Digital voltmeter reading : Optical pick-up displayed value ± 10%

(Optical pick-up label)

For details of the method for checking this value, refer to “8. Recording and Displaying the Iop Information”

IOP = 57.6 mA in this case

IOP (mA) = Digital voltmeter reading (mV)/1 (Ω)

5. Press the **[MENU/NO "R"]** button and display “LDPWR CHECK” (C13) and stop the laser emission. (The **[MENU/NO "R"]** button is effective at all times to stop the laser emission.)

**Note:** After step 4, each time the **[ENTER/YES "R"]** button is pressed, the display will be switched to “LD 0.7W\$ 00” and “LD 6.2mW\$ 00” “LD WP \$ 00”. Nothing needs to be performed here.

**Checking Location:** BD (MD) board (see page 44)

### 6-3. Iop Compare

The current Iop value at laser power 7.0 mW output and reference Iop value (set at shipment) written in the nonvolatile memory are compared, and the rate of increase/decrease will be displayed in percentage.

**Note:** Perform this function with the optical pick-up set at room temperature.

2. Press the **[ENTER/YES "R"]** button and start measurements.
3. When measurements complete, the display changes to “± xx% yy”. xx is the percentage of increase/decrease, and OK or NG is displayed at yy to indicate whether the percentage of increase/decrease is within the allowable range.
4. Press the **[MENU/NO "R"]** button to end.

## 6-4. Auto Check

3. If a disc is in the mechanical deck, it will be ejected forcibly. “DISC IN” will be displayed in this case. Load a test disc (MDW-74/GA-1) which can be recorded.
4. If a disc is loaded at step 3, the check will start automatically.
5. When “XX CHECK” is displayed, the item corresponding to XX will be performed. When “06 CHECK” completes, the disc loaded at step 3 will be ejected. “DISC IN” will be displayed. Load the check disc (TDYS-1).
6. When the disc is loaded in the step 5, the check will automatically be resumed from “07 CHECK”.
7. After completing to test item 12 (“oC CHECK”), check OK or NG will be displayed. If all items are OK, “CHK ALL OK” will be displayed. If any item is NG, it will be displayed as “NG:xxxx”.

When “CHK ALL OK” is displayed, it means that the optical pick-up is normal. Check the operations of other parts (spindle motor, sled motor, etc.).

When displayed as “NG:xxxx”, it means that the optical pick-up is faulty. In this case, replace the optical pick-up.

## SECTION 7 EXPLODED VIEWS

**NOTE:**

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked “\*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.

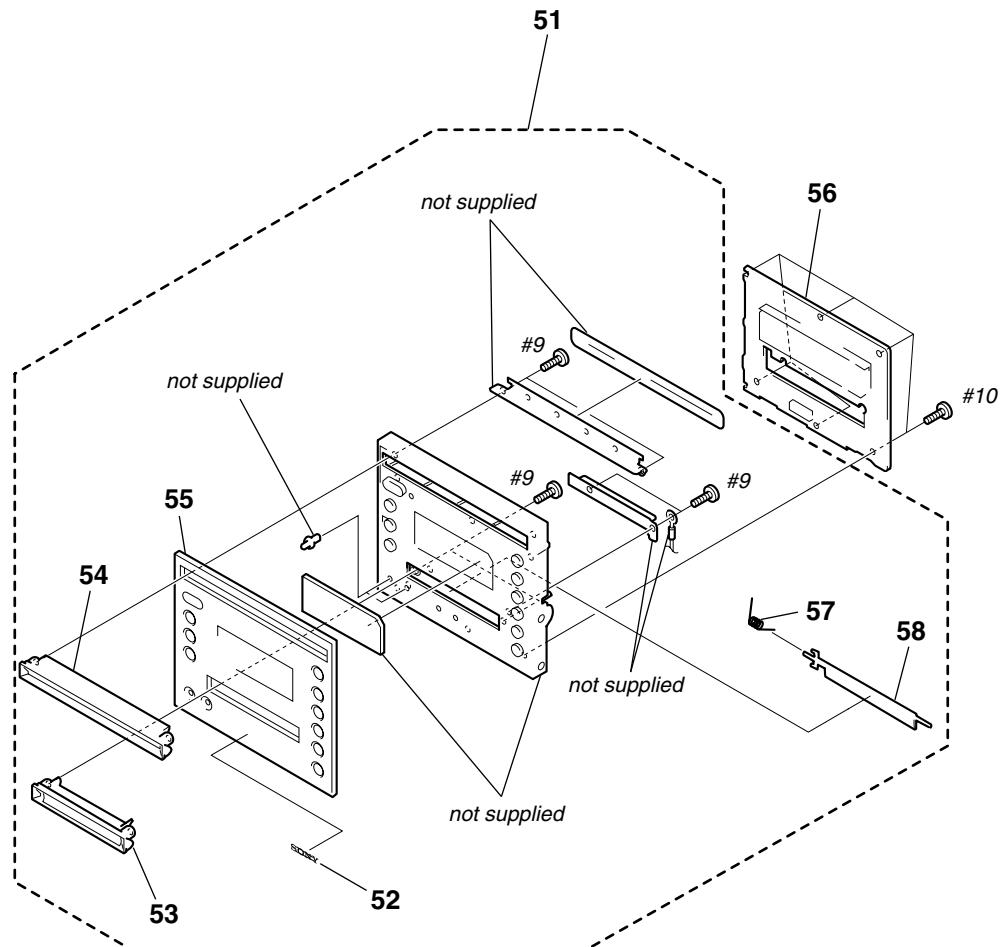

The components identified by mark  $\triangle$  or dotted line with mark  $\triangle$  are critical for safety. Replace only with part number specified.

### ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked “\*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- CAPACITORS:  
uF:  $\mu$ F

- RESISTORS  
All resistors are in ohms.  
METAL: metal-film resistor  
METAL OXIDE: Metal Oxide-film resistor  
F: nonflammable
- COILS  
uH:  $\mu$ H
- SEMICONDUCTORS  
In each case, u:  $\mu$ , for example:  
uA...:  $\mu$ A..., uPA...,  $\mu$ PA...,  
uPB...,  $\mu$ PB..., uPC...,  $\mu$ PC...,  
uPD...,  $\mu$ PD...

- Abbreviation  
AUS : Australian model  
HK : Hong Kong model  
KR : Korean model

When indicating parts by reference number, please include the board name.

The components identified by mark  $\triangle$  or dotted line with mark  $\triangle$  are critical for safety. Replace only with part number specified.
