Before You Begin

■ **FCC Verification:**

NOTE: This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and the receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

■ **IMPORTANT NOTE: Prohibition against eavesdropping**

Except for the operations of law enforcement officers conducted under lawful authority, no person shall use, either directly or indirectly, a device operated pursuant to the provisions of this Part for the purpose of overhearing or recording the private conversations of others unless such use is authorized by all of the parties engaging in the conversation.

- **WARNING:** Modifications not approved by the party responsible for compliance could void user's authority to operate the equipment.

■ **IMPORTANT SAFETY INSTRUCTIONS:**

- Make sure product is fixed correctly and stable if fastened in place
- Do not operate if wires and terminals are exposed

Package Contents

- Wireless OutdoorCam*
- Receiver with Antenna
- AV Cable
- Dip Switch Tool
- Power Adapters
- Operating Instructions
- Security Stickers
- Mounting Hardware

*Camera color may vary by region - 1, 2 or 3 Camera Packs

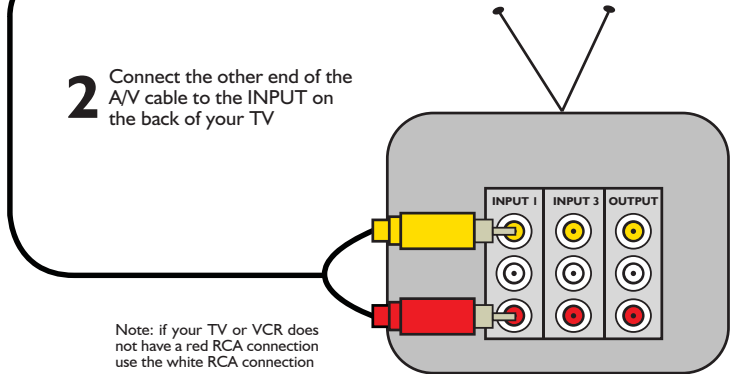

Direct to TV Connection Guide

1 Connect the A/V Cable to the RCA plugs on the back of the receiver

3 Plug in the Receiver Power Adapter

2 Connect the other end of the A/V cable to the INPUT on the back of your TV

Note: if your TV or VCR does not have a red RCA connection use the white RCA connection

VCR / DVD Recorder Connection Guide

Connect the A/V Cable to the RCA plugs on the back of the receiver

4 Plug in the Receiver Power Adapter

2 Connect the other end of the A/V cable to the INPUT on the back of your VCR

Note: if your TV or VCR does not have a red RCA connection use the white RCA connection

3 Connect your VCR to your TV if it is not already connected. Play a tape to ensure it is connected properly

Viewing the Camera on a TV or VCR

■ Viewing the Wireless OutdoorCam connected directly to a TV

1. Connect the Camera and Receiver as described in **Connection Guide Direct to TV** on page 4
2. Plug in the Receiver and Cameras
3. Turn on your TV
4. Press the **INPUT** button on your **TV's** Remote Control until your camera / receiver appears on screen. The majority of TVs will label this button as INPUT, A/V, SOURCE, AUX, TV/AV, Channel 0. If you are unable to change the input on your TV, consult the TV's instruction manual or contact your *TV's manufacturer*.

■ Viewing and Recording the Wireless OutdoorCam on a VCR or DVD Recorder

1. Connect the camera and receiver as described in the VCR/DVD Recorder Connection Guide
2. Plug in the Receiver and Cameras
3. Turn on your TV and VCR
4. Play a tape to confirm your TV is on the correct channel, then press stop
5. Press the **INPUT** button on your **VCR's** Remote Control until your camera / receiver appears on screen. The majority of TVs will label this button as INPUT, A/V, SOURCE, AUX, TV/AV, Channel 0. If you are unable to change the input on your TV, consult the TV's instruction manual or contact your *TV's manufacturer*.

*The INPUT button is sometimes labeled Input, Source, Line In, L1, L2, AUX, A/V, channel 0 etc. Consult the TV or VCR instruction manual for details about changing input channels on your device.

Setting / Changing the Camera Channel

- The Wireless OutdoorCam operates in the 2.4GHz frequency range. It is capable of transmitting on 4 channels. Follow the steps below to set or change the frequency channel of the camera.

1 Pull open the rubber flap on the camera's power cable

2 Locate the 2 dip switches under the rubber flap

3 Use the Dip Switch Tool to flip the switches to change the camera's transmitting channel

4 Set the camera channel as per the switch configuration below. Do not set multiple cameras on the same channel or interference will appear on screen

Selecting Channels on the Receiver

■ Turning Channels ON or OFF

The Wireless Receiver is capable of receiving up to 4 separate channels. To turn on channels move the dip switches on the receiver down to the **ON** position.

In the example below the receiver shows channel 1 is ON. No other channel will appear other than Channel 1. Cameras will only appear on channels in the ON position.

To activate channels move the channel switch down to the ON position

If switches are up, they are set to OFF and cameras will not appear on screen

■ Switching Between Active Channels

The front of the Wireless Receiver has 4 LEDs representing the 4 channels of the receiver. When lit, the LED will indicate which channel is currently being displayed. In the diagram below CH1 is lit up indicating Channel 1 will display on screen.

The Wireless Receiver allows you to manually switch between active channels by pushing the SET button.

Note: The Wireless Receiver will only switch between active channels that have been set to the ON position as described above.

The SET button will manually switch between active channels

The Receiver has 4 lights indicating the 4 channels of the Receiver

Setting the Loop Mode

- The Wireless Receiver has a built in Loop Mode that will display cycle between all active channels every few seconds.

To turn Loop Mode on, move the 'L' or Loop switch down to the ON position. The Receiver will automatically switch between active channels every few seconds.

When the Loop switch is ON the LED indicator on the front of the Receiver will flash RED on the current active channel.

In this diagram Loop has been turned on as well as Channels 1 and 4. The Receiver will cycle from Channel 1 to Channel 4 every few seconds.

Camera Placement & Interference

- The Wireless OutdoorCam operates on 2.4GHz frequency. Some devices such as wireless routers, microwaves, cordless phones can cause interference and affect picture quality as they use the same frequency. If you are experiencing interference or poor image quality try the following steps:

- move or orient the camera in a different location
- adjust or aim the receiver antenna
- limit the number of walls, floors between the camera and receiver as this can dramatically alter picture quality
- dense materials such as concrete or metal will impede the wireless signal; move the camera and/or receiver away from dense materials
- if possible keep the camera and receiver away from or move conflicting devices such as wireless routers, microwaves, cordless phones
- make sure all cameras are set to different camera channels
- disconnect all other wireless devices to find out which is causing the problem and adjust your setup accordingly
- analog wireless cameras are not recommended for use with DVR systems; if you are looking for a wireless camera solution for recording purposes see the digital wireless ADW-300 (SW233-ADW) which will not suffer from interference
- some wireless signals may originate from nearby homes or businesses; in this case a wired camera may be necessary

Troubleshooting Guide

Problem: I can't see the camera or receiver on my TV.

Solution: Ensure the camera and receiver are plugged in and the TV or VCR is tuned to the correct input channel as described on Page 6.

Problem: All I can see at night is a white image.

Solution: The camera's infrared LEDs shine invisible light that reflects off surfaces such as glass causing white light. Place the camera on the other side of windows or place lens of camera flush against the window to try to improve the night vision or place the camera in a well lit area.

Problem: I keep getting interference in my home or business.

Solution: The Wireless OutdoorCam operates on the 2.4GHz frequency like many devices such as wireless routers, cordless phones, microwaves. If possible keep the cameras and receivers away from these devices.

Problem: Motion detection on my DVR keeps recording interference from my cameras.

Solution: Analog cameras such as the Wireless OutdoorCam are not recommended for use with DVRs due to potential interference from other devices. We recommend using wired cameras or the ADW-300 Digital Wireless (SW233-ADW) camera that does not suffer from interference.

Problem: The picture keeps changing from one camera to the next.

Solution: The receiver is in Loop Mode. On the receiver move the 'L' switch up to the Off position.

Problem: I only see 1 or 2 of my cameras when I press the Set button.

Solution: Channels on the receiver are turned off. Move the switches down to the ON position to activate all cameras.

Problem: When I try to power the camera with a battery the image stops transmitting after only a couple of hours.

Solution: This camera requires a constant supply of power to operate. Batteries can be used for temporary testing, placement purposes but mains power is recommended for a long term solution.

Technical Specifications

■ Video

Image Sensor	1/3" CMOS
Video Quality	380 TV Lines
Number of Effective Pixels	NTSC: 510 x 492 / PAL: 628 x 582
Electronic Shutter	1/60 - 1/15,000 NTSC / 1/50 - 1/15,000 PAL
Signal / Noise Ratio	> 48dB
White Balance	Automatic
Gain Control	Automatic
Backlight Compensation	Yes
Day/Night Mode	Color during the day / Switches to B&W at night
Minimum Illumination	0 Lux (IR On)
Lens	6mm
Viewing Angle	53 degrees

■ Night Vision

Night Vision Distance	Up to 26ft / 8m
Number of infrared LEDs	11

■ Wireless

Digital or Analog	Analog
Max Transmission Range	165ft / 50m
Typical Range	65ft / 20m
Frequency	2.4GHz
Transmission Channels	4

■ General

Indoor/Outdoor	Indoor or Outdoor
Operating Power	DC 12V
Operating Temperature	-10°C ~ 50°C / -14°F ~ 122°F
Body Construction	Aluminum
Dimensions Camera & Stand	5.1" x 2.0" x 2.0" / 130mm x 50mm x 50mm
Weight – Camera & Stand	8.6oz / 245g
Dimensions Receiver	1.0" x 3.1" x 4.3" / 25mm x 80mm x 110mm
Weight – Receiver	6.5oz / 185g

Swann Communications warrants this product against defects in workmanship and material for a period of one (1) year from it's original purchase date. You must present your receipt as proof of date of purchase for warranty validation. Any unit which proves defective during the stated period will be repaired without charge for parts or labour or replaced at the sole discretion of Swann. The end user is responsible for all freight charges incurred to send the product to Swann's repair centres. The end user is responsible for all shipping costs incurred when shipping from and to any country other than the country of origin.

The warranty does not cover any incidental, accidental or consequential damages arising from the use of or the inability to use this product. Any costs associated with the fitting or removal of this product by a tradesman or other person or any other costs associated with its use are the responsibility of the end user. This warranty applies to the original purchaser of the product only and is not transferable to any third party. Unauthorized end user or third party modifications to any component or evidence of misuse or abuse of the device will render all warranties void.

By law some countries do not allow limitations on certain exclusions in this warranty. Where applicable by local laws, regulations and legal rights will take precedence.
