FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

This device may not cause harmful interference.

This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

FCC RF Radiation Exposure Statement:

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

The product comply with the FCC portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

For bodyworn operating conditions please use belt-clips, holsters, and/or accessories that have no metallic component in the assembly and must provide at least 0.5cm separation between the device and the user's body.

The device sold in American don't include 3G function .

The device sold in American will not support "region selecting" .

CE Mark Warning

CE 1588

This is a class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

Canadian Compliance Statement

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) This device may not cause interference, and
- (2) This device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme aux norms CNR exemptes de licence d'Industrie Canada. Le fonctionnement est soumis aux deux conditions suivantes:

- (1) cet appareil ne doit pas provoquer d'interférences et
- (2) cet appareil doit accepter toute interférence, y compris celles susceptibles de provoquer un fonctionnement non souhaité de l'appareil.

Industry Canada Statement

Complies with the Canadian ICES-003 Class B specifications.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

This device complies with RSS 210 of Industry Canada. This Class B device meets all the requirements of the Canadian interference-causing equipment regulations.

Cet appareil numérique de la Classe B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

Korea Warning Statements:

당해 무선설비는 운용중 전파혼신 가능성이 있음.

NCC Notice & BSMI Notice

注意!

依據 低功率電波輻射性電機管理辦法

第十二條 經型式認證合格之低功率射頻電機，費經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性或功能。

第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通行；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信規定作業之無線電信。低功率射頻電機需忍受合法通信或工業、科學以及醫療用電波輻射性電機設備之干擾。

安全諮詢及注意事項

- 請使用原裝電源供應器或只能按照本產品注明的電源類型使用本產品。
- 清潔本產品之前請先拔掉電源線。請勿使用液體、噴霧清潔劑或濕布進行清潔。
- 注意防潮，請勿將水或其他液體潑灑到本產品上。
- 插槽與開口供通風使用，以確保本產品的操作可靠並防止過熱，請勿堵塞或覆蓋開口。
- 請勿將本產品置放於靠近熱源的地方。除非有正常的通風，否則不可放在密閉位置中。
- 請不要私自打開機殼，不要嘗試自行維修本產品，請由授權的專業人士進行此項工作。

Продукт сертифіковано згідно с правилами системи УкрСЕПРО на відповідність вимогам нормативних документів та вимогам, що передбачені чинними законодавчими актами України.

Safety Information

- When product has power button, the power button is one of the way to shut off the product; When there is no power button, the only way to completely shut off power is to disconnect the product or the power adapter from the power source.
- Don't disassemble the product, or make repairs yourself. You run the risk of electric shock and voiding the limited warranty. If you need service, please contact us.
- Avoid water and wet locations.

Package Contents

The following items should be found in your package:

- M5360 3G Mobile WiFi, 5200mAh Power Bank
- One power adapter
- One micro USB cable
- Quick Installation Guide
- Micro/Nano to Standard SIM Card Adapter

 **Note:**

Make sure that the package contains the above items. If any of the listed items is damaged or missing, please contact your distributor.

Conventions

The Device or M5360 mentioned in this guide stands for M5360 3G Mobile WiFi, 5200mAh Power Bank without any explanation.

Chapter 1. Introduction

1.1 Product Overview

TP-LINK's M5360 is at the forefront of wireless 3G sharing. Equipped with a built-in 3G modem, you can instantly establish your own Wi-Fi hotspot simply by inserting a 3G SIM card at the interior of the device. With up to 21.6Mbps download and 5.76Mbps upload speeds, M5360 is able to provide 3G wireless sharing to up to 10 users simultaneously. Its pocket-sized design and powerful 5200mAh internal battery make it an ideal travel companion, allowing users to work or play for hours on end. Besides, with its innovative OLED display, users can have a much more intuitive view of the device's working status, such as signal strength, network type (2G/3G), Wi-Fi status, message, internet status and battery meter.

1.2 Main Features

- Equipped with a built-in 3G modem - No other bulky devices required
- HSPA+ supported with up to 21.6Mbps download and 5.76Mbps upload speeds
- Supports up to 10 users simultaneously
- Power Bank for charging smart phones and tablets
- 5200mAh internal battery for extended hours of outdoor use
- Micro USB port for versatile recharging
- OLED display provides an intuitive view of the device's working status
- Equipped with a micro SD card slot for up to 32GB of optional storage

1.3 Physical Description

Figure 1-1 the Exterior

The details about the Exterior are explained as below.

➤ **OLED Screen:**

Figure 1-2 LED Screen

The OLED Indication:

Item	Description	Indication
3G / 2G	Network type & Signal strength	Indicates the current network option: 2G or 3G, and signal strength of current network.
	Network status	Indicates the successful network connection.
M / A	Dial-up type	A Means the automatic mode of Internet connection; M Means the manual mode of Internet connection.
WiFi	Wi-Fi connection	Displays the Wi-Fi status and the amount of current wireless clients.
	SMS	Indicates that there is un-read short message(s) and the amount of un-read messages.
	Battery	Displays the remaining battery power.
0.0B/s↓	Download speed	Indicates the download speed of current data transmission.
0.0B/s↑	Upload speed	Indicates the upload speed of current data transmission.
0.0B	Data statistics	Indicates the data used in total. The data statistics will be cleared after resetting the Device.

Table 1-1 The OLED Screen details

Note:

When you leave alone the buttons on the device, the OLED screen will light on for 60 seconds and then turn off. Pressing the power button will light up or turn off the OLED screen.

- **Micro USB Port:** It's for you to connect the Device with the power adapter (attached in the package) via the USB cable.
- **Power Button:** When the Device is successfully installed, and it's powered (either by battery or electricity); press this button for about 3 seconds to turn on the Device, and if you want to turn it off, please press this button for another 3 seconds. Double-pressing the power button will switch the work mode to the power bank mode.
- **RESET Button (hole):** It's the button to restore the Device to its factory defaults. With the Device powered on, use a pin to press and hold the RESET button (hole) for about 5 seconds, until the LED screen is off and later displays "TP-LINK"; then release the button and wait the Device to reboot and restore its factory default settings.
- **SIM Card Slot:** It's where to insert your SIM card.
- **Micro SD Memory Card Slot:** It's where to insert your micro SD memory card.
- **USB Port:** It can charge for other devices via the USB cable.

1.4 Daily Use

➤ Working as Power Bank

M5360 can be used as a 5200mAh power bank to charge smart phones and tablets by using one of the following two modes.

Method 1:

Charging only (Strongly recommended to save power.)

Method 2:

Simultaneous 3G sharing and charging.

➤ Accessing the Micro SD Card

If M5360 is connected to a computer with a USB cable, you can access its micro SD memory card just as access a hard disk.

- 1) Connect one end of the USB cable to the micro USB port of M5360 and the other end to the USB port of your PC.
- 2) If there appears the Found New Hardware Wizard window, please click Cancel to ignore it.
- 3) Double click Computer icon on your desktop. The inserted micro SD card is displayed as removable disk in file explorer (Here we use Removable Disk (F:) as an example). Double click to access the micro SD card just as access a hard disk.

Chapter 2. Hardware Installation

2.1 Environment Requirements

- Place the Device in a well-ventilated place far from any heater or heating vent
- Avoid direct irradiation of any strong light (such as sunlight)
- Keep at least 2 inches (5 cm) of clear space around the Device
- Operating Temperature: 0°C~35°C (32°F~104°F)
- Operating Humidity: 10%~90%RH, Non-condensing

2.2 Hardware Installation

Install SIM card and memory card.

- 1) Open the cover (as the arrow shows).

- 2) Make sure to have the SIM card's metal chip downwards and the triangle notch inwards, and then slide the card into its slot (in the direction as the arrow shows).

Note:

Micro or Nano SIM cards should be converted using included adapter.

- 3) Close the cover by pressing it.

When finishing the above two-step installation, you can press the power button  for about 3 seconds to turn on M5360.

Tips:

You are supported to charge the battery in two ways:

Method 1:

Use the power adapter to charge the M5360.

**Method 2:**

Charge the M5360 through a computer connection.

Chapter 3. Quick Installation Guide

This chapter will guide you to quickly set up the basic functions for your M5360.

3.1 System Requirements

- SIM card with Internet access enabled.
- Computer supports only the 2.4GHz wireless band.
- Web browser, such as Mozilla Firefox, Internet Explorer, Google Chrome, Apple Safari, etc.

3.2 TCP/IP Configuration

The default IP address of the M5360 is 192.168.0.1, and the default Subnet Mask is 255.255.255.0, which values can be changed as you desire. In this guide, we use all the default values for description, and take the configuration in Windows 7 for example. While, Pads or Wi-Fi cellphones by default obtain IP address and DNS server address automatically, so you can just skip this step and continue with the [3.3 Wireless Connection](#).

Note:

Before configuration, please make sure your computer has been equipped with a wireless network adapter.

➤ **Obtain an IP address automatically**

- 1) Set up the TCP/IP Protocol in "**Obtain an IP address automatically**" mode on your PC. Please refer to [Appendix B: Configuring the PC](#) for the detailed instructions.
- 2) Then the built-in DHCP server will assign an IP address for the PC.

➤ **Configure the IP address manually**

- 1) Set up the TCP/IP Protocol for your PC. Please refer to [Appendix B: Configuring the PC](#) for the detailed instructions.
- 2) Configure the network parameters. The IP address is 192.168.0.X (X stands for any number from 2 to 254), Subnet Mask is 255.255.255.0, and Gateway is 192.168.0.1 (the device's default IP address).

3.3 Connect to the Internet

Note:

To log in the Device's web-based management page, you need to first connect to the wireless network of the Device.

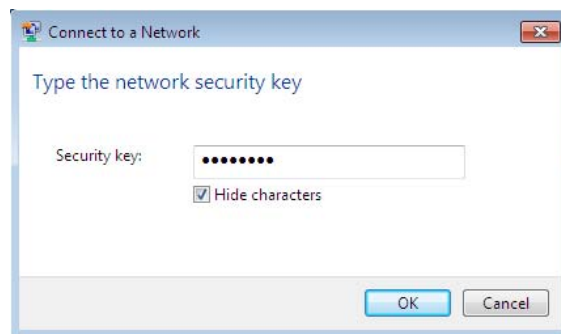

1. Click the icon  at the bottom of your desktop.
2. Click the refresh button  , and then select the SSID of M5360 and then click **Connect**.

Note:

The default SSID (also called Wireless Network Name) of the device is **TP-LINK_M5360_XXXXXX**. (XXXXXX is the last 6 characters of the device's MAC address.)

3. Enter the wireless password you've noted down in the Security Key field, and then click **OK**.

Note:

You can refer to the label on the rear cover for the default SSID and wireless password of M5360.

4. When **Connected** appears behind the SSID of M5360, you've successfully connected to its wireless network.

Note:

After successful connection to M5360 (with a SIM card inserted), you can enjoy the 3G mobile connection instantaneously. Otherwise, please continue with [3.4 Quick Setup](#) to further configure your device.

3.4 Quick Setup

1. Open a web-browser, enter the default address **192.168.0.1** in the address field and then press **Enter**. When the login window appears, enter **admin** (in lower case letters) for Password, and then click the **Log in** button or press the **Enter**.

Figure 3-1 Login Windows

Note:

If the above screen does not pop-up, it means that your Web-browser has been set to a proxy. Go to **Tools menu > Internet Options > Connections > LAN Settings**, in the screen that appears, cancel the Using Proxy checkbox, and click **OK** to finish it.

2. After successful login, there will appear the Status page. Click Wizard to configure the basic network settings for accessing network. Click **Next** to continue.

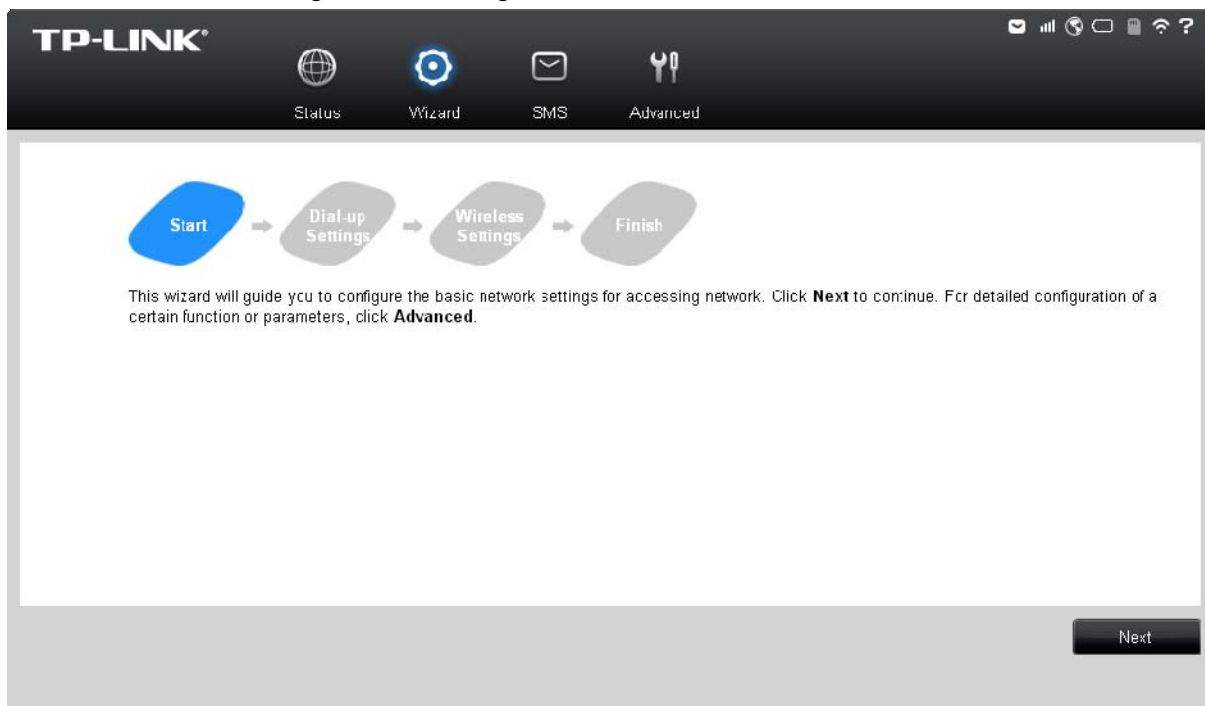

Figure 3-2 Wizard – Start

3. On the Dial-up Settings page shows the ISP information of the SIM card inserted. Click **Next** to continue, if you are sure the information is correct. You can also click **Create** to create a new profile.

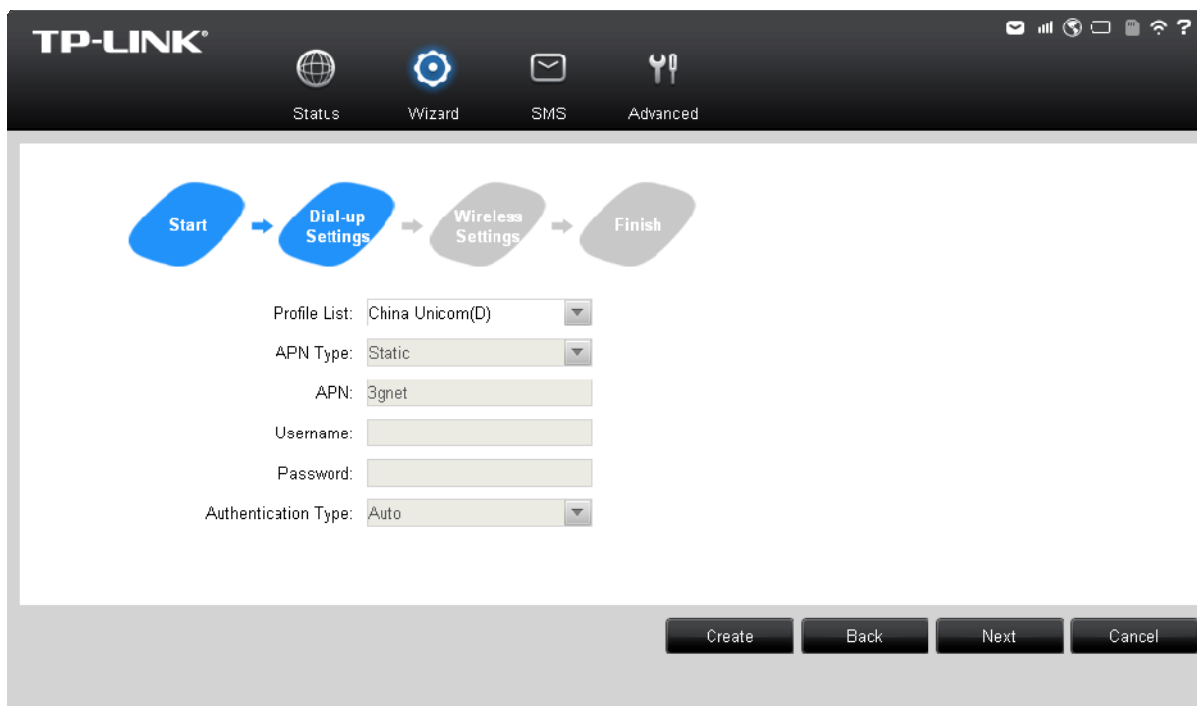

Figure 3-3 Wizard – Dial-up Settings

4. On the Wireless Settings page, you can create a unique and easy-to-remember wireless network name (SSID) as well as Wireless Password, or you can keep it default. Then click **Next** to continue.

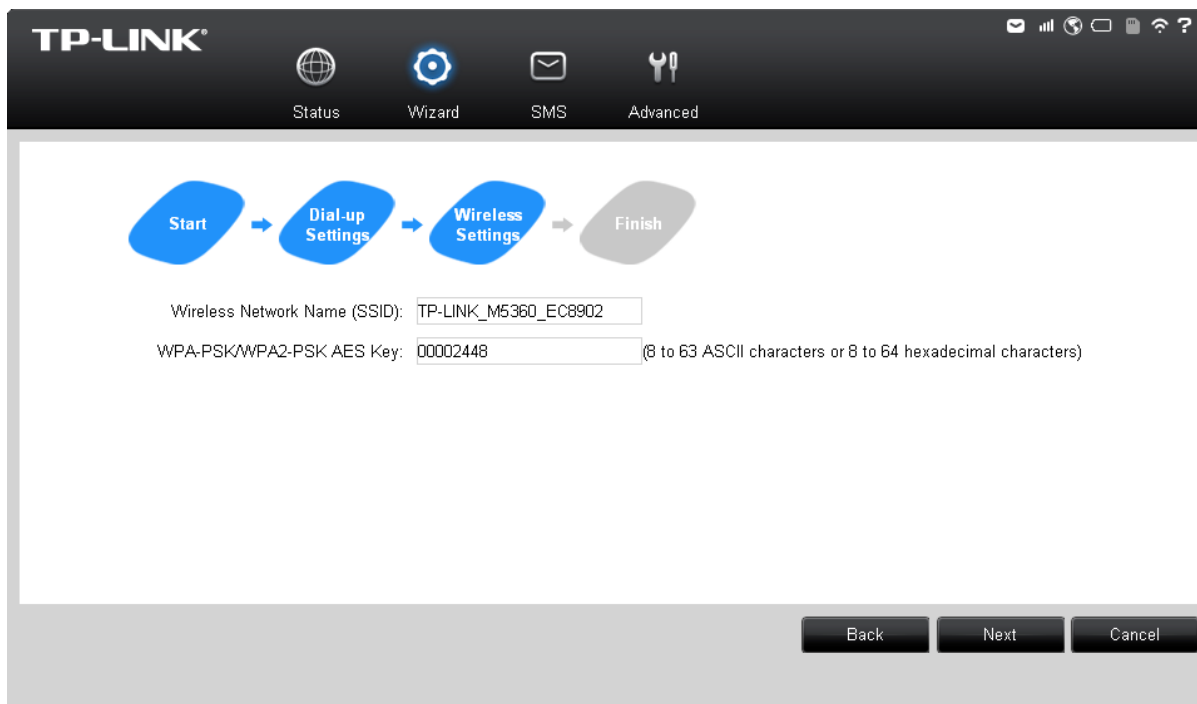

Figure 3-4 Wizard – Wireless Settings

5. On the Finish page, please double-check your settings. If all the parameters are verified, click **Finish** to complete the Wizard; if there is anything wrong, you can click **Back** to re-configure it.

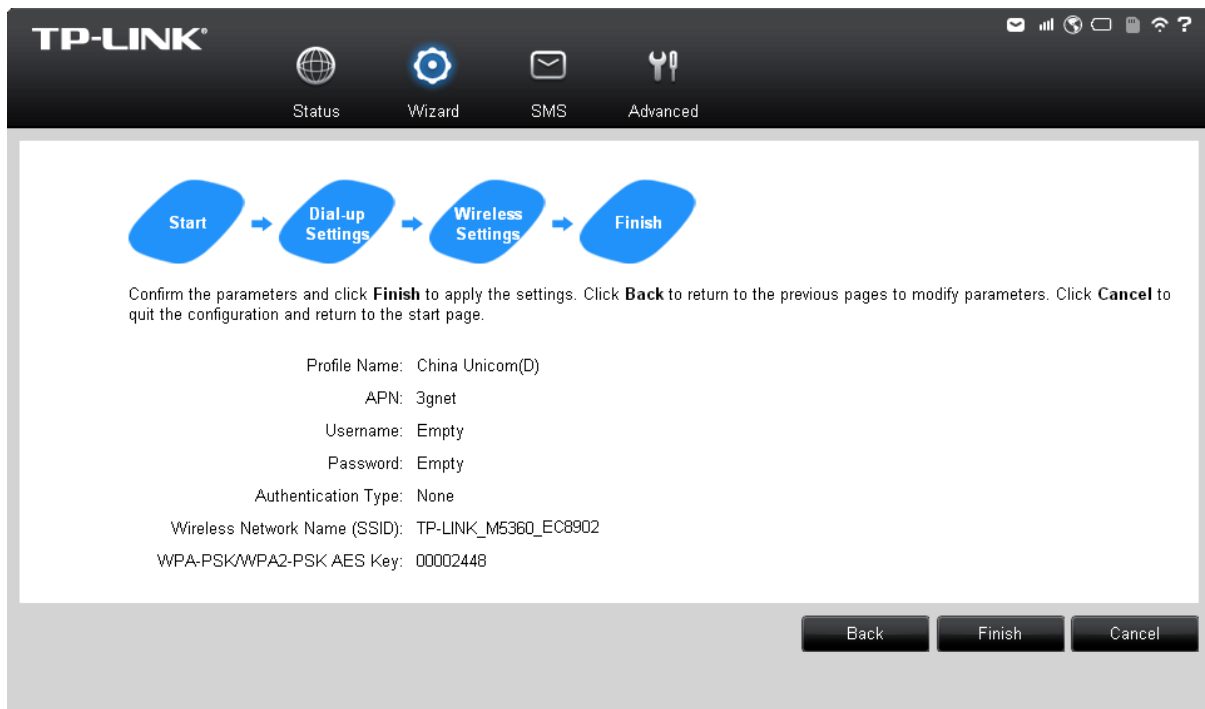

Figure 3-5 Wizard – Finish

Chapter 4. Device Configuration

After the successful login to the web-based management page of M5360, you will see the main menu listing **Status**, **Wizard**, **SMS** and **Advanced** on the top. In the following parts, these items will be explained in details, about their respective functions and configurations.

Figure 4-1 Main Menu

4.1 Status

The Status page displays the current status information about the device. All information is read-only.

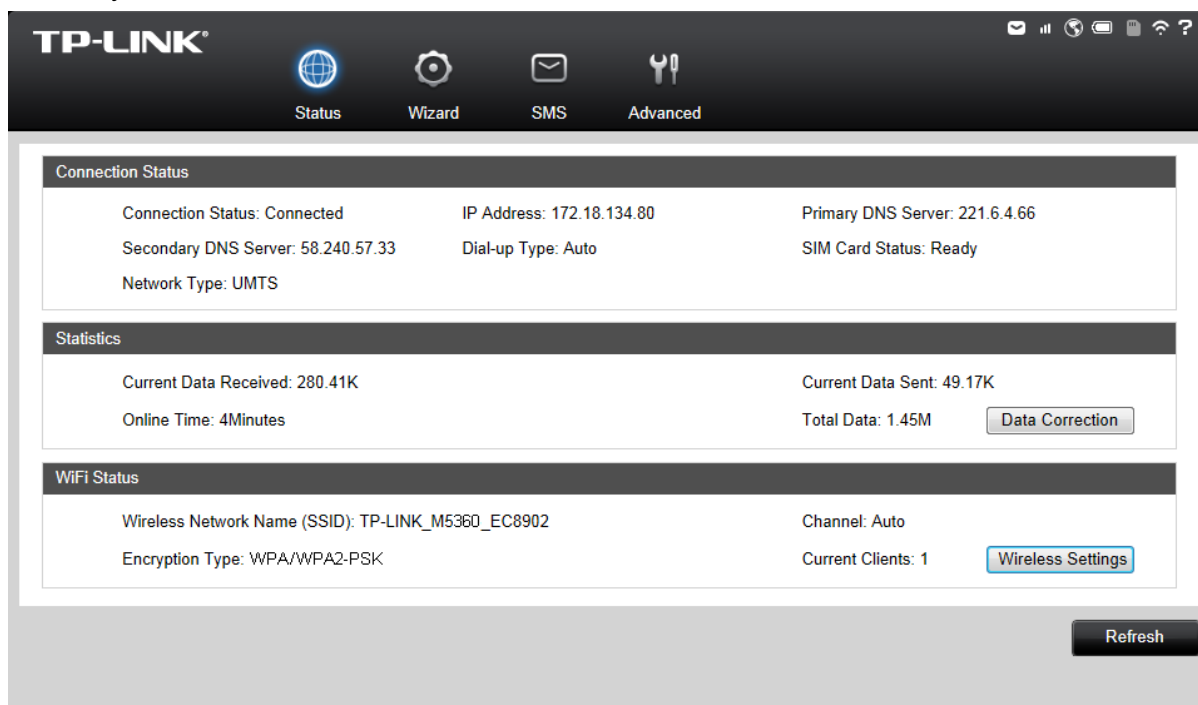

Figure 4-2 Status

- **Connection Status:** Displays the device's current connection status, including the connection and SIM card status, Dial-up and network type, IP address, primary and secondary DNS server.
- **Statistic:** Displays the device's statistics, including current received and sent data, online time and total data used.
- **WiFi Status:** Displays the device's current wireless settings, including SSID, channel, encryption type and current Wireless clients.

Click **Data Correction** to correct the accumulate data used. If the data statistics is different from that your ISP provided, please click **Data Correction** button, and input the data statistics your ISP provided to correct the accumulate data used.

Click **Wireless Settings** to head for the Wireless Basic Settings page and configure it.

Click **Refresh** to get the status information updated.

4.2 Wizard

Please refer to [3.4 Quick Setup](#).

4.3 SMS

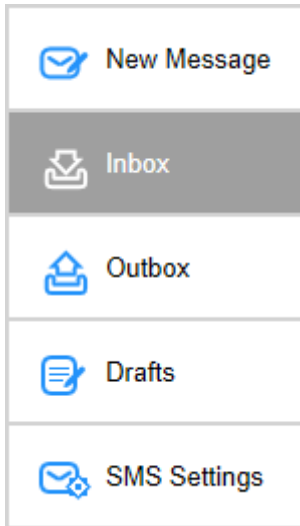

Figure 4-3 SMS Menu

There are five submenus under the **SMS** tab (as shown in Figure 4-3): **New Message**, **Inbox**, **Outbox**, **Drafts** and **SMS Settings**. Click any of them, and you will be able to configure the corresponding functions.

4.3.1 New Message

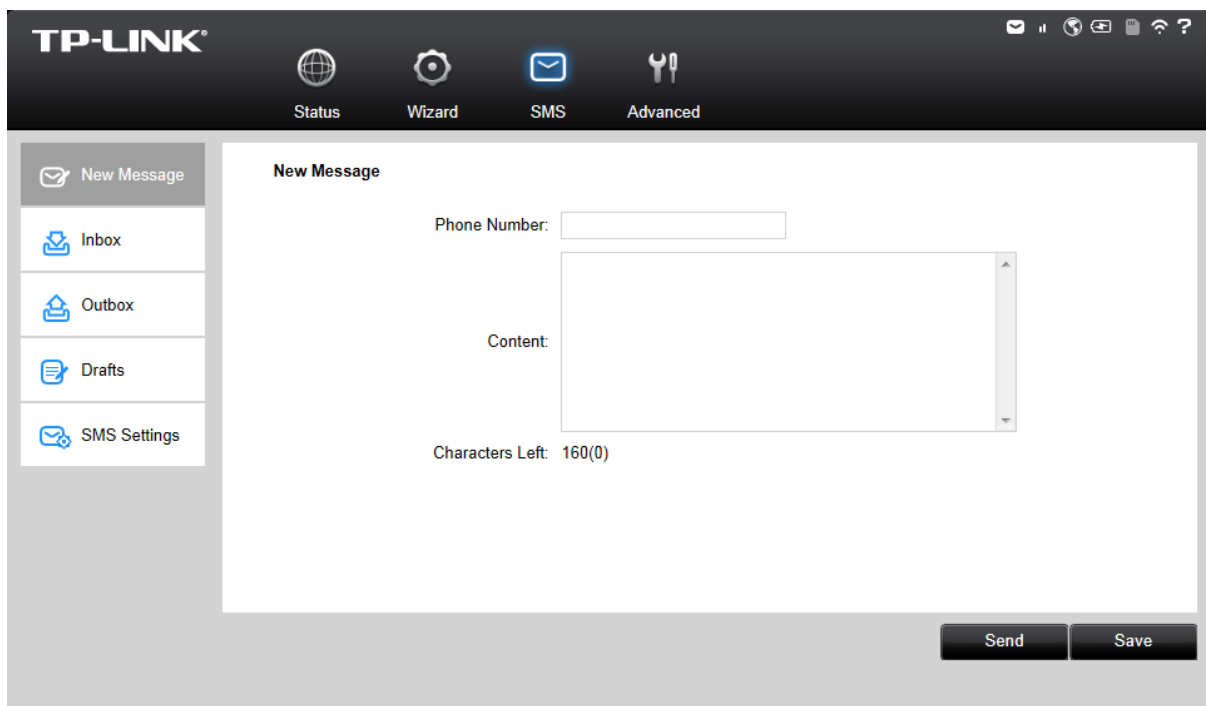

Figure 4-4 New Message

- **Phone Number:** Enter the receiver's cellphone number.
- **Content:** Text your message in this box.

Click **Send** to send the message.

Click **Save** to save the message in the Drafts box.

4.3.2 Inbox

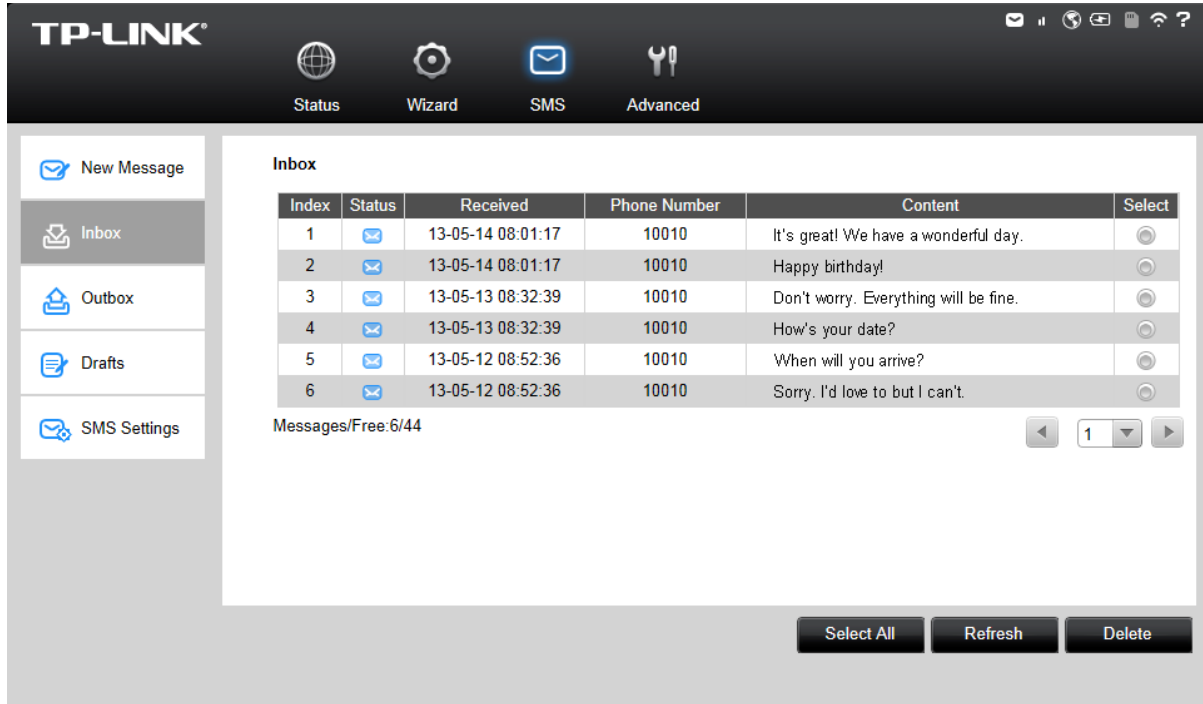

Figure 4-5 Inbox

- **Index:** The index of the message.
- **Status:** means the message has been read. means the message hasn't been read yet.
- **Received:** Shows the date and time when the message was received.
- **Phone Number:** Shows the cellphone number that sent this message.
- **Content:** Click to unfold and read the detailed content of the message.
- **Select:** Select the message(s) for deletion.

Click **Select All** to select all of the messages.

Click **Refresh** to refresh the inbox, and get any new message(s).

Click **Delete** to delete the message(s) selected.

4.3.3 Outbox

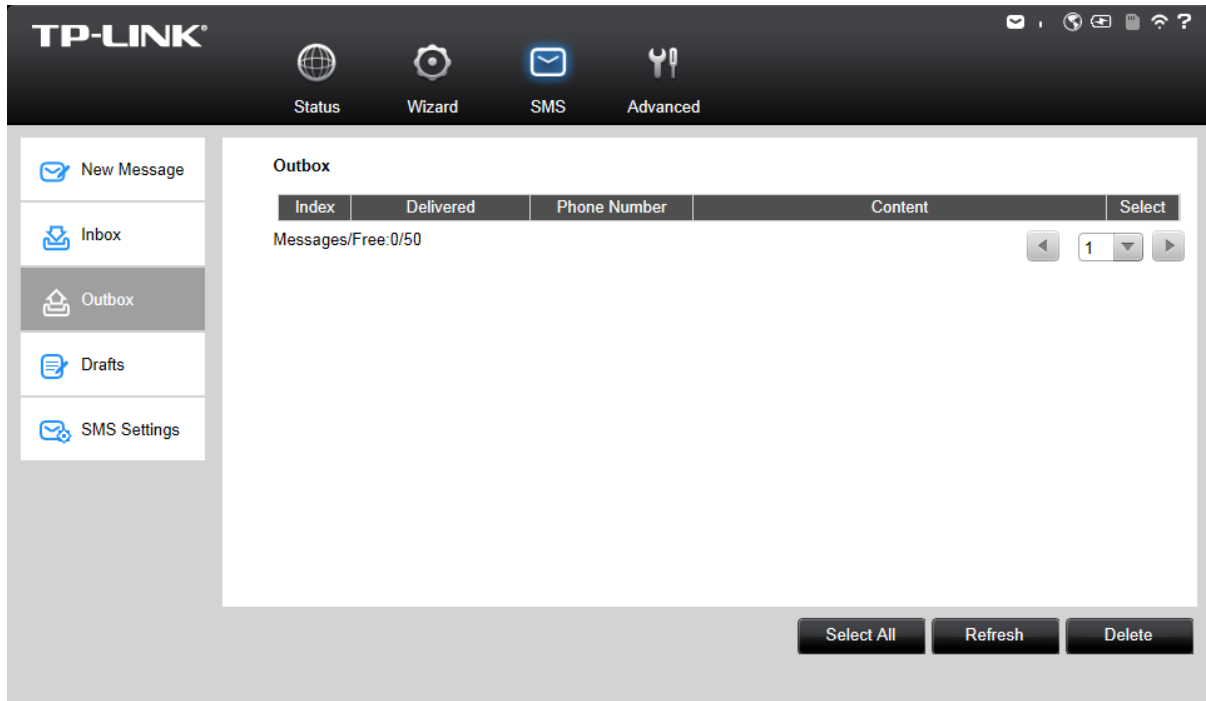

Figure 4-6 Outbox

- **Index:** The index of the message.
- **Delivered:** Shows the date and time when the message was sent.
- **Phone Number:** Shows the cellphone number that the message was planned to be sent to.
- **Content:** Click to unfold and read the detailed content of the message.
- **Select:** Select the message(s) for deletion.

Click **Select All** to select all of the messages.

Click **Refresh** to refresh the inbox.

Click **Delete** to delete the message(s) selected.

4.3.4 Drafts

You can review the unsent saved message(s) on this page.

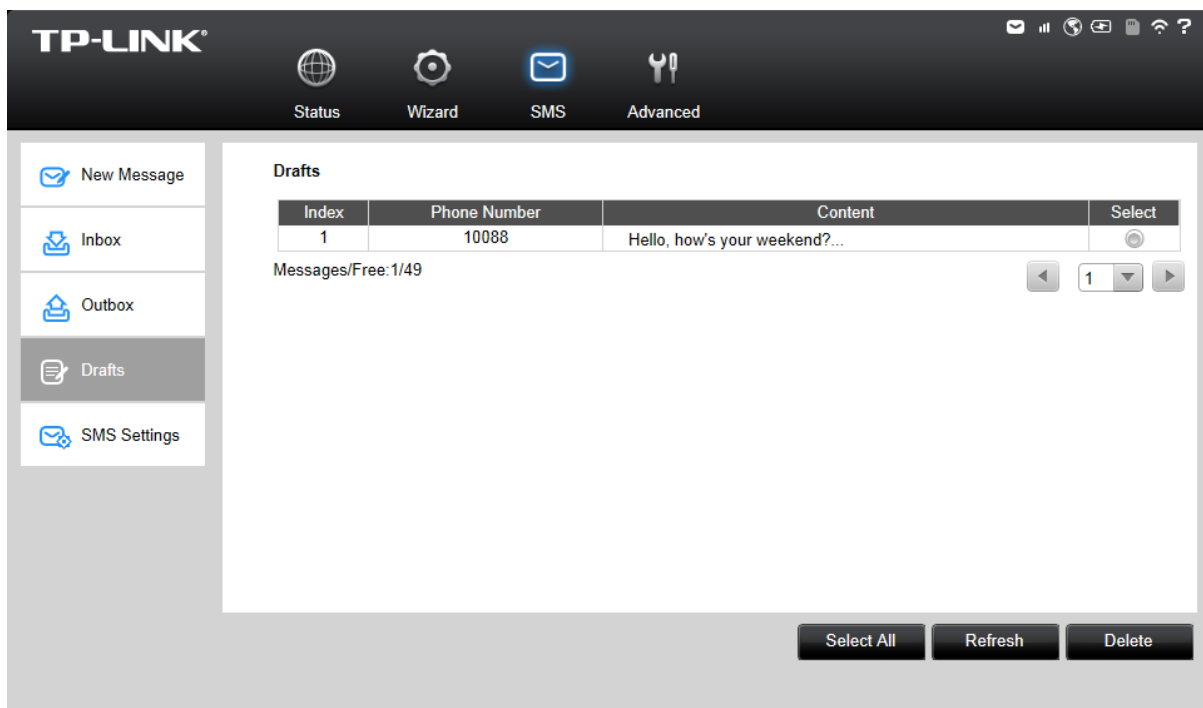

Figure 4-7 Drafts

- **Index:** The index of the message.
- **Phone Number:** Shows the cellphone number that this message was planned to be sent to.
- **Content:** Click to unfold and read the detailed content of the message(s), or for further edition and delivery (as shown in Figure 4-8).
- **Select:** Select the message(s) for deletion.

Click **Select All** to select all of the messages.

Click **Refresh** to refresh the drafts.

Click **Delete** to delete the message(s) selected.

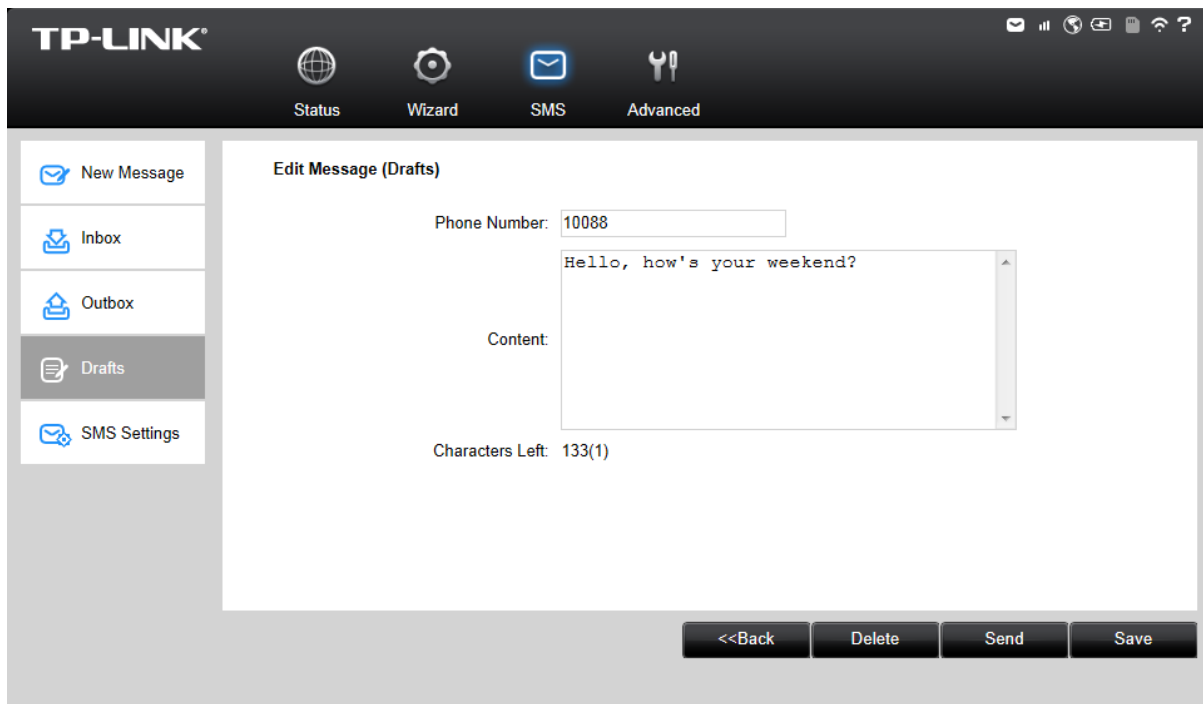

Figure 4-8 Edit Message (Drafts)

4.3.5 SMS Settings

On this page, you can do the following settings:

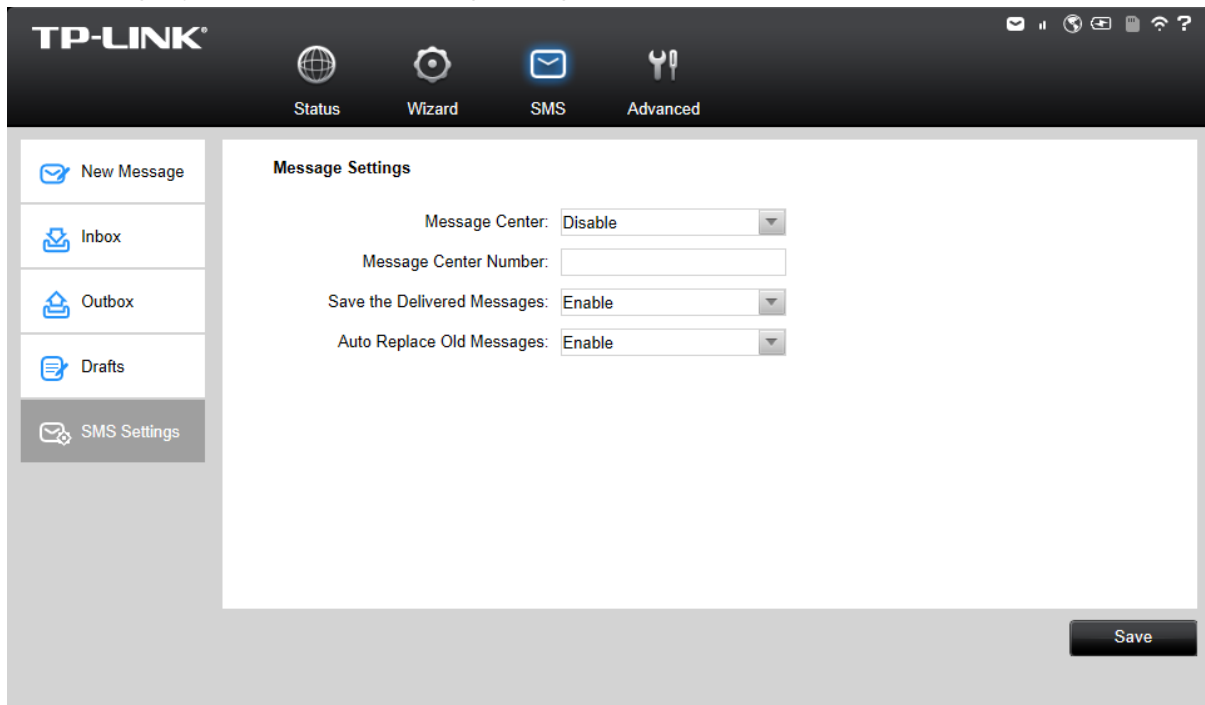

Figure 4-9 Settings

- **Message Center:** Disabled by default. It's recommended to keep the default setting. If you want to manually set the Message Center Number, please select **Enable**.
- **Message Center Number:** When the Message Center is enabled, you can enter the Message Center Number of the local ISP. If you enter a wrong number, the SMS would be affected and not properly used.
- **Save the Delivered Messages:** Enable it to automatically save the delivered messages in the Outbox.
- **Auto Replace Old Messages:** If enabled, it will automatically delete the oldest message and save the new one when the Outbox or Drafts box is full. If disabled, you need to manually delete the old messages to save the new ones when the Outbox or Drafts box is full.

Click **Save** to make your settings take effect.

4.4 Advanced

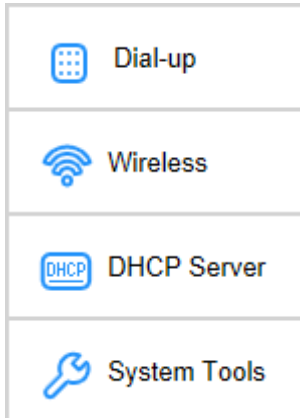

Figure 4-10 Advanced Menu

There are four submenus under the **Advanced** tab (as shown in Figure 4-10): **Dial-up**, **Wireless**, **DHCP Server** and **System Tools**. Click any of them, and you will be able to configure the corresponding functions.

4.4.1 Dial-up

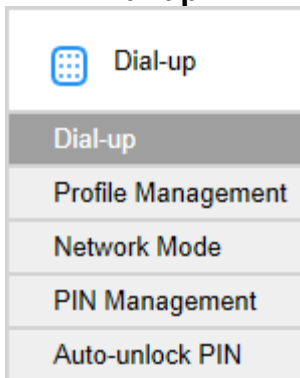

Figure 4-11 Dial-up Menu

4.4.1.1. Dial-up

Dial-up Settings page allows you to do the following configurations.

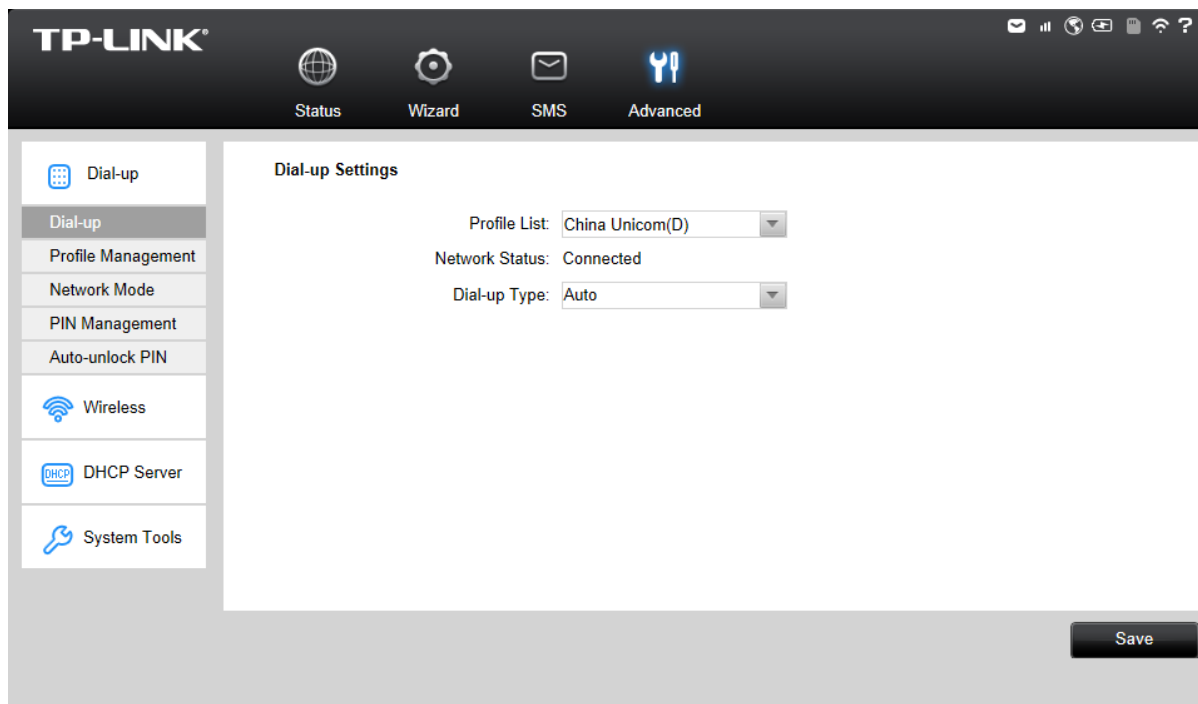

Figure 4-12 Dial-up Settings

- **Profile List:** A list of profile(s). Select the profile of your SIM card currently inserted in the device.
- **Network Status:** Shows whether the Internet is connected or disconnected at present.
- **Dial-up type:** The device provides two types of dial-up – **Auto** and **Manual**. Please select the dial-up type as you need.
 - **Auto:** The device will automatically establish connection once it's started. During the process, if your Internet connection is terminated due to some exterior reasons, the device would automatically attempt connection until it's successful. This option is suggested, if you have the network service paid by month.
 - **Manual:** When you start the device and your computer, or when the connection is terminated during the process, you need to manually dial up for connection in here. When you select Manual as your dial-up type, you need to specify a MAX Idle Time (5 minutes by default), namely a period of inactivity, after which the device will disconnect your Internet connection, and not be able to re-establish your connection automatically as soon as you attempt to access the Internet again. If you have the network service paid by hour, this option is suggested.

Click **Save** to save the above settings and have them take effect.

4.4.1.2. Profile Management

You can manage your profile on this page.

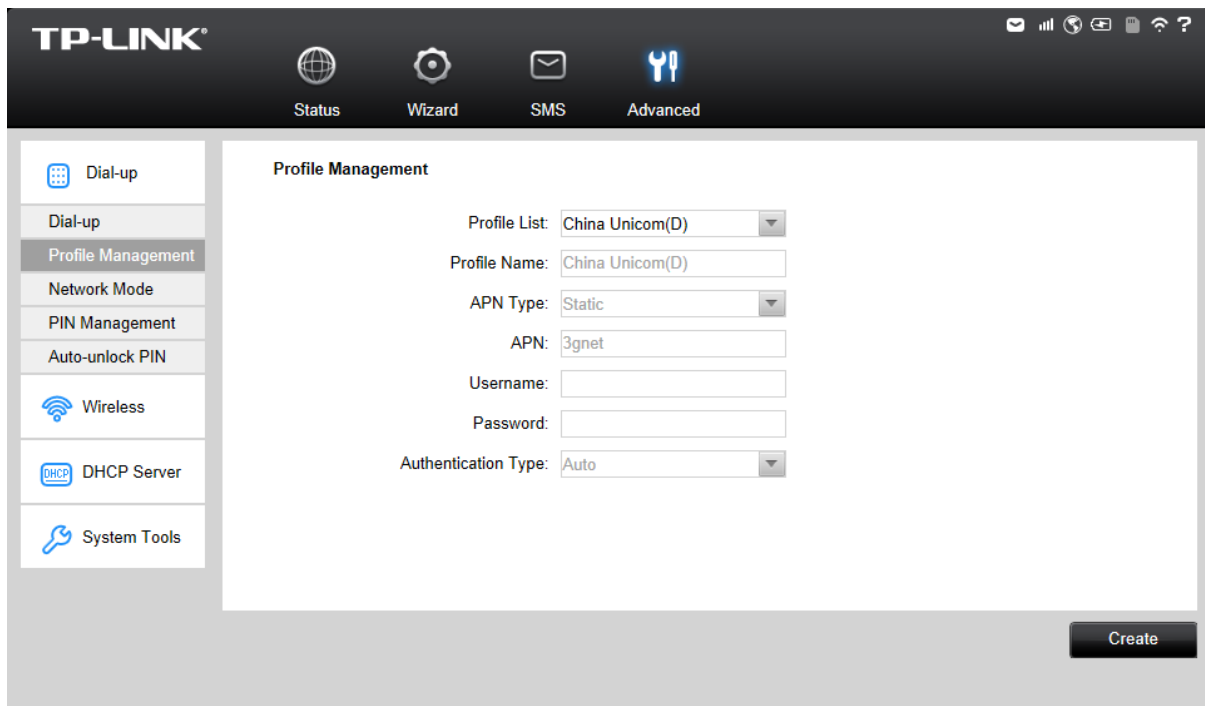

Figure 4-13 Profile Management

- **Profile List:** A list of profile(s). Select the profile of your SIM card currently inserted in the device, and then you can view the related information of it. If you find any parameters wrong, you can click **Create** to create a new profile with the right settings (as shown in Figure 4-14).
- **Profile Name:** Displays the name of the profile you've selected.
- **APN Type:** Displays the type of your APN, either **Dynamic** or **Static**. **Dynamic** means the device have dynamic APN, which needs not to be specified. **Static** means you specify your APN manually.
- **APN:** Displays the Access Point Name provided by your ISP.
- **Username/Password:** Displays the User Name and Password provided by your ISP.
- **Authentication Type:** Displays the specific authentication type your ISP required.
 - **None:** Means no authentication is required.
 - **CHAP:** Means your ISP required Challenge Handshake Authentication Protocol, which allows the device to establish authentication with the peer using three handshakes and checking the peer identity periodically.
 - **PAP:** Means your ISP required Password Authentication Protocol, which allows the device to establish authentication with the peer using two handshakes.
 - **Auto:** Means the device have dynamic negotiation with the dialing server and the Authentication Type needs not to be specified.

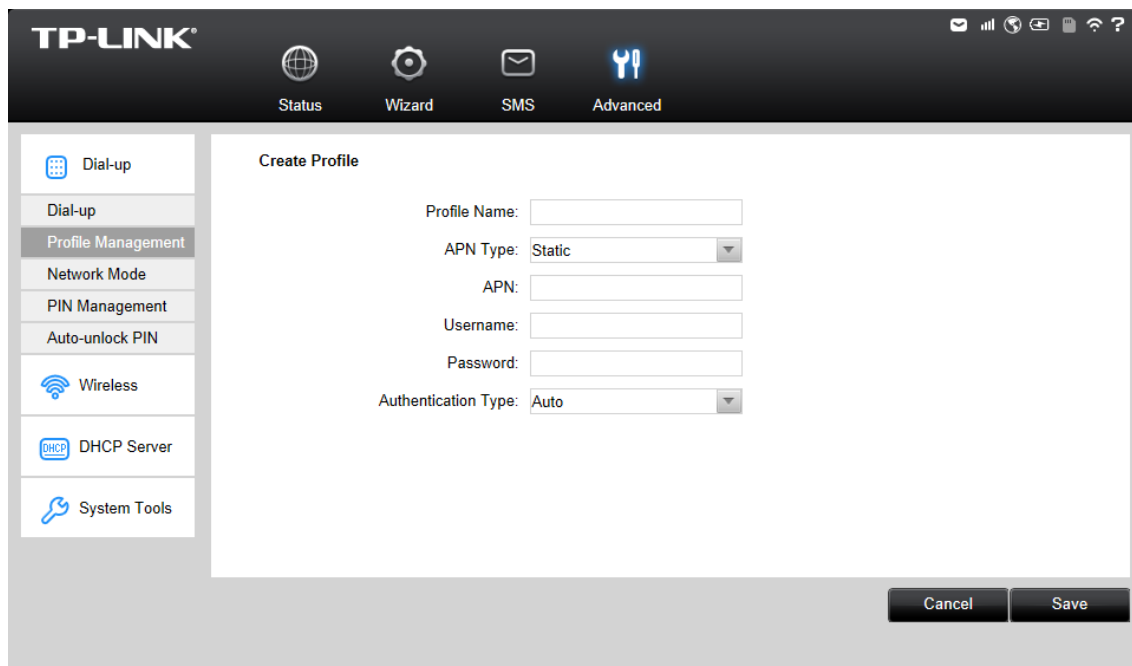

Figure 4-14 New Profile

4.4.1.3. Network Mode

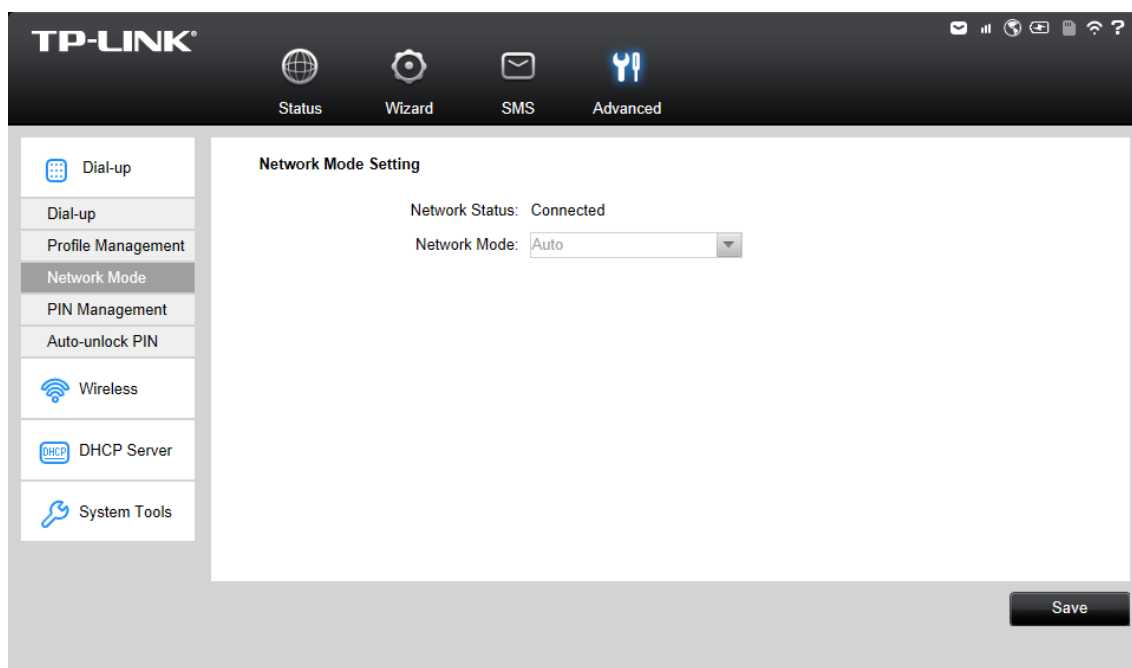

Figure 4-15 Network Mode Settings

- **Network Status:** Shows whether the Internet is connected or disconnected at present.
- **Network Mode:** The device supports three modes of network connection – **Auto**, **2G only** and **3G only**. You can choose the appropriate mode after disconnecting the network. If your SIM card supports GSM, please select **2G only**; if your SIM card supports WCDMA, please select **3G only**; if you are not very sure about it, please select **Auto** and then the device will detect it automatically.

Click **Save** to save your settings.

4.4.1.4. PIN Management

You can manage your PIN code on this page.

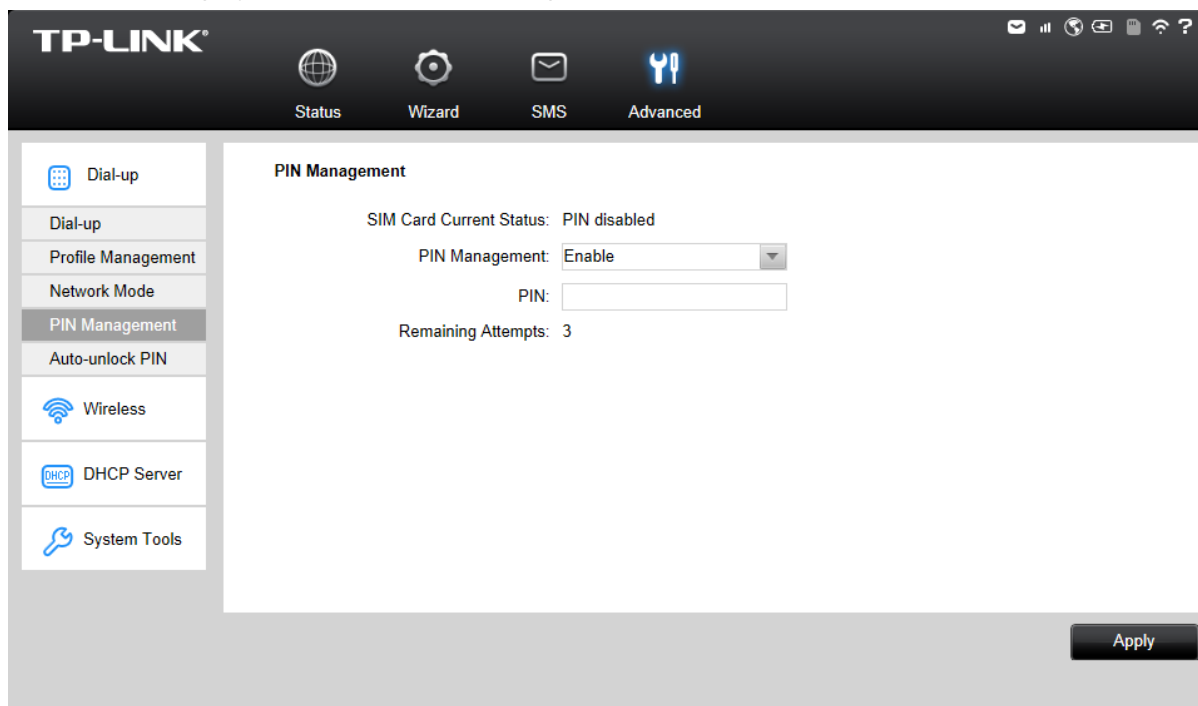

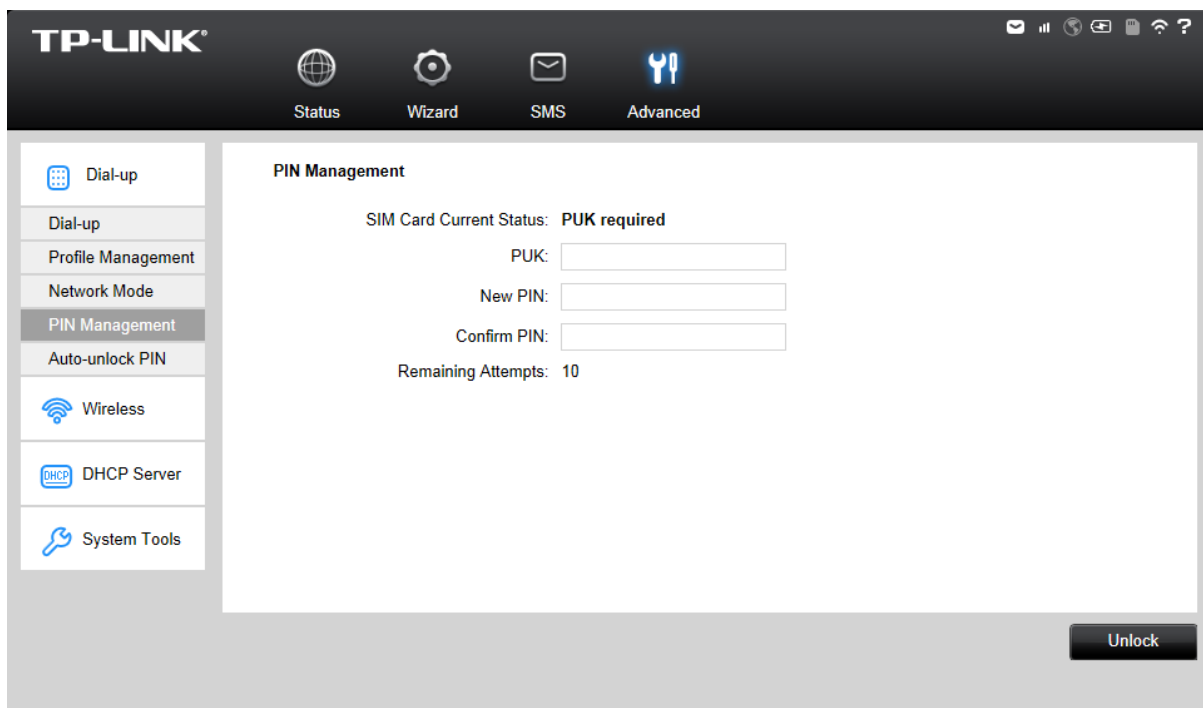

Figure 4-16 PIN Management

- **SIM Card Current Status:** Shows whether your PIN function is enabled or disabled.
- **PIN Management:** You can select whether to enable PIN function or not. Once the PIN function is enabled, every time you start the device with this SIM card inserted, you need to enter the PIN code; while if you go to enable the **Auto-unlock PIN** function, it could save you this trouble.
- **PIN:** You can set a PIN code, which requires 4-8 digits.
- **Remaining Attempts:** Shows how many attempts there are left for you to try entering the PIN code after you failed to enter the right one. You have 3 attempts at most. If you accidentally fail in three attempts, the PIN will be locked and you will be required to enter the PUK code that is written on your SIM card (as shown in Figure 4-17).

If the current status of PIN is disabled, you can select **Enable** and set a PIN code, and then click **Apply** to make your settings take effect. While, if the SIM card's current status is PIN enabled and verified, you can select **Disable** and enter the current PIN code, or select **Modify** and enter the required parameters to set a new PIN code, and then click **Apply** to make your settings take effect.

Unlock

Figure 4-17 PIN Configuration - PUK Decode

A PUK (PIN Unlocked Key), also known as Personal Unlock Code (PUC), is used in 3GPP mobile phones to reset a personal identification number (PIN) that has been lost or forgotten. The PUK is a SIM-specific code assigned by the service provider. If a user does not know his or her PUK and is prompted for it, it should be obtained from the service provider.

On the page as shown in Figure 4-17, first enter the PUK code and then set a new PIN code to unlock your SIM card as well as any device with it inserted.

4.4.2 Wireless

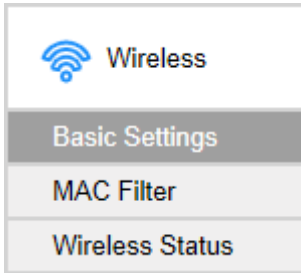

Figure 4-19 Wireless Menu

Wireless Settings can prevent any intruders from connecting your wireless network, occupying your network resources, hacker-overhearing and hacker-attacking, and thus enhance the security of your wireless network.

4.4.2.1. Basic Settings

Wireless basic settings enable you to configure your wireless parameters.

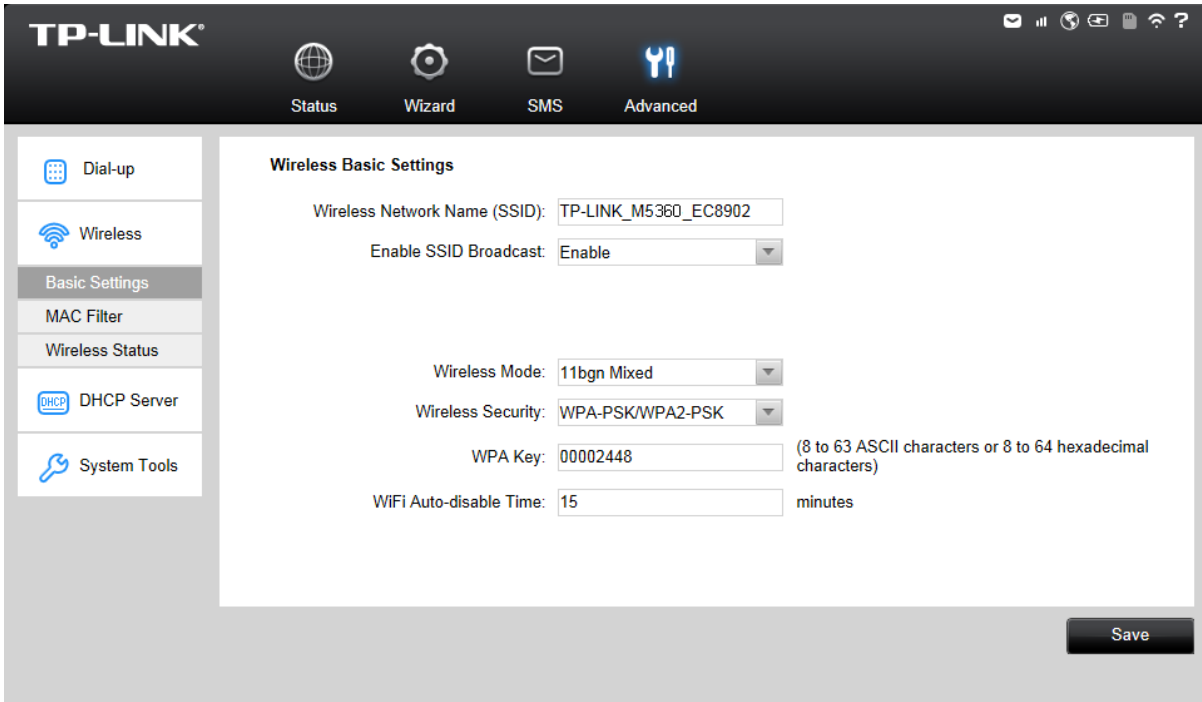

Figure 4-20 Wireless Basic Settings

- **Wireless Network Name (SSID):** SSID is short for Service Set Identification, which is for you to distinguish the different wireless network. The default SSID of this device is TP-LINK_M5360_XXXXXX (XXXXXX stand for the last 6 characters of the MAC address of

the device.) You can rename it as your preference, but the value is limited to 32 characters at most and also it is case-sensitive (For example, TEST is NOT the same as test.). Later on it will display in the wireless network list searched by your devices.

- **Enable SSID Broadcast:** Select to enable or disable this function. When wireless clients search the local area for wireless networks to associate with, they will detect the SSID broadcast by the device. If you Enable SSID Broadcast, the Wireless device will broadcast its name (SSID) on the air; otherwise, you have to manually type in the SSID and then you can join its network.
- **Wireless Mode:** You are provided with five wireless modes here: 11b Only, 11g Only, 11n Only, 11bg Mixed and 11bgn Mixed. The default wireless mode is 11bgn Mixed. If your wireless network card didn't work well in 11bgn Mixed mode, try 11bg Mixed mode.
- **Wireless Security:** You are provided with two modes of wireless security here: Not Secured, WPA-PSK/WPA2-PSK.
 - **WPA-PSK/WPA2-PSK:** It's the WPA/WPA2 authentication type based on pre-shared pass phrase. It's easy to set and secure to use. So it's perfect for SOHO users.
WPA Key: The default WPA key is the last 8 characters of IMEI. You can keep it default or enter 8~63 ASCII characters or 8~64 hexadecimal characters as your new WPA key.
- **WiFi Auto-disable Time:** If no clients connect to the device's wireless network in a period of time (15 minutes by default), the Wi-Fi will be shut down. You can press the power button to resume the Wi-Fi.

Click **Save** to save your settings.

4.4.2.2. MAC Filter

The Wireless MAC Address Filtering feature allows you to control the wireless stations accessing the device, which depends on the station's MAC addresses. MAC Address is the physical address of the wireless stations, usually in the format of XX-XX-XX-XX-XX-XX format (X is any hexadecimal digit).

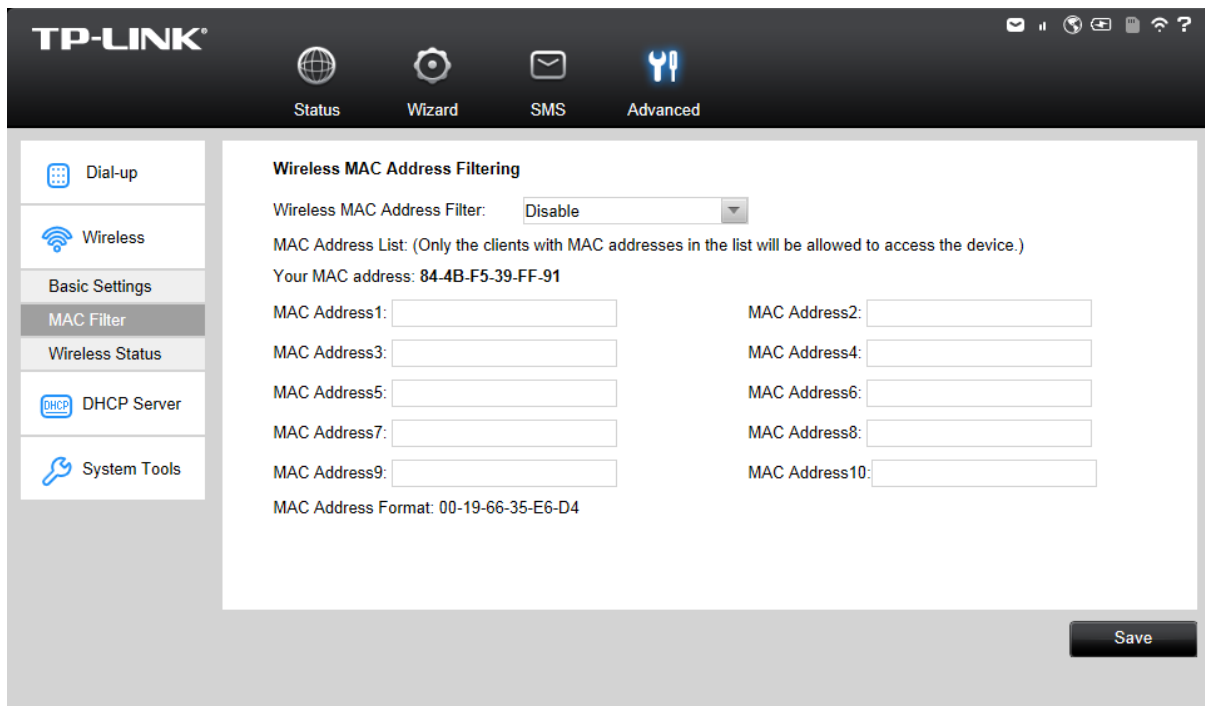

Figure 4-21 Wireless MAC Filter

- **Wireless MAC Address Filter:** Select to Enable or Disable the MAC filter function of the device. The below settings will take effect only when you select **Enable**.
- **MAC Address List:** A List of MAC addresses will be allowed to access the device.
- **Your MAC Address:** Displays the MAC address of your client(s) currently wirelessly connected to the device.

Click **Save** to save your settings.

4.4.2.3. Wireless Status

The Wireless Status page displays the basic information about the Wireless client(s) that are currently connected to the device.

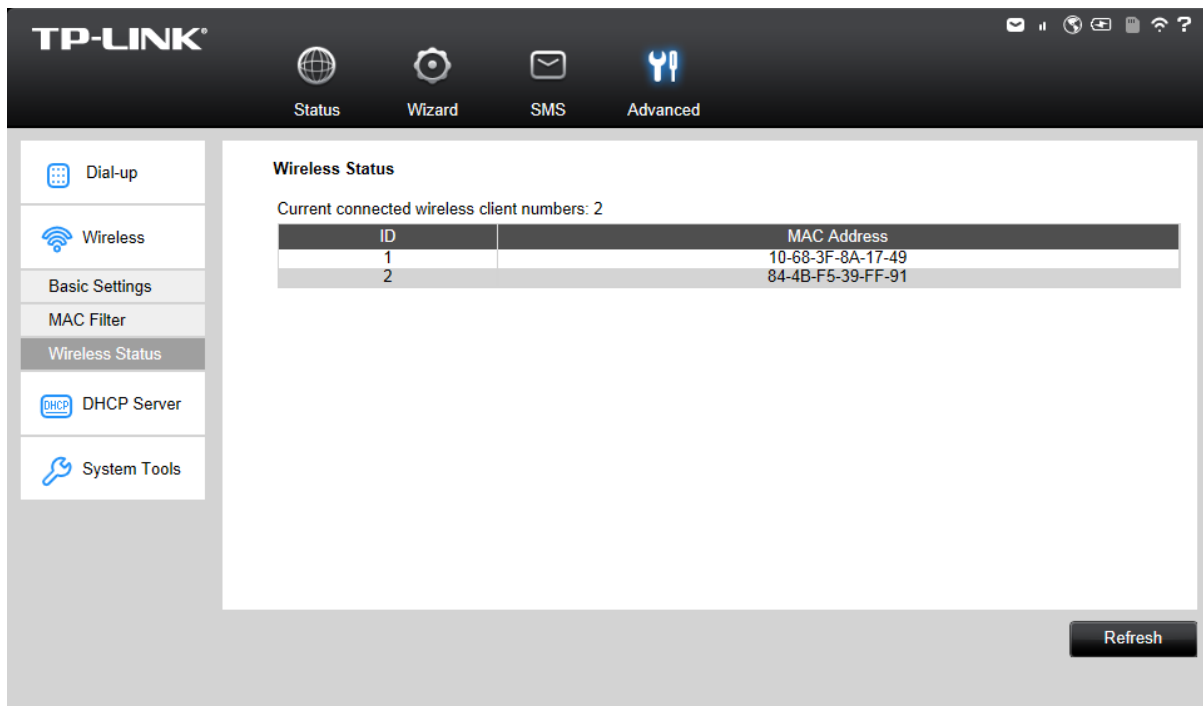

Figure 4-22 Wireless Status

- **ID:** The index of the Wireless Client.
- **MAC Address:** The MAC address of the Wireless client.

Click **Refresh** to update the amount of the Wireless clients and their information.

4.4.3 DHCP Server

Figure 4-23 DHCP menu

The device is set up by default as a DHCP (Dynamic Host Configuration Protocol) server, which provides the TCP/IP configuration for all the wireless clients that are connected to the device in the LAN.

4.4.3.1. Basic Settings

The screenshot displays the 'Basic Settings for DHCP Server' configuration page in the TP-LINK web interface. The page features a navigation menu on the left with options: Dial-up, Wireless, DHCP Server, Basic Settings (selected), Client List, and System Tools. The main content area contains the following settings:

- IP Address:** 192.168.0.1
- Subnet Mask:** 255.255.255.0
- DHCP Server:** Enable
- Start IP Address:** 192.168.0.100
- End IP Address:** 192.168.0.199
- Lease Time:** 120 minutes (Ranging from 1 to 2880, the default value is 120)
- Primary DNS Server:** 192.168.0.1 (optional)
- Secondary DNS Server:** 0.0.0.0 (optional)

A 'Save' button is located at the bottom right of the configuration area.

Figure 4-24 Basic Settings

- **IP Address:** The IP address of the device, which is used to log in its web-based management page. The default value is 192.168.0.1.
- **Subnet Mask:** An address code that determines the size of the network. Normally use 255.255.255.0 as the subnet mask.
- **DHCP Server:** You can select to enable or disable the DHCP server. If you disable the server, you must have another DHCP server within your network, or else you must configure the IP address of the host(s) manually.
- **Start IP Address:** This field specifies the first address in the IP address pool. 192.168.0.100 is the default start IP address.
- **End IP Address:** This field specifies the last address in the IP Address pool. 192.168.0.199 is the default end IP address.
- **Lease Time:** It is the length of time a network user will be allowed to keep connecting to the device with the current IP address (that is assigned by the DHCP server). Enter the amount of time, in minutes, that the IP address will be "leased". The time range is 1~2880 minutes. The default value is 120 minutes.
- **Primary DNS Server:** Input the DNS IP address provided by your ISP. It is optional. The default primary DNS server IP is 192.168.0.100.
- **Secondary DNS Server:** Input the IP address of another DNS server if your ISP provides two DNS servers. It is optional. The default secondary DNS server IP is 192.168.0.199.

Click **Save** to save the changes.

Note:

To use the DHCP server function of the Device, you should configure all the clients in the LAN as "Obtain an IP Address automatically" mode.

4.4.3.2. Client List

On this page, you can view the information about the clients attached to the device. All the information is read-only. You cannot change any of the values on this page.

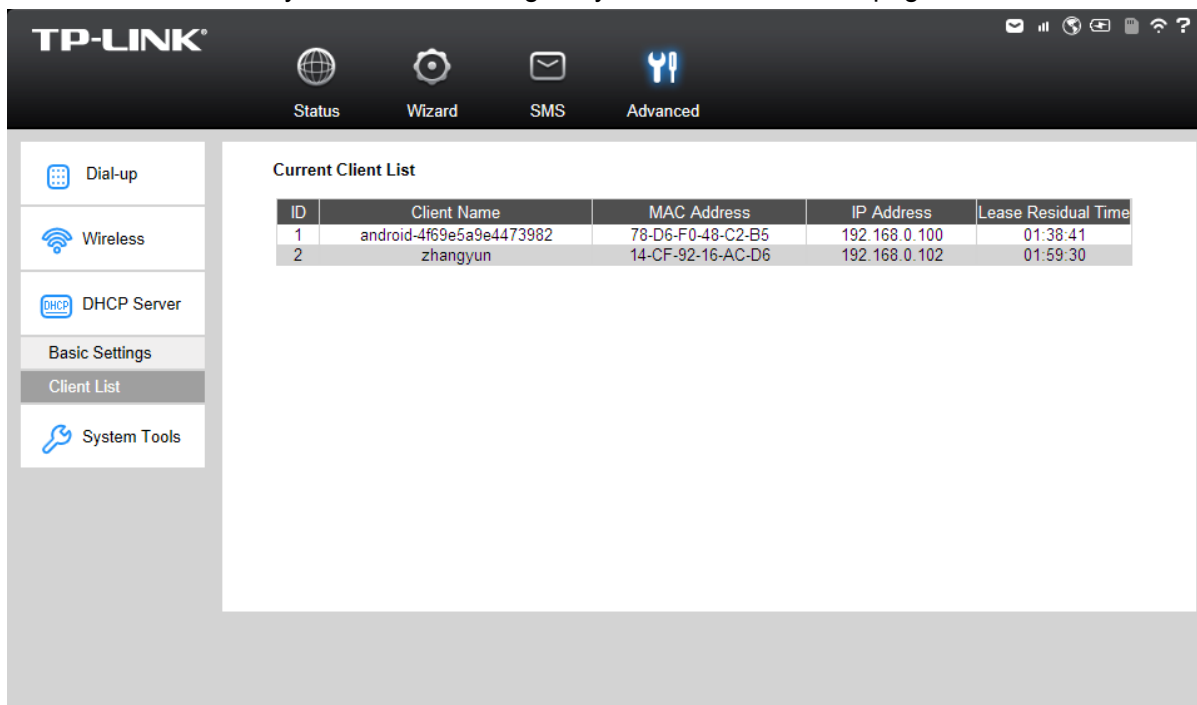

Figure 4-25 Clients List

- **ID:** The index of the DHCP Client.
- **Client Name:** The name of the DHCP client.
- **MAC Address:** The MAC address of the DHCP client.
- **IP Address:** The IP address the device has assigned to the DHCP client.
- **Lease Residual Time:** The rest lease time for the IP address assigned to the DHCP client. The DHCP client will automatically apply to lengthen the lease time before the dynamic IP address expires.

4.4.4 System Tools

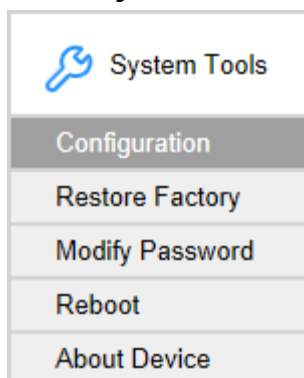

Figure 4-26 System Tools menu

Under **System Tools** menu, you can do such configurations as backing up or uploading a configuration file of the device, restoring all the settings of the device to its factory defaults, modifying the password for your login, rebooting the device, and checking some information

about the device. As follows, we will explain them in details.

4.4.4.1. Configuration

On this page, you can back up the configuration of the device to file, or upload a configuration file to the device.

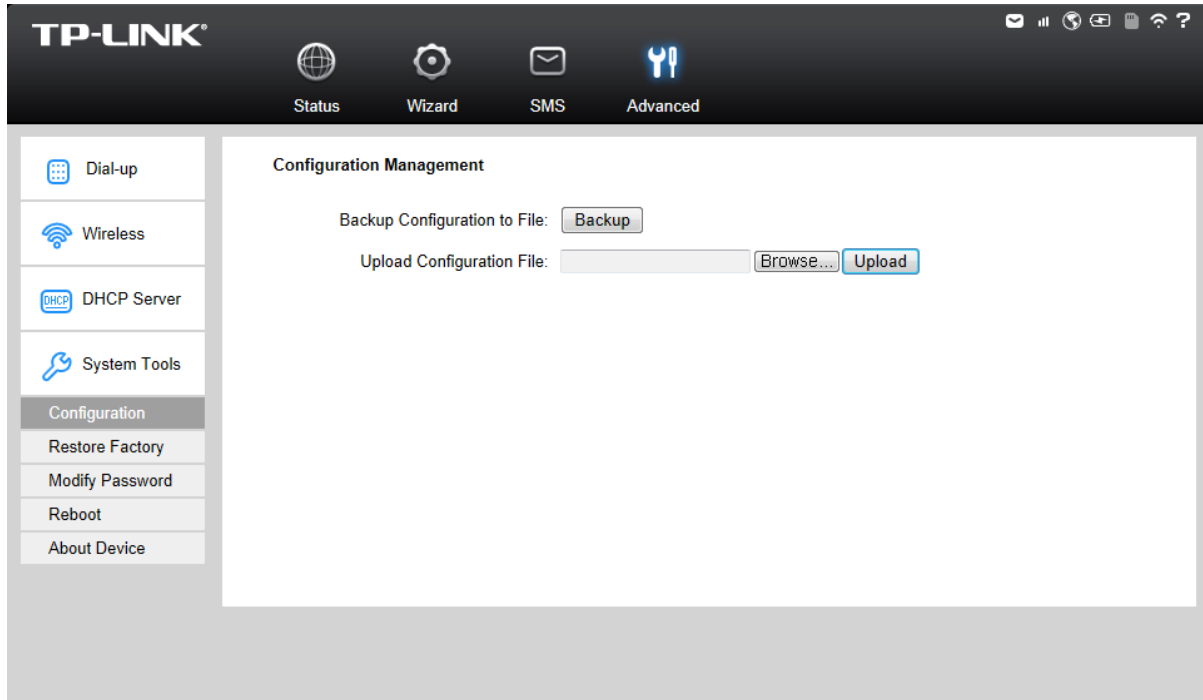

Figure 4-27 Configuration Management

- **Backup Configuration to File:** Click **Backup** to save the configuration file in your computer, for later necessary use. It's strongly recommended to back up the old configuration file before firmware upgrade or new configuration file upload, in case that during those process it might get the original configuration lost.
- **Upload Configuration File:** Click **Browse...** to locate the config.bin file or directly enter its location file, and then click **Upload** to upload the configuration file.

4.4.4.2. Restore Factory

You can restore the device to its factory default settings, when necessary.

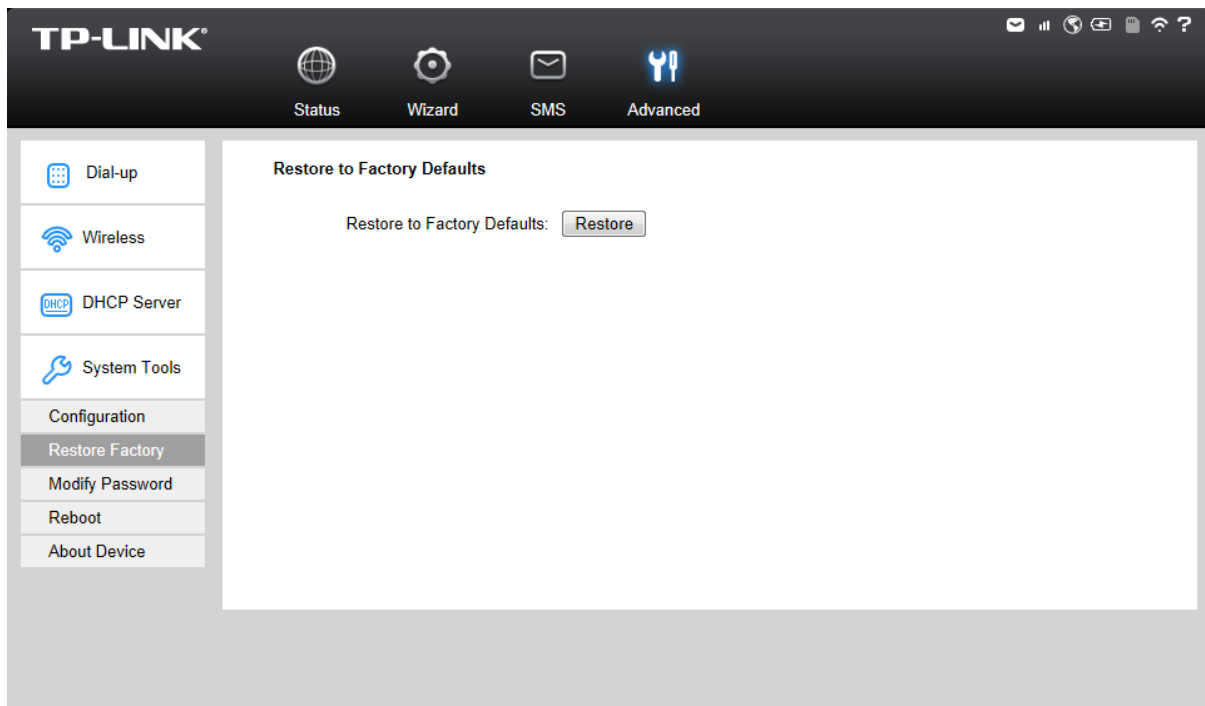

Figure 4-28 Restore to factory defaults

- **Restore to Factory Defaults:** Click **Restore** to reset all configuration settings to their default values. All of the settings you have saved will be lost when the default settings are restored.

You can restore the following factory default values:

- The default login **Password:** admin
- The default **IP Address:** 192.168.0.1
- The default **Subnet Mask:** 255.255.255.0
- The default SSID: TP-LINK_M5360_XXXXXX (XXXXXX is the last 6 characters of the device's MAC address). Please refer to the label on the rear cover of the device for the default SSID.
- The default Wireless Password: Please refer to the label on the rear cover of the device for the default wireless password.

4.4.4.3. Modify Password

It is strongly recommended that you change the factory default login password of the device.

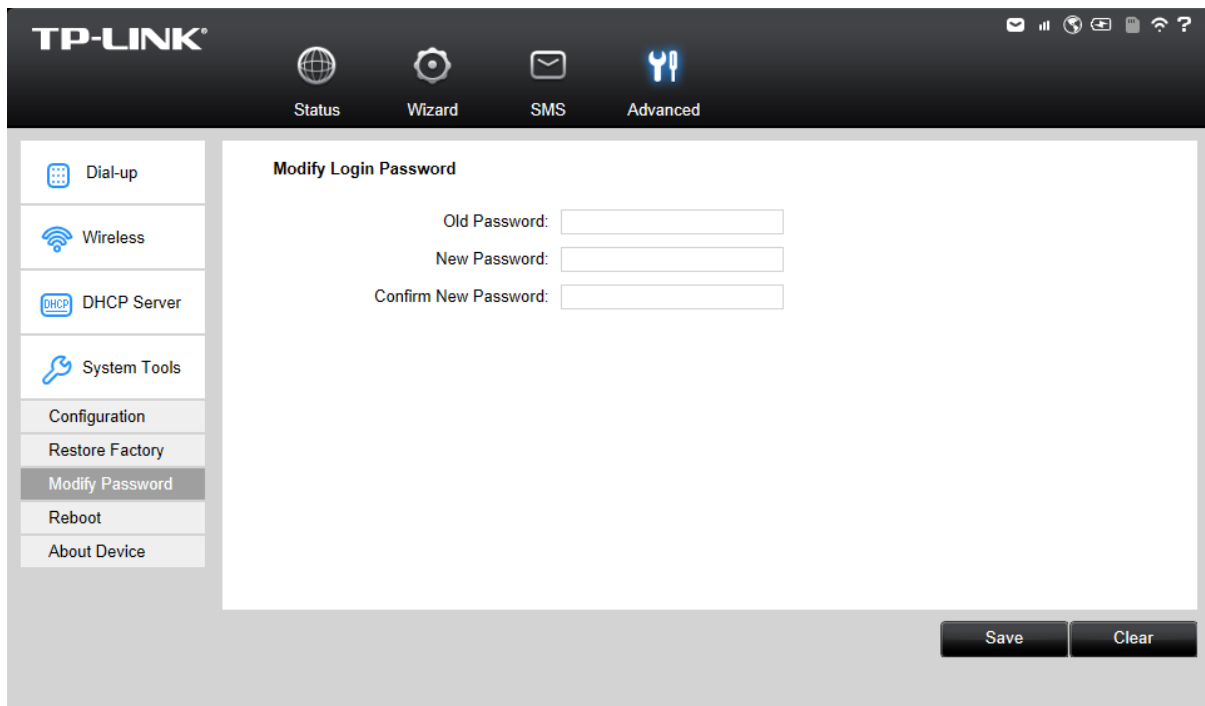

Figure 4-29 Modify Login Password

- **Old Password:** The old password that is used to log in of the device.
- **New Password:** The new password you want to set for the login of the device.
- **Confirm New Password:** Enter the new password again for confirmation.

Click **Save** when you finish the setting.

Click **Clear** to clear all the values you have already set, and then you can reset it.

 **Note:**

The new password must not exceed 14 characters in length and not include any spaces.

4.4.4.4. Reboot

Figure 4-30 Reboot the Device

- **Reboot the Device:** Click **Reboot** to get the device rebooted and the saved settings to take effect.

4.4.4.5. About Device

This page displays the related information about this device, including Model, Firmware Version, Hardware Version, MAC Address, and IMEI.

Figure 4-31 Device Information

- **Model:** The Model of the device.
- **Firmware Version:** The current firmware version
- **Hardware Version:** The current hardware version.
- **MAC Address:** The physical address of the device. The value is read-only thus could not be changed.
- **IMEI:** International Mobile Equipment Identity. Composed of 15 digits, it is unique and thus used to identify individual mobile equipment.

Appendix A: FAQ

T1. What should I do if I cannot access the Internet?

Method 1: Check the ISP parameters.

- 1) Type http://192.168.0.1 in a Web browser, and press Enter. Then enter the default login password: admin.
- 2) Choose “Advanced -> Dial-up -> Profile Management” to check the ISP parameters.
- 3) If the ISP parameters are incorrect, create a new profile with correct ISP parameters.

Method 2: If the “PIN REQUIRED” is displayed on the screen, please try to verify the PIN code.

- 1) Type http://192.168.0.1 in a Web browser, and press Enter. Then enter the default login password: admin.
- 2) Choose “Advanced -> Dial-up -> PIN Management”, and enter the correct PIN code according to your operator.

Method 3: If the “NO SERVICE” is displayed on the screen, please verify the following situations.

- 1) Please verify your card is a WCDMA or GSM SIM card.
- 2) Please verify you are in the service area of the ISP.

Method 4: Please verify your SIM card has enough tariff.

Method 5: Please verify your computer or phone obtains the IP address automatically.

Method 6: If the above methods fail, please feel free to contact our technical support.

T2. What should I do if I cannot log into the web-management page of M5360?

Method 1: Please verify your computer or phone obtains the IP address automatically.

Method 2: Please verify you type the right IP address (http://192.168.0.1) in a Web browser.

T3. What if I forget my login password?

- 1) Restore M5360 to its factory defaults;
- 2) Log into M5360 with the default user name and password: admin. And then reconfigure M5360 following the QIG.

T4. How could I restore M5360 to its factory defaults?

Method 1:

With M5360 powered on, use a pin to press the **RESET** button in the interior panel.

Method 2:

Get logged in to the web-based management page of M5360, and then go to **Advanced -> Tools -> Restore Factory** and click **Restore**.

 **Note:**

Once M5360 is reset, all the current configurations will be lost and you need to reconfigure it.

Appendix B: Configuring the PC

In this section, we'll introduce how to install and configure the TCP/IP correctly in Windows XP. First make sure your Ethernet Adapter is working, refer to the adapter's manual if needed.

1. Install TCP/IP component

- 1) On the Windows taskbar, click the **Start** button, point to **Settings**, and then click **Control Panel**.
- 2) Click the **Network and Internet Connections** icon, and then click on the **Network Connections** tab in the appearing window.
- 3) Right click the icon that showed below, select Properties on the prompt page.

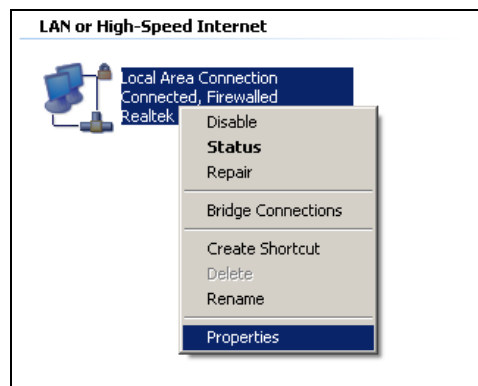

Figure B-1

- 4) In the prompt page that showed below, double click on the **Internet Protocol (TCP/IP)**.

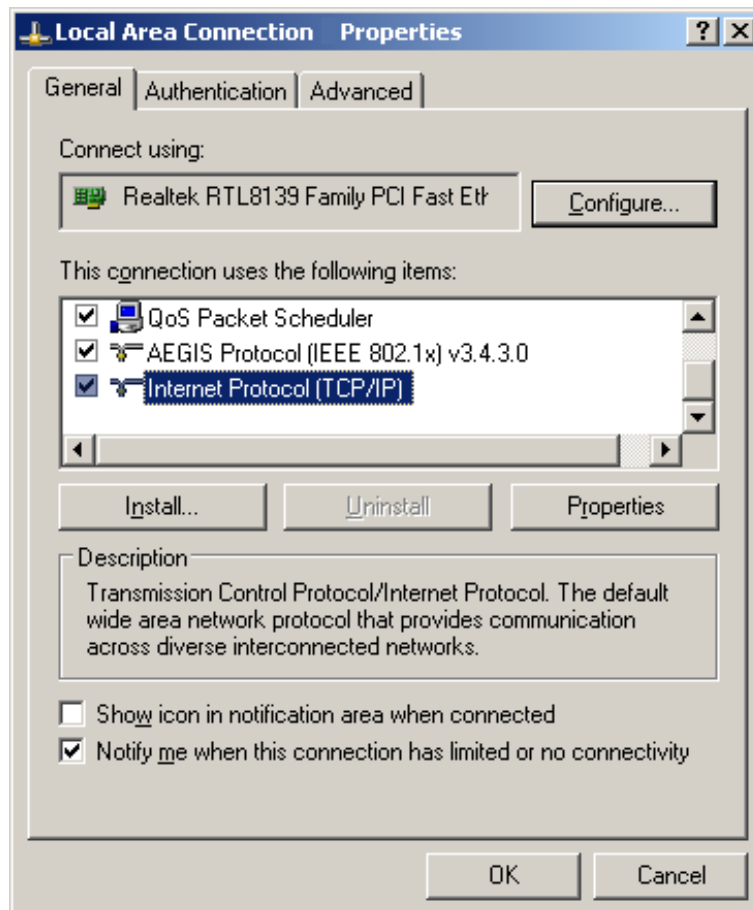

Figure B-2

- 5) The following **TCP/IP Properties** window will display and the **IP Address** tab is open on this window by default.

You have two ways to configure the **TCP/IP** protocol below:

➤ **Setting IP address automatically**

Select **Obtain an IP address automatically**, Choose **Obtain DNS server automatically**, as shown in the Figure below:

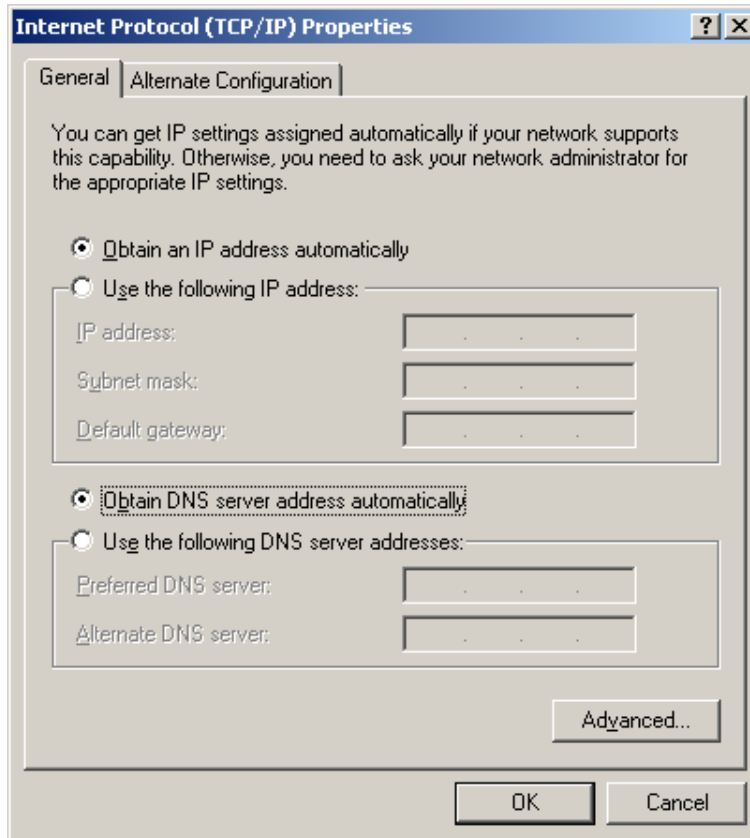

Figure B-3

➤ **Setting IP address manually**

- Select **Use the following IP address** radio button. And the following items available
- If the Device's LAN IP address is 192.168.0.1, type IP address is 192.168.0.x (x is from 2 to 254), and **Subnet mask** is 255.255.255.0.
- Type the Device's LAN IP address (the default IP is 192.168.0.1) into the **Default gateway** field.
- Select **Use the following DNS server addresses** radio button. In the **Preferred DNS Server** field you can type the DNS server IP address, which has been provided by your ISP.

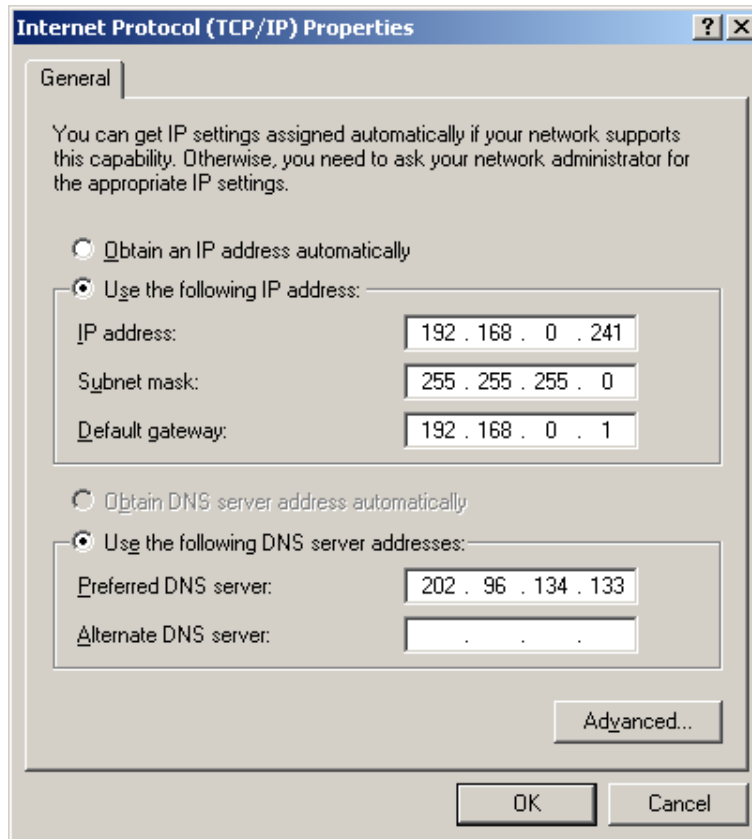

Figure B-4

- 6) Now click **OK** to keep your settings.

Appendix C: Specifications

General	
Standards	IEEE 802.11n, IEEE 802.11b, IEEE 802.11g
Network Type	3G: HSPA+/HSPA/UMTS 2G: EDGE/GRPS/GSM
Certification	CE, FCC, RoHS
Dimension	100mm×44.3mm×28.5mm (W x D x H)
Interface	One Micro USB port, One USB 2.0 port, One SIM card slot, One Micro SD Memory card slot
Button	Power button, RESET button
OLED Display	<p> Indicates the current network option: 2G or 3G, and signal strength of current network.</p> <p> Indicates the successful network connection.</p> <p> Means the automatic mode of Internet connection.</p> <p> Means the manual mode of Internet connection.</p> <p>WiFi Displays the Wi-Fi status and the amount of current wireless clients.</p> <p> Indicates that there is un-read short message(s) and the amount of un-read messages.</p> <p> Displays the remaining battery power.</p> <p>0.0B/s ↓ Indicates the download speed of current data transmission.</p> <p>0.0B/s ↑ Indicates the upload speed of current data transmission.</p> <p>0.0B Indicates the data used in total.</p>
Power Supply	5200m Internal Rechargeable Battery 5VDC/1.0A External Power Adapter
Wireless	
Band	WCDMA: 900/2100Mhz GSM: 850/900/1800/1900Mhz(WWAN)
Data Rate	Download: 21.6Mbps Upload: 5.76Mbps
Frequency(WIFI)	2.4-2.4835GHz(WLAN)
EIRP	WIFI<20dBm;WCDMA(2100/900):N/A;GSM(850/900)<38.5dBm; GSM(1800/1900)<33dBm
Security	64/128-bit WEP, WPA-PSK/WPA2-PSK
Antenna	Internal Antenna
Environment	
Temperature	Operating : 0℃~35℃
	Storage: -20℃~60℃
Humidity	Operating: 0% ~ 75% RH, Non-condensing
	Storage: 0% ~ 75% RH, Non-condensing

Appendix D: Glossary

- **802.11n** - 802.11n builds upon previous 802.11 standards by adding MIMO (multiple-input multiple-output). MIMO uses multiple transmitter and receiver antennas to allow for increased data throughput via spatial multiplexing and increased range by exploiting the spatial diversity, perhaps through coding schemes like Alamouti coding. The Enhanced Wireless Consortium (EWC) [3] was formed to help accelerate the IEEE 802.11n development process and promote a technology specification for interoperability of next-generation wireless local area networking (WLAN) products.
- **802.11b** - The 802.11b standard specifies a wireless networking at 11 Mbps using direct-sequence spread-spectrum (DSSS) technology and operating in the unlicensed radio spectrum at 2.4GHz, and WEP encryption for security. 802.11b networks are also referred to as Wi-Fi networks.
- **802.11g** - specification for wireless networking at 54 Mbps using direct-sequence spread-spectrum (DSSS) technology, using OFDM modulation and operating in the unlicensed radio spectrum at 2.4GHz, and backward compatibility with IEEE 802.11b devices, and WEP encryption for security.
- **DHCP (Dynamic Host Configuration Protocol)** - A protocol that automatically configure the TCP/IP parameters for the all the PC(s) that are connected to a DHCP server.
- **ISP (Internet Service Provider)** - A company that provides access to the Internet.
- **SSID - A Service Set Identification** is a thirty-two character (maximum) alphanumeric key identifying a wireless local area network. For the wireless devices in a network to communicate with each other, all devices must be configured with the same SSID. This is typically the configuration parameter for a wireless PC card. It corresponds to the ESSID in the wireless Access Point and to the wireless network name.
- **WEP (Wired Equivalent Privacy)** - A data privacy mechanism based on a 64-bit or 128-bit shared key algorithm, as described in the IEEE 802.11 standard.
- **Wi-Fi** - A trade name for the 802.11b wireless networking standard, given by the Wireless Ethernet Compatibility Alliance (WECA, see <http://www.wi-fi.net>), an industry standards group promoting interoperability among 802.11b devices.
- **WLAN (Wireless Local Area Network)** - A group of computers and associated devices communicate with each other wirelessly, which network serving users are limited in a local area.
