## Disclaimer and Limitation of Liability

All information herein is either public information or is the property of and owned solely by TAGSYS who shall have and keep the sole right to file patent applications or any other kind of intellectual property protection in connection with such information.

Nothing herein shall be construed as implying or granting to you any rights, by license, grant or otherwise, under any intellectual and/or industrial property rights of or concerning any of TAGSYS' information.

This document can be used for informational, non-commercial, internal and personal use only provided that:

- The copyright notice below, the confidentiality and proprietary legend and this full warning notice appear in all copies.
- This document shall not be posted on any network computer or broadcast in any media and no modification of any part of this document shall be made.

Use for any other purpose is expressly prohibited and may result in severe civil and criminal liabilities.

The information contained in this document is provided "AS IS" without any warranty of any kind. Unless otherwise expressly agreed in writing, TAGSYS makes no warranty as to the value or accuracy of information contained herein. The document could include technical inaccuracies or typographical errors. Changes are periodically added to the information herein. Furthermore, TAGSYS reserves the right to make any change or improvement in the specifications data, information, and the like described herein, at any time.

Therefore TAGSYS assumes no liability and is not responsible for customer applications or product or software which includes TAGSYS products.

TAGSYS HEREBY DISCLAIMS ALL WARRANTIES AND CONDITIONS WITH REGARD TO THE INFORMATION CONTAINED HEREIN, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT. IN NO EVENT SHALL TAGSYS BE LIABLE, WHETHER IN CONTRACT, TORT OR OTHERWISE, FOR ANY INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER INCLUDING BUT NOT LIMITED TO DAMAGES RESULTING FROM LOSS OF USE, DATA, PROFITS, REVENUES, OR CUSTOMERS, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF INFORMATION CONTAINED IN THIS DOCUMENT.

TAGSYS does not and shall not warrant that this product/system/equipment will be resistant to all possible attacks, and shall not incur, and disclaims, any liability in this respect. Even if each product is compliant with current security standards in force on the date of their design, security mechanisms' resistance necessarily evolves according to the state-of-the-art in security and notably under the emergence of new attacks. Under no circumstances shall TAGSYS be held liable for any third party actions, and in particular in case of any successful attack against systems or equipment incorporating TAGSYS products.

TAGSYS disclaims any liability with respect to security for direct, indirect, incidental or consequential damages that result from any use of its products. It is further stressed that independent testing and verification by the person using the product is particularly encouraged, especially in any application in which defective, incorrect, or insecure functioning could result in damage to persons or property, denial of service, or loss of privacy.

# Read This First

Welcome to the TAGSYS range of products operating at the 13.56 MHz frequency. This range of products is used to implement high-quality RFID systems for demanding applications.

This document provides information about how to install and use the Medio L40 reader.

## Audience

This document requires familiarity with RFID technology. It is intended for people in charge of installing and using the product.

## Conventions

Symbol	Meaning
	<b>CAUTION:</b> A note that advises users that a specific action could result in the loss of data or damage the hardware. <b>WARNING:</b> A note that advises users that a specific action may result in physical harm.
	A note that provides additional information that helps the user perform a task or obtain the best performance from the product.

## If you need assistance

Please contact your nearest TAGSYS sales representative or the TAGSYS welcome desk at:

Telephone: +33 (0) 4 42 18 89 00

Fax: +33 (0) 4 42 18 89 01

E-Mail: [info@tagsysrfid.com](mailto:info@tagsysrfid.com)

Website: <http://www.tagsysrfid.com>

## Contact for Comments

We welcome your feedback to help us provide high quality documentation.

For technical comments, please contact our welcome desk:

Telephone: +33 (0) 4 42 18 89 00

Fax: +33 (0) 4 42 18 89 01

E-Mail: [info@tagsysrfid.com](mailto:info@tagsysrfid.com)

Please remember to quote the Document Reference Number [DOC14467A7](#), your job title and your company.

## Quality Issues

TAGSYS implements stringent quality controls at all stages of its manufacturing process. However, should you find a defect with this product, please notify your TAGSYS Quality Service representative using the dedicated Product Return Form.

Telephone: +33 (0) 4 42 18 89 36

Fax: +33 (0) 4 42 18 89 01

# 1 For Your Safety

## 1.1 General Use

The Medio L40 reader is designed to be reliable and to provide continuous, trouble-free service. Please observe the following general tips:

- Take care not to scratch the device. Keep the device clean. When working with the device, use only TAGSYS-approved accessories.
- This device is not waterproof and should not be exposed to rain or moisture. Under extreme conditions, water may enter the circuitry.
- Protect the device from extreme temperatures. For example, do not place the device in a windowed area where the sun may cause extreme temperatures, and keep it away from heaters and other heat sources.
- Do not store or use the device in any location that is extremely dusty, damp, or wet.
- Use a soft, damp cloth to clean the device. If the surface of the device becomes soiled, clean it with a soft cloth moistened with a diluted window-cleaning solution.

## 1.2 Care and Maintenance

This device should be handled with care. The suggestions below will increase the lifetime of this device.

- Keep the device and all parts and accessories out of the reach of small children.
- Keep the device dry. Precipitation, humidity and liquids contain minerals that will corrode electronic circuits.
- Do not use or store the device in dusty, dirty areas. Its moving parts can be damaged.
- Do not store in hot areas. High temperatures can shorten the life of electronic devices, damage batteries and warp or melt certain plastics.
- Do not store in cold areas. When the device warms up (to its normal temperature), moisture can form inside the device, which may damage electronic circuit boards.
- Do not attempt to open the device. Non-professional handling of the device may damage it and will void the TAGSYS warranty.
- Handle the device with care. Shock and vibration may break internal circuit boards.
- Do not clean the device with harsh chemicals, cleaning solvents or strong detergents. Gently wipe the device with a soft cloth slightly dampened in a mild soap-and-water solution.
- Do not paint the device. Paint may clog the device's moving parts and prevent proper operation. Paint with metallic contents may limit device performances.
- If the device or any accessory are not working properly, take it to your nearest qualified TAGSYS representative.

## **1.3 Important Safety Information**

### **1.3.1 Operating Environment**

When connecting the device or any accessory to another device, read its user's guide for detailed safety instructions. Do not connect incompatible products.

As with all RF equipment, users are advised that the equipment should only be used in its normal operating mode described in this document.

## 2 Certification

### 2.1 Occupational Health and Safety Notices

TAGSYS Products have been designed not to exceed the limits given in the European Standard EN 50364 "Limitation of human exposure to electromagnetic fields from devices used in Electronic Article Surveillance (EAS), Radio Frequency Identification (RFID) and similar applications" in conjunction with the European Standard EN 50357 describing how to evaluate the exposure level.

It is the responsibility of the TAGSYS Partner to install the Medio L40 as described in TAGSYS Documentation and with the appropriate antennas.

Modification of any TAGSYS System is prohibited without the written consent of TAGSYS. Unauthorized modifications may void the conformity of the equipment to safety standards and will void the TAGSYS warranty.

An RF fields survey has been carried out on all the TAGSYS System components, in accordance with AS/NZS 2771.1: Radio Frequency Radiation, Part 1. According to this standard the maximum allowable RF exposure levels (non-occupational) at 3 kHz to 300 GHz are 200  $\mu\text{W}/\text{cm}^2$ .

### 2.2 Regulatory Notices

An RFID system typically composed of an RF emission device such as the Medio L40 is subject to national regulations that may differ by country.

One important item to consider is the maximum permissible magnetic field intensity at a distance of 10 meters from the antenna that must not exceed 42  $\text{dB}\mu\text{A}/\text{m}$  in Europe and 38  $\text{dB}\mu\text{A}/\text{m}$  in US.

The Medio L40 meets these limits.

It is the responsibility of the TAGSYS Partner to install the Medio L40 as described in this User's Guide or in TAGSYS Documentation.

#### 2.2.1 In Europe (CE and RTTE Directives)

The Medio L40 complies (CE Declaration of Conformity granted) with the European EMC directive.

The Medio L40 complies with the requirements of the Telecommunication Terminal Equipment Act (FTEG) and the RTTE Directive 1995/5/EC.

It is the responsibility of the TAGSYS Reseller to install the Medio L40 as described in this Reference guide or TAGSYS Documentation.

Any modification of the Medio L40 is prohibited without the written consent of TAGSYS. Unauthorized modifications may void the conformity of the equipment to CE and RTTE Directives and will void the TAGSYS warranty.

If a Medio L40 is further integrated in a different product, it is the responsibility of the manufacturer of this complementary product to obtain the required approvals for this product.

#### 2.2.2 FCC ID Cross Reference Table

It is the responsibility of the TAGSYS Partner to install the Medio L40 as described in the table below, taking care of only installing the right antenna configuration with the right power settings.

**Table 1: Medio L40 FCC ID Cross reference Table**

Antenna	Outside Dimension	Channel Setting	Multiplexer	Max. Output Power	Power Supply	FCC ID
Aero LB Antenna	250X250	Single Channel	Single RF Port	5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40
Aero LC Antenna	400X500	Single Channel	Single RF Port	5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40
L-SA3 Antenna	250X330	Single Channel	Single RF Port	1.5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40
L-SA4 Antenna	220X220	Single Channel	Single RF Port	1W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40
MAT Antenna	130X480	Single Channel	Single RF Port	5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40

To comply with band edge regulation, when used in vertical upright position the Aero LB and Aero LC antennas can read tags in the following RFID uplink protocols configurations

**Table 2: Medio L40 FCC ID Cross reference Table**

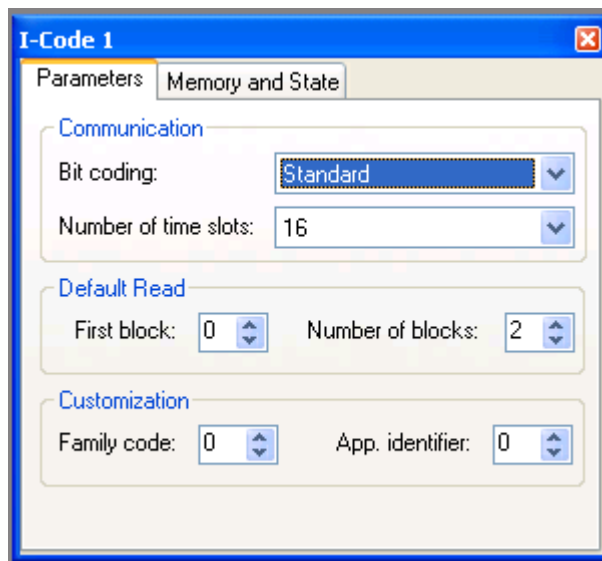

Antenna	Outside Dimension	Channel Setting	Multiplexer	Max. Output Power	Power Supply	FCC ID
Aero LB Antenna	250x250	Quad-Channel	Active	5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40
Aero LC Antenna	400X500	Quad-Channel	Active	5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40
MAT Antenna	130x480	Quad-Channel	Active	5W 	GS40A24-P1J A2-50S18R-V FRA045E-S24-4	QHKMEDIOL40

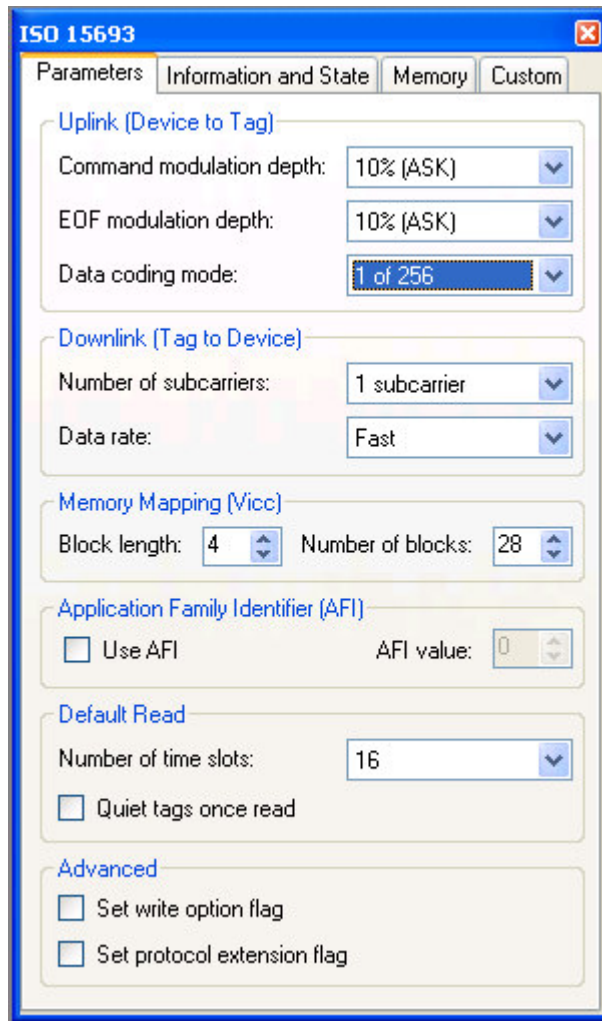

To comply with band edge regulation, when used in vertical upright position the Aero LB antenna can read tags in the following RFID uplink protocols configurations

To comply with band edge regulation, when reading ISO15693 tags TR-CAU antenna can read tags in the following RFID uplink protocols configurations

In I-Code 1 (C270) parameters window set the uplink parameters as follow:  
Bit Coding: "Standard" (1 out of 256 pulse)

In ISO15693 Parameters window set the uplink parameters as follow:

Command modulation depth: 10% (ASK)

EOF modulation depth: 10% (ASK)

Data coding mode: 1 of 256

### 2.2.3 In USA (FCC Directive)

The Medio L40 has been designed to comply with Part 15 of the FCC Rules. Furthermore typical configurations listed section [2.2.2 FCC ID Cross Reference Table](#) have been successfully tested with Part 15 of the FCC rules (FCC ID Numbers are listed on all system-mounted TAGSYS Antennas).

#### Medio L40

##### *WARNING TO USERS IN THE UNITED STATES*

FEDERAL COMMUNICATIONS COMMISSION (FCC) RADIO

INTERFERENCE STATEMENT 47 CFR Section 15.105(b)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different to that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

#### **NO UNAUTHORIZED MODIFICATIONS**

47 CFR Section 15.21

**CAUTION:** This equipment may not be modified, altered, or changed in any way without signed written permission from TAGSYS SA. Unauthorized modification may void the equipment authorization from the FCC and will void the TAGSYS warranty.

#### **ANTENNA REQUIREMENT**

47 CFR Section 15.203

**CAUTION:** This equipment must be professionally installed. The installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this part are not exceeded. Non-professional installation or installation of the equipment with an improper antenna may void the equipment authorization from the FCC and will void the TAGSYS warranty.

Operation is subject to the following two conditions: (1) The system devices may not cause harmful interference, and (2) The system devices must accept any interference received, including interference that may cause undesired operation.

## 2.2.4 In Canada

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

This radio transmitter (IC: 7562A-MEDIOL40) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Le présent émetteur radio (IC: 7562A-MEDIOL40) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

The Medio L40 device has been designed to operate with the antennas listed below, and having a maximum gain of -25 dBi. Antenna not included in this list or having a gain greater than -25 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms.

Aero LB, Aero LC, LSA3, LSA4 and Mat Antenna antennas meet this requirement with a gain less than -25dBi.

Le lecteur Medio L40 a été conçu pour fonctionner avec les antennes citées ci-dessous et ayant un gain maximum de -25dBi. Les antennes non inclus dans cette liste ou ayant un gain supérieur à -25dBi sont strictement interdites pour un usage avec ce lecteur. L'impédance de l'antenne doit être de 50 ohms.

Les antennes Aero LB, Aero LC, LSA3, LSA4 et Mat Antenna satisfont à cette exigence avec un gain inférieur à -25dBi.

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

## 2.3 RoHS and WEEE Directives

### 2.3.1 RoHS (Restriction of the uses of certain Hazardous Substances)

TAGSYS certifies that this product is compliant with the European Directive 2002/95/EC for the restriction in Electric and Electronic Equipments (RoHS) of the use of the following hazardous substances:

- Lead

- Mercury
- Cadmium
- Hexavalent Chromium
- Polybrominated biphenyl flame retardants
- Polybrominated diphenyl ether flame retardants

This declaration is based on information provided by our suppliers and subcontractors.

### 2.3.2 WEEE (Waste Electrical and Electronic Equipment)

This product bears the selective sorting symbol for waste electrical and electronic equipment (WEEE). This means that this product must be handled pursuant to European Directive 2002/96/EC in order to be recycled or dismantled to minimize its impact on the environment. For further information, please contact your local or regional authorities.

---

## 3 Overview

---

The Medio L40 is a long-range 13.56MHz RFID reader intended for RFID applications requiring a high performance, long range RFID infrastructure.

The L40 uses advances in Digital Signal Processing (DSP) and RF Front End technology to achieve breakthrough performance in read range and read speed with industry leading signal to noise ratio. The L40 has been specifically designed to operate in noisy environments such as manufacturing plants and distribution facilities while maintaining the highest levels of data integrity for item level track and trace, inventory management and security. Designed as a network device, the L40 conserves critical network bandwidth by filtering tag data to remove redundancies before transmitting to enterprise systems.

With breakthrough sensor technology and self diagnostic capability, the L40 is the industry's first self-correcting intelligent RFID reader. The L40 can be remotely managed and administered to ensure you get the highest levels of performance from your RFID infrastructure. The L40 and e-connectware, TAGSYS' comprehensive set of management and administrative tools, create an intelligent platform to allow you to manage your RFID infrastructure just as you do a voice or data network to enable scalable, secure and persistent RFID Quality of Service.

### 3.1 Key Features

**Table 3: Medio L40 Key Features**

Description	Medio L40
Operating Frequency	13.56 MHz
Chip Compatibility	C210 C220 ISO15693 ISO18000-3 Mode 1 C370 (I-Code SLI) C370L (I-Code SLI-L) C370S (I-Code SLI-S) C270 (I-Code 1) I-Code ePC I-Code UID Upgradable to the anticipated EPCglobal HF Gen2 Standard
Number of channels	4
RF Output Power	500mW to 5W
RF Output Tolerance	+/- 5% at 5W
Communication Interfaces	RS232 (up to 115200 bauds) USB 2.0 Full Speed Compatible 10/100 Ethernet
Communication Protocols	TAGSYS StxNG Telnet & Serial Console Standalone Mode Heartbeat
I/O Ports (GPIO)	2 Inputs/Outputs
Remote Monitoring	Many health indicators are remotely accessible, such as : <ul style="list-style-type: none"> <li>. System uptime,</li> <li>. Read/Write count (per channel),</li> <li>. RF power amplifiers consumption,</li> <li>. RF power amplifiers operating temperature,</li> <li>. Antennas tuning status,</li> <li>. Real-time Raw signal capture, ...</li> </ul>
Firmware	Remotely upgradeable

## 3.2 Delivery

The Medio L40 reader kit contains the following items:

**Table 4: Package Contents**

Quantity	Item
1	Medio L40 reader
2	CD-ROMs : <ul style="list-style-type: none"> <li>• Medio L40 User's Guide &amp; Medio L400/L40 Designer's guide</li> <li>• USB Drivers for Windows® 2000, 2003, XP, Vista &amp; Seven</li> <li>• Tagsys Explorer software (reader configuration and upgrade on Windows® 9x, NT®, 2000, XP, Vista &amp; Seven platforms)</li> <li>• Software development kits (SDKs) including documentation and sample codes (Win32 Native DLL, .NET component, JAVA archive)</li> </ul>
1	Welcome Letter / Product Return Form

## 3.3 Physical Description

### 3.3.1 Front Panel

The front panel is dedicated to RF connectors.

**Figure 1: Front panel**

- **RF connectors and status LEDs :**

The Medio L40 can handle up to 4 antennas. The connectors provided are SMA. RF output power is software selectable from 500mW to 5W in 250mW increments.

One red LED indicates current RF power status.

Four green LED indicate current RF channel selected.

- **Extension connectors :**

For TAGSYS Internal use only.

### 3.3.2 Rear Panel

The rear panel is dedicated to the power supply and communication connectors.

Figure 2: Rear panel

- **10/ 100 Ethernet Connector**

RJ 45 connector (Please refer to the Ethernet network cabling rules).

- **USB Connector**

USB connector type B. Use standard A/B cable to connect to the host (not included in the package).

- **RS-232 Connector**

RS232 protocol has been implemented through a RJ 45 connector. A RJ45 to DB9 adapter is needed to connect to the host. Please see section [6.2 RS232 Interface](#) for more details.

- **GPIO connector:**

A Male connector on the reader's rear panel implements 2 digital inputs/outputs (N-Channel Open Drain). Please see section [6.3 GPIO Connector](#) for more details.

- **24VDC Connector**

A power supply connector. Please see section [4.2 Cabling Requirements](#) for more details

- **Synchronization Connector**

For TAGSYS Internal use only.

- **Reset Button**

This button allows restoring the reader to its factory settings. Please see section [0 Restoring Factory Configuration](#) for more details.

# 4 Installation

This section describes how to install the Medio L40 reader.

## 4.1 Mechanical Aspects

The Medio L40 is delivered six slots allowing easily fastening off the reader on your system. Please see section [Erreur ! Source du renvoi introuvable. Mechanical Data](#) for more details.

## 4.2 Cabling Requirements

2-ways Male connector mounted on board can accept these references of 2-ways female connectors (2 ways, 3.81mm):

- **Phoenix Contact** references:
  - 1851041
  - 1850660
  - 1803578
- **Würth Electronic** Reference:
  - 691361300002 (Serie 361 WR-TBL)

Please refer to section [3.3.1 Front Panel](#) to identify the power supply connector.

- Connect your power supply to the provided 2-ways connector respecting the wiring described above.

Before plugging the connector to the reader, verify the polarity. Reverse polarity may damage the reader.

- Connect the reader to the host system using one of the available interfaces (USB, RS-232 or Ethernet),
- Connect one or several antennas to reader channels.
- Connect the power supply to the mains supply.

	<p>For USA and countries under FCC Part 15 regulation only use the Antenna and Power Supply Unit combination tested and specified in the cross reference table of the corresponding Medio L40 (see section <a href="#">2.2.2 FCC ID Cross Reference Table</a>). The use of any other combination of reader version, antenna type and Power Supply Unit is subject to obtaining a specific FCC ID either by TAGSYS or by its Qualified Partner under TAGSYS supervision.</p> <p>For other countries, only use Power Supply Units GS40A24-P1J or A2-50S118R-V or FRA045E-S24-4. If using any other Power Supply Unit , the selected Power Supply Unit must meet all following criteria:</p> <ul style="list-style-type: none"><li>• UL Listed UL60950 and CB Certified for Information Technology Equipment</li><li>• Class B Emission CISPR22 EN55022</li><li>• CE marked</li><li>• LPS</li></ul>
---	--

## 4.3 Using USB Interface

### 4.3.1 Installing USB Drivers

At first connection to the PC USB port, Windows® will detect the TAGSYS Medio L40 reader and will ask to install a driver. The USB drivers are located into the USB Drivers folder on the product CD-ROM.

Two drivers will be installed:

- The USB device driver.
- The virtual COM port (VCP) driver. The VCP driver emulates a standard PC COM port.

After installation of the drivers, power up and connect your Medio L40 to a spare USB port on your PC to launch the Windows Found New hardware Wizard

- Select “No, not this time” and click next to proceed with the installation.
- Select “Install from a list or specific location (Advanced)” and then click “Next”.
- Select “Search for the best driver in these locations” and click the Browse button to select the TAGSYS USB Drivers folder on the Product CR-Rom. Then click “Next” to proceed.
- Windows should then display a message indicating that the installation was successful. Click Finish to complete the installation.

Repeat the procedure above when Windows® asks for drivers again (virtual com port).

To confirm that the installation has completed successfully, open the Device Manager and select “View > Devices by type”. The TAGSYS Medio L40 reader now appears as an additional COM port.

Drivers for Windows 98 are not provided. They are available upon request (please contact TAGSYS).

### 4.3.2 Using the USB interface

Once the USB drivers are properly installed, the reader appears as a new COM port. Simply connect to this COM port at 115200 Bauds to access the reader.

Virtual COM port speed is always 115200 Bauds and can not be changed.

## 4.4 Using RS-232 Interface

RS-232 interface does not require specific drivers' installation. Default RS-232 speed is 115200 bauds, and can be modified by software. Supported baud rates are 4800 bauds, 9600 bauds, 19200 bauds, 38400 bauds, 57600 bauds and 115200 bauds.

Please see section [6.2 RS232 Interface](#) for more details.

Beware to plug your RS-232 interface on the correct RJ45 connector (i.e. RS232)

## 4.5 Using 10/100 Ethernet Interface

10/100 Ethernet interface does not require specific drivers installation. Default TCP/IP configuration is the following:

**Table 5: Default TCP/IP configuration**

Parameter	Value
<b>DHCP</b>	Active (The reader will try to automatically configure using DHCP. If it fails, the reader will use the following fallback configuration)
<b>Fallback IP Address</b>	169.254.0.100
<b>Fallback Netmask</b>	255.255.0.0
<b>Fallback Gateway</b>	169.254.0.1

The MAC address of each reader is written on a sticker positioned at the bottom right corner of the reader.

The green Ethernet Activity LED acts as well as the Ethernet Link LED.

Green LED constantly ON signals that the reader is connected to an Ethernet network. Green LED starts blinking to signal activity on the Ethernet with the L40 reader.

Orange LED is only used to provide feedback on the reader being powered up or not.

Beware to plug your Ethernet interface on the correct RJ45 connector (i.e. Ethernet)

Either straight or crossed Ethernet cable can be used, as the reader auto-detect the cable type.

All cables must be correctly shielded. The shielding effectiveness of the material used should be of good performance (60 dB minimum), especially in the frequency range of 10 to 60 MHz. The addition of ferrite clamps near the reader unit will increase common mode rejection. TAGSYS antenna products are delivered with good performance shielded coaxial cables with 6 ferrite beads already mounted to increase shielding effectiveness at low frequencies.

## 4.6 Restoring Factory Configuration

To restore factory configuration, please follow these steps:

- Turn reader off.
- Press and hold the “Reset” button.
- Turn reader on.
- After 3 seconds, release the “Reset” button.

Default configuration is now restored.

## 4.7 Running Tagsys Explorer for the First Time

The Medio L40 reader is delivered with the Tagsys Explorer software tool intended to easily setup the reader, test it and perform RFID reading and writing operations. In addition, Tagsys Explorer can be used to display additional information about the reader (Firmware and hardware versions and revisions) as well as to upgrade reader firmware. This section describes how to start with Tagsys Explorer.

### 4.7.1 Installing Tagsys Explorer

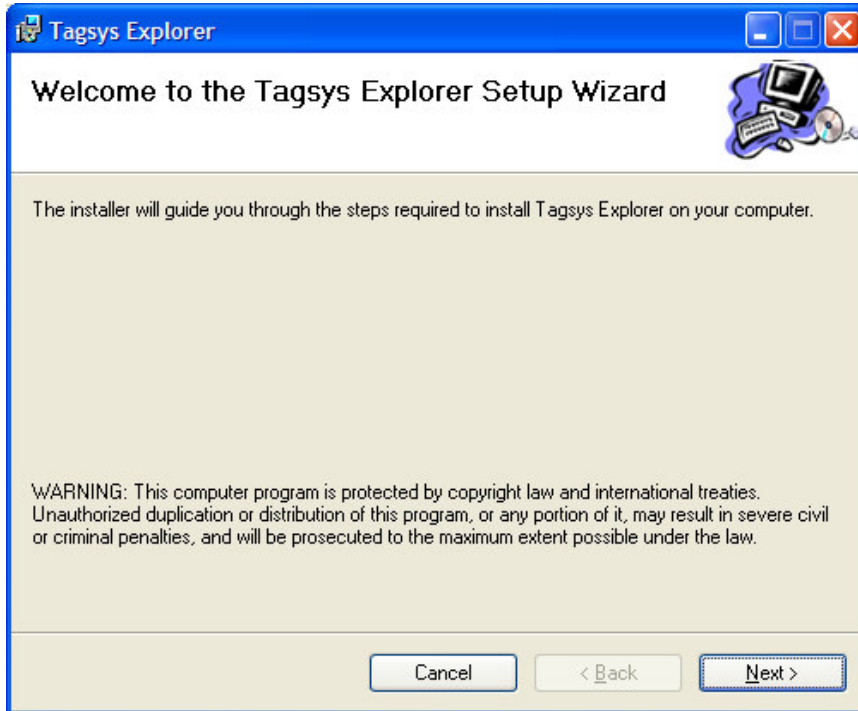

Tagsys Explorer is based Microsoft's .NET technology and requires the following minimum system configuration:

- IBM-PC compatible computer with a 400 MHz or higher processor (1 GHz recommended) ;
- Microsoft® Windows 2000 SP 3, Windows Server 2003, Windows XP SP 2, Windows Vista or windows Seven operating system recommended. Microsoft® Windows 98, Windows 98 SE, Windows ME legacy operating systems are supported but not recommended ;
- Microsoft® .NET Framework version 2.0 or 3.0 ;
- 128 megabytes (MB) of RAM (256 MB recommended) ;
- 300 MB of free hard disk space. This includes .NET Framework requirements ;
- 1024x768 16-bits (1280x1024, 32-bits recommended) ;
- CD-ROM drive ;
- 1 serial port and/or 1USB port and/or 1 Ethernet port.

To install the Tagsys Explorer software on your PC:

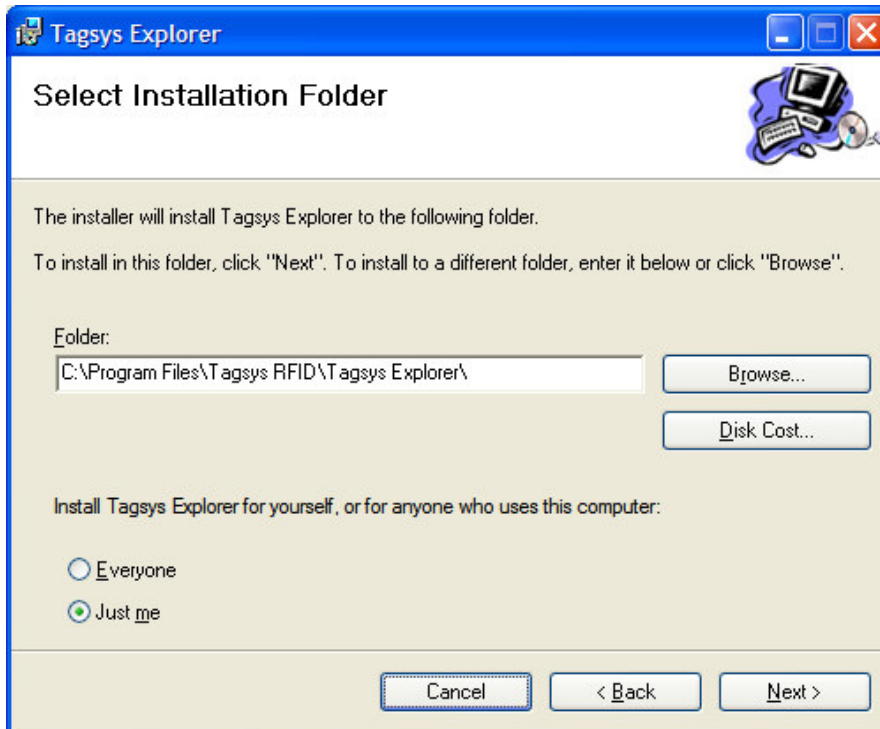

1. Insert the product CD-ROM into the disk drive on your PC.
2. In Windows Explorer, open the CD-ROM drive window and run “Tagsys Explorer Installer.msi” in “Tagsys Explorer” folder.

**Figure 3: Setup Welcome window**

3. Click Next to view the license agreement, then click Next again if you agree with the terms.
4. The Destination Location window is displayed. Select the folder where Tagsys Explorer will be installed.

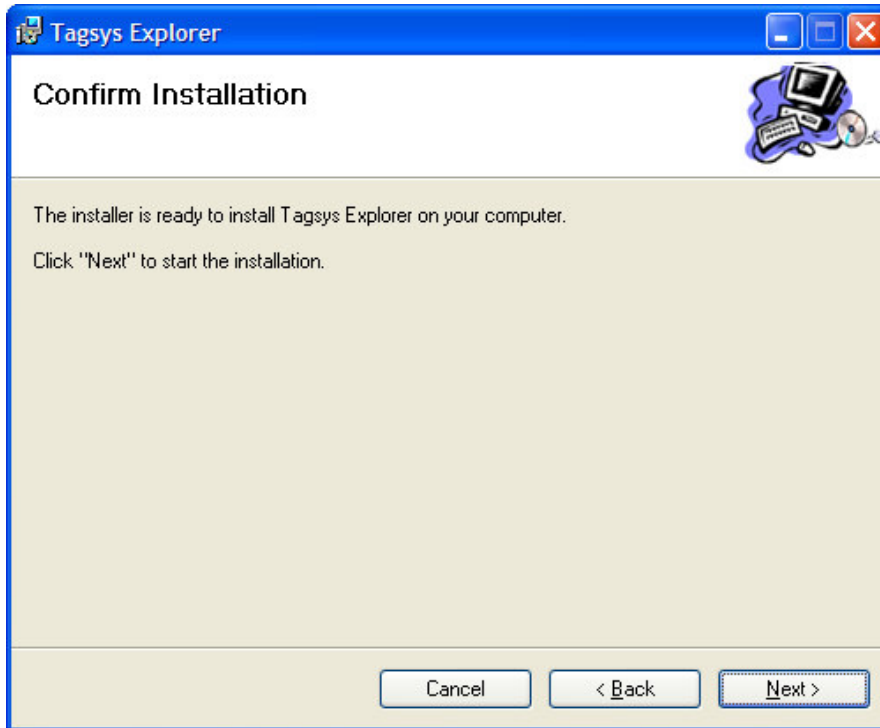

**Figure 4: Select Installation Folder window**

5. Once the correct folder is selected, click Next.

**Figure 5: Confirm Installation window**

6. Click Next to start the installation process. A shortcut will be created on your desktop and a program group will be created in the start menu.

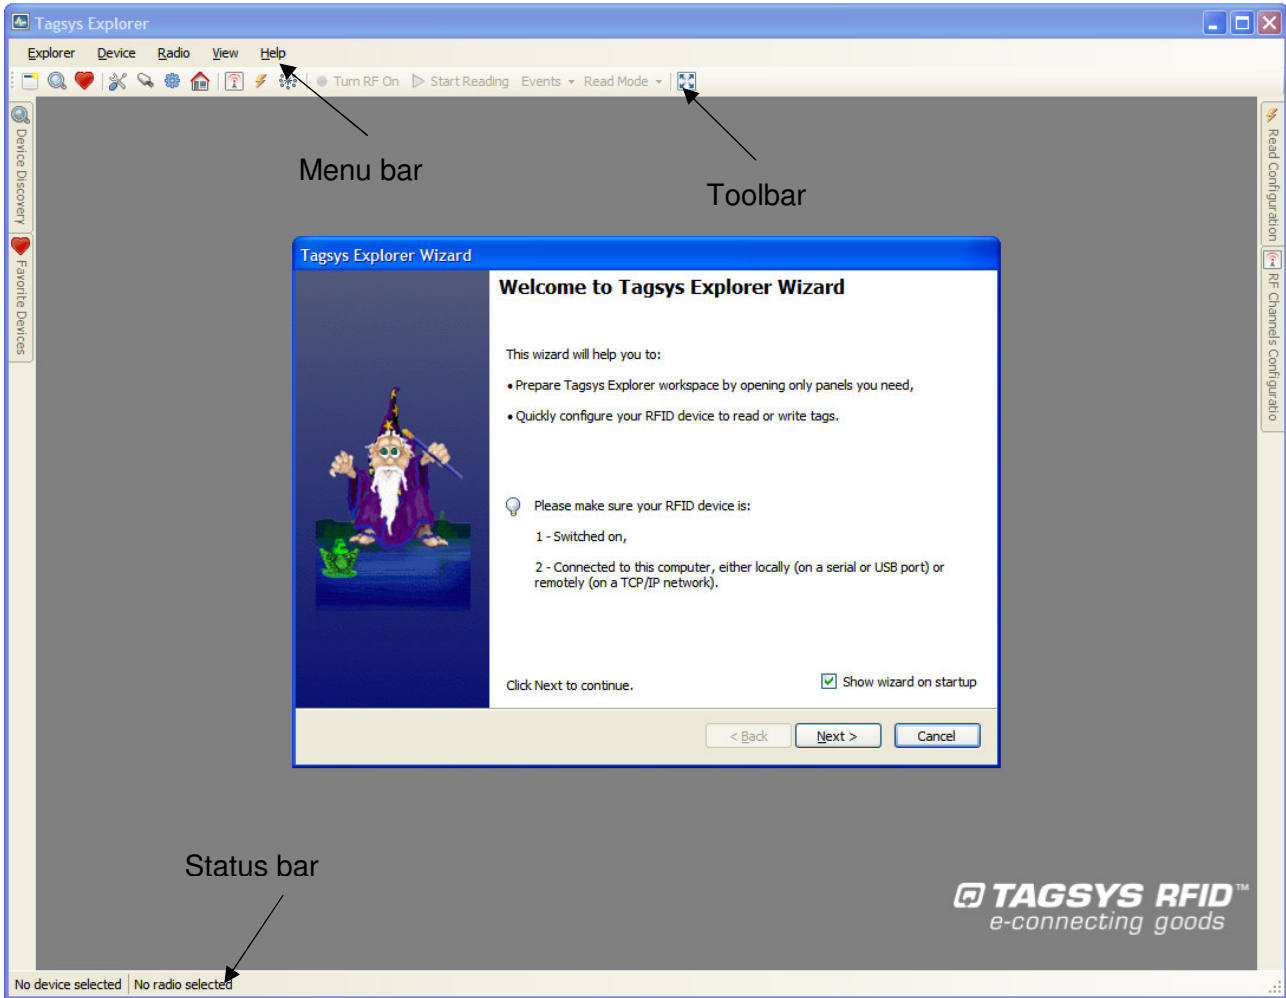

#### **4.7.2 Connecting to a device using Tagsys Explorer Wizard**

This section describes how to get started using the Tagsys Explorer software and configure it.

Before running Tagsys Explorer, connect your RFID reader to the serial/USB port of the PC or to your TCP/IP network. Connect an antenna to the reader (Channel 1) and turn reader on.

Once the reader is ready, run the Tagsys Explorer program and the main window will be displayed.

**Figure 6: Tagsys Explorer window**

The “Tagsys Explorer Wizard” opens automatically when Tagsys Explorer is started for the first time. This wizard allows you to quickly set up the Tagsys Explorer to perform basic tasks such as configuring your RFID device and read or write tags.

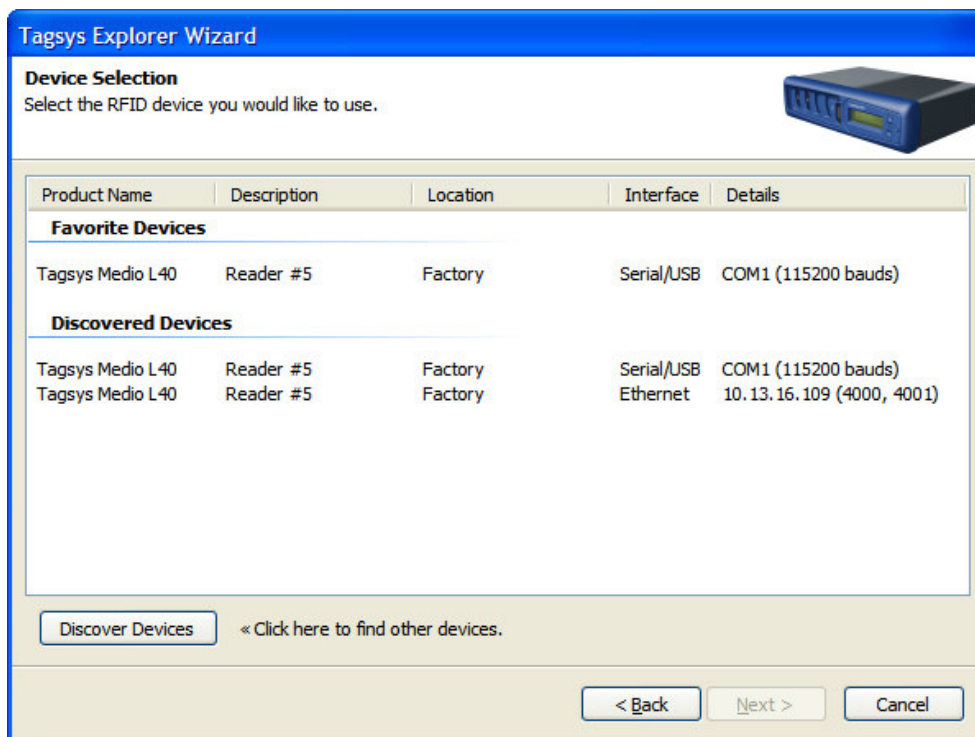

**Figure 7: Tagsys Explorer Wizard**

If the “Tagsys Explorer Wizard” does not open automatically, click on the “Wizard” icon  in the toolbar or choose “Wizard...” in the “Explorer” menu.

Read the instructions given by the wizard and click “Next >” to continue.

**Figure 8: Device Selection page**

The Tagsys Explorer Wizard can automatically discover and display RFID devices plugged into your computer's serial or USB ports or connected on a TCP/IP network.

Discovered devices are displayed under the "Discovered Devices" group. The same device can be displayed one or more times depending on the number of communication interfaces (Serial/USB, Ethernet) this device is connected to. The preferred connection is the "Ethernet" interface when available as it is the fastest communication interface.

You can restart a discovery at any time by clicking "Discover Devices".

Devices that have been previously registered in Tagsys Explorer will appear under the "Favorite Devices" group. Favorite Devices are shortcuts to devices you are working with often and can be managed using the "Favorite Devices" panel. See *Tagsys Explorer User's Guide* for more information.

To continue, choose the device you would like to use and click "Next >". If necessary, this device will be automatically added to your "Favorite Devices".

If a device with the same interface details appears both in "Favorite Devices" and in "Discovered Devices" groups, it does not matter in which group you select this device.

**Figure 9: Task Selection page**

If you want to set up your device parameters, such as changing its description or its interfaces settings, check "I want to configure device's system, interfaces or services".

If you want to read tags, write their memory or send specific tag commands, check "I want to read or write tags on." You can then choose the radio that should be used for emitting and receiving. Medio L40 only supports one radio (Radio #0).

In the "Radio Parameters" section, choose the settings you would like to use.

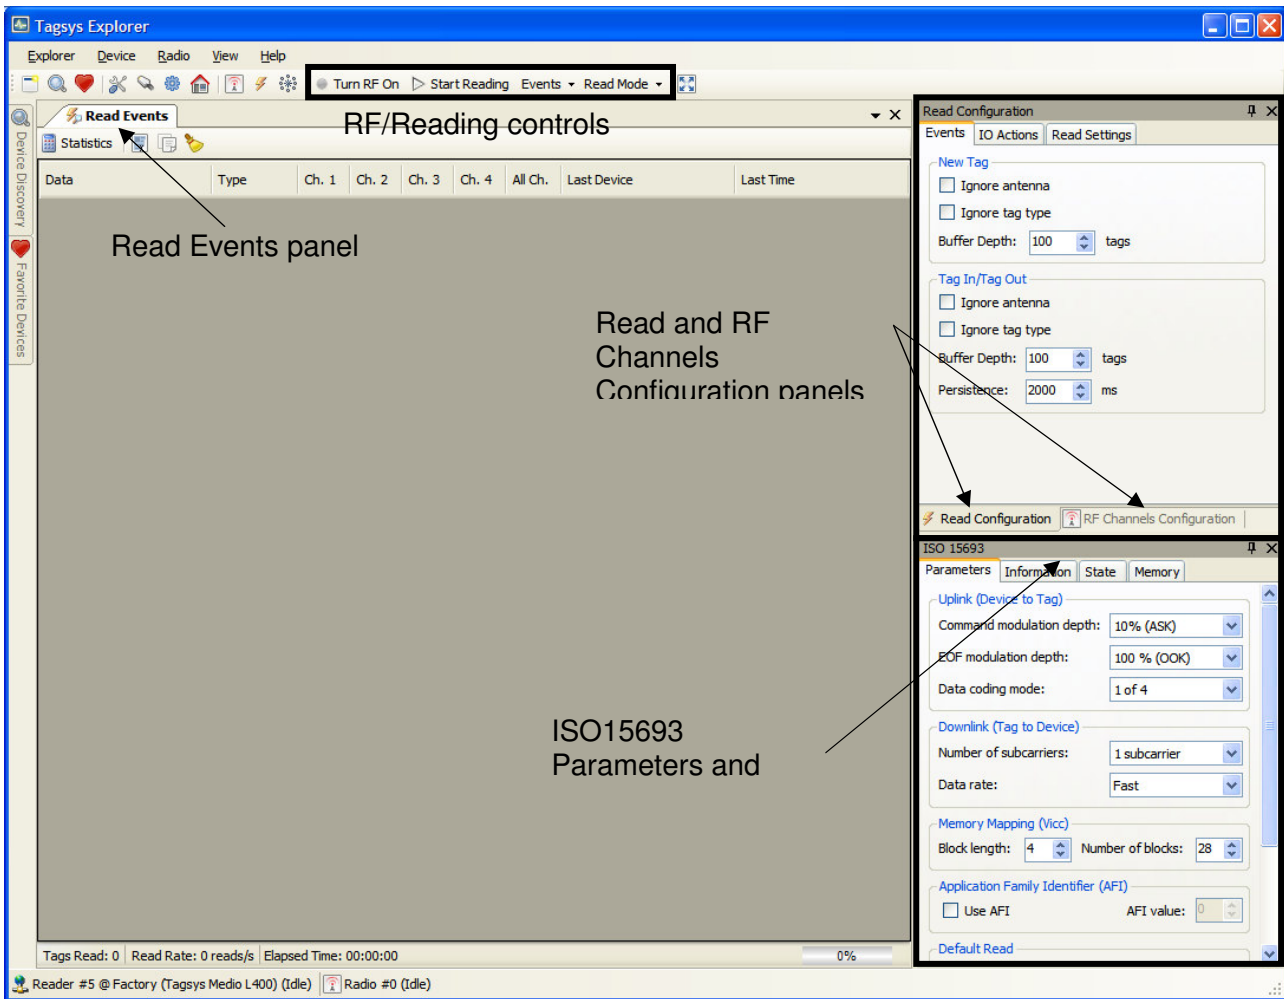

For demonstration purposes, please select the same settings as shown in previous figure. Then, click "Next >" to continue.

**Figure 10: Wizard Summary page**

Verify the summary of all selected parameters chosen and click "Finish" to confirm. Tagsys Explorer will then automatically open the panels you need and apply the radio configuration you have chosen. The following screen appears:

**Figure 11: Tagsys Explorer workspace configured**

### 4.7.3 Reading the UID of ISO 15693 tags

If you have not configured your device using the Tagsys Explorer wizard as explained in section [4.7.1 Installing Tagsys Explorer](#), please do so before proceeding.

To start reading using the configuration the wizard has applied:

1. Click  button in the tool bar to turn the radio field on.

**CAUTION:** Make sure an antenna is plugged in the channel that will be used for reading before turning the radio field on. Turning on the radio field on a channel without an antenna reduces the lifetime of the reader.

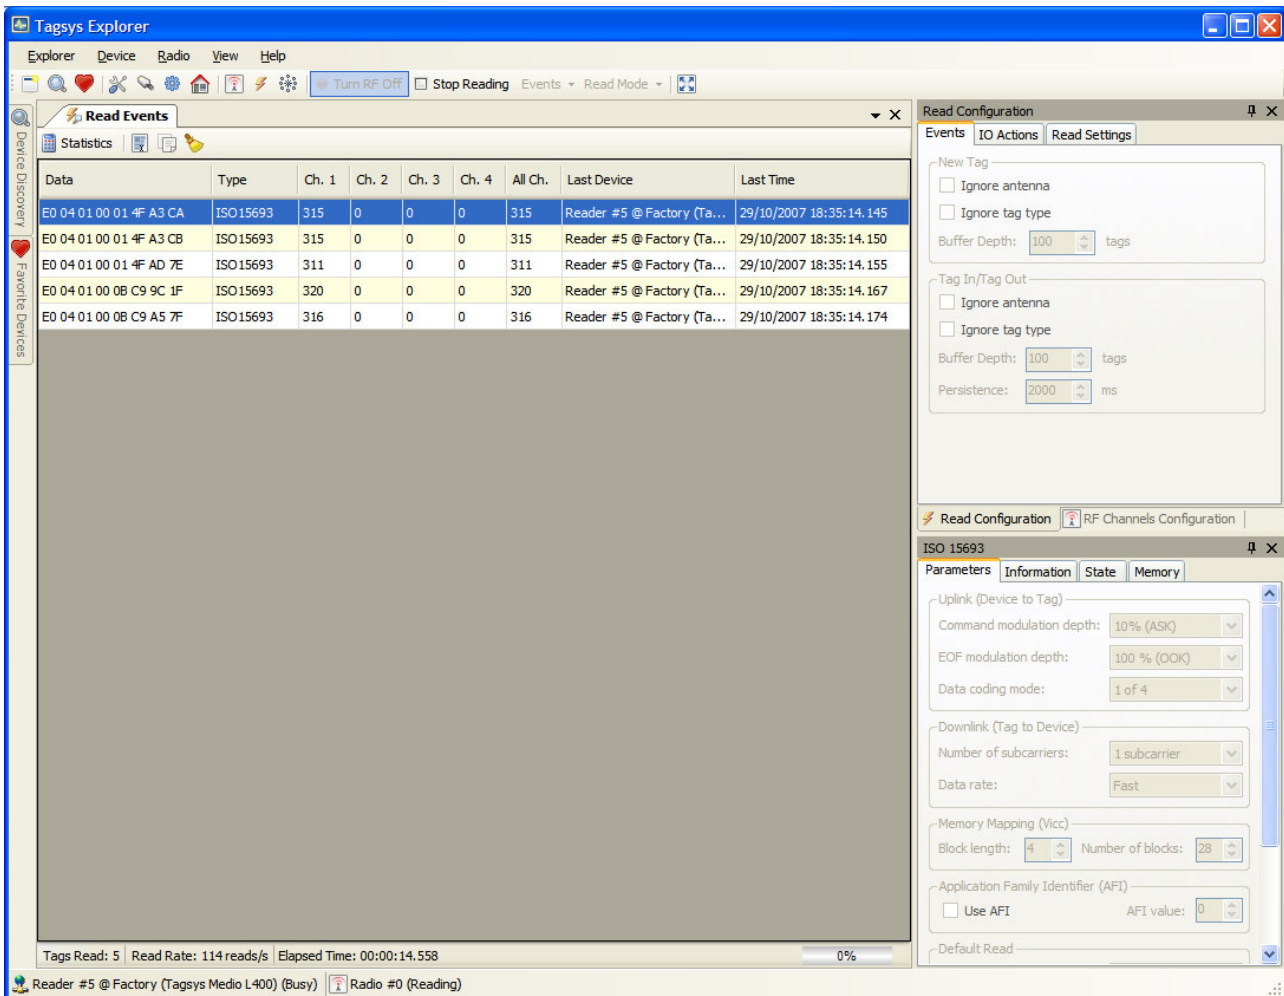

2. Click  button in the tool bar to start reading tags.

If the radio field is not turned on, Tagsys Explorer will request your permission to turn it on; click “OK” to accept. Again, make sure an antenna is plugged in to the channel before accepting.

3. Place ISO 15693 tags in the radio field of channel #1 antenna. Tags appear in the “Read Events” panel as they are read. A counter indicates how many times they have been read on each device’s channel since the read session beginning.

Figure 12: Tagsys Explorer reading ISO 15693 tags

- Click the  Stop Reading button in the tool bar when you are finished reading. You may want to turn the radio field off as well by clicking the  Turn RF Off button.

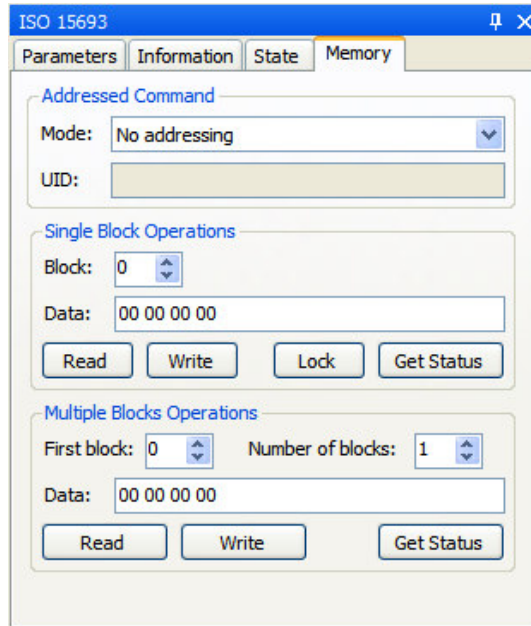

#### 4.7.4 Reading and Writing ISO 15693 tag memory

If you have not configured your device using Tagsys Explorer wizard as explained in section [4.7.2 Connecting to a device using Tagsys Explorer Wizard](#), please do so before proceeding.

This section shows how to read and write ISO15693 tag memory.

- Radio field must be turned on. Click the  Turn RF On button in the toolbar to turn the radio field on.
- Click the “Memory” tab of the ISO15693 panel. This tab contains all memory-related commands.

**Figure 13: Memory tab of ISO 15693 panel**

3. In the “Single Block Operations” box, select the block and data you want to write (data is hexadecimal). You can pad bytes with whitespaces if you wish, but this is not required.

**Figure 14: Single Block Operations**

The length in bytes of a single block depends on the tag manufacturer, but most ISO 15693 tags use four bytes blocks. See *Tagsys Explorer User's Guide* for more information.

4. Place a single ISO15693 tag in the radio field of the channel 1 antenna.
5. Click “Write” to write data to the block. If writing is successful, no error message appears. To check block data, clear the “Data” field and click “Read” to read data back from the block.

### 4.7.5 Upgrading System or Radio Firmware

If you have not configured your device using Tagsys Explorer wizard as explained in section [4.7.2 Connecting to a device using Tagsys Explorer Wizard](#), please do so before proceeding.

Two different firmware sets can be upgraded in your RFID reader:

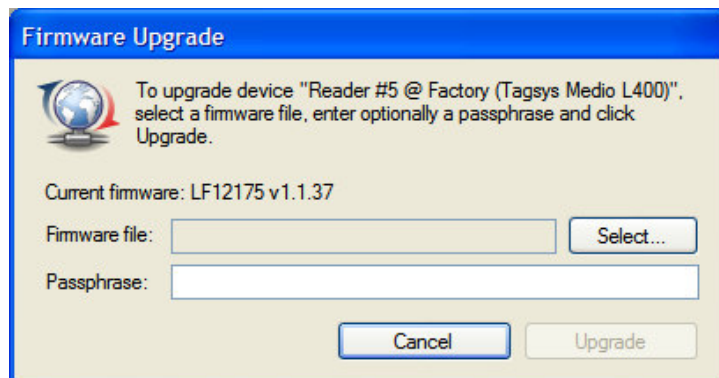

- System firmware (The system is in charge of interfacing one or several radios to a host through various interfaces and protocols)
- Radio firmware (The radio is in charge off all RFID operations).

To upgrade system firmware:

1. Open “Favorite Devices” panel by clicking on the  icon in the tool bar or by choosing “Favorite Devices” in the “Device” menu.
2. Connect to the device you want to upgrade by selecting it and clicking on the  icon.
3. In the  drop down menu, choose “Upgrade System Firmware...”  
Alternatively, you may also right-click the device and choose “Upgrade System Firmware...”
4. In the “Firmware Upgrade” dialog box, select the firmware file, enter its associated passphrase if necessary and click “Upgrade”.

**Figure 15: System firmware upgrade**

**CAUTION:** Do not turn off the device during the upgrade as this may permanently corrupt the system firmware.

5. Once the upgrade is completed, click “Reboot” to reboot the device immediately. If you need to upgrade another set of firmware of the device click “Don’t Reboot”.

**Figure 16: System firmware upgrade completed**

To upgrade radio firmware:

1. Open “Favorite Devices” panel by clicking on the  icon in the tool bar or by choosing “Favorite Devices” in the “Device” menu.
2. Connect to the device that you want to upgrade the radio on by selecting it and clicking on the  icon.

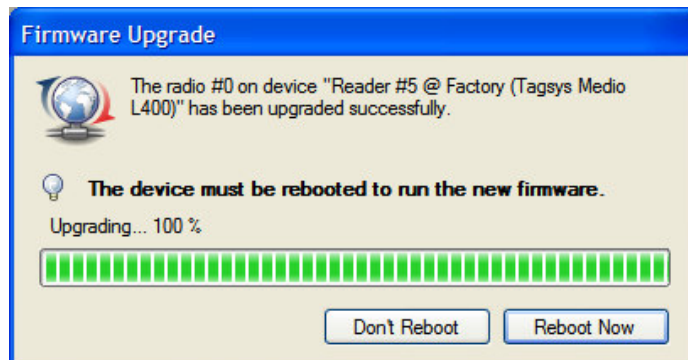

3. Click on the radio to upgrade and in the  drop down menu, choose “Upgrade Radio Firmware...”  
Alternatively, you may as also right-click the radio and choose “Upgrade Radio Firmware...”
4. In the “Firmware Upgrade” dialog, select the firmware file, enter its associated passphrase if necessary and click “Upgrade”.

**Figure 17: Radio firmware upgrade**

6. Once the upgrade is completed, click “Reboot” to reboot the device immediately. If you need to upgrade another set of firmware of the device first, click “Don't Reboot”.

**Figure 18: Radio firmware upgrade completed**

# 5 Advanced Notions

## 5.1 Reader Architecture

Figure 19: Medio L40 Architecture

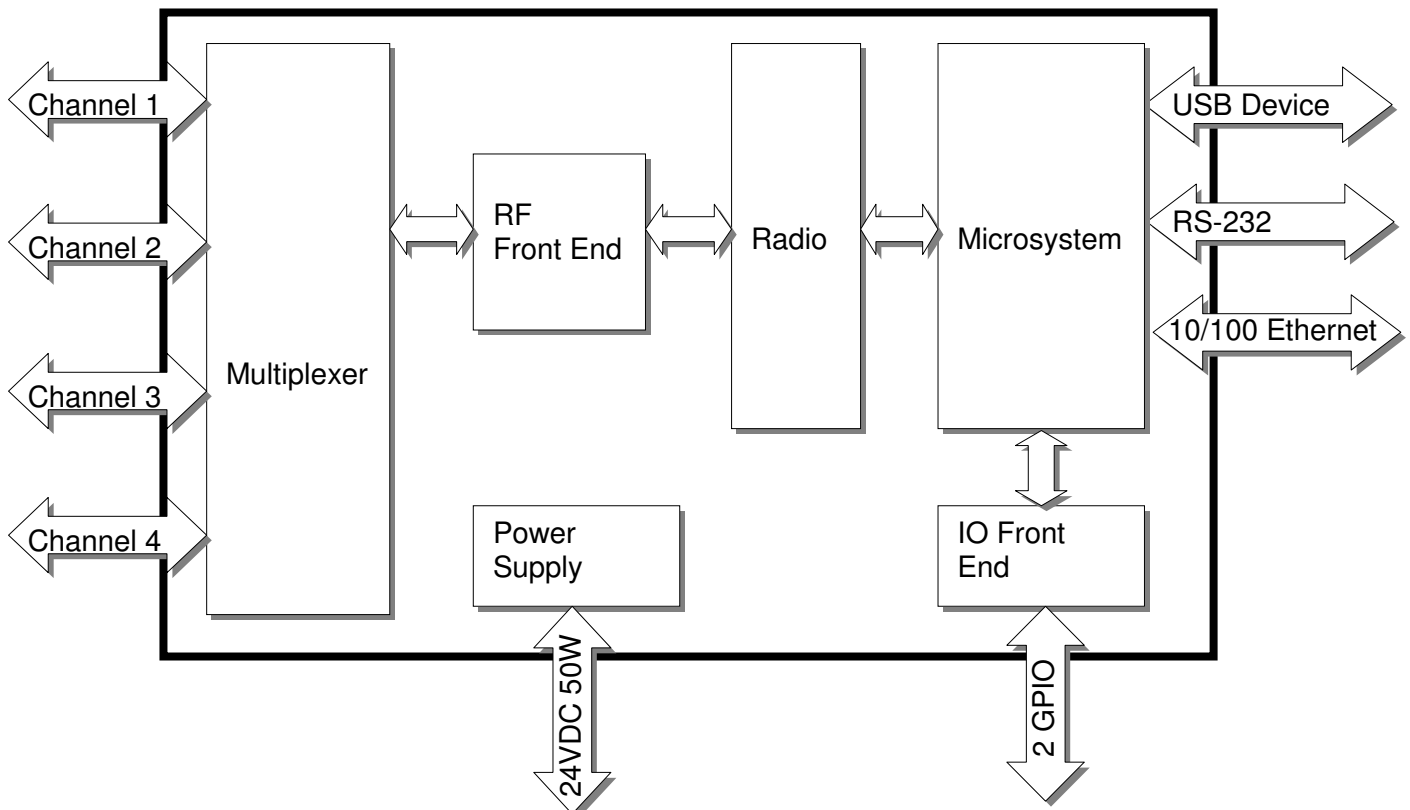

Figure 19 above shows the Medio L40 functional blocks:

- The Multiplexer is an analog subsystem responsible for dispatching the RF signal to the selected channel. It is controlled by the Radio Subsystem.
- The RF Front End is an analog subsystem responsible for generating and modulating the RF field for uplink communication to the tags. It also demodulates signal from tags for downlink communication and provide monitoring information such as operating temperature and antenna tuning status. It is controlled by the Radio Subsystem.
- The Radio Subsystem is responsible for managing the RF and IO Front Ends, encoding and decoding signals to/from tags, filtering tag data (for example removing duplicate reads) and providing RFID-related primitives to the Microsystem (like “Activate channel 1”, “Set output power to 1 Watt”, “Read UID from ISO15693 tag”, ...). It is DSP based and is controlled by the Microsystem.
- The IO Front End is responsible for providing 2 protected digital inputs or 2 protected digital outputs. It is controlled by the Microsystem and can be used as general purpose IOs directly accessed by the host system, or to automatically trigger readings and signal reading activity (by light stacks for example) without intervention from the host system.
- The Microsystem is responsible for interfacing the Radio Subsystem to the host system through various physical interfaces (USB, RS-232, 10/100 Ethernet) and protocols (Tagsys SixNG protocol, standalone mode, telnet server, serial console and heartbeat).

## 5.2 Reader to Host Protocols

### 5.2.1 TAGSYS StxNG

TAGSYS StxNG is the protocol used by the Medio L40 reader to communicate with the host system. Upon start up, the Medio L40 reader starts listening for incoming frames over all of its interfaces:

- USB (seen as a virtual COM port from the host side)
- RS-232
- Primary and Secondary TCP ports (default ports are ports 4000 and 4001. Only one connection per port is accepted).

After a valid frame is received from one of the interfaces, the corresponding command is executed and a reply is sent back to the host.

Below is a short description of the “command” and “response” frame format.

#### Host to reader frame (command):

*<SOF> <Address> <Command ID> <Nb Data> <Data> <Checksum>*

#### Reader to host frame (response):

*<SOF> <Address> <Error Code> <Nb Data> <Data> <Checksum>*

Field	Description
<i>&lt;SOF&gt;</i>	Start Of Frame (01h)
<i>&lt;Address&gt;</i>	When RS422 or RS485 communication modes are supported, only the reader whose StxNG address matches this field executes the command and replies. This field is ignored by Medio L40.
<i>&lt;Command ID&gt;</i>	In a command frame, the ID of the command that should be executed. Command IDs are in the range 0000h-7FFFh
<i>&lt;Error Code&gt;</i>	In a response frame, the error code if an error occurred during execution. Error codes are in the range 8000h-FFFFh. If no error occurred, the command ID is repeated.
<i>&lt;Nb Data&gt;</i>	The Data field length in number of bytes.
<i>&lt;Data&gt;</i>	In a command frame, the parameters for the command. In a response frame, the return values associated to the command.
<i>&lt;Checksum&gt;</i>	A checksum. This is the arithmetic sum off all previous bytes.

The reader is never allowed to send data over its interfaces without having received a command from the host.

A simple password-based security mechanism can be activated to prevent unauthorized access to the reader. In such a case, the host system must first execute a specific command to identify itself before being allowed to send any other command.

For more information about StxNG protocol and a complete command set description, please refer to **Medio L400/L40 Designer's guide**.

### 5.2.2 Heartbeat

The heartbeat service applies to the 10/100 Ethernet interface only. When activated, the heartbeat service periodically broadcasts Ethernet packets containing product name, description, location, IP address and TCP ports on which reader is listening for incoming connections (see StxNG protocol).

This heartbeat is useful to:

- Show Medio L40 readers connected to the same physical network as the host.
- Check that a Medio L40 reader is operating properly (in this case, the heartbeat acts as a watchdog).

For more information about heartbeat please refer to **Medio L400/L40 Designer's guide**.

### 5.2.3 Telnet

The telnet server applies to 10/100 Ethernet interface only. A host can connect to the reader using any standard telnet client. The Telnet server makes it possible to configure the microsystem only (serial port configuration, TCP/IP stack configuration, date/time configuration, version query...).

RFID configuration and control (for example activating a channel and reading a tag) is not allowed with telnet server.

A simple password-based security mechanism can be activated to prevent unauthorized access to the reader.

For more information about telnet server please refer to **Medio L400/L40 Designer's guide**.

### 5.2.4 Serial console

The serial console applies to RS-232 and USB interfaces only. A host can connect to the reader using any standard terminal application. The serial console makes it possible to configure the microsystem only (serial port configuration, TCP/IP stack configuration, date/time configuration, version query...).

RFID configuration and control (for example activating a channel and reading a tag) is not allowed with serial console.

A simple password-based security mechanism can be activated to prevent unauthorized access to the reader.

The reader automatically detects if current data exchanges over its serial and USB ports are StxNG protocol frames or console frames and reacts accordingly. Consequently, there's no need to configure those interfaces for console or StxNG protocol operation: both are simultaneously available.

For more information about serial console please refer to **Medio L400/L40 Designer's guide**.

### 5.2.5 Standalone mode

Standalone mode makes it possible to use the reader without the need for a host to control it. In this case, only the tag reading operation is available.

When standalone mode is activated, the reader automatically loads its last saved configuration upon start-up and initiates a read session. Each time a read event occurs, the reader sends a

frame over its serial port. Frame format is as the following (all fields are ASCII, optional and customizable):

*<Header><Timestamp><Radio ID><Event Type><Channel><Tag Type><Tag Data><Footer>*

A watchdog can also be activated. In this case, a customizable frame is sent periodically over the serial port to indicate the reader is operating properly.

For more information about standalone mode operation and configuration, please refer to **Medio L400/L40 Designer's guide**.

## 5.3 Reader operation principles

Most of the reader commands are executed in a synchronous manner. This means that the reader waits for an incoming request from the host, executes the associated operation then sends a reply containing operation execution status back to the host. Between the reception of two consecutive commands, the reader does nothing but wait for the next command.

The following commands are examples of commands executed in a synchronous manner:

- Configuration commands (configuring the TCP/IP stack, for example).
- Tag writing commands (writing an ISO15693 tag memory block, for example).
- Most tag reading commands (reading the locking status of an ISO15693 tag memory block, for example).

Synchronous commands that actually perform an operation on tags in the RF field (such as a writing operation, opposed to a configuration command) can only use a single channel (multiplexer can not be used). The channel and RF power that should be used for any subsequent synchronous tag operation is called the default RF configuration (specific commands exist to get/set this configuration).

An exception to the mechanism described above exists: the asynchronous read (or default read). Asynchronous read (or default read) can be activated or deactivated using the appropriate commands in the command set. During asynchronous read, the reader continuously tries to read all tags in the field. When a tag is detected, one or several read events are asynchronously pushed into an internal buffer (the event buffer). The host system then needs to poll the event buffer periodically to retrieve the latest events.

One can specify the kind of read events that should be reported during asynchronous read, as well as several options (called read modes) that should be applied during asynchronous read. The following sections provide more details about the different read events, as well as the different read modes.

### 5.3.1 Notion of read modes

During asynchronous read (or default read), the reader continuously tries to read all tags in the RF field. Several options can be applied that modify the reader's behavior during asynchronous read:

- "Multiplexer": If this mode is active, the reader uses the multiplexer instead of the default RF configuration for reading. The multiplexer makes it possible to define a sequence of antennas, tag types and RF output powers that will be automatically used during the reading process. For example, a user can configure the multiplexer so that reader tries to read ISO15693 tags for 100ms on channel 1 at 1Watt, then ICode UID tags for 50ms on channel 1 at 2Watts, then ISO15693 tags for 100ms on channel 2 at 1Watt, then ICode UID tags for 50ms on channel 2 at 2Watts.
- "Input triggered": If this mode is active, the reader waits for GPIO Input #1 to become active in order to activate the RF field and start reading. When GPIO Input #1 gets back to

inactive state, RF field is turned off and the reader stops reading until input is active again. Active input level (low or high) is software configurable.

- “Output feedback”: If this mode is active, the reader uses GPIO Outputs #2 to signal reading activity. GPIO Output #2 is activated when the reader “sees” tags in the RF field. The time an output remains active after the corresponding event has occurred is software configurable.

A user can activate one or several read modes at once, depending on the application requirements.

### 5.3.2 Notion of events

During asynchronous read (or default read), the reader continuously tries to read all tags in the RF field. When a tag is detected, one or several events are pushed into an internal event buffer. Those events contain information such as the kind of event (see below), a timestamp, the channel on which the event occurred, the tag type and the associated tag data (UID, memory...). The following events are supported:

- “Tag Read”: This event is pushed each time a valid tag frame is decoded, without further processing. When activated, this event may be triggered several hundreds of times per second and is consequently bandwidth consuming. It is often used for testing purpose only.
- “Tag New”: This event is pushed each time a new tag is detected. If the same tag is detected several times, it will be reported only once.
- “Tag In”: This event is pushed each time a tag enters the RF field.
- “Tag Out”: This event is pushed each time a tag leaves the RF field.
- “Tag No Read”: When Input triggered read mode is active, this event is pushed when the trigger condition ends and no tag was detected in the RF field. When Input triggered read mode is inactive, this event is never pushed.

A user can register for one or several events at once, depending on the application requirements.

For example, if a user registers for all events and a tag enters the RF field, stays in the field for some time, and then leaves the field, the sequence of events pushed into the event buffer will be:

- “Tag Read”
- “Tag New”
- “Tag In”
- “Tag Read” (repeated as long as the tag remains in the field)
- “Tag Out”

If the same tag re-enters the RF field at a later time, stays in the field for a period of time, then leaves the field, the sequence of events pushed into the event buffer will be:

- “Tag Read”
- “Tag In”
- “Tag Read” (repeated as long as the tag remains in the field)
- “Tag Out”

# 6 Technical Specifications

## 6.1 Technical Data

**Table 6: Medio L40 Technical Specifications**

Description	Medio L40
Size (L x W x H)	223 x 166 x 36 mm (8.8 x 6.5 x 1.4 in.)
Weight	0.8 kg (1.8 lbs.)
DC power	24 VDC +/- 10% Typical
Power consumption	Up to 50 W
Operating temperature	Reader : 0°C to +55°C (32°F to 131°F) FDF0453-A Power Supply : 0°C to +35°C (32°F to 95°F) GS40A24-P1J : 0°C to +50°C (32°F to 122°F) A2-50S18R-V : 0°C to +40°C (32°F to 104°F) FRA045E-S24-4 : -10°C to +70°C (14°F to 158°F)
Storage temperature	-20° to +70°C (-4°F to 158°F)
Mechanical fixation	screw cutting hole for vertical installation
Certification	ETSI EN 302 291-1 & -2, ETS 301-489, FCC Part 15 (for typical configurations), UL 60950, CAN/CSA 22.2 No 60950, IEC 60950-1, CB Report with certificate, C-Tick
Antenna Compatibility	50-Ohms antenna
Operating Frequency	13.56 MHz
Chip Compatibility	C210 C220 ISO15693 ISO18000-3 Mode 1 C270 (I-Code 1) C370 (I-Code SLI) C370L (I-Code SLI-L) C370S (I-Code SLI-S) I-Code ePC I-Code UID Upgradable to EPCglobal HF Gen2 protocol
Number of channels	4
RF Output Power	500mW to 5W
Communication Interfaces	RS232 (up to 115200 bauds) USB 2.0 Full Speed Compatible 10/100 Ethernet
Communication Protocols	Tagsys StxNG Telnet & Serial Console Standalone Mode Heartbeat
I/O Ports (GPIO)	2 Inputs/Outputs
Remote Monitoring	System uptime // Current number of connections per interface // Date of last connection per interface // Total number of connections per interface since power-up // Total amount of bytes sent/received per interface since power-up // Digital Output overload status // Read/Write count per channel // RF power amplifiers consumption // RF power amplifiers operating temperature // Antennas tuning status // Noise Level on I&Q receivers // Real Time raw signal capture
Firmware	Remotely upgradeable

## 6.2 RS232 Interface

To get connected to the reader through RS232 protocol, you will need to use a RJ45 to DB9 adapter.

Adapters RJ45 female to SUB-DB9 female are available from several distributors. Please note, that the adapters are preassembled kits only, which must be configured (strapped) by the customer itself to fit the wiring described below. The modem-signals DCD and RI are not available across the RJ45.

Figure 21: RJ45 Connector (Female 8-pin)

Figure 20: DB9 Connector (Female 9-pin)

Table 7: RJ45 to DB9 adapter wiring

RJ45	Function	DB9
1	CTS	8
2	DTR	4
3	RXD	2
4	GND	5
5	GND	5
6	TXD	3
7	DSR	6
8	RTS	7

Plug your RJ45 to DB9 adapter to the serial communication port of your computer, and then use a standard straight Ethernet cable to connect to the Medio L40 RJ45 RS232 com port.

Alternatively, using a standard Cisco® -style Console cable (RJ-45 to DB9) you can connect your COM port to the RS232 serial port of your reader.

## 6.3 GPIO Connector

Connector reference mounted on board is: **Phoenix Contact** (Manufacturer P/N: 1881529)

It does mate with this female connector: **Phoenix Contact** (Manufacturer P/N: 1881406)

### 6.3.1 Pin Assignment

Figure 22: GPIO Connector (8-pin)

Table 8: GPIO Connector - Pin Assignment

Pin	Description	Pin	Description
1	RFU (TAGSYS Internal use only)	5	IO #1
2	RFU (TAGSYS Internal use only)	6	GND
3	RFU (TAGSYS Internal use only)	7	IO #2
4	RFU (TAGSYS Internal use only)	8	GND

### 6.3.2 Electrical Characteristics

Table 9: GPIO Pins - Electrical Characteristics

Parameters	Min.	Typ.	Max.	Unit
Input Voltage Range	0	--	28	V
Input Voltage (Low Level)	0	--	0.9	V
Input Voltage (High Level)	1.5	--	28	V
Output Voltage Range	0	--	28	V
Maximum Continuous Output Current	--	--	1.4	A
Output Over Current Protection	1.9	2.8	3.8	A

### 6.3.3 Using Inputs

Reader inputs can be driven by a voltage source from 0V up to 28V referring to the ground. Voltages under 0.9V are considered as “logical low state”, voltages above 1.5V are considered as

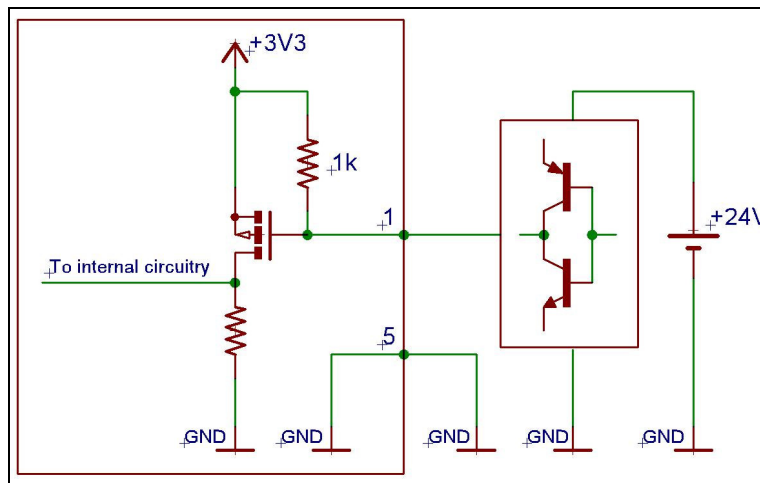

“logical high state”. Inputs are internally pulled-up to 3.3V with 1KOhms resistors. Applying negative voltage to inputs (polarity inversion) may destroy them.

**Figure 23** below demonstrates how to connect an external sensor (a simple switch or a totem pole output sensor) to an input.

**Figure 23: Connecting a simple switch to input #1 or #2**

**Figure 24: Connecting a totem-pole output sensor to input #1 or #2**

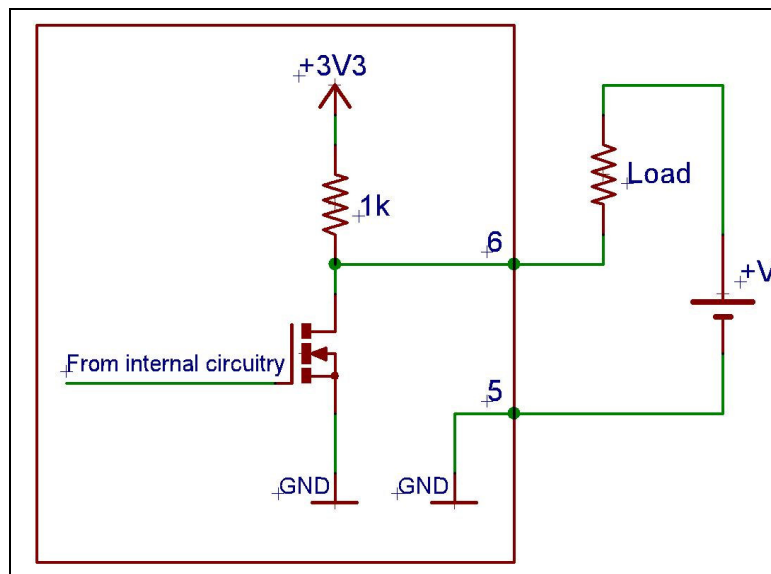

External devices must be connected to GPIOs in compliance with [Table 8](#) and SELV requirements.

### 6.3.4 Using Outputs

The reader outputs are Open Drain, N-Channel (when activated, an output is tied to the ground). They can drive a current up to 1.4A, and accept voltages up to 28V. Outputs are internally pulled-up to 3.3V with 1KOhms resistors and are protected against overload and overheat. Applying negative voltage to outputs (polarity inversion) may destroy them.

**Figure 25** below demonstrates how to connect an external load to an output.

**Figure 25: Connecting an external load to output #1**

External devices must be connected to GPIOs in compliance with [Table 8](#) and SELV requirements.

# 7 Electrical Characteristics

This chapter provides information about AC and DC and characteristics for all connectors. It also gives timing characteristics for the different interfaces.

## 7.1 Absolute Maximum Ratings

### Consumptions and temperatures

Ambient Operating Temperature	0 °C to +55 °C
Storage Temperature	-20 °C to +70 °C

Supply Voltage	30 V
Supply Current	2.5 A

Input Power	50 W
Power Dissipation (Casing)	20 W

### USB port

Data+/Data- (DP, DM pins) Input voltage	-0.5 – to +3.8 V
DC supply voltage	-0.5 to 6 V

### RS232 port

RX input voltage	± 25 V
TX output voltage	± 13.2 V
TX short-circuit duration	Continuous
ESD Protection on RX and TX pins	±15 kV

### IO Ports, Synchro port

Maximum Input Voltage	36 V
Minimum input Voltage	-0.3 V
Continuous Input Voltage	28 V
ESD Voltage (Human Body)	4 kV
ESD Voltage (Machine Model)	0.5 kV
Maximum inductance drive	30 uH
Maximum frequency switch	10 kHz

Note :

- Reverse power on RF connector is not allowed
- Avoid shortcuts and open connections on RF ports
- Use the product in a dust free and dry environment

## 7.2 Power Supply DC Characteristics and start-up

All data applies for a +24V input power voltage and an ambient temperature of 25 °C, except specified.

**Table 10: Power Supply DC Characteristics and start-up**

Parameters	Conditions	Min Typ Max	Unit	Comments
<i>Power Input Voltage</i>		21.5 24 26.5	V	
<i>Power Input Current</i>	Input Voltage = 21.6V	710	mA	RF On, 5W (Load 50Ohms load).
	Input Voltage = 24V	635	mA	
	Input Voltage = 26.4V	575	mA	
	RF on, 1W	240	mA	RF On (Load 50Ohms).
	RF on, 2W	335	mA	
	RF on, 3W	435	mA	
	RF on, 4W	535	mA	
	Input Voltage = 21.5V	134	mA	RF Off, No Communication port plugged or RS232 plugged.
	Input Voltage = 24V	122	mA	
	Input Voltage = 26.5V	112	mA	
	Input Voltage = 21.5V	120	mA	RF Off, Ethernet cable plugged.
	Input Voltage = 24V	110	mA	
	Input Voltage = 26.5V	100	mA	
	Input Voltage = 21.5V	136	mA	RF off, USB cable plugged.
Input Voltage = 24V	124	mA		
Input Voltage = 26.5V	114	mA		
<i>Power On Input Peak Current</i>		0.6	A	
<i>Power On Input Peak Current Recovery Time</i>		35	ms	Internal modules are powered one by one, that can create several input peak current at product power on.
<i>Product start-up time</i>		2.7	s	
<i>Product Start-up time (Ethernet ready)</i>		3.9	s	

## 7.3 RS232 Communication Port Characteristics

Table 11: RS232 Communication Link Electrical Characteristics

Parameters	Conditions	Min	Typ	Max	Unit	Comments
<i>RX Input Voltage Range</i>		-25		+25	V	
<i>RX Input Threshold Low</i>		0.8	1.5		V	
<i>RX Input Threshold High</i>			1.8	2.4	V	
<i>RX Input Hysteresis</i>			0.5		V	
<i>RX Input Resistance</i>		3	5	7	kOhm	
<i>TX Output Voltage Swing</i>	Loaded with 3kOhms to GND	±5	±5.4		V	
<i>TX Output Resistance</i>		300	10000		kOhm	
<i>TX Output Leakage Current</i>				±25	µA	
<i>TX Output Short-circuit Current</i>				±60	mA	
<i>ESD Protection on both pins</i>	IEC 1000-4-2 Air-Gap Discharge		±15		kV	
	IEC 1000-4-2 Contact Discharge		±8		kV	
	Human body model		±15		kV	

## 7.4 USB Communication Port Characteristics

**Table 12: USB Communication Link Electrical Characteristics**

Parameters	Conditions	Min	Typ	Max	Unit	Comments
<i>I/O pins static output (high)</i>		2.8		3.6	V	
<i>I/O pins static output (hlow)</i>		0		0.3	V	
<i>Single ended Rx Thresholdh</i>		0.8		2.0	V	
<i>Differential common mode</i>		0.8		2.5	V	
<i>Differential input sensitivity</i>		0.8		2.5	V	
<i>Driver output impedance</i>		26	29	44	Ohm	

## 7.5 Antenna Electrical Characteristics

**Table 13: Antenna Electrical Characteristics**

Parameters	Conditions	Min	Typ	Max	Unit	Comments
<i>RF ASK modulation ratio</i>		12	16	20	%	
<i>RF output SWR</i>	1W		1.4			
	2W		1.33			
	3W		1.22			
	4W		1.15			
	5W		1.15			
<i>RF frequency</i>			13.56		MHz	
<i>RF Frequency tolerance</i>	Overall temperature range		100		ppm	

## 7.6 Input / Output Electrical Characteristics

Table 14: – I/O Electrical Characteristics

Parameters	Conditions	Min	Typ	Max	Unit	Comments
<i>I/O voltage</i>		0		28	V	
<i>Input voltage Threshold</i>		0.9		1.5	V	
<i>Active output resistance</i>				0.45	Ohm	
<i>Output switch time (on or off)</i>				20	µs	
<i>Active Output – Over Current protection threshold</i>		1.9	2.8	3.8	A	
<i>Input – Over Voltage Protection</i>		34	37		V	

# 8 Mechanical Characteristics

## 8.1 Dimensions and General Mechanical Information

Figure 26: Medio L40 – Mechanical dimensions

Values in Figure 26 have a tolerance of 0.5 mm.

## 8.2 Fixing the product

The Medio L40 reader is delivered with six screw-cutting holes for mounting the unit in various positions. Figure 26 gives details about the screw cutting holes positioning.

Use M5 screws to fix your Medio L40 reader to your system.

For a proper integration of this product in your design, do not forget to leave some space for connections on the front and rear faces.

---

# 9 Warranty Conditions

---

## 9.1 Warranty

TAGSYS warrants that this Product shall comply with the functional specifications set forth herein for a period of one year from the date of delivery to the Buyer.

This warranty is valid for the original Buyer of the Product and is not assignable or transferable to any other party.

TAGSYS cannot be responsible in any way for, and disclaims any liability in connection with the operation or performance of:

- any product in which the Product is incorporated;
- any equipment not supplied by TAGSYS which is attached to or used in connection with the Product; or
- the Product with any equipment

This warranty does only cover the Product to the exclusion of any such other equipment.

Optimal operation and performance of the Product are obtained by using TAGSYS' readers, by applying TAGSYS installation guidelines and by having your installation reviewed by a TAGSYS' technical consultant.

TAGSYS warranty does not cover the installation, maintenance or service of the Product and is strictly limited to the replacement of Products considered as defective by TAGSYS and returned according to the return procedure defined below; in such case, TAGSYS will, at TAGSYS' option, either replace every defective Product by one new Product or refund the purchase price paid by Buyer to TAGSYS for the defective Product.

## 9.2 Warranty Exclusions

- Defects or damages resulting from storage of the Product under conditions which do not comply with TAGSYS specifications or normal usage
- Defects or damages resulting from use of the Product in abnormal conditions (abnormal conditions being defined as any conditions exceeding the ones stated in the product specifications).
- Defects or damages from misuse, accident or neglect.
- Defects from improper testing, operation, maintenance or installation.
- Defects from alteration, modification except modifications or adjustments specifically described in this Product reference guide, adjustment or repair, or any attempt to do any of the foregoing, by anyone other than TAGSYS.
- Any action on Product that prevents TAGSYS from performing an inspection and test of the Product in case of a warranty claim.
- Tampering with or abuse of the Product.
- Any use or incorporation by the Buyer or a third party of TAGSYS' Product into life saving or life support devices or systems, or any related products; TAGSYS expressly excludes any liability for such use.

### 9.2.1 General Provisions

This warranty sets forth the full extent of TAGSYS responsibility regarding the Product.

In any event, TAGSYS warranty is strictly limited to (at TAGSYS' sole option) the replacement or refund of the Products purchase price to TAGSYS, of Products considered as defective by TAGSYS.

The remedy provided above is in lieu and to the exclusion of all other remedies, obligations or liabilities on the part of TAGSYS for damages, whether in contract, tort or otherwise, and including but not limited to, damages for any defects in the Products or for any injury, damage, or loss resulting from such defects or from any work done in connection therewith or for consequential loss, whether based upon lost goodwill, lost resale profits, impairment of other goods or arising from claims by third parties or otherwise.

TAGSYS disclaims any explicit warranty not provided herein and any implied warranty, guaranty or representation as to performance, quality and absence of hidden defects, and any remedy for breach of contract, which but for this provision, might arise by implication, operation of law, custom of trade or course of dealing, including implied warranties of merchantability and fitness for a particular purpose.

### 9.2.2 How to Return Defective Products

The Buyer shall notify TAGSYS of the defects within 15 working days after the defects are discovered.

Defective Products must be returned to TAGSYS after assignment by a TAGSYS Quality Department representative of an RMA (Return Material Authorization) number. No Products shall be returned without their proof of purchase and without the acceptance number relating to the return procedure.

All Products shall be returned with a report from the Buyer stating the complete details of the alleged defect.

Call +33 (0) 4 42 18 89 36 for return authorization and shipping address.

If returned Products prove to be non-defective, a charge will be applied to cover TAGSYS' analysis cost and shipping costs.

If the warranty does not apply for returned Products (due to age, or application of a warranty exclusion clause), a quote for replacement will be issued, and no replacement will be granted until a valid purchase order is received. If no purchase order is received within 30 days after the date of TAGSYS quote, TAGSYS will return the products and charge the analysis cost and shipping costs.

All replaced Products shall become the property of TAGSYS.

The Product Return Form is included on the following page. This form should accompany any product you need to return to TAGSYS for analysis in the event of a problem.
