0 Doorbell Camera Installation

Before you continue following procedure, you must already finish the Doorbell Camera installation. If not, please refer the doorbell quick installation guide to install your Doorbell Camera.

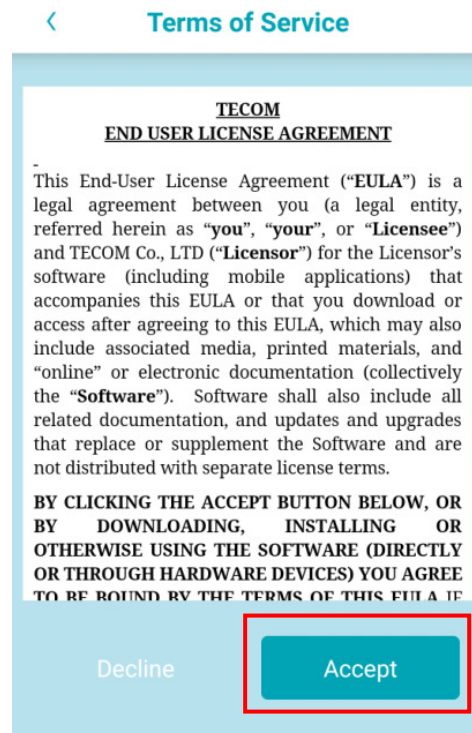

1 Smartphone Setup

1.1 Download Smartphone App

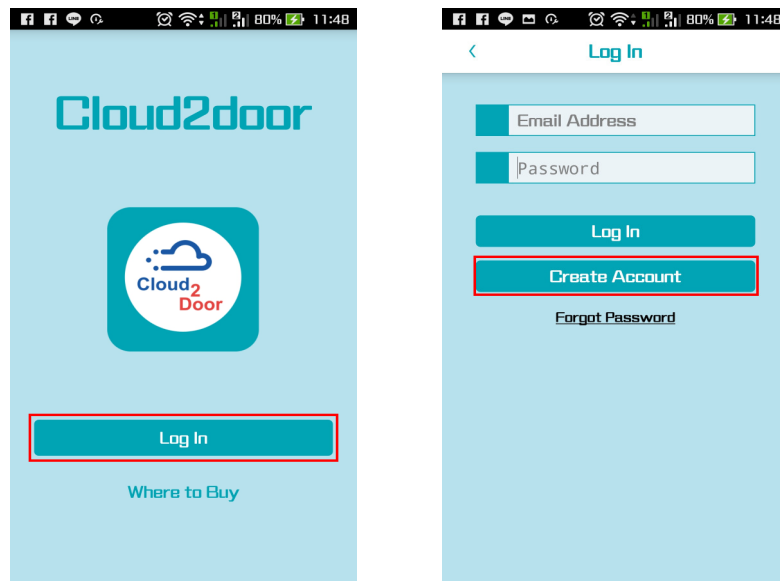

Please download and install “Could2Door” App from App Store (For iOS) or Google Play (For Android).

1.2 Create an Account

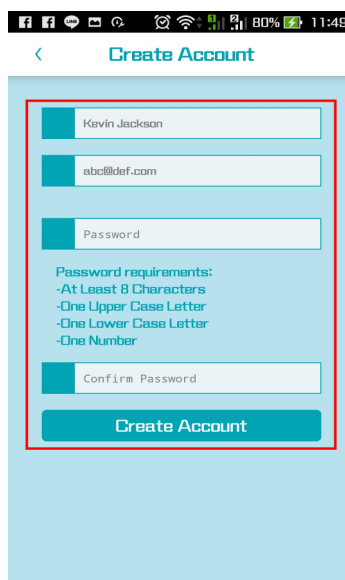

- 1) With the Smartphone connected to Internet via Home WiFi router, click Cloud2door icon to open the App.
- 2) Please read the “Terms of Service” (“terms”). Click “Accept” if you agree these terms.

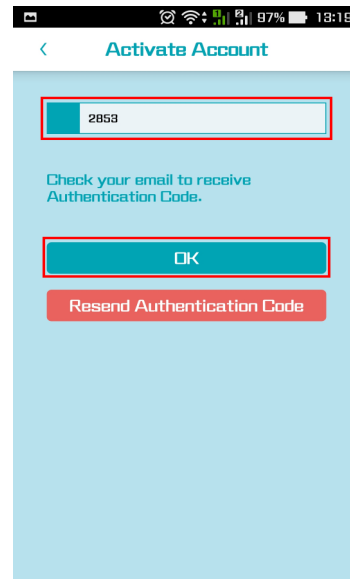

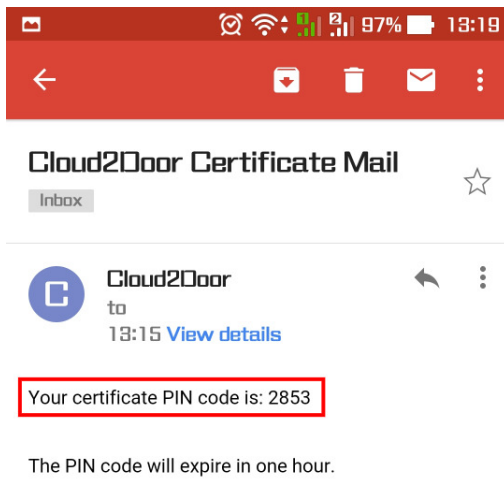

- 3) Select “Log in”, then “Create Account”.

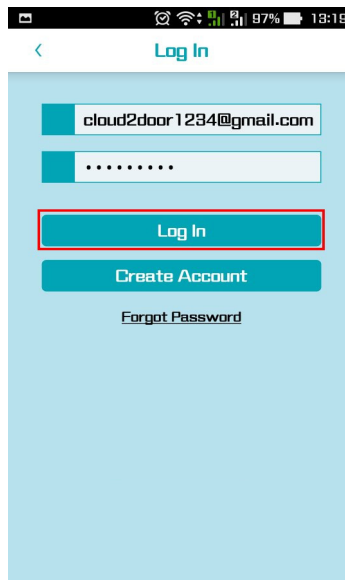

4) Enter a name, valid email address, and password for the account, then select “Create Account”.

5) Check your email to receive authentication code. Enter the PIN code and click “OK”.

6) Your account and password are bringing out automatically, click “Log In”.

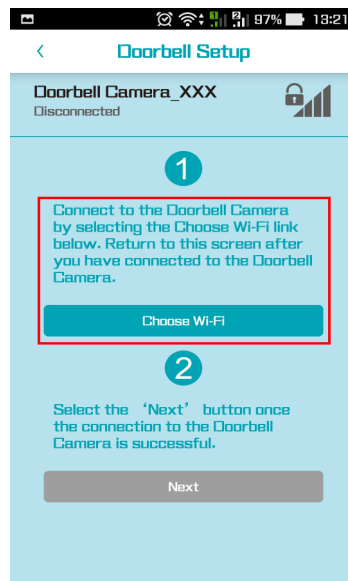

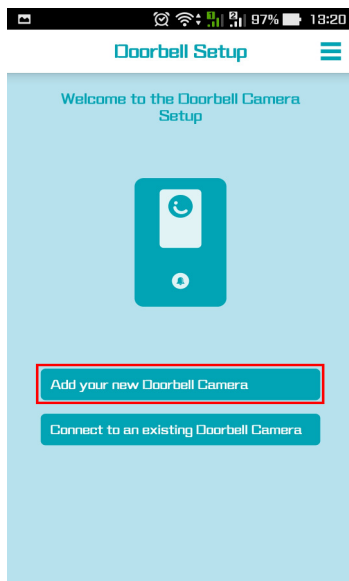

1.3 Doorbell Camera Connection

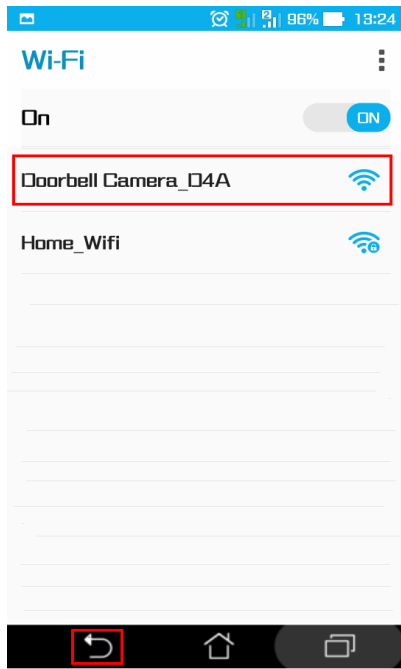

The Doorbell Camera should be in Discovery mode and the button indicator should flash red and green. If the Indicator does not flash, please pressing the call button for ten to fifteen seconds to enter Discovery mode.

- 1) Click “Add your new Doorbell Camera” to enter the Doorbell Setup page.
Android phone: Tap the “Choose Wi-Fi” button. It will jump to Wi-Fi setup page.
iOS phone: Press the “Home” key to back to home screen of iOS phone, and then select Settings -> Wi-Fi.

- 2) Select Doorbell Camera from SSID list. The Doorbell Camera SSID is “Doorbell Camera_XXX” (Where XXX is the last 3 digits of the MAC address). After it is connected, go back to Cloud2door App.

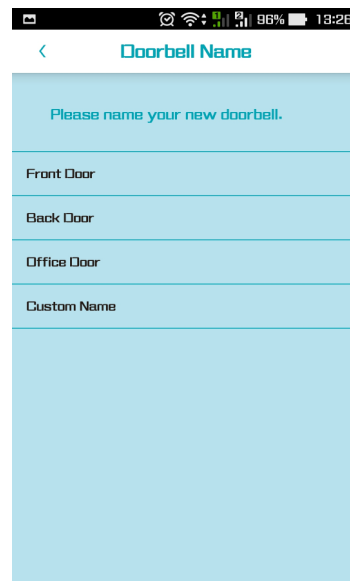

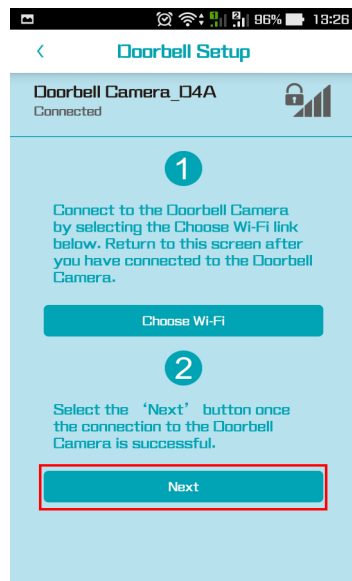

(Android Smartphone)

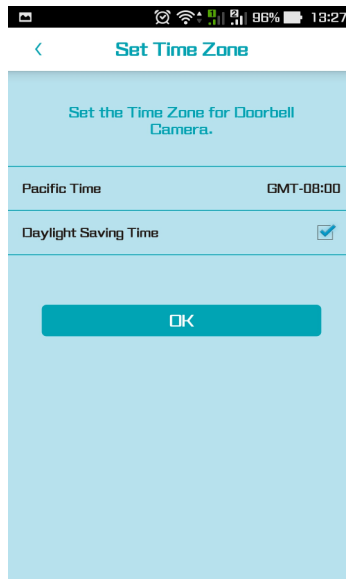

(iPhone)

3) Click Next button, and then select or custom a name to your doorbell.

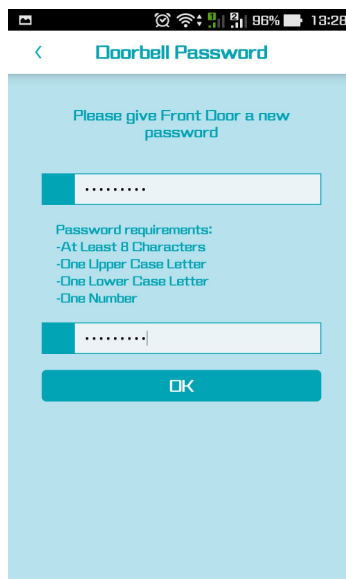

4) Set the Time Zone, and if you live in the region that observes Daylight Saving Time (DST), you should check the Daylight Saving Time.

5) Setup a new password to doorbell. The password will be used for some doorbell related operation (Ex: add/remove user account with doorbell).

MAKE SURE TO MAKE A NOTE OF YOUR PASSWORD!

6) Home router connection. Choose the Choose home router from SSID list, and then enter the password. If the home router doesn't show in the list, please slide down to refresh the SSID list once.

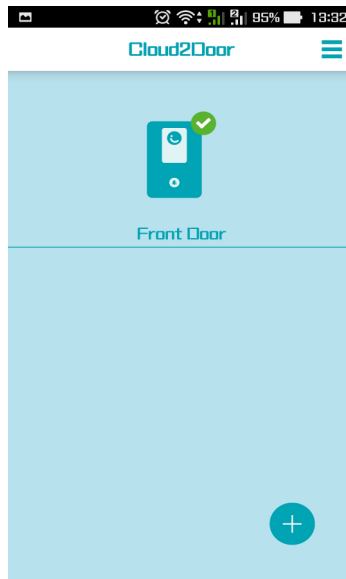

7) **Andoid Smartphone:** Choose home Wi-Fi router from SSID list again, and then click  to back to the App.

iOS phone: It will auto reconnect to Home Wi-Fi router. If not, please go to Settings->Wi-Fi page to choose home Wi-Fi router, and then back to App.

Smartphone may take a few seconds for registration. Once registration is successful, the doorbell icon with a green tick will display on the screen.

1.4 Troubleshooting

Q: The “Next” button is not activation after I connected my Smartphone to doorbell during doorbell setup.

A: 1. Go back to the WiFi setting page to make sure it is connected with Doorbell Camera_XXX.
2. If you have 3G/4G network connection, please turn off it and then try again.

Q: After finish the setup procedure, the button indicator flashes red on Doorbell Camera. On Cloud2door App, the red circle with a X appears on doorbell icon.

A: When the button indicator flashes red slowly, it means that doorbell doesn't connect to network. It usually happens what a wrong password entered to cause Home WiFi router connection failed. Please follow these steps to reconnect Doorbell Camera to Home WiFi router again.

Step 1: Click  (menu) at upper right corner, then select System Settings -> Cloud2door Settings (you need to wait for connection time out.) -> Device Settings -> Remove doorbell.

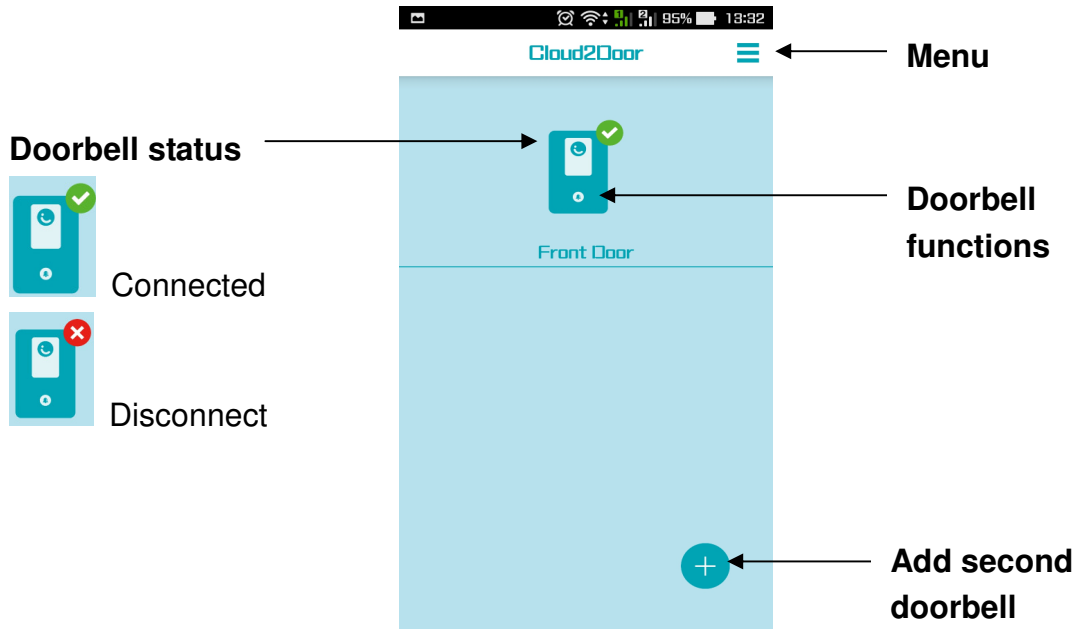

Step 2: Pressing the call button for ten to fifteen seconds to enter Discovery mode (button indicator flashes red and green).

Step 3: Click “Add your new Doorbell Camera”, and then follow steps for final Setup.

2 Operation

2.1 Cloud2door Home Page

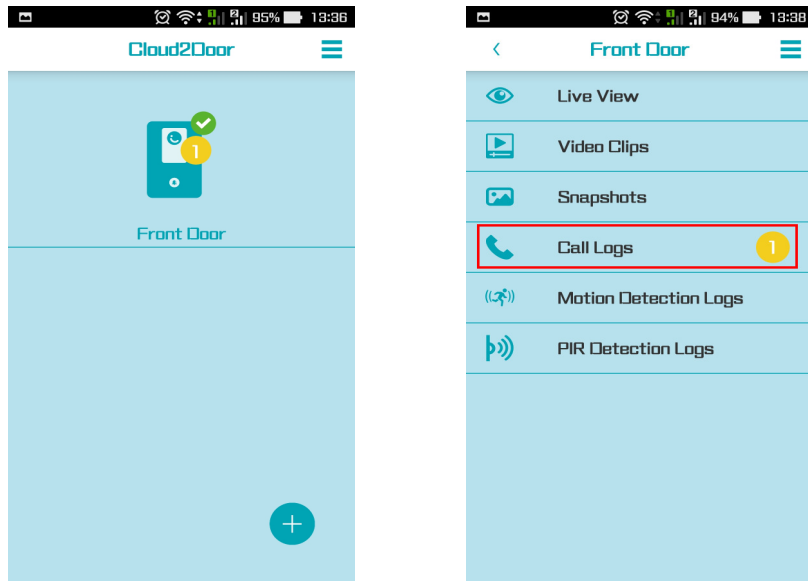

Below picture shows the Cloud2door home page. There is the green/red circle shows on doorbell icon to indicate Doorbell Camera status.

2.2 Notifications

When motion is detected, the detected time will be recorded.

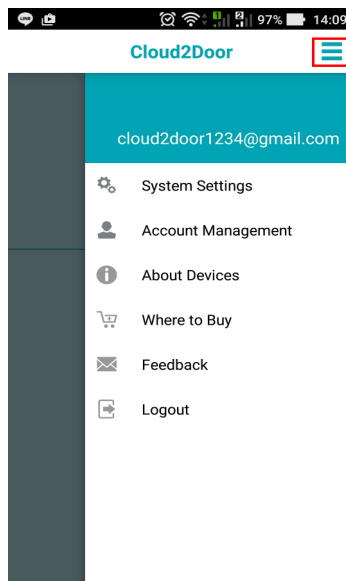

6. PIR-Detection Logs

PIR detected log is showed in the page.

3 Menu

Click menu icon (☰) to bring up all of setup items.

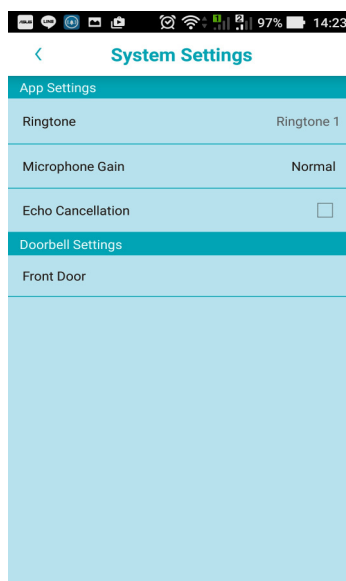

3.1 System Settings

App Settings:

Ringtone: Select your favorite ringtone from the provided list. Once ringtone is selected, it will play once for your confirmation.

Microphone Gain: Allow user to adjust Smartphone’s microphone volume.

Echo Cancellation: Some Smartphones don’t support echo cancellation function. If echo is appeared while conversation, try to enable the feature to improve echo issue.

Doorbell Settings:

User can manage the settings of related Doorbell Camera in the page.

Audio Settings

User can use the slider to adjust the speaker volume or microphone Gain of Doorbell Camera to against ambient noise. Both default settings are 5.

Audio Settings	
Speaker volume	5
Microphone Gain	5

Video Settings

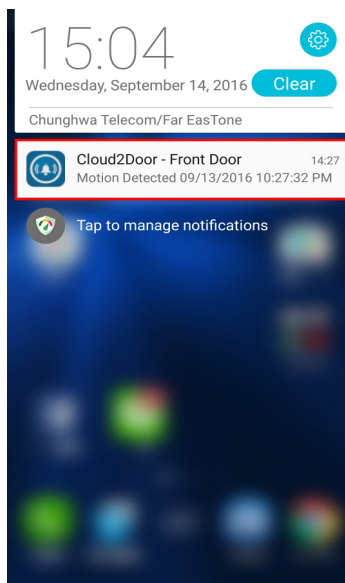

Video Settings	
Motion Detection Region	
Motion Detection Sensitivity	Highest
PIR Detection	Disable
Resolution	Good(360x240)
Frame Rate	Good(10 FPS)
Image Adjustments	

Motion Detection & PIR (Passive Infrared Sensor) Alert

Once the Motion Detection or PIR is configured, Smartphone/iPhone will receive a notification when someone is moving in the front of Doorbell Camera.

Alert notification is received when a Cloud2door icon appeared on status bar.

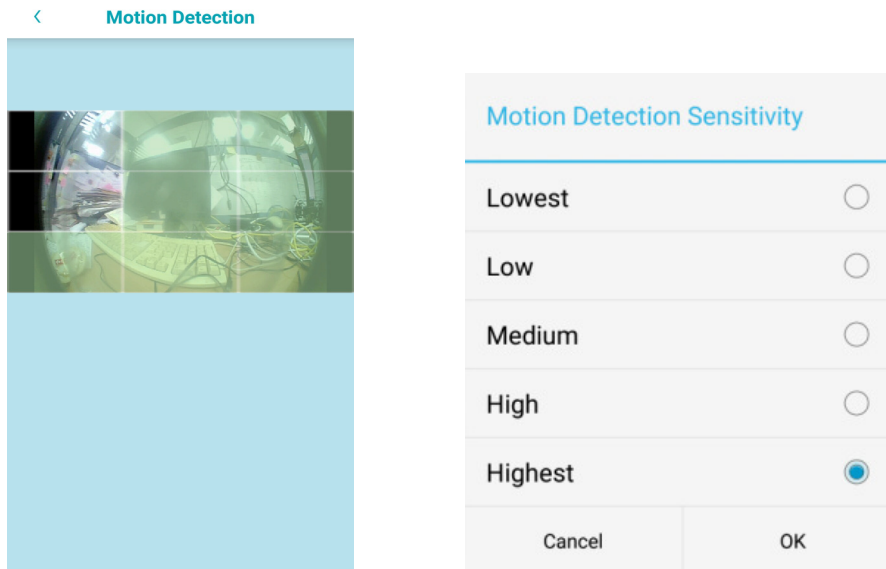

Slide down status bar, then click the Cloud2door message to quickly wake up App.

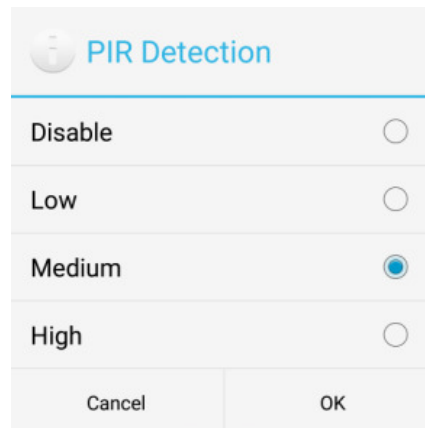

Motion Detection Region:

The live image is displayed, tap the region where you want to detection. Tap same region again to unselected. If you don't want turn on this function, please keep all regions in unselect status.

Motion Detection Sensitivity: User can adjust the motion detection sensitivity in the page.

PIR Detection: You can setup PIR detection distance or disable it. Set to “High” that you can get longer detection distance.

Resolution: Doorbell Camera supports 360x240, 720x480 and 1280x720 three types of image resolution. The higher resolution can get clearer image.

Frame Rate: High frame rate guarantees smooth image display.

NOTE: The higher image resolution and frame rate would require more bandwidth of image transmission. But when the bandwidth is not enough, the Doorbell Camera will auto reduce the resolution and frame rate to get more stable image display.

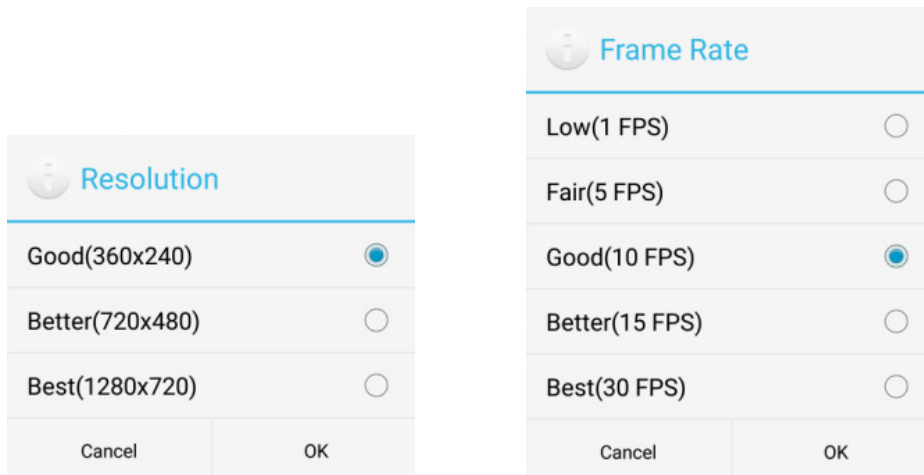

Image Adjustments: To adjust the image quality related parameters.

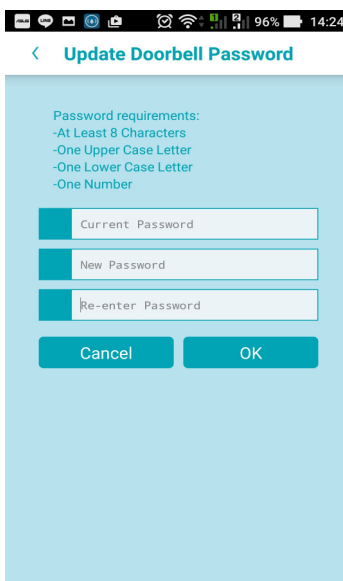

Device Settings

Device Settings	
Rename Doorbell	Front Door
Change Password	
Remove Doorbell	
Do Not Disturb	Off
Time Zone	GMT-08:00
Daylight Saving Time	<input checked="" type="checkbox"/>
Ring time	30

Notice : The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

IMPORTANT NOTE: To comply with the FCC RF exposure compliance requirements, no change to the antenna or the device is permitted. Any change to the antenna or the device could result in the device exceeding the RF exposure requirements and void user's authority to operate the device.

IMPORTANT NOTE:

To comply with the FCC RF exposure compliance requirements, the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. No change to the antenna or the device is permitted. Any change to the antenna or the device could result in the device exceeding the RF exposure requirements and void user's authority to operate the device.

FCC INFORMATION

The Federal Communication Commission Radio Frequency Interference Statement includes the following paragraph:

The equipment has been tested and found to comply with the limits for a Class B Digital Device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction, may cause harmful interference to radio communication. However, there is no grantee that interference will not occur in a particular installation. If this equipment dose cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on , the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
