General information

Battery care

DMP330 is powered by a rechargeable battery.

- ◆ The battery can be charged and discharged hundreds of times but it will eventually wear out. When the operating time (talking time and standby time) is noticeably shorter than normal, user should buy a new battery at this time.
- ◆ Unplug the charger when not in use. Don't leave the battery connected to a charger for longer than a week, since overcharging may shorten its lifetime.
- ◆ Overcharging may shorten its lifetime, and if left unused a fully charged battery may discharge itself over time.
- ◆ If the phone is not in use and charged for a long time, over-discharge may happen.
- ◆ Over-discharge may cause DMP330 to be charged abnormally and the indication of battery in charge cannot be seen immediately once the battery is charged. The indication of battery in charge may only be seen after 20 minutes.

- ◆ Temperature extremes can affect the ability of your battery to charge.
- ◆ Do not use any charger or battery that is damaged in any way.
- ◆ Use the battery only for its intended purpose.
- ◆ Extreme temperatures will affect the charging capacity of your battery.
- ◆ Do not leave the battery in hot or cold places, such as in a car in summer or winter condition.
- ◆ Do not short-circuit the battery. Short-circuiting the terminals may damage the battery or the connecting object.
- ◆ Dispose of batteries according to local regulations. Always recycle. Do not dispose of batteries in a fire.

Access codes

PIN code

The PIN (Personal Identification Number) code protects your SIM card against unauthorized. Your SIM card usually supplies the PIN code.

 **Note:** User may need to obtain the password from your service provider.

 **Note:** If user key in an incorrect PIN code three times in succession, user may need to key in PUK code.

PIN2 code

The PIN2 code may be supplied with the SIM card. Some functions will require PIN2 support.

 **Note:** Your may need to obtain the password from your service provider.

PUK code

The PUK (Personal Unblocking Key) code is required to change a blocked PIN code. The PUK code is required to change a blocked PIN2 code.

 **Note:** User may need to obtain the password from your service provider.

 **Note:** If user keys in an incorrect PIN2 code three times in succession, user may need to key in PUK2 code.

 **Note:** If user key in an incorrect PUK code ten times in succession,

the SIM card cannot be used anymore. Contact your service provider for a new card.

Phone code

Phone code protects the phone against unauthorized use. It is not activated in default. User can activate this function and change the default phone code (1122) to any four to eight-digit personal codes.

Care and maintenance

Read this information before using your mobile phone.

Your mobile phone is a highly sophisticated electronic device. When use DMP330, battery, charger or any accessory, please read this first.

Product care

- ◆ Keep your mobile phone and all its parts out of young children's reach.
- ◆ Keep your mobile phone dry.
- ◆ Avoid exposing your mobile phone to extreme hot or cold temperatures.

- ◆ Avoid placing your mobile phone close to lit cigarettes, naked flames or any heat source.
- ◆ Do not attempt to disassemble it. Non-expert handling of the device may damage it.
- ◆ Do not drop, knock or shake it. Rough handling can break internal circuit boards.
- ◆ Do not paint your mobile phone as the paint could obstruct the earphone, microphone or any moveable parts and prevent normal use.
- ◆ Treat your mobile phone with care, keep it in a clean and dust free place.
- ◆ Do not touch the antenna unnecessarily when the phone is switched on. Contact with the antenna affects call quality and may cause the phone to operate at a higher power level than needed and shorten talk and standby times.
- ◆ Hold the phone as user speaks to any other telephone. While speaking directly into the microphone, angle the antenna in a direction up and over your shoulder. If the antenna is extendable/retractable, it should be extended during the call.

Important safety information

FCC Regulations

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ◆ Reorient or relocate the receiving antenna.
- ◆ Increase the separation between the equipment and receiver.
- ◆ Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- ◆ Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

RF Exposure Information (SAR)

This device meets the government's requirements for exposure to radio waves. This device is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government.

The exposure standard for wireless devices employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg. *Tests for SAR are conducted using standard operating positions accepted by the

FCC with the device transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the device is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The highest SAR value for the device as reported to the FCC when tested for use at the ear is 0.564 W/kg for PCS Head SAR and 0.2 W/kg for WLAN Head SAR and when worn on the body, as described in this user guide, is 0.864 W/kg for PCS Body SAR and 0.434 W/kg for WLAN Body SAR. (Body-worn measurements differ among device models, depending upon available enhancements and FCC requirements.)

While there may be differences between the SAR levels of various devices and at various positions, they all meet the government requirement.

The FCC has granted an Equipment Authorization for this device with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this device is on file with the FCC and can be found under the Display Grant

section of <http://www.fcc.gov/oet/fccid> after searching on FCC ID: D6XDMP330.

For body worn operation, this device has been tested and meets the FCC RF exposure guidelines for use with an accessory that contains no metal and the positions the handset a minimum of 1.5 cm from the body. Use of other enhancements may not ensure compliance with FCC RF exposure guidelines. If you do not use a body-worn accessory and are not holding the device at the ear, position the handset a minimum of 1.5 cm from your body when the device is switched on.

Radio frequency energy

Your mobile phone is a radio transmitter and receiver. When the phone is turned on, it receives and transmits radio frequency (RF) energy. Depending on the type of mobile phone user possesses, it operates on different frequency ranges and employs commonly used modulation techniques. The system that handles your call when user is using phone controls the power level at which DMP330 transmits.

Specific Absorption Rate (SAR) information.

DMP330 has been designed to comply with applicable safety requirement for exposure to radio waves. This requirement is based on scientific organizations through periodic and thorough evaluation of scientific studies. These guidelines include safety margins designed to assure this safety of all persons, regardless of age and health.

- ◆ The radio wave exposure guidelines employ a unit of measurement known as the Specific Absorption Rate, or SAR. Tests for SAR are conducted using standardized method with the phone transmitting at this highest certified power level in all used frequency bands.
- ◆ The SAR limit recommended by the international Commission on Non-Ionizing Radiation Protection (ICNIRP), which is 2W/kg averaged over then (10) gram of tissue.
- ◆ This highest SAR value for this model phone tested by ADT for use at the ear is 0.49W/kg (10g).
- ◆ SAR data information for residents in countries/regions that have adopted the SAR limit recommended by the

Institute of Electrical and Electronics Engineers (IEEE),
which is 1.6 W/kg averaged over one (1) gram of tissue.

Electronic devices

Most modern electronic equipment is shielded from RF energy. However, certain electronic equipment may not be shielded against the RF signals from your wireless phone, therefore:

- ◆ Do not use your mobile phone near medical equipment without requesting permission.

Pacemaker

Mobile phones may affect the operation of some implanted cardiac pacemakers and other medically implanted equipment. Pacemaker manufacturers recommend that a minimum separation of 20 cm (6 inches) be maintained between a hand-held wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by and recommendations of Wireless Technology Research.

Persons with pacemakers:

- ◆ Should always keep the phone more than 20 cm (6

inches) from their pacemaker when the phone is switched on;

- ◆ Should not carry the phone in a breast pocket;
- ◆ Should use the ear opposite the pacemaker to minimize the potential for interference.
- ◆ If user has any reason to suspect that interference is taking place, switch off DMP330 immediately.

Hearing aids

Some hearing aids might be disturbed by mobile phones. In the event of such disturbance, user may want to consult your service provider, or call the customer services line to discuss alternatives.

Aircraft

- ◆ Turn off your mobile phone before boarding any aircraft.
- ◆ Do not use it on the ground without crew permission

To prevent interference with communication systems, user must not use your mobile phone while the plane is in the air.

Potentially explosive atmospheres

Switch off DMP330 when in any area with a potentially explosive atmosphere and obey all signs and instructions. It is rare, but DMP330 or its accessories could generate sparks. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Areas with a potentially explosive atmosphere are often, but not always, clearly marked. They include fuelling areas, such as petrol station, below deck on boats, fuel or chemical transfer or storage facilities, and areas where the air contains chemicals or particles, such as grain, dust, or metal powders and any other area where user would normally be advised to turn off your vehicle engine.

Driving

Check the laws and regulations on the use of mobile phones in the areas where user drive. If user is going to use DMP330 while driving, please:

- ◆ Give full attention to driving
- ◆ Use handsfree. Law in many countries requires vehicle handsfree.
- ◆ Pull off the road and park before making or answering a

call if driving conditions so require.

RF energy may affect some electronic systems in motor vehicles such as car stereo, safety equipment etc. in addition; some vehicle manufacturers do not allow use of mobile phones, unless the installation is supported by a handsfree kit with an external antenna in their vehicles. Check with your vehicle manufacturer's representative to be sure that your mobile phone will not affect the electronic systems in your vehicle.

Getting Started

Installing the SIM card and the battery

User needs to follow up the following steps to insert the SIM card and charge the battery before using the phone.

1. Press the back cover release button and take the cover away as shown in Figure 1
2. Lift the battery away as shown in Figure 2.
3. Insert and slide the SIM card and battery as shown in Figure 3.

Figure 1

Figure 2

Figure 3

- ▶ **Note:** Keep all miniature SIM cards out of the reach of children.
- ▶ **Note:** Be careful to handle, insert or remove the SIM card since the SIM card and its contact can easily be damaged by scratched or bending.
- ▶ **Note:** Before installing/removing the SIM card, always make sure

that the phone is switched off.

Charging the battery

User must fully charge the battery before using DMP330 for the first time.

1. Connect the lead from the travel adapter to the USB socket on the bottom of DMP330.
2. Connect the charger to an AC wall outlet.

User can charge the battery through

- ◆ **Charger:** charge battery from a stand AC power outlet
- ◆ **USB cable:** charge battery from devices with USB host connector (e.g., desktop PC and laptop PC)

 **Note:** When you first use the phone, the battery has to be fully charged. It takes about 2.5 hours to finish charging an empty battery.

Charging through charger

1. Plug the charger connector into mini-USB socket at the bottom of phone when phone is either switched on or off.
2. User can hear a “beep” sound and see a message saying “Charger Connected”, and then charging starts. At this moment, User can see the battery bar icon running on the main display screen.
3. Once the charging is completed, a full battery bar icon  appears.
4. Remove the charger, user will hear a “beep” sound again and see a message saying “Charger Removed.”

Charging through USB cable

1. Connect the USB cable to a desktop PC or a laptop PC which is switched on. Make sure the PC is not in sleep

mode.

2. Plug the USB connector into mini-USB socket at the bottom of phone when phone is either switched on or off.
3. User can hear a “beep” sound and see USB configuration menu in the display screen. Press  key, then charging starts. At this moment, user can see the battery bar icon changing on the main display screen.
4. Once the charging is completed, a full battery bar icon  appears.
5. Remove USB cable, you will hear a “beep” sound again and see a message saying “Charger Removed.”

 **Note:** When the battery level is low and indicated by  on the display, user will hear a “beep” sound. When the battery level becomes too low and indicated by  on the display, it shall be switched off automatically in a short time.

 **Note:** If the phone is not in use and charged for a long time, over-discharge may happen. If user cannot see charging screen upon the connection of the charger, wait for a period of time and then the charging will be activated. In case that the charging screen cannot be shown always, contact service center.

Switching the phone on and off

1. Press and hold  key.
2. If the phone asks PIN code, key in the PIN code, and press  Left Soft Key (LSK) to confirm.

 **Note:** If the phone shows "Insert SIM" when SIM card is properly inserted, contact your network operator or service provider.

 **Note:** Do not switch the phone on when wireless phone use is prohibited or when it may cause interference or danger.

Function without plug-in SIM card

DMP330 has some functions user can use without plug-in SIM card. Including:

- E-mail
- Call History
- Contact
- VoIP
- Services
- File Manager

- Camera
- Entertainment
- Audio Player
- Organizer
- Application
- Setting(except Call Setup and Shortcuts)

Call Function

This gives user information about the calling service that support in DMP330.

Making a call from the Contact

1. In standby mode, dial number and press .
2. In standby mode, press  Right Soft Key (RSK) to enter **Name**, select one name from **Search** and follow by pressing  key to dial.
3. User could also press **Menu** and choose to enter **Contact** submenu to make a call.

Making an international call

For international calls, long press key  for the international prefix (character "+").

Key in the country code, area code and the phone number.

Press  to call.

Answering an incoming call

Press  to answer the call.

Rejecting the incoming call

Press  to reject the call.

Call waiting

User can answer another incoming call while user has a call in progress.

During a call, press  LSK to enter option menu to hold a call.

Making a conference call

User can make conference call while user has multi calls in progress.

1. Make a call to the first participant.
2. Press  LSK and choose **New Call** to call the second participant as explained in Make a new call during a call.
3. Press  LSK and select **Conference**. This joins the calls to the conference.
4. Repeat step 2 and 3 to allow new participants to be connected to the conference call.
5. Press **Option** and select **End All** to end the call or press .
6. Any call (participant) can be disconnected by press **Option** key and select **End Single**.

 **Note:** Please user make sure if the operation supports this service or need to subscribe this service before using this function.

Tips for call options

A call can be connected to any single caller by pressing **Option**. When user presses **Option** during an active call, user would see the following functions:

1. **Hold**: put a call on
2. **End**: end a call.
3. **New call**: make a new call during an active call.
4. **Contact**: shortcut to **Contact** menu.
5. **SMS**: shortcut to **Messages** menu.
6. **Sound recorder**: to record the conversation during an active phone call.
7. **Mute**: set On/Off to mute the call during the conversation.
8. **DTMF**: set On/Off for DTMF (Dual Tone Multi-Frequency) tone dialing system.

Text editing using input method

User can key in text by using the traditional method or predictive smart input. DMP330 is designed to support six languages: English, Spanish, French, German, Traditional Chinese and Simplified Chinese languages

To select input method

1. When key in text, press **Option** and select **Input Method**.
2. User can also change input method by short press  key.

To insert a space

In T9abc, user could use  key to insert spaces.

Traditional English input

DMP330 provides Multitap function. For example, press  key twice to display the letter “B”, and press three times to display the letter “C”. The following table shows the mapping of keypads of “0” ~ “9” and the associated characters.

Text entry with “T9”

“T9” uses a built-in dictionary to recognize the most commonly used word for every sequence of key presses.

The selected input method will be shown the icon in the indication bar. User can choose to turn on or off your T9 input method in option list.

Multitap ABC
Multitap abc
Numeric
Smart ABC
Smart abc

Messages

User can view, edit, and send the message via this menu.

SMS

DMP330 also allows user to send and receive text message contain pictures or melodies.

To write a message

1. In **Messages** menu, choose **SMS**, press **Ok**
2. Choose **Write Message**, press **Ok** to write message.
3. User can also personalize your message with more different special effects by selecting following functions in option list which are:
 - ◆ **Use Templates:** User might insert default template for quick writing.
 - ◆ **Insert Object:** User might insert picture, animation, melody and sound in your text message.

- ◆ **Format Text:** User might choose text size, style, alignment or start new paragraph.
- ◆ **Insert PHB Number:** You can add number from phonebook
- ◆ **Insert PHB Name:** You can add name from phonebook
- ◆ **Insert Bookmark:** You can add bookmark from WAP
- ◆ **Input Method:** User might choose input method as user wishes.

 **Note:** To quick access **Messages** function, user can press left key of  in standby mode.

 **Note:** To key in the content, please refer to Subsection of "Text editing using input method."

To read message

When user has received a message, the indicator  will appear on the display. If your inbox is full, there will be a pop-up window to remind user to delete some of your old message.

Otherwise, your message will be saved in the phone instead of SIM card.

1. In **Messages**, choose **Text Message (SMS)**, press **OK** and then select **Inbox**.
2. Choose the message user would like to read by pressing **OK** to view the content.

 **Note:** *The message user has received will be saved in SIM as default setting.*

When user read the message, DMP330 provides following selections for your option.

- ◆ **Reply:** Allow user to reply by sending a text message.
- ◆ **Delete:** Allow user to delete the message in progress.
- ◆ **Edit:** Allow user to edit the text message.
- ◆ **Forward:** Allow user to forward a text message.
- ◆ **Copy To Phone/SIM:** Allow user to copy the selected text message to DMP330/SIM.

- ◆ **Move To Phone/SIM:** Allow user to move the selected text message to DMP330/SIM.
- ◆ **Chat:** Allow user to chat with the one sending message to DMP330.
- ◆ **Delete All:** Allow user to delete all message at once.
- ◆ **Copy All:** Allow user to copy all message to DMP330 at once.
- ◆ **Move All:** Allow user to move all message to DMP330 at once.
- ◆ **Use Number:** Allow user to save the number in your Contact.
- ◆ **Use URL:** Allow user to use the URL in DMP330.

To send a message

1. In **Messages**, choose **Text Message (SMS)** and press **OK**.
2. Choose **Write Message**; press **OK** to start writing message.

3. After finishing the writing, select **Done** following by pressing **Option**.

 **Note:** To use picture message function, your network operator or service provider support is necessary. Only phones that contain this function can receive and display picture message.

DMP330 provides the following options:

- ◆ **Send Only:** Allow user to send a text message immediately.
- ◆ **Save And Send:** Allow user to save and send a text message.
- ◆ **Save:** Allow user to save the message and send it later.
- ◆ **Send to Many:** Allow user to send many contact at once. Successful sent message will not be stored in **Outbox**.
- ◆ **Send By Group:** Allow user to send a group user has grouped in the phone.

Outbox Message

After sending out the message, the message is saved in the

outbox folder if user choose "**Save And Send**". User is allowed to read message user has chosen to save with the following option:

1. In **Messages**, choose **SMS**,
2. Press **Ok** and then select **Outbox**.

You are allowed to read messages you have chosen to save with the following options:

- ◆ **Send:** Allow user to send the message.
- ◆ **Edit:** Allow user to edit the saved message.
- ◆ **Delete:** Allow user to delete the message in progress.
- ◆ **Copy To Phone/SIM:** Allow user to copy the selected text message to DMP330/SIM.
- ◆ **Move To Phone/SIM:** Allow user to move the selected text message to DMP330/SIM.
- ◆ **Delete All:** Allow user to delete all message in your outbox at once.
- ◆ **Copy All:** Allow user to copy all message to DMP330 at once.
- ◆ **Move All:** Allow user to move all message to DMP330 at once.

- ◆ **Use Number:** Allow user to save the number in your Contact.
- ◆ **Use URL:** Allow user to save the URL in DMP330.

Template

There are several default templates in DMP330 for quick message writing. User can also edit these templates to preferred words or to erase template.

Message Settings

DMP330 allows user to set up default settings on the SMS feature.

1. In **Messages**, choose **SMS**, press **Ok**
2. Choose **Message Settings**, press **Ok**.

DMP330 provides the following selections for your option:

- ◆ **Profile Setting:** If more than one message profile is allowed by your SIM, user may edit the profile

separately.

- ◆ **Common Setting:** User can enable or disable delivery report and reply path.
- ◆ **Memory Status:** Allow user to check the memory status of the SMS in term of in SIM or in Phone
- ◆ **Preferred Storage:** Allow user to change your preferred storage either SIM or phone.
- ◆ **Prefer Bearer:** Allow user to choose your preferred bearer-GSM or GPRS.

Multimedia Message Service (MMS)

The feature allows user to send the message that contains text, sound and a picture. Depending on the network, user may receive a text message that includes an Internet address where user can view the multimedia message.

DMP330 supports the following formats in MMS function.

1. **Picture:** JPG, GIF and BMP.
2. **Sound:** Scalable Polyphonic MIDI (SP-MIDI) and i-Meldoy.

VoIP

DMP330 supports VoIP function through WLAN. It means user can make VoIP call through WLAN, not through GSM. In standby mode, when user inputs numbers and press option,

user can choose to make a call through either VoIP or GSM, according to your presetting mode selection.

If this is the first time for user to use the **VoIP** function, please follow the steps:

Preferred Mode

DMP330 allows user to set to only one of the following modes for the use of GSM or WLAN network. In standby mode, press LSK, choose **Settings** and choose **Network Setup**. In Preferred mode, user can choose:

1. **GSM Only**: Turn off WLAN/SIP function. If user wants to make VoIP/WLAN calls, should not choose this mode.
2. **WLAN Only**: Turn off GSM/GPRS function.
3. **GSM Preferred**: When user makes a new call by pressing , GSM network will be the first priority network to connect.
4. **WLAN Preferred**: When user makes a new call by pressing , WLAN will be the first priority network to connect.

Enable WLAN and search for network

To use the VoIP function through WLAN, user needs to turn on

WLAN first and choose one WLAN network to connect to. At the current time the GSM transmit signal will mute. In standby mode, press LSK and choose **VoIP**. Press **Wireless LAN** and choose **Enable WLAN**, DMP330 will turn on WLAN. And then choose **Search For Networks**, DMP330 will search and show WLAN network in the screen, user can press LSK to:

1. Connect the WLAN networks they want to. User may need to enter the password if the AP is proprietary and press Option to edit.
2. Define Access point to save the connected AP in the profile.

Except Enable/Disable WLAN and Search for network, user can:

1. **Access Point Settings** : To review the AP profile for connection, Edit, define new AP, Delete and change priority.

2. Current Status: Show the information of WLAN.

 In standby mode, user can long press central navi-key to search and connect the Access point (enable the WLAN and search out the AP around) if no access point is defined in the Access Point Setting. Otherwise DMP330 will connect the AP automatically according to the priority order of AP profile defined in the Access Point Settings .

 For detailed settings, please check your operator.

 User can see the status (strength) of WLAN signals in the standby mode.

SIP Setting

Sip is VoIP protocol and is used for setting up communications sessions such as conferencing, telephony and instant messaging on the Internet. You cannot use VoIP function until this function is well set up and you have to enter your user name and password for authentication before using this function. You can contact your network administrator or ISP for more information.

In standby mode, press LSK and choose **VoIP**. Press **SIP Setting** and choose **Profile Setting**. DMP330 can store 10 profiles. User can choose one of profile and press LSK to **Activate** or **Edit**. If user is the first time to use VoIP function. Please choose **Edit** to setup:

1. **Common Setting**: Allow user to setup **Profile Name**, **Data Account** (Wireless LAN or GPRS), **Auto Login**: Allow user to choose turn on /off auto login and **Voice Mail Server**: Allow user to setup voice mail server.
2. **Account Setting**: Allow user to input **SIP Server**, **SIP**

Port, Display Name, Username and Password and Auth Name.

3. **Outbound Server:** Allow user to input **Status, Outbound Server, Outbound Port, Auth Name** and **Password**.
4. **Register Server:** Allow user to input **Status, Register Server, Register port, Auth Name** and **Password**.
5. **NAT Setting:** Allow user to input or show **Status, NAT firewall IP, STUN Server, STUN Port**.
6. **Port setting:** Allow user to input any RTP port number and Local port to avoid collision with others.

 *Detail settings; please check your service providers or operators .*

DMP330 provides Call Setting function to let user to set the desired call setting for the VoIP call function. In standby mode, press LSK and choose **VoIP**. Press **SIP Setting** and choose **Call Setting**.

1. **Auto Answer:** Allow user to choose to turn on/off auto answer.
2. **Auto Reject:** Allow user to choose to turn on/off auto reject.
3. **Auto Redial:** Allow user to choose to turn on/off auto redial.

4. **Hide Caller ID:** Allow user to choose to turn on/off hide caller ID.
5. **DTMF:** Allow user to choose to **Inband/Outband/Off DTMF**.
6. **Comfort Noise:** Allow user to choose to on/off comfort Noise.
7. **Set Codec Order:** Allow user to set the priority of Codec.

 **Note:** When user makes a VoIP call, user must login SIP server (register VoIP service). DMP330 has 2 way to login SIP server:

1. Traditional way: When user enables WLAN and chooses **Access point**, Press **Login** to login SIP server.
2. Auto login: In **SIP Setting/Profile Setting** and choose **Option** to **Common Setting** and choose **Auto Login**.

Make a New VoIP Call

When user finish setup by steps, user can make a VoIP call from DMP330. User may make a VoIP call through:

1. In standby mode, press LSK and choose **VoIP**. Press **Login**. When registering VoIP service for the activated SIP profile succeeds, then press **new call** and type in VoIP number/address user wants to call. After finishing

typing and press , DMP330 will dial to the caller through WLAN.

2. In standby mode, enter VoIP number and press LSK to choose **Call Via VoIP**.

Note: *There are some special functions in DMP330:*

- ◆ Auto login: In profiles settings, user can turn on auto login. When DMP330 turn on the WLAN profile, it will login SIP automatically.
- ◆ Call transfer: When user gets a VoIP call, press LSK and choose transfer and then dial VoIP number, the VoIP call will transfer to the other VoIP phone.
- ◆ Concall: When user A talk to B with VoIP call, user B can press LSK to choose new call and then dial VoIP call to user C, When C get the phone, A, B and C can make concall.

Services

Services describe in the following are supported by your service provider. If user can not connect either one of those services, user might contact with your service provider for further information.

WAP

DMP330s support Web Browser. User can obtain various services such as up-to date news, weather, sport, and other information as well as use e-mail and other Internet services. These services are designed and maintained by WAP service providers.

The WAP service use Wireless Markup Language (WML) on their WAP pages. User may not view the Internet web pages on DMP330.

 **Note:** To activate WAP service, user may need to contact your service provider.

 **Note:** Do not switch the phone on when wireless phone use is prohibited or when it may cause interference or danger.

Homepage

To access the browser from the standby mode, go to WAP in Service and press Homepage. Once connected, the homepage is displayed. The content depends on the service provider.

To exit the browser, press option/Exit key.

Bookmarks

User can use this menu to save URL addresses to quick access a website.

DMP330 also provides user for the following selections for your option.

- ◆ **Goto:** Allow user to link the website.
- ◆ **Edit:** Allow user to edit URL address.
- ◆ **Send:** Allow user to send Bookmark.
- ◆ **Delete:** Allow user to delete the selected bookmark.
- ◆ **Delete all:** Allow user to delete all bookmarks at once.

- ◆ **Add Bookmark:** Allow user to add URL address.

Recent pages

User can view the recent pages user has visited. Press **Goto** to connect the selected page.

Enter Address

User can key in the URL address and enter the address followed by selecting **Done**. DMP330 will connect the URL user just keyed in. After the address is entered, user may select the URL and press **OK** to connect next time.

Service Inbox

DMP330 is able to receive service message sent by your service provider. Service message are notifications of headlines or content, and they may contain address of a WAP service. User can get updated news or new WAP settings from your service provider.

The received WAP push message will be stored in the service inbox. User can press **Option** to either **Read**, **Delete** or **Delete**

All the push message(s).

Settings

GPRS (General Packet Radio Service) is a technology that use for sending and receiving data over the mobile network. The applications that use GPRS are WAP services, MMS and SMS messages and GPRS dial-up (such as Internet and e-mail). User can set the phone to automatically register to a GPRS network when user switches the phone on.

WAP Setting

- ◆ If the settings have made by the service provider, user may begin immediately without setting.
- ◆ If access profiles have assigned by your service provider, select a profile and activate it.
- ◆ Otherwise user may key in setting manually. For appropriate settings, contact your network operator or service provider.

Key in the service settings manually

1. In **WAP** menu, choose **Edit Profile** in **Settings**, and then press **OK**
2. Choose a profile, press **OK**, choose **Edit Profile**, press **OK** to start setting.

User needs to key in the information in Homepage, Data account, User name, Password, IP address and Connection type in DMP330. To get the information, user may need to contact your operator.

 **Note:** *In most cases, user only needs to use one of the default profiles to access the Internet. The settings are different from operator to operator. Please consult your operator or service provider for the correct settings and proceed with care. Wrong settings will cause the connection to fail.*

Activate WAP settings

After user complete all WAP settings (see WAP settings function), in WAP Profile mode, please choose **Activate Profile**, and then press **OK**.

Browser option

User can set the timeout value for the browser. The purpose is to stop the browser connecting the website if the website does not respond within the timeout. Also, user can choose either On or Off the image while browsing.

Service Message Settings

User can choose either receive or not receive the service message which would be saved in the service inbox sent by your service provider.

Clear Cache

The information or data user has accessed are all stored in the cache of the phone. A cache is a file buffer used to store data only temporarily. User can clear the history by selecting this option.

Clear Cookies

Under the consideration of privacy and security issue, we would

suggest user to clear cookies which may contain sensitive information just in case DMP330 is misplaced, lost or stolen.

Trusted Certificates

This function is to indicate your trusted certificate when browsing and also adding the trust list into the browser if needed.

Data Account

Default data accounts based on major operators at the time this phone is manufactured are provide.

User can access WAP via **GSM** or **GPRS**.

- ◆ To get the analogue number or ISDN number information, user may need to contact your operator for the service.
- ◆ To get the access point of GPRS, user may need to contact your operator for the service.

GSM Data

Press **Edit** to change the data account settings, including: Account name, Number, User name, Password, Line type, Speed and DNS.

- ◆ **Equalizer:** Allow user to choose EQ (Normal/Classical/Pop/Bass/Party/Treble/Rock/Dance)
- ◆ **Call Background Sound:** DMP330 provides several background effects for users including:

Motorcycle, Sidewalk, MRT, Restaurant, Pub,
Chord, Alarm, Dou, white noise. User also can use
the voice user record.

Shortcuts

Allow user to choose what functions user wants to add or move
into your shortcuts.

Emergency Calls

Important:

This phone, like any wireless phone, operates using radio
signals, wireless and landline networks as well as user
programmed functions. Because of this, connections in all
conditions cannot be guaranteed. Therefore, user should never
rely solely upon any wireless phone for essential
communications (e.g. medical emergencies)

Emergency calls may not be possible on all wireless phone
networks or when certain network services and/or phone
features are in use. Check with local service provider.
